

# Nokia Service Router Linux

## Release 24.3

### Data Model Reference

---

3HE 20240 AAAA TQZZA  
Edition: 01  
March 2024

Nokia is committed to diversity and inclusion. We are continuously reviewing our customer documentation and consulting with standards bodies to ensure that terminology is inclusive and aligned with the industry. Our future customer documentation will be updated accordingly.

---

This document includes Nokia proprietary and confidential information, which may not be distributed or disclosed to any third parties without the prior written consent of Nokia.

This document is intended for use by Nokia's customers ("You"/"Your") in connection with a product purchased or licensed from any company within Nokia Group of Companies. Use this document as agreed. You agree to notify Nokia of any errors you may find in this document; however, should you elect to use this document for any purpose(s) for which it is not intended, You understand and warrant that any determinations You may make or actions You may take will be based upon Your independent judgment and analysis of the content of this document.

Nokia reserves the right to make changes to this document without notice. At all times, the controlling version is the one available on Nokia's site.

No part of this document may be modified.

# 1 About this guide

This document describes the configuration and state data models available for the Nokia Service Router Linux (SR Linux).

**Note:**

This guide generically covers the current release and may contain some content that will be released in later maintenance loads. See the *SR Linux Release Notes*, for information about features supported in each load.

Configuration and command outputs shown in this guide are examples only; actual displays may differ depending on supported functionality and user configuration.

For more information about accessing and using the interfaces that support these data models, see the *SR Linux System Management Guide*.

## 2 Overview

This overview describes the structure of the configuration and state data models available for the Nokia Service Router Linux (SR Linux). It includes an introduction to the tree hierarchy and details how to interpret field descriptions.

### 2.1 Tree hierarchy

The tree hierarchy consists of branches that show the fields and parameters that are available. [Figure 1: Tree hierarchy example](#) shows a tree hierarchy example.

*Figure 1: Tree hierarchy example*

```

bfd
- network-instance string
- peer number
  - active-receive-interval
  - active-transmit-interval
  - async
  - last-packet-received
  - last-packet-transmitted
  - received-errored-packets
  - received-packets
  - transmitted-packets
  - up-transitions
  - failure-transitions
  - last-failure-time
  - local-address
  - local-diagnostic-code
  - oper-state
  - remote-address
  - remote-control-plane-independent
  - remote-diagnostic-code
  - remote-discriminator
  - remote-minimum-receive-interval
  - remote-multiplier
  - remote-session-state
  - session-state
  - subscribed-protocols
+ peers number
+ clear
+ statistics
+ peers number
  + clear
+ subinterface string
+ admin-state
+ desired-minimum-transmit-interval
+ detection-multiplier
+ minimum-echo-receive-interval
+ required-minimum-receive
+ total_bfd_sessions
+ total_unmatched_bfd_packets

```

Each chapter of this guide describes a branch in the tree with field names linked to their corresponding descriptions. These descriptions indicate the required syntax for each field. See [Field descriptions](#) for more information.

*Italic names after a field indicate the parameter type. Parameter types include (but are not limited to):*

- Boolean (true and false values)
- keyword (enumerated values)

- string
- number
- IPv4 prefix
- IPv6 prefix
- IPv4 address
- IPv6 address
- MAC address

For more information about the input values, click the field or parameter name in the tree. The link will take you to the description where these values are defined.

A parameter type may also be a combination of different base types. These parameters are displayed in the tree with the individual parameter types enclosed in round brackets and separated by a pipe. For example: *(keyword | number)*

## 2.2 Transaction and report types

The following transaction and report types are used with the SR Linux:

- configuration transactions
- state transactions
- show reports

Configuration transactions allow you to modify a configuration while state transactions allow you to view the configuration and operational state.

In the tree hierarchy, configuration transactions are denoted with a plus sign (+). State transactions are denoted with a minus sign (-). See [Figure 2: Configuration/state in tree hierarchy](#).

Figure 2: Configuration/state in tree hierarchy

Each field description has a field called "Configurable". The field is set to either:

- true (for configuration transactions)
- false (for state transactions)

Show reports are Python plug-ins used to create custom output. A set of pre-defined show reports are provided and described in the *SR Linux System Management Guide*. These pre-defined reports can be used as examples for how to create additional custom reports.

## 2.3 Hardware platform designation

The platforms field is used to define the hardware platforms that are valid for a transaction. If a transaction is only valid on specific platforms, the designation is similar to the following:

*Figure 3: Platforms: applies to designated platforms only*

<b>name string</b>	
<b>Description</b>	Enter the name context
<b>Context</b>	<code>system mirroring mirroring-instance name string mirror-source interface name string</code>
<b>String Length</b>	3 to 20
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3L, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2, 7220 IXR-D2L

If a transaction is valid on all platforms, the designation is the following:

*Figure 4: Platforms: applies to all platforms*

<b>acl</b>	
<b>Description</b>	Top level enclosing container for ACL operational tools
<b>Context</b>	<code>acl</code>
<b>Tree</b>	<code>acl</code>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## 2.4 Field descriptions

Syntax for each field is displayed in bold, followed by supported parameters and their type. In the example that follows, the **bfd network-instance** field shows that the parameter type is a string:

```
- bfd
  - network-instance string
```

[Table 1: Field descriptions](#) describes valid fields for commands. Not all fields are applicable for all commands.

*Table 1: Field descriptions*

Field	Description
Context	Configuration path to the command
Tree	Defines the commands location in the tree hierarchy
Description	Describes the command
Configurable	Indicates if the command can be configured (true) or if it is a view-only state command (false)
String Length	For a string, indicates a range (number of characters allowed)

---

Field	Description
Range	For a number, indicates the range of allowed values
Default	Default value
Units	Base unit type
Options	Enumerated values allowed
Reference	Reference to an instance in the configuration needed before the configuration is considered valid
Max Element	For lists and leaf-lists, the maximum number of elements
Platform	Defines the supported hardware platforms

### 2.4.1 References

A description of each parameter is also available from the online CLI help function. See the *SR Linux System Management Guide* for information on using the CLI help.

## 3 acl

```

acl
+ acl-filter name string type keyword
+ description string
+ entry sequence-id number
+ action
  + accept
    + forwarding-class reference
    + rate-limit
      + policer reference
      + system-cpu-policer reference
  + copy
  + drop
  + log boolean
+ description string
- last-clear string
+ match
  + ipv4
    + destination-ip
      + address string
      + mask string
      + prefix string
    + dscp-set (number | keyword)
    + first-fragment boolean
    + fragment boolean
    + icmp
      + code number
      + type (number | keyword)
    + protocol (number | keyword)
    + source-ip
      + address string
      + mask string
      + prefix string
  + ipv6
    + destination-ip
      + address string
      + mask string
      + prefix string
    + dscp-set (number | keyword)
    + icmp6
      + code number
      + type (number | keyword)
    + next-header (number | keyword)
    + source-ip
      + address string
      + mask string
      + prefix string
  + l2
    + destination-mac
      + address string
      + mask string
    + ethertype (string | keyword)
    + source-mac
      + address string
      + mask string
  + vlan
    + outermost-vlan-id

```

```

    + none
    + operator keyword
    + range
      + end number
      + start number
      + value number
+ transport
+ destination-port
  + operator keyword
  + range
    + end (number | keyword)
    + start (number | keyword)
    + value (number | keyword)
+ source-port
  + operator keyword
  + range
    + end (number | keyword)
    + start (number | keyword)
    + value (number | keyword)
+ tcp-flags string
- statistics
- incomplete boolean
- last-clear string
- last-match string
- matched-packets number
- policer
- conforming-octets number
- conforming-packets number
- exceeding-octets number
- exceeding-packets number
- system-cpu-policer
- conforming-octets number
- conforming-packets number
- exceeding-octets number
- exceeding-packets number
- tcam-entries
- forwarding-complex complex-identifier string
- input-total number
- output-total number
- single-instance number
- last-clear string
+ statistics-per-entry boolean
+ subinterface-specific keyword
- datapath-programming
- forwarding-complex slot-id number complex-id number
- last-completed-timestamp string
- programming-complete boolean
+ egress-mac-filtering boolean
+ interface interface-id string
+ input
+ acl-filter name reference type reference
- entry sequence-id reference
- policer
- conforming-octets number
- conforming-packets number
- exceeding-octets number
- exceeding-packets number
- statistics
- incomplete boolean
- last-clear string
- last-match string
- matched-packets number
- statistics
- last-clear string

```

```

- policer
  - conforming-octets number
  - conforming-packets number
  - exceeding-octets number
  - exceeding-packets number
+ interface-ref
+ interface reference
+ subinterface reference
+ output
+ acl-filter name reference type reference
  - entry sequence-id reference
  - policer
    - conforming-octets number
    - conforming-packets number
    - exceeding-octets number
    - exceeding-packets number
  - statistics
    - incomplete boolean
    - last-clear string
    - last-match string
    - matched-packets number
  - statistics
    - last-clear string
  - policer
    - conforming-octets number
    - conforming-packets number
    - exceeding-octets number
    - exceeding-packets number
+ policers
+ policer name string
+ entry-specific boolean
+ max-burst number
+ peak-rate number
+ scope keyword
- statistics
  - aggregate
    - conforming-octets number
    - conforming-packets number
    - exceeding-octets number
    - exceeding-packets number
    - last-clear string
+ system-cpu-policer name string
+ entry-specific boolean
+ max-packet-burst number
+ peak-packet-rate number
- statistics
  - conforming-octets number
  - conforming-packets number
  - exceeding-octets number
  - exceeding-packets number
  - last-clear string
+ tcam-profile keyword

```

## 3.1 acl Descriptions

### acl

<b>Description</b>	Top level container for configuration and operational state related to access control lists (ACLs)
<b>Context</b>	<a href="#">acl</a>
<b>Tree</b>	<a href="#">acl</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### acl-filter *name string type keyword*

<b>Description</b>	List of filter types such as IPv4, IPv6 and MAC depending on the platform's capabilities.
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter</a> <i>name string type keyword</i>
<b>Tree</b>	<a href="#">acl-filter</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### name *string*

<b>Description</b>	ACL Filter policy name
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter</a> <i>name string type keyword</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### type *keyword*

<b>Description</b>	Defines the type of ACL filter: ipv4: IPv4 ACL filter ipv6: IPv6 ACL filter mac: MAC ACL filter
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter</a> <i>name string type keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ipv4</li> <li>• ipv6</li> <li>• mac</li> </ul>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**description** *string*

<b>Description</b>	Description string for the filter policy
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter</a> <a href="#">name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">description</a> <i>string</i>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**entry** [sequence-id](#) *number*

<b>Description</b>	List of ACL entries comprising an ACL Filter
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter</a> <a href="#">name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**sequence-id** *number*

<b>Description</b>	A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter</a> <a href="#">name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i>
<b>Range</b>	0 to 65535
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**action**

<b>Description</b>	Container for the actions to be applied to packets matching the filter entry.
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter</a> <a href="#">name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">action</a>
<b>Tree</b>	<a href="#">action</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**accept**

<b>Description</b>	Accept matching packets and forward them towards their normal destination
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">action</a> <a href="#">accept</a>
<b>Tree</b>	<a href="#">accept</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**forwarding-class** *reference*

<b>Description</b>	The QoS forwarding class to which the packet is mapped
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">action</a> <a href="#">accept</a> <a href="#">forwarding-class</a> <i>reference</i>
<b>Tree</b>	<a href="#">forwarding-class</a>
<b>Reference</b>	<a href="#">qos</a> <a href="#">forwarding-classes</a> <a href="#">forwarding-class name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**rate-limit**

<b>Description</b>	Rate-limit accepted packets
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">action</a> <a href="#">accept</a> <a href="#">rate-limit</a>
<b>Tree</b>	<a href="#">rate-limit</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**policer** *reference*

<b>Description</b>	Reference to a policer
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">action</a> <a href="#">accept</a> <a href="#">rate-limit</a> <a href="#">policer</a> <i>reference</i>
<b>Tree</b>	<a href="#">policer</a>
<b>Reference</b>	<a href="#">acl</a> <a href="#">policers</a> <a href="#">policer name</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### system-cpu-policer *reference*

**Description** Reference to a system-cpu-policer.

**Context** [acl](#) [acl-filter name](#) *string type keyword entry sequence-id number action accept rate-limit system-cpu-policer reference*

**Tree** [system-cpu-policer](#)

**Reference** acl policers system-cpu-policer name

**Configurable** True

**Platforms** Supported on all platforms

### copy

**Description** Create a copy of matching packets extract them to the CPM and deliver them to the designated veth interface

**Context** [acl](#) [acl-filter name](#) *string type keyword entry sequence-id number action copy*

**Tree** [copy](#)

**Configurable** True

**Platforms** Supported on all platforms

### drop

**Description** Drop matching packets.  
Dropped IP packets do not result in sending ICMP messages back to the source

**Context** [acl](#) [acl-filter name](#) *string type keyword entry sequence-id number action drop*

**Tree** [drop](#)

**Configurable** True

**Platforms** Supported on all platforms

### log *boolean*

**Description** When this is true, a log is created for each packet matching the entry  
For IP packets matched by an IP filter entry the log entry contains the following information:

<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">action</a> <a href="#">log</a> <i>boolean</i>
<b>Tree</b>	<a href="#">log</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**description** *string*

<b>Description</b>	Description string for the filter entry
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">description</a> <i>string</i>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**last-clear** *string*

<b>Description</b>	Time of the last clear command performed by the user at this level
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**match**

<b>Description</b>	Container for the conditions that determine whether a packet matches this entry
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">match</a>
<b>Tree</b>	<a href="#">match</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ipv4**

<b>Description</b>	Container for the common layer-3 IPv4 match criteria
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">match</a> <a href="#">ipv4</a>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**destination-ip**

<b>Description</b>	Packet matching criteria based on destination IPv4 address
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">match</a> <a href="#">ipv4</a> <a href="#">destination-ip</a>
<b>Tree</b>	<a href="#">destination-ip</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**address *string***

<b>Description</b>	Match a packet if its destination IP address logically anded with the inverse of the mask equals this IP address.
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">match</a> <a href="#">ipv4</a> <a href="#">destination-ip</a> <a href="#">address</a> <i>string</i>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mask *string***

<b>Description</b>	Match a packet if its destination IP address logically anded with the inverse of this mask equals the configured IP address.
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">match</a> <a href="#">ipv4</a> <a href="#">destination-ip</a> <a href="#">mask</a> <i>string</i>
<b>Tree</b>	<a href="#">mask</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**prefix string**

<b>Description</b>	Match a packet if its destination IP address is within the specified IPv4 prefix.
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry sequence-id</a> <a href="#">number</a> <a href="#">match ipv4 destination-ip</a> <a href="#">prefix</a> <i>string</i>
<b>Tree</b>	<a href="#">prefix</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**dscp-set (number | keyword)**

<b>Description</b>	A list of DSCP values to be matched for incoming packets. An OR match should be performed, such that a packet must match one of the values defined in this list. If the field is left empty then any DSCP value matches.
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry sequence-id</a> <a href="#">number</a> <a href="#">match ipv4 dscp-set</a> ( <i>number   keyword</i> )
<b>Tree</b>	<a href="#">dscp-set</a>
<b>Range</b>	0 to 63
<b>Options</b>	<ul style="list-style-type: none"> <li>• CS0</li> <li>• LE</li> <li>• CS1</li> <li>• AF11</li> <li>• AF12</li> <li>• AF13</li> <li>• CS2</li> <li>• AF21</li> <li>• AF22</li> <li>• AF23</li> <li>• CS3</li> <li>• AF31</li> <li>• AF32</li> <li>• AF33</li> <li>• CS4</li> <li>• AF41</li> <li>• AF42</li> <li>• AF43</li> <li>• CS5</li> <li>• EF</li> </ul>

	<ul style="list-style-type: none"> <li>• CS6</li> <li>• CS7</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### first-fragment *boolean*

<b>Description</b>	<p>Match the first fragment of an IPv4 datagram</p> <p>A packet matches the true condition if the IPv4 header indicates that the fragment-offset is zero and and the more-fragments bit is 1. It is not valid to configure this leaf without configuring a match value for the fragment leaf.</p>
<b>Context</b>	<a href="#">acl acl-filter name string type keyword entry sequence-id number match ipv4 first-fragment boolean</a>
<b>Tree</b>	<a href="#">first-fragment</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### fragment *boolean*

<b>Description</b>	<p>Match an IPv4 fragment</p> <p>A packet matches the true condition if the IPv4 header indicates that the fragment-offset is zero and and the more-fragments bit is 1 or if the IPv4 header indicates that the fragment-offset is greater than 0. A packet matches the false condition if it is unfragmented.</p>
<b>Context</b>	<a href="#">acl acl-filter name string type keyword entry sequence-id number match ipv4 fragment boolean</a>
<b>Tree</b>	<a href="#">fragment</a>
<b>Configurable</b>	True

## start *number*

<b>Description</b>	The starting VLAN ID to include in the range
<b>Context</b>	<a href="#">acl acl-filter name</a> <i>string</i> <i>type</i> <i>keyword</i> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">match I2</a> <a href="#">vlan</a> <a href="#">outermost-vlan-id</a> <a href="#">range</a> <a href="#">start</a> <i>number</i>

<b>Tree</b>	<a href="#">start</a>
<b>Range</b>	0 to 4095
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**value number**

<b>Description</b>	A VLAN ID number A value of zero is used to match priority-tagged 802.1Q frames.
<b>Context</b>	<a href="#">acl acl-filter name string type keyword entry sequence-id number match I2 vlan outermost-vlan-id value number</a>
<b>Tree</b>	<a href="#">value</a>
<b>Range</b>	0 to 4095
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**transport**

<b>Description</b>	Container for the common layer-4 transport match criteria
<b>Context</b>	<a href="#">acl acl-filter name string type keyword entry sequence-id number match transport</a>
<b>Tree</b>	<a href="#">transport</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**destination-port**

<b>Description</b>	A packet matches this condition if its destination TCP or UDP port number matches the value or range that is specified The rule should also have a condition that the IP protocol equals 6 (TCP) or 17 (UDP) in order for this to be interpreted correctly.
<b>Context</b>	<a href="#">acl acl-filter name string type keyword entry sequence-id number match transport destination-port</a>
<b>Tree</b>	<a href="#">destination-port</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**operator** *keyword*

<b>Description</b>	Comparison operator eq = equal ge = greater than or equal to le = less than or equal to
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">match</a> <a href="#">transport</a> <a href="#">destination-port</a> <a href="#">operator</a> <a href="#">keyword</a>
<b>Tree</b>	<a href="#">operator</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>le Less than or equal.</li> <li>ge Greater than or equal.</li> <li>eq Equal to.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**range**

<b>Description</b>	Container used to specify a contiguous range of TCP/UDP port numbers
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">match</a> <a href="#">transport</a> <a href="#">destination-port</a> <a href="#">range</a>
<b>Tree</b>	<a href="#">range</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**end** (*number* | *keyword*)

<b>Description</b>	The ending port number to include in the range
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">match</a> <a href="#">transport</a> <a href="#">destination-port</a> <a href="#">range</a> <a href="#">end</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">end</a>
<b>Range</b>	0 to 65535
<b>Options</b>	<ul style="list-style-type: none"> <li>acap Application Configuration Access Protocol</li> <li>afp-tcp Apple Filing Protocol over TCP</li> </ul>

**Configurable**

True

**Platforms**

Supported on all platforms

**source-port****Description**

A packet matches this condition if its source TCP or UDP port number matches the value or range that is specified

The rule should also have a condition that the IP protocol equals 6 (TCP) or 17 (UDP) in order for this to be interpreted correctly.

**Context**

[acl](#) [acl-filter name](#) *string type keyword entry sequence-id number match transport source-port*

**Tree**

[source-port](#)

**Configurable**

True

**Platforms**

Supported on all platforms

**operator *keyword*****Description**

Comparison operator

eq = equal ge = greater than or equal to le = less than or equal to

**Context**

[acl](#) [acl-filter name](#) *string type keyword entry sequence-id number match transport source-port operator keyword*

**Tree**

[operator](#)

**Options**

- le

- Less than or equal.
- ge
- Greater than or equal.
- eq
- Equal to.

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## range

<b>Description</b>	Container used to specify a contiguous range of TCP/UDP port numbers
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <a href="#">string type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">match</a> <a href="#">transport</a> <a href="#">source-port</a> <a href="#">range</a>
<b>Tree</b>	<a href="#">range</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## end (*number* | *keyword*)

<b>Description</b>	The ending port number to include in the range
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <a href="#">string type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">match</a> <a href="#">transport</a> <a href="#">source-port</a> <a href="#">range</a> <a href="#">end</a> ( <i>number</i>   <i>keyword</i> )

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### tcp-flags *string*

<b>Description</b>	A logical expression using the &,   and ! logical operators and the TCP flag names: rst, syn and ack.
<b>Context</b>	<a href="#">acl acl-filter name string type keyword entry sequence-id number match transport tcp-flags string</a>
<b>Tree</b>	<a href="#">tcp-flags</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### statistics

<b>Description</b>	Container for per-entry statistics
<b>Context</b>	<a href="#">acl acl-filter name string type keyword entry sequence-id number statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### incomplete *boolean*

<b>Description</b>	Returns true when at least one linecard had insufficient stats resources to ensure an accurate set of values for the number of matched packets.
<b>Context</b>	<a href="#">acl acl-filter name string type keyword entry sequence-id number statistics incomplete boolean</a>
<b>Tree</b>	<a href="#">incomplete</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-clear** *string*

<b>Description</b>	Time of the last clear command performed by the user at this level or a higher level
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">statistics</a> <a href="#">last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-match** *string*

<b>Description</b>	The elapsed time since a packet last matched the entry, considering the mgmt0 subinterface and all subinterfaces of all linecard ports that use the ACL as an input ACL
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">statistics</a> <a href="#">last-match</a> <i>string</i>
<b>Tree</b>	<a href="#">last-match</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**matched-packets** *number*

<b>Description</b>	The number of packets matching the entry since it was programmed or since the last clear, considering the mgmt0 subinterface and all subinterfaces of all linecard ports that use the ACL as an input ACL
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">statistics</a> <a href="#">matched-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">matched-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**policer**

<b>Description</b>	Policer stats for traffic matching the entry:
--------------------	---

Statistics for policer configured with scope=global and entry-specific=true, and acl configured with subinterface-specific=false.

<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">statistics</a> <a href="#">policer</a>
<b>Tree</b>	<a href="#">policer</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **conforming-octets** *number*

<b>Description</b>	The number of bytes that were considered conforming by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">statistics</a> <a href="#">policer</a> <a href="#">conforming-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">conforming-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **conforming-packets** *number*

<b>Description</b>	The number of packets (actually Ethernet frames) that were considered conforming by the policer
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <a href="#">number</a> <a href="#">statistics</a> <a href="#">policer</a> <a href="#">conforming-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">conforming-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **exceeding-octets** *number*

<b>Description</b>	The number of bytes that were considered exceeding by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
--------------------	---

<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">policer</a> <a href="#">exceeding-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">exceeding-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **exceeding-packets** *number*

<b>Description</b>	The number of packets (actually Ethernet frames) that were considered exceeding by the policer
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">policer</a> <a href="#">exceeding-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">exceeding-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **system-cpu-policer**

<b>Description</b>	System CPU policer stats for traffic matching the entry: Statistics for system cpu policer configured with scope=global and entry-specific=true, and acl configured with subinterface-specific=false.
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">system-cpu-policer</a>
<b>Tree</b>	<a href="#">system-cpu-policer</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **conforming-octets** *number*

<b>Description</b>	The number of bytes that were considered conforming by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">system-cpu-policer</a> <a href="#">conforming-octets</a> <i>number</i>

<b>Tree</b>	<a href="#">conforming-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **conforming-packets** *number*

<b>Description</b>	The number of packets (actually Ethernet frames) that were considered conforming by the policer
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string type keyword</i> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">system-cpu-policer</a> <a href="#">conforming-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">conforming-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **exceeding-octets** *number*

<b>Description</b>	The number of bytes that were considered exceeding by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string type keyword</i> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">system-cpu-policer</a> <a href="#">exceeding-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">exceeding-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **exceeding-packets** *number*

<b>Description</b>	The number of packets (actually Ethernet frames) that were considered exceeding by the policer
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string type keyword</i> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">system-cpu-policer</a> <a href="#">exceeding-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">exceeding-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tcam-entries**

<b>Description</b>	Information about the TCAM entries used to implement the ACL entry
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">tcam-entries</a>
<b>Tree</b>	<a href="#">tcam-entries</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**forwarding-complex** [complex-identifier](#) *string*

<b>Description</b>	List of forwarding complexes in the system
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">tcam-entries</a> <a href="#">forwarding-complex</a> <a href="#">complex-identifier</a> <i>string</i>
<b>Tree</b>	<a href="#">forwarding-complex</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**complex-identifier** *string*

<b>Description</b>	A forwarding complex in the format (slot-number,complex-number).
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">tcam-entries</a> <a href="#">forwarding-complex</a> <a href="#">complex-identifier</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**input-total** *number*

<b>Description</b>	The number of TCAM entries required to implement this entry on all subinterfaces of this complex where the filter is applied to ingress traffic.  For example, if a single-instance of the entry takes 2 TCAM entries and the filter is an output-only subinterface-specific filter and the filter is applied to 5 subinterfaces on output and to 5 subinterfaces on input then input-total=2. If the entry is not applied to ingress traffic on any subinterfaces of this complex then input-total=0.
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <a href="#">keyword</a> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">tcam-entries</a> <a href="#">forwarding-complex</a> <a href="#">complex-identifier</a> <i>string</i> <a href="#">input-total</a> <i>number</i>
<b>Tree</b>	<a href="#">input-total</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **output-total** *number*

<b>Description</b>	The number of TCAM entries required to implement this entry on all subinterfaces of this complex where the filter is applied to egress traffic.  For example, if a single-instance of the entry takes 2 TCAM entries and the filter is an output-only subinterface-specific filter and the filter is applied to 5 subinterfaces on output and to 5 subinterfaces on input then output-total=10. If the entry is not applied to egress traffic on any subinterfaces of this complex then output-total=0.
<b>Context</b>	<a href="#">acl acl-filter name string type keyword entry sequence-id number tcam-entries forwarding-complex complex-identifier string output-total number</a>
<b>Tree</b>	<a href="#">output-total</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **single-instance** *number*

<b>Description</b>	The number of TCAM entries required to implement this entry if it is applied to only one subinterface and one traffic direction specific to this slot.  This is non-zero even if the filter is not applied to any subinterfaces of this complex. It captures the effect of TCAM entry expansion to deal with L4 port or VLAN ranges, for example.
<b>Context</b>	<a href="#">acl acl-filter name string type keyword entry sequence-id number tcam-entries forwarding-complex complex-identifier string single-instance number</a>
<b>Tree</b>	<a href="#">single-instance</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-clear** *string*

<b>Description</b>	Time of the last clear command performed by the user at this level
<b>Context</b>	<a href="#">acl acl-filter name string type keyword last-clear string</a>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### statistics-per-entry *boolean*

**Description** Collect statistics for each entry of the ACL. If this is set to false no hardware resources are allocated to collecting statistics for this ACL policy.  
The exact set of statistics depend on the subinterface-specific mode

**Context** [acl acl-filter name string type keyword statistics-per-entry boolean](#)

**Tree** [statistics-per-entry](#)

**Configurable** True

**Platforms** Supported on all platforms

### subinterface-specific *keyword*

**Description** Controls the instantiation of the filter when it is applied as an input or output ACL

disabled: all subinterfaces on a single linecard that reference the ACL as an input ACL use a shared filter instance, and all subinterfaces on a single linecard that reference the ACL as an output ACL use a shared filter instance

input-only: all subinterfaces on a single linecard that reference the ACL as an output ACL use a shared filter instance, but each subinterface that references the ACL as an input ACL uses its own separate instance of the filter

output-only: all subinterfaces on a single linecard that reference the ACL as an input ACL use a shared filter instance, but each subinterface that references the ACL as an output ACL uses its own separate instance of the filter

input-and-output: each subinterface that references the ACL as either an input ACL or an output ACL uses its own separate instance of the filter

**Context** [acl acl-filter name string type keyword subinterface-specific keyword](#)

**Tree** [subinterface-specific](#)

**Default** disabled

**Options**

- disabled
- input-only
- output-only
- input-and-output

**Configurable** True

**Platforms** Supported on all platforms

## datapath-programming

<b>Description</b>	Container to represent the progress of ACL datapath programming
<b>Context</b>	<a href="#">acl datapath-programming</a>
<b>Tree</b>	<a href="#">datapath-programming</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## forwarding-complex *slot-id number complex-id number*

<b>Description</b>	List of forwarding complexes that are currently installed and online
<b>Context</b>	<a href="#">acl datapath-programming forwarding-complex slot-id number complex-id number</a>
<b>Tree</b>	<a href="#">forwarding-complex</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## slot-id *number*

<b>Description</b>	The slot id
<b>Context</b>	<a href="#">acl datapath-programming forwarding-complex slot-id number complex-id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## complex-id *number*

<b>Description</b>	The complex id
<b>Context</b>	<a href="#">acl datapath-programming forwarding-complex slot-id number complex-id number</a>
<b>Range</b>	0 to 1
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-completed-timestamp** *string*

<b>Description</b>	The date and time when the forwarding complex last completed all datapath programming related to prior ACL configuration changes.
<b>Context</b>	<a href="#">acl datapath-programming forwarding-complex slot-id number complex-id number last-completed-timestamp</a> <i>string</i>
<b>Tree</b>	<a href="#">last-completed-timestamp</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**programming-complete** *boolean*

<b>Description</b>	Reads false when there are still pending entries to program from prior configuration transactions  Reads true when all datapath programming related to all prior ACL configuration changes is complete
<b>Context</b>	<a href="#">acl datapath-programming forwarding-complex slot-id number complex-id number programming-complete</a> <i>boolean</i>
<b>Tree</b>	<a href="#">programming-complete</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**egress-mac-filtering** *boolean*

<b>Description</b>	Must be set to true in order to apply any MAC ACLs to any subinterface in the egress traffic direction.  Internally this sets the following limits:  Remember that the number of ACL instances per ACL policy is greater than one if subinterface-specific is set to input-and-output or output-only.  A setting of true is blocked if the number of IPv4 ACL instances applied to egress traffic is already greater than 32, or if the number of IPv6 ACL instances applied to egress traffic is already greater than 32.
<b>Context</b>	<a href="#">acl egress-mac-filtering</a> <i>boolean</i>
<b>Tree</b>	<a href="#">egress-mac-filtering</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**interface** [interface-id](#) *string*

<b>Description</b>	List of interfaces and subinterfaces referencing ACL filters.
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface-id** *string*

<b>Description</b>	Identifier for the interface or subinterface.
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**input**

<b>Description</b>	Container for ACL filters that apply to ingress traffic on the subinterface
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i> <a href="#">input</a>
<b>Tree</b>	<a href="#">input</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**acl-filter** [name](#) *reference* [type](#) *reference*

<b>Description</b>	MAC, IPv4, IPv6 ACL filter(s) to be applied on this subinterface direction On 7220 and 7250 IXR platforms only a single MAC, IPv4 or IPv6 filter is supported.
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i> <a href="#">input</a> <a href="#">acl-filter</a> <a href="#">name</a> <i>reference</i> <a href="#">type</a> <i>reference</i>
<b>Tree</b>	<a href="#">acl-filter</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	4

**name** *reference*

<b>Description</b>	Enter the name context
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string input</i> <a href="#">acl-filter name</a> <i>reference type reference</i>
<b>Reference</b>	acl acl-filter name
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type** *reference*

<b>Description</b>	Enter the type context
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string input</i> <a href="#">acl-filter name</a> <i>reference type reference</i>
<b>Reference</b>	acl acl-filter type
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**entry** [sequence-id](#) *reference*

<b>Description</b>	ACL Filter statistics per entry and per subinterface
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string input</i> <a href="#">acl-filter name</a> <i>reference type reference</i> <a href="#">entry sequence-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**sequence-id** *reference*

<b>Description</b>	Reference to type entry ID key
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string input</i> <a href="#">acl-filter name</a> <i>reference type reference</i> <a href="#">entry sequence-id</a> <i>reference</i>
<b>Reference</b>	acl acl-filter entry sequence-id
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**policer**

<b>Description</b>	Policer stats for traffic matching the entry:
--------------------	---

Statistics under `/acl/interfaces` for policer configured with `scope=subinterface` and `entry-specific=true`, and `acl` configured with `subinterface-specific=input-and-output`.

<b>Context</b>	<a href="#">acl interface interface-id string input acl-filter name reference type reference entry sequence-id reference policer</a>
<b>Tree</b>	<a href="#">policer</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **conforming-octets** *number*

<b>Description</b>	The number of bytes that were considered conforming by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
<b>Context</b>	<a href="#">acl interface interface-id string input acl-filter name reference type reference entry sequence-id reference policer conforming-octets number</a>
<b>Tree</b>	<a href="#">conforming-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **conforming-packets** *number*

<b>Description</b>	The number of packets (actually Ethernet frames) that were considered conforming by the policer
<b>Context</b>	<a href="#">acl interface interface-id string input acl-filter name reference type reference entry sequence-id reference policer conforming-packets number</a>
<b>Tree</b>	<a href="#">conforming-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **exceeding-octets** *number*

<b>Description</b>	The number of bytes that were considered exceeding by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
--------------------	---

<b>Context</b>	<a href="#">acl interface interface-id string input acl-filter name reference type reference entry sequence-id reference policer exceeding-octets number</a>
<b>Tree</b>	<a href="#">exceeding-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **exceeding-packets** *number*

<b>Description</b>	The number of packets (actually Ethernet frames) that were considered exceeding by the policer
<b>Context</b>	<a href="#">acl interface interface-id string input acl-filter name reference type reference entry sequence-id reference policer exceeding-packets number</a>
<b>Tree</b>	<a href="#">exceeding-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **statistics**

<b>Description</b>	Container for per-entry statistics
<b>Context</b>	<a href="#">acl interface interface-id string input acl-filter name reference type reference entry sequence-id reference statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **incomplete** *boolean*

<b>Description</b>	Returns true when at least one linecard had insufficient stats resources to ensure an accurate set of values for the number of matched packets.
<b>Context</b>	<a href="#">acl interface interface-id string input acl-filter name reference type reference entry sequence-id reference statistics incomplete boolean</a>
<b>Tree</b>	<a href="#">incomplete</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-clear** *string*

<b>Description</b>	Time of the last clear command performed by the user at this level or a higher level
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i> <a href="#">input acl-filter name</a> <i>reference</i> <a href="#">type</a> <i>reference</i> <a href="#">entry sequence-id</a> <i>reference</i> <a href="#">statistics last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-match** *string*

<b>Description</b>	The elapsed time since a packet last matched the entry, considering the mgmt0 subinterface and all subinterfaces of all linecard ports that use the ACL as an input ACL
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i> <a href="#">input acl-filter name</a> <i>reference</i> <a href="#">type</a> <i>reference</i> <a href="#">entry sequence-id</a> <i>reference</i> <a href="#">statistics last-match</a> <i>string</i>
<b>Tree</b>	<a href="#">last-match</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**matched-packets** *number*

<b>Description</b>	The number of packets matching the entry since it was programmed or since the last clear, considering the mgmt0 subinterface and all subinterfaces of all linecard ports that use the ACL as an input ACL
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i> <a href="#">input acl-filter name</a> <i>reference</i> <a href="#">type</a> <i>reference</i> <a href="#">entry sequence-id</a> <i>reference</i> <a href="#">statistics matched-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">matched-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Container for policer scope=subinterface and per-entry-statistics=false statistics
<b>Context</b>	<a href="#">acl interface interface-id string input statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**last-clear *string***

<b>Description</b>	Time of the last clear command performed by the user at this level
<b>Context</b>	<a href="#">acl interface interface-id string input statistics last-clear string</a>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**policer**

<b>Description</b>	Policer stats for traffic matching one or multiple entries: List of ACL policer statistics of scope=subinterface and per-entry-statistics=false, and acl configured with subinterface-specific=false.
<b>Context</b>	<a href="#">acl interface interface-id string input statistics policer</a>
<b>Tree</b>	<a href="#">policer</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**conforming-octets *number***

<b>Description</b>	The number of bytes that were considered conforming by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
<b>Context</b>	<a href="#">acl interface interface-id string input statistics policer conforming-octets number</a>
<b>Tree</b>	<a href="#">conforming-octets</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### conforming-packets *number*

<b>Description</b>	The number of packets (actually Ethernet frames) that were considered conforming by the policer
<b>Context</b>	<a href="#">acl interface interface-id string input statistics policer conforming-packets number</a>
<b>Tree</b>	<a href="#">conforming-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### exceeding-octets *number*

<b>Description</b>	The number of bytes that were considered exceeding by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
<b>Context</b>	<a href="#">acl interface interface-id string input statistics policer exceeding-octets number</a>
<b>Tree</b>	<a href="#">exceeding-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### exceeding-packets *number*

<b>Description</b>	The number of packets (actually Ethernet frames) that were considered exceeding by the policer
<b>Context</b>	<a href="#">acl interface interface-id string input statistics policer exceeding-packets number</a>
<b>Tree</b>	<a href="#">exceeding-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## interface-ref

**Description** Reference to an interface or subinterface

**Context** [acl interface interface-id](#) *string* [interface-ref](#)

**Tree** [interface-ref](#)

**Configurable** True

**Platforms** Supported on all platforms

## interface *reference*

**Description** Reference to a base interface, for example a port or LAG

**Context** [acl interface interface-id](#) *string* [interface-ref](#) [interface reference](#)

**Tree** [interface](#)

**Reference** [interface name](#) *string*

**Configurable** True

**Platforms** Supported on all platforms

## subinterface *reference*

**Description** Reference to a subinterface

This requires the base interface to be specified using the interface leaf in this container.

**Context** [acl interface interface-id](#) *string* [interface-ref](#) [subinterface reference](#)

**Tree** [subinterface](#)

**Reference** [interface name](#) *string* [subinterface index](#) *number*

**Configurable** True

**Platforms** Supported on all platforms

## output

**Description** Container for ACL filters that apply to ingress traffic on the subinterface

**Context** [acl interface interface-id](#) *string* [output](#)

**Tree** [output](#)

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **acl-filter** *name reference type reference*

<b>Description</b>	MAC, IPv4, IPv6 ACL filter(s) to be applied on this subinterface direction On 7220 and 7250 IXR platforms only a single MAC, IPv4 or IPv6 filter is supported.
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string output</i> <a href="#">acl-filter name reference type reference</a>
<b>Tree</b>	<a href="#">acl-filter</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	4

### **name** *reference*

<b>Description</b>	Enter the name context
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string output</i> <a href="#">acl-filter name reference type reference</a>
<b>Reference</b>	acl acl-filter name
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **type** *reference*

<b>Description</b>	Enter the type context
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string output</i> <a href="#">acl-filter name reference type reference</a>
<b>Reference</b>	acl acl-filter type
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **entry** *sequence-id reference*

<b>Description</b>	ACL Filter statistics per entry and per subinterface
--------------------	--

<b>Context</b>	<a href="#">acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference</a>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **sequence-id** *reference*

<b>Description</b>	Reference to type entry ID key
<b>Context</b>	<a href="#">acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference</a>
<b>Reference</b>	acl acl-filter entry sequence-id
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **policer**

<b>Description</b>	<p>Policer stats for traffic matching the entry:</p> <p>Statistics under /acl/interfaces for policer configured with scope=subinterface and entry-specific=true, and acl configured with subinterface-specific=input-and-output.</p>
<b>Context</b>	<a href="#">acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference policer</a>
<b>Tree</b>	<a href="#">policer</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **conforming-octets** *number*

<b>Description</b>	The number of bytes that were considered conforming by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
<b>Context</b>	<a href="#">acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference policer conforming-octets number</a>
<b>Tree</b>	<a href="#">conforming-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### conforming-packets *number*

**Description** The number of packets (actually Ethernet frames) that were considered conforming by the policer

**Context** [acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference policer conforming-packets number](#)

**Tree** [conforming-packets](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### exceeding-octets *number*

**Description** The number of bytes that were considered exceeding by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.

**Context** [acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference policer exceeding-octets number](#)

**Tree** [exceeding-octets](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### exceeding-packets *number*

**Description** The number of packets (actually Ethernet frames) that were considered exceeding by the policer

**Context** [acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference policer exceeding-packets number](#)

**Tree** [exceeding-packets](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**statistics**

<b>Description</b>	Container for per-entry statistics
<b>Context</b>	<a href="#">acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**incomplete *boolean***

<b>Description</b>	Returns true when at least one linecard had insufficient stats resources to ensure an accurate set of values for the number of matched packets.
<b>Context</b>	<a href="#">acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference statistics incomplete boolean</a>
<b>Tree</b>	<a href="#">incomplete</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-clear *string***

<b>Description</b>	Time of the last clear command performed by the user at this level or a higher level
<b>Context</b>	<a href="#">acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference statistics last-clear string</a>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-match *string***

<b>Description</b>	The elapsed time since a packet last matched the entry, considering the mgmt0 subinterface and all subinterfaces of all linecard ports that use the ACL as an input ACL
<b>Context</b>	<a href="#">acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference statistics last-match string</a>
<b>Tree</b>	<a href="#">last-match</a>

<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **matched-packets** *number*

<b>Description</b>	The number of packets matching the entry since it was programmed or since the last clear, considering the mgmt0 subinterface and all subinterfaces of all linecard ports that use the ACL as an input ACL
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i> <a href="#">output acl-filter name</a> <i>reference type</i> <a href="#">reference entry sequence-id</a> <i>reference</i> <a href="#">statistics matched-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">matched-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **statistics**

<b>Description</b>	Container for policer scope=subinterface and per-entry-statistics=false statistics
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i> <a href="#">output statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **last-clear** *string*

<b>Description</b>	Time of the last clear command performed by the user at this level
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i> <a href="#">output statistics last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**policer**

<b>Description</b>	Policer stats for traffic matching one or multiple entries: List of ACL policer statistics of scope=subinterface and per-entry-statistics=false, and acl configured with subinterface-specific=false.
<b>Context</b>	<a href="#">acl interface interface-id string output statistics policer</a>
<b>Tree</b>	<a href="#">policer</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**conforming-octets number**

<b>Description</b>	The number of bytes that were considered conforming by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
<b>Context</b>	<a href="#">acl interface interface-id string output statistics policer conforming-octets number</a>
<b>Tree</b>	<a href="#">conforming-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**conforming-packets number**

<b>Description</b>	The number of packets (actually Ethernet frames) that were considered conforming by the policer
<b>Context</b>	<a href="#">acl interface interface-id string output statistics policer conforming-packets number</a>
<b>Tree</b>	<a href="#">conforming-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**exceeding-octets number**

<b>Description</b>	The number of bytes that were considered exceeding by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
--------------------	---

<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i> <a href="#">output statistics policer exceeding-octets number</a>
<b>Tree</b>	<a href="#">exceeding-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **exceeding-packets** *number*

<b>Description</b>	The number of packets (actually Ethernet frames) that were considered exceeding by the policer
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i> <a href="#">output statistics policer exceeding-packets number</a>
<b>Tree</b>	<a href="#">exceeding-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **policers**

<b>Description</b>	Container for policer definitions used by ACL entries
<b>Context</b>	<a href="#">acl policers</a>
<b>Tree</b>	<a href="#">policers</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **policer** [name](#) *string*

<b>Description</b>	List of policer templates used in subinterface and CPM Filter ACL.
<b>Context</b>	<a href="#">acl policers policer name</a> <i>string</i>
<b>Tree</b>	<a href="#">policer</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**name** *string*

<b>Description</b>	User-defined name of the policer
<b>Context</b>	<a href="#">acl policers policer name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**entry-specific** *boolean*

<b>Description</b>	Controls the instantiation of the policer between filter entries false: one policer instance is created from this template and it is shared by all entries of in the same ACL filter that refer to this policer true: multiple policer instances are created from this template, one for each ACL filter entry that refers to this policer
<b>Context</b>	<a href="#">acl policers policer name</a> <i>string</i> <a href="#">entry-specific</a> <i>boolean</i>
<b>Tree</b>	<a href="#">entry-specific</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-burst** *number*

<b>Description</b>	The MBS bucket depth in bytes
<b>Context</b>	<a href="#">acl policers policer name</a> <i>string</i> <a href="#">max-burst</a> <i>number</i>
<b>Tree</b>	<a href="#">max-burst</a>
<b>Range</b>	1 to 125000000
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**peak-rate** *number*

<b>Description</b>	The PIR rate in kbps (bucket empty/fill rate).
<b>Context</b>	<a href="#">acl policers policer name</a> <i>string</i> <a href="#">peak-rate</a> <i>number</i>

<b>Tree</b>	<a href="#">peak-rate</a>
<b>Range</b>	1 to 800000000
<b>Units</b>	kbps
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### scope *keyword*

<b>Description</b>	Controls the instantiation of the policer between subinterfaces global: policer is instantiated per direction and shared between ACL, requires filter subinterface-specific disabled subinterface: policer is instantiated per subinterface and per direction, requires filter subinterface-specific input-and-ouput
<b>Context</b>	<a href="#">acl policers policer name string scope keyword</a>
<b>Tree</b>	<a href="#">scope</a>
<b>Default</b>	global
<b>Options</b>	<ul style="list-style-type: none"> <li>• global</li> <li>• subinterface</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### statistics

<b>Description</b>	Container for linecard policer statistics.
<b>Context</b>	<a href="#">acl policers policer name string statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### aggregate

<b>Description</b>	None of these statistics are populated if the policer is configured as entry-specific=true. If entry-specific=false and subinterface-specific=true, this is sum of all the entries and all the policer templates instantiated for all subintrefaces.
--------------------	---

If entry-specific=false and subinterface-specific=false, this is sum of all the entries using this policer template.

<b>Context</b>	<a href="#">acl policers policer name</a> <i>string</i> <a href="#">statistics aggregate</a>
<b>Tree</b>	<a href="#">aggregate</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **conforming-octets** *number*

<b>Description</b>	The number of bytes that were considered conforming by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
<b>Context</b>	<a href="#">acl policers policer name</a> <i>string</i> <a href="#">statistics aggregate conforming-octets number</a>
<b>Tree</b>	<a href="#">conforming-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **conforming-packets** *number*

<b>Description</b>	The number of packets (actually Ethernet frames) that were considered conforming by the policer
<b>Context</b>	<a href="#">acl policers policer name</a> <i>string</i> <a href="#">statistics aggregate conforming-packets number</a>
<b>Tree</b>	<a href="#">conforming-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **exceeding-octets** *number*

<b>Description</b>	The number of bytes that were considered exceeding by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
<b>Context</b>	<a href="#">acl policers policer name</a> <i>string</i> <a href="#">statistics aggregate exceeding-octets number</a>
<b>Tree</b>	<a href="#">exceeding-octets</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### exceeding-packets *number*

<b>Description</b>	The number of packets (actually Ethernet frames) that were considered exceeding by the policer
<b>Context</b>	<a href="#">acl policers policer name string statistics aggregate exceeding-packets number</a>
<b>Tree</b>	<a href="#">exceeding-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### last-clear *string*

<b>Description</b>	Time of the last clear command that applied to these statistics
<b>Context</b>	<a href="#">acl policers policer name string statistics aggregate last-clear string</a>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### system-cpu-policer [name string](#)

<b>Description</b>	List of system CPU policer templates. For each policer in this list one or more policer instances are implemented in the XDP-CPM software and these policer instances process the aggregate of terminating traffic received from all linecards.
<b>Context</b>	<a href="#">acl policers system-cpu-policer name string</a>
<b>Tree</b>	<a href="#">system-cpu-policer</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	User-defined name of the policer
<b>Context</b>	<a href="#">acl policers system-cpu-policer name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**entry-specific** *boolean*

<b>Description</b>	If set to false, only one policer instance is created from this template and it is shared by all entries of all cpm-filter ACLs that refer to this policer.  If set to true, multiple policer instances are created from this template, one for each cpm-filter entry that refers to the policer template.
<b>Context</b>	<a href="#">acl policers system-cpu-policer name</a> <i>string</i> <a href="#">entry-specific</a> <i>boolean</i>
<b>Tree</b>	<a href="#">entry-specific</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-packet-burst** *number*

<b>Description</b>	The maximum depth of the policer bucket in number of packets
<b>Context</b>	<a href="#">acl policers system-cpu-policer name</a> <i>string</i> <a href="#">max-packet-burst</a> <i>number</i>
<b>Tree</b>	<a href="#">max-packet-burst</a>
<b>Range</b>	16 to 4000000
<b>Default</b>	16
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**peak-packet-rate** *number*

<b>Description</b>	The maximum number of packets per second (bucket empty/fill rate)
<b>Context</b>	<a href="#">acl policers system-cpu-policer name</a> <i>string</i> <a href="#">peak-packet-rate</a> <i>number</i>
<b>Tree</b>	<a href="#">peak-packet-rate</a>
<b>Range</b>	1 to 4000000

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Container for system CPU policer statistics None of these statistics are populated if the policer is configured as entry-specific=true.
<b>Context</b>	<a href="#">acl policers system-cpu-policer name</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## conforming-octets *number*

<b>Description</b>	The number of bytes that were considered conforming by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
<b>Context</b>	<a href="#">acl policers system-cpu-policer name</a> <i>string</i> <a href="#">statistics conforming-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">conforming-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## conforming-packets *number*

<b>Description</b>	The number of packets (actually Ethernet frames) that were considered conforming by the policer
<b>Context</b>	<a href="#">acl policers system-cpu-policer name</a> <i>string</i> <a href="#">statistics conforming-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">conforming-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**exceeding-octets** *number*

<b>Description</b>	The number of bytes that were considered exceeding by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
<b>Context</b>	<a href="#">acl policers system-cpu-policer name</a> <i>string</i> <a href="#">statistics exceeding-octets number</a>
<b>Tree</b>	<a href="#">exceeding-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**exceeding-packets** *number*

<b>Description</b>	The number of packets (actually Ethernet frames) that were considered exceeding by the policer
<b>Context</b>	<a href="#">acl policers system-cpu-policer name</a> <i>string</i> <a href="#">statistics exceeding-packets number</a>
<b>Tree</b>	<a href="#">exceeding-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-clear** *string*

<b>Description</b>	Time of the last clear command that applied to these statistics
<b>Context</b>	<a href="#">acl policers system-cpu-policer name</a> <i>string</i> <a href="#">statistics last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tcam-profile** *keyword*

<b>Description</b>	Specify the TCAM resource management profile
<b>Context</b>	<a href="#">acl tcam-profile</a> <i>keyword</i>
<b>Tree</b>	<a href="#">tcam-profile</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• default</li> </ul>

---

Default allocation that provides twice as many resources to ingress ACLs as egress ACLs

- ipv4-egress-scaled

Alternate allocation that provides more resources to IPv4 egress ACLs than any other application

- acl-mfc-ipv4-only

Alternate allocation that provides maximum entries for IPv4 ACLs and IPv4 MFC policies and provides no space for MAC ACLs, IPv6 ACLs or IPv6 MFC policies

**Configurable**

True

**Platforms**

7220 IXR-D4, 7220 IXR-D5

## 4.1 bfd Descriptions

### bfd

<b>Description</b>	Context to configure BFD parameters and report BFD sessions state
<b>Context</b>	<a href="#">bfd</a>
<b>Tree</b>	<a href="#">bfd</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### micro-bfd-sessions

<b>Description</b>	Context to configure micro-BFD session parameters and report sessions state
<b>Context</b>	<a href="#">bfd micro-bfd-sessions</a>
<b>Tree</b>	<a href="#">micro-bfd-sessions</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### lag-interface [name reference](#)

<b>Description</b>	List of interface references to associate a micro-BFD session config and state
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name reference</a>
<b>Tree</b>	<a href="#">lag-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### name [reference](#)

<b>Description</b>	Reference ID for associated lag interface Example: lag1 (Reference Interface lag1).
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name reference</a>

<b>Reference</b>	<a href="#">interface name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **admin-state** *keyword*

<b>Description</b>	Administratively enable or disable BFD for this subinterface
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **desired-minimum-transmit-interval** *number*

<b>Description</b>	<p>The minimum interval between transmission of BFD control packets</p> <p>This value is advertised to the peer, however the actual interval used is specified by taking the maximum of desired-minimum-transmit-interval and the value of the remote required-minimum-recv interval value. This value is specified as an integer number of microseconds.</p>
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">desired-minimum-transmit-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">desired-minimum-transmit-interval</a>
<b>Range</b>	10000 to 100000000
<b>Default</b>	1000000
<b>Units</b>	microseconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**detection-multiplier** *number*

<b>Description</b>	The number of packets that must be missed to declare this session as down The detection interval for the BFD session is calculated by multiplying the value of the negotiated transmission interval by this value.
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">detection-multiplier number</a>
<b>Tree</b>	<a href="#">detection-multiplier</a>
<b>Range</b>	3 to 20
<b>Default</b>	3
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**local-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	IP address to be used as source address in BFD packets
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">local-address (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">local-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**member-interface** *name string*

<b>Description</b>	List of interface references to associate a micro-BFD session config and state
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">member-interface name string</a>
<b>Tree</b>	<a href="#">member-interface</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**name** *string*

<b>Description</b>	Reference ID for associated interface Example: ethernet-2/1 (Reference Interface ethernet-2/1).
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">member-interface name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**active-receive-interval** *number*

<b>Description</b>	The receive interval currently being used by this BFD session This is the amount of time the BFD state machine expects between receiving BFD messages from the remote peer.
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">member-interface name</a> <i>string</i> <a href="#">active-receive-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">active-receive-interval</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**active-transmit-interval** *number*

<b>Description</b>	The transmit interval currently being used by this BFD session This is the amount of time the local BFD agent will wait between the sending of BFD messages to the remote peer
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">member-interface name</a> <i>string</i> <a href="#">active-transmit-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">active-transmit-interval</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**async**

<b>Description</b>	Container for async BFD operational state parameters
--------------------	--

<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">member-interface name</a> <i>string async</i>
<b>Tree</b>	<a href="#">async</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-clear** *string*

<b>Description</b>	Timestamp of the last time the session counters were cleared.
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">member-interface name</a> <i>string async last-clear string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-packet-received** *string*

<b>Description</b>	Timestamp for when the last BFD packet was received for this session
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">member-interface name</a> <i>string async last-packet-received string</i>
<b>Tree</b>	<a href="#">last-packet-received</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-packet-transmitted** *string*

<b>Description</b>	Timestamp for when the last BFD packet was transmitted for this session
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">member-interface name</a> <i>string async last-packet-transmitted string</i>
<b>Tree</b>	<a href="#">last-packet-transmitted</a>
<b>String Length</b>	20 to 32

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### received-errored-packets *number*

<b>Description</b>	Counter for the number of BFD packets received with BFD level errors
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">member-interface name</a> <i>string async received-errored-packets number</i>
<b>Tree</b>	<a href="#">received-errored-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### received-packets *number*

<b>Description</b>	Counter for the number of BFD packets received for this session
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">member-interface name</a> <i>string async received-packets number</i>
<b>Tree</b>	<a href="#">received-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### transmitted-packets *number*

<b>Description</b>	Counter for the number of BFD packets transmitted for this session
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">member-interface name</a> <i>string async transmitted-packets number</i>
<b>Tree</b>	<a href="#">transmitted-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **up-transitions** *number*

**Description** Counter for the number of UP transitions for this BFD session

**Context** [bfd micro-bfd-sessions lag-interface name](#) *reference* [member-interface name](#) *string* [async up-transitions](#) *number*

**Tree** [up-transitions](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **failure-transitions** *number*

**Description** The number of times that the BFD session has transitioned out of the up state

**Context** [bfd micro-bfd-sessions lag-interface name](#) *reference* [member-interface name](#) *string* [failure-transitions](#) *number*

**Tree** [failure-transitions](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-failure-time** *string*

**Description** Timestamp of the last BFD session transition out of the up state to down state

**Context** [bfd micro-bfd-sessions lag-interface name](#) *reference* [member-interface name](#) *string* [last-failure-time](#) *string*

**Tree** [last-failure-time](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-state-transition** *string*

<b>Description</b>	Timestamp of the last micro-BFD session transition from any state to any state. Time of the session in the current state can be calculated from this value.
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">member-interface name</a> <i>string last-state-transition string</i>
<b>Tree</b>	<a href="#">last-state-transition</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**local-diagnostic-code** *keyword*

<b>Description</b>	The local BFD diagnostic code indicating the most recent reason for failure of this BFD session
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">member-interface name</a> <i>string local-diagnostic-code keyword</i>
<b>Tree</b>	<a href="#">local-diagnostic-code</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• NO_DIAGNOSTIC No diagnostic code was specified, or the session has not changed state</li> <li>• DETECTION_TIMEOUT The control detection time expired: no BFD packet was received within the required period</li> <li>• ECHO_FAILED The BFD echo function failed - echo packets have not been received for the required period of time</li> <li>• NEIGHBOR_SIGNED_DOWN The neighbor signaled session down</li> <li>• FORWARDING_RESET The forwarding plane in the local system was reset The remote system cannot rely on the forwarding state of the device specifying this error code.</li> <li>• PATH_DOWN Signalling outside of BFD specified that the path underlying this session has failed</li> <li>• CONCATENATED_PATH_DOWN</li> </ul>

A segment on the path between source and destination has failed

When a BFD session runs over a series of path segments, this error code indicates that a subsequent path segment (i.e., one in the transmit path between the source and destination of the session) has failed.

- ADMIN\_DOWN

The BFD session has been administratively disabled by the peer

- REVERSE\_CONCATENATED\_PATH\_DOWN

A segment on the reverse path between destination and source has failed

In the case that a BFD session is running over a series of path segments, this error code indicates that a path segment on the reverse path (i.e., in the transmit direction from the destination to the source of the session) has failed.

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### local-discriminator *number*

**Description**

BFD session local discriminator

**Context**

[bfd micro-bfd-sessions lag-interface name](#) *reference* [member-interface name](#) *string* [local-discriminator](#) *number*

**Tree**

[local-discriminator](#)

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### remote-control-plane-independent *boolean*

**Description**

Indicates if the remote neighbor has set the control independent flag

**Context**

[bfd micro-bfd-sessions lag-interface name](#) *reference* [member-interface name](#) *string* [remote-control-plane-independent](#) *boolean*

**Tree**

[remote-control-plane-independent](#)

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**remote-diagnostic-code** *keyword*

<b>Description</b>	The remote BFD diagnostic code indicating the remote system's reason for failure of the BFD session
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">member-interface name</a> <i>string remote-diagnostic-code keyword</i>
<b>Tree</b>	<a href="#">remote-diagnostic-code</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>NO_DIAGNOSTIC</b> No diagnostic code was specified, or the session has not changed state</li> <li>• <b>DETECTION_TIMEOUT</b> The control detection time expired: no BFD packet was received within the required period</li> <li>• <b>ECHO_FAILED</b> The BFD echo function failed - echo packets have not been received for the required period of time</li> <li>• <b>NEIGHBOR_SIGNED_DOWN</b> The neighbor signaled session down</li> <li>• <b>FORWARDING_RESET</b> The forwarding plane in the local system was reset The remote system cannot rely on the forwarding state of the device specifying this error code.</li> <li>• <b>PATH_DOWN</b> Signalling outside of BFD specified that the path underlying this session has failed</li> <li>• <b>CONCATENATED_PATH_DOWN</b> A segment on the path between source and destination has failed When a BFD session runs over a series of path segments, this error code indicates that a subsequent path segment (i.e., one in the transmit path between the source and destination of the session) has failed.</li> <li>• <b>ADMIN_DOWN</b> The BFD session has been administratively disabled by the peer</li> <li>• <b>REVERSE_CONCATENATED_PATH_DOWN</b> A segment on the reverse path between destination and source has failed In the case that a BFD session is running over a series of path segments, this error code indicates that a path segment on the reverse path (i.e., in the transmit direction from the destination to the source of the session) has failed.</li> </ul>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### remote-discriminator *number*

**Description** A unique identifier used by the remote system to identify this BFD session

**Context** [bfd micro-bfd-sessions lag-interface name](#) *reference* [member-interface name](#) *string* [remote-discriminator number](#)

**Tree** [remote-discriminator](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### remote-minimum-receive-interval *number*

**Description** The value of the minimum receive interval that was specified by the peer  
This value references the value in the most recent BFD control packet received from the peer.

**Context** [bfd micro-bfd-sessions lag-interface name](#) *reference* [member-interface name](#) *string* [remote-minimum-receive-interval number](#)

**Tree** [remote-minimum-receive-interval](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### remote-multiplier *number*

**Description** The current number of packets that must be missed to declare the session as down  
The detection interval for the BFD session is calculated by multiplying the value of the negotiated transmission interval by this value.

**Context** [bfd micro-bfd-sessions lag-interface name](#) *reference* [member-interface name](#) *string* [remote-multiplier number](#)

**Tree** [remote-multiplier](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### remote-session-state *keyword*

**Description** The reported state of the BFD session according to the remote system  
This state reflects the last state reported in a BFD control packet.

**Context** [bfd micro-bfd-sessions lag-interface name](#) *reference* [member-interface name](#) *string* [remote-session-state](#) *keyword*

**Tree** [remote-session-state](#)

**Options**

- ADMIN\_DOWN  
The BFD session is administratively disabled
- DOWN  
The BFD session is perceived to be down by the system
- INIT  
The BFD session is perceived to be initialising by the system
- UP  
The BFD session is perceived to be up by the system

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### session-state *keyword*

**Description** The state of the BFD session perceived by the local system

**Context** [bfd micro-bfd-sessions lag-interface name](#) *reference* [member-interface name](#) *string* [session-state](#) *keyword*

**Tree** [session-state](#)

**Options**

- ADMIN\_DOWN  
The BFD session is administratively disabled
- DOWN  
The BFD session is perceived to be down by the system
- INIT  
The BFD session is perceived to be initialising by the system
- UP

The BFD session is perceived to be up by the system

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### remote-address (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The remote IP address for the far-end of the BFD session This must be the same IP version as the local-address.
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">remote-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">remote-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### required-minimum-receive *number*

<b>Description</b>	The minimum interval between received BFD control packets that this system should support  This value is advertised to the remote peer to indicate the maximum frequency (i.e., minimum inter-packet interval) between BFD control packets that is acceptable to the local system. This value is specified as an integer number of microseconds.
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name</a> <i>reference</i> <a href="#">required-minimum-receive number</a>
<b>Tree</b>	<a href="#">required-minimum-receive</a>
<b>Range</b>	10000 to 100000000
<b>Default</b>	1000000
<b>Units</b>	microseconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**network-instance** *name string*

<b>Description</b>	network-instance context for BFD session.
<b>Context</b>	<a href="#">bfd network-instance name string</a>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	A unique name identifying the network instance
<b>Context</b>	<a href="#">bfd network-instance name string</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**peer** *local-discriminator number*

<b>Description</b>	BFD session state related to this peer
<b>Context</b>	<a href="#">bfd network-instance name string peer local-discriminator number</a>
<b>Tree</b>	<a href="#">peer</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**local-discriminator** *number*

<b>Description</b>	BFD session local discriminator
<b>Context</b>	<a href="#">bfd network-instance name string peer local-discriminator number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active-receive-interval** *number*

<b>Description</b>	The receive interval currently being used by this BFD session This is the amount of time the BFD state machine expects between receiving BFD messages from the remote peer.
<b>Context</b>	<a href="#">bfd network-instance name string peer local-discriminator number active-receive-interval number</a>

<b>Tree</b>	<a href="#">active-receive-interval</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **active-transmit-interval** *number*

<b>Description</b>	The transmit interval currently being used by this BFD session This is the amount of time the local BFD agent will wait between the sending of BFD messages to the remote peer
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">active-transmit-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">active-transmit-interval</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **async**

<b>Description</b>	Container for async BFD operational state parameters
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">async</a>
<b>Tree</b>	<a href="#">async</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-clear** *string*

<b>Description</b>	Timestamp of the last time the session counters were cleared.
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">async</a> <a href="#">last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-packet-received** *string*

<b>Description</b>	Timestamp for when the last BFD packet was received for this session
--------------------	--

<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">async last-packet-received</a> <i>string</i>
<b>Tree</b>	<a href="#">last-packet-received</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-packet-transmitted** *string*

<b>Description</b>	Timestamp for when the last BFD packet was transmitted for this session
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">async last-packet-transmitted</a> <i>string</i>
<b>Tree</b>	<a href="#">last-packet-transmitted</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **received-errored-packets** *number*

<b>Description</b>	Counter for the number of BFD packets received with BFD level errors
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">async received-errored-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">received-errored-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **received-packets** *number*

<b>Description</b>	Counter for the number of BFD packets received for this session
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">async received-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">received-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**transmitted-packets** *number*

<b>Description</b>	Counter for the number of BFD packets transmitted for this session
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">async transmitted-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">transmitted-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**up-transitions** *number*

<b>Description</b>	Counter for the number of UP transitions for this BFD session
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">async up-transitions</a> <i>number</i>
<b>Tree</b>	<a href="#">up-transitions</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**failure-transitions** *number*

<b>Description</b>	The number of times that the BFD session has transitioned out of the up state
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">failure-transitions</a> <i>number</i>
<b>Tree</b>	<a href="#">failure-transitions</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv4-unnumbered-interface** *string*

<b>Description</b>	For IPv4 unnumbered sessions only, indicates the local interface with which the session is associated.
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">ipv4-unnumbered-interface</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-unnumbered-interface</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### ipv6-link-local-interface *string*

<b>Description</b>	For IPv6 link local sessions only, indicates the local interface with which the session is associated.
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator number</a> <a href="#">ipv6-link-local-interface</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv6-link-local-interface</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### last-failure-time *string*

<b>Description</b>	Timestamp of the last BFD session transition out of the up state to down state
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator number</a> <a href="#">last-failure-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-failure-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### last-state-transition *string*

<b>Description</b>	Timestamp of the last BFD session transition from any state to any state Time of the session in the current state can be calculated from this value.
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator number</a> <a href="#">last-state-transition</a> <i>string</i>
<b>Tree</b>	<a href="#">last-state-transition</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### local-address (*ipv4-address* | *ipv6-address*)

<b>Description</b>	IP address to be used as source address in BFD packets
--------------------	--

<b>Context</b>	<code>bfd network-instance name string peer local-discriminator number local-address (ipv4-address   ipv6-address)</code>
<b>Tree</b>	<code>local-address</code>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **local-diagnostic-code** *keyword*

<b>Description</b>	The local BFD diagnostic code indicating the most recent reason for failure of this BFD session
<b>Context</b>	<code>bfd network-instance name string peer local-discriminator number local-diagnostic-code keyword</code>
<b>Tree</b>	<code>local-diagnostic-code</code>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>NO_DIAGNOSTIC</b> No diagnostic code was specified, or the session has not changed state</li> <li>• <b>DETECTION_TIMEOUT</b> The control detection time expired: no BFD packet was received within the required period</li> <li>• <b>ECHO_FAILED</b> The BFD echo function failed - echo packets have not been received for the required period of time</li> <li>• <b>NEIGHBOR_SIGNED_DOWN</b> The neighbor signaled session down</li> <li>• <b>FORWARDING_RESET</b> The forwarding plane in the local system was reset The remote system cannot rely on the forwarding state of the device specifying this error code.</li> <li>• <b>PATH_DOWN</b> Signalling outside of BFD specified that the path underlying this session has failed</li> <li>• <b>CONCATENATED_PATH_DOWN</b> A segment on the path between source and destination has failed When a BFD session runs over a series of path segments, this error code indicates that a subsequent path segment (i.e., one in the transmit path between the source and destination of the session) has failed.</li> <li>• <b>ADMIN_DOWN</b> The BFD session has been administratively disabled by the peer</li> <li>• <b>REVERSE_CONCATENATED_PATH_DOWN</b> A segment on the reverse path between destination and source has failed</li> </ul>

In the case that a BFD session is running over a series of path segments, this error code indicates that a path segment on the reverse path (i.e., in the transmit direction from the destination to the source of the session) has failed.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **oper-state** *keyword*

<b>Description</b>	Details the operational state of the session
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <b>oper-state</b> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting</li> </ul>

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **remote-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The remote IP address for the far-end of the BFD session This must be the same IP version as the local-address.
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">remote-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">remote-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **remote-control-plane-independent** *boolean*

<b>Description</b>	Indicates if the remote neighbor has set the control independent flag
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">remote-control-plane-independent</a> <i>boolean</i>
<b>Tree</b>	<a href="#">remote-control-plane-independent</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **remote-diagnostic-code** *keyword*

<b>Description</b>	The remote BFD diagnostic code indicating the remote system's reason for failure of the BFD session
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">remote-diagnostic-code</a> <i>keyword</i>
<b>Tree</b>	<a href="#">remote-diagnostic-code</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• NO_DIAGNOSTIC</li> </ul>

No diagnostic code was specified, or the session has not changed state

- DETECTION\_TIMEOUT

The control detection time expired: no BFD packet was received within the required period

- ECHO\_FAILED

The BFD echo function failed - echo packets have not been received for the required period of time

- NEIGHBOR\_SIGNALED\_DOWN

The neighbor signaled session down

- FORWARDING\_RESET

The forwarding plane in the local system was reset

The remote system cannot rely on the forwarding state of the device specifying this error code.

- PATH\_DOWN

Signalling outside of BFD specified that the path underlying this session has failed

- CONCATENATED\_PATH\_DOWN

A segment on the path between source and destination has failed

When a BFD session runs over a series of path segments, this error code indicates that a subsequent path segment (i.e., one in the transmit path between the source and destination of the session) has failed.

- ADMIN\_DOWN

The BFD session has been administratively disabled by the peer

- REVERSE\_CONCATENATED\_PATH\_DOWN

A segment on the reverse path between destination and source has failed

In the case that a BFD session is running over a series of path segments, this error code indicates that a path segment on the reverse path (i.e., in the transmit direction from the destination to the source of the session) has failed.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### remote-discriminator *number*

<b>Description</b>	A unique identifier used by the remote system to identify this BFD session
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator number</a> <a href="#">remote-discriminator number</a>
<b>Tree</b>	<a href="#">remote-discriminator</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **remote-minimum-receive-interval** *number*

**Description** The value of the minimum receive interval that was specified by the peer  
This value references the value in the most recent BFD control packet received from the peer.

**Context** [bfd network-instance name](#) *string* [peer local-discriminator](#) *number* [remote-minimum-receive-interval](#) *number*

**Tree** [remote-minimum-receive-interval](#)

**Configurable** False

**Platforms** Supported on all platforms

### **remote-multiplier** *number*

**Description** The current number of packets that must be missed to declare the session as down  
The detection interval for the BFD session is calculated by multiplying the value of the negotiated transmission interval by this value.

**Context** [bfd network-instance name](#) *string* [peer local-discriminator](#) *number* [remote-multiplier](#) *number*

**Tree** [remote-multiplier](#)

**Configurable** False

**Platforms** Supported on all platforms

### **remote-session-state** *keyword*

**Description** The reported state of the BFD session according to the remote system  
This state reflects the last state reported in a BFD control packet.

**Context** [bfd network-instance name](#) *string* [peer local-discriminator](#) *number* [remote-session-state](#) *keyword*

**Tree** [remote-session-state](#)

**Options**

- ADMIN\_DOWN  
The BFD session is administratively disabled
- DOWN  
The BFD session is perceived to be down by the system
- INIT

The BFD session is perceived to be initialising by the system

- UP

The BFD session is perceived to be up by the system

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **session-state** *keyword*

<b>Description</b>	The state of the BFD session perceived by the local system
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">session-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">session-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ADMIN_DOWN The BFD session is administratively disabled</li> <li>• DOWN The BFD session is perceived to be down by the system</li> <li>• INIT The BFD session is perceived to be initialising by the system</li> <li>• UP The BFD session is perceived to be up by the system</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **sr-policy-endpoint** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	SR-Policy endpoint IP address associated with this seamless BFD session
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">sr-policy-endpoint</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">sr-policy-endpoint</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **subscribed-protocols** *string*

<b>Description</b>	Indicates the set of protocols that currently use this BFD session for liveness detection
--------------------	---

<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">subscribed-protocols</a> <i>string</i>
<b>Tree</b>	<a href="#">subscribed-protocols</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**te-policy-name** *string*

<b>Description</b>	Name of the TE-Policy associated with this seamless BFD session
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">te-policy-name</a> <i>string</i>
<b>Tree</b>	<a href="#">te-policy-name</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**te-policy-protocol-origin** *keyword*

<b>Description</b>	Indicates the protocol type used to originate the TE-Policy associated with this seamless BFD session
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">te-policy-protocol-origin</a> <i>keyword</i>
<b>Tree</b>	<a href="#">te-policy-protocol-origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• LOCAL The associated TE-Policy originated from local configuration</li> <li>• PCEP The associated TE-Policy from a PCEP controller</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**te-policy-segment-list-index** *number*

<b>Description</b>	Indicates the segment list index of the TE-Policy associated with this seamless BFD session
<b>Context</b>	<a href="#">bfd network-instance name</a> <i>string</i> <a href="#">peer local-discriminator</a> <i>number</i> <a href="#">te-policy-segment-list-index</a> <i>number</i>
<b>Tree</b>	<a href="#">te-policy-segment-list-index</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **te-policy-segment-list-lsp-index** *number*

**Description** Indicates the lsp index for the segment list of the TE-Policy associated with this seamless BFD session

**Context** [bfd network-instance name](#) *string* [peer local-discriminator](#) *number* [te-policy-segment-list-lsp-index](#) *number*

**Tree** [te-policy-segment-list-lsp-index](#)

**Configurable** False

**Platforms** Supported on all platforms

### **te-policy-type**

**Description** Type of TE-Policy associated with this seamless BFD session

**Context** [bfd network-instance name](#) *string* [peer local-discriminator](#) *number* [te-policy-type](#)

**Tree** [te-policy-type](#)

**Configurable** False

**Platforms** Supported on all platforms

### **subinterface** *id string*

**Description** List of subinterface references to associating BFD config and state

**Context** [bfd subinterface id](#) *string*

**Tree** [subinterface](#)

**Configurable** True

**Platforms** Supported on all platforms

### **id** *string*

**Description** Reference ID for associated subinterface Example: ethernet-2/1.100 (Reference Interface ethernet-2/1, subinterface 100).

**Context** [bfd subinterface id](#) *string*

**String Length** 5 to 25

**Configurable** True

**Platforms** Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable BFD for this subinterface
<b>Context</b>	<a href="#">bfd subinterface id</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**desired-minimum-transmit-interval** *number*

<b>Description</b>	<p>The minimum interval between transmission of BFD control packets</p> <p>This value is advertised to the peer, however the actual interval used is specified by taking the maximum of desired-minimum-transmit-interval and the value of the remote required-minimum-receive interval value. This value is specified as an integer number of microseconds.</p>
<b>Context</b>	<a href="#">bfd subinterface id</a> <i>string</i> <a href="#">desired-minimum-transmit-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">desired-minimum-transmit-interval</a>
<b>Range</b>	10000 to 100000000
<b>Default</b>	1000000
<b>Units</b>	microseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**detection-multiplier** *number*

<b>Description</b>	<p>The number of packets that must be missed to declare this session as down</p> <p>The detection interval for the BFD session is calculated by multiplying the value of the negotiated transmission interval by this value.</p>
<b>Context</b>	<a href="#">bfd subinterface id</a> <i>string</i> <a href="#">detection-multiplier</a> <i>number</i>
<b>Tree</b>	<a href="#">detection-multiplier</a>
<b>Range</b>	3 to 20
<b>Default</b>	3
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **max-hop-count** *number*

**Description** TTL to be used in the BFD IP header for multihop BFD.

**Context** [bfd subinterface id](#) *string* [max-hop-count](#) *number*

**Tree** [max-hop-count](#)

**Range** 2 to 255

**Default** 255

**Configurable** True

**Platforms** Supported on all platforms

### **minimum-echo-receive-interval** *number*

**Description** The minimum interval between echo packets the local node can receive  
Implicitly enabled echo mode on the associated interface.

**Context** [bfd subinterface id](#) *string* [minimum-echo-receive-interval](#) *number*

**Tree** [minimum-echo-receive-interval](#)

**Range** 0 | 250000 to 100000000

**Default** 0

**Configurable** True

**Platforms** Supported on all platforms

### **required-minimum-receive** *number*

**Description** The minimum interval between received BFD control packets that this system should support  
  
This value is advertised to the remote peer to indicate the maximum frequency (i.e., minimum inter-packet interval) between BFD control packets that is acceptable to the local system. This value is specified as an integer number of microseconds.

**Context** [bfd subinterface id](#) *string* [required-minimum-receive](#) *number*

**Tree** [required-minimum-receive](#)

**Range** 10000 to 100000000

**Default** 1000000

**Units** microseconds

---

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**total-bfd-sessions** *number*

<b>Description</b>	Counter for the total number of BFD sessions
<b>Context</b>	<a href="#">bfd total-bfd-sessions</a> <i>number</i>
<b>Tree</b>	<a href="#">total-bfd-sessions</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-unmatched-bfd-packets** *number*

<b>Description</b>	Counter for the total number of BFD packets received not matching a BFD session
<b>Context</b>	<a href="#">bfd total-unmatched-bfd-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">total-unmatched-bfd-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## 5.1 interface Descriptions

### interface `name string`

<b>Description</b>	The list of named interfaces on the device
<b>Context</b>	<a href="#">interface name string</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### name `string`

<b>Description</b>	<p>The name of the interface</p> <p>Valid options are: irb&lt;N&gt;, N=0..255 lif-&lt;lif_name&gt; enp&lt;bus&gt;s&lt;dev&gt;f&lt;fn&gt;, bus=0..255, dev=0..31, fn=0..7 vhn-&lt;vhn_name&gt; lag&lt;N&gt;, N=1..1000 [note1] lo&lt;N&gt;, N=0..255 mgmt0 mgmt0-standby ethernet-&lt;slot&gt;/&lt;port&gt; ethernet-&lt;slot&gt;/&lt;mda&gt;/&lt;port&gt; system0 sync0</p> <p>&lt;lif_name&gt;=Linux interface name &lt;vhn_name&gt;=vhost interface name &lt;slot&gt;=slot number {1,2,3,..} &lt;mda&gt;=mda id {a,b,c,d} &lt;port&gt;=port id {1,2,3,..}</p> <p>[note1] The maximum number of LAGs per platform is as follows: D1: 32 D2-D3: 128 D4-D5: 64 H2-H3: 127 H4: 255 IXR: 128</p>
<b>Context</b>	<a href="#">interface name string</a>
<b>String Length</b>	3 to 20
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### adapter

<b>Description</b>	State for adapters
<b>Context</b>	<a href="#">interface name string adapter</a>
<b>Tree</b>	<a href="#">adapter</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**model-number** *string*

<b>Description</b>	Model information for the adapter  This is the information as read from the EEPROM of the part. The string is expected to contain printable ASCII characters, but unprintable ASCII characters read from the EEPROM are not filtered out.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">adapter</a> <a href="#">model-number</a> <i>string</i>
<b>Tree</b>	<a href="#">model-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	Type of adapter for the port
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">adapter</a> <a href="#">type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• unknown</li> <li>• qsfp28-to-sfp+/sfp28</li> <li>• cfp-to-qsfp28</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**vendor-manufacture-date** *string*

<b>Description</b>	Vendor's date code.  This is the information as read from the EEPROM of the part.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">adapter</a> <a href="#">vendor-manufacture-date</a> <i>string</i>
<b>Tree</b>	<a href="#">vendor-manufacture-date</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**vendor-oui** *string*

<b>Description</b>	Vendor's OUI which contains the IEEE company identifier for the vendor  This is the information as read from the EEPROM of the part. A value of all zero indicates that the vendor OUI is unspecified.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">adapter</a> <a href="#">vendor-oui</a> <i>string</i>

<b>Tree</b>	<a href="#">vendor-oui</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **vendor-part-number** *string*

<b>Description</b>	Vendor's part number or product name of the adapter  This is the information as read from the EEPROM of the part. An empty string indicates the vendor part number is unspecified. The string is expected to contain printable ASCII characters, but unprintable ASCII characters read from the EEPROM are not filtered out.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">adapter</a> <a href="#">vendor-part-number</a> <i>string</i>
<b>Tree</b>	<a href="#">vendor-part-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **vendor-serial-number** *string*

<b>Description</b>	Vendor's serial number of the adapter  This is the information as read from the EEPROM of the part. An empty string indicates the vendor serial number is unspecified. The string is expected to contain printable ASCII characters, but unprintable ASCII characters read from the EEPROM are not filtered out.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">adapter</a> <a href="#">vendor-serial-number</a> <i>string</i>
<b>Tree</b>	<a href="#">vendor-serial-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **admin-state** *keyword*

<b>Description</b>	The configured, desired state of the interface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## breakout-mode

**Description** Configuration of breakout options.  
 The 7220 D3 supports 4x10G and 4x25G breakout on ports 3-33. The 7220 D3L supports 4x10G and 4x25G breakout on ports 1-31. The 7220 H3 supports 4x10G, 2x100G/4x100G, and 2x200G breakout on ports 3-34. The 7220 H4 supports 4x100G breakout on ports 1-64. The 7220 D4 supports 4x100G breakout on ports 29-32. The 7220 D4 supports 4x25G breakout on ports 9, 23-27, 29-32. The 7220 D4 supports 4x10G breakout on ports 9, 23-27, 29-32. The 7220 D5 supports 4x10G, 4x25G, and 2x100G/4x100G breakout on ports 1-32. 7250 IXR-6e/10e 36p QSFPDD IMM all port: 4x100G, 2x100G, 4x25G, and 4x10G

**Context** [interface name](#) *string* [breakout-mode](#)

**Tree** [breakout-mode](#)

**Configurable** True

**Platforms** 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10e, 7250 IXR-6e

## breakout-port-speed *keyword*

**Description** The speed of each breakout port

**Context** [interface name](#) *string* [breakout-mode](#) [breakout-port-speed](#) *keyword*

**Tree** [breakout-port-speed](#)

**Options**

- 10G
- 25G
- 50G
- 100G
- 200G

**Configurable** True

**Platforms** 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10e, 7250 IXR-6e

## num-breakout-ports *keyword*

**Description** The number of breakout ports supported by this connector

**Context** [interface name](#) *string* [breakout-mode](#) [num-breakout-ports](#) *keyword*

<b>Tree</b>	<a href="#">num-breakout-ports</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• 2</li> <li>• 3</li> <li>• 4</li> <li>• 8</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10e, 7250 IXR-6e

### description *string*

<b>Description</b>	A user-configured description of the interface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">description</a> <i>string</i>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### ethernet

<b>Description</b>	Enter the ethernet context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a>
<b>Tree</b>	<a href="#">ethernet</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### aggregate-id *reference*

<b>Description</b>	lag interface with which this interface is associated
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a> <a href="#">aggregate-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">aggregate-id</a>
<b>Reference</b>	<a href="#">interface name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**auto-negotiate** *boolean*

<b>Description</b>	When set to true the interface uses auto-negotiation for speed, duplex and flow-control settings. When set to false, the transmission parameters are specified manually.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a> <a href="#">auto-negotiate</a> <i>boolean</i>
<b>Tree</b>	<a href="#">auto-negotiate</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1

**dac-link-training** *boolean*

<b>Description</b>	If the system detects that the transceiver is connected to a DAC cable then a true setting enables link training for better link stability. The link training setting must be the same at both ends of the DAC cable or else the link may not come up.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a> <a href="#">dac-link-training</a> <i>boolean</i>
<b>Tree</b>	<a href="#">dac-link-training</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H3, 7220 IXR-H4

**duplex-mode** *keyword*

<b>Description</b>	When auto-negotiate is true, this sets the duplex mode that will be advertised to the peer. When auto-negotiate is false, this directly sets the duplex mode of the interface.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a> <a href="#">duplex-mode</a> <i>keyword</i>
<b>Tree</b>	<a href="#">duplex-mode</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• full</li> <li>• half</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1

**flow-control**

<b>Description</b>	Enter the flow-control context
--------------------	--------------------------------

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet flow-control</a>
<b>Tree</b>	<a href="#">flow-control</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **receive** *boolean*

<b>Description</b>	<p>When this is true PAUSE frames received on this interface are accepted and processed, and, if auto-negotiation is enabled it also causes the capability to receive PAUSE frames to be signaled to the peer (applicable only to ports 1-48 of the 7220 IXR-D1 and to mgmt0 and mgmt0-standby ports).</p> <p>When this is false PAUSE frames received on this interface are ignored, and, if auto-negotiation is enabled it causes the capability to receive PAUSE frames to be signaled to the peer as non-support (applicable only to ports 1-48 of the 7220 IXR-D1 and to mgmt0 and mgmt0-standby ports)</p>
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet flow-control receive</a> <i>boolean</i>
<b>Tree</b>	<a href="#">receive</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **forwarding-viable** *boolean*

<b>Description</b>	<p>If true: this LAG member link should be used for the transmission of traffic if all other LAG/port attributes allow it.</p> <p>If false: this LAG member link should not be used for the transmission of traffic.</p> <p>In all cases: This LAG member link should process any received frames when it is an active member link. L2 protocols such as LLDP, LACP and micro-BFD should continue to be sent and processed.</p>
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet forwarding-viable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">forwarding-viable</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **hold-time**

<b>Description</b>	Configure interface hold timers for Ethernet interfaces
--------------------	---

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a> <a href="#">hold-time</a>
<b>Tree</b>	<a href="#">hold-time</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**down** *number*

<b>Description</b>	Holds link down events for the configured time  The hold-time down behavior is triggered with events that try to bring the ethernet interface down and can change quickly. It is not triggered with an admin-state disable event or interface disable due to other internal reasons (such as fabric unavailability). When running, the interface will not be brought down till the timer expires. The typical use of the hold-time down is to provide stability and avoid the protocols to advertise/withdraw messages if there are flapping optics. The hold-time down is aborted if the user does admin-state disable or if the interface is disabled due to other internal reasons that prevent the traffic to be forwarded on the interface.
--------------------	--

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a> <a href="#">hold-time</a> <a href="#">down</a> <i>number</i>
<b>Tree</b>	<a href="#">down</a>
<b>Range</b>	0   100 to 86400000
<b>Default</b>	0
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**down-expires** *string*

<b>Description</b>	The remaining time until the hold-time down expires and the interface goes operationally down.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a> <a href="#">hold-time</a> <a href="#">down-expires</a> <i>string</i>
<b>Tree</b>	<a href="#">down-expires</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**up** *number*

<b>Description</b>	Holds link up events for the configured time
--------------------	--

The hold-time up behavior is triggered with any event that tries to bring up the ethernet interface (interface admin-state enable, a reboot, etc). While the hold-time up is running, the transceiver laser will be enabled, however the higher layers will not be notified that the interface is operationally up until the timer expires.

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet hold-time up</a> <i>number</i>
<b>Tree</b>	<a href="#">up</a>
<b>Range</b>	0   100 to 86400000
<b>Default</b>	0
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **up-expires** *string*

<b>Description</b>	The remaining time until the hold-time up expires and the interface comes up.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet hold-time up-expires</a> <i>string</i>
<b>Tree</b>	<a href="#">up-expires</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **hw-mac-address** *string*

<b>Description</b>	The MAC address associated with the port
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet hw-mac-address</a> <i>string</i>
<b>Tree</b>	<a href="#">hw-mac-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **l2cp-transparency**

<b>Description</b>	Configuration and state of the Layer-2 Control Protocol transparency
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet l2cp-transparency</a>
<b>Tree</b>	<a href="#">l2cp-transparency</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## dot1x

**Description** Container for the configuration of 802.1x Port based Network Access Control.

**Context** [interface name](#) *string* [ethernet](#) [l2cp-transparency](#) [dot1x](#)

**Tree** [dot1x](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## oper-rule *keyword*

**Description** The operational state of the TCAM rule applied to ingress dot1x frames.

**Context** [interface name](#) *string* [ethernet](#) [l2cp-transparency](#) [dot1x](#) [oper-rule](#) *keyword*

**Tree** [oper-rule](#)

**Options**

- [trap-to-cpu-untagged](#)
- [drop-tagged-and-untagged](#)
- [tunnel-tagged-and-untagged](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## tunnel *boolean*

**Description** Configures if incoming dot1x frames are tunneled.

Dot1x frames are identified by MAC DA 01-80-c2-00-00-03 and Ethertype 0x888e.

**Context** [interface name](#) *string* [ethernet](#) [l2cp-transparency](#) [dot1x](#) [tunnel](#) *boolean*

**Tree** [tunnel](#)

**Default** false

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**lACP**

<b>Description</b>	Container for L2CP transparency of the Link Aggregation Control Protocol
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a> <a href="#">l2cp-transparency</a> <a href="#">lACP</a>
<b>Tree</b>	<a href="#">lACP</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**oper-rule** *keyword*

<b>Description</b>	The operational state of the TCAM rule applied to ingress LACP frames.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a> <a href="#">l2cp-transparency</a> <a href="#">lACP</a> <a href="#">oper-rule</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-rule</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">trap-to-cpu-untagged</a></li> <li>• <a href="#">drop-tagged-and-untagged</a></li> <li>• <a href="#">tunnel-tagged-and-untagged</a></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**tunnel** *boolean*

<b>Description</b>	Configures if incoming LACP frames are tunneled. LACP frames are identified by MAC DA 01-80-c2-00-00-02, Ethertype 0x8809 and slow-protocol sub-type 0x01.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a> <a href="#">l2cp-transparency</a> <a href="#">lACP</a> <a href="#">tunnel</a> <i>boolean</i>
<b>Tree</b>	<a href="#">tunnel</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**lldp**

<b>Description</b>	Container for L2CP transparency of the Link Layer Discovery Protocol
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a> <a href="#">l2cp-transparency</a> <a href="#">lldp</a>

<b>Tree</b>	<a href="#">lldp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **oper-rule** *keyword*

<b>Description</b>	The operational state of the TCAM rule applied to ingress LLDP frames.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a> <a href="#">l2cp-transparency</a> <a href="#">lldp</a> <a href="#">oper-rule</a> <i>keyword</i>

<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">trap-to-cpu-untagged</a></li> <li>• <a href="#">drop-tagged-and-untagged</a></li> <li>• <a href="#">tunnel-tagged-and-untagged</a></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **tunnel** *boolean*

<b>Description</b>	Configures if incoming LLDP frames are tunneled. LLDP frames are identified by MAC DA 01-80-c2-00-00-00 and Ethertype 0x88cc.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a> <a href="#">l2cp-transparency</a> <a href="#">lldp</a> <a href="#">tunnel</a> <i>boolean</i>
<b>Tree</b>	<a href="#">tunnel</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **ptp**

<b>Description</b>	Container for the configuration of Precision Time Protocol Peer-Delay frames.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a> <a href="#">l2cp-transparency</a> <a href="#">ptp</a>
<b>Tree</b>	<a href="#">ptp</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **oper-rule** *keyword*

**Description** The operational state of the TCAM rule applied to ingress ptp frames.

**Context** [interface name](#) *string* [ethernet l2cp-transparency ptp oper-rule](#) *keyword*

**Tree** [oper-rule](#)

**Options**

- trap-to-cpu-untagged
- drop-tagged-and-untagged
- tunnel-tagged-and-untagged

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **tunnel** *boolean*

**Description** Configures if incoming ptp frames are tunneled.  
ptp frames are identified by MAC DA 01-80-c2-00-00-0e and Ethertype 0x88f7.

**Context** [interface name](#) *string* [ethernet l2cp-transparency ptp tunnel](#) *boolean*

**Tree** [tunnel](#)

**Default** false

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **tunnel-all-l2cp** *boolean*

**Description** Configures the tunneling of all the L2CP protocols.  
When set to true this command triggers the installation of an ingress TCAM rule with the highest priority (above all the individual L2CP tunnel rules) which allows the forwarding of any Layer-2 Control Protocol coming into the interface. All the L2CP frames identified by MAC DA = 01:80:c2:00:00:0x or MAC DA = 01:80:c2:00:00:2x, with 'x' being any hex value, are tunneled. When set to false, all L2CP frames without a specific L2CP tunnel rule are discarded.

**Context** [interface name](#) *string* [ethernet l2cp-transparency tunnel-all-l2cp](#) *boolean*

<b>Tree</b>	<a href="#">tunnel-all-l2cp</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## xstp

<b>Description</b>	Container for the configuration of all the Spanning Tree Protocols. It includes Spanning Tree Protocol (STP), Rapid RSTP (RSTP) and Multiple STP (MSTP)
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet l2cp-transparency xstp</a>
<b>Tree</b>	<a href="#">xstp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## oper-rule *keyword*

<b>Description</b>	The operational state of the TCAM rule applied to ingress xSTP frames.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet l2cp-transparency xstp oper-rule</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-rule</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">trap-to-cpu-untagged</a></li> <li>• <a href="#">drop-tagged-and-untagged</a></li> <li>• <a href="#">tunnel-tagged-and-untagged</a></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## tunnel *boolean*

<b>Description</b>	Configures if incoming xSTP frames are tunneled. xSTP frames are identified by MAC DA 01-80-c2-00-00-00 and any Ethertype.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet l2cp-transparency xstp tunnel</a> <i>boolean</i>
<b>Tree</b>	<a href="#">tunnel</a>
<b>Default</b>	false

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **lacp-port-priority** *number*

<b>Description</b>	Configure the port priority for LACP. This value is used to determine which port should be activated with LACP fallback mode. Lower values are more preferred.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet lacp-port-priority</a> <i>number</i>
<b>Tree</b>	<a href="#">lacp-port-priority</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **mac-address** *string*

<b>Description</b>	MAC address of the interface  If not configured, this is set to the hw-mac-address, which is populated depending on interface type:  When deleted, will revert back to the value of hw-mac-address.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet mac-address</a> <i>string</i>
<b>Tree</b>	<a href="#">mac-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **physical-medium** *keyword*

<b>Description</b>	Indicates the PHY supported by the RJ45 port.  If the port is supported by a SFP, QSFP+, QSFP28 or QSFP-DD transceiver no value is populated in this leaf.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet physical-medium</a> <i>keyword</i>
<b>Tree</b>	<a href="#">physical-medium</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>1000BASE-T</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**port-speed keyword****Description**

The speed of the port or channel

The default speed of a port (when there is no configured value and auto-negotiation is disabled or unsupported) depends on the platform and port/connector number as follows:

mgmt0 and mgmt0-standby ports: 1G J2 IMM ports 1-32: 100G J2 IMM ports 33-36: 100G 7220-D1 ports 1-48: 1G 7220-D1 ports 49-52: 10G 7220-D2/D2L ports 1-48: 25G 7220-D2/D2L ports 49-56: 100G 7220-D2L ports 57-58: 10G 7220-D3 ports 1-2: 10G 7220-D3 ethernet-1/[3-34]: 100G 7220-D3 ethernet-1/[3-33]/n: 25G 7220-D3L ethernet-1/[1-32]: 100G 7220-D3L ethernet-1/[1-31]/n: 25G 7220-D3L ports 33-34: 10G 7220-D4 ports 1-28: 100G 7220-D4 ports 29-36: 400G 7220-D5 ports 1-32: 400G 7220-D5 ports 33-38: 10G 7220-H2 ports 1-128: 100G 7220-H3 ports 1-2: 10G 7220-H3 ports 3-34: 400G 7220-H4 ports 1-64: 400G 7220-H4 ports 65-66: 10G 7250 IXR-6e/10e 60p QSFP28 IMM all port: 100G 7250 IXR-6e/10e 36p QSFPDD-400 IMM all port: 400G

Supported speeds: mgmt0 and mgmt0-standby ports: 1G J2 IMM ports 1-32: 40G, 100G [note1] J2 IMM ports 33-36: 40G, 100G, 400G 7220-D1 ports 1-48: 10M, 100M, 1G 7220-D1 ports 49-52: 10G 7220-D2/D2L ports 1-48: 1G, 10G, 25G [note2] 7220-D2 ports 49-56: 10G, 25G, 40G, 100G 7220-D2L ports 49-56: 10G, 25G, 40G, 100G 7220-D2L ports 57-58: 10G 7220-D3 ports 1-2: 10G 7220-D3 ethernet-1/[3-34]: 10G, 25G, 40G, 50G, 100G 7220-D3 ethernet-1/[3-33]/n: 10G, 25G 7220-D3L ethernet-1/[1-32]: 10G, 25G, 40G, 50G, 100G 7220-D3L ethernet-1/[1-31]/n: 10G, 25G 7220-D3L ports 33-34: 10G 7220-D4 ports 1-8: 40G, 100G 7220-D4 ports 9-28: 10G, 25G, 40G, 100G 7220-D4 ports 29-36: 10G, 25G, 40G, 100G, 400G 7220-D5 ports 1-32: 40G, 100G, 400G 7220-D5 ports 33-38: 10G 7220-H2 ports 1-128: 100G 7220-H3 ports 1-2: 10G 7220-H3 ports 3-34: 40G, 100G, 200G, 400G 7220-H4 ports 1-64: 40G, 100G, 400G 7220-H4 ports 65-66: 10G 7250 IXR-6e/10e 60p QSFP28 IMM all port: 100G 7250 IXR-6e/10e 36p QSFPDD-400 IMM all port: 40G, 100G, 400G

[note1] Ports 9-12 cannot operate at different port speeds (some at 40G and others at 100G). The required speed of ports 9-12 is based on the port-speed of the lowest-numbered configured port in this block; if any higher-numbered port in the block is configured with a different port speed that port will not come up.

[note2] On 7220-D2: if one port in each consecutive group of 4 ports (1-4, 5-8, .. , 45-48) is configured and has a speed of 25G then the other 3 ports may only be configured if they also have a speed of 25G; if one port in each consecutive group of 4 ports (1-4, 5-8, .. , 45-48) is configured and has a speed of 1G or 10G the other 3 ports may only be configured if they also have a speed of 1G or 10G. On 7220-D2L: if one port in each port group of 4 ports ({1, 2, 3, 6}, {4, 5, 7, 9}, {8, 10, 11, 12}, {13, 14, 15, 18}, {16, 17, 19, 21}, {20, 22, 23, 24}, {25, 26, 27, 30}, {28, 29, 31, 33}, {32, 34, 35, 36}, {37, 38, 39, 42}, {40, 41, 43, 45}, {44, 46, 47, 48}) is configured and has a speed of 25G the other 3 ports may only be configured if they also have a speed of 25G; if one port in each port group of 4 ports is configured and has a speed

of 1G or 10G the other 3 ports may only be configured if they also have a speed of 1G or 10G.

7250 IXR details: If the interface corresponds to a connector that has no installed transceiver then the value is accepted without any checking or restriction, and info from state will display the configured value. Otherwise if the configured port-speed is NOT supported by the installed transceiver the port is forced operationally down.

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a> <a href="#">port-speed</a> <i>keyword</i>
<b>Tree</b>	<a href="#">port-speed</a>

### **ptp-asymmetry** *number*

<b>Description</b>	This command configures the PTP asymmetry delay on the Ethernet port This command is used to correct known asymmetry as part of time of day or phase recovery using PTP packets on both local and downstream PTP clocks.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet</a> <a href="#">ptp-asymmetry</a> <i>number</i>
<b>Tree</b>	<a href="#">ptp-asymmetry</a>
<b>Default</b>	0
<b>Units</b>	nanoseconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**reload-delay** *number*

<b>Description</b>	Configure reload-delay timer for Ethernet interfaces.  The reload-delay timer starts when the associated XDP interface state is learned. While the timer is running, the interface transceiver laser is disabled to avoid attracting traffic from the connected device at the other end of the interface. The reload-delay timer should be used in multi-homing interfaces and be set to a value long enough to allow the system to recover all the network protocols upon reboot, before start attracting traffic from the multi-homed device.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet reload-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">reload-delay</a>
<b>Range</b>	1 to 86400
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**reload-delay-expires** *string*

<b>Description</b>	The remaining time until the reload-delay expires and the interface can go operationally up.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet reload-delay-expires</a> <i>string</i>
<b>Tree</b>	<a href="#">reload-delay-expires</a>
<b>String Length</b>	20 to 32

### **in-fragment-frames** *number*

<b>Description</b>	Number of fragment frames received on the interface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics</a> <a href="#">in-fragment-frames</a> <i>number</i>
<b>Tree</b>	<a href="#">in-fragment-frames</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **in-jabber-frames** *number*

<b>Description</b>	Number of jabber frames received on the interface. Jabber frames are typically defined as oversize frames which also have a bad CRC
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics</a> <a href="#">in-jabber-frames</a> <i>number</i>
<b>Tree</b>	<a href="#">in-jabber-frames</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **in-mac-pause-frames** *number*

<b>Description</b>	Number of MAC layer PAUSE frames received on the interface.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics</a> <a href="#">in-mac-pause-frames</a> <i>number</i>
<b>Tree</b>	<a href="#">in-mac-pause-frames</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **in-oversize-frames** *number*

<b>Description</b>	Number of oversize frames received on the interface (i.e. frames that exceed the operational port MTU)
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics in-oversize-frames</a> <i>number</i>
<b>Tree</b>	<a href="#">in-oversize-frames</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-clear** *string*

<b>Description</b>	Timestamp of the last time the MAC counters were cleared
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-1024b-to-1518b-frames** *number*

<b>Description</b>	Number of transmitted Ethernet frames that are 1024-1518 bytes in length
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics out-1024b-to-1518b-frames</a> <i>number</i>
<b>Tree</b>	<a href="#">out-1024b-to-1518b-frames</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-128b-to-255b-frames** *number*

<b>Description</b>	Number of transmitted Ethernet frames that are 128-255 bytes in length
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics out-128b-to-255b-frames</a> <i>number</i>

<b>Tree</b>	<a href="#">out-128b-to-255b-frames</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-1519b-or-longer-frames** *number*

<b>Description</b>	Number of transmitted Ethernet frames that are 1519 bytes or longer
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics</a> <a href="#">out-1519b-or-longer-frames</a> <i>number</i>
<b>Tree</b>	<a href="#">out-1519b-or-longer-frames</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-256b-to-511b-frames** *number*

<b>Description</b>	Number of transmitted Ethernet frames that are 256-511 bytes in length
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics</a> <a href="#">out-256b-to-511b-frames</a> <i>number</i>
<b>Tree</b>	<a href="#">out-256b-to-511b-frames</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-512b-to-1023b-frames** *number*

<b>Description</b>	Number of transmitted Ethernet frames that are 512-1023 bytes in length
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics</a> <a href="#">out-512b-to-1023b-frames</a> <i>number</i>
<b>Tree</b>	<a href="#">out-512b-to-1023b-frames</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-64b-frames** *number*

<b>Description</b>	Number of transmitted Ethernet frames that are exactly 64 bytes in length
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics</a> <a href="#">out-64b-frames</a> <i>number</i>

<b>Tree</b>	<a href="#">out-64b-frames</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-65b-to-127b-frames** *number*

<b>Description</b>	Number of transmitted Ethernet frames that are 65-127 bytes in length
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics out-65b-to-127b-frames</a> <i>number</i>
<b>Tree</b>	<a href="#">out-65b-to-127b-frames</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-mac-pause-frames** *number*

<b>Description</b>	Number of MAC layer PAUSE frames sent on the interface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics out-mac-pause-frames</a> <i>number</i>
<b>Tree</b>	<a href="#">out-mac-pause-frames</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **storm-control**

<b>Description</b>	Enable the storm-control context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet storm-control</a>
<b>Tree</b>	<a href="#">storm-control</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **broadcast-rate** *number*

<b>Description</b>	The maximum rate allowed for ingress broadcast frames on the interface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet storm-control broadcast-rate</a> <i>number</i>

<b>Tree</b>	<a href="#">broadcast-rate</a>
<b>Range</b>	0 to 100000000
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **multicast-rate** *number*

<b>Description</b>	The maximum rate allowed for ingress multicast frames on the interface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet storm-control multicast-rate</a> <i>number</i>
<b>Tree</b>	<a href="#">multicast-rate</a>
<b>Range</b>	0 to 100000000
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **operational-broadcast-rate** *number*

<b>Description</b>	The operational maximum rate for ingress broadcast frames programmed on the interface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet storm-control operational-broadcast-rate</a> <i>number</i>
<b>Tree</b>	<a href="#">operational-broadcast-rate</a>
<b>Units</b>	kbps
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **operational-multicast-rate** *number*

<b>Description</b>	The operational maximum rate for ingress multicast frames programmed on the interface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet storm-control operational-multicast-rate</a> <i>number</i>
<b>Tree</b>	<a href="#">operational-multicast-rate</a>
<b>Units</b>	kbps
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **operational-unknown-unicast-rate** *number*

**Description** The operational maximum rate for ingress unknown unicast frames programmed on the interface

**Context** [interface name](#) *string* [ethernet storm-control operational-unknown-unicast-rate](#) *number*

**Tree** [operational-unknown-unicast-rate](#)

**Units** kbps

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **units** *keyword*

**Description** Units of storm-control policer in kbps or percentage of the interface bandwidth

**Context** [interface name](#) *string* [ethernet storm-control units](#) *keyword*

**Tree** [units](#)

**Default** percentage

**Options**

- kbps
- percentage

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **unknown-unicast-rate** *number*

**Description** The maximum rate allowed for ingress unknown unicast frames on the interface

**Context** [interface name](#) *string* [ethernet storm-control unknown-unicast-rate](#) *number*

**Tree** [unknown-unicast-rate](#)

**Range** 0 to 1000000000

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**syncE**

<b>Description</b>	This struct containing all attributes for SyncE in line/client ports.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet syncE</a>
<b>Tree</b>	<a href="#">syncE</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**ssm**

<b>Description</b>	This struct containing all attributes for QL/SSM with SyncE in these ports.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet syncE ssm</a>
<b>Tree</b>	<a href="#">ssm</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**admin-state** *keyword*

<b>Description</b>	Configure the administrative state for SyncE in line/client ports. When enabled, the associated transmit and receiver ports are set to synchronous mode and ESMC/SSM processing is enabled. Otherwise, all syncE functions are disabled in the port.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet syncE ssm admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**forwarding-complex** *reference*

<b>Description</b>	The forwarding-complex on which this interface resides This field is not populated for non-forwarding-complex-attached interfaces, for example mgmt0.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">forwarding-complex</a> <i>reference</i>

<b>Tree</b>	<a href="#">forwarding-complex</a>
<b>Reference</b>	<a href="#">platform linecard slot number forwarding-complex name keyword</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ifindex number**

<b>Description</b>	System-wide persistent unique ifIndex assigned to the interface
<b>Context</b>	<a href="#">interface name string ifindex number</a>
<b>Tree</b>	<a href="#">ifindex</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**lag**

<b>Description</b>	Container for options related to LAG
<b>Context</b>	<a href="#">interface name string lag</a>
<b>Tree</b>	<a href="#">lag</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**lacp**

<b>Description</b>	LACP parameters for the associated LAG
<b>Context</b>	<a href="#">interface name string lag lacp</a>
<b>Tree</b>	<a href="#">lacp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**admin-key number**

<b>Description</b>	Configure the LACP admin-key to be advertised by the local system. If this value is not specified a value starting from 32768 is automatically assigned by the system.
<b>Context</b>	<a href="#">interface name</a> <i>string lag lacp admin-key number</i>
<b>Tree</b>	<a href="#">admin-key</a>
<b>Range</b>	1 to 65535
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**interval keyword**

<b>Description</b>	Set the period between LACP messages -- uses the lacp-period-type enumeration.
<b>Context</b>	<a href="#">interface name</a> <i>string lag lacp interval keyword</i>
<b>Tree</b>	<a href="#">interval</a>
<b>Default</b>	SLOW
<b>Options</b>	<ul style="list-style-type: none"> <li>FAST Send LACP packets every second</li> <li>SLOW Send LACP packets every 30 seconds</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**lacp-mode keyword**

<b>Description</b>	ACTIVE is to initiate the transmission of LACP packets. PASSIVE is to wait for peer to initiate the transmission of LACP packets.
<b>Context</b>	<a href="#">interface name</a> <i>string lag lacp lacp-mode keyword</i>
<b>Tree</b>	<a href="#">lacp-mode</a>
<b>Default</b>	ACTIVE
<b>Options</b>	<ul style="list-style-type: none"> <li>ACTIVE Interface is an active member, i.e., will detect and maintain aggregates</li> </ul>

- PASSIVE

Interface is a passive member, i.e., it participates with an active partner

**Configurable**

True

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**system-id-mac *string*****Description**

The MAC address portion of the node's System ID. This is combined with the system priority to construct the 8-octet system-id. If not configured, the system-ID configured at the system/ level is used.

**Context**

[interface name](#) *string* [lag lacp system-id-mac](#) *string*

**Tree**

[system-id-mac](#)

**Configurable**

True

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**system-priority *number*****Description**

System priority used by the node on this LAG interface. Lower value is higher priority for determining which node is the controlling system. If not configured, the system-priority configured at the system/ level is used.

**Context**

[interface name](#) *string* [lag lacp system-priority](#) *number*

**Tree**

[system-priority](#)

**Configurable**

True

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**lacp-fallback-mode *keyword*****Description**

Specifies lacp-fallback mode if enabled

**Context**

[interface name](#) *string* [lag lacp-fallback-mode](#) *keyword*

**Tree**

[lacp-fallback-mode](#)

**Options**

- static

Set the LACP-fallback mode as static

**Configurable**

True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### lacp-fallback-timeout *number*

**Description** Specifies the LACP-fallback timeout interval in seconds

**Context** [interface name](#) *string* [lag lacp-fallback-timeout](#) *number*

**Tree** [lacp-fallback-timeout](#)

**Range** 4 to 3600

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### lag-speed *number*

**Description** reports current aggregate bandwidth speed of the associated LAG

**Context** [interface name](#) *string* [lag lag-speed](#) *number*

**Tree** [lag-speed](#)

**Units** Mbps

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### lag-type *keyword*

**Description** Sets the type of LAG, i.e., how it is configured / maintained

**Context** [interface name](#) *string* [lag lag-type](#) *keyword*

**Tree** [lag-type](#)

**Default** static

**Options**

- lacp  
LAG managed by LACP
- static  
Statically configured bundle / LAG

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### member [name reference](#)

**Description** Reports the list of interfaces associated with the LAG instance

**Context** [interface name string lag member name reference](#)

**Tree** [member](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### name [reference](#)

**Description** Enter the name context

**Context** [interface name string lag member name reference](#)

**Reference** [interface name string](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### lacp

**Description** Operational status data for the member interfaces

**Context** [interface name string lag member name reference lacp](#)

**Tree** [lacp](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### activity [keyword](#)

**Description** Indicates participant is active or passive

**Context** [interface name string lag member name reference lacp activity keyword](#)

<b>Tree</b>	<a href="#">activity</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>ACTIVE Interface is an active member, i.e., will detect and maintain aggregates</li> <li>PASSIVE Interface is a passive member, i.e., it participates with an active partner</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**aggregatable** *boolean*

<b>Description</b>	A true value indicates that the participant will allow the link to be used as part of the aggregate. A false value indicates the link should be used as an individual link
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">lag member name</a> <i>reference</i> <a href="#">lACP aggregatable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">aggregatable</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**collecting** *boolean*

<b>Description</b>	If true, the participant is collecting incoming frames on the link, otherwise false
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">lag member name</a> <i>reference</i> <a href="#">lACP collecting</a> <i>boolean</i>
<b>Tree</b>	<a href="#">collecting</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**distributing** *boolean*

<b>Description</b>	When true, the participant is distributing outgoing frames; when false, distribution is disabled
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">lag member name</a> <i>reference</i> <a href="#">lACP distributing</a> <i>boolean</i>

### **lACP-out-pkts** *number*

**Description** Number of LACPDU transmitted

**Context** [interface name](#) *string* [lag member name](#) *reference* [lACP statistics lACP-out-pkts number](#)

**Tree** [lACP-out-pkts](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### lacp-rx-errors *number*

<b>Description</b>	Number of LACPDU receive packet errors
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">lag member name</a> <i>reference</i> <a href="#">lacp statistics lacp-rx-errors</a> <i>number</i>
<b>Tree</b>	<a href="#">lacp-rx-errors</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### lacp-tx-errors *number*

<b>Description</b>	Number of LACPDU transmit packet errors
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">lag member name</a> <i>reference</i> <a href="#">lacp statistics lacp-tx-errors</a> <i>number</i>
<b>Tree</b>	<a href="#">lacp-tx-errors</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### lacp-unknown-errors *number*

<b>Description</b>	Number of LACPDU unknown packet errors
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">lag member name</a> <i>reference</i> <a href="#">lacp statistics lacp-unknown-errors</a> <i>number</i>
<b>Tree</b>	<a href="#">lacp-unknown-errors</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**synchronization** *keyword*

<b>Description</b>	Indicates whether the participant is in-sync or out-of-sync
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">lag member name</a> <i>reference</i> <a href="#">lACP synchronization</a> <i>keyword</i>
<b>Tree</b>	<a href="#">synchronization</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• IN_SYNC Participant is in sync with the system id and key transmitted</li> <li>• OUT_SYNC Participant is not in sync with the system id and key transmitted</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**system-id** *string*

<b>Description</b>	MAC address that defines the local system ID for the aggregate interface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">lag member name</a> <i>reference</i> <a href="#">lACP system-id</a> <i>string</i>
<b>Tree</b>	<a href="#">system-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**timeout** *keyword*

<b>Description</b>	The timeout type (short or long) used by the participant
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">lag member name</a> <i>reference</i> <a href="#">lACP timeout</a> <i>keyword</i>
<b>Tree</b>	<a href="#">timeout</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• LONG Participant wishes to use long timeouts to detect status of the aggregate, i.e., will expect less frequent transmissions. Long timeout is 90 seconds.</li> <li>• SHORT Participant wishes to use short timeouts, i.e., expects frequent transmissions to aggressively detect status changes. Short timeout is 3 seconds.</li> </ul>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-change** *string*

**Description** The date and time of the most recent change to the LAG member-link state

**Context** [interface name](#) *string* [lag member name](#) *reference* [last-change](#) *string*

**Tree** [last-change](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **microbfd-enabled** *boolean*

**Description** Indicates if microBFD is currently used in the determination of the member-link oper-status

**Context** [interface name](#) *string* [lag member name](#) *reference* [microbfd-enabled](#) *boolean*

**Tree** [microbfd-enabled](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **oper-down-reason** *keyword*

**Description** Reason for operational down state for the associated LAG

**Context** [interface name](#) *string* [lag member name](#) *reference* [oper-down-reason](#) *keyword*

**Tree** [oper-down-reason](#)

**Options**

- port-disabled
- port-oper-disabled
- lag-admin-disabled
- lacp-down
- microBFD-down
- lag-min-link-threshold

	<ul style="list-style-type: none"> <li>• lag-speed-mismatch</li> <li>• other</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **oper-state** *keyword*

<b>Description</b>	Operational state for the associated LAG
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">lag member name</a> <i>reference</i> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting</li> </ul>

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**member-speed** *keyword*

**Description**

Specifies the link speed of allowed member-links

**Context**

[interface name](#) *string* [lag](#) [member-speed](#) *keyword*

**Tree**

[member-speed](#)

**Options**

- 10M  
Indicates the the LAG member-links must be 10M to be active
- 100M  
Indicates the the LAG member-links must be 100M to be active
- 1G  
Indicates the the LAG member-links must be 1G to be active
- 10G  
Indicates the the LAG member-links must be 10G to be active
- 25G  
Indicates the the LAG member-links must be 25G to be active
- 40G  
Indicates the the LAG member-links must be 40G to be active
- 50G  
Indicates the the LAG member-links must be 50G to be active
- 100G  
Indicates the the LAG member-links must be 100G to be active
- 400G  
Indicates the the LAG member-links must be 400G to be active

**Configurable**

True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **min-links** *number*

**Description** Specifies the minimum number of member interfaces that must be active for the aggregate interface to be available

**Context** [interface name](#) *string lag min-links number*

**Tree** [min-links](#)

**Range** 1 to 64

**Default** 1

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-change** *string*

**Description** The date and time of the most recent change to the interface state

**Context** [interface name](#) *string last-change string*

**Tree** [last-change](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** Supported on all platforms

### **linecard** *reference*

**Description** The linecard on which this interface resides  
This field is not populated for non-forwarding-complex-attached interfaces, for example mgmt0.

**Context** [interface name](#) *string linecard reference*

**Tree** [linecard](#)

**Reference** [platform linecard slot](#) *number*

**Configurable** False

**Platforms** Supported on all platforms

**loopback-mode** *keyword*

<b>Description</b>	Loopback mode of the port
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <b>loopback-mode</b> <i>keyword</i>
<b>Tree</b>	<a href="#">loopback-mode</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none No loopback is applied</li> <li>• facility A loopback which directs traffic normally transmitted on the port back into the switch as if received on the same port from an external source On some systems this is also called local loopback.</li> <li>• terminal A loopback which directs traffic received from an external source on the port back out the transmit side of the same port.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mtu** *number*

<b>Description</b>	<p>Port MTU in bytes including ethernet overhead but excluding 4-bytes FCS If a transmitted packet exceeds this size it is dropped.</p> <p>The default value for ethernet-x interfaces is taken from /system/mtu/default-port-mtu. For the mgmt0 and mgmt0-standby interfaces the default is 1514 bytes, but the value can be changed for each interface individually. Port MTU is not configurable for loopback interfaces.</p> <p>The max mtu for the mgmt0 and mgmt0-standby interfaces is 9216.</p> <p>The 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-H2, and 7220 IXR-H3 systems support a maximum port MTU of 9412 bytes and minimum of 1500 bytes.</p> <p>All other systems support a maximum port MTU of 9500 and minimum of 1500 bytes.</p> <p>Each 7250 IXR IMM supports a maximum of 8 different port MTU values. 7220 IXR systems do not have any limit on the maximum number of different port MTU values.</p>
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <b>mtu</b> <i>number</i>
<b>Tree</b>	<a href="#">mtu</a>
<b>Range</b>	1450 to 9500
<b>Units</b>	bytes
<b>Configurable</b>	True

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**p4rt**

<b>Description</b>	Top-level container for P4Runtime interface configuration and state
<b>Context</b>	<a href="#">interface name</a> <i>string p4rt</i>
<b>Tree</b>	<a href="#">p4rt</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**id number**

<b>Description</b>	<p>The numeric identifier used by the controller to address the interface</p> <p>This ID is the interface ifIndex by default, or is assigned by an external-to-the-device entity (e.g., an SDN management system) to establish an externally deterministic numeric reference for the interface.</p> <p>The programming entity must ensure that the ID is unique within the required context.</p> <p>Note that this identifier is used only when a numeric reference to the interface is required, it does not replace the unique name assigned to the interface.</p>
<b>Context</b>	<a href="#">interface name</a> <i>string p4rt id number</i>
<b>Tree</b>	<a href="#">id</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**parent-id** *number*

<b>Description</b>	The numeric ID used by the controller to address the ASIC this interface resides on This is the ID configured at /platform/linecard/forwarding-complex/p4rt/id. This ID may be referred to as a 'device', 'node' or 'target' by the P4RT specification. Each switching ASIC (i.e., node) is addressed by the external entity based on its numeric identifier.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">p4rt</a> <a href="#">parent-id</a> <i>number</i>
<b>Tree</b>	<a href="#">parent-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**packet-link-qualification**

<b>Description</b>	gNOI Packet Link Qualification results
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">packet-link-qualification</a>
<b>Tree</b>	<a href="#">packet-link-qualification</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**result id** *string*

<b>Description</b>	Enter the result list instance
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">packet-link-qualification</a> <a href="#">result id</a> <i>string</i>
<b>Tree</b>	<a href="#">result</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**id** *string*

<b>Description</b>	Packet link qualification test ID
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">packet-link-qualification</a> <a href="#">result id</a> <i>string</i>

<b>String Length</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**end-time string**

<b>Description</b>	End time of the test
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">packet-link-qualification result id</a> <i>string</i> <a href="#">end-time</a> <i>string</i>
<b>Tree</b>	<a href="#">end-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**expected-rate number**

<b>Description</b>	Expected rate of the test  This is the computed or observed rate that the service expected to be maintained throughout the qualification duration.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">packet-link-qualification result id</a> <i>string</i> <a href="#">expected-rate number</a>
<b>Tree</b>	<a href="#">expected-rate</a>
<b>Units</b>	bytes per second
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**oper-state keyword**

<b>Description</b>	State of the qualification test
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">packet-link-qualification result id</a> <i>string</i> <a href="#">oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>unspecified</li> </ul>

- Unspecified state of the qualification
- error  
The qualification has errored
- idle  
Initial state for the qualification
- setup  
Interface is being configured
- running  
Qualification underway
- teardown  
Interface is being reset
- completed  
Qualification is complete

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**packets-dropped *number*****Description**

Number of packets dropped

**Context**[interface name](#) *string* [packet-link-qualification result id](#) *string* [packets-dropped number](#)**Tree**[packets-dropped](#)**Units**

packets

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**packets-error *number*****Description**

Number of packets transmitted that experienced corruption

**Context**[interface name](#) *string* [packet-link-qualification result id](#) *string* [packets-error number](#)**Tree**[packets-error](#)**Units**

packets

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### packets-received *number*

<b>Description</b>	Number of packets received
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">packet-link-qualification result id</a> <i>string</i> <a href="#">packets-received number</a>
<b>Tree</b>	<a href="#">packets-received</a>
<b>Units</b>	packets
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### packets-sent *number*

<b>Description</b>	Number of packets sent
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">packet-link-qualification result id</a> <i>string</i> <a href="#">packets-sent number</a>
<b>Tree</b>	<a href="#">packets-sent</a>
<b>Units</b>	packets
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### qualification-rate *number*

<b>Description</b>	Observed rate of the test  This is the computed or observed rate that the service expected to be maintained throughout the qualification duration.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">packet-link-qualification result id</a> <i>string</i> <a href="#">qualification-rate number</a>
<b>Tree</b>	<a href="#">qualification-rate</a>
<b>Units</b>	bytes per second
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### start-time *string*

**Description** Start time of the test

**Context** [interface name](#) *string* [packet-link-qualification result id](#) *string* [start-time](#) *string*

**Tree** [start-time](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### status *keyword*

**Description** Status of the test  
Only set when the test is in the error state.

**Context** [interface name](#) *string* [packet-link-qualification result id](#) *string* [status](#) *keyword*

**Tree** [status](#)

**Options**

- not-found  
Request ID not found
- invalid-argument  
Unsupported configuration parameter
- canceled  
Test was canceled
- deadline-exceeded  
A test stage took too long to complete
- failed-precondition  
A test stage was not setup properly
- internal  
A test stage had unexpected serious errors

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**status-message** *string*

<b>Description</b>	Status message of the test Only set when the test is in the error state.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">packet-link-qualification result id</a> <i>string</i> <a href="#">status-message</a> <i>string</i>
<b>Tree</b>	<a href="#">status-message</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**phy-group-members** *string*

<b>Description</b>	The group of interfaces sharing a phy with this interface On the 7220 IXR-D2 and 7220 IXR-D2L platforms this group of interfaces must be set to the same speed, either 1/10G or 25G.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">phy-group-members</a> <i>string</i>
<b>Tree</b>	<a href="#">phy-group-members</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L

**sflow**

<b>Description</b>	Context to configure sFlow parameters
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">sflow</a>
<b>Tree</b>	<a href="#">sflow</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable sFlow on this interface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">sflow admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>enable</li> </ul>

	<ul style="list-style-type: none"> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## carrier-transitions *number*

<b>Description</b>	Number of times the interface state has transitioned from down to up. This is reset to zero when the device is started or reset or the counters are cleared.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">carrier-transitions</a> <i>number</i>
<b>Tree</b>	<a href="#">carrier-transitions</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## in-broadcast-packets *number*

<b>Description</b>	Corresponds to ifHCInBroadcastPkts from the IF-MIB
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">in-broadcast-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-broadcast-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## in-discarded-packets *number*

<b>Description</b>	Corresponds to ifInDiscards from the IFMIB.
--------------------	---

This counts the number of IP packets discarded due to VLAN mismatch, unknown dest MAC or drop by system-filter drop action. On 7250 IXR/IXRe systems this counter is not expected to increment above zero.

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">in-discarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-discarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **in-error-packets** *number*

<b>Description</b>	Corresponds to ifInErrors from the IF-MIB
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">in-error-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **in-fcs-error-packets** *number*

<b>Description</b>	Ingress FCS errors
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">in-fcs-error-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-fcs-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **in-multicast-packets** *number*

<b>Description</b>	Corresponds to ifHCInMulticastPkts from the IF-MIB
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">in-multicast-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-multicast-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-octets** *number*

<b>Description</b>	Corresponds to ifHCInOctets from the IFMIB
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">in-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-packets** *number*

<b>Description</b>	Sum of all received packets, independent of protocol and forwarding type and before discards and errors
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">in-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-unicast-packets** *number*

<b>Description</b>	Corresponds to ifHCInUcastPkts from the IF-MIB
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">in-unicast-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-unicast-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-clear** *string*

<b>Description</b>	Timestamp of the last time the interface counters were cleared
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**out-broadcast-packets** *number*

<b>Description</b>	Corresponds to ifHCOutBroadcastPkts from the IF-MIB
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">out-broadcast-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-broadcast-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**out-discarded-packets** *number*

<b>Description</b>	Corresponds to ifOutDiscards from the IF-MIB. On 7250 IXR-6/10 systems this counts packets dropped by an egress IP ACL of any of the port's subinterfaces.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">out-discarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-discarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**out-error-packets** *number*

<b>Description</b>	Corresponds to ifOutErrors from the IF-MIB
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">out-error-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**out-mirror-octets** *number*

<b>Description</b>	This counts the number of outgoing mirrored octets
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">out-mirror-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-mirror-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

### **out-mirror-packets** *number*

**Description** This counts the number of outgoing mirrored packets  
**Context** [interface name](#) *string* [statistics](#) [out-mirror-packets](#) *number*  
**Tree** [out-mirror-packets](#)  
**Default** 0  
**Configurable** False  
**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

### **out-multicast-packets** *number*

**Description** Corresponds to ifHCOutMulticastPkts from the IF-MIB  
**Context** [interface name](#) *string* [statistics](#) [out-multicast-packets](#) *number*  
**Tree** [out-multicast-packets](#)  
**Default** 0  
**Configurable** False  
**Platforms** Supported on all platforms

### **out-octets** *number*

**Description** Corresponds to ifHCOutOctets from the IF-MIB  
**Context** [interface name](#) *string* [statistics](#) [out-octets](#) *number*  
**Tree** [out-octets](#)  
**Default** 0  
**Configurable** False  
**Platforms** Supported on all platforms

### **out-packets** *number*

**Description** Sum of all transmitted packets, independent of protocol and forwarding type and before discards and errors  
**Context** [interface name](#) *string* [statistics](#) [out-packets](#) *number*  
**Tree** [out-packets](#)  
**Default** 0

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-unicast-packets** *number*

<b>Description</b>	Corresponds to ifHCOutUcastPkts from the IF-MIB
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">out-unicast-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-unicast-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **subinterface** [index](#) *number*

<b>Description</b>	The list of subinterfaces (logical interfaces) associated with a physical interface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i>
<b>Tree</b>	<a href="#">subinterface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	4095

### **index** *number*

<b>Description</b>	The index of the subinterface, or logical interface number
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i>
<b>Range</b>	0 to 9999
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **admin-state** *keyword*

<b>Description</b>	The configured, desired state of the subinterface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable

<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## anycast-gw

<b>Description</b>	Enable the anycast-gw context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">anycast-gw</a>
<b>Tree</b>	<a href="#">anycast-gw</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## anycast-gw-mac *string*

<b>Description</b>	<p>The MAC address of associated to the anycast-gw IP address.</p> <p>If the anycast-gw MAC address is not configured, it will be auto-derived from the virtual-router-id value as per draft-ietf-bess-evpn-inter-subnet-forwarding following the format 00:00:5E:00:01:VRID.</p>
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">anycast-gw</a> <a href="#">anycast-gw-mac</a> <i>string</i>
<b>Tree</b>	<a href="#">anycast-gw-mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## anycast-gw-mac-origin *keyword*

<b>Description</b>	<p>Origin of the active anycast-gateway MAC address.</p> <p>If not configured, the anycast-gateway-mac will be auto-derived out of 00:00:5E:00:01:VRID, where VRID is the Virtual Router Identifier of the subinterface anycast-gw.</p>
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">anycast-gw</a> <a href="#">anycast-gw-mac-origin</a> <i>keyword</i>
<b>Tree</b>	<a href="#">anycast-gw-mac-origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• configured</li> </ul>

- vrid-auto-derived

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### virtual-router-id *number*

<b>Description</b>	The Virtual Router Identifier (VRID) value used to auto-derive the anycast-gw-mac in the format 00:00:5E:00:01:VRID.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">anycast-gw virtual-router-id</a> <i>number</i>
<b>Tree</b>	<a href="#">virtual-router-id</a>
<b>Range</b>	1 to 255
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### bridge-table

<b>Description</b>	Enable the Bridge Table on the subinterface and configure associated parameters
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">bridge-table</a>
<b>Tree</b>	<a href="#">bridge-table</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### discard-unknown-src-mac *boolean*

<b>Description</b>	Discard frames with unknown source mac addresses. The source mac address of the discarded frame is never learned when this command is enabled.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">bridge-table discard-unknown-src-mac</a> <i>boolean</i>
<b>Tree</b>	<a href="#">discard-unknown-src-mac</a>
<b>Default</b>	false
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## mac-duplication

**Description** Enter the mac-duplication context

**Context** [interface name](#) *string* [subinterface](#) *index number* [bridge-table](#) [mac-duplication](#)

**Tree** [mac-duplication](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## action *keyword*

**Description** Action to take on the subinterface upon detecting at least one mac addresses as duplicate on the subinterface. In particular:

**Context** [interface name](#) *string* [subinterface](#) *index number* [bridge-table](#) [mac-duplication](#) [action](#) *keyword*

**Tree** [action](#)

**Default** use-net-instance-action

**Options**

- use-net-instance-action
- stop-learning
- blackhole
- oper-down

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## duplicate-entries

**Description** Enter the duplicate-entries context

**Context** [interface name](#) *string* [subinterface](#) *index number* [bridge-table](#) [mac-duplication](#) [duplicate-entries](#)

**Tree** [duplicate-entries](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**mac address string**

<b>Description</b>	macs duplicate on the bridging instance
<b>Context</b>	<a href="#">interface name string</a> <a href="#">subinterface index number</a> <a href="#">bridge-table mac-duplication duplicate-entries mac address string</a>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**address string**

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">interface name string</a> <a href="#">subinterface index number</a> <a href="#">bridge-table mac-duplication duplicate-entries mac address string</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**dup-detect-time string**

<b>Description</b>	The date and time when the mac was declared duplicate
<b>Context</b>	<a href="#">interface name string</a> <a href="#">subinterface index number</a> <a href="#">bridge-table mac-duplication duplicate-entries mac address string dup-detect-time string</a>
<b>Tree</b>	<a href="#">dup-detect-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**hold-down-time-remaining (keyword | number)**

<b>Description</b>	remaining hold down time for duplicate mac
<b>Context</b>	<a href="#">interface name string</a> <a href="#">subinterface index number</a> <a href="#">bridge-table mac-duplication duplicate-entries mac address string hold-down-time-remaining (keyword   number)</a>
<b>Tree</b>	<a href="#">hold-down-time-remaining</a>
<b>Units</b>	seconds

<b>Options</b>	• indefinite
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## mac-learning

<b>Description</b>	Enter the mac-learning context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a>
<b>Tree</b>	<a href="#">mac-learning</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## admin-state *keyword*

<b>Description</b>	Configurable state of the learning procedures for dynamic mac addresses. If disabled, the existing macs in the bridge-table will be kept (and refreshed if new frames arrive for them) but no new mac addresses will be learned. Frames with unknown mac addresses are not dropped, unless discard-unknown-src-mac is configured.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## aging

<b>Description</b>	Enter the aging context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">aging</a>
<b>Tree</b>	<a href="#">aging</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **admin-state** *keyword*

**Description** Configurable state of the aging for the dynamic mac entries in the bridge table. If disabled, dynamically learned mac entries will be programmed in the bridge table until the network instance is disabled.

**Context** [interface name](#) *string* [subinterface index](#) *number* [bridge-table mac-learning aging admin-state](#) *keyword*

**Tree** [admin-state](#)

**Default** enable

**Options**

- enable
- disable

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **learnt-entries**

**Description** Enter the learnt-entries context

**Context** [interface name](#) *string* [subinterface index](#) *number* [bridge-table mac-learning learnt-entries](#)

**Tree** [learnt-entries](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **mac** [address](#) *string*

**Description** macs learnt on the bridging instance

**Context** [interface name](#) *string* [subinterface index](#) *number* [bridge-table mac-learning learnt-entries mac address](#) *string*

**Tree** [mac](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**address string**

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">interface name string subinterface index number bridge-table mac-learning learnt-entries mac address string</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**aging (number | keyword)**

<b>Description</b>	remaining age time for learnt macs
<b>Context</b>	<a href="#">interface name string subinterface index number bridge-table mac-learning learnt-entries mac address string aging (number   keyword)</a>
<b>Tree</b>	<a href="#">aging</a>
<b>Units</b>	seconds
<b>Options</b>	<ul style="list-style-type: none"> <li>disabled</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**last-update string**

<b>Description</b>	The date and time of the last update of this learnt mac
<b>Context</b>	<a href="#">interface name string subinterface index number bridge-table mac-learning learnt-entries mac address string last-update string</a>
<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**mac-limit**

<b>Description</b>	Bridge Table size and thresholds.
<b>Context</b>	<a href="#">interface name string subinterface index number bridge-table mac-limit</a>
<b>Tree</b>	<a href="#">mac-limit</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### maximum-entries *number*

**Description** Maximum number of mac addresses allowed in the bridge-table.

**Context** [interface name](#) *string* [subinterface](#) *index* *number* [bridge-table](#) [mac-limit](#) [maximum-entries](#) *number*

**Tree** [maximum-entries](#)

**Range** 1 to 8192

**Default** 250

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### warning-threshold-pct *number*

**Description** Percentage of the configured max-number-macs over which a warning is triggered. The warning message is cleared when the percentage drops below the configured percentage minus 5%

**Context** [interface name](#) *string* [subinterface](#) *index* *number* [bridge-table](#) [mac-limit](#) [warning-threshold-pct](#) *number*

**Tree** [warning-threshold-pct](#)

**Range** 6 to 100

**Default** 95

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### mac-table

**Description** Enter the mac-table context

**Context** [interface name](#) *string* [subinterface](#) *index* *number* [bridge-table](#) [mac-table](#)

**Tree** [mac-table](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**mac address string**

<b>Description</b>	macs learnt on the bridging instance
<b>Context</b>	<a href="#">interface name string</a> <a href="#">subinterface index number</a> <a href="#">bridge-table</a> <a href="#">mac-table</a> <a href="#">mac address string</a>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**address string**

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">interface name string</a> <a href="#">subinterface index number</a> <a href="#">bridge-table</a> <a href="#">mac-table</a> <a href="#">mac address string</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**failed-slots number**

<b>Description</b>	The list of slot IDs corresponding to the linecards that did not successfully program the mac
<b>Context</b>	<a href="#">interface name string</a> <a href="#">subinterface index number</a> <a href="#">bridge-table</a> <a href="#">mac-table</a> <a href="#">mac address string</a> <a href="#">failed-slots number</a>
<b>Tree</b>	<a href="#">failed-slots</a>
<b>Range</b>	1 to 8
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**last-update string**

<b>Description</b>	The date and time of the last update of this mac
<b>Context</b>	<a href="#">interface name string</a> <a href="#">subinterface index number</a> <a href="#">bridge-table</a> <a href="#">mac-table</a> <a href="#">mac address string</a> <a href="#">last-update string</a>
<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **not-programmed-reason** *keyword*

<b>Description</b>	The reason why the mac is not programmed
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">bridge-table mac-table mac address</a> <i>string</i> <b>not-programmed-reason</b> <i>keyword</i>
<b>Tree</b>	<a href="#">not-programmed-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• mac-limit</li> <li>• failed-on-slots</li> <li>• no-destination-index</li> <li>• reserved</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **type** *keyword*

<b>Description</b>	the type of the mac installed in the fib.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">bridge-table mac-table mac address</a> <i>string</i> <b>type</b> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• duplicate</li> <li>• learnt</li> <li>• irb-interface</li> <li>• evpn</li> <li>• evpn-static</li> <li>• irb-interface-anycast</li> <li>• proxy-anti-spoof</li> <li>• reserved</li> <li>• eth-cfm</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**active-entries** *number*

<b>Description</b>	The total number of entries that are active on the sub-interface.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">statistics</a> <a href="#">active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**failed-entries** *number*

<b>Description</b>	The total number of macs, which have not been programmed on atleast one slot
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">statistics</a> <a href="#">failed-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">failed-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**mac-type** *type* *keyword*

<b>Description</b>	the type of the mac on the sub-interface.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">statistics</a> <a href="#">mac-type</a> <i>type</i> <i>keyword</i>
<b>Tree</b>	<a href="#">mac-type</a>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**type** *keyword*

<b>Description</b>	Enter the type context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index number</i> <a href="#">bridge-table</a> <a href="#">statistics</a> <a href="#">mac-type</a> <i>type keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• duplicate</li> <li>• learnt</li> <li>• irb-interface</li> <li>• evpn</li> <li>• evpn-static</li> <li>• irb-interface-anycast</li> <li>• proxy-anti-spoof</li> <li>• reserved</li> <li>• eth-cfm</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**active-entries** *number*

<b>Description</b>	The total number of entries of this type on the sub-interface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index number</i> <a href="#">bridge-table</a> <a href="#">statistics</a> <a href="#">mac-type</a> <i>type keyword active-entries number</i>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**failed-entries** *number*

<b>Description</b>	The total number of macs of this type, which have not been programmed on at least one slot
--------------------	--

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">bridge-table</a> <a href="#">statistics</a> <a href="#">mac-type</a> <a href="#">type</a> <a href="#">keyword</a> <a href="#">failed-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">failed-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**total-entries** *number*

<b>Description</b>	The total number of macs of this type , active and inactive, on the sub-interface.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">bridge-table</a> <a href="#">statistics</a> <a href="#">mac-type</a> <a href="#">type</a> <a href="#">keyword</a> <a href="#">total-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**total-entries** *number*

<b>Description</b>	The total number of macs, active and inactive, on the sub-interface.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">bridge-table</a> <a href="#">statistics</a> <a href="#">total-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**description** *string*

<b>Description</b>	A user-configured description of the interface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">description</a> <i>string</i>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### ethernet-segment-association

**Description** ethernet-segment association information.

**Context** [interface name](#) *string* [subinterface index](#) *number* [ethernet-segment-association](#)

**Tree** [ethernet-segment-association](#)

**Configurable** False

**Platforms** Supported on all platforms

### designated-forwarder *boolean*

**Description** The value of this leaf indicates if the interface is the designated forwarder for the ethernet-segment on the network-instance.

**Context** [interface name](#) *string* [subinterface index](#) *number* [ethernet-segment-association designated-forwarder](#) *boolean*

**Tree** [designated-forwarder](#)

**Default** false

**Configurable** False

**Platforms** Supported on all platforms

### es-managed *boolean*

**Description** The value of this leaf indicates if the interface is managed by the ethernet-segment on the network-instance.

**Context** [interface name](#) *string* [subinterface index](#) *number* [ethernet-segment-association es-managed](#) *boolean*

**Tree** [es-managed](#)

**Default** false

**Configurable** False

**Platforms** Supported on all platforms

### ethernet-segment *string*

**Description** The value of this leaf indicates the ethernet-segment, the sub-interface is associated to.

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ethernet-segment-association</a> <a href="#">ethernet-segment</a> <i>string</i>
<b>Tree</b>	<a href="#">ethernet-segment</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ifindex** *number*

<b>Description</b>	System-wide persistent unique ifIndex assigned to the subinterface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ifindex</a> <i>number</i>
<b>Tree</b>	<a href="#">ifindex</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ip-mtu** *number*

<b>Description</b>	<p>IP MTU of the subinterface in bytes.</p> <p>Includes the IP header but excludes Ethernet encapsulation.</p> <p>IP MTU specifies the maximum sized IPv4 or IPv6 packet that can be transmitted on the subinterface. If an IPv4 or IPv6 packet exceeds this size it is dropped and this may result in the generation of an ICMP error message back to the source.</p> <p>The default IP MTU for a subinterface is taken from <code>/system/mtu/default-ip-mtu</code>. For the <code>mgmt0</code> and <code>mgmt0-standby</code> subinterfaces the default is the associated interface MTU minus the Ethernet encapsulation overhead.</p> <p>The IP MTU is not configurable for subinterfaces of loopback interfaces.</p> <p>The 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-H2, and 7220 IXR-H3 systems support a maximum IP MTU of 9398 bytes.</p> <p>Each 7250 IXR IMM supports a maximum of 4 different IP MTU values. 7220 IXR systems do not have any limit on the maximum number of different IP MTU values.</p>
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ip-mtu</a> <i>number</i>
<b>Tree</b>	<a href="#">ip-mtu</a>
<b>Range</b>	1280 to 9486
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ipv4**

<b>Description</b>	IPv4 configuration and state for the subinterface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4</a>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**address** [ip-prefix](#) *string*

<b>Description</b>	The list of IPv4 addresses assigned to the subinterface.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 address ip-prefix</a> <i>string</i>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	64

**ip-prefix** *string*

<b>Description</b>	The IPv4 address and prefix length in CIDR notation  Subnets on the same subinterface are allowed to overlap as long as the host bits are different. When a locally originated unicast packet is destined to a host covered by multiple subnets associated with a subinterface, the source address is chosen to be the numerically lowest IP address among all these subnets. For example, if the addresses 172.16.1.1/12, 172.16.1.2/12, and 172.16.1.3/12 are configured on the same interface, 172.16.1.1 would be used as a local address when you issue a ping 172.16.1.5 command
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 address ip-prefix</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**anycast-gw** *boolean*

<b>Description</b>	This designates the associated IPv4 address as an anycast-gateway IPv4 address of the subinterface.  When this parameter is set to true:
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 address ip-prefix</a> <i>string</i> <a href="#">anycast-gw</a> <i>boolean</i>

<b>Tree</b>	<a href="#">anycast-gw</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **origin keyword**

<b>Description</b>	The origin of the IPv4 address.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 address ip-prefix</a> <i>string</i> <a href="#">origin keyword</a>
<b>Tree</b>	<a href="#">origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• other</li> <li>• static</li> <li>• dhcp</li> <li>• link-layer</li> <li>• random</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **primary**

<b>Description</b>	<p>One of the IPv4 prefixes assigned to the subinterface can be explicitly configured as primary by setting this leaf to true. This designates the associated IPv4 address as a primary IPv4 address of the subinterface. By default, the numerically lowest value IPv4 address is selected as the primary address.</p> <p>The primary address is used as the source address for locally originated broadcast and multicast packets sent out the subinterface.</p>
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 address ip-prefix</a> <i>string</i> <a href="#">primary</a>
<b>Tree</b>	<a href="#">primary</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **status keyword**

<b>Description</b>	The status of an IPv4 address
--------------------	-------------------------------

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 address ip-prefix</a> <i>string</i> <a href="#">status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• preferred</li> <li>• inaccessible</li> <li>• tentative</li> <li>• duplicate</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **admin-state** *keyword*

<b>Description</b>	<p>Enable/disable IPv4 on the subinterface</p> <p>When set to enable, and even before an IPv4 address is configured, the subinterface starts to accept incoming packets with dest-ip 255.255.255.255, which is necessary to support dhcp-client functionality.</p>
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **allow-directed-broadcast** *boolean*

<b>Description</b>	<p>When this is set to true the software is allowed to re-broadcast targeted broadcast IPv4 packets on this subinterface</p> <p>Detailed handling of subnet broadcast is as follows:</p> <p>If a targeted broadcast packet is received on subinterface X that has the matching subnet then it is delivered to the CPM and CPM will reply to an ICMP echo.</p> <p>If a targeted broadcast packet is received on subinterface X but the matching subnet is associated with subinterface Y, and subinterface Y is configured with <code>allow-directed-broadcasts=false</code> then it is delivered to the CPM and CPM replies to an ICMP echo per above, but it does not re-broadcast the packet on subinterface Y.</p> <p>If a targeted broadcast packet is received on subinterface X but the matching subnet is associated with subinterface Y, and subinterface Y is configured</p>
--------------------	---

with `allow-directed-broadcasts=true` then it is delivered to the CPM and CPM replies to an ICMP echo per above, and CPM also re-broadcasts the packet on subinterface Y.

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index number</a> <i>number</i> <a href="#">ipv4 allow-directed-broadcast</a> <i>boolean</i>
<b>Tree</b>	<a href="#">allow-directed-broadcast</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## arp

<b>Description</b>	Container for the IPv4 ARP protocol
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index number</a> <i>number</i> <a href="#">ipv4 arp</a>
<b>Tree</b>	<a href="#">arp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## debug *keyword*

<b>Description</b>	List of events to debug
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index number</a> <i>number</i> <a href="#">ipv4 arp debug</a> <i>keyword</i>
<b>Tree</b>	<a href="#">debug</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>messages</code> Capture all arp-request and reply-messages sent and received by the subinterface</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## duplicate-address-detection *boolean*

<b>Description</b>	If set to true IPv4 Address Conflict Detection per RFC 5227 is performed on the IPv4 address assigned to the subinterface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index number</a> <i>number</i> <a href="#">ipv4 arp duplicate-address-detection</a> <i>boolean</i>
<b>Tree</b>	<a href="#">duplicate-address-detection</a>
<b>Default</b>	true

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## evpn

<b>Description</b>	Configure which types of ARP or ND entries will be advertised in EVPN MAC/IP routes.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp evpn</a>
<b>Tree</b>	<a href="#">evpn</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## advertise [route-type](#) *keyword*

<b>Description</b>	Enter the advertise list instance
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp evpn advertise route-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">advertise</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## [route-type](#) *keyword*

<b>Description</b>	Controls what type of ARP or ND entries to advertise.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp evpn advertise route-type</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• dynamic</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## internal-tags

<b>Description</b>	Configuration and state of internal tags
--------------------	--

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp evpn advertise route-type</a> <i>keyword</i> <a href="#">internal-tags</a>
<b>Tree</b>	<a href="#">internal-tags</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **set-tag-set** *reference*

<b>Description</b>	Reference to a tag-set defined under routing-policy
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp evpn advertise route-type</a> <i>keyword</i> <a href="#">internal-tags</a> <a href="#">set-tag-set</a> <i>reference</i>
<b>Tree</b>	<a href="#">set-tag-set</a>
<b>Reference</b>	<a href="#">routing-policy</a> <a href="#">tag-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	1

### **host-route**

<b>Description</b>	Configure which types of ARP or ND entries will be populated in the route-table.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp host-route</a>
<b>Tree</b>	<a href="#">host-route</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **populate** [route-type](#) *keyword*

<b>Description</b>	Enter the populate list instance
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp host-route populate route-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">populate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**route-type** *keyword*

<b>Description</b>	Controls what type of ARP or ND entries generate a host route.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp host-route populate route-type</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• dynamic</li> <li>• evpn</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**datapath-programming** *boolean*

<b>Description</b>	When set to true, the host route is programmed in the datapath
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp host-route populate route-type</a> <i>keyword</i> <a href="#">datapath-programming</a> <i>boolean</i>
<b>Tree</b>	<a href="#">datapath-programming</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**internal-tags**

<b>Description</b>	Configuration and state of internal tags
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp host-route populate route-type</a> <i>keyword</i> <a href="#">internal-tags</a>
<b>Tree</b>	<a href="#">internal-tags</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**set-tag-set** *reference*

<b>Description</b>	Reference to a tag-set defined under routing-policy
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp host-route populate route-type</a> <i>keyword</i> <a href="#">internal-tags set-tag-set</a> <i>reference</i>
<b>Tree</b>	<a href="#">set-tag-set</a>

<b>Reference</b>	<a href="#">routing-policy tag-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	1

### **learn-unsolicited** *boolean*

<b>Description</b>	If set to true an ARP entry should be learned from any received ARP packets.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp learn-unsolicited</a> <i>boolean</i>
<b>Tree</b>	<a href="#">learn-unsolicited</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **neighbor** [ipv4-address](#) *string*

<b>Description</b>	List of static and dynamic ARP cache entries that map an IPv4 address to a MAC address  To configure a static ARP entry a value must be written into this leaf and the link-layer-address leaf.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp neighbor ipv4-address</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **ipv4-address** *string*

<b>Description</b>	IPv4 address resolved by the ARP entry  To configure a static neighbor entry a value must be written into this leaf and the link-layer-address leaf.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp neighbor ipv4-address</a> <i>string</i>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## datapath-programming

**Description** Container for state related to the datapath programming of the ARP or neighbor entry

**Context** [interface name string subinterface index number ipv4 arp neighbor ipv4-address string datapath-programming](#)

**Tree** [datapath-programming](#)

**Configurable** False

**Platforms** Supported on all platforms

## last-failed-complexes *string*

**Description** List of forwarding complexes that reported a failure for the last operation. They appear in the format (slot-number,complex-number).

**Context** [interface name string subinterface index number ipv4 arp neighbor ipv4-address string datapath-programming last-failed-complexes string](#)

**Tree** [last-failed-complexes](#)

**Configurable** False

**Platforms** Supported on all platforms

## status *keyword*

**Description** The status of the ARP or neighbor entry with respect to datapath programming

**Context** [interface name string subinterface index number ipv4 arp neighbor ipv4-address string datapath-programming status keyword](#)

**Tree** [status](#)

**Options**

- success
 

All linecard complexes have reported that the entry was programmed successfully
- failed
 

At least one linecard complex reported that the entry was not programmed successfully or else this entry was not even provided to the datapath for programming because the system limit on the number of IPv4 ARP and IPv6 neighbor entries was exceeded
- pending

The ARP or neighbor entry was provided to the datapath for programming but at least one linecard complex has not provided a status yet.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### expiration-time *string*

<b>Description</b>	The date and time when the dynamic ARP entry is set to expire
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp neighbor ipv4-address</a> <i>string</i> <a href="#">expiration-time</a> <i>string</i>
<b>Tree</b>	<a href="#">expiration-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### link-layer-address *string*

<b>Description</b>	The resolving MAC address of the ARP entry To configure a static ARP entry a value must be written into this leaf and the ipv4-address leaf.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp neighbor ipv4-address</a> <i>string</i> <a href="#">link-layer-address</a> <i>string</i>
<b>Tree</b>	<a href="#">link-layer-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### origin *keyword*

<b>Description</b>	The origin of the ARP entry
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp neighbor ipv4-address</a> <i>string</i> <a href="#">origin</a> <i>keyword</i>
<b>Tree</b>	<a href="#">origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• other</li> <li>• static</li> <li>• dynamic</li> <li>• evpn</li> </ul>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### proxy-arp *boolean*

**Description** When set to true, the router replies with its own MAC to ARP Request destined to any host.

**Context** [interface name string subinterface index number ipv4 arp proxy-arp boolean](#)

**Tree** [proxy-arp](#)

**Default** false

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### timeout *number*

**Description** Duration of time that dynamic ARP entries remain in the ARP cache before they expire

A change to this value does not affect existing entries until they are refreshed.

**Context** [interface name string subinterface index number ipv4 arp timeout number](#)

**Tree** [timeout](#)

**Range** 60 to 65535

**Default** 14400

**Units** seconds

**Configurable** True

**Platforms** Supported on all platforms

### virtual-ipv4-discovery

**Description** Enable Virtual IPv4 discovery on the subinterface and configure associated parameters

When enabled, the system will attempt to discover the configured virtual IPv4 addresses on the listed bridged subinterfaces.

**Context** [interface name string subinterface index number ipv4 arp virtual-ipv4-discovery](#)

**Tree** [virtual-ipv4-discovery](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### address *ipv4-address string*

**Description** The list of virtual IPv4 addresses to be discovered on the subinterface.

**Context** [interface name string subinterface index number ipv4 arp virtual-ipv4-discovery address ipv4-address string](#)

**Tree** [address](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**Max. Elements** 640

### ipv4-address *string*

**Description** The virtual IPv4 address.

**Context** [interface name string subinterface index number ipv4 arp virtual-ipv4-discovery address ipv4-address string](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### allowed-macs *string*

**Description** List of allowed mac addresses for a discovered virtual IP address.

**Context** [interface name string subinterface index number ipv4 arp virtual-ipv4-discovery address ipv4-address string allowed-macs string](#)

**Tree** [allowed-macs](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**Max. Elements** 10

**probe-bridged-subinterfaces** *string*

<b>Description</b>	Configure the list of bridged sub-interfaces on the associated MAC-VRF to which the ARP probes are sent.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp virtual-ipv4-discovery address</a> <a href="#">ipv4-address</a> <i>string</i> <a href="#">probe-bridged-subinterfaces</a> <i>string</i>
<b>Tree</b>	<a href="#">probe-bridged-subinterfaces</a>
<b>String Length</b>	5 to 25
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	10

**probe-interval** *number*

<b>Description</b>	Configure the ARP probe interval at which the system sends an ARP request for the virtual IPv4 address.  The default value of zero determines that the system sends an ARP Request for the virtual IPv4 only when the address is configured. The creation of the ARP entry for the virtual IPv4 address will in this case rely on the server sending a Gratuitous ARP for the virtual IPv4 address. When the value is set to a non-zero interval, the system sends a periodic ARP Request at the configured interval and irrespective of the ARP entry being already created.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp virtual-ipv4-discovery address</a> <a href="#">ipv4-address</a> <i>string</i> <a href="#">probe-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">probe-interval</a>
<b>Range</b>	0   5 to 86400
<b>Default</b>	0
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**statistics**

<b>Description</b>	Statistics for the Virtual IP address
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp virtual-ipv4-discovery address</a> <a href="#">ipv4-address</a> <i>string</i> <a href="#">statistics</a>

<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**dns-resolution**

<b>Description</b>	Enter the dns-resolution context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index number</i> <a href="#">ipv4 dhcp-relay dns-resolution</a>
<b>Tree</b>	<a href="#">dns-resolution</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**server** [domain](#) *string*

<b>Description</b>	Reports the resolved IP address for server entries using domain names
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index number</i> <a href="#">ipv4 dhcp-relay dns-resolution server domain</a> <i>string</i>
<b>Tree</b>	<a href="#">server</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**domain** *string*

<b>Description</b>	The server domain name
--------------------	------------------------

<b>Context</b>	<a href="#">interface name string subinterface index number ipv4 dhcp-relay dns-resolution server domain string</a>
<b>String Length</b>	1 to 253
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-update string**

<b>Description</b>	The date and time of the last update of the server IP address
<b>Context</b>	<a href="#">interface name string subinterface index number ipv4 dhcp-relay dns-resolution server domain string last-update string</a>
<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **resolved-ip-address (ipv4-address | ipv6-address)**

<b>Description</b>	The resolved IP address of the server domain name. An entry of 0.0.0.0 indicates the server IP cannot be resolved.
<b>Context</b>	<a href="#">interface name string subinterface index number ipv4 dhcp-relay dns-resolution server domain string resolved-ip-address (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">resolved-ip-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **gi-address string**

<b>Description</b>	IPv4 address to be used as giaddr of the relayed packets towards DHCPv4 servers. This address can be any IPv4 address configured within the network-instance towards the DHCPv4 server
<b>Context</b>	<a href="#">interface name string subinterface index number ipv4 dhcp-relay gi-address string</a>
<b>Tree</b>	<a href="#">gi-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**network-instance** *reference*

<b>Description</b>	network instance to relay dhcp packets to
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 dhcp-relay network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**oper-down-reason** *keyword*

<b>Description</b>	The reason causing the dhcp relay agent to go into operational down state
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 dhcp-relay oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">dhcp-relay-admin-down</a></li> <li>• <a href="#">sub-interface-oper-down</a></li> <li>• <a href="#">all-dhcp-servers-unreachable-within-net-instance</a></li> <li>• <a href="#">gi-address-not-matching-relay-sub-interface-ipv4-addresses</a></li> <li>• <a href="#">no-valid-ipv4-address-on-sub-interface</a></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	The operational state of the dhcp relay agent
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 dhcp-relay oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">up</a> Component or process is operational</li> <li>• <a href="#">down</a> Component or process is not operational</li> <li>• <a href="#">empty</a> Component slot is empty</li> </ul>

- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

Supported on all platforms

**option keyword****Description**

List of option82 suboptions to insert into relayed packet towards DHCPv4 server

**Context**[interface name](#) *string* [subinterface](#) *index number* [ipv4 dhcp-relay option keyword](#)**Tree**[option](#)**Options**

- circuit-id

Enable option 82 suboption 1 circuit-id into relayed packet towards DHCPv4 server, format=system\_name/VRF\_instance/sub-interface\_id:vlan\_id

- remote-id

Enable option 82 suboption 2 remote-id into relayed packet towards DHCPv4 server, format=client MAC address

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **server** (*ipv4-address* | *domain-name*)

<b>Description</b>	List of the DHCPv4 servers that the DHCPv4 relay function will relay DHCPv4 packets to/from
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 dhcp-relay server</a> ( <i>ipv4-address</i>   <i>domain-name</i> )

<b>Description</b>	Details if the dhcp server is operationally available
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 dhcp-server oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>

**Options**

- up  
Component or process is operational
- down  
Component or process is not operational
- empty  
Component slot is empty
- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

Supported on all platforms

## statistics

<b>Description</b>	Container for subinterface statistics, counting IPv4 packets or IPv6 packets or both depending on the context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv4</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## in-discarded-packets *number*

<b>Description</b>	The total number of input IPv4 packets or IPv6 packets or both (transit and terminating traffic) that were dropped for any of the following reasons:  This also includes IP/MPLS packets dropped by ingress interface ACL drop action or CPM filer drop action.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv4</a> <a href="#">statistics</a> <a href="#">in-discarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-discarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## in-error-packets *number*

<b>Description</b>	The total number of input IPv4 packets or IPv6 packets or both discarded due to errors, counting transit and terminating traffic  The sum of the following RFC 4293 counters: ipIfStatsInHdrErrors ipIfStatsInNoRoutes ipIfStatsInAddrErrors ipIfStatsInUnknownProtos ipIfStatsInTruncatedPkts
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv4</a> <a href="#">statistics</a> <a href="#">in-error-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**in-forwarded-octets** *number*

<b>Description</b>	The number of octets in input IPv4 packets or IPv6 packets or both received on this subinterface and counted in in-forwarded-packets
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 statistics in-forwarded-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-forwarded-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**in-forwarded-packets** *number*

<b>Description</b>	The number of input IPv4 packets or IPv6 packets or both received on this subinterface for which the router was not the final destination and for which the router attempted to find a route to forward them to that final destination.  Note that non-terminating IPv4 packets with options and non-terminating IPv6 packets with extension headers are included in this count (and not dropped) as are packets that trigger ICMP/ICMPv6 redirect messages.  On 7220 IXR systems this also counts received traffic that is terminating.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 statistics in-forwarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-forwarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**in-matched-ra-packets** *number*

<b>Description</b>	The total number of IPv6 packets matched with applied RA-Guard policy
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 statistics in-matched-ra-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-matched-ra-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**in-octets** *number*

<b>Description</b>	The total number of octets received in input packets, counting transit and terminating traffic
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 statistics in-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**in-packets** *number*

<b>Description</b>	The total number of input packets received, counting transit and terminating traffic  This equals the sum of: in-error-packets in-discarded-packets (also includes IP/MPLS packets) in-terminated-packets (also includes IP/MPLS packets) in-forwarded-packets
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 statistics in-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**in-terminated-octets** *number*

<b>Description</b>	The total number of octets in input IPv4 packets or IPv6 packets or both that were received on this subinterface and counted in in-terminated-packets
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 statistics in-terminated-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-terminated-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**in-terminated-packets** *number*

<b>Description</b>	The total number of input IPv4 packets or IPv6 packets or both that were received on this subinterface and that have a destination IP address matching a local interface address or an IPv6 multicast address to which the interface belongs. The count includes packets eventually discarded by the CPM. Such discards include:  This also includes terminating IP/MPLS packets.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 statistics in-terminated-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-terminated-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-clear** *string*

<b>Description</b>	Timestamp of the last time the subinterface counters were cleared.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 statistics last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**out-discarded-packets** *number*

<b>Description</b>	The total number of IPv4 packets or IPv6 packets or both, originating and transit, sent towards this subinterface that were dropped.  This also includes IP/MPLS packets dropped by egress interface ACL drop action.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 statistics out-discarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-discarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**out-error-packets** *number*

<b>Description</b>	The number of IPv4 packets or IPv6 packets or both, originating and transit, for which this router was successful in finding a path to their final destination through this subinterface but an error prevented their transmission.  On 7250 IXR systems this is incremented when the IPv4 packet size exceeds the IP MTU and fragmentation was not allowed or not supported
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 statistics out-error-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**out-forwarded-octets** *number*

<b>Description</b>	The number of octets in transit IPv4 packets or IPv6 packets or both which the router attempted to route out this subinterface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 statistics out-forwarded-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-forwarded-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**out-forwarded-packets** *number*

<b>Description</b>	The number of transit IPv4 packets or IPv6 packets or both which the router attempted to route out this subinterface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 statistics out-forwarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-forwarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**out-octets** *number*

<b>Description</b>	The total number of octets in IPv4 packets or IPv6 packets or both delivered to the lower layers for transmission
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 statistics out-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**out-originated-octets** *number*

<b>Description</b>	The number of octets in IPv4 packets or IPv6 packets or both which originated on the CPM and which the router attempted to route out this subinterface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 statistics out-originated-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-originated-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**out-originated-packets** *number*

<b>Description</b>	The number of IPv4 packets or IPv6 packets or both which originated on the CPM and which the router attempted to route out this subinterface This includes all originated ICMP/ICMPv6 messages.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 statistics out-originated-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-originated-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**out-packets** *number*

<b>Description</b>	The total number of IPv4 packets or IPv6 packets or both that this router supplied to the lower layers for transmission
--------------------	---

This includes packets generated locally and those forwarded by this router. If there are no queue drops it is equal to: <out-forwarded-packets> + <out-originated-packets>

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 statistics out-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv6

<b>Description</b>	IPv6 configuration and state for the subinterface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6</a>
<b>Tree</b>	<a href="#">ipv6</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## address [ip-prefix](#) *string*

<b>Description</b>	The list of IPv6 addresses assigned to the subinterface.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 address ip-prefix</a> <i>string</i>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	18

## [ip-prefix](#) *string*

<b>Description</b>	The IPv6 address and prefix-length in CIDR notation  Up to 16 global unicast IPv6 addresses can be assigned to each subinterface. Global unicast IPv6 address subnets on the same subinterface are allowed to overlap as long as the host bits are different. When a locally originated unicast packet is destined to a host covered by multiple subnets associated with a subinterface, the source address is chosen to be the numerically lowest IP address among all these subnets.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 address ip-prefix</a> <i>string</i>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **anycast-gw** *boolean*

**Description** This designates the associated IPv6 address as an anycast-gateway IPv6 address of the subinterface.  
When this parameter is set to true:

**Context** [interface name](#) *string* [subinterface index](#) *number* [ipv6 address](#) [ip-prefix](#) *string*  
[anycast-gw](#) *boolean*

**Tree** [anycast-gw](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **origin** *keyword*

**Description** The origin of the IPv6 address

**Context** [interface name](#) *string* [subinterface index](#) *number* [ipv6 address](#) [ip-prefix](#) *string*  
[origin](#) *keyword*

**Tree** [origin](#)

**Options**

- other
- static
- dhcp
- link-layer
- random

**Configurable** False

**Platforms** Supported on all platforms

### **primary**

**Description** One of the IPv6 prefixes assigned to the subinterface can be explicitly configured as primary by setting this leaf to true. This designates the associated IPv6 address as a primary IPv6 address of the subinterface. By default, the numerically lowest value IPv6 address is selected as the primary address.  
The primary address is used as the source address for locally originated broadcast and multicast packets sent out the subinterface.

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 address ip-prefix</a> <i>string</i> <a href="#">primary</a>
<b>Tree</b>	<a href="#">primary</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**status** *keyword*

<b>Description</b>	The status of an IPv6 address
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 address ip-prefix</a> <i>string</i> <a href="#">status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• preferred</li> <li>• deprecated</li> <li>• invalid</li> <li>• inaccessible</li> <li>• unknown</li> <li>• tentative</li> <li>• duplicate</li> <li>• optimistic</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	<p>Specifies the explicit type of the IPv6 address being assigned to the subinterface</p> <p>By default, addresses are assumed to be global unicast. Where a link-local address is to be explicitly configured, this leaf should be set to link-local.</p>
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 address ip-prefix</a> <i>string</i> <a href="#">type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Default</b>	global-unicast
<b>Options</b>	<ul style="list-style-type: none"> <li>• global-unicast</li> </ul> <p>The IPv6 address is a global unicast address type and must be in the format defined in RFC 4291 section 2.4.</p> <ul style="list-style-type: none"> <li>• link-local-unicast</li> </ul>

The IPv6 address is a Link-Local unicast address type and must be in the format defined in RFC 4291 section 2.4.

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **admin-state** *keyword*

<b>Description</b>	Enable/disable IPv6 on the subinterface When set to enable, and even before a global unicast IPv6 address is configured, chassis manager assigns an IPv6 link-local address to the subinterface, which will appear as a read-only entry in the address list. At this stage, the subinterface can receive IPv6 packets with any of the following destinations:
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **dhcp-client**

<b>Description</b>	Container for options related to DHCPv6
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcp-client</a>
<b>Tree</b>	<a href="#">dhcp-client</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **trace-options**

<b>Description</b>	Container for tracing DHCPv6 operations on the subinterface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcp-client trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**trace** *keyword*

<b>Description</b>	List of events to trace
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6</a> <a href="#">dhcp-client</a> <a href="#">trace-options</a> <a href="#">trace</a> <i>keyword</i>
<b>Tree</b>	<a href="#">trace</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">messages</a> Capture all DHCPv6 messages sent and received by the subinterface</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**dhcp-relay**

<b>Description</b>	Container for options related to DHCPv6 relay
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6</a> <a href="#">dhcp-relay</a>
<b>Tree</b>	<a href="#">dhcp-relay</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	The configurable state of the dhcp relay agent
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6</a> <a href="#">dhcp-relay</a> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">enable</a></li> <li>• <a href="#">disable</a></li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**dns-resolution**

<b>Description</b>	Enter the dns-resolution context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6</a> <a href="#">dhcp-relay</a> <a href="#">dns-resolution</a>

<b>Tree</b>	<a href="#">dns-resolution</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**server domain** *string*

<b>Description</b>	Reports the resolved IP address for server entries using domain names
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index number</i> <a href="#">ipv6</a> <a href="#">dhcp-relay</a> <a href="#">dns-resolution</a> <a href="#">server domain</a> <i>string</i>
<b>Tree</b>	<a href="#">server</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**domain** *string*

<b>Description</b>	The server domain name
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index number</i> <a href="#">ipv6</a> <a href="#">dhcp-relay</a> <a href="#">dns-resolution</a> <a href="#">server domain</a> <i>string</i>
<b>String Length</b>	1 to 253
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-update** *string*

<b>Description</b>	The date and time of the last update of the server IP address
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index number</i> <a href="#">ipv6</a> <a href="#">dhcp-relay</a> <a href="#">dns-resolution</a> <a href="#">server domain</a> <i>string</i> <a href="#">last-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**resolved-ip-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The resolved IP address of the server domain name. An entry of 0.0.0.0 indicates the server IP cannot be resolved.
--------------------	---

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcp-relay dns-resolution server domain</a> <i>string</i> <a href="#">resolved-ip-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">resolved-ip-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### network-instance *reference*

<b>Description</b>	network instance to relay dhcp packets to
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcp-relay network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### oper-down-reason *keyword*

<b>Description</b>	The reason causing the dhcp relay agent to go into operational down state
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcp-relay oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• dhcp-relay-admin-down</li> <li>• sub-interface-oper-down</li> <li>• all-dhcpv6-servers-unreachable-within-net-instance</li> <li>• source-address-not-matching-relay-sub-interface-ipv6-addresses</li> <li>• no-valid-ipv6-address-on-sub-interface</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### oper-state *keyword*

<b>Description</b>	The operational state of the dhcp relay agent
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcp-relay oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>

**Options**

- up  
Component or process is operational
- down  
Component or process is not operational
- empty  
Component slot is empty
- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

Supported on all platforms

**option** *keyword*

<b>Description</b>	List of options to insert into relayed packet towards DHCPv6 server
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcp-relay option</a> <i>keyword</i>
<b>Tree</b>	<a href="#">option</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>interface-id Enable option 18 Interface-Id into relayed packet towards DHCPv6 server, format=system_name/VRF_instance/sub-interface_id:vlan_id</li> <li>remote-id Enable option 37 Remote Identifier into relayed packet towards DHCPv6 server, format=client MAC address</li> <li>client-link-layer-address Enable option 79 Client Link-Layer Address into relayed packet towards DHCPv6 server, format based on rfc-6939</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**server** (*ipv6-address* | *domain-name*)

<b>Description</b>	List of the DHCPv6 servers that the DHCPv6 relay function will relay DHCPv6 packets to/from
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcp-relay server</a> ( <i>ipv6-address</i>   <i>domain-name</i> )
<b>Tree</b>	<a href="#">server</a>
<b>String Length</b>	1 to 253
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	8
<b>Min. Elements</b>	1

**source-address** *string*

<b>Description</b>	Source IPv6 address of the relayed packets towards DHCPv6 servers this address can be any IPv6 address configured within the network-instance towards the DHCPv6 server
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcp-relay source-address</a> <i>string</i>
<b>Tree</b>	<a href="#">source-address</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6</a> <a href="#">dhcp-relay</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### client-packets-discarded *number*

<b>Description</b>	Total discarded dhcp packets from dhcp client(s) towards DHCP server(s)
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6</a> <a href="#">dhcp-relay</a> <a href="#">statistics</a> <a href="#">client-packets-discarded</a> <i>number</i>
<b>Tree</b>	<a href="#">client-packets-discarded</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### client-packets-received *number*

<b>Description</b>	Total received dhcp packets from dhcp client(s) for DHCP Relay
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6</a> <a href="#">dhcp-relay</a> <a href="#">statistics</a> <a href="#">client-packets-received</a> <i>number</i>
<b>Tree</b>	<a href="#">client-packets-received</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### client-packets-relayed *number*

<b>Description</b>	Total relayed dhcp packets from dhcp client(s) towards DHCP server(s)
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6</a> <a href="#">dhcp-relay</a> <a href="#">statistics</a> <a href="#">client-packets-relayed</a> <i>number</i>
<b>Tree</b>	<a href="#">client-packets-relayed</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **server-packets-discarded** *number*

<b>Description</b>	Total discarded dhcp packets from DHCP server(s) towards dhcp client(s)
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcp-relay statistics server-packets-discarded</a> <i>number</i>
<b>Tree</b>	<a href="#">server-packets-discarded</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **server-packets-received** *number*

<b>Description</b>	Total received dhcp packets from DHCP server(s) for DHCP Relay
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcp-relay statistics server-packets-received</a> <i>number</i>
<b>Tree</b>	<a href="#">server-packets-received</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **server-packets-relayed** *number*

<b>Description</b>	Total relayed dhcp packets from DHCP server(s) towards dhcp client(s)
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcp-relay statistics server-packets-relayed</a> <i>number</i>
<b>Tree</b>	<a href="#">server-packets-relayed</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **trace-options**

<b>Description</b>	Container for tracing DHCPv6 relay operations on the subinterface
--------------------	---

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcp-relay trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**trace** *keyword*

<b>Description</b>	List of events to trace
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcp-relay trace-options</a> <a href="#">trace</a> <i>keyword</i>
<b>Tree</b>	<a href="#">trace</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">messages</a> Capture all DHCPv6 messages sent and received by the subinterface</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**dhcpv6-server**

<b>Description</b>	Enable the dhcpv6-server context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcpv6-server</a>
<b>Tree</b>	<a href="#">dhcpv6-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Enables/Disables DHCPv6 server function on subinterface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcpv6-server admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">enable</a></li> <li>• <a href="#">disable</a></li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	Details if the dhcp server is operationally available
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 dhcpv6-server oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>• waiting Component or process is currently waiting</li> </ul>

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## neighbor-discovery

<b>Description</b>	Container for the IPv6 Neighbor Discovery protocol
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery</a>
<b>Tree</b>	<a href="#">neighbor-discovery</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## debug *keyword*

<b>Description</b>	List of events to debug
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery debug</a> <i>keyword</i>
<b>Tree</b>	<a href="#">debug</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>messages</li> </ul> <p>Capture all neighbor-solicitation and neighbor-advertisement messages sent and received by the subinterface</p>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## duplicate-address-detection *boolean*

<b>Description</b>	<p>Enables Duplicate Address Detection on all tentative addresses</p> <p>This applies to link-local and global unicast addresses. Only one transmission is done; there are no retransmissions.</p> <p>Must be true on an IPv6 subinterface that has dhcp-client enabled.</p>
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery duplicate-address-detection</a> <i>boolean</i>
<b>Tree</b>	<a href="#">duplicate-address-detection</a>
<b>Default</b>	true
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## evpn

**Description** Configure which types of ARP or ND entries will be advertised in EVPN MAC/IP routes.

**Context** [interface name](#) *string* [subinterface index](#) *number* [ipv6 neighbor-discovery evpn](#)

**Tree** [evpn](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## advertise [route-type](#) *keyword*

**Description** Enter the advertise list instance

**Context** [interface name](#) *string* [subinterface index](#) *number* [ipv6 neighbor-discovery evpn advertise route-type](#) *keyword*

**Tree** [advertise](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## route-type *keyword*

**Description** Controls what type of ARP or ND entries to advertise.

**Context** [interface name](#) *string* [subinterface index](#) *number* [ipv6 neighbor-discovery evpn advertise route-type](#) *keyword*

**Options**

- static
- dynamic

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## internal-tags

**Description** Configuration and state of internal tags

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery evpn advertise route-type</a> <i>keyword</i> <a href="#">internal-tags</a>
<b>Tree</b>	<a href="#">internal-tags</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **set-tag-set** *reference*

<b>Description</b>	Reference to a tag-set defined under routing-policy
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery evpn advertise route-type</a> <i>keyword</i> <a href="#">internal-tags set-tag-set</a> <i>reference</i>
<b>Tree</b>	<a href="#">set-tag-set</a>
<b>Reference</b>	<a href="#">routing-policy tag-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	1

### **host-route**

<b>Description</b>	Configure which types of ARP or ND entries will be populated in the route-table.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery host-route</a>
<b>Tree</b>	<a href="#">host-route</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **populate** [route-type](#) *keyword*

<b>Description</b>	Enter the populate list instance
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery host-route populate route-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">populate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**route-type** *keyword*

<b>Description</b>	Controls what type of ARP or ND entries generate a host route.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery host-route populate route-type</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• dynamic</li> <li>• evpn</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**datapath-programming** *boolean*

<b>Description</b>	When set to true, the host route is programmed in the datapath
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery host-route populate route-type</a> <i>keyword</i> <a href="#">datapath-programming</a> <i>boolean</i>
<b>Tree</b>	<a href="#">datapath-programming</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**internal-tags**

<b>Description</b>	Configuration and state of internal tags
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery host-route populate route-type</a> <i>keyword</i> <a href="#">internal-tags</a>
<b>Tree</b>	<a href="#">internal-tags</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**set-tag-set** *reference*

<b>Description</b>	Reference to a tag-set defined under routing-policy
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery host-route populate route-type</a> <i>keyword</i> <a href="#">internal-tags set-tag-set</a> <i>reference</i>
<b>Tree</b>	<a href="#">set-tag-set</a>

<b>Reference</b>	<a href="#">routing-policy tag-set name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	1

### **learn-unsolicited** *keyword*

<b>Description</b>	Sets if neighbors should be learned from unsolicited neighbor advertisements for global or link local addresses or both.
<b>Context</b>	<a href="#">interface name string subinterface index number ipv6 neighbor-discovery learn-unsolicited keyword</a>
<b>Tree</b>	<a href="#">learn-unsolicited</a>
<b>Default</b>	none
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• global</li> <li>• link-local</li> <li>• both</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **limit**

<b>Description</b>	Container for the configuration of Neighbor-Discovery limit
<b>Context</b>	<a href="#">interface name string subinterface index number ipv6 neighbor-discovery limit</a>
<b>Tree</b>	<a href="#">limit</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **log-only** *boolean*

<b>Description</b>	<p>Generate only a log message when limit is reached</p> <p>When set to true, neighbor entries are still being learned after exceeding the max-entries limit.</p>
--------------------	---

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery limit</a> <a href="#">log-only</a> <i>boolean</i>
<b>Tree</b>	<a href="#">log-only</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-entries** *number*

<b>Description</b>	The maximum number of neighbor entries allowed on the subinterface If not configured, the amount of neighbor entries on the subinterface is only limited by the total amount of entries supported by the router.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery limit</a> <a href="#">max-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">max-entries</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**warning-threshold-pct** *number*

<b>Description</b>	Threshold percentage of the configured maximum number of entries When exceeded, an event is triggered.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery limit</a> <a href="#">warning-threshold-pct</a> <i>number</i>
<b>Tree</b>	<a href="#">warning-threshold-pct</a>
<b>Range</b>	1 to 100
<b>Default</b>	90
<b>Units</b>	percent
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**neighbor** [ipv6-address](#) *string*

<b>Description</b>	List of static and dynamic ND cache entries that map an IPv6 address to a MAC address
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery neighbor</a> <a href="#">ipv6-address</a> <i>string</i>

<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **ipv6-address** *string*

<b>Description</b>	IPv6 address resolved by the ND cache entry To configure a static neighbor entry a value must be written into this leaf and the link-layer-address leaf.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery neighbor</a> <a href="#">ipv6-address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **current-state** *keyword*

<b>Description</b>	The Neighbor Unreachability Detection state
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">current-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">current-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• incomplete</li> <li>• reachable</li> <li>• stale</li> <li>• delay</li> <li>• probe</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **datapath-programming**

<b>Description</b>	Container for state related to the datapath programming of the ARP or neighbor entry
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">datapath-programming</a>
<b>Tree</b>	<a href="#">datapath-programming</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-failed-complexes** *string*

<b>Description</b>	List of forwarding complexes that reported a failure for the last operation. They appear in the format (slot-number,complex-number).
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery neighbor ipv6-address</a> <i>string</i> <a href="#">datapath-programming last-failed-complexes</a> <i>string</i>
<b>Tree</b>	<a href="#">last-failed-complexes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**status** *keyword*

<b>Description</b>	The status of the ARP or neighbor entry with respect to datapath programming
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery neighbor ipv6-address</a> <i>string</i> <a href="#">datapath-programming status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• success All linecard complexes have reported that the entry was programmed successfully</li> <li>• failed At least one linecard complex reported that the entry was not programmed successfully or else this entry was not even provided to the datapath for programming because the system limit on the number of IPv4 ARP and IPv6 neighbor entries was exceeded</li> <li>• pending The ARP or neighbor entry was provided to the datapath for programming but at least one linecard complex has not provided a status yet.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**is-router** *boolean*

<b>Description</b>	Indicates that the neighbor node claims to be a router (R bit in the Neighbor Advertisement message)
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery neighbor ipv6-address</a> <i>string</i> <a href="#">is-router</a> <i>boolean</i>
<b>Tree</b>	<a href="#">is-router</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **link-layer-address** *string*

<b>Description</b>	The resolving MAC address of the ND cache entry To configure a static neighbor entry a value must be written into this leaf and the ipv6-address leaf.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery neighbor ipv6-address</a> <i>string</i> <a href="#">link-layer-address</a> <i>string</i>
<b>Tree</b>	<a href="#">link-layer-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **next-state-time** *string*

<b>Description</b>	The date and time when the neighbor state is expected to transition to the next state
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery neighbor ipv6-address</a> <i>string</i> <a href="#">next-state-time</a> <i>string</i>
<b>Tree</b>	<a href="#">next-state-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **origin** *keyword*

<b>Description</b>	The origin of the neighbor cache entry.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery neighbor ipv6-address</a> <i>string</i> <a href="#">origin</a> <i>keyword</i>
<b>Tree</b>	<a href="#">origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• other</li> <li>• static</li> <li>• dynamic</li> <li>• evpn</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**proxy-nd** *boolean*

<b>Description</b>	When set to true, the router replies with its own MAC to Neighbor Solicitations destined to any host.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery proxy-nd</a> <i>boolean</i>
<b>Tree</b>	<a href="#">proxy-nd</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**reachable-time** *number*

<b>Description</b>	The period of time that a dynamic IPv6 neighbor cache entry is considered reachable after a reachability confirmation event After this time expires the neighbor state moves to STALE.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery reachable-time</a> <i>number</i>
<b>Tree</b>	<a href="#">reachable-time</a>
<b>Range</b>	30 to 3600
<b>Default</b>	30
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**stale-time** *number*

<b>Description</b>	The maximum time that a dynamic IPv6 neighbor cache entry can remain in the STALE state before it is removed This limit is reached only if no traffic is sent/queued towards the neighbor during the entire duration of the timer.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery stale-time</a> <i>number</i>
<b>Tree</b>	<a href="#">stale-time</a>
<b>Range</b>	60 to 65535
<b>Default</b>	14400

<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### virtual-ipv6-discovery

<b>Description</b>	Enable Virtual IPv6 discovery on the subinterface and configure associated parameters  When enabled, the system will attempt to discover the configured virtual IPv6 addresses on the listed bridged subinterfaces.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery</a>
<b>Tree</b>	<a href="#">virtual-ipv6-discovery</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### address [ipv6-address](#) *string*

<b>Description</b>	The list of virtual IPv6 addresses to be discovered on the subinterface.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery address</a> <a href="#">ipv6-address</a> <i>string</i>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	640

### ipv6-address *string*

<b>Description</b>	The virtual IPv6 address.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery address</a> <a href="#">ipv6-address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**allowed-macs** *string*

<b>Description</b>	List of allowed mac addresses for a discovered virtual IP address.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery address</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">allowed-macs</a> <i>string</i>
<b>Tree</b>	<a href="#">allowed-macs</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	10

**probe-bridged-subinterfaces** *string*

<b>Description</b>	Configure the list of bridged sub-interfaces on the associated MAC-VRF to which the NS probes are sent.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery address</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">probe-bridged-subinterfaces</a> <i>string</i>
<b>Tree</b>	<a href="#">probe-bridged-subinterfaces</a>
<b>String Length</b>	5 to 25
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	10

**probe-interval** *number*

<b>Description</b>	<p>Configure the probe interval at which the system sends a Neighbor Solicitation (NS) for the virtual IPv6 address.</p> <p>The default value of zero determines that the system sends a NS for the virtual IPv6 only when the address is configured. The creation of the Neighbor entry for the virtual IPv6 address will in this case rely on the server sending an unsolicited Neighbor Advertisement for the virtual IPv6 address. When the value is set to a non-zero interval, the system sends a periodic NS at the configured interval and irrespective of the Neighbor entry being already created.</p>
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery address</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">probe-interval</a> <i>number</i>

<b>Tree</b>	<a href="#">probe-interval</a>
<b>Range</b>	0   5 to 86400
<b>Default</b>	0
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## statistics

<b>Description</b>	Statistics for the Virtual IP address
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery address</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## out-probe-packets *number*

<b>Description</b>	The number of probe packets transmitted for the Virtual IP discovery.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery address</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">statistics out-probe-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-probe-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## statistics

<b>Description</b>	Global statistics for Virtual IP discovery
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### out-total-probe-packets *number*

<b>Description</b>	The number of total probe packets transmitted for Virtual discovery.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery statistics out-total-probe-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-total-probe-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### router-advertisement

<b>Description</b>	Container for configuring IPv6 router discovery options
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 router-advertisement</a>
<b>Tree</b>	<a href="#">router-advertisement</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### debug *keyword*

<b>Description</b>	List of events to debug
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 router-advertisement debug</a> <i>keyword</i>
<b>Tree</b>	<a href="#">debug</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>messages</li> </ul> <p>Capture all router-solicitation and router-advertisement messages sent and received by the subinterface</p>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**router-role**

<b>Description</b>	IPv6 router advertisement options that apply when the role of the interface is a router interface.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 router-advertisement router-role</a>
<b>Tree</b>	<a href="#">router-role</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable the sending of router advertisements on the subinterface.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 router-advertisement router-role admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**current-hop-limit** *number*

<b>Description</b>	The current hop limit to advertise in the router advertisement messages.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 router-advertisement router-role current-hop-limit</a> <i>number</i>
<b>Tree</b>	<a href="#">current-hop-limit</a>
<b>Default</b>	64
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ip-mtu** *number*

<b>Description</b>	The IP MTU to advertise in the router advertisement messages and that hosts should associate with the link on which these messages are received. If no value is specified the option is not included.
--------------------	---

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 router-advertisement router-role ip-mtu</a> <i>number</i>
<b>Tree</b>	<a href="#">ip-mtu</a>
<b>Range</b>	1280 to 9486
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **managed-configuration-flag** *boolean*

<b>Description</b>	When this is set the M-bit is set in the router advertisement messages, indicating that hosts should use DHCPv6 to obtain IPv6 addresses.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 router-advertisement router-role managed-configuration-flag</a> <i>boolean</i>
<b>Tree</b>	<a href="#">managed-configuration-flag</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **max-advertisement-interval** *number*

<b>Description</b>	The maximum time between sending router advertisement messages to the all-nodes multicast address.  Each subinterface has its own timer. Whenever the timer fires the message is sent and then the timer is reset to a uniformly distributed random value between min-advertisement-interval and max-advertisement-interval. The RA message can be sent before timer expiry in response to a RS message.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 router-advertisement router-role max-advertisement-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">max-advertisement-interval</a>
<b>Range</b>	4 to 1800
<b>Default</b>	600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**min-advertisement-interval** *number*

<b>Description</b>	The minimum time between sending router advertisement messages to the all-nodes multicast address.  Each subinterface has its own timer. Whenever the timer fires the message is sent and then the timer is reset to a uniformly distributed random value between min-advertisement-interval and max-advertisement-interval. The RA message can be sent before timer expiry in response to a RS message.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <a href="#">number</a> <a href="#">ipv6</a> <a href="#">router-advertisement</a> <a href="#">router-role</a> <a href="#">min-advertisement-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">min-advertisement-interval</a>
<b>Range</b>	3 to 1350
<b>Default</b>	200
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**other-configuration-flag** *boolean*

<b>Description</b>	When this is set the O-bit is set in the router advertisement messages, indicating that hosts should use DHCPv6 to obtain other configuration information (besides addresses).
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <a href="#">number</a> <a href="#">ipv6</a> <a href="#">router-advertisement</a> <a href="#">router-role</a> <a href="#">other-configuration-flag</a> <i>boolean</i>
<b>Tree</b>	<a href="#">other-configuration-flag</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**prefix** [ipv6-prefix](#) *string*

<b>Description</b>	The list of IPv6 prefixes to advertise in the router advertisement messages.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <a href="#">number</a> <a href="#">ipv6</a> <a href="#">router-advertisement</a> <a href="#">router-role</a> <a href="#">prefix</a> <a href="#">ipv6-prefix</a> <i>string</i>
<b>Tree</b>	<a href="#">prefix</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	16

**ipv6-prefix** *string*

<b>Description</b>	An IPv6 global unicast address prefix.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 router-advertisement router-role prefix</a> <a href="#">ipv6-prefix</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**autonomous-flag** *boolean*

<b>Description</b>	When this is set in the prefix information option hosts can use the prefix for stateless address autoconfiguration (SLAAC).
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 router-advertisement router-role prefix</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">autonomous-flag</a> <i>boolean</i>
<b>Tree</b>	<a href="#">autonomous-flag</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**on-link-flag** *boolean*

<b>Description</b>	When this is set in the prefix information option hosts can use the prefix for on-link determination.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 router-advertisement router-role prefix</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">on-link-flag</a> <i>boolean</i>
<b>Tree</b>	<a href="#">on-link-flag</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**preferred-lifetime** (*keyword* | *number*)

<b>Description</b>	The length of time in seconds (relative to the time the packet is sent) that addresses generated from the prefix via stateless address autoconfiguration remain preferred.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 router-advertisement router-role prefix</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">preferred-lifetime</a> ( <i>keyword</i>   <i>number</i> )
<b>Tree</b>	<a href="#">preferred-lifetime</a>

<b>Default</b>	604800
<b>Units</b>	seconds
<b>Options</b>	• infinite
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **valid-lifetime** (*keyword* | *number*)

<b>Description</b>	The length of time in seconds (relative to the time the packet is sent) that the prefix is valid for the purpose of on-link determination.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 router-advertisement router-role prefix</a> <a href="#">ipv6-prefix</a> <i>string</i> <b>valid-lifetime</b> ( <i>keyword</i>   <i>number</i> )
<b>Tree</b>	<a href="#">valid-lifetime</a>
<b>Default</b>	2592000
<b>Units</b>	seconds
<b>Options</b>	• infinite
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **reachable-time** *number*

<b>Description</b>	The time, in milliseconds, that is advertised as the reachable time in RA messages and that hosts use for the ICMPv6 Neighbor Unreachability Detection algorithm. A value of zero means unspecified by this router.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 router-advertisement router-role</a> <b>reachable-time</b> <i>number</i>
<b>Tree</b>	<a href="#">reachable-time</a>
<b>Range</b>	0 to 3600000
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **retransmit-time** *number*

<b>Description</b>	The time, in milliseconds, that is advertised as the retrans-timer in RA messages and that hosts use for address resolution and the Neighbor Unreachability Detection algorithm. It represents the time between
--------------------	---

	retransmitted NS messages. A value of zero means unspecified by this router.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 router-advertisement router-role retransmit-time</a> <i>number</i>
<b>Tree</b>	<a href="#">retransmit-time</a>
<b>Range</b>	0 to 1800000
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **router-lifetime** *number*

<b>Description</b>	The lifetime in seconds that is advertised as the router lifetime in RA messages. This indicates the time period for which the advertising router can be used as a default router/gateway. A value of 0 means the router should not be used as a default gateway.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 router-advertisement router-role router-lifetime</a> <i>number</i>
<b>Tree</b>	<a href="#">router-lifetime</a>
<b>Range</b>	0 to 9000
<b>Default</b>	1800
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **statistics**

<b>Description</b>	Container for subinterface statistics, counting IPv4 packets or IPv6 packets or both depending on the context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **in-discarded-packets** *number*

<b>Description</b>	The total number of input IPv4 packets or IPv6 packets or both (transit and terminating traffic) that were dropped for any of the following reasons:
--------------------	--

This also includes IP/MPLS packets dropped by ingress interface ACL drop action or CPM filter drop action.

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics in-discarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-discarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **in-error-packets** *number*

<b>Description</b>	The total number of input IPv4 packets or IPv6 packets or both discarded due to errors, counting transit and terminating traffic  The sum of the following RFC 4293 counters: ipIfStatsInHdrErrors ipIfStatsInNoRoutes ipIfStatsInAddrErrors ipIfStatsInUnknownProtos ipIfStatsInTruncatedPkts
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics in-error-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **in-forwarded-octets** *number*

<b>Description</b>	The number of octets in input IPv4 packets or IPv6 packets or both received on this subinterface and counted in in-forwarded-packets
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics in-forwarded-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-forwarded-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **in-forwarded-packets** *number*

<b>Description</b>	The number of input IPv4 packets or IPv6 packets or both received on this subinterface for which the router was not the final destination and for which the router attempted to find a route to forward them to that final destination.
--------------------	---

Note that non-terminating IPv4 packets with options and non-terminating IPv6 packets with extension headers are included in this count (and not dropped) as are packets that trigger ICMP/ICMPv6 redirect messages.

On 7220 IXR systems this also counts received traffic that is terminating.

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics in-forwarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-forwarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **in-matched-ra-packets** *number*

<b>Description</b>	The total number of IPv6 packets matched with applied RA-Guard policy
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics in-matched-ra-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-matched-ra-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **in-octets** *number*

<b>Description</b>	The total number of octets received in input packets, counting transit and terminating traffic
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics in-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **in-packets** *number*

<b>Description</b>	The total number of input packets received, counting transit and terminating traffic
--------------------	--

This equals the sum of: in-error-packets in-discarded-packets (also includes IP/MPLS packets) in-terminated-packets (also includes IP/MPLS packets) in-forwarded-packets

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics in-packets number</a>
<b>Tree</b>	<a href="#">in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **in-terminated-octets** *number*

<b>Description</b>	The total number of octets in input IPv4 packets or IPv6 packets or both that were received on this subinterface and counted in in-terminated-packets
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics in-terminated-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-terminated-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **in-terminated-packets** *number*

<b>Description</b>	The total number of input IPv4 packets or IPv6 packets or both that were received on this subinterface and that have a destination IP address matching a local interface address or an IPv6 multicast address to which the interface belongs. The count includes packets eventually discarded by the CPM. Such discards include:  This also includes terminating IP/MPLS packets.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics in-terminated-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-terminated-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-clear** *string*

<b>Description</b>	Timestamp of the last time the subinterface counters were cleared.
--------------------	--

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **out-discarded-packets** *number*

<b>Description</b>	The total number of IPv4 packets or IPv6 packets or both, originating and transit, sent towards this subinterface that were dropped.  This also includes IP/MPLS packets dropped by egress interface ACL drop action.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics out-discarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-discarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **out-error-packets** *number*

<b>Description</b>	The number of IPv4 packets or IPv6 packets or both, originating and transit, for which this router was successful in finding a path to their final destination through this subinterface but an error prevented their transmission.  On 7250 IXR systems this is incremented when the IPv4 packet size exceeds the IP MTU and fragmentation was not allowed or not supported
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics out-error-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **out-forwarded-octets** *number*

<b>Description</b>	The number of octets in transit IPv4 packets or IPv6 packets or both which the router attempted to route out this subinterface
--------------------	--

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics out-forwarded-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-forwarded-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **out-forwarded-packets** *number*

<b>Description</b>	The number of transit IPv4 packets or IPv6 packets or both which the router attempted to route out this subinterface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics out-forwarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-forwarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **out-octets** *number*

<b>Description</b>	The total number of octets in IPv4 packets or IPv6 packets or both delivered to the lower layers for transmission
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics out-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **out-originated-octets** *number*

<b>Description</b>	The number of octets in IPv4 packets or IPv6 packets or both which originated on the CPM and which the router attempted to route out this subinterface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics out-originated-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-originated-octets</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **out-originated-packets** *number*

<b>Description</b>	The number of IPv4 packets or IPv6 packets or both which originated on the CPM and which the router attempted to route out this subinterface  This includes all originated ICMP/ICMPv6 messages.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics out-originated-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-originated-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **out-packets** *number*

<b>Description</b>	The total number of IPv4 packets or IPv6 packets or both that this router supplied to the lower layers for transmission  This includes packets generated locally and those forwarded by this router. If there are no queue drops it is equal to: <out-forwarded-packets> + <out-originated-packets>
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv6 statistics out-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **I2-mtu** *number*

<b>Description</b>	Layer-2 MTU of the subinterface in bytes.  Includes the Ethernet header and VLAN tags, and excludes 4-bytes FCS.  L2 MTU specifies the maximum sized Ethernet frame that can be transmitted on the subinterface. If a frame exceeds this size it is discarded. If the I2-mtu of the subinterface exceeds the port-mtu of the associated interface, the subinterface will remain operationally down.  The default value for a subinterface is taken from /system/mtu/default-I2-mtu. The L2 MTU is only configurable for bridged subinterfaces.
--------------------	--

The 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-H2, and 7220 IXR-H3 systems support a maximum L2 MTU of 9412 bytes and minimum of 1500 bytes.

All other systems support a maximum L2 MTU of 9500 and minimum of 1500 bytes.

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">l2-mtu</a> <i>number</i>
<b>Tree</b>	<a href="#">l2-mtu</a>
<b>Range</b>	1450 to 9500
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **last-change** *string*

<b>Description</b>	The date and time of the most recent change to the subinterface state
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">last-change</a> <i>string</i>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **local-mirror-destination**

<b>Description</b>	Container for options related to local mirror destination
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">local-mirror-destination</a>
<b>Tree</b>	<a href="#">local-mirror-destination</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

### **admin-state** *keyword*

<b>Description</b>	The configurable state of the local mirror destination
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">local-mirror-destination</a> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>

<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

### **oper-state** *keyword*

<b>Description</b>	The operational state of the local mirror destination
<b>Context</b>	<a href="#">interface name</a> <a href="#">string</a> <a href="#">subinterface index</a> <a href="#">number</a> <a href="#">local-mirror-destination</a> <a href="#">oper-state</a> <a href="#">keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot</li> </ul>

Component or process is currently warm rebooting

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

## mpls

**Description**

Container for MPLS configuration and state at the subinterface level

**Context**

[interface name](#) *string* [subinterface index](#) *number* [mpls](#)

**Tree**

[mpls](#)

**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## statistics

**Description**

Container for MPLS-specific subinterface statistics

**Context**

[interface name](#) *string* [subinterface index](#) *number* [mpls](#) [statistics](#)

**Tree**

[statistics](#)

**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## in-discarded-packets *number*

**Description**

The total number of MPLS packets that were dropped because they were received with forwarded top label having an MPLS TTL value of 1

**Context**

[interface name](#) *string* [subinterface index](#) *number* [mpls](#) [statistics](#) [in-discarded-packets](#) *number*

**Tree**

[in-discarded-packets](#)

**Default**

0

**Configurable**

False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **in-error-packets** *number*

**Description** The total number of MPLS packets that were dropped because they were received with errors that include:

**Context** [interface name](#) *string* [subinterface index](#) *number* [mpls statistics in-error-packets](#) *number*

**Tree** [in-error-packets](#)

**Default** 0

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **in-forwarded-octets** *number*

**Description** The number of octets in MPLS packets received on this subinterface that were attempted to be forwarded to another IP or MPLS interface

**Context** [interface name](#) *string* [subinterface index](#) *number* [mpls statistics in-forwarded-octets](#) *number*

**Tree** [in-forwarded-octets](#)

**Default** 0

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **in-forwarded-packets** *number*

**Description** The number of MPLS packets received on this subinterface that were attempted to be forwarded to another IP or MPLS interface

**Context** [interface name](#) *string* [subinterface index](#) *number* [mpls statistics in-forwarded-packets](#) *number*

**Tree** [in-forwarded-packets](#)

**Default** 0

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**in-octets** *number*

<b>Description</b>	The total number of octets in input MPLS packets received, not counting MPLS packets discarded due to ACLs or IP/MPLS packets that terminated on this router.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">mpls statistics in-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**in-packets** *number*

<b>Description</b>	The total number of input MPLS packets received, not counting MPLS packets discarded due to ACLs or IP/MPLS packets that terminated on this router.  This equals the sum of: in-error-packets in-discarded-packets in-forwarded-packets
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">mpls statistics in-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-clear** *string*

<b>Description</b>	Timestamp of the last time the subinterface MPLS counters were cleared.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">mpls statistics last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**out-error-packets** *number*

<b>Description</b>	The number of MPLS packets that could not be transmitted on this subinterface because of an error.  For now this only counts transmission errors that result from the MPLS packet size exceeding the MPLS MTU of the subinterface.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">mpls statistics out-error-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**out-forwarded-octets** *number*

<b>Description</b>	The number of octets in MPLS packets transmitted on this subinterface. This does not include IP packets that resulted from a PHP pop operation.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">mpls statistics out-forwarded-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-forwarded-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**out-forwarded-packets** *number*

<b>Description</b>	The number of MPLS packets transmitted on this subinterface. This does not include IP packets that resulted from a PHP pop operation.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">mpls statistics out-forwarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-forwarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**out-octets** *number*

<b>Description</b>	The total number of octets in output MPLS packets transmitted.
--------------------	--

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">mpls statistics out-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **out-originated-octets** *number*

<b>Description</b>	The number of octets in MPLS packets that were originated by this router.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">mpls statistics out-originated-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-originated-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **out-originated-packets** *number*

<b>Description</b>	The number of MPLS packets that were originated by this router.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">mpls statistics out-originated-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-originated-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **out-packets** *number*

<b>Description</b>	The total number of output MPLS packets transmitted. This equals out-originated-packets + out-forwarded-packets
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">mpls statistics out-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**mpls-mtu** *number*

<b>Description</b>	<p>MPLS MTU of the subinterface in bytes, including the transmitted label stack.</p> <p>MPLS MTU specifies the maximum sized MPLS packet that can be transmitted on the subinterface. If an MPLS packet containing any payload exceeds this size then it is dropped. If the payload of the dropped packet is IPv4 or IPv6 then this may also result in the generation of an ICMP error message that is either tunneled or sent back to the source.</p> <p>The default MPLS MTU for a subinterface is taken from /system/mtu/default-mpls-mtu.</p> <p>The MPLS MTU is not configurable for subinterfaces of loopback interfaces. Each 7250 IXR IMM supports a maximum of 4 different MPLS MTU values.</p>
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">mpls-mtu</a> <i>number</i>
<b>Tree</b>	<a href="#">mpls-mtu</a>
<b>Range</b>	1284 to 9496
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**name** *string*

<b>Description</b>	<p>The system assigned name of the subinterface.</p> <p>It is formed by taking the base interface name and appending a dot (.) and the subinterface index number. For example, ethernet-2/1.0</p>
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">name</a> <i>string</i>
<b>Tree</b>	<a href="#">name</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-down-reason** *keyword*

<b>Description</b>	The first (and possibly only) reason for the subinterface being operationally down
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">oper-down-reason</a> <i>keyword</i>

<b>Platforms</b>	Supported on all platforms

**in-packets** *number*

<b>Description</b>	The total number of input packets received, counting transit and terminating traffic  This equals the sum of: in-error-packets in-discarded-packets (also includes IP/MPLS packets) in-terminated-packets (also includes IP/MPLS packets) in-forwarded-packets
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">statistics in-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-terminated-octets** *number*

<b>Description</b>	The total number of octets in input IPv4 packets or IPv6 packets or both that were received on this subinterface and counted in in-terminated-packets
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">statistics in-terminated-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-terminated-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**in-terminated-packets** *number*

<b>Description</b>	The total number of input IPv4 packets or IPv6 packets or both that were received on this subinterface and that have a destination IP address matching a local interface address or an IPv6 multicast address to which the interface belongs. The count includes packets eventually discarded by the CPM. Such discards include:  This also includes terminating IP/MPLS packets.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">statistics in-terminated-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-terminated-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-clear** *string*

<b>Description</b>	Timestamp of the last time the subinterface counters were cleared.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">statistics last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**out-discarded-packets** *number*

<b>Description</b>	The total number of IPv4 packets or IPv6 packets or both, originating and transit, sent towards this subinterface that were dropped.  This also includes IP/MPLS packets dropped by egress interface ACL drop action.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">statistics out-discarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-discarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**out-error-packets** *number*

<b>Description</b>	The number of IPv4 packets or IPv6 packets or both, originating and transit, for which this router was successful in finding a path to their final destination through this subinterface but an error prevented their transmission.  On 7250 IXR systems this is incremented when the IPv4 packet size exceeds the IP MTU and fragmentation was not allowed or not supported
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">statistics out-error-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**out-forwarded-octets** *number*

<b>Description</b>	The number of octets in transit IPv4 packets or IPv6 packets or both which the router attempted to route out this subinterface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">statistics out-forwarded-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-forwarded-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**out-forwarded-packets** *number*

<b>Description</b>	The number of transit IPv4 packets or IPv6 packets or both which the router attempted to route out this subinterface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">statistics out-forwarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-forwarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**out-octets** *number*

<b>Description</b>	The total number of octets in IPv4 packets or IPv6 packets or both delivered to the lower layers for transmission
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">statistics out-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**out-originated-octets** *number*

<b>Description</b>	The number of octets in IPv4 packets or IPv6 packets or both which originated on the CPM and which the router attempted to route out this subinterface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">statistics out-originated-octets</a> <i>number</i>

<b>Tree</b>	<a href="#">out-originated-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-originated-packets** *number*

<b>Description</b>	The number of IPv4 packets or IPv6 packets or both which originated on the CPM and which the router attempted to route out this subinterface  This includes all originated ICMP/ICMPv6 messages.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">statistics out-originated-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-originated-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-packets** *number*

<b>Description</b>	The total number of IPv4 packets or IPv6 packets or both that this router supplied to the lower layers for transmission  This includes packets generated locally and those forwarded by this router. If there are no queue drops it is equal to: <out-forwarded-packets> + <out-originated-packets>
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">statistics out-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **type** *identityref*

<b>Description</b>	Indicates the context in which the ethernet subinterface will be used
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>routed</li> </ul>

- Indicates subinterface is used in a routed context
- bridged
- Indicates subinterface is used in a bridged context
- local-mirror-dest
- Indicates subinterface is used in a mirroring destination SPAN context

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### unidirectional-link-delay

<b>Description</b>	Unidirectional link delay configuration and state related to subinterface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">unidirectional-link-delay</a>
<b>Tree</b>	<a href="#">unidirectional-link-delay</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### static-delay (*number* | *keyword*)

<b>Description</b>	A statically configured unidirectional delay value that can be advertised as an interface attribute by an IGP
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">unidirectional-link-delay</a> <a href="#">static-delay</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">static-delay</a>
<b>Range</b>	0 to 2147483647
<b>Default</b>	none
<b>Units</b>	microseconds
<b>Options</b>	• none
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### vlan

<b>Description</b>	Parameters for VLAN definition under SRL interfaces.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">vlan</a>
<b>Tree</b>	<a href="#">vlan</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## encap

**Description** VLAN match parameters for the associated subinterface.

**Context** [interface name](#) [string](#) [subinterface](#) [index](#) [number](#) [vlan](#) [encap](#)

**Tree** [encap](#)

**Configurable** True

**Platforms** Supported on all platforms

## single-tagged

**Description** When present, tagged frames with a specific, non-zero, outer VLAN ID are associated to the subinterface

The outer VLAN-ID tag is considered service delimiting and it is by default stripped at ingress and restored/added on egress.

**Context** [interface name](#) [string](#) [subinterface](#) [index](#) [number](#) [vlan](#) [encap](#) [single-tagged](#)

**Tree** [single-tagged](#)

**Configurable** True

**Platforms** Supported on all platforms

## vlan-id (*number* | *keyword*)

**Description** VLAN identifier for single-tagged packets.

**Context** [interface name](#) [string](#) [subinterface](#) [index](#) [number](#) [vlan](#) [encap](#) [single-tagged](#) [vlan-id](#) (*number* | *keyword*)

**Tree** [vlan-id](#)

**Range** 1 to 4094

**Options**

- optional
- any

**Configurable** True

**Platforms** Supported on all platforms

## single-tagged-range

**Description** When present, tagged frames with a specific, non-zero, outer VLAN ID contained in a specified set of range are associated to the subinterface.

The outer VLAN ID tag of the frame is not stripped off on ingress, and no tag is pushed on egress.

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">vlan encap single-tagged-range</a>
<b>Tree</b>	<a href="#">single-tagged-range</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **low-vlan-id** [range-low-vlan-id](#) *number*

<b>Description</b>	Enter the low-vlan-id list instance
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">vlan encap single-tagged-range low-vlan-id range-low-vlan-id</a> <i>number</i>
<b>Tree</b>	<a href="#">low-vlan-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
<b>Max. Elements</b>	8
<b>Min. Elements</b>	1

### **range-low-vlan-id** *number*

<b>Description</b>	The low-value VLAN identifier in a range for single-tagged packets. The range is matched inclusively.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">vlan encap single-tagged-range low-vlan-id range-low-vlan-id</a> <i>number</i>
<b>Range</b>	1 to 4094
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **high-vlan-id** *number*

<b>Description</b>	The high-value VLAN identifier in a range for single-tagged packets. The range is matched inclusively.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">vlan encap single-tagged-range low-vlan-id range-low-vlan-id</a> <i>number</i> <a href="#">high-vlan-id</a> <i>number</i>
<b>Tree</b>	<a href="#">high-vlan-id</a>

<b>Range</b>	1 to 4094
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## untagged

<b>Description</b>	When present, untagged frames and VLAN ID 0 priority tagged frames are associated to the subinterface when it belongs to an interface with vlan-tagging enabled.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">vlan encap untagged</a>
<b>Tree</b>	<a href="#">untagged</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## tpid *identityref*

<b>Description</b>	Optionally set the tag protocol identifier field (TPID) that is accepted on the VLAN
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">tpid identityref</a>
<b>Tree</b>	<a href="#">tpid</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">TPID_0X8100</a> Default TPID value for 802.1q single-tagged VLANs.</li> <li>• <a href="#">TPID_0X88A8</a> TPID value for 802.1ad provider bridging, QinQ or stacked VLANs.</li> <li>• <a href="#">TPID_0X9100</a> Alternate TPID value.</li> <li>• <a href="#">TPID_0X9200</a> Alternate TPID value.</li> <li>• <a href="#">TPID_ANY</a> A wildcard that matches any of the generally used TPID values for singly- or multiply-tagged VLANs. Equivalent to matching any of <a href="#">TPID_0X8100</a>, <a href="#">TPID_0X88A8</a>, <a href="#">TPID_0X9100</a> and <a href="#">TPID_0x9200</a>. This value is only applicable where the TPID of a packet is being matched.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4

**traffic-rate**

<b>Description</b>	Container for traffic rate statistics
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">traffic-rate</a>
<b>Tree</b>	<a href="#">traffic-rate</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-bps** *number*

<b>Description</b>	The ingress bandwidth utilization of the port
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">traffic-rate</a> <a href="#">in-bps</a> <i>number</i>
<b>Tree</b>	<a href="#">in-bps</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**out-bps** *number*

<b>Description</b>	The egress bandwidth utilization of the port
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">traffic-rate</a> <a href="#">out-bps</a> <i>number</i>
<b>Tree</b>	<a href="#">out-bps</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**transceiver**

<b>Description</b>	Enter the transceiver context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a>
<b>Tree</b>	<a href="#">transceiver</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**channel** [index](#) *number*

<b>Description</b>	List of physical channels supported by the transceiver associated with this port
--------------------	--

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index number</a>
<b>Tree</b>	<a href="#">channel</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**index number**

<b>Description</b>	Index of the physical channel or lane
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index number</a>
<b>Range</b>	1 to 10
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**input-power**

<b>Description</b>	Enter the input-power context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index number</a> <a href="#">input-power</a>
<b>Tree</b>	<a href="#">input-power</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**high-alarm-condition *boolean***

<b>Description</b>	High alarm threshold condition. Set to true whenever the Rx power is above the high-alarm-threshold and set to false whenever the Rx power is below the high-alarm-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index number</a> <a href="#">input-power high-alarm-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">high-alarm-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**high-alarm-threshold *decimal-number***

<b>Description</b>	High alarm threshold. Read from the installed transceiver
--------------------	--

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index number</a> <i>number</i> <a href="#">input-power high-alarm-threshold</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">high-alarm-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **high-warning-condition** *boolean*

<b>Description</b>	High warning threshold condition. Set to true whenever the Rx power is above the high-warning-threshold and set to false whenever the Rx power is below the high-warning-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index number</a> <i>number</i> <a href="#">input-power high-warning-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">high-warning-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **high-warning-threshold** *decimal-number*

<b>Description</b>	High warning threshold. Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index number</a> <i>number</i> <a href="#">input-power high-warning-threshold</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">high-warning-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **latest-value** *decimal-number*

<b>Description</b>	The current value of the optical Rx power in dBm
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index number</a> <i>number</i> <a href="#">input-power latest-value</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">latest-value</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**low-alarm-condition** *boolean*

<b>Description</b>	Low alarm threshold condition. Set to true whenever the Rx power is below the low-alarm-threshold and set to false whenever the Rx power is above the low-alarm-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">input-power low-alarm-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">low-alarm-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**low-alarm-threshold** *decimal-number*

<b>Description</b>	Low alarm threshold condition. Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">input-power low-alarm-threshold</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">low-alarm-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**low-warning-condition** *boolean*

<b>Description</b>	Low warning threshold condition. Set to true whenever the Rx power is below the low-warning-threshold and set to false whenever the Rx power is above the low-warning-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">input-power low-warning-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">low-warning-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**low-warning-threshold** *decimal-number*

<b>Description</b>	Low warning threshold. Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">input-power low-warning-threshold</a> <i>decimal-number</i>

<b>Tree</b>	<a href="#">low-warning-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### laser-bias-current

<b>Description</b>	Enter the laser-bias-current context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">laser-bias-current</a>
<b>Tree</b>	<a href="#">laser-bias-current</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### high-alarm-condition *boolean*

<b>Description</b>	High alarm threshold condition. Set to true whenever the laser bias current is above the high-alarm-threshold and set to false whenever the laser bias current is below the high-alarm-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">laser-bias-current</a> <a href="#">high-alarm-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">high-alarm-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### high-alarm-threshold *decimal-number*

<b>Description</b>	High alarm threshold. Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">laser-bias-current</a> <a href="#">high-alarm-threshold</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">high-alarm-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### high-warning-condition *boolean*

<b>Description</b>	High warning threshold condition.
--------------------	-----------------------------------

Set to true whenever the laser bias current is above the high-warning-threshold and set to false whenever the laser bias current is below the high-warning-threshold

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">laser-bias-current high-warning-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">high-warning-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **high-warning-threshold** *decimal-number*

<b>Description</b>	High warning threshold. Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">laser-bias-current high-warning-threshold</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">high-warning-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **latest-value** *decimal-number*

<b>Description</b>	The current value of the laser bias current in mA
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">laser-bias-current latest-value</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">latest-value</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **low-alarm-condition** *boolean*

<b>Description</b>	Low alarm threshold condition. Set to true whenever the laser bias current is below the low-alarm-threshold and set to false whenever the laser bias current is above the low-alarm-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">laser-bias-current low-alarm-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">low-alarm-condition</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **low-alarm-threshold** *decimal-number*

**Description** Low alarm threshold.  
Read from the installed transceiver

**Context** [interface name](#) *string* [transceiver channel index](#) *number* [laser-bias-current](#)  
[low-alarm-threshold](#) *decimal-number*

**Tree** [low-alarm-threshold](#)

**Configurable** False

**Platforms** Supported on all platforms

### **low-warning-condition** *boolean*

**Description** Low warning threshold condition.  
Set to true whenever the laser bias current is below the low-warning-threshold and set to false whenever the laser bias current is above the low-warning-threshold

**Context** [interface name](#) *string* [transceiver channel index](#) *number* [laser-bias-current](#)  
[low-warning-condition](#) *boolean*

**Tree** [low-warning-condition](#)

**Configurable** False

**Platforms** Supported on all platforms

### **low-warning-threshold** *decimal-number*

**Description** Low warning threshold.  
Read from the installed transceiver

**Context** [interface name](#) *string* [transceiver channel index](#) *number* [laser-bias-current](#)  
[low-warning-threshold](#) *decimal-number*

**Tree** [low-warning-threshold](#)

**Configurable** False

**Platforms** Supported on all platforms

### **output-power**

**Description** Enter the output-power context

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">output-power</a>
<b>Tree</b>	<a href="#">output-power</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### high-alarm-condition *boolean*

<b>Description</b>	High alarm threshold condition. Set to true whenever the Tx power is above the high-alarm-threshold and set to false whenever the Tx power is below the high-alarm-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">output-power</a> <a href="#">high-alarm-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">high-alarm-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### high-alarm-threshold *decimal-number*

<b>Description</b>	High alarm threshold. Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">output-power</a> <a href="#">high-alarm-threshold</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">high-alarm-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### high-warning-condition *boolean*

<b>Description</b>	High warning threshold condition. Set to true whenever the Tx power is above the high-warning-threshold and set to false whenever the Tx power is below the high-warning-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">output-power</a> <a href="#">high-warning-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">high-warning-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**high-warning-threshold** *decimal-number*

<b>Description</b>	High warning threshold. Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">output-power high-warning-threshold</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">high-warning-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**latest-value** *decimal-number*

<b>Description</b>	The current value of the optical Tx power in dBm
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">output-power latest-value</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">latest-value</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**low-alarm-condition** *boolean*

<b>Description</b>	Low alarm threshold condition. Set to true whenever the Tx power is below the low-alarm-threshold and set to false whenever the Tx power is above the low-alarm-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">output-power low-alarm-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">low-alarm-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**low-alarm-threshold** *decimal-number*

<b>Description</b>	Low alarm threshold. Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">output-power low-alarm-threshold</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">low-alarm-threshold</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **low-warning-condition** *boolean*

<b>Description</b>	Low warning threshold condition. Set to true whenever the Tx power is below the low-warning-threshold and set to false whenever the Tx power is above the low-warning-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">output-power low-warning-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">low-warning-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **low-warning-threshold** *decimal-number*

<b>Description</b>	Low warning threshold. Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">output-power low-warning-threshold</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">low-warning-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **wavelength** *decimal-number*

<b>Description</b>	Wavelength of the transmitting laser in nanometers
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver channel index</a> <i>number</i> <a href="#">wavelength</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">wavelength</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **connector-type** *keyword*

<b>Description</b>	Specifies the fiber connector type of the transceiver associated with the port
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver connector-type</a> <i>keyword</i>

<b>Tree</b>	<a href="#">connector-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• SC</li> <li>• FC-STYLE1-COPPER</li> <li>• FC-STYLE2-COPPER</li> <li>• BNC-OR-TNC</li> <li>• FC-COAX</li> <li>• FIBER-JACK</li> <li>• LC</li> <li>• MT-RJ</li> <li>• MU</li> <li>• SG</li> <li>• OPTICAL-PIGTAIL</li> <li>• MPO-1x12</li> <li>• MPO-2x16</li> <li>• HSSDC</li> <li>• COPPER-PIGTAIL</li> <li>• RJ45</li> <li>• no-separable-connector</li> <li>• MXC-2x16</li> <li>• CS-OPTICAL-CONNECTOR</li> <li>• SN-OPTICAL-CONNECTOR</li> <li>• MPO-2x12</li> <li>• MPO-1x16</li> <li>• unknown</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **date-code** *string*

<b>Description</b>	Transceiver date code.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver date-code</a> <i>string</i>
<b>Tree</b>	<a href="#">date-code</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ddm-events** *boolean*

<b>Description</b>	Controls the reporting of DDM events When set to true, log events related to the Digital Diagnostic Monitoring (DDM) capabilities of the transceiver are generated. When set to false, no DDM-related log events are generated for this port/transceiver. When read from state this leaf always returns false (even if the configured value is true) when the Ethernet port is a copper/RJ45 port.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">ddm-events</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ddm-events</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ethernet-pmd** *string*

<b>Description</b>	Specifies the Ethernet compliance code of the transceiver associated with the port
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">ethernet-pmd</a> <i>string</i>
<b>Tree</b>	<a href="#">ethernet-pmd</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**fault-condition** *boolean*

<b>Description</b>	Indicates if a fault condition exists in the transceiver.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">fault-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">fault-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**form-factor** *keyword*

<b>Description</b>	Specifies the transceiver form factor associated with the port
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">form-factor</a> <i>keyword</i>
<b>Tree</b>	<a href="#">form-factor</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>CFP2</li> </ul>

	<ul style="list-style-type: none"> <li>• CFP2-ACO</li> <li>• CFP4</li> <li>• QSFP</li> <li>• QSFPplus</li> <li>• QSFP28</li> <li>• QSFPDD</li> <li>• SFP</li> <li>• SFPplus</li> <li>• Non-pluggable</li> <li>• Other</li> <li>• SFP28</li> <li>• SFPDD</li> <li>• QSFP56</li> <li>• SFP56</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **forward-error-correction** *keyword*

<b>Description</b>	<p>The forward error correction algorithm to use on the optical channel</p> <p>The same FEC algorithm must be used at both ends of a link.</p> <p>25G interfaces support disabled, base-r rs-108 and rs-528; configuring other (incompatible) options will bring the port down. The FEC requirement for a 25G interface depends on the cable type. A CA-N DAC cable has a loss specification that requires no FEC. A CA-S DAC cable requires base-r FEC at a minimum. A CA-L DAC cable requires the stronger rs-108 Reed Solomon FEC.</p> <p>100G interfaces support disabled and rs-528; configuring other (incompatible) options will bring the port down.</p> <p>400G interfaces require rs-544; configuring other (unsupported) options will bring the port down.</p>
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">forward-error-correction</a> <i>keyword</i>
<b>Tree</b>	<a href="#">forward-error-correction</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• disabled</li> <li>• rs-528</li> <li>• rs-544</li> <li>• base-r</li> </ul> <p>BASE-R FEC algorithm for 25GbE interfaces (also known as fire-code)</p>

- rs-108  
Reed Solomon FEC algorithm for 25GbE interfaces

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## healthz

<b>Description</b>	The health of the component  The paramaters within this container indicate the status of the component beyond whether it is operationally up or down. When a signal is received that a component is in an unhealthy state the gNOI.Healthz service can be used to retrieve further diagnostic information relating to the component. The contents of this directory relate only to the specific component that it is associated with.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">healthz</a>
<b>Tree</b>	<a href="#">healthz</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## last-unhealthy *string*

<b>Description</b>	Last unhealthy time  The time at which the component was last observed to transition from the healthy state to any other state, represented as nanoseconds since the Unix epoch.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">healthz</a> <a href="#">last-unhealthy</a> <i>string</i>
<b>Tree</b>	<a href="#">last-unhealthy</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## status *keyword*

<b>Description</b>	Health status  The status of the component, indicating its current health.
--------------------	--

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver healthz status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>unspecified Unspecified status The component's health status has not yet been checked by the system.</li> <li>healthy Healthy status The component is in a healthy state, and is operating within the expected parameters.</li> <li>unhealthy Unhealthy status The component is in a unhealthy state, it is not performing the function expected of it.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### unhealthy-count *number*

<b>Description</b>	Unhealthy count The number of times the component has transitioned from the healthy state to any other state.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver healthz unhealthy-count</a> <i>number</i>
<b>Tree</b>	<a href="#">unhealthy-count</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### input-power

<b>Description</b>	Enter the input-power context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver input-power</a>
<b>Tree</b>	<a href="#">input-power</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### high-alarm-condition *boolean*

**Description** High alarm threshold condition.  
Set to true whenever the Rx power is above the high-alarm-threshold and set to false whenever the Rx power is below the high-alarm-threshold

**Context** [interface name](#) *string* [transceiver input-power high-alarm-condition](#) *boolean*

**Tree** [high-alarm-condition](#)

**Configurable** False

**Platforms** Supported on all platforms

### high-alarm-threshold *decimal-number*

**Description** High alarm threshold.  
Read from the installed transceiver

**Context** [interface name](#) *string* [transceiver input-power high-alarm-threshold](#) *decimal-number*

**Tree** [high-alarm-threshold](#)

**Configurable** False

**Platforms** Supported on all platforms

### high-warning-condition *boolean*

**Description** High warning threshold condition.  
Set to true whenever the Rx power is above the high-warning-threshold and set to false whenever the Rx power is below the high-warning-threshold

**Context** [interface name](#) *string* [transceiver input-power high-warning-condition](#) *boolean*

**Tree** [high-warning-condition](#)

**Configurable** False

**Platforms** Supported on all platforms

### high-warning-threshold *decimal-number*

**Description** High warning threshold.  
Read from the installed transceiver

---

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">input-power</a> <a href="#">high-warning-threshold</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">high-warning-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**latest-value** *decimal-number*

<b>Description</b>	The current value of the optical Rx power in dBm
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">input-power</a> <a href="#">latest-value</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">latest-value</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**low-alarm-condition** *boolean*

<b>Description</b>	Low alarm threshold condition. Set to true whenever the Rx power is below the low-alarm-threshold and set to false whenever the Rx power is above the low-alarm-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">input-power</a> <a href="#">low-alarm-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">low-alarm-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**low-alarm-threshold** *decimal-number*

<b>Description</b>	Low alarm threshold condition. Set to true whenever the laser bias current is below the low-alarm-threshold and set to false whenever the laser bias current is above the low-alarm-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">laser-bias-current</a> <a href="#">low-alarm-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">low-alarm-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### low-alarm-threshold *decimal-number*

<b>Description</b>	Low alarm threshold. Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">laser-bias-current</a> <a href="#">low-alarm-threshold</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">low-alarm-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### low-warning-condition *boolean*

<b>Description</b>	Low warning threshold condition. Set to true whenever the laser bias current is below the low-warning-threshold and set to false whenever the laser bias current is above the low-warning-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">laser-bias-current</a> <a href="#">low-warning-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">low-warning-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**low-warning-threshold** *decimal-number*

<b>Description</b>	Low warning threshold. Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">laser-bias-current</a> <a href="#">low-warning-threshold</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">low-warning-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-down-reason** *keyword*

<b>Description</b>	The reason for the transceiver being operationally down
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• not-present</li> <li>• read-failure</li> <li>• checksum-failure</li> <li>• unknown-transceiver</li> <li>• tx-laser-disabled</li> <li>• unsupported-breakout</li> <li>• port-disabled</li> <li>• connector-transceiver-down</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	The operational state of the transceiver The oper-state is always down when the Ethernet port is a copper/RJ45 port.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up</li> <li>• down</li> </ul>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

## output-power

**Description** Enter the output-power context

**Context** [interface name](#) *string* [transceiver](#) [output-power](#)

**Tree** [output-power](#)

**Configurable** False

**Platforms** Supported on all platforms

## high-alarm-condition *boolean*

**Description** High alarm threshold condition.  
Set to true whenever the Tx power is above the high-alarm-threshold and set to false whenever the Tx power is below the high-alarm-threshold

**Context** [interface name](#) *string* [transceiver](#) [output-power](#) [high-alarm-condition](#) *boolean*

**Tree** [high-alarm-condition](#)

**Configurable** False

**Platforms** Supported on all platforms

## high-alarm-threshold *decimal-number*

**Description** High alarm threshold.  
Read from the installed transceiver

**Context** [interface name](#) *string* [transceiver](#) [output-power](#) [high-alarm-threshold](#) *decimal-number*

**Tree** [high-alarm-threshold](#)

**Configurable** False

**Platforms** Supported on all platforms

## high-warning-condition *boolean*

**Description** High warning threshold condition.  
Set to true whenever the Tx power is above the high-warning-threshold and set to false whenever the Tx power is below the high-warning-threshold

**Context** [interface name](#) *string* [transceiver](#) [output-power](#) [high-warning-condition](#) *boolean*

<b>Tree</b>	<a href="#">high-warning-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">temperature</a>
<b>Tree</b>	<a href="#">temperature</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**high-alarm-condition** *boolean*

<b>Description</b>	High alarm threshold condition Set to true whenever the temperature is above the high-alarm-threshold and set to false whenever the temperature is below the high-alarm-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">temperature</a> <a href="#">high-alarm-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">high-alarm-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**high-alarm-threshold** *number*

<b>Description</b>	High alarm threshold Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">temperature</a> <a href="#">high-alarm-threshold</a> <i>number</i>
<b>Tree</b>	<a href="#">high-alarm-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**high-warning-condition** *boolean*

<b>Description</b>	High warning threshold condition. Set to true whenever the temperature is above the high-warning-threshold and set to false whenever the temperature is below the high-warning-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">temperature</a> <a href="#">high-warning-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">high-warning-condition</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **high-warning-threshold** *number*

**Description** High warning threshold.  
Read from the installed transceiver

**Context** [interface name](#) *string* [transceiver temperature high-warning-threshold](#) *number*

**Tree** [high-warning-threshold](#)

**Configurable** False

**Platforms** Supported on all platforms

### **latest-value** *number*

**Description** The current temperature of the transceiver module in degrees Celsius

**Context** [interface name](#) *string* [transceiver temperature latest-value](#) *number*

**Tree** [latest-value](#)

**Configurable** False

**Platforms** Supported on all platforms

### **low-alarm-condition** *boolean*

**Description** Low alarm threshold condition.  
Set to true whenever the temperature is below the low-alarm-threshold and set to false whenever the temperature is above the low-alarm-threshold

**Context** [interface name](#) *string* [transceiver temperature low-alarm-condition](#) *boolean*

**Tree** [low-alarm-condition](#)

**Configurable** False

**Platforms** Supported on all platforms

### **low-alarm-threshold** *number*

**Description** Low alarm threshold.  
Read from the installed transceiver

**Context** [interface name](#) *string* [transceiver temperature low-alarm-threshold](#) *number*

**Tree** [low-alarm-threshold](#)

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **low-warning-condition** *boolean*

<b>Description</b>	Low warning threshold condition. Set to true whenever the temperature is below the low-warning-threshold and set to false whenever the temperature is above the low-warning-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver temperature low-warning-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">low-warning-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **low-warning-threshold** *number*

<b>Description</b>	Low warning threshold. Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver temperature low-warning-threshold</a> <i>number</i>
<b>Tree</b>	<a href="#">low-warning-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **maximum** *number*

<b>Description</b>	Represents the highest temperature the transceiver has reached since it booted
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver temperature maximum</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **maximum-time** *string*

<b>Description</b>	Indicates the time this transceiver reached the temperature referenced in maximum
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver temperature maximum-time</a> <i>string</i>

<b>Tree</b>	<a href="#">maximum-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tx-laser** *boolean*

<b>Description</b>	Enable (true) or disable (false) the transmit laser of the transceiver When read from state this leaf always returns false (even if the configured value is true) when the Ethernet port is a copper/RJ45 port. Default is true (for interfaces that support transceivers).
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">tx-laser</a> <i>boolean</i>
<b>Tree</b>	<a href="#">tx-laser</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**vendor** *string*

<b>Description</b>	Name of the transceiver vendor This is the information as read from the EEPROM of the part.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">vendor</a> <i>string</i>
<b>Tree</b>	<a href="#">vendor</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**vendor-lot-number** *string*

<b>Description</b>	Vendor's lot number for the transceiver This is the information as read from the EEPROM of the part.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">vendor-lot-number</a> <i>string</i>
<b>Tree</b>	<a href="#">vendor-lot-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**vendor-part-number** *string*

<b>Description</b>	Vendor's part number for the transceiver This is the information as read from the EEPROM of the part.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">vendor-part-number</a> <i>string</i>
<b>Tree</b>	<a href="#">vendor-part-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**vendor-revision** *string*

<b>Description</b>	Vendor's revision number for the transceiver This is the information as read from the EEPROM of the part.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">vendor-revision</a> <i>string</i>
<b>Tree</b>	<a href="#">vendor-revision</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**voltage**

<b>Description</b>	Enter the voltage context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">voltage</a>
<b>Tree</b>	<a href="#">voltage</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**high-alarm-condition** *boolean*

<b>Description</b>	High alarm threshold condition. Set to true whenever the module voltage is above the high-alarm-threshold and set to false whenever the module voltage is below the high-alarm-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver</a> <a href="#">voltage</a> <a href="#">high-alarm-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">high-alarm-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**high-alarm-threshold** *decimal-number*

<b>Description</b>	High alarm threshold. Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver voltage</a> <a href="#">high-alarm-threshold</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">high-alarm-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**high-warning-condition** *boolean*

<b>Description</b>	High warning threshold condition. Set to true whenever the module voltage is above the high-warning-threshold and set to false whenever the module voltage is below the high-warning-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver voltage</a> <a href="#">high-warning-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">high-warning-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**high-warning-threshold** *decimal-number*

<b>Description</b>	High warning threshold. Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver voltage</a> <a href="#">high-warning-threshold</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">high-warning-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**latest-value** *decimal-number*

<b>Description</b>	The current voltage reading of the transceiver module (in Volts)
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver voltage</a> <a href="#">latest-value</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">latest-value</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **low-alarm-condition** *boolean*

<b>Description</b>	Low alarm threshold condition. Set to true whenever the module voltage is below the low-alarm-threshold and set to false whenever the module voltage is above the low-alarm-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver voltage</a> <a href="#">low-alarm-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">low-alarm-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **low-alarm-threshold** *decimal-number*

<b>Description</b>	Low alarm threshold. Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver voltage</a> <a href="#">low-alarm-threshold</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">low-alarm-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **low-warning-condition** *boolean*

<b>Description</b>	Low warning threshold condition. Set to true whenever the module voltage is below the low-warning-threshold and set to false whenever the module voltage is above the low-warning-threshold
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver voltage</a> <a href="#">low-warning-condition</a> <i>boolean</i>
<b>Tree</b>	<a href="#">low-warning-condition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**low-warning-threshold** *decimal-number*

<b>Description</b>	Low warning threshold . Read from the installed transceiver
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver voltage</a> <a href="#">low-warning-threshold</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">low-warning-threshold</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**wavelength** *decimal-number*

<b>Description</b>	Wavelength of the transmitting laser in nanometers
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">transceiver wavelength</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">wavelength</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**vlan-tagging** *boolean*

<b>Description</b>	When set to true the interface is allowed to accept frames with one or more VLAN tags
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">vlan-tagging</a> <i>boolean</i>
<b>Tree</b>	<a href="#">vlan-tagging</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## 6.1 network-instance Descriptions

### network-instance *name string*

<b>Description</b>	Network instances configured on the local system
<b>Context</b>	<a href="#">network-instance name string</a>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### name *string*

<b>Description</b>	A unique name identifying the network instance
<b>Context</b>	<a href="#">network-instance name string</a>
<b>String Length</b>	1 to 247
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### admin-state *keyword*

<b>Description</b>	This leaf contains the configured, desired state of the network instance.
<b>Context</b>	<a href="#">network-instance name string admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### afts

<b>Description</b>	The abstract forwarding tables (AFTs) that are associated with the network instance
<b>Context</b>	<a href="#">network-instance name string afts</a>
<b>Tree</b>	<a href="#">afts</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## ipv4-unicast

<b>Description</b>	The abstract forwarding table for IPv4 unicast Entries within this table are uniquely keyed on the IPv4 unicast destination prefix which is matched by ingress packets. The data set represented by the IPv4 Unicast AFT is the set of entries from the IPv4 unicast RIB that have been selected for installation into the FIB of the device exporting the data structure.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">afts ipv4-unicast</a>
<b>Tree</b>	<a href="#">ipv4-unicast</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## ipv4-entry [prefix](#) *string*

<b>Description</b>	List of the IPv4 unicast entries within the abstract forwarding table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">afts ipv4-unicast</a> <a href="#">ipv4-entry</a> <a href="#">prefix</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-entry</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## [prefix](#) *string*

<b>Description</b>	The IPv4 destination prefix that should be matched to utilise the AFT entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">afts ipv4-unicast</a> <a href="#">ipv4-entry</a> <a href="#">prefix</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## entry-metadata *binary*

<b>Description</b>	Metadata persistently stored with the entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">afts ipv4-unicast</a> <a href="#">ipv4-entry</a> <a href="#">prefix</a> <i>string</i> <a href="#">entry-metadata</a> <i>binary</i>
<b>Tree</b>	<a href="#">entry-metadata</a>

<b>String Length</b>	0 to 8
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **next-hop-group** *reference*

<b>Description</b>	A reference to the next-hop-group that is used for the entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">afts ipv4-unicast ipv4-entry prefix</a> <i>string</i> <a href="#">next-hop-group</a> <i>reference</i>
<b>Tree</b>	<a href="#">next-hop-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table next-hop-group index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **next-hop-group-network-instance** *reference*

<b>Description</b>	The network instance associated with the next-hop-group If unspecified, the next hop group is in the local network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">afts ipv4-unicast ipv4-entry prefix</a> <i>string</i> <a href="#">next-hop-group-network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">next-hop-group-network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **origin-network-instance** *reference*

<b>Description</b>	The network-instance from which the IPv4 entry was learned if it was leaked from another network-instance If unspecified, the IPv4 entry was not leaked
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">afts ipv4-unicast ipv4-entry prefix</a> <i>string</i> <a href="#">origin-network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">origin-network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**origin-protocol** *identityref*

<b>Description</b>	The protocol that submitted the route for the IPv4 prefix
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">afts ipv4-unicast ipv4-entry prefix</a> <i>string</i> <a href="#">origin-protocol</a> <i>identityref</i>
<b>Tree</b>	<a href="#">origin-protocol</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• aggregate Locally configured aggregate route</li> <li>• arp-nd IP route added by ARP ND.</li> <li>• bgp Border Gateway Protocol version 4</li> <li>• bgp-label Border Gateway Protocol labeled routes</li> <li>• bgp-evpn BGP Ethernet VPN (EVPN)</li> <li>• bgp-vpn Border Gateway Protocol VPN routes</li> <li>• dhcp IP (default) route added by DHCP.</li> <li>• gribi A gRIBI route</li> <li>• host A host route</li> <li>• isis IS-IS</li> <li>• local A directly connected route</li> <li>• linux IP route added by the linux kernel.</li> <li>• ndk1 Route added by an agent application using the NDK</li> <li>• ndk2 Route added by an agent application using the NDK</li> <li>• ospfv2 OSPFv2</li> </ul>

- ospfv3  
OSPFv3
- static  
Locally configured static route

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## ipv6-unicast

<b>Description</b>	The abstract forwarding table for IPv6 unicast Entries within this table are uniquely keyed on the IPv6 unicast destination prefix which is matched by ingress packets. The data set represented by the IPv6 Unicast AFT is the set of entries from the IPv6 unicast RIB that have been selected for installation into the FIB of the device exporting the data structure.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">afts ipv6-unicast</a>
<b>Tree</b>	<a href="#">ipv6-unicast</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## ipv6-entry [prefix string](#)

<b>Description</b>	List of the IPv6 unicast entries within the abstract forwarding table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">afts ipv6-unicast</a> <a href="#">ipv6-entry prefix string</a>
<b>Tree</b>	<a href="#">ipv6-entry</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## [prefix string](#)

<b>Description</b>	The IPv6 destination prefix that should be matched to utilise the AFT entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">afts ipv6-unicast</a> <a href="#">ipv6-entry prefix string</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**entry-metadata** *binary*

<b>Description</b>	Metadata persistently stored with the entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">afts</a> <a href="#">ipv6-unicast</a> <a href="#">ipv6-entry prefix</a> <i>string</i> <a href="#">entry-metadata</a> <i>binary</i>
<b>Tree</b>	<a href="#">entry-metadata</a>
<b>String Length</b>	0 to 8
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop-group** *reference*

<b>Description</b>	A reference to the next-hop-group that is used for the entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">afts</a> <a href="#">ipv6-unicast</a> <a href="#">ipv6-entry prefix</a> <i>string</i> <a href="#">next-hop-group</a> <i>reference</i>
<b>Tree</b>	<a href="#">next-hop-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop-group-network-instance** *reference*

<b>Description</b>	The network instance associated with the next-hop-group If unspecified, the next hop group is in the local network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">afts</a> <a href="#">ipv6-unicast</a> <a href="#">ipv6-entry prefix</a> <i>string</i> <a href="#">next-hop-group-network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">next-hop-group-network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**origin-network-instance** *reference*

<b>Description</b>	The network-instance from which the IPv6 entry was learned if it was leaked from another network-instance If unspecified, the IPv6 entry was not leaked
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">afts</a> <a href="#">ipv6-unicast</a> <a href="#">ipv6-entry prefix</a> <i>string</i> <a href="#">origin-network-instance</a> <i>reference</i>

<b>Tree</b>	<a href="#">origin-network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **origin-protocol** *identityref*

<b>Description</b>	The protocol that submitted the route for the IPv6 prefix
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">afts ipv6-unicast ipv6-entry prefix</a> <i>string</i> <a href="#">origin-protocol</a> <i>identityref</i>
<b>Tree</b>	<a href="#">origin-protocol</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• aggregate Locally configured aggregate route</li> <li>• arp-nd IP route added by ARP ND.</li> <li>• bgp Border Gateway Protocol version 4</li> <li>• bgp-label Border Gateway Protocol labeled routes</li> <li>• bgp-evpn BGP Ethernet VPN (EVPN)</li> <li>• bgp-vpn Border Gateway Protocol VPN routes</li> <li>• dhcp IP (default) route added by DHCP.</li> <li>• gribi A gRIBI route</li> <li>• host A host route</li> <li>• isis IS-IS</li> <li>• local A directly connected route</li> <li>• linux IP route added by the linux kernel.</li> <li>• ndk1</li> </ul>

Route added by an agent application using the NDK

- ndk2

Route added by an agent application using the NDK

- ospfv2  
OSPFv2
- ospfv3  
OSPFv3
- static  
Locally configured static route

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## aggregate-routes

<b>Description</b>	Enable the aggregate-routes context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">aggregate-routes</a>
<b>Tree</b>	<a href="#">aggregate-routes</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## route prefix (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the route list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">aggregate-routes</a> <a href="#">route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	16384

## prefix (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">aggregate-routes</a> <a href="#">route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **admin-state** *keyword*

**Description** This leaf contains the configured, desired state of the aggregate prefix.

**Context** [network-instance name](#) *string* [aggregate-routes route prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [admin-state](#) *keyword*

**Tree** [admin-state](#)

**Default** enable

**Options**

- enable
- disable

**Configurable** True

**Platforms** Supported on all platforms

### **aggregator**

**Description** Enter the aggregator context

**Context** [network-instance name](#) *string* [aggregate-routes route prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [aggregator](#)

**Tree** [aggregator](#)

**Configurable** True

**Platforms** Supported on all platforms

### **address** *string*

**Description** Specifies the aggregator's IP address.

**Context** [network-instance name](#) *string* [aggregate-routes route prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [aggregator address](#) *string*

**Tree** [address](#)

**Configurable** True

**Platforms** Supported on all platforms

### **as-number** *number*

**Description** Specifies the aggregator's ASN

**Context** [network-instance name](#) *string* [aggregate-routes route prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [aggregator as-number](#) *number*

<b>Tree</b>	<a href="#">as-number</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## communities

<b>Description</b>	Enter the communities context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">aggregate-routes route prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">communities</a>
<b>Tree</b>	<a href="#">communities</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## add (*bgp-std-community-type | identityref | bgp-large-community-type*)

<b>Description</b>	Enter the add context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">aggregate-routes route prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">communities</a> <a href="#">add (bgp-std-community-type   identityref   bgp-large-community-type)</a>
<b>Tree</b>	<a href="#">add</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>no-export Do not export NLRI received carrying this community outside the bounds of this autonomous system, or this confederation if the local autonomous system is a confederation member AS. This community has a value of 0xFFFFFFFF01.</li> <li>no-advertise All NLRI received carrying this community must not be advertised to other BGP peers. This community has a value of 0xFFFFFFFF02.</li> <li>no-export-subconfed All NLRI received carrying this community must not be advertised to external BGP peers - including over confederation sub-AS boundaries. This community has a value of 0xFFFFFFFF03.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	12

**generate-icmp** *boolean*

<b>Description</b>	When set to true the router generates ICMP unreachable messages for packets matching the aggregate route (and not a more specific route).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">aggregate-routes route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">generate-icmp</a> <i>boolean</i>
<b>Tree</b>	<a href="#">generate-icmp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**installed** *boolean*

<b>Description</b>	If set to true, this indicates that the aggregate route was installed into the datapath. If this is false then there are 2 possible reasons: (a) the admin-state is disable (b) there is another IP route for the same prefix that has a superior preference
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">aggregate-routes route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">installed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">installed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**summary-only** *boolean*

<b>Description</b>	When set to true the router blocks the advertisement of all contributing routes of this aggregate route in dynamic protocols such as BGP.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">aggregate-routes route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">summary-only</a> <i>boolean</i>
<b>Tree</b>	<a href="#">summary-only</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**bfd**

<b>Description</b>	Container for BFD related network-instance related configuration
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bfd</a>
<b>Tree</b>	<a href="#">bfd</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### seamless-bfd

**Description** Container for BFD related network-instance related configuration

**Context** [network-instance name](#) *string* [bfd seamless-bfd](#)

**Tree** [seamless-bfd](#)

**Configurable** True

**Platforms** Supported on all platforms

### peer [address](#) (*ipv4-address* | *ipv6-address*)

**Description** Enter the peer list instance

**Context** [network-instance name](#) *string* [bfd seamless-bfd peer address](#) (*ipv4-address* | *ipv6-address*)

**Tree** [peer](#)

**Configurable** True

**Platforms** Supported on all platforms

### [address](#) (*ipv4-address* | *ipv6-address*)

**Description** An IPv4 or IPv6 address of the farend seamless-bfd discriminator binding

**Context** [network-instance name](#) *string* [bfd seamless-bfd peer address](#) (*ipv4-address* | *ipv6-address*)

**Configurable** True

**Platforms** Supported on all platforms

### discriminator *number*

**Description** Static seamless-BFD discriminator for the farend binding

**Context** [network-instance name](#) *string* [bfd seamless-bfd peer address](#) (*ipv4-address* | *ipv6-address*) [discriminator](#) *number*

**Tree** [discriminator](#)

**Configurable** True

**Platforms** Supported on all platforms

**reflector** *name string*

<b>Description</b>	List of seamless BFD reflector instances
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bfd seamless-bfd reflector name string</a>
<b>Tree</b>	<a href="#">reflector</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	A name for the local seamless-bfd reflector agent
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bfd seamless-bfd reflector name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Used to administratively enable or disable seamless-bfd reflector
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bfd seamless-bfd reflector name string</a> <a href="#">admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**description** *string*

<b>Description</b>	Description of the seamless-bfd reflector
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bfd seamless-bfd reflector name string</a> <a href="#">description string</a>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**local-discriminator *number***

<b>Description</b>	Seamless-BFD discriminator for the local reflector agent
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bfd seamless-bfd reflector name</a> <i>string</i> <a href="#">local-discriminator</a> <i>number</i>
<b>Tree</b>	<a href="#">local-discriminator</a>
<b>Range</b>	524288 to 526335
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**bgp-rib**

<b>Description</b>	Container for BGP RIB state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a>
<b>Tree</b>	<a href="#">bgp-rib</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**afi-safi [afi-safi-name](#) *identityref***

<b>Description</b>	List of address families with routes in the BGP RIB
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i>
<b>Tree</b>	<a href="#">afi-safi</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**afi-safi-name *identityref***

<b>Description</b>	The name of the address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ipv4-unicast</a> Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1)</li> <li>• <a href="#">ipv6-unicast</a> Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1)</li> <li>• <a href="#">l3vpn-ipv4-unicast</a> VPN-IPv4 unicast address family (AFI = 1, SAFI = 128)</li> </ul>

- l3vpn-ipv6-unicast  
VPN-IPv6 unicast address family (AFI = 2, SAFI = 128)
- ipv4-labeled-unicast  
Labeled IPv4 unicast routes (AFI 1, SAFI 4)
- ipv6-labeled-unicast  
Labeled IPv6 unicast routes (AFI 2, SAFI 4)
- evpn  
EVPN routes (AFI = 25, SAFI = 70)
- route-target  
Route target constraint routes (AFI 1, SAFI 132)

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### ipv4-labeled-unicast

<b>Description</b>	Container for RIB state of labeled IPv4-unicast routes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a>
<b>Tree</b>	<a href="#">ipv4-labeled-unicast</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### local-rib

<b>Description</b>	Container for local RIB, containing all imported routes from other protocols plus the post-import-policy version of all label-IPv4 routes learned from all BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a>
<b>Tree</b>	<a href="#">local-rib</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**route prefix** (*ipv4-prefix* | *ipv6-prefix*) **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **origin-protocol** [identityref](#) **path-id** *number*

<b>Description</b>	List of label-IPv4 routes in the local RIB.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">neighbor (ipv4-address-with-zone   ipv6-address-with-zone)</a> <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **prefix** (*ipv4-prefix | ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">neighbor (ipv4-address-with-zone   ipv6-address-with-zone)</a> <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">neighbor (ipv4-address-with-zone   ipv6-address-with-zone)</a> <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **origin-protocol** *identityref*

<b>Description</b>	If the route was imported from another protocol, this is the protocol name.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">neighbor (ipv4-address-with-zone   ipv6-address-with-zone)</a> <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>aggregate</b> Locally configured aggregate route</li> <li>• <b>arp-nd</b> IP route added by ARP ND.</li> </ul>

- `bgp`  
Border Gateway Protocol version 4
- `bgp-label`  
Border Gateway Protocol labeled routes
- `bgp-evpn`  
BGP Ethernet VPN (EVPN)
- `bgp-vpn`  
Border Gateway Protocol VPN routes
- `dhcp`  
IP (default) route added by DHCP.
- `gribi`  
A gRIBI route
- `host`  
A host route
- `isis`  
IS-IS
- `local`  
A directly connected route
- `linux`  
IP route added by the linux kernel.
- `ndk1`  
Route added by an agent application using the NDK
- `ndk2`  
Route added by an agent application using the NDK
- `ospfv2`  
OSPFv2
- `ospfv3`  
OSPFv3
- `static`  
Locally configured static route

**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**path-id number****Description**

Path identifier of the BGP route

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**attr-id** *reference*

<b>Description</b>	Leaf reference to <a href="#">networkinstance/bgp-rib/attr-sets/attr-set/index</a>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i> <a href="#">attr-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**best-route** *boolean*

<b>Description</b>	Set to true if the route is the BGP best path for the prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i> <a href="#">best-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">best-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**group-best** *boolean*

<b>Description</b>	Set to true if the route is the best BGP route amongst all routes received from one particular neighbor AS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i> <a href="#">group-best</a> <i>boolean</i>
<b>Tree</b>	<a href="#">group-best</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## invalid-reason

**Description** Enter the invalid-reason context

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-labeled-unicast](#) [local-rib](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) *number* [invalid-reason](#)

**Tree** [invalid-reason](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## as-loop *boolean*

**Description** Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-labeled-unicast](#) [local-rib](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) *number* [invalid-reason](#) [as-loop](#) *boolean*

**Tree** [as-loop](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## cluster-loop *boolean*

**Description** Indicates true if the BGP route has a cluster-list loop.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-labeled-unicast](#) [local-rib](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) *number* [invalid-reason](#) [cluster-loop](#) *boolean*

**Tree** [cluster-loop](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## fib-programming-failed *boolean*

**Description** Indicates true if FIB programming failed

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">fib-programming-failed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">fib-programming-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **label-allocation-failed** *boolean*

<b>Description</b>	Indicates true if dynamic-label-block has no more free labels
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">label-allocation-failed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">label-allocation-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **next-hop-unresolved** *boolean*

<b>Description</b>	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">next-hop-unresolved</a> <i>boolean</i>
<b>Tree</b>	<a href="#">next-hop-unresolved</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **rejected-route** *boolean*

<b>Description</b>	Indicates true if the route was rejected by an import policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">rejected-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">rejected-route</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-modified** *string*

**Description** Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-updatereceived. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-labeled-unicast](#) [local-rib](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) [number](#) **last-modified** *string*

**Tree** [last-modified](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **neighbor-as** *number*

**Description** The last external AS to advertise the route into the local AS

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-labeled-unicast](#) [local-rib](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) [number](#) **neighbor-as** *number*

**Tree** [neighbor-as](#)

**Range** 1 to 4294967295

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **pending-delete** *boolean*

**Description** Set to true if the route is marked for deletion.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-labeled-unicast](#) [local-rib](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) [number](#) **pending-delete** *boolean*

**Tree** [pending-delete](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**received-mpls-label** (*number* | *keyword*)

<b>Description</b>	Received MPLS label value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i> <a href="#">received-mpls-label</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">received-mpls-label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> <li>• IMPLICIT_NULL</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	1

**stale-route** *boolean*

<b>Description</b>	Set to true if the route is stale due to BGP graceful restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i> <a href="#">stale-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">stale-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**tie-break-reason** *keyword*

<b>Description</b>	Indicates the reason why a BGP route is sorted behind the next best route. The BGP best path displays a value of 'none'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i> <a href="#">tie-break-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">tie-break-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• unknown</li> <li>• none</li> </ul>

**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **used-route** *boolean*

**Description**

Indicates true if the route is being used for forwarding.

**Context**

[network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-labeled-unicast](#) [local-rib](#) [route prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-*

	<i>address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <i>origin-protocol</i> <i>identityref</i> <i>path-id</i> <i>number</i> <i>used-route</i> <i>boolean</i>
<b>Tree</b>	<a href="#">used-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **valid-route** *boolean*

<b>Description</b>	Indicates true if the route is valid.
<b>Context</b>	<a href="#">network-instance</a> <i>name</i> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <i>origin-protocol</i> <i>identityref</i> <a href="#">path-id</a> <i>number</i> <a href="#">valid-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">valid-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **rib-in-out**

<b>Description</b>	Container for BGP routes learned and advertised to BGP neighbors.
<b>Context</b>	<a href="#">network-instance</a> <i>name</i> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a>
<b>Tree</b>	<a href="#">rib-in-out</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **rib-in-post**

<b>Description</b>	Container for the post-import-policy version of BGP routes learned from BGP neighbors.
<b>Context</b>	<a href="#">network-instance</a> <i>name</i> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a>
<b>Tree</b>	<a href="#">rib-in-post</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**route prefix** (*ipv4-prefix* | *ipv6-prefix*) **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **path-id** *number*

<b>Description</b>	List of IPv4 routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**path-id** *number*

<b>Description</b>	Path identifier of the BGP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**attr-id** *reference*

<b>Description</b>	Leaf reference to networkinstance/protocols/bgp/rib/ attr-sets/attr-set/index.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">attr-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <a href="#">number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**best-route** *boolean*

<b>Description</b>	Set to true if the route is the BGP best path for the prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">best-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">best-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**group-best** *boolean*

<b>Description</b>	Set to true if the route is the best BGP route amongst all routes received from one particular neighbor AS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">group-best</a> <i>boolean</i>
<b>Tree</b>	<a href="#">group-best</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**internal-tags** *string*

<b>Description</b>	Internal route tag written in the route/tunnel tables or BGP rib The internal-tag value is shown with the format 'type-string = hex-value-string'. For example:
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">internal-tags</a> <i>string</i>
<b>Tree</b>	<a href="#">internal-tags</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	2

## invalid-reason

<b>Description</b>	Enter the invalid-reason context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a>
<b>Tree</b>	<a href="#">invalid-reason</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## as-loop *boolean*

<b>Description</b>	Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">as-loop</a> <i>boolean</i>
<b>Tree</b>	<a href="#">as-loop</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## cluster-loop *boolean*

<b>Description</b>	Indicates true if the BGP route has a cluster-list loop.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> )

	<a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">cluster-loop</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">cluster-loop</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**fib-programming-failed** *boolean*

<b>Description</b>	Indicates true if FIB programming failed
<b>Context</b>	<a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">fib-programming-failed</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">fib-programming-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**label-allocation-failed** *boolean*

<b>Description</b>	Indicates true if dynamic-label-block has no more free labels
<b>Context</b>	<a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">label-allocation-failed</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">label-allocation-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**next-hop-unresolved** *boolean*

<b>Description</b>	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
<b>Context</b>	<a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">next-hop-unresolved</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">next-hop-unresolved</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**rejected-route** *boolean*

<b>Description</b>	Indicates true if the route was rejected by an import policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">rejected-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">rejected-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-modified** *string*

<b>Description</b>	Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-updatereceived. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">last-modified</a> <i>string</i>
<b>Tree</b>	<a href="#">last-modified</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**neighbor-as** *number*

<b>Description</b>	The last external AS to advertise the route into the local AS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">neighbor-as</a> <i>number</i>
<b>Tree</b>	<a href="#">neighbor-as</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**pending-delete** *boolean*

<b>Description</b>	Set to true if the route is marked for deletion.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">pending-delete</a> <i>boolean</i>
<b>Tree</b>	<a href="#">pending-delete</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**received-mpls-label** (*number* | *keyword*)

<b>Description</b>	Received MPLS label value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">received-mpls-label</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">received-mpls-label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> <li>• IMPLICIT_NULL</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	1

**stale-route** *boolean*

<b>Description</b>	Set to true if the route is stale due to BGP graceful restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">stale-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">stale-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**tie-break-reason** *keyword*

<b>Description</b>	Indicates the reason why a BGP route is sorted behind the next best route. The BGP best path displays a value of 'none'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <a href="#">tie-break-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">tie-break-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• unknown</li> <li>• none</li> <li>• origin</li> <li>• as-path-length</li> <li>• next-hop-cost</li> <li>• med</li> <li>• local-pref</li> <li>• aggregate</li> <li>• originator-id</li> <li>• cluster-list</li> <li>• extended-community</li> <li>• aigp</li> <li>• missing-attribute</li> <li>• rtm-pref</li> <li>• owner</li> <li>• eigrp-labeled</li> <li>• vpn-route</li> <li>• ebgp-route</li> <li>• peer-ip</li> <li>• local-peer</li> <li>• multi-path</li> <li>• vpn-rd</li> <li>• next-hop-type</li> <li>• invalid-route</li> <li>• origin-validation</li> <li>• long-live-gr-stale</li> <li>• default-originate</li> <li>• fib-install-disabled</li> <li>• peer-router-id</li> </ul>

- path-identifier

**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**used-route** *boolean***Description**

Indicates true if the route is being used for forwarding.

**Context**

[network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [used-route](#) *boolean*

**Tree**[used-route](#)**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**valid-route** *boolean***Description**

Indicates true if the route is valid.

**Context**

[network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [valid-route](#) *boolean*

**Tree**[valid-route](#)**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**rib-in-pre****Description**

Container for the pre-import-policy version of BGP routes learned from BGP neighbors.

**Context**

[network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-labeled-unicast](#) [rib-in-out](#) [rib-in-pre](#)

**Tree**[rib-in-pre](#)**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**route prefix** (*ipv4-prefix* | *ipv6-prefix*) **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **path-id** *number*

<b>Description</b>	List of IPv4 routes.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**path-id** *number*

<b>Description</b>	Path identifier of the BGP route
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**attr-id reference**

<b>Description</b>	Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">attr-id reference</a>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <a href="#">number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**received-mpls-label (number | keyword)**

<b>Description</b>	Received MPLS label value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">received-mpls-label</a> ( <a href="#">number</a>   <a href="#">keyword</a> )
<b>Tree</b>	<a href="#">received-mpls-label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> <li>• IMPLICIT_NULL</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	1

**rib-out-post**

<b>Description</b>	Container for the post-export-policy version of BGP routes advertised to BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a>
<b>Tree</b>	<a href="#">rib-out-post</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**route prefix** (*ipv4-prefix* | *ipv6-prefix*) **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **path-id** *number*

<b>Description</b>	List of IPv4 routes.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**path-id** *number*

<b>Description</b>	Path identifier of the BGP route
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**advertised-mpls-label** (*number* | *keyword*)

<b>Description</b>	Advertised MPLS label value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">advertised-mpls-label</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">advertised-mpls-label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> <li>• IMPLICIT_NULL</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	1

**attr-id** *reference*

<b>Description</b>	Leaf reference to <a href="#">networkinstance/protocols/bgp/rib/attr-sets/attr-set/index</a> .
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">attr-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4-unicast**

<b>Description</b>	Container for RIB state of IPv4-unicast routes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a>
<b>Tree</b>	<a href="#">ipv4-unicast</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## local-rib

<b>Description</b>	Container for local RIB, containing all imported routes from other protocols plus the post-import-policy version of all IPv4 routes learned from all BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a>
<b>Tree</b>	<a href="#">local-rib</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route prefix** (*ipv4-prefix* | *ipv6-prefix*) **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [origin-protocol](#) [identityref](#) [path-id](#) *number*

<b>Description</b>	List of IPv4 routes in the local RIB.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## prefix (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## neighbor (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**origin-protocol** *identityref*

<b>Description</b>	If the route was imported from another protocol, this is the protocol name.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <i>identityref</i> <a href="#">path-id</a> <i>number</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>aggregate</b> Locally configured aggregate route</li> <li>• <b>arp-nd</b> IP route added by ARP ND.</li> <li>• <b>bgp</b> Border Gateway Protocol version 4</li> <li>• <b>bgp-label</b> Border Gateway Protocol labeled routes</li> <li>• <b>bgp-evpn</b> BGP Ethernet VPN (EVPN)</li> <li>• <b>bgp-vpn</b> Border Gateway Protocol VPN routes</li> <li>• <b>dhcp</b> IP (default) route added by DHCP.</li> <li>• <b>gribi</b> A gRIBI route</li> <li>• <b>host</b> A host route</li> <li>• <b>isis</b> IS-IS</li> <li>• <b>local</b> A directly connected route</li> <li>• <b>linux</b> IP route added by the linux kernel.</li> <li>• <b>ndk1</b> Route added by an agent application using the NDK</li> <li>• <b>ndk2</b> Route added by an agent application using the NDK</li> <li>• <b>ospfv2</b> OSPFv2</li> <li>• <b>ospfv3</b></li> </ul>

- OSPFv3
  - static
    - Locally configured static route

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **path-id** *number*

<b>Description</b>	Path identifier of the BGP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **attr-id** *reference*

<b>Description</b>	Leaf reference to networkinstance/bgp-rib/attr-sets/attr-set/index
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i> <a href="#">attr-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **best-route** *boolean*

<b>Description</b>	Set to true if the route is the BGP best path for the prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i> <a href="#">best-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">best-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**group-best** *boolean*

<b>Description</b>	Set to true if the route is the best BGP route amongst all routes received from one particular neighbor AS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">group-best</a> <i>boolean</i>
<b>Tree</b>	<a href="#">group-best</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**invalid-reason**

<b>Description</b>	Enter the invalid-reason context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a>
<b>Tree</b>	<a href="#">invalid-reason</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**as-loop** *boolean*

<b>Description</b>	Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">as-loop</a> <i>boolean</i>
<b>Tree</b>	<a href="#">as-loop</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**cluster-loop** *boolean*

<b>Description</b>	Indicates true if the BGP route has a cluster-list loop.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">cluster-loop</a> <i>boolean</i>
<b>Tree</b>	<a href="#">cluster-loop</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **fib-programming-failed** *boolean*

<b>Description</b>	Indicates true if FIB programming failed
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">fib-programming-failed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">fib-programming-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **label-allocation-failed** *boolean*

<b>Description</b>	Indicates true if dynamic-label-block has no more free labels
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">label-allocation-failed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">label-allocation-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **next-hop-unresolved** *boolean*

<b>Description</b>	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">next-hop-unresolved</a> <i>boolean</i>
<b>Tree</b>	<a href="#">next-hop-unresolved</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### rejected-route *boolean*

**Description** Indicates true if the route was rejected by an import policy.

**Context** [network-instance name string](#) [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [local-rib](#) [route](#) [prefix \(ipv4-prefix | ipv6-prefix\)](#) [neighbor \(ipv4-address-with-zone | ipv6-address-with-zone\)](#) [origin-protocol](#) [identityref](#) [path-id](#) [number](#) [invalid-reason](#) [rejected-route boolean](#)

**Tree** [rejected-route](#)

**Configurable** False

**Platforms** Supported on all platforms

### last-modified *string*

**Description** Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-updatereceived. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.

**Context** [network-instance name string](#) [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [local-rib](#) [route](#) [prefix \(ipv4-prefix | ipv6-prefix\)](#) [neighbor \(ipv4-address-with-zone | ipv6-address-with-zone\)](#) [origin-protocol](#) [identityref](#) [path-id](#) [number](#) [last-modified string](#)

**Tree** [last-modified](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** Supported on all platforms

### neighbor-as *number*

**Description** The last external AS to advertise the route into the local AS

**Context** [network-instance name string](#) [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [local-rib](#) [route](#) [prefix \(ipv4-prefix | ipv6-prefix\)](#) [neighbor \(ipv4-address-with-zone | ipv6-address-with-zone\)](#) [origin-protocol](#) [identityref](#) [path-id](#) [number](#) [neighbor-as number](#)

**Tree** [neighbor-as](#)

**Range** 1 to 4294967295

**Configurable** False

**Platforms** Supported on all platforms

**pending-delete** *boolean*

<b>Description</b>	Set to true if the route is marked for deletion.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">pending-delete</a> <i>boolean</i>
<b>Tree</b>	<a href="#">pending-delete</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**stale-route** *boolean*

<b>Description</b>	Set to true if the route is stale due to BGP graceful restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">stale-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">stale-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tie-break-reason** *keyword*

<b>Description</b>	Indicates the reason why a BGP route is sorted behind the next best route. The BGP best path displays a value of 'none'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">tie-break-reason</a> <i>keyword</i>

**used-route** *boolean***Description**

Indicates true if the route is being used for forwarding.

**Context**

[network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [local-rib](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) [number](#) [used-route](#) *boolean*

**Tree**[used-route](#)**Configurable**

False

**Platforms**

Supported on all platforms

**valid-route** *boolean*

<b>Description</b>	Indicates true if the route is valid.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i> <a href="#">valid-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">valid-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**rib-in-out**

<b>Description</b>	Container for BGP routes learned and advertised to BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a>
<b>Tree</b>	<a href="#">rib-in-out</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**rib-in-post**

<b>Description</b>	Container for the post-import-policy version of BGP routes learned from BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a>
<b>Tree</b>	<a href="#">rib-in-post</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route** [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

<b>Description</b>	List of IPv4 routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **prefix** (*ipv4-prefix* | *ipv6-prefix*)

**Description** Enter the prefix context

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

**Configurable** False

**Platforms** Supported on all platforms

### **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

**Description** If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

**Configurable** False

**Platforms** Supported on all platforms

### **path-id** *number*

**Description** Path identifier of the BGP route

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

**Configurable** False

**Platforms** Supported on all platforms

### **attr-id** *reference*

**Description** Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number* [attr-id](#) *reference*

**Tree** [attr-id](#)

**Reference** [network-instance name](#) *string* [bgp-rib](#) [attr-sets](#) [attr-set](#) [index](#) *number*

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**best-route** *boolean*

<b>Description</b>	Set to true if the route is the BGP best path for the prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <b>best-route</b> <i>boolean</i>
<b>Tree</b>	<a href="#">best-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**group-best** *boolean*

<b>Description</b>	Set to true if the route is the best BGP route amongst all routes received from one particular neighbor AS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <b>group-best</b> <i>boolean</i>
<b>Tree</b>	<a href="#">group-best</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**internal-tags** *string*

<b>Description</b>	Internal route tag written in the route/tunnel tables or BGP rib The internal-tag value is shown with the format 'type-string = hex-value-string'. For example:
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <b>internal-tags</b> <i>string</i>
<b>Tree</b>	<a href="#">internal-tags</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**Max. Elements** 2

### invalid-reason

**Description** Enter the invalid-reason context

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number* **invalid-reason**

**Tree** [invalid-reason](#)

**Configurable** False

**Platforms** Supported on all platforms

### as-loop *boolean*

**Description** Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number* **invalid-reason** **as-loop** *boolean*

**Tree** [as-loop](#)

**Configurable** False

**Platforms** Supported on all platforms

### cluster-loop *boolean*

**Description** Indicates true if the BGP route has a cluster-list loop.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number* **invalid-reason** **cluster-loop** *boolean*

**Tree** [cluster-loop](#)

**Configurable** False

**Platforms** Supported on all platforms

### fib-programming-failed *boolean*

**Description** Indicates true if FIB programming failed

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">fib-programming-failed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">fib-programming-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **label-allocation-failed** *boolean*

<b>Description</b>	Indicates true if dynamic-label-block has no more free labels
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">label-allocation-failed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">label-allocation-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **next-hop-unresolved** *boolean*

<b>Description</b>	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">next-hop-unresolved</a> <i>boolean</i>
<b>Tree</b>	<a href="#">next-hop-unresolved</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **rejected-route** *boolean*

<b>Description</b>	Indicates true if the route was rejected by an import policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">rejected-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">rejected-route</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **last-modified** *string*

**Description** Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-updatereceived. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [last-modified](#) *string*

**Tree** [last-modified](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** Supported on all platforms

### **neighbor-as** *number*

**Description** The last external AS to advertise the route into the local AS

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [neighbor-as](#) *number*

**Tree** [neighbor-as](#)

**Range** 1 to 4294967295

**Configurable** False

**Platforms** Supported on all platforms

### **pending-delete** *boolean*

**Description** Set to true if the route is marked for deletion.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [pending-delete](#) *boolean*

**Tree** [pending-delete](#)

**Configurable** False

**Platforms** Supported on all platforms

**stale-route** *boolean*

<b>Description</b>	Set to true if the route is stale due to BGP graceful restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <b>stale-route</b> <i>boolean</i>
<b>Tree</b>	<a href="#">stale-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tie-break-reason** *keyword*

<b>Description</b>	Indicates the reason why a BGP route is sorted behind the next best route. The BGP best path displays a value of 'none'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <b>tie-break-reason</b> <i>keyword</i>

### **valid-route** *boolean*

<b>Description</b>	Indicates true if the route is valid.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <b>valid-route</b> <i>boolean</i>
<b>Tree</b>	<a href="#">valid-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**rib-in-pre**

<b>Description</b>	Container for the pre-import-policy version of BGP routes learned from BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a>
<b>Tree</b>	<a href="#">rib-in-pre</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route prefix** (*ipv4-prefix* | *ipv6-prefix*) **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **path-id** *number*

<b>Description</b>	List of IPv4 routes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**path-id number**

<b>Description</b>	Path identifier of the BGP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**attr-id reference**

<b>Description</b>	Leaf reference to <a href="#">networkinstance/protocols/bgp/rib/attr-sets/attr-set/index</a> .
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <a href="#">attr-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**rib-out-post**

<b>Description</b>	Container for the post-export-policy version of BGP routes advertised to BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a>
<b>Tree</b>	<a href="#">rib-out-post</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route prefix** ([ipv4-prefix](#) | [ipv6-prefix](#)) **neighbor** ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) *number*

<b>Description</b>	List of IPv4 routes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **path-id** *number*

<b>Description</b>	Path identifier of the BGP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **attr-id** *reference*

<b>Description</b>	Leaf reference to networkinstance/protocols/bgp/rib/ attr-sets/attr-set/index.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">attr-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">attr-id</a>

<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## ipv6-labeled-unicast

<b>Description</b>	Container for RIB state of labeled IPv6-unicast routes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast</a>
<b>Tree</b>	<a href="#">ipv6-labeled-unicast</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## local-rib

<b>Description</b>	Container for local RIB, containing all imported routes from other protocols plus the post-import-policy version of all label-IPv4 routes learned from all BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a>
<b>Tree</b>	<a href="#">local-rib</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**route** [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [origin-protocol](#) *identityref* [path-id](#) *number*

<b>Description</b>	List of label-IPv6 routes in the local RIB.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <i>identityref</i> <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**origin-protocol** *identityref*

<b>Description</b>	If the route was imported from another protocol, this is the protocol name.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>aggregate</b> Locally configured aggregate route</li> <li>• <b>arp-nd</b> IP route added by ARP ND.</li> <li>• <b>bgp</b> Border Gateway Protocol version 4</li> <li>• <b>bgp-label</b> Border Gateway Protocol labeled routes</li> <li>• <b>bgp-evpn</b> BGP Ethernet VPN (EVPN)</li> <li>• <b>bgp-vpn</b> Border Gateway Protocol VPN routes</li> </ul>

- dhcp  
IP (default) route added by DHCP.
- gribi  
A gRIBI route
- host  
A host route
- isis  
IS-IS
- local  
A directly connected route
- linux  
IP route added by the linux kernel.
- ndk1  
Route added by an agent application using the NDK
- ndk2  
Route added by an agent application using the NDK
- ospfv2  
OSPFv2
- ospfv3  
OSPFv3
- static  
Locally configured static route

**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**path-id number****Description**

Path identifier of the BGP route

**Context**

[network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [local-rib](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [origin-protocol](#) [identityref](#) [path-id number](#)

**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**attr-id** *reference*

<b>Description</b>	Leaf reference to networkinstance/bgp-rib/attr-sets/attr-set/index
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i> <a href="#">attr-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**best-route** *boolean*

<b>Description</b>	Set to true if the route is the BGP best path for the prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i> <a href="#">best-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">best-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**group-best** *boolean*

<b>Description</b>	Set to true if the route is the best BGP route amongst all routes received from one particular neighbor AS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i> <a href="#">group-best</a> <i>boolean</i>
<b>Tree</b>	<a href="#">group-best</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**invalid-reason**

<b>Description</b>	Enter the invalid-reason context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-</a>

	<a href="#">address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a>
<b>Tree</b>	<a href="#">invalid-reason</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**as-loop** *boolean*

<b>Description</b>	Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.
<b>Context</b>	<a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">as-loop</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">as-loop</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**cluster-loop** *boolean*

<b>Description</b>	Indicates true if the BGP route has a cluster-list loop.
<b>Context</b>	<a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">cluster-loop</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">cluster-loop</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**fib-programming-failed** *boolean*

<b>Description</b>	Indicates true if FIB programming failed
<b>Context</b>	<a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">fib-programming-failed</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">fib-programming-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**label-allocation-failed** *boolean*

<b>Description</b>	Indicates true if dynamic-label-block has no more free labels
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">label-allocation-failed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">label-allocation-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**next-hop-unresolved** *boolean*

<b>Description</b>	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">next-hop-unresolved</a> <i>boolean</i>
<b>Tree</b>	<a href="#">next-hop-unresolved</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**rejected-route** *boolean*

<b>Description</b>	Indicates true if the route was rejected by an import policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">rejected-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">rejected-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-modified** *string*

<b>Description</b>	Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-updatereceived. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">last-modified</a> <i>string</i>
<b>Tree</b>	<a href="#">last-modified</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **neighbor-as** *number*

<b>Description</b>	The last external AS to advertise the route into the local AS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">neighbor-as</a> <i>number</i>
<b>Tree</b>	<a href="#">neighbor-as</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **pending-delete** *boolean*

<b>Description</b>	Set to true if the route is marked for deletion.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">pending-delete</a> <i>boolean</i>
<b>Tree</b>	<a href="#">pending-delete</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **received-mpls-label** (*number* | *keyword*)

<b>Description</b>	Received MPLS label value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">received-mpls-label</a> ( <i>number</i>   <i>keyword</i> )

<b>Tree</b>	<a href="#">received-mpls-label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> <li>• IMPLICIT_NULL</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	1

### **stale-route** *boolean*

<b>Description</b>	Set to true if the route is stale due to BGP graceful restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i> <a href="#">stale-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">stale-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **tie-break-reason** *keyword*

<b>Description</b>	Indicates the reason why a BGP route is sorted behind the next best route. The BGP best path displays a value of 'none'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i> <a href="#">tie-break-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">tie-break-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• unknown</li> <li>• none</li> <li>• origin</li> <li>• as-path-length</li> <li>• next-hop-cost</li> <li>• med</li> <li>• local-pref</li> <li>• aggregate</li> <li>• originator-id</li> </ul>

<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**rib-in-out**

<b>Description</b>	Container for BGP routes learned and advertised to BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <b>rib-in-out</b>
<b>Tree</b>	<a href="#">rib-in-out</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**rib-in-post**

<b>Description</b>	Container for the post-import-policy version of BGP routes learned from BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <b>rib-in-post</b>
<b>Tree</b>	<a href="#">rib-in-post</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**route** [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

<b>Description</b>	List of label-IPv6 routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **prefix** (*ipv4-prefix* | *ipv6-prefix*)

**Description** Enter the prefix context

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

**Description** If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **path-id** *number*

**Description** Path identifier of the BGP route

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **attr-id** *reference*

**Description** Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number* [attr-id](#) *reference*

**Tree** [attr-id](#)

**Reference** [network-instance name](#) *string* [bgp-rib](#) [attr-sets](#) [attr-set](#) [index](#) *number*

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**best-route** *boolean*

<b>Description</b>	Set to true if the route is the BGP best path for the prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">best-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">best-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**group-best** *boolean*

<b>Description</b>	Set to true if the route is the best BGP route amongst all routes received from one particular neighbor AS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">group-best</a> <i>boolean</i>
<b>Tree</b>	<a href="#">group-best</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**internal-tags** *string*

<b>Description</b>	Internal route tag written in the route/tunnel tables or BGP rib The internal-tag value is shown with the format 'type-string = hex-value-string'. For example:
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">internal-tags</a> <i>string</i>
<b>Tree</b>	<a href="#">internal-tags</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**Max. Elements** 2

### invalid-reason

**Description** Enter the invalid-reason context

**Context** [network-instance name](#) [string](#) [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#)

**Tree** [invalid-reason](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### as-loop *boolean*

**Description** Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.

**Context** [network-instance name](#) [string](#) [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#) [as-loop](#) [boolean](#)

**Tree** [as-loop](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### cluster-loop *boolean*

**Description** Indicates true if the BGP route has a cluster-list loop.

**Context** [network-instance name](#) [string](#) [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#) [cluster-loop](#) [boolean](#)

**Tree** [cluster-loop](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### fib-programming-failed *boolean*

**Description** Indicates true if FIB programming failed

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">fib-programming-failed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">fib-programming-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **label-allocation-failed** *boolean*

<b>Description</b>	Indicates true if dynamic-label-block has no more free labels
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">label-allocation-failed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">label-allocation-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **next-hop-unresolved** *boolean*

<b>Description</b>	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">next-hop-unresolved</a> <i>boolean</i>
<b>Tree</b>	<a href="#">next-hop-unresolved</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **rejected-route** *boolean*

<b>Description</b>	Indicates true if the route was rejected by an import policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">rejected-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">rejected-route</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### last-modified *string*

**Description** Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-updatereceived. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [last-modified](#) *string*

**Tree** [last-modified](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### neighbor-as *number*

**Description** The last external AS to advertise the route into the local AS

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [neighbor-as](#) *number*

**Tree** [neighbor-as](#)

**Range** 1 to 4294967295

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### pending-delete *boolean*

**Description** Set to true if the route is marked for deletion.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [pending-delete](#) *boolean*

**Tree** [pending-delete](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**received-mpls-label** (*number* | *keyword*)

<b>Description</b>	Received MPLS label value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">received-mpls-label</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">received-mpls-label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> <li>• IMPLICIT_NULL</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	1

**stale-route** *boolean*

<b>Description</b>	Set to true if the route is stale due to BGP graceful restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">stale-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">stale-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**tie-break-reason** *keyword*

<b>Description</b>	Indicates the reason why a BGP route is sorted behind the next best route. The BGP best path displays a value of 'none'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">tie-break-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">tie-break-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• unknown</li> <li>• none</li> </ul>

**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **used-route** *boolean*

**Description**

Indicates true if the route is being used for forwarding.

**Context**

[network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#))

	<a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">used-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">used-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**valid-route** *boolean*

<b>Description</b>	Indicates true if the route is valid.
<b>Context</b>	<a href="#">network-instance</a> <i>name</i> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">valid-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">valid-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**rib-in-pre**

<b>Description</b>	Container for the pre-import-policy version of BGP routes learned from BGP neighbors.
<b>Context</b>	<a href="#">network-instance</a> <i>name</i> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a>
<b>Tree</b>	<a href="#">rib-in-pre</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**route** [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

<b>Description</b>	List of label-IPv6 routes.
<b>Context</b>	<a href="#">network-instance</a> <i>name</i> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**path-id** *number*

<b>Description</b>	Path identifier of the BGP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**attr-id** *reference*

<b>Description</b>	Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">attr-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**received-mpls-label** (*number* | *keyword*)

<b>Description</b>	Received MPLS label value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">received-mpls-label</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">received-mpls-label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> <li>• IMPLICIT_NULL</li> </ul>

<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	1

**rib-out-post**

<b>Description</b>	Container for the post-export-policy version of BGP routes advertised to BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a>
<b>Tree</b>	<a href="#">rib-out-post</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**route** [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

<b>Description</b>	List of label-IPv6 routes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**path-id** *number*

<b>Description</b>	Path identifier of the BGP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**advertised-mpls-label** (*number* | *keyword*)

<b>Description</b>	Advertised MPLS label value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">advertised-mpls-label</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">advertised-mpls-label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> </ul>

- IMPLICIT\_NULL

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	1

### attr-id reference

<b>Description</b>	Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">attr-id reference</a>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <a href="#">number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv6-unicast

<b>Description</b>	Container for RIB state of IPv6-unicast routes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a>
<b>Tree</b>	<a href="#">ipv6-unicast</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### local-rib

<b>Description</b>	Container for local RIB, containing all imported routes from other protocols plus the post-import-policy version of all IPv4 routes learned from all BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">local-rib</a>
<b>Tree</b>	<a href="#">local-rib</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route prefix** (*ipv4-prefix | ipv6-prefix*) **neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*) **origin-protocol** *identityref* **path-id** *number*

<b>Description</b>	List of IPv6 routes in the local RIB.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast local-rib route prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <i>identityref</i> <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**prefix** (*ipv4-prefix | ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast local-rib route prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <i>identityref</i> <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast local-rib route prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <i>identityref</i> <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**origin-protocol** *identityref*

<b>Description</b>	If the route was imported from another protocol, this is the protocol name.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast local-rib route prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <a href="#">origin-protocol</a> <i>identityref</i> <a href="#">path-id</a> <i>number</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>aggregate Locally configured aggregate route</li> <li>arp-nd IP route added by ARP ND.</li> </ul>

- `bgp`  
Border Gateway Protocol version 4
- `bgp-label`  
Border Gateway Protocol labeled routes
- `bgp-evpn`  
BGP Ethernet VPN (EVPN)
- `bgp-vpn`  
Border Gateway Protocol VPN routes
- `dhcp`  
IP (default) route added by DHCP.
- `gribi`  
A gRIBI route
- `host`  
A host route
- `isis`  
IS-IS
- `local`  
A directly connected route
- `linux`  
IP route added by the linux kernel.
- `ndk1`  
Route added by an agent application using the NDK
- `ndk2`  
Route added by an agent application using the NDK
- `ospfv2`  
OSPFv2
- `ospfv3`  
OSPFv3
- `static`  
Locally configured static route

**Configurable**

False

**Platforms**

Supported on all platforms

***path-id number*****Description**

Path identifier of the BGP route

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**attr-id** *reference*

<b>Description</b>	Leaf reference to <a href="#">networkinstance/protocols/bgp/rib/attr-sets/attr-set/index</a>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">attr-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <a href="#">number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**best-route** *boolean*

<b>Description</b>	Set to true if the route is the BGP best path for the prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">best-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">best-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**group-best** *boolean*

<b>Description</b>	Set to true if the route is the best BGP route amongst all routes received from one particular neighbor AS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">group-best</a> <i>boolean</i>
<b>Tree</b>	<a href="#">group-best</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

## invalid-reason

**Description** Enter the invalid-reason context

**Context** [network-instance name](#) [string](#) [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast](#) [local-rib](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) [number](#) [invalid-reason](#)

**Tree** [invalid-reason](#)

**Configurable** False

**Platforms** Supported on all platforms

## as-loop *boolean*

**Description** Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.

**Context** [network-instance name](#) [string](#) [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast](#) [local-rib](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) [number](#) [invalid-reason](#) [as-loop](#) [boolean](#)

**Tree** [as-loop](#)

**Configurable** False

**Platforms** Supported on all platforms

## cluster-loop *boolean*

**Description** Indicates true if the BGP route has a cluster-list loop.

**Context** [network-instance name](#) [string](#) [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast](#) [local-rib](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) [number](#) [invalid-reason](#) [cluster-loop](#) [boolean](#)

**Tree** [cluster-loop](#)

**Configurable** False

**Platforms** Supported on all platforms

## fib-programming-failed *boolean*

**Description** Indicates true if FIB programming failed

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">fib-programming-failed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">fib-programming-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **label-allocation-failed** *boolean*

<b>Description</b>	Indicates true if dynamic-label-block has no more free labels
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">label-allocation-failed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">label-allocation-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **next-hop-unresolved** *boolean*

<b>Description</b>	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">next-hop-unresolved</a> <i>boolean</i>
<b>Tree</b>	<a href="#">next-hop-unresolved</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **rejected-route** *boolean*

<b>Description</b>	Indicates true if the route was rejected by an import policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">rejected-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">rejected-route</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **last-modified** *string*

**Description** Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-updatereceived. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast](#) [local-rib](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) [number](#) [last-modified](#) *string*

**Tree** [last-modified](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** Supported on all platforms

### **neighbor-as** *number*

**Description** The last external AS to advertise the route into the local AS

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast](#) [local-rib](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) [number](#) [neighbor-as](#) *number*

**Tree** [neighbor-as](#)

**Range** 1 to 4294967295

**Configurable** False

**Platforms** Supported on all platforms

### **pending-delete** *boolean*

**Description** Set to true if the route is marked for deletion.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast](#) [local-rib](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) [number](#) [pending-delete](#) *boolean*

**Tree** [pending-delete](#)

**Configurable** False

**Platforms** Supported on all platforms

**stale-route** *boolean*

<b>Description</b>	Set to true if the route is stale due to BGP graceful restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i> <a href="#">stale-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">stale-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tie-break-reason** *keyword*

<b>Description</b>	Indicates the reason why a BGP route is sorted behind the next best route. The BGP best path displays a value of 'none'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <i>number</i> <a href="#">tie-break-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">tie-break-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• unknown</li> <li>• none</li> <li>• origin</li> <li>• as-path-length</li> <li>• next-hop-cost</li> <li>• med</li> <li>• local-pref</li> <li>• aggregate</li> <li>• originator-id</li> <li>• cluster-list</li> <li>• extended-community</li> <li>• aigp</li> <li>• missing-attribute</li> <li>• rtm-pref</li> <li>• owner</li> <li>• eigrp-labeled</li> <li>• vpn-route</li> <li>• ebgp-route</li> </ul>

- vpn-rd
- next-hop-type
- invalid-route
- origin-validation
- long-live-gr-stale
- default-originate
- fib-install-disabled
- peer-router-id
- path-identifier

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **used-route** *boolean*

<b>Description</b>	Indicates true if the route is being used for forwarding.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">used-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">used-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **valid-route** *boolean*

<b>Description</b>	Indicates true if the route is valid.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">local-rib</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">origin-protocol</a> <a href="#">identityref</a> <a href="#">path-id</a> <a href="#">number</a> <a href="#">valid-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">valid-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**rib-in-out**

<b>Description</b>	Container for BGP routes learned and advertised to BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a>
<b>Tree</b>	<a href="#">rib-in-out</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**rib-in-post**

<b>Description</b>	Container for the post-import-policy version of BGP routes learned from BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a>
<b>Tree</b>	<a href="#">rib-in-post</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route** [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

<b>Description</b>	List of IPv6 routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**path-id** *number*

<b>Description</b>	Path identifier of the BGP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**attr-id** *reference*

<b>Description</b>	Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">attr-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**best-route** *boolean*

<b>Description</b>	Set to true if the route is the BGP best path for the prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">best-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">best-route</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### group-best *boolean*

<b>Description</b>	Set to true if the route is the best BGP route amongst all routes received from one particular neighbor AS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">group-best</a> <i>boolean</i>
<b>Tree</b>	<a href="#">group-best</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### internal-tags *string*

<b>Description</b>	Internal route tag written in the route/tunnel tables or BGP rib The internal-tag value is shown with the format 'type-string = hex-value-string'. For example:
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">internal-tags</a> <i>string</i>
<b>Tree</b>	<a href="#">internal-tags</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	2

### invalid-reason

<b>Description</b>	Enter the invalid-reason context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a>
<b>Tree</b>	<a href="#">invalid-reason</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **as-loop** *boolean*

**Description** Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#) [as-loop](#) *boolean*

**Tree** [as-loop](#)

**Configurable** False

**Platforms** Supported on all platforms

### **cluster-loop** *boolean*

**Description** Indicates true if the BGP route has a cluster-list loop.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#) [cluster-loop](#) *boolean*

**Tree** [cluster-loop](#)

**Configurable** False

**Platforms** Supported on all platforms

### **fib-programming-failed** *boolean*

**Description** Indicates true if FIB programming failed

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#) [fib-programming-failed](#) *boolean*

**Tree** [fib-programming-failed](#)

**Configurable** False

**Platforms** Supported on all platforms

### **label-allocation-failed** *boolean*

**Description** Indicates true if dynamic-label-block has no more free labels

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">label-allocation-failed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">label-allocation-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **next-hop-unresolved** *boolean*

<b>Description</b>	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">next-hop-unresolved</a> <i>boolean</i>
<b>Tree</b>	<a href="#">next-hop-unresolved</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **rejected-route** *boolean*

<b>Description</b>	Indicates true if the route was rejected by an import policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">invalid-reason</a> <a href="#">rejected-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">rejected-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-modified** *string*

<b>Description</b>	Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-updatereceived. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">last-modified</a> <i>string</i>

<b>Tree</b>	<a href="#">last-modified</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **neighbor-as** *number*

<b>Description</b>	The last external AS to advertise the route into the local AS
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">neighbor-as</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">neighbor-as</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **pending-delete** *boolean*

<b>Description</b>	Set to true if the route is marked for deletion.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">pending-delete</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">pending-delete</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **stale-route** *boolean*

<b>Description</b>	Set to true if the route is stale due to BGP graceful restart.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">stale-route</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">stale-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## tie-break-reason keyword

<b>Description</b>	Indicates the reason why a BGP route is sorted behind the next best route. The BGP best path displays a value of 'none'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <b>tie-break-reason</b> <i>keyword</i>
<b>Tree</b>	<a href="#">tie-break-reason</a>
<b>Options</b>	<ul style="list-style-type: none"><li>• unknown</li><li>• none</li><li>• origin</li><li>• as-path-length</li><li>• next-hop-cost</li><li>• med</li><li>• local-pref</li><li>• aggregate</li><li>• originator-id</li><li>• cluster-list</li><li>• extended-community</li><li>• aigp</li><li>• missing-attribute</li><li>• rtm-pref</li><li>• owner</li><li>• eigrp-labeled</li><li>• vpn-route</li><li>• ebgp-route</li><li>• peer-ip</li><li>• local-peer</li><li>• multi-path</li><li>• vpn-rd</li><li>• next-hop-type</li><li>• invalid-route</li><li>• origin-validation</li><li>• long-live-gr-stale</li><li>• default-originate</li><li>• fib-install-disabled</li></ul>

	<ul style="list-style-type: none"> <li>peer-router-id</li> <li>path-identifier</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### used-route *boolean*

<b>Description</b>	Indicates true if the route is being used for forwarding.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">used-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">used-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### valid-route *boolean*

<b>Description</b>	Indicates true if the route is valid.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <a href="#">number</a> <a href="#">valid-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">valid-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### rib-in-pre

<b>Description</b>	Container for the pre-import-policy version of BGP routes learned from BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a>
<b>Tree</b>	<a href="#">rib-in-pre</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route prefix** (*ipv4-prefix | ipv6-prefix*) **neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*) **path-id number**

<b>Description</b>	List of IPv6 routes.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <a href="#">path-id number</a>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**prefix** (*ipv4-prefix | ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <a href="#">path-id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor** (*ipv4-address-with-zone | ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <a href="#">path-id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**path-id number**

<b>Description</b>	Path identifier of the BGP route
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <a href="#">path-id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**attr-id reference**

<b>Description</b>	Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">attr-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**rib-out-post**

<b>Description</b>	Container for the post-export-policy version of BGP routes advertised to BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a>
<b>Tree</b>	<a href="#">rib-out-post</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route prefix** (*ipv4-prefix* | *ipv6-prefix*) **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **path-id** *number*

<b>Description</b>	List of IPv6 routes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **path-id** *number*

<b>Description</b>	Path identifier of the BGP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **attr-id** *reference*

<b>Description</b>	Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">attr-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **route-target**

<b>Description</b>	Container for RIB state of RTC routes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a>

<b>Tree</b>	<a href="#">route-target</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### rib-in-out

<b>Description</b>	Container for BGP routes learned and advertised to BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a>
<b>Tree</b>	<a href="#">rib-in-out</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### rib-in-post

<b>Description</b>	Container for the post-import-policy version of BGP routes learned from BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a>
<b>Tree</b>	<a href="#">rib-in-post</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**route** [origin-as](#) *number* [route-target-prefix](#) *string* [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

<b>Description</b>	List of RTC routes in the RIB-IN, after import-policy modification.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**origin-as** *number*

<b>Description</b>	The origin AS of the RTC route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**route-target-prefix** *string*

<b>Description</b>	The RTC prefix in the format number1:number2/length, where number1 is an IPv4 address or a 2-byte ASN or a 4-byte ASN, number2 is a 2-byte or 4-byte administrative value and length is a number of bits between 0 and 96 The default RTC prefix is represented by 0:0/0
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**path-id** *number*

<b>Description</b>	Path identifier of the BGP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**attr-id** *reference*

<b>Description</b>	Leaf reference to networkinstance/protocols/bgp/rib/ attr-sets/attr-set/index.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <a href="#">attr-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**best-route** *boolean*

<b>Description</b>	Set to true if the route is the BGP best path for the prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <a href="#">best-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">best-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**group-best** *boolean*

<b>Description</b>	Set to true if the route is the best BGP route amongst all routes received from one particular neighbor AS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <a href="#">group-best</a> <i>boolean</i>
<b>Tree</b>	<a href="#">group-best</a>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### internal-tags *string*

**Description** Internal route tag written in the route/tunnel tables or BGP rib  
The internal-tag value is shown with the format 'type-string = hex-value-string'. For example:

**Context** [network-instance name string](#) [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [route-target](#) [rib-in-out](#) [rib-in-post](#) [route](#) [origin-as](#) [number](#) [route-target-prefix](#) [string](#) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [internal-tags](#) [string](#)

**Tree** [internal-tags](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**Max. Elements** 2

### invalid-reason

**Description** Enter the invalid-reason context

**Context** [network-instance name string](#) [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [route-target](#) [rib-in-out](#) [rib-in-post](#) [route](#) [origin-as](#) [number](#) [route-target-prefix](#) [string](#) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#)

**Tree** [invalid-reason](#)

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### as-loop *boolean*

**Description** Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.

**Context** [network-instance name string](#) [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [route-target](#) [rib-in-out](#) [rib-in-post](#) [route](#) [origin-as](#) [number](#) [route-target-prefix](#) [string](#) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#) [as-loop](#) [boolean](#)

**Tree** [as-loop](#)

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### cluster-loop *boolean*

<b>Description</b>	Indicates true if the BGP route has a cluster-list loop.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <a href="#">invalid-reason</a> <a href="#">cluster-loop</a> <i>boolean</i>
<b>Tree</b>	<a href="#">cluster-loop</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### fib-programming-failed *boolean*

<b>Description</b>	Indicates true if FIB programming failed
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <a href="#">invalid-reason</a> <a href="#">fib-programming-failed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">fib-programming-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### label-allocation-failed *boolean*

<b>Description</b>	Indicates true if dynamic-label-block has no more free labels
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <a href="#">invalid-reason</a> <a href="#">label-allocation-failed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">label-allocation-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**next-hop-unresolved** *boolean*

<b>Description</b>	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <a href="#">invalid-reason</a> <a href="#">next-hop-unresolved</a> <i>boolean</i>
<b>Tree</b>	<a href="#">next-hop-unresolved</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**rejected-route** *boolean*

<b>Description</b>	Indicates true if the route was rejected by an import policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <a href="#">invalid-reason</a> <a href="#">rejected-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">rejected-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**last-modified** *string*

<b>Description</b>	Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-updatereceived. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <a href="#">last-modified</a> <i>string</i>
<b>Tree</b>	<a href="#">last-modified</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**neighbor-as** *number*

<b>Description</b>	The last external AS to advertise the route into the local AS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">neighbor-as</a> <i>number</i>
<b>Tree</b>	<a href="#">neighbor-as</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**pending-delete** *boolean*

<b>Description</b>	Set to true if the route is marked for deletion.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">pending-delete</a> <i>boolean</i>
<b>Tree</b>	<a href="#">pending-delete</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**stale-route** *boolean*

<b>Description</b>	Set to true if the route is stale due to BGP graceful restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">stale-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">stale-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**tie-break-reason** *keyword*

<b>Description</b>	Indicates the reason why a BGP route is sorted behind the next best route. The BGP best path displays a value of 'none'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">path-id</a> <i>number</i> <a href="#">tie-break-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">tie-break-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• unknown</li> <li>• none</li> <li>• origin</li> <li>• as-path-length</li> <li>• next-hop-cost</li> <li>• med</li> <li>• local-pref</li> <li>• aggregate</li> <li>• originator-id</li> <li>• cluster-list</li> <li>• extended-community</li> <li>• aigp</li> <li>• missing-attribute</li> <li>• rtm-pref</li> <li>• owner</li> <li>• eigrp-labeled</li> <li>• vpn-route</li> <li>• ebgp-route</li> <li>• peer-ip</li> <li>• local-peer</li> <li>• multi-path</li> <li>• vpn-rd</li> <li>• next-hop-type</li> <li>• invalid-route</li> <li>• origin-validation</li> <li>• long-live-gr-stale</li> <li>• default-originate</li> <li>• fib-install-disabled</li> <li>• peer-router-id</li> </ul>

- path-identifier

**Configurable**

False

**Platforms**

7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**used-route** *boolean***Description**

Indicates true if the route is being used for forwarding.

**Context**

[network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [route-target](#) [rib-in-out](#) [rib-in-post](#) [route](#) [origin-as](#) *number* [route-target-prefix](#) *string* [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) *number* [used-route](#) *boolean*

**rib-in-pre****Description**

Container for the pre-import-policy version of BGP routes learned from BGP neighbors.

**Context**

[network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [route-target](#) [rib-in-out](#) [rib-in-pre](#)

**Tree**[rib-in-pre](#)**Configurable**

False

**Platforms**

7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**route origin-as** *number* **route-target-prefix** *string* **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **path-id** *number*

<b>Description</b>	List of RTC routes in the RIB-IN, before import-policy modification.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**origin-as** *number*

<b>Description</b>	The origin AS of the RTC route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**route-target-prefix** *string*

<b>Description</b>	The RTC prefix in the format number1:number2/length, where number1 is an IPv4 address or a 2-byte ASN or a 4-byte ASN, number2 is a 2-byte or 4-byte administrative value and length is a number of bits between 0 and 96  The default RTC prefix is represented by 0:0/0
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**path-id** *number*

<b>Description</b>	Path identifier of the BGP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**attr-id** *reference*

<b>Description</b>	Leaf reference to <code>networkinstance/protocols/bgp/rib/attr-sets/attr-set/index</code> .
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-in-pre</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i> <a href="#">attr-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**rib-out-post**

<b>Description</b>	Container for the post-export-policy version of BGP routes advertised to BGP neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a>

<b>Tree</b>	<a href="#">rib-out-post</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**route** [origin-as](#) *number* [route-target-prefix](#) *string* [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

<b>Description</b>	List of RTC routes in the RIB-OUT, after export-policy modification.
<b>Context</b>	<a href="#">network-instance</a> <i>name</i> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**origin-as** *number*

<b>Description</b>	The origin AS of the RTC route
<b>Context</b>	<a href="#">network-instance</a> <i>name</i> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**route-target-prefix** *string*

<b>Description</b>	The RTC prefix in the format number1:number2/length, where number1 is an IPv4 address or a 2-byte ASN or a 4-byte ASN, number2 is a 2-byte or 4-byte administrative value and length is a number of bits between 0 and 96 The default RTC prefix is represented by 0:0/0
<b>Context</b>	<a href="#">network-instance</a> <i>name</i> <i>string</i> <a href="#">bgp-rib</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">route-target</a> <a href="#">rib-in-out</a> <a href="#">rib-out-post</a> <a href="#">route</a> <a href="#">origin-as</a> <i>number</i> <a href="#">route-target-prefix</a> <i>string</i> <a href="#">neighbor</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">path-id</a> <i>number</i>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

**Description** If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [route-target](#) [rib-in-out](#) [rib-out-post](#) [route](#) [origin-as](#) *number* [route-target-prefix](#) *string* [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **path-id** *number*

**Description** Path identifier of the BGP route

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [route-target](#) [rib-in-out](#) [rib-out-post](#) [route](#) [origin-as](#) *number* [route-target-prefix](#) *string* [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **attr-id** *reference*

**Description** Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.

**Context** [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [route-target](#) [rib-in-out](#) [rib-out-post](#) [route](#) [origin-as](#) *number* [route-target-prefix](#) *string* [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number* [attr-id](#) *reference*

**Tree** [attr-id](#)

**Reference** [network-instance name](#) *string* [bgp-rib](#) [attr-sets](#) [attr-set](#) [index](#) *number*

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**attr-sets**

<b>Description</b>	Container for BGP RIB path attribute sets that can be shared by one or more BGP routes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets</a>
<b>Tree</b>	<a href="#">attr-sets</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**attr-set** *index number*

<b>Description</b>	List of attribute sets.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index number</a>
<b>Tree</b>	<a href="#">attr-set</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**index** *number*

<b>Description</b>	A unique internal identifier of the attribute set.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**aggregator**

<b>Description</b>	Enter the aggregator context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index number aggregator</a>
<b>Tree</b>	<a href="#">aggregator</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The router ID of the BGP router that formed the aggregate route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index number aggregator address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )

<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**as-number** *number*

<b>Description</b>	The 2byte or 4byte AS number of the router that formed the aggregate route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">aggregator as-number</a> <i>number</i>
<b>Tree</b>	<a href="#">as-number</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**aigp** *number*

<b>Description</b>	The value in the AIGP path attribute.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">aigp</a> <i>number</i>
<b>Tree</b>	<a href="#">aigp</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**as-path**

<b>Description</b>	A container for the AS path attribute of the attribute set.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">as-path</a>
<b>Tree</b>	<a href="#">as-path</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**segment** [as-path-index](#) *number*

<b>Description</b>	A list of segments. Each segment has a type and a list of one or more AS numbers.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">as-path segment as-path-index</a> <i>number</i>

<b>Tree</b>	<a href="#">segment</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**as-path-index** *number*

<b>Description</b>	RIB attribute AS Path index
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">as-path segment as-path-index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**member** *number*

<b>Description</b>	A list of AS numbers (each of which is a 2byte-ASN or a 4byte-ASN) that belong to the AS path segment.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">as-path segment as-path-index</a> <i>number</i> <a href="#">member</a> <i>number</i>
<b>Tree</b>	<a href="#">member</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	The type of the AS path segment.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">as-path segment as-path-index</a> <i>number</i> <a href="#">type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• as-set</li> <li>• as-sequence</li> <li>• as-confed-sequence</li> <li>• as-confed-set</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**atomic-aggregate** *boolean*

<b>Description</b>	Set to true to indicate the presence of the ATOMIC_AGGREGATE path attribute.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">atomic-aggregate</a> <i>boolean</i>
<b>Tree</b>	<a href="#">atomic-aggregate</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**cluster-list** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The list of IPv4 addresses in the CLUSTER_LIST path attribute.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">cluster-list</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">cluster-list</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**communities**

<b>Description</b>	Container for different types of BGP communities
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">communities</a>
<b>Tree</b>	<a href="#">communities</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**community** *string*

<b>Description</b>	List of standard 4-byte community values in the COMMUNITY path attribute. Each should be displayed in the format <0..65355>:<0..65535>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">communities</a> <a href="#">community</a> <i>string</i>
<b>Tree</b>	<a href="#">community</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ext-community** *string*

<b>Description</b>	List of extended 8-byte community values in the COMMUNITY path attribute.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">communities ext-community</a> <i>string</i>
<b>Tree</b>	<a href="#">ext-community</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**large-community** *string*

<b>Description</b>	List of large 12-byte community values in the LARGE_COMMUNITY path attribute. Each should be displayed in the format: <0..4294967295>:<0..4294967295>:< 0..4294967295>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">communities large-community</a> <i>string</i>
<b>Tree</b>	<a href="#">large-community</a>
<b>String Length</b>	1 to 72
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**local-pref** *number*

<b>Description</b>	The value of the LOCAL_PREF path attribute.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">local-pref</a> <i>number</i>
<b>Tree</b>	<a href="#">local-pref</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**med** *number*

<b>Description</b>	The value of the MULTI_EXIT_DISC path attribute.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">med</a> <i>number</i>
<b>Tree</b>	<a href="#">med</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop** (*ipv4-address-with-zone | ipv6-address-with-zone*)

<b>Description</b>	The IPv4 or IPv6 address of the BGP next-hop (extracted from the NEXT_HOP field of the UPDATE or the MP_REACH_NLRI next-hop).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">next-hop</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> )
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**origin** *keyword*

<b>Description</b>	The value of the ORIGIN path attribute
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">origin</a> <i>keyword</i>
<b>Tree</b>	<a href="#">origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>igp</code></li> <li>• <code>egp</code></li> <li>• <code>incomplete</code></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**originator-id** (*ipv4-address | ipv6-address*)

<b>Description</b>	The address in the ORIGINATOR_ID attribute added by a route reflector.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">originator-id</a> ( <i>ipv4-address   ipv6-address</i> )
<b>Tree</b>	<a href="#">originator-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pmsi-tunnel**

<b>Description</b>	A container for the Provider Multicast Service Interface Tunnel Attribute (PTA) of the attribute set.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">pmsi-tunnel</a>

<b>Tree</b>	<a href="#">pmsi-tunnel</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## flags

<b>Description</b>	A container for the PTA Flags
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set index</a> <i>number</i> <a href="#">pmsi-tunnel flags</a>
<b>Tree</b>	<a href="#">flags</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## assisted-replication-type *keyword*

<b>Description</b>	The value of the assisted-replication role type.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set index</a> <i>number</i> <a href="#">pmsi-tunnel flags</a> <a href="#">assisted-replication-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">assisted-replication-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• ar-replicator</li> <li>• ar-leaf</li> <li>• reserved</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## leaf-information-required *boolean*

<b>Description</b>	The value of the Leaf Information Required (LIR) flag.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set index</a> <i>number</i> <a href="#">pmsi-tunnel flags</a> <a href="#">leaf-information-required</a> <i>boolean</i>
<b>Tree</b>	<a href="#">leaf-information-required</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pruned-flood-list**

<b>Description</b>	A container for the optimized ingress replication pruned flood list flags.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">pmsi-tunnel flags pruned-flood-list</a>
<b>Tree</b>	<a href="#">pruned-flood-list</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**broadcast-multicast** *keyword*

<b>Description</b>	The value of the broadcast-multicast flag.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">pmsi-tunnel flags pruned-flood-list broadcast-multicast</a> <i>keyword</i>
<b>Tree</b>	<a href="#">broadcast-multicast</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• 0</li> <li>• 1</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**unknown-unicast** *keyword*

<b>Description</b>	The value of the unknown-unicast flag.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">pmsi-tunnel flags pruned-flood-list unknown-unicast</a> <i>keyword</i>
<b>Tree</b>	<a href="#">unknown-unicast</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• 0</li> <li>• 1</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**label**

<b>Description</b>	The encoded label value and type in the PMSI Tunnel Attribute
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">pmsi-tunnel label</a>
<b>Tree</b>	<a href="#">label</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**value number**

<b>Description</b>	The value of the label field  If the route is an EVPN MPLS route, the mpls-label is read out of the 20-bit high order value. If the route is an EVPN VXLAN route, the vni is read out of the 24-bit value. If the route is an EVPN SRv6 route, this field is set to zero if no transposition is used and set to a non-zero value if transposition is used.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bgp-rib attr-sets attr-set index number</a> <a href="#">pmsi-tunnel label value number</a>
<b>Tree</b>	<a href="#">value</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**value-type keyword**

<b>Description</b>	Whether the encoded label value is an mpls-label, a vni or a transposed function or argument
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bgp-rib attr-sets attr-set index number</a> <a href="#">pmsi-tunnel label value-type keyword</a>
<b>Tree</b>	<a href="#">value-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• mpls-label</li> <li>• vni</li> <li>• transposed-srv6-function</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tunnel-endpoint (ipv4-address | ipv6-address)**

<b>Description</b>	The value of the tunnel-endpoint in the PMSI Tunnel Attribute.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bgp-rib attr-sets attr-set index number</a> <a href="#">pmsi-tunnel tunnel-endpoint (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">tunnel-endpoint</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **tunnel-type** *keyword*

**Description** The value of the tunnel-type in the PMSI Tunnel Attribute

**Context** [network-instance name](#) *string* [bgp-rib attr-sets attr-set index](#) *number* [pmsi-tunnel tunnel-type](#) *keyword*

**Tree** [tunnel-type](#)

**Options**

- no-tunnel
- rsvp-te-p2mp
- mldp-p2mp
- pim-ssm
- pim-sm
- bidir-pim
- ingress-replication
- mldp-mp2mp
- assisted-replication
- bier

**Configurable** False

**Platforms** Supported on all platforms

### **unknown-attributes**

**Description** Container for unknown path attributes

**Context** [network-instance name](#) *string* [bgp-rib attr-sets attr-set index](#) *number* [unknown-attributes](#)

**Tree** [unknown-attributes](#)

**Configurable** False

**Platforms** Supported on all platforms

### **unknown-attribute** [unknown-attr-index](#) *number*

**Description** List of unknown BGP path attributes

**Context** [network-instance name](#) *string* [bgp-rib attr-sets attr-set index](#) *number* [unknown-attributes unknown-attribute unknown-attr-index](#) *number*

**Tree** [unknown-attribute](#)

**Configurable** False

**Platforms** Supported on all platforms

### **unknown-attr-index** *number*

**Description** RIB attribute unknown attribute index

**Context** [network-instance name](#) *string* [bgp-rib attr-sets attr-set index](#) *number* [unknown-attributes unknown-attribute unknown-attr-index](#) *number*

**Configurable** False

**Platforms** Supported on all platforms

### **attr-len** *number*

**Description** The length of the unknown path attribute

**Context** [network-instance name](#) *string* [bgp-rib attr-sets attr-set index](#) *number* [unknown-attributes unknown-attribute unknown-attr-index](#) *number* [attr-len](#) *number*

**Tree** [attr-len](#)

**Configurable** False

**Platforms** Supported on all platforms

### **attr-type** *number*

**Description** The type code of the unknown path attribute

**Context** [network-instance name](#) *string* [bgp-rib attr-sets attr-set index](#) *number* [unknown-attributes unknown-attribute unknown-attr-index](#) *number* [attr-type](#) *number*

**Tree** [attr-type](#)

**Configurable** False

**Platforms** Supported on all platforms

### **extended** *boolean*

**Description** Set to true if the unknown path attribute has the extended length flag is set to 1.

**Context** [network-instance name](#) *string* [bgp-rib attr-sets attr-set index](#) *number* [unknown-attributes unknown-attribute unknown-attr-index](#) *number* [extended](#) *boolean*

**Tree** [extended](#)

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**optional *boolean***

<b>Description</b>	Set to true if the unknown path attribute has the optional flag is set to 1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">unknown-attributes unknown-attribute unknown-attr-index</a> <i>number</i> <b>optional</b> <i>boolean</i>
<b>Tree</b>	<a href="#">optional</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**partial *boolean***

<b>Description</b>	Set to true if the unknown path attribute has the partial flag is set to 1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">unknown-attributes unknown-attribute unknown-attr-index</a> <i>number</i> <b>partial</b> <i>boolean</i>
<b>Tree</b>	<a href="#">partial</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**transitive *boolean***

<b>Description</b>	Set to true if the unknown path attribute has the transitive flag is set to 1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bgp-rib attr-sets attr-set index</a> <i>number</i> <a href="#">unknown-attributes unknown-attribute unknown-attr-index</a> <i>number</i> <b>transitive</b> <i>boolean</i>
<b>Tree</b>	<a href="#">transitive</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**bridge-table**

<b>Description</b>	Enable the bridge-table context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <b>bridge-table</b>
<b>Tree</b>	<a href="#">bridge-table</a>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **discard-unknown-dest-mac** *boolean*

<b>Description</b>	Discard frames with unknown destination mac addresses. The source mac address of the discarded frame is learned as long as the mac is valid, mac-learning is enabled, and the number of entries has not reached the maximum-entries threshold.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">discard-unknown-dest-mac</a> <i>boolean</i>
<b>Tree</b>	<a href="#">discard-unknown-dest-mac</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **mac-duplication**

<b>Description</b>	Configuration of the MAC duplication procedures.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a>
<b>Tree</b>	<a href="#">mac-duplication</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **action** *keyword*

<b>Description</b>	Action to take on the subinterface (if action is use-net-instance-action) upon detecting at least one mac addresses as duplicate on the subinterface. In particular:
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">action</a> <i>keyword</i>
<b>Tree</b>	<a href="#">action</a>
<b>Default</b>	stop-learning
<b>Options</b>	<ul style="list-style-type: none"> <li>• stop-learning</li> <li>• blackhole</li> <li>• oper-down</li> </ul>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **admin-state** *keyword*

<b>Description</b>	Configurable state of the mac-duplication procedures. Mac-duplication detects duplicate macs that move between different subinterfaces or a subinterface and an evpn destination.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **duplicate-entries**

<b>Description</b>	Enter the duplicate-entries context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">duplicate-entries</a>
<b>Tree</b>	<a href="#">duplicate-entries</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **mac** [address](#) *string*

<b>Description</b>	macs duplicate on the bridging instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">duplicate-entries</a> <a href="#">mac address</a> <i>string</i>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**address string**

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bridge-table mac-duplication duplicate-entries mac address string</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**destination string**

<b>Description</b>	the name of the destination the duplicate mac is installed against in the fdb.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bridge-table mac-duplication duplicate-entries mac address string destination string</a>
<b>Tree</b>	<a href="#">destination</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**destination-index number**

<b>Description</b>	A system-wide unique identifier of a subinterface object (system allocated).
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bridge-table mac-duplication duplicate-entries mac address string destination-index number</a>
<b>Tree</b>	<a href="#">destination-index</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**destination-type keyword**

<b>Description</b>	the type of the destination the duplicate mac is installed against in the fdb.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bridge-table mac-duplication duplicate-entries mac address string destination-type keyword</a>
<b>Tree</b>	<a href="#">destination-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• sub-interface</li> <li>• blackhole</li> <li>• irb-interface</li> </ul>

- vxlan
- reserved
- evpn-mpls
- connection-point

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### dup-detect-time *string*

<b>Description</b>	The date and time when the mac was declared duplicate
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">duplicate-entries</a> <a href="#">mac address</a> <i>string</i> <a href="#">dup-detect-time</a> <i>string</i>
<b>Tree</b>	<a href="#">dup-detect-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### hold-down-time-remaining (*keyword* | *number*)

<b>Description</b>	remaining hold down time for duplicate mac
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">duplicate-entries</a> <a href="#">mac address</a> <i>string</i> <a href="#">hold-down-time-remaining</a> ( <i>keyword</i>   <i>number</i> )
<b>Tree</b>	<a href="#">hold-down-time-remaining</a>
<b>Units</b>	seconds
<b>Options</b>	<ul style="list-style-type: none"> <li>• indefinite</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### hold-down-time (*keyword* | *number*)

<b>Description</b>	Time to wait from the moment a mac is declared duplicate to the mac is flushed from the bridge table. When the duplicate mac is flushed, the monitoring process for the mac is restarted.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">hold-down-time</a> ( <i>keyword</i>   <i>number</i> )

<b>Tree</b>	<a href="#">hold-down-time</a>
<b>Range</b>	2 to 60
<b>Default</b>	9
<b>Units</b>	minutes
<b>Options</b>	<ul style="list-style-type: none"> <li>indefinite</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### monitoring-window *number*

<b>Description</b>	Monitoring window for detecting duplication on a given mac address. A mac is declared as duplicate if it exceeds the num-moves within the monitoring-window.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">monitoring-window</a> <i>number</i>
<b>Tree</b>	<a href="#">monitoring-window</a>
<b>Range</b>	1 to 15
<b>Default</b>	3
<b>Units</b>	minutes
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### num-moves *number*

<b>Description</b>	Number of moves a mac is allowed within the monitoring-window, before it is declared duplicate.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">num-moves</a> <i>number</i>
<b>Tree</b>	<a href="#">num-moves</a>
<b>Range</b>	3 to 10
<b>Default</b>	5
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**mac-learning**

<b>Description</b>	Enter the mac-learning context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a>
<b>Tree</b>	<a href="#">mac-learning</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**admin-state** *keyword*

<b>Description</b>	Configurable state of the learning procedures for dynamic mac addresses. If disabled, the existing macs in the bridge-table will be kept (and refreshed if new frames arrive for them) but no new mac addresses will be learned. Frames with unknown mac addresses are not dropped, unless discard-unknown-src-mac is configured.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**aging**

<b>Description</b>	Enter the aging context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">aging</a>
<b>Tree</b>	<a href="#">aging</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**admin-state** *keyword*

<b>Description</b>	Configurable state of the aging for the dynamic mac entries in the bridge table. If disabled, dynamically learned mac entries will be programmed in the bridge table until the network instance is disabled.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">aging</a> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**age-time** *number*

<b>Description</b>	Configurable aging time for dynamically learned mac addresses
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">aging</a> <a href="#">age-time</a> <i>number</i>
<b>Tree</b>	<a href="#">age-time</a>
<b>Range</b>	60 to 86400
<b>Default</b>	300
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**learnt-entries**

<b>Description</b>	Enter the learnt-entries context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">learnt-entries</a>
<b>Tree</b>	<a href="#">learnt-entries</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**mac address string**

<b>Description</b>	macs learnt on the bridging instance
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bridge-table mac-learning learnt-entries mac address string</a>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**address string**

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bridge-table mac-learning learnt-entries mac address string</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**aging (number | keyword)**

<b>Description</b>	remaining age time for learnt macs
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bridge-table mac-learning learnt-entries mac address string aging (number   keyword)</a>
<b>Tree</b>	<a href="#">aging</a>
<b>Units</b>	seconds
<b>Options</b>	<ul style="list-style-type: none"> <li>disabled</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**destination string**

<b>Description</b>	the name of the subinterface where the mac is learnt against.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bridge-table mac-learning learnt-entries mac address string destination string</a>
<b>Tree</b>	<a href="#">destination</a>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **last-update** *string*

**Description** The date and time of the last update of this learnt mac

**Context** [network-instance name](#) *string* [bridge-table](#) [mac-learning](#) [learnt-entries](#) [mac address](#) *string* **last-update** *string*

**Tree** [last-update](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **mac-relearn-only** *boolean*

**Description** The value of this leaf indicates that network-instance will not learn any new mac addresses, but will relearn any that are already programmed

**Context** [network-instance name](#) *string* [bridge-table](#) [mac-learning](#) **mac-relearn-only** *boolean*

**Tree** [mac-relearn-only](#)

**Default** true

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **oper-mac-learning** *keyword*

**Description** The operational state of mac-learning on this network instance.

**Context** [network-instance name](#) *string* [bridge-table](#) [mac-learning](#) **oper-mac-learning** *keyword*

**Tree** [oper-mac-learning](#)

**Options**

- up  
Component or process is operational
- down  
Component or process is not operational
- empty  
Component slot is empty

- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**oper-mac-learning-disabled-reason** *keyword***Description**

The reason for the mac-learning being disabled on this network instance

**Context**[network-instance name](#) *string* [bridge-table](#) [mac-learning](#) [oper-mac-learning-disabled-reason](#) *keyword***Tree**[oper-mac-learning-disabled-reason](#)**Options**

- admin-disabled

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### mac-limit

<b>Description</b>	Bridge Table size and thresholds.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-limit</a>
<b>Tree</b>	<a href="#">mac-limit</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### maximum-entries *number*

<b>Description</b>	Maximum number of mac addresses allowed in the bridge-table.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-limit</a> <a href="#">maximum-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-entries</a>
<b>Range</b>	1 to 250000
<b>Default</b>	250
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### warning-threshold-pct *number*

<b>Description</b>	Percentage of the configured max-number-macs over which a warning is triggered. The warning message is cleared when the percentage drops below the configured percentage minus 5%
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-limit</a> <a href="#">warning-threshold-pct</a> <i>number</i>
<b>Tree</b>	<a href="#">warning-threshold-pct</a>
<b>Range</b>	6 to 100
<b>Default</b>	95
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**mac-table**

<b>Description</b>	Enter the mac-table context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-table</a>
<b>Tree</b>	<a href="#">mac-table</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**mac address string**

<b>Description</b>	macs learnt on the bridging instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-table</a> <a href="#">mac address</a> <i>string</i>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**address string**

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-table</a> <a href="#">mac address</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**destination string**

<b>Description</b>	the name of the destination where the mac is programmed against.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-table</a> <a href="#">mac address</a> <i>string</i> <a href="#">destination</a> <i>string</i>
<b>Tree</b>	<a href="#">destination</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**destination-index** *number*

<b>Description</b>	A system-wide unique identifier of a subinterface object (system allocated).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-table</a> <a href="#">mac address</a> <i>string</i> <a href="#">destination-index</a> <i>number</i>
<b>Tree</b>	<a href="#">destination-index</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**destination-type** *keyword*

<b>Description</b>	the type of the destination the mac installed against in the fdb.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-table</a> <a href="#">mac address</a> <i>string</i> <a href="#">destination-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">destination-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• sub-interface</li> <li>• blackhole</li> <li>• irb-interface</li> <li>• vxlan</li> <li>• reserved</li> <li>• evpn-mpls</li> <li>• connection-point</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**failed-slots** *number*

<b>Description</b>	The list of slot IDs corresponding to the linecards that did not successfully program the mac
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-table</a> <a href="#">mac address</a> <i>string</i> <a href="#">failed-slots</a> <i>number</i>
<b>Tree</b>	<a href="#">failed-slots</a>
<b>Range</b>	1 to 8
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**is-protected** *boolean*

<b>Description</b>	Indicates if the mac is protected in the hardware.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-table</a> <a href="#">mac address</a> <i>string</i> <a href="#">is-protected</a> <i>boolean</i>
<b>Tree</b>	<a href="#">is-protected</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**last-update** *string*

<b>Description</b>	The date and time of the last update of this mac
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-table</a> <a href="#">mac address</a> <i>string</i> <a href="#">last-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**not-programmed-reason** *keyword*

<b>Description</b>	The reason why the mac is not programmed
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-table</a> <a href="#">mac address</a> <i>string</i> <a href="#">not-programmed-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">not-programmed-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• mac-limit</li> <li>• failed-on-slots</li> <li>• no-destination-index</li> <li>• reserved</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**type** *keyword*

<b>Description</b>	the type of the mac installed in the fib.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-table</a> <a href="#">mac address</a> <i>string</i> <a href="#">type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• duplicate</li> <li>• learnt</li> <li>• irb-interface</li> <li>• evpn</li> <li>• evpn-static</li> <li>• irb-interface-anycast</li> <li>• proxy-anti-spoof</li> <li>• reserved</li> <li>• eth-cfm</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**protect-anycast-gw-mac** *boolean*

<b>Description</b>	Protect anycast gateway mac's installed in the FDB, when this mac-vrf is part of an IRB.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">protect-anycast-gw-mac</a> <i>boolean</i>
<b>Tree</b>	<a href="#">protect-anycast-gw-mac</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**proxy-arp**

<b>Description</b>	Enable the proxy-arp context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a>
<b>Tree</b>	<a href="#">proxy-arp</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **admin-state** *keyword*

**Description** Configurable state of the layer-2 proxy ARP/ND table

**Context** [network-instance name](#) *string* [bridge-table proxy-arp admin-state](#) *keyword*

**Tree** [admin-state](#)

**Default** enable

**Options**

- enable
- disable

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **duplicate-entries**

**Description** Enter the duplicate-entries context

**Context** [network-instance name](#) *string* [bridge-table proxy-arp duplicate-entries](#)

**Tree** [duplicate-entries](#)

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **neighbor** [ipv4-address](#) *string*

**Description** List of duplicate proxy ARP entries.

**Context** [network-instance name](#) *string* [bridge-table proxy-arp duplicate-entries neighbor ipv4-address](#) *string*

**Tree** [neighbor](#)

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **ipv4-address** *string*

**Description** IPv4 address of the proxy ARP entry

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">duplicate-entries</a> <a href="#">neighbor ipv4-address</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**detect-time** *string*

<b>Description</b>	The date and time when the proxy entry was declared duplicate
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">duplicate-entries</a> <a href="#">neighbor ipv4-address</a> <i>string</i> <a href="#">detect-time</a> <i>string</i>
<b>Tree</b>	<a href="#">detect-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**hold-down-time-remaining** (*keyword* | *number*)

<b>Description</b>	Remaining hold down time for the duplicate proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">duplicate-entries</a> <a href="#">neighbor ipv4-address</a> <i>string</i> <a href="#">hold-down-time-remaining</a> ( <i>keyword</i>   <i>number</i> )
<b>Tree</b>	<a href="#">hold-down-time-remaining</a>
<b>Units</b>	seconds
<b>Options</b>	<ul style="list-style-type: none"> <li>indefinite</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**is-immutable** *boolean*

<b>Description</b>	The immutable property of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">duplicate-entries</a> <a href="#">neighbor ipv4-address</a> <i>string</i> <a href="#">is-immutable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">is-immutable</a>
<b>Default</b>	false
<b>Configurable</b>	False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### link-layer-address *string*

**Description** The resolving MAC address of the proxy entry

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-arp](#) [duplicate-entries](#) [neighbor ipv4-address](#) *string* [link-layer-address](#) *string*

**Tree** [link-layer-address](#)

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### state *keyword*

**Description** The state of the proxy entry

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-arp](#) [duplicate-entries](#) [neighbor ipv4-address](#) *string* [state](#) *keyword*

**Tree** [state](#)

**Options**

- active
- in-active
- pending

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### dynamic-entries

**Description** Enter the dynamic-entries context

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-arp](#) [dynamic-entries](#)

**Tree** [dynamic-entries](#)

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### neighbor [ipv4-address](#) *string*

**Description** List of dynamic proxy ARP entries

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">dynamic-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**ipv4-address** *string*

<b>Description</b>	IPv4 address of the proxy ARP entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">dynamic-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**aging** (*number* | *keyword*)

<b>Description</b>	The remaining age time for learnt proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">dynamic-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i> <a href="#">aging</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">aging</a>
<b>Units</b>	seconds
<b>Options</b>	<ul style="list-style-type: none"> <li>disabled</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**is-immutable** *boolean*

<b>Description</b>	The immutable property of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">dynamic-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i> <a href="#">is-immutable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">is-immutable</a>
<b>Default</b>	false
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**last-update** *string*

<b>Description</b>	The date and time of the last update of this proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-arp dynamic-entries neighbor ipv4-address</a> <i>string</i> <a href="#">last-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**link-layer-address** *string*

<b>Description</b>	The resolving MAC address of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-arp dynamic-entries neighbor ipv4-address</a> <i>string</i> <a href="#">link-layer-address</a> <i>string</i>
<b>Tree</b>	<a href="#">link-layer-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**state** *keyword*

<b>Description</b>	The state of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-arp dynamic-entries neighbor ipv4-address</a> <i>string</i> <a href="#">state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• active</li> <li>• in-active</li> <li>• pending</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**dynamic-learning**

<b>Description</b>	Enter the dynamic-learning context
--------------------	------------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">dynamic-learning</a>
<b>Tree</b>	<a href="#">dynamic-learning</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **admin-state** *keyword*

<b>Description</b>	Configurable state of the learning procedures for dynamic ARP/ND entries The dynamic ARP/ND entries are learned out of snooped GARP/ARP/ND messages on bridged sub-interfaces. These entries will be shown as dynamic, as opposed to EVPN entries or static entries. If the admin-state is disabled, the existing ARP/ND entries in the proxy table will be kept (and refreshed).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">dynamic-learning</a> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **age-time** (*keyword* | *number*)

<b>Description</b>	Aging timer value for the proxy entries When the aging expires, the entry is flushed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">dynamic-learning</a> <a href="#">age-time</a> ( <i>keyword</i>   <i>number</i> )
<b>Tree</b>	<a href="#">age-time</a>
<b>Range</b>	60 to 86400
<b>Default</b>	never
<b>Units</b>	seconds
<b>Options</b>	<ul style="list-style-type: none"> <li>• never</li> </ul>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### send-refresh (*number* | *keyword*)

**Description** Configures the proxy refresh interval  
The interval determines the frequency at which the system generates three ARP Requests or Neighbor Solicitations with the intend to refresh the proxy entry. The refresh is sent within the age-time window.

**Context** [network-instance name](#) *string* [bridge-table proxy-arp dynamic-learning send-refresh](#) (*number* | *keyword*)

**Tree** [send-refresh](#)

**Range** 120 to 86400

**Default** never

**Options**

- never

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### evpn

**Description** How proxy arp interacts with evpn

**Context** [network-instance name](#) *string* [bridge-table proxy-arp evpn](#)

**Tree** [evpn](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### flood

**Description** How ARP frames received on a proxy service are flooded into the EVPN network

**Context** [network-instance name](#) *string* [bridge-table proxy-arp evpn flood](#)

**Tree** [flood](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

**gratuitous-arp** *boolean*

<b>Description</b>	Whether to flood GARP requests or replies into EVPN
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-arp evpn flood gratuitous-arp</a> <i>boolean</i>
<b>Tree</b>	<a href="#">gratuitous-arp</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

**unknown-arp-req** *boolean*

<b>Description</b>	Whether to flood ARP requests (with source squelching) when there is no hit in the bridge-table-proxy-arp table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-arp evpn flood unknown-arp-req</a> <i>boolean</i>
<b>Tree</b>	<a href="#">unknown-arp-req</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

**internal-tags**

<b>Description</b>	Configuration and state of internal tags
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-arp evpn internal-tags</a>
<b>Tree</b>	<a href="#">internal-tags</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**set-tag-set** *reference*

<b>Description</b>	Reference to a tag-set defined under routing-policy
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-arp evpn internal-tags set-tag-set</a> <i>reference</i>
<b>Tree</b>	<a href="#">set-tag-set</a>
<b>Reference</b>	<a href="#">routing-policy tag-set name</a> <i>string</i>
<b>Configurable</b>	True

<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	1

**evpn-entries**

<b>Description</b>	Enter the evpn-entries context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">evpn-entries</a>
<b>Tree</b>	<a href="#">evpn-entries</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**neighbor** [ipv4-address](#) *string*

<b>Description</b>	List of EVPN proxy ARP entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">evpn-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**ipv4-address** *string*

<b>Description</b>	IPv4 address of the proxy ARP entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">evpn-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**is-immutable** *boolean*

<b>Description</b>	The immutable property of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">evpn-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i> <a href="#">is-immutable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">is-immutable</a>
<b>Default</b>	false

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **last-update** *string*

<b>Description</b>	The date and time of the last update of this proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">evpn-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i> <b>last-update</b> <i>string</i>
<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **link-layer-address** *string*

<b>Description</b>	The resolving MAC address of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">evpn-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i> <b>link-layer-address</b> <i>string</i>
<b>Tree</b>	<a href="#">link-layer-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **state** *keyword*

<b>Description</b>	The state of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">evpn-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i> <b>state</b> <i>keyword</i>
<b>Tree</b>	<a href="#">state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• active</li> <li>• in-active</li> <li>• pending</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**ip-duplication**

<b>Description</b>	Configuration of the proxy ARP/ND IP duplication procedures
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">ip-duplication</a>
<b>Tree</b>	<a href="#">ip-duplication</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**anti-spoof-mac** *string*

<b>Description</b>	MAC address associated with the optional anti-spoofing mechanism
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">ip-duplication</a> <a href="#">anti-spoof-mac</a> <i>string</i>
<b>Tree</b>	<a href="#">anti-spoof-mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**hold-down-time** (*keyword* | *number*)

<b>Description</b>	Time to wait from the moment an IP is declared duplicate to the time the IP is removed from the proxy ARP/ND table  When the duplicate IP is removed, the monitoring process for the IP address is restarted.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">ip-duplication</a> <a href="#">hold-down-time</a> ( <i>keyword</i>   <i>number</i> )
<b>Tree</b>	<a href="#">hold-down-time</a>
<b>Range</b>	2 to 60
<b>Default</b>	9
<b>Units</b>	minutes
<b>Options</b>	<ul style="list-style-type: none"> <li>indefinite</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**monitoring-window** *number*

<b>Description</b>	Monitoring window for detecting duplication on a given ip address in the proxy ARP/ND table An IP is declared duplicate if it exceeds the num-moves within the monitoring-window.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">ip-duplication</a> <a href="#">monitoring-window</a> <i>number</i>
<b>Tree</b>	<a href="#">monitoring-window</a>
<b>Range</b>	1 to 15
<b>Default</b>	3
<b>Units</b>	minutes
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**num-moves** *number*

<b>Description</b>	Number of moves in the proxy ARP/ND table that an IP is allowed within the monitoring-window When the number of moves exceeds this value, the IP address is declared duplicate.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">ip-duplication</a> <a href="#">num-moves</a> <i>number</i>
<b>Tree</b>	<a href="#">num-moves</a>
<b>Range</b>	3 to 10
<b>Default</b>	5
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**static-blackhole** *boolean*

<b>Description</b>	Whether the anti-spoof MAC is programmed as a black hole static-mac in the mac-table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">ip-duplication</a> <a href="#">static-blackhole</a> <i>boolean</i>
<b>Tree</b>	<a href="#">static-blackhole</a>
<b>Default</b>	false

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **oper-down-reason** *keyword*

<b>Description</b>	The reason the proxy-type is down on the network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• admin-down</li> <li>• no-mcid</li> <li>• tag-set-not-resolved</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **process-arp-probes** *boolean*

<b>Description</b>	<p>Determines whether the router processes ARP probe messages.</p> <p>When set to true, ARP probe messages used by the hosts for Duplicate Address Detection are processed, replied if a proxy-arp entry is hit or reinjected into the data path. When set to false, ARP probe messages are flooded to the remote nodes if unknown-arp-requests are configured to be flooded. ARP probe messages are identified as ARP Requests that use IP address 0.0.0.0 as sender's address.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">process-arp-probes</a> <i>boolean</i>
<b>Tree</b>	<a href="#">process-arp-probes</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **static-entries**

<b>Description</b>	Enter the static-entries context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">static-entries</a>

<b>Tree</b>	<a href="#">static-entries</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **neighbor** [ipv4-address](#) *string*

<b>Description</b>	List of static proxy ARP entries that map an IPv4 address to a MAC address To configure a static proxy ARP entry a value must be written into this leaf, as well as the link-layer-address leaf.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">static-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **ipv4-address** *string*

<b>Description</b>	IPv4 address resolved by the proxy ARP entry To configure a static neighbor entry a value must be written into this leaf, as well as the link-layer-address leaf.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">static-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **is-immutable** *boolean*

<b>Description</b>	The immutable property of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">static-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i> <a href="#">is-immutable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">is-immutable</a>
<b>Default</b>	false
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**last-update** *string*

<b>Description</b>	The date and time of the last update of this proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">static-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i> <a href="#">last-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**link-layer-address** *string*

<b>Description</b>	The resolving MAC address of the proxy entry To configure a static proxy entry a value must be written into this leaf and the ip-address leaf.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">static-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i> <a href="#">link-layer-address</a> <i>string</i>
<b>Tree</b>	<a href="#">link-layer-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**state** *keyword*

<b>Description</b>	The state of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">static-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i> <a href="#">state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• active</li> <li>• in-active</li> <li>• pending</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**active-entries** *number*

<b>Description</b>	The total number of active proxy ARP entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">statistics</a> <a href="#">active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**in-active-entries** *number*

<b>Description</b>	The total number of inactive proxy ARP entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">statistics</a> <a href="#">in-active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">in-active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**neighbor-origin** [origin](#) *keyword*

<b>Description</b>	The origin of the proxy entry installed in the table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">statistics</a> <a href="#">neighbor-origin</a> <a href="#">origin</a> <i>keyword</i>
<b>Tree</b>	<a href="#">neighbor-origin</a>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **origin** *keyword*

**Description** Enter the origin context

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-arp](#) [statistics](#) [neighbor-origin](#) [origin](#) *keyword*

**Options**

- static
- dynamic
- evpn
- duplicate

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **active-entries** *number*

**Description** The total number of active proxy ARP entries.

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-arp](#) [statistics](#) [neighbor-origin](#) [origin](#) *keyword* [active-entries](#) *number*

**Tree** [active-entries](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **in-active-entries** *number*

**Description** The total number of inactive proxy ARP entries.

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-arp](#) [statistics](#) [neighbor-origin](#) [origin](#) *keyword* [in-active-entries](#) *number*

**Tree** [in-active-entries](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**pending-entries** *number*

<b>Description</b>	The total number of pending proxy ARP entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-arp statistics neighbor-origin origin</a> <i>keyword</i> <a href="#">pending-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">pending-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**total-entries** *number*

<b>Description</b>	The total number of proxy ARP entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-arp statistics neighbor-origin origin</a> <i>keyword</i> <a href="#">total-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**pending-entries** *number*

<b>Description</b>	The total number of pending proxy ARP entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-arp statistics pending-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">pending-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**total-entries** *number*

<b>Description</b>	The total number of proxy ARP entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-arp statistics total-entries</a> <i>number</i>

<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### table-entries

<b>Description</b>	Enter the table-entries context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">table-entries</a>
<b>Tree</b>	<a href="#">table-entries</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### neighbor [ipv4-address](#) *string*

<b>Description</b>	List of static and dynamic proxy ARP entries that map an IPv4 address to a MAC address
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">table-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### ipv4-address *string*

<b>Description</b>	IPv4 address resolved by the proxy ARP entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">table-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### is-immutable *boolean*

<b>Description</b>	The immutable property of the proxy entry
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">table-entries</a> <a href="#">neighbor ipv4-address</a> <i>string</i> <a href="#">is-immutable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">is-immutable</a>
<b>Default</b>	false
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**last-update** *string*

<b>Description</b>	The date and time of the last update of this proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">table-entries</a> <a href="#">neighbor ipv4-address</a> <i>string</i> <a href="#">last-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**link-layer-address** *string*

<b>Description</b>	The resolving MAC address of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">table-entries</a> <a href="#">neighbor ipv4-address</a> <i>string</i> <a href="#">link-layer-address</a> <i>string</i>
<b>Tree</b>	<a href="#">link-layer-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**origin** *keyword*

<b>Description</b>	The origin of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">table-entries</a> <a href="#">neighbor ipv4-address</a> <i>string</i> <a href="#">origin</a> <i>keyword</i>
<b>Tree</b>	<a href="#">origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• dynamic</li> <li>• evpn</li> </ul>

	<ul style="list-style-type: none"> <li>• duplicate</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### state *keyword*

<b>Description</b>	The state of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">table-entries</a> <a href="#">neighbor</a> <a href="#">ipv4-address</a> <i>string</i> <b>state</b> <i>keyword</i>
<b>Tree</b>	<a href="#">state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• active</li> <li>• in-active</li> <li>• pending</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### table-size *number*

<b>Description</b>	Maximum number of entries allowed in the proxy table of the network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">table-size</a> <i>number</i>
<b>Tree</b>	<a href="#">table-size</a>
<b>Range</b>	1 to 8192
<b>Default</b>	250
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### trace-options

<b>Description</b>	Debug trace-options for Proxy-ARP
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### flag name keyword

**Description** Tracing parameters

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-arp](#) [trace-options](#) [flag name](#) *keyword*

**Tree** [flag](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### name keyword

**Description** Enter the name context

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-arp](#) [trace-options](#) [flag name](#) *keyword*

**Options**

- request  
Trace all ARP request protocol packets snooped or generated for proxy-ARP
- reply  
Trace all ARP reply protocol packets snooped or generated for proxy-ARP

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### modifier keyword

**Description** Enter the modifier context

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-arp](#) [trace-options](#) [flag name](#) *keyword* [modifier](#) *keyword*

**Tree** [modifier](#)

**Options**

- detail  
Enables detailed tracing  
Includes both, received and sent packets.
- receive

Enables tracing for the received packets

- send

Enables tracing for the sent packets

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## proxy-nd

**Description** Enable the proxy-nd context

**Context** [network-instance name](#) *string* [bridge-table proxy-nd](#)

**Tree** [proxy-nd](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## admin-state *keyword*

**Description** Configurable state of the layer-2 proxy ARP/ND table

**Context** [network-instance name](#) *string* [bridge-table proxy-nd admin-state keyword](#)

**Tree** [admin-state](#)

**Default** enable

**Options**

- enable
- disable

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## duplicate-entries

**Description** Enter the duplicate-entries context

**Context** [network-instance name](#) *string* [bridge-table proxy-nd duplicate-entries](#)

**Tree** [duplicate-entries](#)

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**neighbor ipv6-address** *string*

<b>Description</b>	List of duplicate proxy ND entries
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">duplicate-entries</a> <a href="#">neighbor ipv6-address</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**ipv6-address** *string*

<b>Description</b>	IPv6 address of the proxy ND entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">duplicate-entries</a> <a href="#">neighbor ipv6-address</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**detect-time** *string*

<b>Description</b>	The date and time when the proxy entry was declared duplicate
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">duplicate-entries</a> <a href="#">neighbor ipv6-address</a> <i>string</i> <a href="#">detect-time</a> <i>string</i>
<b>Tree</b>	<a href="#">detect-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**evpn-override** *boolean*

<b>Description</b>	The evpn-override property of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">duplicate-entries</a> <a href="#">neighbor ipv6-address</a> <i>string</i> <a href="#">evpn-override</a> <i>boolean</i>
<b>Tree</b>	<a href="#">evpn-override</a>
<b>Default</b>	false
<b>Configurable</b>	False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### hold-down-time-remaining (*keyword | number*)

**Description** Remaining hold down time for the duplicate proxy entry

**Context** [network-instance name](#) *string* [bridge-table proxy-nd duplicate-entries neighbor ipv6-address](#) *string* [hold-down-time-remaining](#) (*keyword | number*)

**Tree** [hold-down-time-remaining](#)

**Units** seconds

**Options**

- indefinite

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### is-immutable *boolean*

**Description** The immutable property of the proxy entry

**Context** [network-instance name](#) *string* [bridge-table proxy-nd duplicate-entries neighbor ipv6-address](#) *string* [is-immutable](#) *boolean*

**Tree** [is-immutable](#)

**Default** false

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### link-layer-address *string*

**Description** The resolving MAC address of the proxy entry

**Context** [network-instance name](#) *string* [bridge-table proxy-nd duplicate-entries neighbor ipv6-address](#) *string* [link-layer-address](#) *string*

**Tree** [link-layer-address](#)

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**state** *keyword*

<b>Description</b>	The state of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">duplicate-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <b>state</b> <i>keyword</i>
<b>Tree</b>	<a href="#">state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• active</li> <li>• in-active</li> <li>• pending</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**type** *keyword*

<b>Description</b>	The type of the neighbor entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">duplicate-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <b>type</b> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• router</li> <li>• host</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**dynamic-entries**

<b>Description</b>	Enter the dynamic-entries context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">dynamic-entries</a>
<b>Tree</b>	<a href="#">dynamic-entries</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**neighbor** [ipv6-address](#) *string*

<b>Description</b>	List of dynamic proxy ND entries
--------------------	----------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">dynamic-entries</a> <a href="#">neighbor ipv6-address</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**ipv6-address** *string*

<b>Description</b>	IPv6 address of the proxy ND entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">dynamic-entries</a> <a href="#">neighbor ipv6-address</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**aging** (*number* | *keyword*)

<b>Description</b>	The remaining age time for learnt proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">dynamic-entries</a> <a href="#">neighbor ipv6-address</a> <i>string</i> <a href="#">aging</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">aging</a>
<b>Units</b>	seconds
<b>Options</b>	<ul style="list-style-type: none"> <li>disabled</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**evpn-override** *boolean*

<b>Description</b>	The evpn-override property of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">dynamic-entries</a> <a href="#">neighbor ipv6-address</a> <i>string</i> <a href="#">evpn-override</a> <i>boolean</i>
<b>Tree</b>	<a href="#">evpn-override</a>
<b>Default</b>	false
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**is-immutable** *boolean*

<b>Description</b>	The immutable property of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-nd dynamic-entries neighbor ipv6-address</a> <i>string</i> <a href="#">is-immutable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">is-immutable</a>
<b>Default</b>	false
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**last-update** *string*

<b>Description</b>	The date and time of the last update of this proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-nd dynamic-entries neighbor ipv6-address</a> <i>string</i> <a href="#">last-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**link-layer-address** *string*

<b>Description</b>	The resolving MAC address of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-nd dynamic-entries neighbor ipv6-address</a> <i>string</i> <a href="#">link-layer-address</a> <i>string</i>
<b>Tree</b>	<a href="#">link-layer-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**state** *keyword*

<b>Description</b>	The state of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-nd dynamic-entries neighbor ipv6-address</a> <i>string</i> <a href="#">state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">state</a>

<b>Options</b>	<ul style="list-style-type: none"> <li>• active</li> <li>• in-active</li> <li>• pending</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**type** *keyword*

<b>Description</b>	The type of the neighbor entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">dynamic-entries</a> <a href="#">neighbor ipv6-address</a> <i>string</i> <b>type</b> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• router</li> <li>• host</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**dynamic-learning**

<b>Description</b>	Enter the dynamic-learning context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">dynamic-learning</a>
<b>Tree</b>	<a href="#">dynamic-learning</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**admin-state** *keyword*

<b>Description</b>	Configurable state of the learning procedures for dynamic ARP/ND entries  The dynamic ARP/ND entries are learned out of snooped GARP/ARP/ND messages on bridged sub-interfaces. These entries will be shown as dynamic, as opposed to EVPN entries or static entries. If the admin-state is disabled, the existing ARP/ND entries in the proxy table will be kept (and refreshed).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">dynamic-learning</a> <a href="#">admin-state</a> <i>keyword</i>

<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **age-time** (*keyword* | *number*)

<b>Description</b>	Aging timer value for the proxy entries When the aging expires, the entry is flushed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">dynamic-learning</a> <a href="#">age-time</a> ( <i>keyword</i>   <i>number</i> )
<b>Tree</b>	<a href="#">age-time</a>
<b>Range</b>	60 to 86400
<b>Default</b>	never
<b>Units</b>	seconds
<b>Options</b>	<ul style="list-style-type: none"> <li>• never</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **send-refresh** (*number* | *keyword*)

<b>Description</b>	Configures the proxy refresh interval The interval determines the frequency at which the system generates three ARP Requests or Neighbor Solicitations with the intend to refresh the proxy entry. The refresh is sent within the age-time window.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">dynamic-learning</a> <a href="#">send-refresh</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">send-refresh</a>
<b>Range</b>	120 to 86400
<b>Default</b>	never
<b>Options</b>	<ul style="list-style-type: none"> <li>• never</li> </ul>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## evpn

**Description** How proxy ARP/ND interacts with EVPN

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-nd](#) [evpn](#)

**Tree** [evpn](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## advertise-neighbor-type *keyword*

**Description** Whether to advertise router entries or host entries into EVPN MAC/IP routes  
It also specifies whether to reply to Neighbor Solicitations for EVPN entries with the router flag set or unset.

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-nd](#) [evpn](#) [advertise-neighbor-type](#) *keyword*

**Tree** [advertise-neighbor-type](#)

**Default** router

**Options**

- router
- host
- router-host

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## flood

**Description** How Neighbor Discovery frames received on a proxy service are flooded into the EVPN network

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-nd](#) [evpn](#) [flood](#)

**Tree** [flood](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

**unknown-neighbor-advertise-host** *boolean*

<b>Description</b>	Whether to flood Neighbor Advertisement (NA) replies, for type host, into the EVPN network
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">evpn</a> <a href="#">flood</a> <a href="#">unknown-neighbor-advertise-host</a> <i>boolean</i>
<b>Tree</b>	<a href="#">unknown-neighbor-advertise-host</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

**unknown-neighbor-advertise-router** *boolean*

<b>Description</b>	Whether to flood Neighbor Advertisement (NA) replies, for type router, into the EVPN network
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">evpn</a> <a href="#">flood</a> <a href="#">unknown-neighbor-advertise-router</a> <i>boolean</i>
<b>Tree</b>	<a href="#">unknown-neighbor-advertise-router</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

**unknown-neighbor-solicitation** *boolean*

<b>Description</b>	Whether to flood Neighbor Solicitation (NS) messages (with source squelching) into the EVPN network
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">evpn</a> <a href="#">flood</a> <a href="#">unknown-neighbor-solicitation</a> <i>boolean</i>
<b>Tree</b>	<a href="#">unknown-neighbor-solicitation</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

**internal-tags**

<b>Description</b>	Configuration and state of internal tags
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">evpn</a> <a href="#">internal-tags</a>
<b>Tree</b>	<a href="#">internal-tags</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **set-tag-set** *reference*

<b>Description</b>	Reference to a tag-set defined under routing-policy
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">evpn</a> <a href="#">internal-tags</a> <a href="#">set-tag-set</a> <i>reference</i>
<b>Tree</b>	<a href="#">set-tag-set</a>
<b>Reference</b>	<a href="#">routing-policy</a> <a href="#">tag-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	1

### **evpn-entries**

<b>Description</b>	Enter the evpn-entries context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">evpn-entries</a>
<b>Tree</b>	<a href="#">evpn-entries</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **neighbor** [ipv6-address](#) *string*

<b>Description</b>	List of EVPN proxy ND entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">evpn-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **ipv6-address** *string*

<b>Description</b>	IPv6 address of the proxy ND entry
--------------------	------------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">evpn-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**evpn-override** *boolean*

<b>Description</b>	The evpn-override property of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">evpn-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">evpn-override</a> <i>boolean</i>
<b>Tree</b>	<a href="#">evpn-override</a>
<b>Default</b>	false
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**is-immutable** *boolean*

<b>Description</b>	The immutable property of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">evpn-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">is-immutable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">is-immutable</a>
<b>Default</b>	false
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**last-update** *string*

<b>Description</b>	The date and time of the last update of this proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">evpn-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">last-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**link-layer-address** *string*

<b>Description</b>	The resolving MAC address of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">evpn-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">link-layer-address</a> <i>string</i>
<b>Tree</b>	<a href="#">link-layer-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**state** *keyword*

<b>Description</b>	The state of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">evpn-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• active</li> <li>• in-active</li> <li>• pending</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**type** *keyword*

<b>Description</b>	The type of the neighbor entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">evpn-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• router</li> <li>• host</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**ip-duplication**

<b>Description</b>	Configuration of the proxy ARP/ND IP duplication procedures
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">ip-duplication</a>
<b>Tree</b>	<a href="#">ip-duplication</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**anti-spoof-mac** *string*

<b>Description</b>	MAC address associated with the optional anti-spoofing mechanism
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">ip-duplication</a> <a href="#">anti-spoof-mac</a> <i>string</i>
<b>Tree</b>	<a href="#">anti-spoof-mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**hold-down-time** (*keyword | number*)

<b>Description</b>	Time to wait from the moment an IP is declared duplicate to the time the IP is removed from the proxy ARP/ND table  When the duplicate IP is removed, the monitoring process for the IP address is restarted.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">ip-duplication</a> <a href="#">hold-down-time</a> ( <i>keyword   number</i> )
<b>Tree</b>	<a href="#">hold-down-time</a>
<b>Range</b>	2 to 60
<b>Default</b>	9
<b>Units</b>	minutes
<b>Options</b>	<ul style="list-style-type: none"> <li>indefinite</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**monitoring-window** *number*

<b>Description</b>	Monitoring window for detecting duplication on a given ip address in the proxy ARP/ND table  An IP is declared duplicate if it exceeds the num-moves within the monitoring-window.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">ip-duplication</a> <a href="#">monitoring-window</a> <i>number</i>
<b>Tree</b>	<a href="#">monitoring-window</a>
<b>Range</b>	1 to 15
<b>Default</b>	3
<b>Units</b>	minutes
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**num-moves** *number*

<b>Description</b>	Number of moves in the proxy ARP/ND table that an IP is allowed within the monitoring-window  When the number of moves exceeds this value, the IP address is declared duplicate.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">ip-duplication</a> <a href="#">num-moves</a> <i>number</i>
<b>Tree</b>	<a href="#">num-moves</a>
<b>Range</b>	3 to 10
<b>Default</b>	5
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**static-blackhole** *boolean*

<b>Description</b>	Whether the anti-spoof MAC is programmed as a black hole static-mac in the mac-table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">ip-duplication</a> <a href="#">static-blackhole</a> <i>boolean</i>
<b>Tree</b>	<a href="#">static-blackhole</a>
<b>Default</b>	false

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **oper-down-reason** *keyword*

<b>Description</b>	The reason the proxy-type is down on the network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-nd oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• admin-down</li> <li>• no-mcid</li> <li>• tag-set-not-resolved</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **process-dad-neighbor-solicitations** *boolean*

<b>Description</b>	<p>Determines whether the router processes Neighbor Solicitation DAD messages</p> <p>When set to true, Neighbor Solicitation DAD messages used by the hosts for Duplicate Address Detection are processed, replied if a proxy ND entry is hit, or reinjected into the data path. When set to false, Neighbor Solicitation DAD messages are flooded to the remote nodes if unknown-neighbor-solicitation is configured so that unknown Neighbor Solicitation messages are flooded.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-nd process-dad-neighbor-solicitations</a> <i>boolean</i>
<b>Tree</b>	<a href="#">process-dad-neighbor-solicitations</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **static-entries**

<b>Description</b>	Enter the static-entries context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table proxy-nd static-entries</a>

<b>Tree</b>	<a href="#">static-entries</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **neighbor** [ipv6-address](#) *string*

<b>Description</b>	List of static proxy ND entries that map an IPv6 address to a MAC address To configure a static proxy ND entry a value must be written into this leaf, as well as the link-layer-address leaf.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">static-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **ipv6-address** *string*

<b>Description</b>	IPv6 address resolved by the proxy ND entry To configure a static neighbor entry a value must be written into this leaf, as well as the link-layer-address leaf.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">static-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **evpn-override** *boolean*

<b>Description</b>	The evpn-override property of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">static-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">evpn-override</a> <i>boolean</i>
<b>Tree</b>	<a href="#">evpn-override</a>
<b>Default</b>	false
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**is-immutable** *boolean*

<b>Description</b>	The immutable property of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">static-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <b>is-immutable</b> <i>boolean</i>
<b>Tree</b>	<a href="#">is-immutable</a>
<b>Default</b>	false
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**last-update** *string*

<b>Description</b>	The date and time of the last update of this proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">static-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <b>last-update</b> <i>string</i>
<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**link-layer-address** *string*

<b>Description</b>	The resolving MAC address of the proxy entry To configure a static proxy entry a value must be written into this leaf and the ip-address leaf.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">static-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <b>link-layer-address</b> <i>string</i>
<b>Tree</b>	<a href="#">link-layer-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**state** *keyword*

<b>Description</b>	The state of the proxy entry
--------------------	------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">static-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <i>state</i> <i>keyword</i>
<b>Tree</b>	<a href="#">state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• active</li> <li>• in-active</li> <li>• pending</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**type** *keyword*

<b>Description</b>	The type of the neighbor entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">static-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <i>type</i> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Default</b>	router
<b>Options</b>	<ul style="list-style-type: none"> <li>• router</li> <li>• host</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**active-entries** *number*

<b>Description</b>	The total number of active proxy ARP entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">statistics</a> <a href="#">active-entries</a> <i>number</i>

<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **in-active-entries** *number*

<b>Description</b>	The total number of inactive proxy ARP entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd statistics</a> <a href="#">in-active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">in-active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **neighbor-origin** [origin](#) *keyword*

<b>Description</b>	The origin of the proxy entry installed in the table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd statistics</a> <a href="#">neighbor-origin</a> <a href="#">origin</a> <i>keyword</i>
<b>Tree</b>	<a href="#">neighbor-origin</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **origin** *keyword*

<b>Description</b>	Enter the origin context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd statistics</a> <a href="#">neighbor-origin</a> <a href="#">origin</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• dynamic</li> <li>• evpn</li> <li>• duplicate</li> </ul>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **active-entries** *number*

**Description** The total number of active proxy ARP entries.

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-nd](#) [statistics](#) [neighbor-origin](#) [origin](#) *keyword* **active-entries** *number*

**Tree** [active-entries](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **in-active-entries** *number*

**Description** The total number of inactive proxy ARP entries.

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-nd](#) [statistics](#) [neighbor-origin](#) [origin](#) *keyword* **in-active-entries** *number*

**Tree** [in-active-entries](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **pending-entries** *number*

**Description** The total number of pending proxy ARP entries.

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-nd](#) [statistics](#) [neighbor-origin](#) [origin](#) *keyword* **pending-entries** *number*

**Tree** [pending-entries](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**total-entries** *number*

<b>Description</b>	The total number of proxy ARP entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">statistics</a> <a href="#">neighbor-origin</a> <a href="#">origin</a> <i>keyword</i> <b>total-entries</b> <i>number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**pending-entries** *number*

<b>Description</b>	The total number of pending proxy ARP entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">statistics</a> <b>pending-entries</b> <i>number</i>
<b>Tree</b>	<a href="#">pending-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**total-entries** *number*

<b>Description</b>	The total number of proxy ARP entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">statistics</a> <b>total-entries</b> <i>number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**table-entries**

<b>Description</b>	Enter the table-entries context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <b>table-entries</b>
<b>Tree</b>	<a href="#">table-entries</a>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### neighbor ipv6-address *string*

<b>Description</b>	List of proxy ND entries that map an IPv6 address to a MAC address
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">table-entries</a> <a href="#">neighbor ipv6-address</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### ipv6-address *string*

<b>Description</b>	IPv6 address resolved by the proxy ND entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">table-entries</a> <a href="#">neighbor ipv6-address</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### evpn-override *boolean*

<b>Description</b>	The evpn-override property of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">table-entries</a> <a href="#">neighbor ipv6-address</a> <i>string</i> <a href="#">evpn-override</a> <i>boolean</i>
<b>Tree</b>	<a href="#">evpn-override</a>
<b>Default</b>	false
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### is-immutable *boolean*

<b>Description</b>	The immutable property of the proxy entry
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">table-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">is-immutable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">is-immutable</a>
<b>Default</b>	false
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**last-update** *string*

<b>Description</b>	The date and time of the last update of this proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">table-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">last-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**link-layer-address** *string*

<b>Description</b>	The resolving MAC address of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">table-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">link-layer-address</a> <i>string</i>
<b>Tree</b>	<a href="#">link-layer-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**origin** *keyword*

<b>Description</b>	The origin of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">table-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">origin</a> <i>keyword</i>
<b>Tree</b>	<a href="#">origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• dynamic</li> <li>• evpn</li> </ul>

	<ul style="list-style-type: none"> <li>• duplicate</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**state** *keyword*

<b>Description</b>	The state of the proxy entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">table-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <b>state</b> <i>keyword</i>
<b>Tree</b>	<a href="#">state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• active</li> <li>• in-active</li> <li>• pending</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**type** *keyword*

<b>Description</b>	The type of the neighbor entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">table-entries</a> <a href="#">neighbor</a> <a href="#">ipv6-address</a> <i>string</i> <b>type</b> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• router</li> <li>• host</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**table-size** *number*

<b>Description</b>	Maximum number of entries allowed in the proxy table of the network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <b>table-size</b> <i>number</i>
<b>Tree</b>	<a href="#">table-size</a>
<b>Range</b>	1 to 8192

<b>Default</b>	250
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## trace-options

<b>Description</b>	Debug traceoptions for Proxy-ARP
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## flag *name keyword*

<b>Description</b>	Tracing parameters
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">trace-options</a> <a href="#">flag name</a> <i>keyword</i>
<b>Tree</b>	<a href="#">flag</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## name *keyword*

<b>Description</b>	Enter the name context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">trace-options</a> <a href="#">flag name</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• solicitation Trace all Neighbor Solicitation packets snooped or generated for proxy ND</li> <li>• advertisement Trace all Neighbor Advertisement packets snooped or generated for proxy ND</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**modifier** *keyword*

<b>Description</b>	Enter the modifier context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-nd</a> <a href="#">trace-options</a> <a href="#">flag name</a> <i>keyword</i> <a href="#">modifier</a> <i>keyword</i>
<b>Tree</b>	<a href="#">modifier</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• detail To enable detailed tracing, including both received and sent packets</li> <li>• receive To enable tracing for the received packets</li> <li>• send To enable tracing for the sent packets</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**reserved-macs**

<b>Description</b>	Enter the reserved-macs context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">reserved-macs</a>
<b>Tree</b>	<a href="#">reserved-macs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**mac** *address string*

<b>Description</b>	reserved macs on the bridging instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">reserved-macs</a> <a href="#">mac address</a> <i>string</i>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**address string**

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bridge-table reserved-macs mac address string</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**users application string**

<b>Description</b>	applications reserving this mac
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bridge-table reserved-macs mac address string</a> <a href="#">users application string</a>
<b>Tree</b>	<a href="#">users</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**application string**

<b>Description</b>	Enter the application context
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bridge-table reserved-macs mac address string</a> <a href="#">users application string</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**static-mac**

<b>Description</b>	Enter the static-mac context
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">bridge-table static-mac</a>
<b>Tree</b>	<a href="#">static-mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**mac address string**

<b>Description</b>	static macs configured on the bridging instance
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bridge-table</a> <a href="#">static-mac</a> <a href="#">mac address</a> <a href="#">string</a>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**address string**

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bridge-table</a> <a href="#">static-mac</a> <a href="#">mac address</a> <a href="#">string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**destination (keyword | subinterface-all | name)**

<b>Description</b>	the destination where the mac is programmed against.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bridge-table</a> <a href="#">static-mac</a> <a href="#">mac address</a> <a href="#">string</a> <a href="#">destination (keyword   subinterface-all   name)</a>
<b>Tree</b>	<a href="#">destination</a>
<b>String Length</b>	5 to 25
<b>Options</b>	<ul style="list-style-type: none"> <li>• blackhole</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">bridge-table</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**active-entries** *number*

<b>Description</b>	The total number of entries that are active in the mac-table.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table statistics active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**failed-entries** *number*

<b>Description</b>	The total number of macs, which have not been programmed on atleast one slot
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table statistics failed-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">failed-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**mac-type** *type keyword*

<b>Description</b>	the type of the mac installed in the fib.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table statistics mac-type</a> <i>type keyword</i>
<b>Tree</b>	<a href="#">mac-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**type** *keyword*

<b>Description</b>	Enter the type context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table statistics mac-type</a> <i>type keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• duplicate</li> <li>• learnt</li> </ul>

<b>Platforms</b>	Supported on all platforms

**total**

<b>Description</b>	Aggregate statistics, counting all ICMP message types
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp statistics total</a>
<b>Tree</b>	<a href="#">total</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-error-packets** *number*

<b>Description</b>	The number of ICMPv4 messages that the network instance received and extracted successfully to the CPM but when they arrived they were determined to have ICMP-specific errors (bad ICMP checksums, bad length, etc.)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp statistics total in-error-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-packets** *number*

<b>Description</b>	The total number of ICMPv4 messages that the network instance received and extracted successfully to the CPM. Note that this counter includes all those counted by in-error-packets.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp statistics total in-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**out-error-packets** *number*

<b>Description</b>	The number of ICMPv4 messages that could not be sent from this network instance due to issues such as 'no route to the source' or 'fragmentation required but not supported'
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp statistics total out-error-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**out-packets** *number*

<b>Description</b>	The total number of ICMPv4 messages that the network instance attempted to send. Note that this counter includes all those counted by out-error-packets.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp statistics total out-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *name* *keyword*

<b>Description</b>	Enter the type list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp statistics type name</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *keyword*

<b>Description</b>	Enter the name context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp statistics type name</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• echo-reply</li> <li>• dest-unreachable</li> <li>• redirect</li> <li>• echo</li> <li>• rtr-advertisement</li> <li>• rtr-selection</li> <li>• time-exceeded</li> <li>• param-problem</li> <li>• timestamp</li> <li>• timestamp-reply</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-packets** *number*

<b>Description</b>	The total number of ICMPv4 messages of this type that the network instance received and extracted successfully to the CPM.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp statistics type name</a> <i>keyword</i> <a href="#">in-packets number</a>
<b>Tree</b>	<a href="#">in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**out-error-packets** *number*

<b>Description</b>	The number of ICMPv4 messages of this type that could not be sent from this network instance due to issues such as 'no route to the source' or 'fragmentation required but not supported'
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp statistics type name</a> <i>keyword</i> <a href="#">out-error-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-packets** *number*

<b>Description</b>	The total number of ICMPv4 messages of this type that the network instance attempted to send.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp statistics type name</a> <i>keyword</i> <a href="#">out-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **icmp6**

<b>Description</b>	Enter the icmp6 context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp6</a>
<b>Tree</b>	<a href="#">icmp6</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **statistics**

<b>Description</b>	ICMP version 6 statistics
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp6 statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-clear** *string*

<b>Description</b>	Timestamp of the last time the interface counters were cleared.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp6 statistics last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total**

<b>Description</b>	Aggregate statistics, counting all ICMP message types
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp6 statistics total</a>
<b>Tree</b>	<a href="#">total</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-error-packets** *number*

<b>Description</b>	The number of ICMPv6 messages that the network instance received and extracted successfully to the CPM but when they arrived they were determined to have ICMP-specific errors (bad ICMP checksums, bad length, etc.)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp6 statistics total in-error-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**in-packets** *number*

<b>Description</b>	The total number of ICMPv6 messages that the network instance received and extracted successfully to the CPM. Note that this counter includes all those counted by in-error-packets.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp6 statistics total in-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**out-error-packets** *number*

<b>Description</b>	The number of ICMPv6 messages that could not be sent from this network instance due to issues such as 'no route to the source'
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp6 statistics total out-error-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**out-packets** *number*

<b>Description</b>	The total number of ICMPv6 messages that the network instance attempted to send. Note that this counter includes all those counted by out-error-packets.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp6 statistics total out-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** [name](#) *keyword*

<b>Description</b>	Enter the type list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp6 statistics type name</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *keyword*

<b>Description</b>	Enter the name context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp6 statistics type name</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• dest-unreachable</li> <li>• packet-too-big</li> <li>• time-exceeded</li> <li>• param-problem</li> </ul>

- nbr-advertisement
- redirect

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **in-packets** *number*

<b>Description</b>	The total number of ICMPv6 messages of this type that the network instance received and extracted successfully to the CPM.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp6 statistics type name</a> <i>keyword</i> <a href="#">in-packets number</a>
<b>Tree</b>	<a href="#">in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-error-packets** *number*

<b>Description</b>	The number of ICMPv6 messages of this type that could not be sent from this network instance due to issues such as 'no route to the source'
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp6 statistics type name</a> <i>keyword</i> <a href="#">out-error-packets number</a>
<b>Tree</b>	<a href="#">out-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-packets** *number*

<b>Description</b>	The total number of ICMPv6 messages of this type that the network instance attempted to send.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp6 statistics type name</a> <i>keyword</i> <a href="#">out-packets number</a>

<b>Tree</b>	<a href="#">out-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## inter-instance-policies

<b>Description</b>	Policies for leaking routes between this network instance and other network instances
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">inter-instance-policies</a>
<b>Tree</b>	<a href="#">inter-instance-policies</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## apply-policy

<b>Description</b>	Container for specifying route leaking import and export policies
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">inter-instance-policies</a> <a href="#">apply-policy</a>
<b>Tree</b>	<a href="#">apply-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## export-policy *reference*

<b>Description</b>	Policy used to specify the routes of this NI that should be made available for leaking to other NIs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">inter-instance-policies</a> <a href="#">apply-policy</a> <a href="#">export-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">export-policy</a>
<b>Reference</b>	<a href="#">routing-policy</a> <i>policy name</i> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**import-policy** *reference*

<b>Description</b>	Policy used to specify the routes leaked by other NIs that should be imported into this NI
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">inter-instance-policies</a> <a href="#">apply-policy</a> <a href="#">import-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">import-policy</a>
<b>Reference</b>	<a href="#">routing-policy</a> <a href="#">policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**interface** [name](#) *string*

<b>Description</b>	List of subinterfaces used by this network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the subinterface bound to this network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**bridge-table**

<b>Description</b>	Enable the bridge-table context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i> <a href="#">bridge-table</a>
<b>Tree</b>	<a href="#">bridge-table</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**mac-relearn-only** *boolean*

<b>Description</b>	The value of this leaf indicates that the interface will not learn any new mac addresses, but will relearn any that are already programmed
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i> <a href="#">bridge-table mac-relearn-only</a> <i>boolean</i>
<b>Tree</b>	<a href="#">mac-relearn-only</a>
<b>Default</b>	true
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**multicast-forwarding** *keyword*

<b>Description</b>	The type of multicast data forwarded by this subinterface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i> <a href="#">bridge-table multicast-forwarding</a> <i>keyword</i>
<b>Tree</b>	<a href="#">multicast-forwarding</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• BUM</li> <li>• unknown-unicast</li> <li>• broadcast-mcast</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**oper-mac-learning** *keyword*

<b>Description</b>	The operational state of mac-learning on this subinterface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i> <a href="#">bridge-table oper-mac-learning</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-mac-learning</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty</li> </ul>

- Component slot is empty
- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**oper-mac-learning-disabled-reason** *keyword***Description**

The reason for the mac-learning being disabled on this interface

**Context**[network-instance name](#) *string* [interface name](#) *string* [bridge-table](#) [oper-mac-learning-disabled-reason](#) *keyword***Tree**[oper-mac-learning-disabled-reason](#)

<b>Options</b>	<ul style="list-style-type: none"> <li>• admin-disabled</li> <li>• mac-dup-detected</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **index number**

<b>Description</b>	network instance allocated sub interface index
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i> <a href="#">index number</a>
<b>Tree</b>	<a href="#">index</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **interface-ref**

<b>Description</b>	Reference to a subinterface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i> <a href="#">interface-ref</a>
<b>Tree</b>	<a href="#">interface-ref</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **interface reference**

<b>Description</b>	Reference to a base interface, for example a port or LAG
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i> <a href="#">interface-ref</a> <a href="#">interface reference</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Reference</b>	<a href="#">interface name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**subinterface** *reference*

<b>Description</b>	Reference to a subinterface This requires the base interface to be specified using the interface leaf in this container.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i> <a href="#">interface-ref</a> <a href="#">subinterface reference</a>
<b>Tree</b>	<a href="#">subinterface</a>
<b>Reference</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**oper-down-reason** *keyword*

<b>Description</b>	The reason for the interface being down in the network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i> <a href="#">oper-down-reason keyword</a>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ip-addr-missing</li> <li>• ip-addr-overlap</li> <li>• subif-down</li> <li>• net-inst-down</li> <li>• vrf-type-mismatch</li> <li>• mac-dup-detected</li> <li>• associated-mac-vrf-down</li> <li>• mac-vrf-association-missing</li> <li>• ip-vrf-association-missing</li> <li>• associated-ip-vrf-down</li> <li>• evpn-mh-standby</li> <li>• interface-ref-missing</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	The operational state of this subinterface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">interface name</a> <i>string</i> <a href="#">oper-state keyword</a>

<b>Tree</b>	<b>oper-state</b>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>• waiting Component or process is currently waiting This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## ip-forwarding

<b>Description</b>	Forwarding options that apply to the entire network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">ip-forwarding</a>
<b>Tree</b>	<a href="#">ip-forwarding</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## last-resort-lookup

<b>Description</b>	Enter the last-resort-lookup context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">ip-forwarding</a> <a href="#">last-resort-lookup</a>
<b>Tree</b>	<a href="#">last-resort-lookup</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## network-instance *reference*

<b>Description</b>	A reference to another network-instance in which the system will try to find a matching IP route if this network instance does not have any route to the destination IP
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">ip-forwarding</a> <a href="#">last-resort-lookup</a> <a href="#">network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## receive-ipv4-check *boolean*

<b>Description</b>	If set to true then the following check is done on every subinterface of the network-instance: if an IPv4 packet is received on a subinterface and the IPv4 oper-status of this subinterface is down the packet is discarded. If this leaf is set to false then received IPv4 packets are accepted on all subinterfaces of the network-instance that are up, even if they do not have any IPv4 addresses.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">ip-forwarding</a> <a href="#">receive-ipv4-check</a> <i>boolean</i>
<b>Tree</b>	<a href="#">receive-ipv4-check</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### receive-ipv6-check *boolean*

**Description** If set to true then the following check is done on every subinterface of the network-instance: if an IPv6 packet is received on a subinterface and the IPv6 oper-status of this subinterface is down the packet is discarded. If this leaf is set to false then received IPv6 packets are accepted on all subinterfaces of the network-instance that are up, even if they do not have any IPv6 addresses.

**Context** [network-instance name](#) *string* [ip-forwarding](#) [receive-ipv6-check](#) *boolean*

**Tree** [receive-ipv6-check](#)

**Configurable** True

**Platforms** Supported on all platforms

### ip-load-balancing

**Description** Container for IP load-balancing options that are specific to the network-instance

**Context** [network-instance name](#) *string* [ip-load-balancing](#)

**Tree** [ip-load-balancing](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### resilient-hash-prefix [ip-prefix](#) (*ipv4-prefix | ipv6-prefix*)

**Description** List of IPv4 and IPv6 prefixes which should be programmed for resilient ECMP hashing.

**Context** [network-instance name](#) *string* [ip-load-balancing](#) [resilient-hash-prefix](#) [ip-prefix](#) (*ipv4-prefix | ipv6-prefix*)

**Tree** [resilient-hash-prefix](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ip-prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	IPv4 or IPv6 prefix. Active routes in the FIB that exactly match this prefix or that are longer matches of this prefix are provided with resilient-hash programming.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">ip-load-balancing resilient-hash-prefix ip-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**hash-buckets-per-path** *number*

<b>Description</b>	The number of times each next-hop is repeated in the fill pattern if there are max-paths ECMP next-hops  A larger number consumes more resources but provides more granularity when flows need to be moved. There is a platform-specific limit to the product of this hash-buckets-per-path value and the max-paths value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">ip-load-balancing resilient-hash-prefix ip-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">hash-buckets-per-path</a> <i>number</i>
<b>Tree</b>	<a href="#">hash-buckets-per-path</a>
<b>Range</b>	1 to 32
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**max-paths** *number*

<b>Description</b>	The maximum number of ECMP next-hops per route associated with the resilient-hash prefix  If a matching route has more than this number of ECMP next-hops only the first N are used, where N is the value of this parameter. There is a platform-specific limit to the product of this max-paths value and the hash-buckets-per-path value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">ip-load-balancing resilient-hash-prefix ip-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">max-paths</a> <i>number</i>
<b>Tree</b>	<a href="#">max-paths</a>
<b>Range</b>	1 to 64

<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## mpls

<b>Description</b>	Enable the mpls context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">mpls</a>
<b>Tree</b>	<a href="#">mpls</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## icmp-tunneling *boolean*

<b>Description</b>	<p>When enabled, ICMP messages generated by the router acting in the role of a transit LSR are injected in the forward direction of the LSP, to be turned around and sent back to the sender of the IP payload by the egress LER.</p> <p>If a transit LSR receives an MPLS packet that cannot be forwarded (e.g. label TTL has expired, or the egress subinterface MPLS MTU was exceeded) and the MPLS packet has an IP payload, the router will generate an appropriate ICMP error message. When icmp-tunneling is 'false' the ICMP error message is dropped if there is no IP route back to the source in the network-instance that received the MPLS packet.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">mpls</a> <a href="#">icmp-tunneling</a> <i>boolean</i>
<b>Tree</b>	<a href="#">icmp-tunneling</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## static-entry [top-label](#) *number* [preference](#) *number*

<b>Description</b>	Enter the static-entry list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">mpls</a> <a href="#">static-entry</a> <a href="#">top-label</a> <i>number</i> <a href="#">preference</a> <i>number</i>
<b>Tree</b>	<a href="#">static-entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**top-label** *number*

<b>Description</b>	A received MPLS packet, received on any subinterface, matches this static entry if its top label stack entry contains the label value specified by this leaf.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">mpls static-entry top-label number preference number</a>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**preference** *number*

<b>Description</b>	For a given top label value the entry with the lowest preference is selected as the active entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">mpls static-entry top-label number preference number</a>
<b>Range</b>	0 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**admin-state** *keyword*

<b>Description</b>	Used to disable the entire static route and all its next-hops.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">mpls static-entry top-label number preference number</a> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**collect-stats** *boolean*

<b>Description</b>	When set to true, stats resources are used to count the number of incoming packets matching the top label value of this static MPLS route
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">mpls static-entry top-label</a> <i>number</i> <a href="#">preference number</a> <a href="#">collect-stats</a> <i>boolean</i>
<b>Tree</b>	<a href="#">collect-stats</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**installed** *boolean*

<b>Description</b>	Indicates whether the MPLS route entry was programmed in the data path.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">mpls static-entry top-label</a> <i>number</i> <a href="#">preference number</a> <a href="#">installed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">installed</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**next-hop-group** *reference*

<b>Description</b>	Enter the next-hop-group context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">mpls static-entry top-label</a> <i>number</i> <a href="#">preference number</a> <a href="#">next-hop-group</a> <i>reference</i>
<b>Tree</b>	<a href="#">next-hop-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups</a> <i>group name</i> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**operation** *keyword*

<b>Description</b>	The operation to be performed with the top label.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">mpls static-entry top-label</a> <i>number</i> <a href="#">preference number</a> <a href="#">operation</a> <i>keyword</i>
<b>Tree</b>	<a href="#">operation</a>
<b>Default</b>	swap
<b>Options</b>	<ul style="list-style-type: none"> <li>• pop</li> <li>• swap</li> </ul>
<b>Configurable</b>	True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### resolved-next-hop-group-id *reference*

**Description** Enter the resolved-next-hop-group-id context

**Context** [network-instance name](#) *string* [mpls static-entry top-label](#) *number* [preference](#) *number* [resolved-next-hop-group-id](#) *reference*

**Tree** [resolved-next-hop-group-id](#)

**Reference** [network-instance name](#) *string* [route-table next-hop-group](#) *index* *number*

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### static-label-block *reference*

**Description** Enter the static-label-block context

**Context** [network-instance name](#) *string* [mpls static-label-block](#) *reference*

**Tree** [static-label-block](#)

**Reference** [system mpls label-ranges static](#) *name* *string*

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### static-label-block-status *keyword*

**Description** Status of the label block.  
The label block may show as unavailable if there is pending cleanup.

**Context** [network-instance name](#) *string* [mpls static-label-block-status](#) *keyword*

**Tree** [static-label-block-status](#)

**Options**

- available
- unavailable

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### mpls-forwarding

**Description** Enter the mpls-forwarding context

**Context** [network-instance name](#) *string* [mpls-forwarding](#)

<b>Tree</b>	<a href="#">mpls-forwarding</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **forward-received-packets** *boolean*

<b>Description</b>	<p>When set to true, MPLS packets received on any subinterface of the network-instance will be forwarded according to the matching ILM entries.</p> <p>When set to false, MPLS packets are discarded if received on any subinterface of the network-instance.</p> <p>In the default network-instance the default is 'true'.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">mpls-forwarding</a> <a href="#">forward-received-packets</a> <i>boolean</i>
<b>Tree</b>	<a href="#">forward-received-packets</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **mtu**

<b>Description</b>	Top-level container for configuration and state data related to network-instance MTU
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">mtu</a>
<b>Tree</b>	<a href="#">mtu</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **path-mtu-discovery** *boolean*

<b>Description</b>	<p>Enables or disables path MTU discovery in this network-instance</p> <p>This is controlled via the kernel <code>ip_no_pmtu_disc</code> option. Path MTU discovery (PMTUD) is a standardized technique in networking for determining the MTU size on the network path between two hosts, usually with the goal of avoiding IP fragmentation.</p> <p>For IPv4 packets, Path MTU discovery works by setting the Don't Fragment (DF) flag bit in the IP headers of outgoing packets. Then, any device along the path whose MTU is smaller than the packet will drop it, and send back an Internet Control Message Protocol (ICMP) Fragmentation Needed (Type 3, Code 4) message containing its MTU, allowing the source host to reduce</p>
--------------------	--

its Path MTU appropriately. The process is repeated until the MTU is small enough to traverse the entire path without fragmentation.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">mtu</a> <a href="#">path-mtu-discovery</a> <i>boolean</i>
<b>Tree</b>	<a href="#">path-mtu-discovery</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### multicast-forwarding-information-base

<b>Description</b>	Enter the multicast-forwarding-information-base context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">multicast-forwarding-information-base</a>
<b>Tree</b>	<a href="#">multicast-forwarding-information-base</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### multicast-route [source](#) (*ipv4-address* | *ipv6-address*) [group](#) (*ipv4-address* | *ipv6-address*)

<b>Description</b>	List of all the MFIB entries in the instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">multicast-forwarding-information-base</a> <a href="#">multicast-route source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">multicast-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### [source](#) (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Source IP address of the MFIB entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">multicast-forwarding-information-base</a> <a href="#">multicast-route source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**group** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Multicast group address of the MFIB entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">multicast-forwarding-information-base multicast-route source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-update** *string*

<b>Description</b>	Last update of this MFIB entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">multicast-forwarding-information-base multicast-route source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">last-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**outgoing-interface** [index number](#)

<b>Description</b>	List of the outgoing interfaces for this MFIB entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">multicast-forwarding-information-base multicast-route source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">outgoing-interface</a> <a href="#">index number</a>
<b>Tree</b>	<a href="#">outgoing-interface</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**index number**

<b>Description</b>	network instance allocated sub interface index
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">multicast-forwarding-information-base multicast-route source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">outgoing-interface</a> <a href="#">index number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**forward** *boolean*

<b>Description</b>	Whether the outgoing interface is in forwarding state
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">multicast-forwarding-information-base multicast-route source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">outgoing-interface index</a> <i>number</i> <b>forward</b> <i>boolean</i>
<b>Tree</b>	<a href="#">forward</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**outgoing-next-hop-group** [index](#) *number*

<b>Description</b>	List of the outgoing tunnel next-hop-groups associated with this MFIB entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">multicast-forwarding-information-base multicast-route source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">outgoing-next-hop-group index</a> <i>number</i>
<b>Tree</b>	<a href="#">outgoing-next-hop-group</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**index** *number*

<b>Description</b>	Next-hop-group allocated index
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">multicast-forwarding-information-base multicast-route source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">outgoing-next-hop-group index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**forward** *boolean*

<b>Description</b>	Whether the outgoing next-hop-group is in forwarding state
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">multicast-forwarding-information-base multicast-route source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">group</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">outgoing-next-hop-group index</a> <i>number</i> <b>forward</b> <i>boolean</i>
<b>Tree</b>	<a href="#">forward</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop-groups**

<b>Description</b>	Enable the next-hop-groups context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups</a>
<b>Tree</b>	<a href="#">next-hop-groups</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**group name** *string*

<b>Description</b>	Specifies the next hop group.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i>
<b>Tree</b>	<a href="#">group</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Specifies the next hop group name
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Used to enable or disable a next-hop group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**blackhole**

<b>Description</b>	Enable the blackhole context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i> <a href="#">blackhole</a>
<b>Tree</b>	<a href="#">blackhole</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**generate-icmp** *boolean*

<b>Description</b>	When set to true the router generates ICMP unreachable messages for the dropped packets
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i> <a href="#">blackhole generate-icmp</a> <i>boolean</i>
<b>Tree</b>	<a href="#">generate-icmp</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**nexthop** [index](#) *number*

<b>Description</b>	Enter the nexthop list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i> <a href="#">nexthop index</a> <i>number</i>
<b>Tree</b>	<a href="#">nexthop</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	128

**index** *number*

<b>Description</b>	Numerical index of the next-hop member
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i> <a href="#">nexthop index</a> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Used to enable or disable a particular next-hop
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i> <a href="#">nexthop index</a> <i>number</i> <b>admin-state</b> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**failure-detection**

<b>Description</b>	Enter the failure-detection context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i> <a href="#">nexthop index</a> <i>number</i> <b>failure-detection</b>
<b>Tree</b>	<a href="#">failure-detection</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**enable-bfd**

<b>Description</b>	Enable the enable-bfd context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i> <a href="#">nexthop index</a> <i>number</i> <a href="#">failure-detection</a> <b>enable-bfd</b>
<b>Tree</b>	<a href="#">enable-bfd</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**local-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The local address to be used for the associated BFD session
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i> <a href="#">nexthop index</a> <i>number</i> <a href="#">failure-detection</a> <a href="#">enable-bfd</a> <b>local-address</b> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">local-address</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **local-discriminator *number***

<b>Description</b>	The local discriminator to be used for the associated BFD session
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i> <a href="#">nexthop index</a> <i>number</i> <a href="#">failure-detection enable-bfd local-discriminator</a> <i>number</i>
<b>Tree</b>	<a href="#">local-discriminator</a>
<b>Range</b>	1 to 16384
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **remote-discriminator *number***

<b>Description</b>	The remote discriminator to be used for the associated BFD session
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i> <a href="#">nexthop index</a> <i>number</i> <a href="#">failure-detection enable-bfd remote-discriminator</a> <i>number</i>
<b>Tree</b>	<a href="#">remote-discriminator</a>
<b>Range</b>	1 to 16384
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **ip-address (*ipv4-address-with-zone* | *ipv6-address-with-zone*)**

<b>Description</b>	The next-hop IPv4 or IPv6 address If the IPv6 address is a link-local address then the zoned format must be used
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i> <a href="#">nexthop index</a> <i>number</i> <a href="#">ip-address (<i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i>)</a>
<b>Tree</b>	<a href="#">ip-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**pushed-mpls-label-stack** (*number* | *keyword*)

<b>Description</b>	A list of MPLS labels to push onto the packet when forwarding to this particular next-hop  Default is none/empty. Pushing an MPLS label stack is not supported unless the resolve flag is set to false.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i> <a href="#">nexthop index number</a> <a href="#">pushed-mpls-label-stack</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">pushed-mpls-label-stack</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> <li>• IMPLICIT_NULL</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	1

**resolve** *boolean*

<b>Description</b>	When set to true, the router is allowed to use any route to resolve the nexthop address to an outgoing interface  When set to false the router is only allowed to use a local route to resolve the next-hop address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i> <a href="#">nexthop index number</a> <a href="#">resolve</a> <i>boolean</i>
<b>Tree</b>	<a href="#">resolve</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**oper-down-reason** *keyword*

<b>Description</b>	The reason the network-instance is down
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• admin-down</li> <li>• no-mcid</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **oper-mac-vrf-mtu** *number*

<b>Description</b>	Operational I2-mtu of the mac-vrf network-instance. Calculated as the lowest I2-mtu of the bridged subinterfaces associated to the mac-vrf, minus the vlan tags associated to that subinterface (lowest mtu subinterface).  When the mac-vrf has an associated irb subinterface, if the configured irb ip-mtu exceeds the oper-mac-vrf-mtu minus 14 bytes (Ethernet header), then the irb subinterface will remain operationally down.  The oper-mac-vrf-mtu is only available in mac-vrf network-instances.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">oper-mac-vrf-mtu</a> <i>number</i>
<b>Tree</b>	<a href="#">oper-mac-vrf-mtu</a>
<b>Range</b>	1492 to 9500
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **oper-state** *keyword*

<b>Description</b>	This leaf contains the operational state of the network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed</li> </ul>

- Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## policy-forwarding

<b>Description</b>	Configuration and operational state relating to policy-forwarding within a network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding</a>
<b>Tree</b>	<a href="#">policy-forwarding</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## interface [subinterface](#) *string*

<b>Description</b>	List of subinterfaces that use the policy forwarding policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding interface subinterface</a> <i>string</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### subinterface *string*

**Description** Name of the subinterface.

**Context** [network-instance name](#) *string* [policy-forwarding interface subinterface](#) *string*

**String Length** 1 to 255

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### apply-forwarding-policy *reference*

**Description** The policy to be applied on the interface. Packets ingress on the referenced interface should be compared to the match criteria within the specified policy, and in the case that these criteria are met, the forwarding actions specified applied.

**Context** [network-instance name](#) *string* [policy-forwarding interface subinterface](#) *string* [apply-forwarding-policy](#) *reference*

**Tree** [apply-forwarding-policy](#)

**Reference** [network-instance name](#) *string* [policy-forwarding policy](#) *policy-id* *string*

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### interface-ref

**Description** Reference to a subinterface

**Context** [network-instance name](#) *string* [policy-forwarding interface subinterface](#) *string* [interface-ref](#)

**Tree** [interface-ref](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### interface *reference*

**Description** Reference to a base interface, for example a port or LAG

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding interface subinterface</a> <i>string</i> <a href="#">interface-ref interface</a> <i>reference</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Reference</b>	<a href="#">interface name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### subinterface *reference*

<b>Description</b>	Reference to a subinterface This requires the base interface to be specified using the interface leaf in this container.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding interface subinterface</a> <i>string</i> <a href="#">interface-ref subinterface</a> <i>reference</i>
<b>Tree</b>	<a href="#">subinterface</a>
<b>Reference</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### policy [policy-id](#) *string*

<b>Description</b>	A forwarding policy is defined to have a set of match criteria, allowing particular fields of a packet's header to be matched, and a set of forwarding actions which determines how the local system should forward the packet.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i>
<b>Tree</b>	<a href="#">policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	4

### policy-id *string*

<b>Description</b>	A unique name identifying the forwarding policy. This name is used when applying the policy to a particular interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i>
<b>String Length</b>	1 to 255

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **description** *string*

<b>Description</b>	Description string for the policy
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i> <a href="#">description</a> <i>string</i>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **rule** [sequence-id](#) *number*

<b>Description</b>	List of policy forwarding rules.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i> <a href="#">rule</a> <a href="#">sequence-id</a> <i>number</i>
<b>Tree</b>	<a href="#">rule</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **sequence-id** *number*

<b>Description</b>	A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i> <a href="#">rule</a> <a href="#">sequence-id</a> <i>number</i>
<b>Range</b>	0 to 128
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **action**

<b>Description</b>	Container for the actions to be applied to packets matching the policy forwarding rule.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i> <a href="#">rule</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">action</a>

<b>Tree</b>	<a href="#">action</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## encapsulate-gre

<b>Description</b>	Container for the GRE encapsulation actions to be applied to packets matching the policy forwarding rule.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i> <a href="#">rule sequence-id</a> <i>number</i> <a href="#">action encapsulate-gre</a>
<b>Tree</b>	<a href="#">encapsulate-gre</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## target id *string*

<b>Description</b>	Identifier for the GRE target group. Each target specified within this list should be treated as a endpoint to which packets should be GRE encapsulated. Where the set of destinations described within a single entry expands to more than one destination IP address, packets should be load shared across the destination using the local system's ECMP hashing mechanisms.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i> <a href="#">rule sequence-id</a> <i>number</i> <a href="#">action encapsulate-gre target id</a> <i>string</i>
<b>Tree</b>	<a href="#">target</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	4

## id *string*

<b>Description</b>	A unique identifier for the target.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i> <a href="#">rule sequence-id</a> <i>number</i> <a href="#">action encapsulate-gre target id</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**destination** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	The set of destination addresses that should be encapsulated towards. Where a subnet is specified, each address within the subnet should be treated as an independent destination for encapsulated traffic. Packets should be distributed with ECMP across the set of tunnel destination addresses.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i> <a href="#">rule sequence-id</a> <i>number</i> <a href="#">action encapsulate-gre target id</a> <i>string</i> <a href="#">destination</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Tree</b>	<a href="#">destination</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ip-ttl** *number*

<b>Description</b>	The TTL that should be specified in the IP header of the GRE packet encapsulating the packet matching the rule.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i> <a href="#">rule sequence-id</a> <i>number</i> <a href="#">action encapsulate-gre target id</a> <i>string</i> <a href="#">ip-ttl</a> <i>number</i>
<b>Tree</b>	<a href="#">ip-ttl</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**source** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The source IP address that should be used when encapsulating packets from the local system.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i> <a href="#">rule sequence-id</a> <i>number</i> <a href="#">action encapsulate-gre target id</a> <i>string</i> <a href="#">source</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**network-instance** *reference*

<b>Description</b>	When this leaf is set, packets matching the match criteria for the forwarding rule should be looked up in the network-instance that is referenced rather than the network-instance with which the interface is associated.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i> <a href="#">rule sequence-id</a> <i>number</i> <a href="#">action network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### description *string*

<b>Description</b>	Description string for the rule
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i> <a href="#">rule sequence-id</a> <i>number</i> <a href="#">description</a> <i>string</i>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### match

<b>Description</b>	Container for the conditions that determine whether a packet matches this entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i> <a href="#">rule sequence-id</a> <i>number</i> <a href="#">match</a>
<b>Tree</b>	<a href="#">match</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv4

<b>Description</b>	Container for match conditions associated with IPv4 header fields If no match conditions are provided then no IPv4 packets are matched.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i> <a href="#">rule sequence-id</a> <i>number</i> <a href="#">match</a> <a href="#">ipv4</a>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**dscp-set** (*number* | *keyword*)

<b>Description</b>	A list of DSCP values to be matched for incoming packets. An OR match should be performed, such that a packet must match one of the values defined in this list. If the field is left empty then any DSCP value matches.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <i>string</i> <a href="#">policy-id</a> <i>string</i> <a href="#">rule sequence-id</a> <i>number</i> <a href="#">match ipv4</a> <a href="#">dscp-set</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">dscp-set</a>
<b>Range</b>	0 to 63
<b>Options</b>	<ul style="list-style-type: none"> <li>• CS0</li> <li>• LE</li> <li>• CS1</li> <li>• AF11</li> <li>• AF12</li> <li>• AF13</li> <li>• CS2</li> <li>• AF21</li> <li>• AF22</li> <li>• AF23</li> <li>• CS3</li> <li>• AF31</li> <li>• AF32</li> <li>• AF33</li> <li>• CS4</li> <li>• AF41</li> <li>• AF42</li> <li>• AF43</li> <li>• CS5</li> <li>• EF</li> <li>• CS6</li> <li>• CS7</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**protocol** (*number* | *keyword*)

<b>Description</b>	An IPv4 packet matches this condition if its IP protocol type field matches the specified value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <i>string</i> <a href="#">rule sequence-id</a> <i>number</i> <a href="#">match ipv4 protocol</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">protocol</a>
<b>Range</b>	0 to 255
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ipv6-hop</a> IPv6 hop-by-hop option</li> <li>• <a href="#">icmp</a> Internet Control Message Protocol</li> <li>• <a href="#">igmp</a> Internet Group Management Protocol</li> <li>• <a href="#">ggp</a> Gateway-to-Gateway Protocol</li> <li>• <a href="#">ipv4</a> IPv4 encapsulation</li> <li>• <a href="#">st</a> Stream Protocol</li> <li>• <a href="#">tcp</a> Transmission Control Protocol</li> <li>• <a href="#">egp</a> Exterior Gateway Protocol</li> <li>• <a href="#">igp</a> Interior Gateway Protocol</li> <li>• <a href="#">udp</a> User Datagram Protocol</li> <li>• <a href="#">ipv6</a> IPv6 encapsulation</li> <li>• <a href="#">idrp</a> Inter-Domain Routing Protocol</li> <li>• <a href="#">rsvp</a> Resource Reservation Protocol</li> <li>• <a href="#">gre</a> Generic Routing Encapsulation</li> <li>• <a href="#">esp</a></li> </ul>

## IPSec Encapsulating Security Payload

**Configurable**

True

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**source-ip****Description**

Packet matching criteria based on source IPv4 address

**Context**

[network-instance name](#) *string* [policy-forwarding policy](#) [policy-id](#) *string* [rule sequence-id](#) *number* [match ipv4 source-ip](#)

**Tree**[source-ip](#)**Configurable**

True

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**prefix string**

<b>Description</b>	Match a packet if its source IP address is within the specified IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">policy-forwarding policy policy-id string rule sequence-id number match ipv4 source-ip prefix string</a>
<b>Tree</b>	<a href="#">prefix</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv6**

<b>Description</b>	Container for match conditions associated with IPv4 header fields If no match conditions are provided then no IPv4 packets are matched.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">policy-forwarding policy policy-id string rule sequence-id number match ipv6</a>
<b>Tree</b>	<a href="#">ipv6</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**dscp-set (number | keyword)**

<b>Description</b>	A list of DSCP values to be matched for incoming packets. An OR match should be performed, such that a packet must match one of the values defined in this list. If the field is left empty then any DSCP value matches.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">policy-forwarding policy policy-id string rule sequence-id number match ipv6 dscp-set (number   keyword)</a>
<b>Tree</b>	<a href="#">dscp-set</a>
<b>Range</b>	0 to 63
<b>Options</b>	<ul style="list-style-type: none"> <li>• CS0</li> <li>• LE</li> <li>• CS1</li> <li>• AF11</li> <li>• AF12</li> <li>• AF13</li> <li>• CS2</li> <li>• AF21</li> <li>• AF22</li> </ul>

	<ul style="list-style-type: none"> <li>• AF23</li> <li>• CS3</li> <li>• AF31</li> <li>• AF32</li> <li>• AF33</li> <li>• CS4</li> <li>• AF41</li> <li>• AF42</li> <li>• AF43</li> <li>• CS5</li> <li>• EF</li> <li>• CS6</li> <li>• CS7</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **next-header** (*number* | *keyword*)

<b>Description</b>	An IPv6 packet matches this condition if its IP next-header type field matches the specified value
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">policy-forwarding policy</a> <a href="#">policy-id</a> <a href="#">string</a> <a href="#">rule sequence-id</a> <a href="#">number</a> <a href="#">match ipv6 next-header</a> ( <i>number</i>   <i>keyword</i> )

<b>Options</b>	<ul style="list-style-type: none"> <li><a href="#">pbr-policy</a></li> </ul> <p>The policy reflects a policy-based routing policy that supports generic PBR actions.</p>

- vrf-selection-policy  
The policy is used only to classify incoming packets into corresponding network instances.

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## protocols

<b>Description</b>	The routing protocols that are enabled for this network-instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a>
<b>Tree</b>	<a href="#">protocols</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## bgp

<b>Description</b>	Enable the bgp context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">bgp</a>
<b>Tree</b>	<a href="#">bgp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## admin-state *keyword*

<b>Description</b>	Administratively enable or disable the entire BGP instance Disable causes all BGP sessions to be taken down immediately, even if admin-state at the group or neighbor level of some of these sessions is still set as enable.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">bgp</a> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**afi-safi** *afi-safi-name identityref*

<b>Description</b>	List of address families supported by the BGP instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string protocols bgp afi-safi afi-safi-name identityref</i>
<b>Tree</b>	<a href="#">afi-safi</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**afi-safi-name** *identityref*

<b>Description</b>	The name of a BGP address family, which translates to a specific AFI value and a specific SAFI value
<b>Context</b>	<a href="#">network-instance name</a> <i>string protocols bgp afi-safi afi-safi-name identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ipv4-unicast</a> Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1)</li> <li>• <a href="#">ipv6-unicast</a> Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1)</li> <li>• <a href="#">l3vpn-ipv4-unicast</a> VPN-IPv4 unicast address family (AFI = 1, SAFI = 128)</li> <li>• <a href="#">l3vpn-ipv6-unicast</a> VPN-IPv6 unicast address family (AFI = 2, SAFI = 128)</li> <li>• <a href="#">ipv4-labeled-unicast</a> Labeled IPv4 unicast routes (AFI 1, SAFI 4)</li> <li>• <a href="#">ipv6-labeled-unicast</a> Labeled IPv6 unicast routes (AFI 2, SAFI 4)</li> <li>• <a href="#">evpn</a> EVPN routes (AFI = 25, SAFI = 70)</li> <li>• <a href="#">route-target</a> Route target constraint routes (AFI 1, SAFI 132)</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**active-routes** *number*

<b>Description</b>	The total number of routes belonging to this AFI/SAFI that are installed and used, being best routes
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref active-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">active-routes</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## add-paths

<b>Description</b>	Configure support for the advertisement and receipt of multiple paths for the AFI/SAFI
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref add-paths</a>
<b>Tree</b>	<a href="#">add-paths</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## receive *boolean*

<b>Description</b>	Enable capability negotiation to receive multiple path advertisements from a single peer for a single NLRI belonging to the AFI/SAFI
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref add-paths receive</a> <i>boolean</i>
<b>Tree</b>	<a href="#">receive</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## send *boolean*

<b>Description</b>	Enable capability negotiation to send multiple path advertisements to a single peer for a single NLRI belonging to the AFI/SAFI
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref add-paths send</a> <i>boolean</i>
<b>Tree</b>	<a href="#">send</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### send-max *number*

**Description** Send the N best paths for a single NLRI, or as many as possible until there are no more valid paths to send.

This ensures the best path is advertised but does not limit the additional paths to being 'used' paths.

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) [identityref add-paths send-max](#) *number*

**Tree** [send-max](#)

**Range** 1 to 16

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### send-multipath

**Description** Send the used paths for a single NLRI, including all paths that are multipaths.

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) [identityref add-paths send-multipath](#)

**Tree** [send-multipath](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### admin-state *keyword*

**Description** This leaf indicates whether the AFI-SAFI is enabled for the instance

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) [identityref admin-state](#) *keyword*

**Tree** [admin-state](#)

**Default** disable

**Options**

- enable

	<ul style="list-style-type: none"> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## evpn

<b>Description</b>	Options related to the EVPN address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref evpn</a>
<b>Tree</b>	<a href="#">evpn</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## advertise-ipv6-next-hops *boolean*

<b>Description</b>	<p>Enables advertisement of EVPN routes with IPv6 next-hops to peers</p> <p>If this is set to true and the local-address used towards the peer is an IPv6 address and BGP is supposed to apply next-hop-self then the route is advertised with the IPv6 local-address as the BGP next-hop. If this is set to false, then the EVPN route is advertised with an IPv4 next-hop.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref evpn advertise-ipv6-next-hops</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-ipv6-next-hops</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## inter-as-vpn *boolean*

<b>Description</b>	<p>When set to true, received EVPN routes that are not imported by any network-instance are retained in the BGP RIB and considered 'used' so that they can be propagated to any EBGP or IBGP peer.</p> <p>This command supersedes the effect of keep-all-routes.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref evpn inter-as-vpn</a> <i>boolean</i>
<b>Tree</b>	<a href="#">inter-as-vpn</a>
<b>Default</b>	false
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **keep-all-routes** *boolean*

**Description** When this is set to true all received EVPN routes are retained in the RIB-IN, even those not imported by any network-instance; these routes display as 'rejected' and cannot be propagated to other peers.

When this is false, EVPN routes that are not imported by any network-instance are dropped and not retained in the BGP RIB-IN; policy changes affecting received EVPN routes will trigger the sending of ROUTE\_REFRESH messages towards all EVPN family peers.

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref* [evpn keep-all-routes](#) *boolean*

**Tree** [keep-all-routes](#)

**Default** false

**Configurable** True

**Platforms** Supported on all platforms

### **rapid-update** *boolean*

**Description** When this is set to true, EVPN UPDATES advertising reachability and withdrawals are advertised immediately, bypassing the session level min-route-advertisement-interval. When this is false, reachability updates and withdrawals are subject to the MRAI interval.

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref* [evpn rapid-update](#) *boolean*

**Tree** [rapid-update](#)

**Default** false

**Configurable** True

**Platforms** Supported on all platforms

### **export-policy** *reference*

**Description** Apply an export policy to advertised BGP routes

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref* [export-policy](#) *reference*

**Tree** [export-policy](#)

**Reference** [routing-policy policy name](#) *string*

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### import-policy *reference*

**Description** Apply an import policy to received BGP routes

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) [identityref import-policy reference](#)

**Tree** [import-policy](#)

**Reference** [routing-policy policy name](#) *string*

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv4-labeled-unicast

**Description** Options related to the labeled IPv4-unicast address family

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) [identityref ipv4-labeled-unicast](#)

**Tree** [ipv4-labeled-unicast](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### advertise-ipv6-next-hops *boolean*

**Description** Enables advertisement of IPv4 routes with IPv6 next-hops

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) [identityref ipv4-labeled-unicast advertise-ipv6-next-hops](#) *boolean*

**Tree** [advertise-ipv6-next-hops](#)

**Default** false

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### backup-paths

**Description** Enter the backup-paths context

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast backup-paths</a>
<b>Tree</b>	<a href="#">backup-paths</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**install** *boolean*

<b>Description</b>	Install a backup path for every NLRI in the address family, when a suitable one exists
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast backup-paths</a> <a href="#">install</a> <i>boolean</i>
<b>Tree</b>	<a href="#">install</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**convergence**

<b>Description</b>	Options for controlling and monitoring routing convergence of the relevant address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast convergence</a>
<b>Tree</b>	<a href="#">convergence</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**converged-peers** *number*

<b>Description</b>	The number of peers that have sent an EOR marker for the address family since the last BGP restart
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast convergence converged-peers</a> <i>number</i>
<b>Tree</b>	<a href="#">converged-peers</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**convergence-state** *keyword*

<b>Description</b>	Enter the convergence-state context
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">convergence</a> <a href="#">convergence-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">convergence-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>waiting BGP has recently restarted and no sessions have re-established yet</li> <li>started BGP has recently restarted and at least one session has re-established with support of the address family</li> <li>partial BGP has recently restarted and at least one session has advertised an End-of-RIB marker for the address family.</li> <li>timeout BGP has recently restarted and not all non-slow peers advertised an End-of-RIB marker for the address family before the max-wait-to-advertise timer expired</li> <li>converged All non-slow peers that support the address family have have advertised the End-of-RIB marker for the address family</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**convergence-time** *number*

<b>Description</b>	The elapsed time in seconds, starting from the last BGP restart, to reach the converged state for the address family
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">convergence</a> <a href="#">convergence-time</a> <i>number</i>
<b>Tree</b>	<a href="#">convergence-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**first-up-peer-time** *number*

<b>Description</b>	The time when the first session supporting the address family came up, measured from the time that the BGP instance restarted
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast convergence first-up-peer-time</a> <i>number</i>
<b>Tree</b>	<a href="#">first-up-peer-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-up-peer-time** *number*

<b>Description</b>	The time when the last session supporting the address family came up, measured from the time that the BGP instance restarted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast convergence last-up-peer-time</a> <i>number</i>
<b>Tree</b>	<a href="#">last-up-peer-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **max-wait-to-advertise** *number*

<b>Description</b>	The maximum amount of time, in seconds, measured from the time when the first session (configured or dynamic) that supports the address family comes up after a BGP restart, until BGP is allowed to advertise any routes in that address family to any peer  The value of this leaf must always be greater than or equal to the operational value of min-wait-to-advertise. The default value is 3x the value of min-wait-to-advertise. A value of 0 means the feature is disabled and there is no additional delay before advertising routes of the address family.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast convergence max-wait-to-advertise</a> <i>number</i>
<b>Tree</b>	<a href="#">max-wait-to-advertise</a>
<b>Range</b>	0 to 3600
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **oper-max-wait-to-advertise** *number*

<b>Description</b>	The operational value of the max-wait-to-advertise timer for the address family
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast convergence oper-max-wait-to-advertise</a> <i>number</i>
<b>Tree</b>	<a href="#">oper-max-wait-to-advertise</a>
<b>Range</b>	0 to 10800
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**up-peers** *number*

<b>Description</b>	The number of BGP sessions (configured and dynamic) that support the address family and that are currently in the established state
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast convergence up-peers</a> <i>number</i>
<b>Tree</b>	<a href="#">up-peers</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**up-peers-when-min-expired** *number*

<b>Description</b>	The number of BGP sessions (configured and dynamic) that support the address family and that were in established state when the win-wait-to-advertise timer expired
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast convergence up-peers-when-min-expired</a> <i>number</i>
<b>Tree</b>	<a href="#">up-peers-when-min-expired</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**next-hop-resolution**

<b>Description</b>	Options for controlling next-hop resolution procedures
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast next-hop-resolution</a>
<b>Tree</b>	<a href="#">next-hop-resolution</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4-next-hops**

<b>Description</b>	Options related to the resolution of BGP next-hops that are IPv4 addresses
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast next-hop-resolution ipv4-next-hops</a>
<b>Tree</b>	<a href="#">ipv4-next-hops</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**route-resolution**

<b>Description</b>	Options related to resolution using IP routes in the FIB
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast next-hop-resolution ipv4-next-hops route-resolution</a>
<b>Tree</b>	<a href="#">route-resolution</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**admin-state** *keyword*

<b>Description</b>	Enable or disable route resolution if no resolving tunnel is found
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast next-hop-resolution ipv4-next-hops route-resolution admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ignore-default-routes** *boolean*

<b>Description</b>	Ignore default routes, regardless of route type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast next-hop-resolution ipv4-next-hops route-resolution ignore-default-routes</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ignore-default-routes</a>

<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## tunnel-resolution

<b>Description</b>	Options related to resolution using tunnels in the tunnel table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast next-hop-resolution ipv4-next-hops tunnel-resolution</a>
<b>Tree</b>	<a href="#">tunnel-resolution</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## allowed-tunnel-types *identityref*

<b>Description</b>	List of allowed tunnel types
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast next-hop-resolution ipv4-next-hops tunnel-resolution</a> <a href="#">allowed-tunnel-types</a> <i>identityref</i>
<b>Tree</b>	<a href="#">allowed-tunnel-types</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">bgp-next-hop-resolution-tunnel-type</a> Base type for the types of tunnels that can be used by BGP for next-hop resolution</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## color-aware

<b>Description</b>	Color-aware next-hop resolution options
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast next-hop-resolution ipv4-next-hops tunnel-resolution</a> <a href="#">color-aware</a>
<b>Tree</b>	<a href="#">color-aware</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv6-next-hops**

<b>Description</b>	Options related to the resolution of BGP next-hops that are IPv6 addresses
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast next-hop-resolution ipv6-next-hops</a>
<b>Tree</b>	<a href="#">ipv6-next-hops</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**route-resolution**

<b>Description</b>	Options related to resolution using IP routes in the FIB
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast next-hop-resolution ipv6-next-hops route-resolution</a>
<b>Tree</b>	<a href="#">route-resolution</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**admin-state** *keyword*

<b>Description</b>	Enable or disable route resolution if no resolving tunnel is found
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast next-hop-resolution ipv6-next-hops route-resolution admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ignore-default-routes** *boolean*

<b>Description</b>	Ignore default routes, regardless of route type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast next-hop-resolution ipv6-next-hops route-resolution ignore-default-routes</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ignore-default-routes</a>

<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## tunnel-resolution

<b>Description</b>	Options related to resolution using tunnels in the tunnel table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast next-hop-resolution ipv6-next-hops tunnel-resolution</a>
<b>Tree</b>	<a href="#">tunnel-resolution</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## allowed-tunnel-types *identityref*

<b>Description</b>	List of allowed tunnel types
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast next-hop-resolution ipv6-next-hops tunnel-resolution</a> <a href="#">allowed-tunnel-types</a> <i>identityref</i>
<b>Tree</b>	<a href="#">allowed-tunnel-types</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">bgp-next-hop-resolution-tunnel-type</a> Base type for the types of tunnels that can be used by BGP for next-hop resolution</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## color-aware

<b>Description</b>	Color-aware next-hop resolution options
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast next-hop-resolution ipv6-next-hops tunnel-resolution</a> <a href="#">color-aware</a>
<b>Tree</b>	<a href="#">color-aware</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**rapid-update** *boolean*

<b>Description</b>	When true, label-ipv4 update messages are advertised immediately, bypassing the MRAI  When this is false, reachability updates and withdrawals are subject to the MRAI interval.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast rapid-update</a> <i>boolean</i>
<b>Tree</b>	<a href="#">rapid-update</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**receive-ipv6-next-hops** *boolean*

<b>Description</b>	Enables the advertisement of the RFC 8950 capability to receive IPv4 routes with IPv6 next-hops  When set to true, BGP advertises an extended NH encoding (RFC 8950) capability to its peers. This capability indicates that local router is prepared to accept BGP routes for the AFI/SAFI with IPv6 next-hops from peers in the scope of the command. When set to false, BGP handles received AFI/SAFI routes with IPv6 next-hops as an error and applies treat-as-withdraw.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast receive-ipv6-next-hops</a> <i>boolean</i>
<b>Tree</b>	<a href="#">receive-ipv6-next-hops</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4-unicast**

<b>Description</b>	Options related to the IPv4-unicast address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a>
<b>Tree</b>	<a href="#">ipv4-unicast</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**advertise-ipv6-next-hops** *boolean*

<b>Description</b>	Enables advertisement of IPv4 routes with IPv6 next-hops
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast advertise-ipv6-next-hops</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-ipv6-next-hops</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**convergence**

<b>Description</b>	Options for controlling and monitoring routing convergence of the relevant address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast convergence</a>
<b>Tree</b>	<a href="#">convergence</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**converged-peers** *number*

<b>Description</b>	The number of peers that have sent an EOR marker for the address family since the last BGP restart
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast convergence converged-peers</a> <i>number</i>
<b>Tree</b>	<a href="#">converged-peers</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**convergence-state** *keyword*

<b>Description</b>	Enter the convergence-state context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast convergence convergence-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">convergence-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>waiting BGP has recently restarted and no sessions have re-established yet</li> </ul>

- **started**  
BGP has recently restarted and at least one session has re-established with support of the address family
- **partial**  
BGP has recently restarted and at least one session has advertised an End-of-RIB marker for the address family.
- **timeout**  
BGP has recently restarted and not all non-slow peers advertised an End-of-RIB marker for the address family before the max-wait-to-advertise timer expired
- **converged**  
All non-slow peers that support the address family have advertised the End-of-RIB marker for the address family

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **convergence-time** *number*

<b>Description</b>	The elapsed time in seconds, starting from the last BGP restart, to reach the converged state for the address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast convergence convergence-time</a> <i>number</i>
<b>Tree</b>	<a href="#">convergence-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **first-up-peer-time** *number*

<b>Description</b>	The time when the first session supporting the address family came up, measured from the time that the BGP instance restarted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast convergence first-up-peer-time</a> <i>number</i>
<b>Tree</b>	<a href="#">first-up-peer-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-up-peer-time** *number*

<b>Description</b>	The time when the last session supporting the address family came up, measured from the time that the BGP instance restarted
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast convergence last-up-peer-time</a> <i>number</i>
<b>Tree</b>	<a href="#">last-up-peer-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**max-wait-to-advertise** *number*

<b>Description</b>	The maximum amount of time, in seconds, measured from the time when the first session (configured or dynamic) that supports the address family comes up after a BGP restart, until BGP is allowed to advertise any routes in that address family to any peer  The value of this leaf must always be greater than or equal to the operational value of min-wait-to-advertise. The default value is 3x the value of min-wait-to-advertise. A value of 0 means the feature is disabled and there is no additional delay before advertising routes of the address family.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast convergence max-wait-to-advertise</a> <i>number</i>
<b>Tree</b>	<a href="#">max-wait-to-advertise</a>
<b>Range</b>	0 to 3600
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**oper-max-wait-to-advertise** *number*

<b>Description</b>	The operational value of the max-wait-to-advertise timer for the address family
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast convergence oper-max-wait-to-advertise</a> <i>number</i>
<b>Tree</b>	<a href="#">oper-max-wait-to-advertise</a>
<b>Range</b>	0 to 10800
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**up-peers** *number*

<b>Description</b>	The number of BGP sessions (configured and dynamic) that support the address family and that are currently in the established state
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast convergence up-peers</a> <i>number</i>
<b>Tree</b>	<a href="#">up-peers</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**up-peers-when-min-expired** *number*

<b>Description</b>	The number of BGP sessions (configured and dynamic) that support the address family and that were in established state when the win-wait-to-advertise timer expired
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast convergence up-peers-when-min-expired</a> <i>number</i>
<b>Tree</b>	<a href="#">up-peers-when-min-expired</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop-resolution**

<b>Description</b>	Options for controlling next-hop resolution procedures
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast next-hop-resolution</a>
<b>Tree</b>	<a href="#">next-hop-resolution</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4-next-hops**

<b>Description</b>	Options related to the resolution of BGP next-hops that are IPv4 addresses
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast next-hop-resolution ipv4-next-hops</a>
<b>Tree</b>	<a href="#">ipv4-next-hops</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**tunnel-resolution**

<b>Description</b>	Options related to resolution using tunnels in the tunnel table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast</a> <a href="#">next-hop-resolution</a> <a href="#">ipv4-next-hops</a> <a href="#">tunnel-resolution</a>
<b>Tree</b>	<a href="#">tunnel-resolution</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**allowed-tunnel-types** *identityref*

<b>Description</b>	List of allowed tunnel types
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast</a> <a href="#">next-hop-resolution</a> <a href="#">ipv4-next-hops</a> <a href="#">tunnel-resolution</a> <a href="#">allowed-tunnel-types</a> <i>identityref</i>
<b>Tree</b>	<a href="#">allowed-tunnel-types</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">bgp-next-hop-resolution-tunnel-type</a> Base type for the types of tunnels that can be used by BGP for next-hop resolution</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**color-aware**

<b>Description</b>	Color-aware next-hop resolution options
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast</a> <a href="#">next-hop-resolution</a> <a href="#">ipv4-next-hops</a> <a href="#">tunnel-resolution</a> <a href="#">color-aware</a>
<b>Tree</b>	<a href="#">color-aware</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**mode** *keyword*

<b>Description</b>	Mode to control the order of tunnel resolution compared to route resolution
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast</a> <a href="#">next-hop-resolution</a> <a href="#">ipv4-next-hops</a> <a href="#">tunnel-resolution</a> <a href="#">mode</a> <i>keyword</i>

<b>Tree</b>	<a href="#">mode</a>
<b>Default</b>	disabled
<b>Options</b>	<ul style="list-style-type: none"> <li>• prefer</li> <li>• require</li> <li>• disabled</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv6-next-hops

<b>Description</b>	Options related to the resolution of BGP next-hops that are IPv6 addresses
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast next-hop-resolution ipv6-next-hops</a>
<b>Tree</b>	<a href="#">ipv6-next-hops</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## tunnel-resolution

<b>Description</b>	Options related to resolution using tunnels in the tunnel table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast next-hop-resolution ipv6-next-hops tunnel-resolution</a>
<b>Tree</b>	<a href="#">tunnel-resolution</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## allowed-tunnel-types *identityref*

<b>Description</b>	List of allowed tunnel types
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast next-hop-resolution ipv6-next-hops tunnel-resolution allowed-tunnel-types</a> <i>identityref</i>
<b>Tree</b>	<a href="#">allowed-tunnel-types</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• bgp-next-hop-resolution-tunnel-type</li> </ul>

Base type for the types of tunnels that can be used by BGP for next-hop resolution

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## color-aware

<b>Description</b>	Color-aware next-hop resolution options
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast next-hop-resolution ipv6-next-hops tunnel-resolution color-aware</a>
<b>Tree</b>	<a href="#">color-aware</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## mode *keyword*

<b>Description</b>	Mode to control the order of tunnel resolution compared to route resolution
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast next-hop-resolution ipv6-next-hops tunnel-resolution mode keyword</a>
<b>Tree</b>	<a href="#">mode</a>
<b>Default</b>	disabled
<b>Options</b>	<ul style="list-style-type: none"> <li>• prefer</li> <li>• require</li> <li>• disabled</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## receive-ipv6-next-hops *boolean*

<b>Description</b>	Enables the advertisement of the RFC 8950 capability to receive IPv4 routes with IPv6 next-hops
--------------------	---

When set to true, BGP advertises an extended NH encoding (RFC 8950) capability to its peers. This capability indicates that local router is prepared to accept BGP routes for the AFI/SAFI with IPv6 next-hops from peers in the scope of the command. When set to false, BGP handles received AFI/SAFI routes with IPv6 next-hops as an error and applies treat-as-withdraw.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast receive-ipv6-next-hops</a> <i>boolean</i>
<b>Tree</b>	<a href="#">receive-ipv6-next-hops</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### ipv6-labeled-unicast

<b>Description</b>	Options related to the labeled IPv6-unicast address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast</a>
<b>Tree</b>	<a href="#">ipv6-labeled-unicast</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### backup-paths

<b>Description</b>	Enter the backup-paths context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast backup-paths</a>
<b>Tree</b>	<a href="#">backup-paths</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### install *boolean*

<b>Description</b>	Install a backup path for every NLRI in the address family, when a suitable one exists
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast backup-paths install</a> <i>boolean</i>
<b>Tree</b>	<a href="#">install</a>
<b>Default</b>	false

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## convergence

<b>Description</b>	Options for controlling and monitoring routing convergence of the relevant address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast convergence</a>
<b>Tree</b>	<a href="#">convergence</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## converged-peers *number*

<b>Description</b>	The number of peers that have sent an EOR marker for the address family since the last BGP restart
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast convergence converged-peers</a> <i>number</i>
<b>Tree</b>	<a href="#">converged-peers</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## convergence-state *keyword*

<b>Description</b>	Enter the convergence-state context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast convergence convergence-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">convergence-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>waiting</b> BGP has recently restarted and no sessions have re-established yet</li> <li>• <b>started</b> BGP has recently restarted and at least one session has re-established with support of the address family</li> <li>• <b>partial</b> BGP has recently restarted and at least one session has advertised an End-of-RIB marker for the address family.</li> <li>• <b>timeout</b></li> </ul>

BGP has recently restarted and not all non-slow peers advertised an End-of-RIB marker for the address family before the max-wait-to-advertise timer expired

- converged

All non-slow peers that support the address family have advertised the End-of-RIB marker for the address family

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **convergence-time number**

<b>Description</b>	The elapsed time in seconds, starting from the last BGP restart, to reach the converged state for the address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast convergence convergence-time</a> <i>number</i>
<b>Tree</b>	<a href="#">convergence-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **first-up-peer-time number**

<b>Description</b>	The time when the first session supporting the address family came up, measured from the time that the BGP instance restarted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast convergence first-up-peer-time</a> <i>number</i>
<b>Tree</b>	<a href="#">first-up-peer-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-up-peer-time number**

<b>Description</b>	The time when the last session supporting the address family came up, measured from the time that the BGP instance restarted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast convergence last-up-peer-time</a> <i>number</i>
<b>Tree</b>	<a href="#">last-up-peer-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**max-wait-to-advertise** *number*

<b>Description</b>	The maximum amount of time, in seconds, measured from the time when the first session (configured or dynamic) that supports the address family comes up after a BGP restart, until BGP is allowed to advertise any routes in that address family to any peer  The value of this leaf must always be greater than or equal to the operational value of min-wait-to-advertise. The default value is 3x the value of min-wait-to-advertise. A value of 0 means the feature is disabled and there is no additional delay before advertising routes of the address family.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast convergence max-wait-to-advertise</a> <i>number</i>
<b>Tree</b>	<a href="#">max-wait-to-advertise</a>
<b>Range</b>	0 to 3600
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**oper-max-wait-to-advertise** *number*

<b>Description</b>	The operational value of the max-wait-to-advertise timer for the address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast convergence oper-max-wait-to-advertise</a> <i>number</i>
<b>Tree</b>	<a href="#">oper-max-wait-to-advertise</a>
<b>Range</b>	0 to 10800
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**up-peers** *number*

<b>Description</b>	The number of BGP sessions (configured and dynamic) that support the address family and that are currently in the established state
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast convergence up-peers</a> <i>number</i>
<b>Tree</b>	<a href="#">up-peers</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**up-peers-when-min-expired** *number*

<b>Description</b>	The number of BGP sessions (configured and dynamic) that support the address family and that were in established state when the win-wait-to-advertise timer expired
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast convergence up-peers-when-min-expired</a> <i>number</i>
<b>Tree</b>	<a href="#">up-peers-when-min-expired</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**next-hop-resolution**

<b>Description</b>	Options for controlling next-hop resolution procedures
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast next-hop-resolution</a>
<b>Tree</b>	<a href="#">next-hop-resolution</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4-next-hops**

<b>Description</b>	Options related to the resolution of BGP next-hops that are IPv4 addresses
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast next-hop-resolution ipv4-next-hops</a>
<b>Tree</b>	<a href="#">ipv4-next-hops</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**route-resolution**

<b>Description</b>	Options related to resolution using IP routes in the FIB
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast next-hop-resolution ipv4-next-hops route-resolution</a>
<b>Tree</b>	<a href="#">route-resolution</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**admin-state** *keyword*

<b>Description</b>	Enable or disable route resolution if no resolving tunnel is found
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">next-hop-resolution</a> <a href="#">ipv4-next-hops</a> <a href="#">route-resolution</a> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ignore-default-routes** *boolean*

<b>Description</b>	Ignore default routes, regardless of route type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">next-hop-resolution</a> <a href="#">ipv4-next-hops</a> <a href="#">route-resolution</a> <a href="#">ignore-default-routes</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ignore-default-routes</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**tunnel-resolution**

<b>Description</b>	Options related to resolution using tunnels in the tunnel table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">next-hop-resolution</a> <a href="#">ipv4-next-hops</a> <a href="#">tunnel-resolution</a>
<b>Tree</b>	<a href="#">tunnel-resolution</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**allowed-tunnel-types** *identityref*

<b>Description</b>	List of allowed tunnel types
--------------------	------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast next-hop-resolution ipv4-next-hops tunnel-resolution allowed-tunnel-types</a> <i>identityref</i>
<b>Tree</b>	<a href="#">allowed-tunnel-types</a>
<b>Options</b>	<ul style="list-style-type: none"> <li><a href="#">bgp-next-hop-resolution-tunnel-type</a> Base type for the types of tunnels that can be used by BGP for next-hop resolution</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## color-aware

<b>Description</b>	Color-aware next-hop resolution options
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast next-hop-resolution ipv4-next-hops tunnel-resolution color-aware</a>
<b>Tree</b>	<a href="#">color-aware</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv6-next-hops

<b>Description</b>	Options related to the resolution of BGP next-hops that are IPv6 addresses
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast next-hop-resolution ipv6-next-hops</a>
<b>Tree</b>	<a href="#">ipv6-next-hops</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## route-resolution

<b>Description</b>	Options related to resolution using IP routes in the FIB
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast next-hop-resolution ipv6-next-hops route-resolution</a>
<b>Tree</b>	<a href="#">route-resolution</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**admin-state** *keyword*

<b>Description</b>	Enable or disable route resolution if no resolving tunnel is found
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">next-hop-resolution</a> <a href="#">ipv6-next-hops</a> <a href="#">route-resolution</a> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ignore-default-routes** *boolean*

<b>Description</b>	Ignore default routes, regardless of route type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">next-hop-resolution</a> <a href="#">ipv6-next-hops</a> <a href="#">route-resolution</a> <a href="#">ignore-default-routes</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ignore-default-routes</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**tunnel-resolution**

<b>Description</b>	Options related to resolution using tunnels in the tunnel table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a> <a href="#">next-hop-resolution</a> <a href="#">ipv6-next-hops</a> <a href="#">tunnel-resolution</a>
<b>Tree</b>	<a href="#">tunnel-resolution</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**allowed-tunnel-types** *identityref*

<b>Description</b>	List of allowed tunnel types
--------------------	------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast next-hop-resolution ipv6-next-hops tunnel-resolution allowed-tunnel-types</a> <i>identityref</i>
<b>Tree</b>	<a href="#">allowed-tunnel-types</a>
<b>Options</b>	<ul style="list-style-type: none"> <li><a href="#">bgp-next-hop-resolution-tunnel-type</a> Base type for the types of tunnels that can be used by BGP for next-hop resolution</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## color-aware

<b>Description</b>	Color-aware next-hop resolution options
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast next-hop-resolution ipv6-next-hops tunnel-resolution color-aware</a>
<b>Tree</b>	<a href="#">color-aware</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## rapid-update *boolean*

<b>Description</b>	When true, label-ipv6 update messages are advertised immediately, bypassing the MRAI  When this is false, reachability updates and withdrawals are subject to the MRAI interval.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast rapid-update</a> <i>boolean</i>
<b>Tree</b>	<a href="#">rapid-update</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv6-unicast

<b>Description</b>	Options related to the IPv6-unicast address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast</a>

<b>Tree</b>	<a href="#">ipv6-unicast</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## convergence

<b>Description</b>	Options for controlling and monitoring routing convergence of the relevant address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast convergence</a>
<b>Tree</b>	<a href="#">convergence</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## converged-peers *number*

<b>Description</b>	The number of peers that have sent an EOR marker for the address family since the last BGP restart
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast convergence converged-peers</a> <i>number</i>
<b>Tree</b>	<a href="#">converged-peers</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## convergence-state *keyword*

<b>Description</b>	Enter the convergence-state context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast convergence convergence-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">convergence-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>waiting</b> BGP has recently restarted and no sessions have re-established yet</li> <li>• <b>started</b> BGP has recently restarted and at least one session has re-established with support of the address family</li> <li>• <b>partial</b> BGP has recently restarted and at least one session has advertised an End-of-RIB marker for the address family.</li> </ul>

- **timeout**  
BGP has recently restarted and not all non-slow peers advertised an End-of-RIB marker for the address family before the max-wait-to-advertise timer expired
- **converged**  
All non-slow peers that support the address family have have advertised the End-of-RIB marker for the address family

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **convergence-time** *number*

<b>Description</b>	The elapsed time in seconds, starting from the last BGP restart, to reach the converged state for the address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast convergence convergence-time</a> <i>number</i>
<b>Tree</b>	<a href="#">convergence-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **first-up-peer-time** *number*

<b>Description</b>	The time when the first session supporting the address family came up, measured from the time that the BGP instance restarted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast convergence first-up-peer-time</a> <i>number</i>
<b>Tree</b>	<a href="#">first-up-peer-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-up-peer-time** *number*

<b>Description</b>	The time when the last session supporting the address family came up, measured from the time that the BGP instance restarted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast convergence last-up-peer-time</a> <i>number</i>
<b>Tree</b>	<a href="#">last-up-peer-time</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **max-wait-to-advertise** *number*

**Description** The maximum amount of time, in seconds, measured from the time when the first session (configured or dynamic) that supports the address family comes up after a BGP restart, until BGP is allowed to advertise any routes in that address family to any peer

The value of this leaf must always be greater than or equal to the operational value of min-wait-to-advertise. The default value is 3x the value of min-wait-to-advertise. A value of 0 means the feature is disabled and there is no additional delay before advertising routes of the address family.

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref* [ipv6-unicast convergence max-wait-to-advertise](#) *number*

**Tree** [max-wait-to-advertise](#)

**Range** 0 to 3600

**Default** 0

**Configurable** True

**Platforms** Supported on all platforms

### **oper-max-wait-to-advertise** *number*

**Description** The operational value of the max-wait-to-advertise timer for the address family

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref* [ipv6-unicast convergence oper-max-wait-to-advertise](#) *number*

**Tree** [oper-max-wait-to-advertise](#)

**Range** 0 to 10800

**Configurable** False

**Platforms** Supported on all platforms

### **up-peers** *number*

**Description** The number of BGP sessions (configured and dynamic) that support the address family and that are currently in the established state

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref* [ipv6-unicast convergence up-peers](#) *number*

**Tree** [up-peers](#)

**Configurable** False

**Platforms** Supported on all platforms

### up-peers-when-min-expired *number*

**Description** The number of BGP sessions (configured and dynamic) that support the address family and that were in established state when the win-wait-to-advertise timer expired

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref* [ipv6-unicast convergence up-peers-when-min-expired](#) *number*

**Tree** [up-peers-when-min-expired](#)

**Configurable** False

**Platforms** Supported on all platforms

### next-hop-resolution

**Description** Options for controlling next-hop resolution procedures

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref* [ipv6-unicast next-hop-resolution](#)

**Tree** [next-hop-resolution](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv4-next-hops

**Description** Options related to the resolution of BGP next-hops that are IPv4 addresses

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref* [ipv6-unicast next-hop-resolution ipv4-next-hops](#)

**Tree** [ipv4-next-hops](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### tunnel-resolution

**Description** Options related to resolution using tunnels in the tunnel table

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref* [ipv6-unicast next-hop-resolution ipv4-next-hops tunnel-resolution](#)

**Tree** [tunnel-resolution](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### allowed-tunnel-types *identityref*

**Description** List of allowed tunnel types

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref* [ipv6-unicast next-hop-resolution ipv4-next-hops tunnel-resolution allowed-tunnel-types](#) *identityref*

**Tree** [allowed-tunnel-types](#)

**Options**

- [bgp-next-hop-resolution-tunnel-type](#)  
Base type for the types of tunnels that can be used by BGP for next-hop resolution

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### color-aware

**Description** Color-aware next-hop resolution options

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref* [ipv6-unicast next-hop-resolution ipv4-next-hops tunnel-resolution color-aware](#)

**Tree** [color-aware](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### mode *keyword*

**Description** Mode to control the order of tunnel resolution compared to route resolution

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref* [ipv6-unicast next-hop-resolution ipv4-next-hops tunnel-resolution mode](#) *keyword*

**Tree** [mode](#)

**Default** disabled

**Options**

- prefer
- require
- disabled

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv6-next-hops

**Description** Options related to the resolution of BGP next-hops that are IPv6 addresses

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref*  
[ipv6-unicast next-hop-resolution ipv6-next-hops](#)

**Tree** [ipv6-next-hops](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## tunnel-resolution

**Description** Options related to resolution using tunnels in the tunnel table

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref*  
[ipv6-unicast next-hop-resolution ipv6-next-hops tunnel-resolution](#)

**Tree** [tunnel-resolution](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## allowed-tunnel-types *identityref*

**Description** List of allowed tunnel types

**Context** [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref*  
[ipv6-unicast next-hop-resolution ipv6-next-hops tunnel-resolution allowed-tunnel-types](#) *identityref*

**Tree** [allowed-tunnel-types](#)

**Options**

- [bgp-next-hop-resolution-tunnel-type](#)  
Base type for the types of tunnels that can be used by BGP for next-hop resolution

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**color-aware**

<b>Description</b>	Color-aware next-hop resolution options
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">next-hop-resolution</a> <a href="#">ipv6-next-hops</a> <a href="#">tunnel-resolution</a> <a href="#">color-aware</a>
<b>Tree</b>	<a href="#">color-aware</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**mode** *keyword*

<b>Description</b>	Mode to control the order of tunnel resolution compared to route resolution
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">next-hop-resolution</a> <a href="#">ipv6-next-hops</a> <a href="#">tunnel-resolution</a> <a href="#">mode</a> <i>keyword</i>
<b>Tree</b>	<a href="#">mode</a>
<b>Default</b>	disabled
<b>Options</b>	<ul style="list-style-type: none"> <li>• prefer</li> <li>• require</li> <li>• disabled</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**multipath**

<b>Description</b>	Options related to BGP multipath
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp</a> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">multipath</a>
<b>Tree</b>	<a href="#">multipath</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**allow-multiple-as** *boolean*

<b>Description</b>	When set to true, BGP is allowed to build a multipath set using BGP routes with different neighbor AS (most recent AS in the AS_PATH)  When set to false, BGP is only allowed to use non-best paths for ECMP if they meet the multipath criteria and they have the same neighbor AS as the best path
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">multipath allow-multiple-as</a> <i>boolean</i>
<b>Tree</b>	<a href="#">allow-multiple-as</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-paths-level-1** *number*

<b>Description</b>	The maximum number of BGP ECMP next-hops for BGP routes with an NLRI belonging to the address family of this configuration context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">multipath max-paths-level-1</a> <i>number</i>
<b>Tree</b>	<a href="#">max-paths-level-1</a>
<b>Range</b>	1 to 64
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-paths-level-2** *number*

<b>Description</b>	The maximum number of resolving ECMP next-hops per BGP next-hop associated with BGP routes having an NLRI belonging to the address family of this configuration context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">multipath max-paths-level-2</a> <i>number</i>
<b>Tree</b>	<a href="#">max-paths-level-2</a>
<b>Range</b>	1 to 64
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**received-routes** *number*

<b>Description</b>	The total number of routes belonging to this AFI/SAFI received from all peers of the BGP instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">received-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">received-routes</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**as-path-options**

<b>Description</b>	Options for handling the AS_PATH in received BGP routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp as-path-options</a>
<b>Tree</b>	<a href="#">as-path-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**allow-own-as** *number*

<b>Description</b>	The maximum number of times the global AS number or a local AS number of the BGP instance can appear in any received AS_PATH before it is considered a loop and considered invalid
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp as-path-options allow-own-as</a> <i>number</i>
<b>Tree</b>	<a href="#">allow-own-as</a>
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**remove-private-as**

<b>Description</b>	Container with options for removing private AS numbers (2-byte and 4-byte) from the advertised AS path towards all peers
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp as-path-options remove-private-as</a>
<b>Tree</b>	<a href="#">remove-private-as</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ignore-peer-as** *boolean*

<b>Description</b>	If set to true then do not delete or replace a private AS number that is the same as the peer AS number
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp as-path-options remove-private-as ignore-peer-as</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ignore-peer-as</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**leading-only** *boolean*

<b>Description</b>	If set to true then only delete or replace private AS numbers that appear before the first occurrence of a non-private ASN in the sequence of most recent ASNs in the AS path
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp as-path-options remove-private-as leading-only</a> <i>boolean</i>
<b>Tree</b>	<a href="#">leading-only</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mode** *keyword*

<b>Description</b>	The method by which private AS numbers are removed from the advertised AS_PATH attribute
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp as-path-options remove-private-as mode</a> <i>keyword</i>
<b>Tree</b>	<a href="#">mode</a>
<b>Default</b>	disabled
<b>Options</b>	<ul style="list-style-type: none"> <li>• disabled Do not strip or replace any private AS numbers</li> <li>• delete Delete private AS numbers, shortening the AS path</li> </ul>

- `replace`  
Replace private AS numbers with the local AS number used towards the peer, maintaining the AS path length

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## authentication

<b>Description</b>	Container with authentication options that apply to all peers of the BGP instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## keychain *reference*

<b>Description</b>	Reference to a keychain. The keychain type must be tcp-md5.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp authentication keychain reference</a>
<b>Tree</b>	<a href="#">keychain</a>
<b>Reference</b>	<a href="#">system authentication keychain name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## password *string*

<b>Description</b>	Configures an MD5 authentication password for use with neighboring devices.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp authentication password</a> <i>string</i>
<b>Tree</b>	<a href="#">password</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**autonomous-system** *number*

<b>Description</b>	The global AS number of the BGP instance Values greater than 65535 must be entered in ASPLAIN format.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp autonomous-system</a> <i>number</i>
<b>Tree</b>	<a href="#">autonomous-system</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**best-path-selection**

<b>Description</b>	Container with options that control the BGP decision process (tie break between routes for the same NLRI).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp best-path-selection</a>
<b>Tree</b>	<a href="#">best-path-selection</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**advertise-inactive** *boolean*

<b>Description</b>	Advertise the best BGP route even if it is inactive due to the programming of a better non-BGP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp best-path-selection advertise-inactive</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-inactive</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**always-compare-med** *boolean*

<b>Description</b>	Compare multi-exit discriminator (MED) value from different ASes when selecting the best route. The default behavior is to only compare MEDs for paths received from the same AS.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp best-path-selection always-compare-med</a> <i>boolean</i>

<b>Tree</b>	<a href="#">always-compare-med</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## bgp-label

<b>Description</b>	Enter the bgp-label context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp bgp-label</a>
<b>Tree</b>	<a href="#">bgp-label</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## convergence

<b>Description</b>	Options for configuring address family independent BGP convergence parameters
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp convergence</a>
<b>Tree</b>	<a href="#">convergence</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## min-wait-to-advertise *number*

<b>Description</b>	<p>The minimum amount of time, in seconds, measured from the moment when the first session (configured or dynamic) comes up after a BGP restart, until BGP is allowed to advertise any routes to any peer</p> <p>The sessions that are established when this timer expires determines the set of peers from which EOR is expected in order to declare convergence for an address family. A value of 0 means the feature is disabled and all routes are advertised immediately.</p> <p>This timer and associated state machine are only restarted by one of the following triggers:</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp convergence min-wait-to-advertise</a> <i>number</i>
<b>Tree</b>	<a href="#">min-wait-to-advertise</a>
<b>Range</b>	0 to 3600

<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## dynamic-neighbors

<b>Description</b>	Options related to the acceptance and initiation of dynamic BGP sessions
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp dynamic-neighbors</a>
<b>Tree</b>	<a href="#">dynamic-neighbors</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## accept

<b>Description</b>	Options related to the acceptance of dynamic BGP sessions from remote peers
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp dynamic-neighbors accept</a>
<b>Tree</b>	<a href="#">accept</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## match [prefix](#) (*ipv4-prefix | ipv6-prefix*)

<b>Description</b>	<p>List of prefix and group-id combinations from which incoming TCP connections to port 179 will be accepted</p> <p>An incoming TCP connection to port 179 is matched to a list entry if: (a) the source IP does not match a configured BGP neighbor address (b) the list entry prefix is the longest prefix match of the source IP. (c) the source IP is not an IPv6 link-local address associated with an (unnumbered) interface configured for dynamic-neighbor sessions.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp dynamic-neighbors accept match prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> )
<b>Tree</b>	<a href="#">match</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	The IP prefix used to match an incoming dynamic BGP session to a group.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp dynamic-neighbors accept match prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**allowed-peer-as** *string*

<b>Description</b>	The allowed AS numbers that can establish incoming BGP sessions from this prefix and group-id-range combination  If the OPEN message from a peer matched to this prefix contains a MyAS number that is not in this allowed list then a NOTIFICATION is sent to the peer with the indication Bad Peer AS. Each entry in this list can be a single AS number or a range of AS numbers in the format as1..as2
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp dynamic-neighbors accept match prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">allowed-peer-as</a> <i>string</i>
<b>Tree</b>	<a href="#">allowed-peer-as</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

**peer-group** *reference*

<b>Description</b>	Reference to a peer-group  When an incoming session is matched to this list entry it is associated with the peer-group referenced by this leaf. The peer-group provides all the parameters needed to complete the establishment of the dynamic session. If the referenced peer-group has a configured peer-as this is ignored by dynamic BGP sessions using the group as a template.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp dynamic-neighbors accept match prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">peer-group</a> <i>reference</i>
<b>Tree</b>	<a href="#">peer-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group</a> <a href="#">group-name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-sessions** *number*

<b>Description</b>	The maximum number of incoming BGP sessions that will be accepted by the router  A value of 0 means no limit.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp dynamic-neighbors accept max-sessions</a> <i>number</i>
<b>Tree</b>	<a href="#">max-sessions</a>
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface** [interface-name](#) *string*

<b>Description</b>	List of interfaces on which dynamic sessions based on IPv6 link-local address discovery are accepted and initiated.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp dynamic-neighbors interface interface-name</a> <i>string</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**interface-name** *string*

<b>Description</b>	Reference to a specific subinterface of the form <interface-name>.<subinterface-index>  The referenced subinterface should be enabled for IPv6 and should be configured to accept and send IPv6 router advertisement messages. The referenced subinterface does not need any IPv4 addresses or global-unicast IPv6 addresses (i.e. it can be an unnumbered interface).  When a subinterface is present in this list, incoming TCP connections to the BGP well-known port that are received on this subinterface and sourced from an IPv6 link local address and destined for the IPv6 link local address of the subinterface are automatically accepted.  When a subinterface is present in this list, received IPv6 router advertisement messages on this subinterface automatically trigger BGP session setup towards the sender of these messages, if there is not already an established session.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp dynamic-neighbors interface interface-name</a> <i>string</i>
<b>String Length</b>	5 to 25
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **allowed-peer-as** *string*

<b>Description</b>	Specifies the allowed AS numbers of dynamic BGP neighbors on this interface. If the OPEN message from a peer on this interface contains a MyAS number that is not in this allowed list then a NOTIFICATION is sent to the peer with the indication Bad Peer AS. Each entry in this list can be a single AS number or a range of AS numbers in the string format as1..as2.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp dynamic-neighbors interface interface-name</a> <i>string</i> <a href="#">allowed-peer-as</a> <i>string</i>
<b>Tree</b>	<a href="#">allowed-peer-as</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	32

### **max-sessions** *number*

<b>Description</b>	The maximum number of dynamic sessions that are allowed to be setup on the interface as a result of accepting sessions from link-local addresses or initiating sessions by means of receiving IPv6 router advertisements.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp dynamic-neighbors interface interface-name</a> <i>string</i> <a href="#">max-sessions</a> <i>number</i>
<b>Tree</b>	<a href="#">max-sessions</a>
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**peer-group** *reference*

<b>Description</b>	Reference to a peer-group Specifies the peer-group to associate with dynamic BGP neighbors on this interface. The peer-group provides all the parameters needed to complete the establishment of the dynamic session.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp dynamic-neighbors interface interface-name</a> <i>string</i> <a href="#">peer-group reference</a>
<b>Tree</b>	<a href="#">peer-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ebgp-default-policy**

<b>Description</b>	Options for controlling the default policies that apply to EBGp sessions
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp ebgp-default-policy</a>
<b>Tree</b>	<a href="#">ebgp-default-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**export-reject-all** *boolean*

<b>Description</b>	When set to true, all outbound routes towards any EBGp peer to which no explicit export policy is applied are treated as though they were rejected by policy
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp ebgp-default-policy export-reject-all</a> <i>boolean</i>
<b>Tree</b>	<a href="#">export-reject-all</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**import-reject-all** *boolean*

<b>Description</b>	When set to true, all inbound routes from any EBGp peer to which no explicit import policy is applied are treated as though they were rejected by policy
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp ebgp-default-policy import-reject-all</a> <i>boolean</i>
<b>Tree</b>	<a href="#">import-reject-all</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **export-policy** *reference*

<b>Description</b>	Apply an export policy to advertised BGP routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp export-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">export-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **failure-detection**

<b>Description</b>	Options related to methods of detecting BGP session failure
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp failure-detection</a>
<b>Tree</b>	<a href="#">failure-detection</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **enable-bfd** *boolean*

<b>Description</b>	The true setting enables Bi-directional Forwarding Detection on BGP sessions belonging to the peer group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp failure-detection enable-bfd</a> <i>boolean</i>
<b>Tree</b>	<a href="#">enable-bfd</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**fast-failover** *boolean*

<b>Description</b>	The true setting causes EBGP and IBGP sessions to drop immediately (and not wait for hold timer expiry) when the local interface that they depend upon for neighbor reachability goes down
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp failure-detection fast-failover</a> <i>boolean</i>
<b>Tree</b>	<a href="#">fast-failover</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**graceful-restart**

<b>Description</b>	Options for controlling the behavior of the router as a graceful restart helper
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp graceful-restart</a>
<b>Tree</b>	<a href="#">graceful-restart</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable graceful restart helper for all address families
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp graceful-restart admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**requested-restart-time** *number*

<b>Description</b>	The restart time encoded in this router's GR capability. If the neighbor honors this request then this is the maximum time allowed for this router to re-establish its TCP connection after a restart. If this time
--------------------	--

is exceeded, the neighbor is expected to flush stale routes that it was maintaining on behalf of this router.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp graceful-restart requested-restart-time</a> <i>number</i>
<b>Tree</b>	<a href="#">requested-restart-time</a>
<b>Range</b>	1 to 3600
<b>Default</b>	300
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **stale-routes-time** *number*

<b>Description</b>	The maximum number of seconds that routes received from a helped peer remain stale until they are deleted  Routes of AFI/SAFI X received from peer Y are marked stale when peer Y goes down and its previous GR capability included AFI/SAFI X.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp graceful-restart stale-routes-time</a> <i>number</i>
<b>Tree</b>	<a href="#">stale-routes-time</a>
<b>Range</b>	1 to 3600
<b>Default</b>	360
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **group** [group-name](#) *string*

<b>Description</b>	Peer group templates
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i>
<b>Tree</b>	<a href="#">group</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**group-name** *string*

<b>Description</b>	The configured name of the peer group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i>
<b>String Length</b>	1 to 64
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable the peer group Disable will tear down all the BGP sessions in the group, even if they are administratively enabled at the neighbor level.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**afi-safi** [afi-safi-name](#) *identityref*

<b>Description</b>	List of address families supported by the BGP peer group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i>
<b>Tree</b>	<a href="#">afi-safi</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**afi-safi-name** *identityref*

<b>Description</b>	The name of a BGP address family, which translates to a specific AFI value and a specific SAFI value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ipv4-unicast</li> </ul>

- Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1)
- ipv6-unicast
  - Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1)
- l3vpn-ipv4-unicast
  - VPN-IPv4 unicast address family (AFI = 1, SAFI = 128)
- l3vpn-ipv6-unicast
  - VPN-IPv6 unicast address family (AFI = 2, SAFI = 128)
- ipv4-labeled-unicast
  - Labeled IPv4 unicast routes (AFI 1, SAFI 4)
- ipv6-labeled-unicast
  - Labeled IPv6 unicast routes (AFI 2, SAFI 4)
- evpn
  - EVPN routes (AFI = 25, SAFI = 70)
- route-target
  - Route target constraint routes (AFI 1, SAFI 132)

**Configurable**

True

**Platforms**

Supported on all platforms

**add-paths****Description**

Configure support for the advertisement and receipt of multiple paths for the AFI/SAFI

**Context**

[network-instance name](#) *string* [protocols bgp group group-name](#) *string* [afi-safi afi-safi-name](#) *identityref* [add-paths](#)

**Tree**

[add-paths](#)

**Configurable**

True

**import-policy** *reference*

<b>Description</b>	Apply an import policy to received BGP routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">import-policy reference</a>
<b>Tree</b>	<a href="#">import-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4-labeled-unicast**

<b>Description</b>	Options related to the labeled-IPv4-unicast address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast</a>
<b>Tree</b>	<a href="#">ipv4-labeled-unicast</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**advertise-ipv6-next-hops** *boolean*

<b>Description</b>	Enables advertisement of IPv4 routes with IPv6 next-hops
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast advertise-ipv6-next-hops</a> <i>boolean</i>

<b>Tree</b>	<a href="#">advertise-ipv6-next-hops</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### receive-ipv6-next-hops *boolean*

<b>Description</b>	<p>Enables the advertisement of the RFC 8950 capability to receive IPv4 routes with IPv6 next-hops</p> <p>When set to true, BGP advertises an extended NH encoding (RFC 8950) capability to its peers. This capability indicates that local router is prepared to accept BGP routes for the AFI/SAFI with IPv6 next-hops from peers in the scope of the command. When set to false, BGP handles received AFI/SAFI routes with IPv6 next-hops as an error and applies treat-as-withdraw.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-labeled-unicast receive-ipv6-next-hops</a> <i>boolean</i>
<b>Tree</b>	<a href="#">receive-ipv6-next-hops</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv4-unicast

<b>Description</b>	Options related to the IPv4-unicast address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast</a>
<b>Tree</b>	<a href="#">ipv4-unicast</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### advertise-ipv6-next-hops *boolean*

<b>Description</b>	Enables advertisement of IPv4 routes with IPv6 next-hops
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast advertise-ipv6-next-hops</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-ipv6-next-hops</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## link-bandwidth

<b>Description</b>	Enter the link-bandwidth context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast link-bandwidth</a>
<b>Tree</b>	<a href="#">link-bandwidth</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## add-next-hop-count-to-received-bgp-routes (*number* | *keyword*)

<b>Description</b>	Determines the weight that is internally added to the received PE-CE BGP routes  The configured weight is added to all received BGP PE-CE routes for the purpose of EVPN unequal ECMP. This weight is internal and not added into any link-bandwidth extended community when readvertising the received routes to other ipv4 or ipv6 neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast link-bandwidth add-next-hop-count-to-received-bgp-routes</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">add-next-hop-count-to-received-bgp-routes</a>
<b>Range</b>	1 to 128
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>disable</code></li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## prefix-limit-received

<b>Description</b>	Options for configuring the maximum number of IPv4 routes allowed to be received from each peer in the group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast prefix-limit-received</a>
<b>Tree</b>	<a href="#">prefix-limit-received</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-received-routes** *number*

<b>Description</b>	Maximum number of IPv4 routes that will be accepted from each neighbor, counting routes accepted and rejected by import policies
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast prefix-limit-received max-received-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">max-received-routes</a>
<b>Range</b>	1 to 4294967295
<b>Default</b>	4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**prevent-teardown** *boolean*

<b>Description</b>	When false the session is immediately torn down when the number of received IPv4 routes exceeds the configured limit.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast prefix-limit-received prevent-teardown</a> <i>boolean</i>
<b>Tree</b>	<a href="#">prevent-teardown</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**warning-threshold-pct** *number*

<b>Description</b>	When the number of IPv4 routes received from any group peer (counting routes accepted and rejected by import policy) reaches this percentage of the max-received-routes limit, BGP raises a warning log event
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast prefix-limit-received warning-threshold-pct</a> <i>number</i>
<b>Tree</b>	<a href="#">warning-threshold-pct</a>
<b>Range</b>	0 to 100
<b>Default</b>	90
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**receive-ipv6-next-hops** *boolean*

<b>Description</b>	Enables the advertisement of the RFC 8950 capability to receive IPv4 routes with IPv6 next-hops  When set to true, BGP advertises an extended NH encoding (RFC 8950) capability to its peers. This capability indicates that local router is prepared to accept BGP routes for the AFI/SAFI with IPv6 next-hops from peers in the scope of the command. When set to false, BGP handles received AFI/SAFI routes with IPv6 next-hops as an error and applies treat-as-withdraw.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv4-unicast receive-ipv6-next-hops</a> <i>boolean</i>
<b>Tree</b>	<a href="#">receive-ipv6-next-hops</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ipv6-labeled-unicast**

<b>Description</b>	Options related to the labeled IPv6-unicast address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-labeled-unicast</a>
<b>Tree</b>	<a href="#">ipv6-labeled-unicast</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv6-unicast**

<b>Description</b>	Options related to the IPv6-unicast address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast</a>
<b>Tree</b>	<a href="#">ipv6-unicast</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**link-bandwidth**

<b>Description</b>	Enter the link-bandwidth context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast link-bandwidth</a>

<b>Tree</b>	<a href="#">link-bandwidth</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **add-next-hop-count-to-received-bgp-routes** (*number* | *keyword*)

<b>Description</b>	Determines the weight that is internally added to the received PE-CE BGP routes  The configured weight is added to all received BGP PE-CE routes for the purpose of EVPN unequal ECMP. This weight is internal and not added into any link-bandwidth extended community when readvertising the received routes to other ipv4 or ipv6 neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast link-bandwidth add-next-hop-count-to-received-bgp-routes</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">add-next-hop-count-to-received-bgp-routes</a>
<b>Range</b>	1 to 128
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>disable</code></li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **prefix-limit-received**

<b>Description</b>	Options for configuring the maximum number of IPv6 routes allowed to be received from each peer in the group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast prefix-limit-received</a>
<b>Tree</b>	<a href="#">prefix-limit-received</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **max-received-routes** *number*

<b>Description</b>	Maximum number of IPv6 routes that will be accepted from each neighbor, counting routes accepted and rejected by import policies
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast prefix-limit-received</a> <a href="#">max-received-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">max-received-routes</a>
<b>Range</b>	1 to 4294967295
<b>Default</b>	4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **prevent-teardown** *boolean*

<b>Description</b>	When false the session is immediately torn down when the number of received IPv6 routes exceeds the configured limit.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast prefix-limit-received</a> <a href="#">prevent-teardown</a> <i>boolean</i>
<b>Tree</b>	<a href="#">prevent-teardown</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **warning-threshold-pct** *number*

<b>Description</b>	When the number of IPv6 routes received from any group peer (counting routes accepted and rejected by import policy) reaches this percentage of the max-received-routes limit, BGP raises a warning log event
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i> <a href="#">ipv6-unicast prefix-limit-received</a> <a href="#">warning-threshold-pct</a> <i>number</i>
<b>Tree</b>	<a href="#">warning-threshold-pct</a>
<b>Range</b>	0 to 100
<b>Default</b>	90
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**route-target**

<b>Description</b>	Options related to the RT constraint address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">route-target</a>
<b>Tree</b>	<a href="#">route-target</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**prefix-limit-received**

<b>Description</b>	Options for configuring the maximum number of RTC routes allowed to be received from the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">route-target</a> <a href="#">prefix-limit-received</a>
<b>Tree</b>	<a href="#">prefix-limit-received</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**max-received-routes** *number*

<b>Description</b>	Maximum number of RTC routes that will be accepted from the neighbor, counting routes accepted and rejected by import policies
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">route-target</a> <a href="#">prefix-limit-received</a> <a href="#">max-received-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">max-received-routes</a>
<b>Range</b>	1 to 4294967295
<b>Default</b>	4294967295
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**prevent-teardown** *boolean*

<b>Description</b>	When false the session is immediately torn down when the number of received RTC routes exceeds the configured limit.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">route-target</a> <a href="#">prefix-limit-received</a> <a href="#">prevent-teardown</a> <i>boolean</i>
<b>Tree</b>	<a href="#">prevent-teardown</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **warning-threshold-pct** *number*

<b>Description</b>	When the number of RTC routes received from the peer (counting routes accepted and rejected by import policy) reaches this percentage of the max-received-routes limit, BGP raises a warning log event
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">route-target</a> <a href="#">prefix-limit-received</a> <a href="#">warning-threshold-pct</a> <i>number</i>
<b>Tree</b>	<a href="#">warning-threshold-pct</a>
<b>Range</b>	0 to 100
<b>Default</b>	90
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **send-default-route** *boolean*

<b>Description</b>	When true the router advertises a synthetically generated default RTC route to each peer in the group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">afi-safi afi-safi-name</a> <i>identityref</i> <a href="#">route-target</a> <a href="#">send-default-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">send-default-route</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**as-path-options**

<b>Description</b>	Options for handling the AS_PATH in received BGP routes
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp group group-name</a> <a href="#">string</a> <a href="#">as-path-options</a>
<b>Tree</b>	<a href="#">as-path-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**allow-own-as** *number*

<b>Description</b>	The maximum number of times the global AS number or a local AS number of the BGP instance can appear in any received AS_PATH before it is considered a loop and considered invalid  When this value is changed the new value applies only to the routes received after the change is committed.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp group group-name</a> <a href="#">string</a> <a href="#">as-path-options allow-own-as</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">allow-own-as</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**remove-private-as**

<b>Description</b>	Container with options for removing private AS numbers (2-byte and 4-byte) from the advertised AS path towards all peers
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp group group-name</a> <a href="#">string</a> <a href="#">as-path-options remove-private-as</a>
<b>Tree</b>	<a href="#">remove-private-as</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ignore-peer-as** *boolean*

<b>Description</b>	If set to true then do not delete or replace a private AS number that is the same as the peer AS number
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp group group-name</a> <a href="#">string</a> <a href="#">as-path-options remove-private-as ignore-peer-as</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">ignore-peer-as</a>

<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **leading-only** *boolean*

<b>Description</b>	If set to true then only delete or replace private AS numbers that appear before the first occurrence of a non-private ASN in the sequence of most recent ASNs in the AS path
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">as-path-options remove-private-as leading-only</a> <i>boolean</i>
<b>Tree</b>	<a href="#">leading-only</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **mode** *keyword*

<b>Description</b>	The method by which private AS numbers are removed from the advertised AS_PATH attribute
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">as-path-options remove-private-as mode</a> <i>keyword</i>
<b>Tree</b>	<a href="#">mode</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• disabled Do not strip or replace any private AS numbers</li> <li>• delete Delete private AS numbers, shortening the AS path</li> <li>• replace Replace private AS numbers with the local AS number used towards the peer, maintaining the AS path length</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **replace-peer-as** *boolean*

<b>Description</b>	If set to true then replace every occurrence of the peer AS number that is present in the advertised AS path with the local AS number used towards the peer
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">as-path-options replace-peer-as</a> <i>boolean</i>
<b>Tree</b>	<a href="#">replace-peer-as</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## authentication

<b>Description</b>	Container with authentication options that apply to all peers in this peer-group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## keychain *reference*

<b>Description</b>	Reference to a keychain. The keychain type must be tcp-md5.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">authentication keychain</a> <i>reference</i>
<b>Tree</b>	<a href="#">keychain</a>
<b>Reference</b>	<a href="#">system authentication keychain name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## password *string*

<b>Description</b>	Configures an MD5 authentication password for use with neighboring devices.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">authentication password</a> <i>string</i>
<b>Tree</b>	<a href="#">password</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**description** *string*

<b>Description</b>	A user provided description string for the peer group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">description</a> <i>string</i>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**export-policy** *reference*

<b>Description</b>	Apply an export policy to advertised BGP routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">export-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">export-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**failure-detection**

<b>Description</b>	Options related to methods of detecting BGP session failure
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">failure-detection</a>
<b>Tree</b>	<a href="#">failure-detection</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**enable-bfd** *boolean*

<b>Description</b>	The true setting enables Bi-directional Forwarding Detection on BGP sessions belonging to the peer group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">failure-detection enable-bfd</a> <i>boolean</i>
<b>Tree</b>	<a href="#">enable-bfd</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **fast-failover** *boolean*

**Description** The true setting causes EBGP and IBGP sessions in the peer group to drop immediately (and not wait for hold timer expiry) when the local interface that they depend upon for neighbor reachability goes down

**Context** [network-instance name](#) *string* [protocols bgp group group-name](#) *string* [failure-detection fast-failover](#) *boolean*

**Tree** [fast-failover](#)

**Configurable** True

**Platforms** Supported on all platforms

### **graceful-restart**

**Description** Options related to router behavior as a graceful restart helper

**Context** [network-instance name](#) *string* [protocols bgp group group-name](#) *string* [graceful-restart](#)

**Tree** [graceful-restart](#)

**Configurable** True

**Platforms** Supported on all platforms

### **admin-state** *keyword*

**Description** Administratively enable or disable graceful restart helper for all address families

**Context** [network-instance name](#) *string* [protocols bgp group group-name](#) *string* [graceful-restart admin-state](#) *keyword*

**Tree** [admin-state](#)

**Options**

- enable
- disable

**Configurable** True

**Platforms** Supported on all platforms

### **requested-restart-time** *number*

**Description** The restart time encoded in this router's GR capability.

If the neighbor honors this request then this is the maximum time allowed for this router to re-establish its TCP connection after a restart. If this time is exceeded, the neighbor is expected to flush stale routes that it was maintaining on behalf of this router.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">graceful-restart requested-restart-time</a> <i>number</i>
<b>Tree</b>	<a href="#">requested-restart-time</a>
<b>Range</b>	1 to 3600
<b>Default</b>	300
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **stale-routes-time** *number*

<b>Description</b>	The maximum number of seconds that routes received from a neighbor that is being helped remain stale until they are deleted.  Routes of AFI/SAFI X received from peer Y are marked stale when peer Y goes down and its previous GR capability included AFI/SAFI X.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">graceful-restart stale-routes-time</a> <i>number</i>
<b>Tree</b>	<a href="#">stale-routes-time</a>
<b>Range</b>	1 to 3600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **import-policy** *reference*

<b>Description</b>	Apply an import policy to received BGP routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">import-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">import-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**local-as**

<b>Description</b>	Options related to the local autonomous-system number advertised by this router to its peers
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">local-as</a>
<b>Tree</b>	<a href="#">local-as</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**as-number** *number*

<b>Description</b>	The local autonomous system number used to override the global ASN on this group of BGP sessions  Sets the ASN value that this router sends in its OPEN message towards its peer in the group.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">local-as as-number</a> <i>number</i>
<b>Tree</b>	<a href="#">as-number</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**prepend-global-as** *boolean*

<b>Description</b>	When set to true, the global ASN value is prepended to the AS path in outbound routes towards each BGP peer in the group  If a session is EBGP (peer-as is not equal to the local-as) then the local-as is prepended as the final step, so that the local-as is the first element in the AS_PATH received by the peer.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">local-as prepend-global-as</a> <i>boolean</i>
<b>Tree</b>	<a href="#">prepend-global-as</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**prepend-local-as** *boolean*

<b>Description</b>	When set to true, the local AS value is prepended to the AS path of inbound routes from each EBGP peer belonging to the group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">local-as prepend-local-as</a> <i>boolean</i>
<b>Tree</b>	<a href="#">prepend-local-as</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**local-preference** *number*

<b>Description</b>	The value of the local-preference attribute that is added to received routes from EBGP peers in the group  It is also used to encode the local preference attribute for locally generated BGP routes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">local-preference</a> <i>number</i>
<b>Tree</b>	<a href="#">local-preference</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**maintenance-group** *string*

<b>Description</b>	State field to display the maintenance group to which this group belongs to.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">maintenance-group</a> <i>string</i>
<b>Tree</b>	<a href="#">maintenance-group</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**multihop**

<b>Description</b>	Configuration parameters specifying the multihop behaviour for IBGP and EBGP peers in the peer group.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">multihop</a>
<b>Tree</b>	<a href="#">multihop</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **admin-state** *keyword*

**Description** When enabled, IBGP and EBGP peers in the group are allowed to be indirectly connected by up to N hops, where N is controlled by the maximum-hops parameter. When disabled, only IBGP peers within the peer group support multihop.

This can be overridden on a per neighbor basis. It is inherited by neighbors in the peer-group only if maximum-hops is also specified.

By default this is disabled.

**Context** [network-instance name](#) *string* [protocols bgp group group-name](#) *string* [multihop admin-state](#) *keyword*

**Tree** [admin-state](#)

**Options**

- enable
- disable

**Configurable** True

**Platforms** Supported on all platforms

### **maximum-hops** *number*

**Description** This sets the maximum number of routing hops towards each peer. It determines the IP TTL value in originated BGP TCP/IP packets. By default the TTL is set to 1 towards EBGP peers and 64 towards IBGP peers. This leaf sets a new IP TTL to use towards both EBGP and IBGP peers in the peer group.

This can be overridden on a per neighbor basis. It is inherited by neighbors in the peer-group only if admin-state is also specified.

**Context** [network-instance name](#) *string* [protocols bgp group group-name](#) *string* [multihop maximum-hops](#) *number*

**Tree** [maximum-hops](#)

**Range** 1 to 255

**Configurable** True

**Platforms** Supported on all platforms

### **next-hop-self** *boolean*

**Description** When set to true, the next-hop in all IPv4-unicast, IPv6-unicast, EVPN, VPN-IPv4 and VPN-IPv6 BGP routes advertised to all IBGP peers in the peer-group is set equal to the local-address used on each session (or to the

router ID if the NLRI is IPv6 and there is no IPv6 local address to use). This is independent of the route origin (EBGP, IBGP-client, IBGP-non-client or redistributed direct/static/aggregate route).

When set to false, normal BGP rules from RFC 4271 apply.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">next-hop-self</a> <i>boolean</i>
<b>Tree</b>	<a href="#">next-hop-self</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **peer-as** *number*

<b>Description</b>	The autonomous system number expected from each peer in the group A configured session with a peer does not come up if this value does not match the AS value reported by the peer in its OPEN message.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">peer-as</a> <i>number</i>
<b>Tree</b>	<a href="#">peer-as</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **route-reflector**

<b>Description</b>	Container with route reflection configuration options.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">route-reflector</a>
<b>Tree</b>	<a href="#">route-reflector</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **client** *boolean*

<b>Description</b>	When this is set to true all configured and dynamic BGP sessions that belong to the peer-group are considered RR clients.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">route-reflector client</a> <i>boolean</i>

<b>Tree</b>	<a href="#">client</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **cluster-id** (*number | dotted-quad*)

<b>Description</b>	The cluster-id to insert into the CLUSTER_LIST attribute when reflecting routes received by or sent to each client in the peer-group. The default is inherited from instance level configuration.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">route-reflector cluster-id</a> ( <i>number   dotted-quad</i> )
<b>Tree</b>	<a href="#">cluster-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **send-community**

<b>Description</b>	Options for controlling the sending of BGP communities to peers in the group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">send-community</a>
<b>Tree</b>	<a href="#">send-community</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **large** *boolean*

<b>Description</b>	The false setting causes BGP to strip all large (12 byte) BGP communities from all outbound routes advertised to each peer in the group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">send-community large</a> <i>boolean</i>
<b>Tree</b>	<a href="#">large</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **standard** *boolean*

<b>Description</b>	The false setting causes BGP to strip all standard (4 byte) communities from all outbound routes advertised to each peer in the group
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">send-community standard</a> <i>boolean</i>
<b>Tree</b>	<a href="#">standard</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### send-default-route

<b>Description</b>	Options for controlling the generation of default routes towards group peers
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">send-default-route</a>
<b>Tree</b>	<a href="#">send-default-route</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### export-policy *reference*

<b>Description</b>	The name of a policy that should be applied to the advertised default routes, in order to set their attributes to non-default values Only the default-action of this policy is parsed and applied.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">send-default-route export-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">export-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### ipv4-unicast *boolean*

<b>Description</b>	Enables the sending of a synthetically generated default IPv4 route [0/0] to each peer in the group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">send-default-route ipv4-unicast</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv4-unicast</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ipv6-unicast** *boolean*

<b>Description</b>	Enables the sending of a synthetically generated default IPv6 route [::/0] to each peer in the group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">send-default-route ipv6-unicast</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv6-unicast</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Container for BGP statistics.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**disabled-peers** *number*

<b>Description</b>	The number of configured BGP peers associated with the peer-group that are administratively disabled
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">statistics disabled-peers</a> <i>number</i>
<b>Tree</b>	<a href="#">disabled-peers</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**dynamic-peers** *number*

<b>Description</b>	The number of dynamic BGP peers associated with the peer-group that are currently in the established state, counting sessions resulting from accepted incoming TCP connections and outgoing TCP connections triggered by LLDP auto-discovery
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">statistics dynamic-peers</a> <i>number</i>

<b>Tree</b>	<a href="#">dynamic-peers</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **path-memory** *number*

<b>Description</b>	The total number of bytes required to store the path attribute objects used by received BGP routes associated with the peer-group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">statistics path-memory</a> <i>number</i>
<b>Tree</b>	<a href="#">path-memory</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **total-active-routes** *number*

<b>Description</b>	The total number of received BGP routes that are active (installed for forwarding) and associated with the peer-group, summed across all address families
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">statistics total-active-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">total-active-routes</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **total-paths** *number*

<b>Description</b>	The total number of path attribute objects used by received BGP routes associated with the peer-group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">statistics total-paths</a> <i>number</i>
<b>Tree</b>	<a href="#">total-paths</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-peers** *number*

<b>Description</b>	The total number of configured BGP peers associated with the peer-group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">statistics total-peers</a> <i>number</i>
<b>Tree</b>	<a href="#">total-peers</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-prefixes** *number*

<b>Description</b>	The total number of unique NLRI contained in all received BGP routes associated with the BGP instance or the peer-group.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">statistics total-prefixes</a> <i>number</i>
<b>Tree</b>	<a href="#">total-prefixes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-received-routes** *number*

<b>Description</b>	The total number of received BGP routes associated with the peer-group, summed across all address families
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">statistics total-received-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">total-received-routes</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**up-peers** *number*

<b>Description</b>	The number of configured BGP peers associated with the peer-group that are currently in the established state
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">statistics up-peers</a> <i>number</i>
<b>Tree</b>	<a href="#">up-peers</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

## timers

**Description** Enter the timers context

**Context** [network-instance name string protocols bgp group group-name string timers](#)

**Tree** [timers](#)

**Configurable** True

**Platforms** Supported on all platforms

## connect-retry *number*

**Description** The time interval in seconds between successive attempts to establish a session with a peer

**Context** [network-instance name string protocols bgp group group-name string timers connect-retry number](#)

**Tree** [connect-retry](#)

**Range** 1 to 65535

**Default** 120

**Units** seconds

**Configurable** True

**Platforms** Supported on all platforms

## hold-time *number*

**Description** The hold-time interval in seconds that the router proposes to the peer in its OPEN message

The actual in-use hold-time is negotiated to the lowest value proposed by the two peers. A negotiated value of 0 suppresses the sending of keepalives by both peers.

**Context** [network-instance name string protocols bgp group group-name string timers hold-time number](#)

**Tree** [hold-time](#)

**Range** 0 | 3 to 65535

**Default** 90

**Units** seconds

**Configurable** True

**Platforms** Supported on all platforms

### keepalive-interval *number*

**Description** The interval in seconds between successive keepalive messages sent to the peer

The period between one keepalive message and the next is the minimum of this configured value and 1/3 of the negotiated hold-time duration. A value of 0 suppresses the sending of keepalives to the peer.

**Context** [network-instance name](#) *string* [protocols bgp group group-name](#) *string* [timers keepalive-interval](#) *number*

**Tree** [keepalive-interval](#)

**Range** 0 to 21845

**Units** seconds

**Configurable** True

**Platforms** Supported on all platforms

### minimum-advertisement-interval *number*

**Description** The value assigned to the MinRouteAdvertisementIntervalTimer of RFC 4271, for both EBGp and IBGP sessions

Each session runs its own independent timer and the timer affects both route advertisements and route withdrawals, regardless of address family. For route withdrawals only, this timer is bypassed if rapid-withdrawal is set to true.

**Context** [network-instance name](#) *string* [protocols bgp group group-name](#) *string* [timers minimum-advertisement-interval](#) *number*

**Tree** [minimum-advertisement-interval](#)

**Range** 1 to 255

**Default** 5

**Units** seconds

**Configurable** True

**Platforms** Supported on all platforms

### prefix-limit-restart-timer *number*

**Description** Time interval in seconds after which the BGP session is re-established after being torn down due to exceeding any prefix limit (of any address family)

This only applies if prevent-teardown is false.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">timers prefix-limit-restart-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">prefix-limit-restart-timer</a>
<b>Default</b>	0
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## trace-options

<b>Description</b>	Debug traceoptions for BGP
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">trace-options</a>

**passive-mode** *boolean*

<b>Description</b>	The true setting causes BGP to wait for the peer to initiate the TCP connection
--------------------	---

The false setting causes BGP to initiate a TCP connection whenever the BGP session is started or restarted.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">transport passive-mode</a> <i>boolean</i>
<b>Tree</b>	<a href="#">passive-mode</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **tcp-mss** *number*

<b>Description</b>	The maximum segment size of BGP TCP packets The actual value used in the transmit direction towards a particular peer should be checked at the neighbor level.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">transport tcp-mss</a> <i>number</i>
<b>Tree</b>	<a href="#">tcp-mss</a>
<b>Range</b>	536 to 9446
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **under-maintenance** *boolean*

<b>Description</b>	Indicates if this BGP group is in maintenance mode
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">under-maintenance</a> <i>boolean</i>
<b>Tree</b>	<a href="#">under-maintenance</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **import-policy** *reference*

<b>Description</b>	Apply an import policy to received BGP routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp import-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">import-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### local-preference *number*

<b>Description</b>	The value of the local-preference attribute that is added to received routes from EBGP peers  It is also used to encode the local preference attribute for locally generated BGP routes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp local-preference</a> <i>number</i>
<b>Tree</b>	<a href="#">local-preference</a>
<b>Default</b>	100
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### maintenance-group *string*

<b>Description</b>	State field to display the maintenance group to which this bgp instance belongs to.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp maintenance-group</a> <i>string</i>
<b>Tree</b>	<a href="#">maintenance-group</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### max-ecmp-hash-buckets-per-next-hop-group *number*

<b>Description</b>	Specifies the maximum number of ECMP hash buckets per next-hop-group  Weighted ECMP weights are normalized based on this number of hash buckets.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp max-ecmp-hash-buckets-per-next-hop-group</a> <i>number</i>
<b>Tree</b>	<a href="#">max-ecmp-hash-buckets-per-next-hop-group</a>
<b>Range</b>	1 to 256
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**neighbor peer-address** (*ipv4-address-with-zone | ipv6-address-with-zone*)

<b>Description</b>	Create a configured BGP session
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> )
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**peer-address** (*ipv4-address-with-zone | ipv6-address-with-zone*)

<b>Description</b>	The transport address of the BGP peer  The peer-address must be a valid IPv4 unicast address, IPv6 global unicast address or IPv6 link-local address. An IPv6 link-local address requires the interface scope to be identified, using a format such as fe80::1234%ethernet-1/1.1
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> )
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable the peer  Disable will tear down the BGP session (return it to IDLE state).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**advertised-capabilities** *keyword*

<b>Description</b>	List of BGP capabilities advertised by the local routing device to the peer
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">advertised-capabilities</a> <i>keyword</i>
<b>Tree</b>	<a href="#">advertised-capabilities</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• MP_BGP</li> <li>• ROUTE_REFRESH</li> <li>• EXT_NH_ENCODING</li> <li>• GRACEFUL_RESTART</li> <li>• 4-OCTET_ASN</li> <li>• ORF_SEND_EXCOMM</li> <li>• ORF_RECEIVE_EXCOMM</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **afi-safi** [afi-safi-name](#) *identityref*

<b>Description</b>	List of address families supported by the BGP neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i>
<b>Tree</b>	<a href="#">afi-safi</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **afi-safi-name** *identityref*

<b>Description</b>	The name of a BGP address family, which translates to a specific AFI value and a specific SAFI value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ipv4-unicast</a> Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1)</li> <li>• <a href="#">ipv6-unicast</a> Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1)</li> <li>• <a href="#">l3vpn-ipv4-unicast</a> VPN-IPv4 unicast address family (AFI = 1, SAFI = 128)</li> <li>• <a href="#">l3vpn-ipv6-unicast</a> VPN-IPv6 unicast address family (AFI = 2, SAFI = 128)</li> <li>• <a href="#">ipv4-labeled-unicast</a></li> </ul>

- Labeled IPv4 unicast routes (AFI 1, SAFI 4)
- `ipv6-labeled-unicast`
- Labeled IPv6 unicast routes (AFI 2, SAFI 4)
- `evpn`
- EVPN routes (AFI = 25, SAFI = 70)
- `route-target`
- Route target constraint routes (AFI 1, SAFI 132)

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **active-routes** *number*

<b>Description</b>	The number of routes belonging to this AFI/SAFI received from the peer that are installed and used, being best routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">active-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">active-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **add-paths**

<b>Description</b>	Configure support for the advertisement and receipt of multiple paths for the AFI/SAFI
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">add-paths</a>
<b>Tree</b>	<a href="#">add-paths</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **receive** *boolean*

<b>Description</b>	Enable capability negotiation to receive multiple path advertisements from a single peer for a single NLRI belonging to the AFI/SAFI
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">add-paths receive</a> <i>boolean</i>
<b>Tree</b>	<a href="#">receive</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**send** *boolean*

<b>Description</b>	Enable capability negotiation to send multiple path advertisements to a single peer for a single NLRI belonging to the AFI/SAFI
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">add-paths send</a> <i>boolean</i>
<b>Tree</b>	<a href="#">send</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**send-max** *number*

<b>Description</b>	Send the N best paths for a single NLRI, or as many as possible until there are no more valid paths to send.  This ensures the best path is advertised but does not limit the additional paths to being 'used' paths.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi afi-safi-name</a> <a href="#">identityref</a> <a href="#">add-paths send-max</a> <i>number</i>
<b>Tree</b>	<a href="#">send-max</a>
<b>Range</b>	1 to 16
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**send-multipath**

<b>Description</b>	Send the used paths for a single NLRI, including all paths that are multipaths.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi afi-safi-name</a> <a href="#">identityref add-paths</a> <a href="#">send-multipath</a>
<b>Tree</b>	<a href="#">send-multipath</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**admin-state** *keyword*

<b>Description</b>	This leaf indicates whether support for the AFI-SAFI is enabled/advertised to the neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi afi-safi-name</a> <a href="#">identityref admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**evpn**

<b>Description</b>	Options related to the EVPN address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi afi-safi-name</a> <a href="#">identityref evpn</a>
<b>Tree</b>	<a href="#">evpn</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**advertise-ipv6-next-hops** *boolean*

<b>Description</b>	Enables advertisement of EVPN routes with IPv6 next-hops to peers
--------------------	---

If this is set to true and the local-address used towards the peer is an IPv6 address and BGP is supposed to apply next-hop-self then the route is advertised with the IPv6 local-address as the BGP next-hop. If this is set to false, then the EVPN route is advertised with an IPv4 next-hop.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref evpn advertise-ipv6-next-hops</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-ipv6-next-hops</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### prefix-limit-received

<b>Description</b>	Options for configuring the maximum number of EVPN routes allowed to be received from the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref evpn prefix-limit-received</a>
<b>Tree</b>	<a href="#">prefix-limit-received</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### max-received-routes *number*

<b>Description</b>	Maximum number of EVPN routes that will be accepted from the neighbor, counting routes accepted and rejected by import policies
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref evpn prefix-limit-received max-received-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">max-received-routes</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### warning-threshold-pct *number*

<b>Description</b>	When the number of EVPN routes received from the peer (counting routes accepted and rejected by import policy) reaches this percentage of the max-received-routes limit, BGP raises a warning log event
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">evpn prefix-limit-received</a> <a href="#">warning-threshold-pct</a> <i>number</i>
<b>Tree</b>	<a href="#">warning-threshold-pct</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **export-policy** *reference*

<b>Description</b>	Apply an export policy to advertised BGP routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">export-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">export-policy</a>
<b>Reference</b>	<a href="#">routing-policy</a> <a href="#">policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **import-policy** *reference*

<b>Description</b>	Apply an import policy to received BGP routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">import-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">import-policy</a>
<b>Reference</b>	<a href="#">routing-policy</a> <a href="#">policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ipv4-labeled-unicast**

<b>Description</b>	Options related to the labeled IPv4-unicast address family
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a>
<b>Tree</b>	<a href="#">ipv4-labeled-unicast</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **advertise-ipv6-next-hops** *boolean*

<b>Description</b>	Enables advertisement of IPv4 routes with IPv6 next-hops
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">advertise-ipv6-next-hops</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-ipv6-next-hops</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **receive-ipv6-next-hops** *boolean*

<b>Description</b>	<p>Enables the advertisement of the RFC 8950 capability to receive IPv4 routes with IPv6 next-hops</p> <p>When set to true, BGP advertises an extended NH encoding (RFC 8950) capability to its peers. This capability indicates that local router is prepared to accept BGP routes for the AFI/SAFI with IPv6 next-hops from peers in the scope of the command. When set to false, BGP handles received AFI/SAFI routes with IPv6 next-hops as an error and applies treat-as-withdraw.</p>
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-labeled-unicast</a> <a href="#">receive-ipv6-next-hops</a> <i>boolean</i>
<b>Tree</b>	<a href="#">receive-ipv6-next-hops</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ipv4-unicast**

<b>Description</b>	Options related to the IPv4-unicast address family
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a>
<b>Tree</b>	<a href="#">ipv4-unicast</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### advertise-ipv6-next-hops *boolean*

<b>Description</b>	Enables advertisement of IPv4 routes with IPv6 next-hops
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">advertise-ipv6-next-hops</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-ipv6-next-hops</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### link-bandwidth

<b>Description</b>	Enter the link-bandwidth context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">link-bandwidth</a>
<b>Tree</b>	<a href="#">link-bandwidth</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### add-next-hop-count-to-received-bgp-routes (*number* | *keyword*)

<b>Description</b>	Determines the weight that is internally added to the received PE-CE BGP routes  The configured weight is added to all received BGP PE-CE routes for the purpose of EVPN unequal ECMP. This weight is internal and not added into any link-bandwidth extended community when readvertising the received routes to other ipv4 or ipv6 neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">link-bandwidth</a> <a href="#">add-next-hop-count-to-received-bgp-routes</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">add-next-hop-count-to-received-bgp-routes</a>
<b>Range</b>	1 to 128
<b>Options</b>	<ul style="list-style-type: none"> <li>• disable</li> </ul>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### prefix-limit-received

<b>Description</b>	Options for configuring the maximum number of IPv4 routes allowed to be received from the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast prefix-limit-received</a>
<b>Tree</b>	<a href="#">prefix-limit-received</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### max-received-routes *number*

<b>Description</b>	Maximum number of IPv4 routes that will be accepted from the neighbor, counting routes accepted and rejected by import policies
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast prefix-limit-received max-received-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">max-received-routes</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### prefix-limit-exceeded *boolean*

<b>Description</b>	Changes from false to true when the number of received IPv4 routes increases to max-received-routes + 1 and remains true until the number of received IPv4 routes decreases back to max-received-routes (applicable if prevent-teardown = true) or until the session is re-established (applicable if prevent-teardown = false)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast prefix-limit-received prefix-limit-exceeded</a> <i>boolean</i>
<b>Tree</b>	<a href="#">prefix-limit-exceeded</a>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### prevent-teardown *boolean*

**Description** When false the session is immediately torn down when the number of received IPv4 routes exceeds the configured limit.

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast prefix-limit-received](#) [prevent-teardown](#) *boolean*

**Tree** [prevent-teardown](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### warning-threshold-pct *number*

**Description** When the number of IPv4 routes received from the peer (counting routes accepted and rejected by import policy) reaches this percentage of the max-received-routes limit, BGP raises a warning log event

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast prefix-limit-received](#) [warning-threshold-pct](#) *number*

**Tree** [warning-threshold-pct](#)

**Range** 0 to 100

**Configurable** True

**Platforms** Supported on all platforms

### receive-ipv6-next-hops *boolean*

**Description** Enables the advertisement of the RFC 8950 capability to receive IPv4 routes with IPv6 next-hops

When set to true, BGP advertises an extended NH encoding (RFC 8950) capability to its peers. This capability indicates that local router is prepared to accept BGP routes for the AFI/SAFI with IPv6 next-hops from peers in the scope of the command. When set to false, BGP handles received AFI/SAFI routes with IPv6 next-hops as an error and applies treat-as-withdraw.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv4-unicast</a> <a href="#">receive-ipv6-next-hops</a> <i>boolean</i>
<b>Tree</b>	<a href="#">receive-ipv6-next-hops</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## ipv6-labeled-unicast

<b>Description</b>	Options related to the labeled-IPv6-unicast address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-labeled-unicast</a>
<b>Tree</b>	<a href="#">ipv6-labeled-unicast</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv6-unicast

<b>Description</b>	Options related to the IPv6-unicast address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a>
<b>Tree</b>	<a href="#">ipv6-unicast</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## link-bandwidth

<b>Description</b>	Enter the link-bandwidth context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast</a> <a href="#">link-bandwidth</a>
<b>Tree</b>	<a href="#">link-bandwidth</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**add-next-hop-count-to-received-bgp-routes** (*number* | *keyword*)

<b>Description</b>	Determines the weight that is internally added to the received PE-CE BGP routes  The configured weight is added to all received BGP PE-CE routes for the purpose of EVPN unequal ECMP. This weight is internal and not added into any link-bandwidth extended community when readvertising the received routes to other ipv4 or ipv6 neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast link-bandwidth add-next-hop-count-to-received-bgp-routes</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">add-next-hop-count-to-received-bgp-routes</a>
<b>Range</b>	1 to 128
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>disable</code></li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**prefix-limit-received**

<b>Description</b>	Options for configuring the maximum number of IPv6 routes allowed to be received from the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast prefix-limit-received</a>
<b>Tree</b>	<a href="#">prefix-limit-received</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-received-routes** *number*

<b>Description</b>	Maximum number of IPv6 routes that will be accepted from the neighbor, counting routes accepted and rejected by import policies
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">ipv6-unicast prefix-limit-received max-received-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">max-received-routes</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **prefix-limit-exceeded** *boolean*

**Description** Changes from false to true when the number of received IPv6 routes increases to max-received-routes + 1 and remains true until the number of received IPv6 routes decreases back to max-received-routes (applicable if prevent-teardown = true) or until the session is re-established (applicable if prevent-teardown = false)

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone | ipv6-address-with-zone*) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast prefix-limit-received prefix-limit-exceeded](#) *boolean*

**Tree** [prefix-limit-exceeded](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **prevent-teardown** *boolean*

**Description** When false the session is immediately torn down when the number of received IPv6 routes exceeds the configured limit.

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone | ipv6-address-with-zone*) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast prefix-limit-received prevent-teardown](#) *boolean*

**Tree** [prevent-teardown](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **warning-threshold-pct** *number*

**Description** When the number of IPv6 routes received from the peer (counting routes accepted and rejected by import policy) reaches this percentage of the max-received-routes limit, BGP raises a warning log event

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone | ipv6-address-with-zone*) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast prefix-limit-received warning-threshold-pct](#) *number*

**Tree** [warning-threshold-pct](#)

**Range** 0 to 100

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**oper-state keyword**

<b>Description</b>	Enter the oper-state context
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">oper-state</a> <a href="#">keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Negotiated operational state of the address family is up</li> <li>• down Negotiated operational state of the address family is down</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**received-routes number**

<b>Description</b>	The number of routes belonging to this AFI/SAFI received from the peer, including routes rejected by import policy
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">received-routes</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">received-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**received-routes-withdrawn-due-to-error number**

<b>Description</b>	The number of routes belonging to this AFI/SAFI received from the peer that were withdrawn due to an update packet error
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">received-routes-withdrawn-due-to-error</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">received-routes-withdrawn-due-to-error</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**rejected-routes** *number*

<b>Description</b>	The number of routes belonging to this AFI/SAFI received from the peer that were rejected by import policy
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">rejected-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">rejected-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-target**

<b>Description</b>	Options related to the RT constraint address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a>
<b>Tree</b>	<a href="#">route-target</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**prefix-limit-received**

<b>Description</b>	Options for configuring the maximum number of RTC routes allowed to be received from the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">prefix-limit-received</a>
<b>Tree</b>	<a href="#">prefix-limit-received</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**max-received-routes** *number*

<b>Description</b>	Maximum number of RTC routes that will be accepted from the neighbor, counting routes accepted and rejected by import policies
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">prefix-limit-received</a> <a href="#">max-received-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">max-received-routes</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **prefix-limit-exceeded** *boolean*

<b>Description</b>	Changes from false to true when the number of received routes increases to max-received-routes + 1 and remains true until the number of received routes decreases back to max-received-routes (applicable if prevent-teardown = true) or until the session is re-established (applicable if prevent-teardown = false)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">prefix-limit-received</a> <a href="#">prefix-limit-exceeded</a> <i>boolean</i>
<b>Tree</b>	<a href="#">prefix-limit-exceeded</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **prevent-teardown** *boolean*

<b>Description</b>	When false the session is immediately torn down when the number of received RTC routes exceeds the configured limit.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">prefix-limit-received</a> <a href="#">prevent-teardown</a> <i>boolean</i>
<b>Tree</b>	<a href="#">prevent-teardown</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **warning-threshold-pct** *number*

<b>Description</b>	When the number of RTC routes received from the peer (counting routes accepted and rejected by import policy) reaches this percentage of the max-received-routes limit, BGP raises a warning log event
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">prefix-limit-received</a> <a href="#">warning-threshold-pct</a> <i>number</i>
<b>Tree</b>	<a href="#">warning-threshold-pct</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **send-default-route** *boolean*

<b>Description</b>	When true the router advertises a synthetically generated default RTC route to the neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">route-target</a> <a href="#">send-default-route</a> <i>boolean</i>
<b>Tree</b>	<a href="#">send-default-route</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **sent-routes** *number*

<b>Description</b>	The number of routes belonging to this AFI/SAFI advertised as reachable to the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">afi-safi</a> <a href="#">afi-safi-name</a> <a href="#">identityref</a> <a href="#">sent-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">sent-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **as-path-options**

<b>Description</b>	Options for handling the AS_PATH in received BGP routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">as-path-options</a>
<b>Tree</b>	<a href="#">as-path-options</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **allow-own-as** *number*

**Description** The maximum number of times the global AS number or a local AS number of the BGP instance can appear in any received AS\_PATH before it is considered a loop and considered invalid

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone | ipv6-address-with-zone*) [as-path-options allow-own-as number](#)

**Tree** [allow-own-as](#)

**Configurable** True

**Platforms** Supported on all platforms

### **remove-private-as**

**Description** Container with options for removing private AS numbers (2-byte and 4-byte) from the advertised AS path towards all peers

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone | ipv6-address-with-zone*) [as-path-options remove-private-as](#)

**Tree** [remove-private-as](#)

**Configurable** True

**Platforms** Supported on all platforms

### **ignore-peer-as** *boolean*

**Description** If set to true then do not delete or replace a private AS number that is the same as the peer AS number

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone | ipv6-address-with-zone*) [as-path-options remove-private-as ignore-peer-as](#) *boolean*

**Tree** [ignore-peer-as](#)

**Default** false

**Configurable** True

**Platforms** Supported on all platforms

**leading-only** *boolean*

<b>Description</b>	If set to true then only delete or replace private AS numbers that appear before the first occurrence of a non-private ASN in the sequence of most recent ASNs in the AS path
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">as-path-options remove-private-as leading-only</a> <i>boolean</i>
<b>Tree</b>	<a href="#">leading-only</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mode** *keyword*

<b>Description</b>	The method by which private AS numbers are removed from the advertised AS_PATH attribute
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">as-path-options remove-private-as mode</a> <i>keyword</i>
<b>Tree</b>	<a href="#">mode</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>disabled Do not strip or replace any private AS numbers</li> <li>delete Delete private AS numbers, shortening the AS path</li> <li>replace Replace private AS numbers with the local AS number used towards the peer, maintaining the AS path length</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**replace-peer-as** *boolean*

<b>Description</b>	If set to true then replace every occurrence of the peer AS number that is present in the advertised AS path with the local AS number used towards the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">as-path-options replace-peer-as</a> <i>boolean</i>
<b>Tree</b>	<a href="#">replace-peer-as</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## authentication

<b>Description</b>	Container with authentication options that apply to this specific peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## keychain *reference*

<b>Description</b>	Reference to a keychain. The keychain type must be tcp-md5.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">authentication keychain reference</a>
<b>Tree</b>	<a href="#">keychain</a>
<b>Reference</b>	<a href="#">system authentication keychain name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## password *string*

<b>Description</b>	Configures an MD5 authentication password for use with neighboring devices.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">authentication password string</a>
<b>Tree</b>	<a href="#">password</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**transmit-active** *boolean*

<b>Description</b>	Reads true when the TCP segments being sent to the peer have authentication data.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">authentication transmit-active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">transmit-active</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**description** *string*

<b>Description</b>	A user provided description string for the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">description</a> <i>string</i>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**discovered-by-lldp** *boolean*

<b>Description</b>	Set to true if the peer IP address is known through LLDP (irrespective of whether the final TCP connection was originated by this router or not)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">discovered-by-lldp</a> <i>boolean</i>
<b>Tree</b>	<a href="#">discovered-by-lldp</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**dynamic-neighbor** *boolean*

<b>Description</b>	Indicates true if the neighbor is a dynamic peer that resulted from an accepted incoming TCP connection or an outgoing TCP connection triggered by LLDP auto-discovery
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">dynamic-neighbor</a> <i>boolean</i>
<b>Tree</b>	<a href="#">dynamic-neighbor</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **established-transitions** *number*

<b>Description</b>	The total number of times the BGP FSM transitioned into the established state for this peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">established-transitions</a> <i>number</i>
<b>Tree</b>	<a href="#">established-transitions</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **export-policy** *reference*

<b>Description</b>	Apply an export policy to advertised BGP routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">export-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">export-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **failure-detection**

<b>Description</b>	Options related to methods of detecting BGP session failure
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">failure-detection</a>
<b>Tree</b>	<a href="#">failure-detection</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **enable-bfd** *boolean*

<b>Description</b>	The true setting enables Bi-directional Forwarding Detection on BGP sessions belonging to the peer group
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">failure-detection enable-bfd</a> <i>boolean</i>
<b>Tree</b>	<a href="#">enable-bfd</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**fast-failover** *boolean*

<b>Description</b>	The true setting the EBGP or IBGP session to drop immediately (and not wait for hold timer expiry) when the local interface that it depends upon for neighbor reachability goes down
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">failure-detection fast-failover</a> <i>boolean</i>
<b>Tree</b>	<a href="#">fast-failover</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**graceful-restart**

<b>Description</b>	Options related to router behavior as a graceful restart helper
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">graceful-restart</a>
<b>Tree</b>	<a href="#">graceful-restart</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable graceful restart helper for all address families
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">graceful-restart admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### helper-active *boolean*

<b>Description</b>	Set to true when the router is actively helping the neighbor for at least one address family - i.e. for that address family the peer restarted with F=1 in its capability and the stale-routes-time has not expired yet
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">graceful-restart helper-active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">helper-active</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### last-restart-time *string*

<b>Description</b>	The last time the peer restarted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">graceful-restart last-restart-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-restart-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### neighbor-capability

<b>Description</b>	Container for information about the last GR capability received from the neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">graceful-restart neighbor-capability</a>
<b>Tree</b>	<a href="#">neighbor-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**afi-safi** *name identityref*

<b>Description</b>	List of AFI/SAFI TLVs that were contained in the neighbor's last GR capability
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <a href="#">graceful-restart neighbor-capability</a> <a href="#">afi-safi name</a> <i>identityref</i>
<b>Tree</b>	<a href="#">afi-safi</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *identityref*

<b>Description</b>	Enter the name context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <a href="#">graceful-restart neighbor-capability</a> <a href="#">afi-safi name</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ipv4-unicast</a> Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1)</li> <li>• <a href="#">ipv6-unicast</a> Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1)</li> <li>• <a href="#">l3vpn-ipv4-unicast</a> VPN-IPv4 unicast address family (AFI = 1, SAFI = 128)</li> <li>• <a href="#">l3vpn-ipv6-unicast</a> VPN-IPv6 unicast address family (AFI = 2, SAFI = 128)</li> <li>• <a href="#">ipv4-labeled-unicast</a> Labeled IPv4 unicast routes (AFI 1, SAFI 4)</li> <li>• <a href="#">ipv6-labeled-unicast</a> Labeled IPv6 unicast routes (AFI 2, SAFI 4)</li> <li>• <a href="#">evpn</a> EVPN routes (AFI = 25, SAFI = 70)</li> <li>• <a href="#">route-target</a> Route target constraint routes (AFI 1, SAFI 132)</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**forwarding-preserved** *boolean*

<b>Description</b>	The F-bit setting in the AFI/SAFI TLV
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">graceful-restart neighbor-capability afi-safi name</a> <a href="#">identityref</a> <a href="#">forwarding-preserved</a> <i>boolean</i>
<b>Tree</b>	<a href="#">forwarding-preserved</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**restart-time** *number*

<b>Description</b>	The value of the Restart Time in the neighbor's last GR capability
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">graceful-restart neighbor-capability restart-time</a> <i>number</i>
<b>Tree</b>	<a href="#">restart-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**number-of-restarts** *number*

<b>Description</b>	The number of times the peer has restarted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">graceful-restart number-of-restarts</a> <i>number</i>
<b>Tree</b>	<a href="#">number-of-restarts</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**requested-restart-time** *number*

<b>Description</b>	The restart time encoded in this router's GR capability.  If the neighbor honors this request then this is the maximum time allowed for this router to re-establish its TCP connection after a restart. If this time is exceeded, the neighbor is expected to flush stale routes that it was maintaining on behalf of this router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">graceful-restart requested-restart-time</a> <i>number</i>

<b>Tree</b>	<a href="#">requested-restart-time</a>
<b>Range</b>	1 to 3600
<b>Default</b>	300
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **stale-routes-time** *number*

<b>Description</b>	The maximum number of seconds that routes received from a helped peer remain stale until they are deleted  Routes of AFI/SAFI X received from peer Y are marked stale when peer Y goes down and its previous GR capability included AFI/SAFI X.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">graceful-restart stale-routes-time</a> <i>number</i>
<b>Tree</b>	<a href="#">stale-routes-time</a>
<b>Range</b>	1 to 3600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **import-policy** *reference*

<b>Description</b>	Apply an import policy to received BGP routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">import-policy reference</a>
<b>Tree</b>	<a href="#">import-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **last-established** *string*

<b>Description</b>	The time when the session last transitioned into or out of the established state
--------------------	--

Uptime or downtime of the session can be calculated from this state.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">last-established</a> <i>string</i>
<b>Tree</b>	<a href="#">last-established</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-event** *keyword*

<b>Description</b>	Enter the last-event context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">last-event</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-event</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• start</li> <li>• stop</li> <li>• open</li> <li>• close</li> <li>• openFail</li> <li>• error</li> <li>• connectRetry</li> <li>• holdTime</li> <li>• keepAlive</li> <li>• recvOpen</li> <li>• recvKeepAlive</li> <li>• recvUpdate</li> <li>• recvNotify</li> <li>• startPassive</li> <li>• parseError</li> <li>• outOfMemory</li> <li>• rtmLimitExceed</li> <li>• outOfProtNHIndex</li> <li>• outOfNHIndex</li> <li>• labelAllocFailed</li> <li>• lspIdAllocFailed</li> </ul>

- collisionResolution

- peerDamping

**Configurable**

False

**Platforms**

Supported on all platforms

**last-state** *keyword***Description**

Previous state of the session

**Context**[network-instance name](#) *string* [protocols](#) [bgp neighbor peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [last-state](#) *keyword***Tree**[last-state](#)**Options**

- idle
- connect
- active
- opensent
- openconfirm
- established

**Configurable**

False

**Platforms**

Supported on all platforms

**local-as****Description**

Options related to the local autonomous-system number advertised by this router to the peer

**Context**[network-instance name](#) *string* [protocols](#) [bgp neighbor peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [local-as](#)**Tree**[local-as](#)**Configurable**

True

**Platforms** Supported on all platforms

### **as-number** *number*

**Description** The local autonomous system number used to override the global ASN on this session  
Sets the ASN value that this router sends in its OPEN message towards its peer.

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [local-as as-number](#) *number*

**Tree** [as-number](#)

**Range** 1 to 4294967295

**Configurable** True

**Platforms** Supported on all platforms

### **prepend-global-as** *boolean*

**Description** When set to true, the global ASN value is prepended to the AS path in outbound routes towards the peer  
If a session is EBGP (peer-as is not equal to the local-as) then the local-as is prepended as the final step, so that the local-as is the first element in the AS\_PATH received by the peer.

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [local-as prepend-global-as](#) *boolean*

**Tree** [prepend-global-as](#)

**Configurable** True

**Platforms** Supported on all platforms

### **prepend-local-as** *boolean*

**Description** When set to true, the local AS value is prepended to the AS path of inbound routes from the peer

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [local-as prepend-local-as](#) *boolean*

**Tree** [prepend-local-as](#)

**Configurable** True

**Platforms** Supported on all platforms

**local-preference** *number*

<b>Description</b>	The value of the local-preference attribute that is added to received routes from the peer, if it is EBGP  It is also used to encode the local preference attribute for locally generated BGP routes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">local-preference</a> <i>number</i>
<b>Tree</b>	<a href="#">local-preference</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**maintenance-group** *string*

<b>Description</b>	State field to display the maintenance group to which this neighbor belongs to.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">maintenance-group</a> <i>string</i>
<b>Tree</b>	<a href="#">maintenance-group</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**multihop**

<b>Description</b>	Configuration parameters specifying the multihop behaviour for an EBGP peer. This is not applicable to an IBGP peer.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">multihop</a>
<b>Tree</b>	<a href="#">multihop</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	When enabled, the peer is allowed to be indirectly connected by up to N hops, where N is controlled by the maximum-hops parameter. When disabled, multihop is allowed only if the peer type is IBGP.  This overrides the group setting for admin-state.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">multihop admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### maximum-hops *number*

<b>Description</b>	<p>This sets the maximum number of routing hops towards the peer. It determines the IP TTL value in originated BGP TCP/IP packets. By default the TTL is set to 1 towards an EBGP peer and 64 towards an IBGP peer.</p> <p>This overrides the group setting for maximum-hops.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">multihop maximum-hops</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-hops</a>
<b>Range</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### next-hop-self *boolean*

<b>Description</b>	<p>When set to true, the next-hop in all IPv4-unicast, IPv6-unicast and EVPN BGP routes advertised to the peer, if IBGP, is set equal to the local-address used on this session (or to the router ID if the NLRI is IPv6 and there is no IPv6 local address to use). This is independent of the route origin (EBGP, IBGP-client, IBGP-non-client or redistributed direct/static/aggregate route).</p> <p>When set to false, normal BGP rules from RFC 4271 apply.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">next-hop-self</a> <i>boolean</i>
<b>Tree</b>	<a href="#">next-hop-self</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**peer-as** *number*

<b>Description</b>	The autonomous system number expected from the peer A configured session with a peer does not come up if this value does not match the AS value reported by the peer in its OPEN message.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">peer-as</a> <i>number</i>
<b>Tree</b>	<a href="#">peer-as</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**peer-group** *reference*

<b>Description</b>	A reference to the peer-group template to use for this BGP session This is not immutable.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">peer-group</a> <i>reference</i>
<b>Tree</b>	<a href="#">peer-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**peer-router-id** *string*

<b>Description</b>	The BGP identifier advertised by the peer in its OPEN message
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">peer-router-id</a> <i>string</i>
<b>Tree</b>	<a href="#">peer-router-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**peer-type** *keyword*

<b>Description</b>	The session type. The type is EBGP when the local AS and peer AS are different, and the type is IBGP when the local AS and peer AS have the same value.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">peer-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">peer-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>ibgp</code> Indicates that the peer is IBGP (<code>local-as == peer-as</code>).</li> <li>• <code>ebgp</code> Indicates that the peer is EBGP (<code>local-as != peer-as</code>).</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **received-afi-safi** *identityref*

<b>Description</b>	List of multiprotocol BGP address families supported by the peer, derived from the AFI/SAFI list in the MP-BGP capability received by the local routing device from the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">received-afi-safi</a> <i>identityref</i>
<b>Tree</b>	<a href="#">received-afi-safi</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>ipv4-unicast</code> Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1)</li> <li>• <code>ipv6-unicast</code> Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1)</li> <li>• <code>l3vpn-ipv4-unicast</code> VPN-IPv4 unicast address family (AFI = 1, SAFI = 128)</li> <li>• <code>l3vpn-ipv6-unicast</code> VPN-IPv6 unicast address family (AFI = 2, SAFI = 128)</li> <li>• <code>ipv4-labeled-unicast</code> Labeled IPv4 unicast routes (AFI 1, SAFI 4)</li> <li>• <code>ipv6-labeled-unicast</code> Labeled IPv6 unicast routes (AFI 2, SAFI 4)</li> <li>• <code>evpn</code> EVPN routes (AFI = 25, SAFI = 70)</li> <li>• <code>route-target</code> Route target constraint routes (AFI 1, SAFI 132)</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**received-capabilities** *keyword*

<b>Description</b>	List of BGP capabilities received by the local routing device from the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">received-capabilities</a> <i>keyword</i>
<b>Tree</b>	<a href="#">received-capabilities</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• MP_BGP</li> <li>• ROUTE_REFRESH</li> <li>• EXT_NH_ENCODING</li> <li>• GRACEFUL_RESTART</li> <li>• 4-OCTET_ASN</li> <li>• ORF_SEND_EXCOMM</li> <li>• ORF_RECEIVE_EXCOMM</li> <li>• ADD_PATH</li> <li>• LONG_LIVED_GR</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**received-end-of-rib** *identityref*

<b>Description</b>	List of address families for which the peer has signaled the End of RIB marker
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">received-end-of-rib</a> <i>identityref</i>
<b>Tree</b>	<a href="#">received-end-of-rib</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ipv4-unicast Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1)</li> <li>• ipv6-unicast Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1)</li> <li>• l3vpn-ipv4-unicast VPN-IPv4 unicast address family (AFI = 1, SAFI = 128)</li> <li>• l3vpn-ipv6-unicast VPN-IPv6 unicast address family (AFI = 2, SAFI = 128)</li> <li>• ipv4-labeled-unicast Labeled IPv4 unicast routes (AFI 1, SAFI 4)</li> <li>• ipv6-labeled-unicast</li> </ul>

- Labeled IPv6 unicast routes (AFI 2, SAFI 4)
- evpn
  - EVPN routes (AFI = 25, SAFI = 70)
- route-target
  - Route target constraint routes (AFI 1, SAFI 132)

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## received-messages

<b>Description</b>	Container for state information about BGP messages received from the peer.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">bgp</a> <a href="#">neighbor</a> <a href="#">peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">received-messages</a>
<b>Tree</b>	<a href="#">received-messages</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## last-notification-error-code *keyword*

<b>Description</b>	The error code in the last NOTIFICATION received from this peer.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">bgp</a> <a href="#">neighbor</a> <a href="#">peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">received-messages</a> <a href="#">last-notification-error-code</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-notification-error-code</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• Message Header Error</li> <li>• Open Message Error</li> <li>• Update Message Error</li> <li>• Hold Timer Error</li> <li>• Finite State Machine Error</li> <li>• Cease</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## last-notification-error-subcode *keyword*

<b>Description</b>	The error subcode in the last NOTIFICATION received from the peer.
--------------------	--

---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <a href="#">received-messages last-notification-error-subcode</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-notification-error-subcode</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• Connection Not Synchronized</li> <li>• Bad Message Length</li> <li>• Bad Message Type</li> <li>• Unsupported Version Number</li> <li>• Bad Peer As</li> <li>• Bad BGP Identifier</li> <li>• Unsupported Optional Parameter</li> <li>• Unacceptable Hold Time</li> <li>• UPDATE Message Error subcodes</li> <li>• Malformed Attribute List</li> <li>• Unrecognized Well-known Attribute</li> <li>• Missing Well-known Attribute</li> <li>• Attribute Flags Error</li> <li>• Attribute Length Error</li> <li>• Invalid ORIGIN Attribute</li> <li>• Invalid NEXT_HOP Attribute</li> <li>• Optional Attribute Error</li> <li>• Invalid Network Field</li> <li>• Malformed AS_PATH</li> <li>• Maximum Number of Prefixes Reached</li> <li>• Administrative Shutdown</li> <li>• Peer De-configured</li> <li>• Administrative Reset</li> <li>• Connection Rejected</li> <li>• Other Configuration Change</li> <li>• Connection Collision Resolution</li> <li>• Out of Resources</li> <li>• Unspecific</li> <li>• Hard Reset</li> <li>• Unsupported Capability</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### last-notification-time *string*

<b>Description</b>	Timestamp representing the time of the last Notification message received from the peer.
<b>Context</b>	<a href="#">network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone   ipv6-address-with-zone) received-messages last-notification-time string</a>
<b>Tree</b>	<a href="#">last-notification-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### last-update-time *string*

<b>Description</b>	The timestamp when the last UPDATE was received from this peer.
<b>Context</b>	<a href="#">network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone   ipv6-address-with-zone) received-messages last-update-time string</a>
<b>Tree</b>	<a href="#">last-update-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### malformed-updates *number*

<b>Description</b>	Number of BGP UPDATE messages received from the peer that were malformed but recoverable through treat-as-withdraw or attribute-discard (i.e. without session reset)
<b>Context</b>	<a href="#">network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone   ipv6-address-with-zone) received-messages malformed-updates number</a>
<b>Tree</b>	<a href="#">malformed-updates</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**queue-depth** *number*

<b>Description</b>	The number of messages received from the peer currently queued.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">bgp</a> <a href="#">neighbor</a> <a href="#">peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">received-messages</a> <a href="#">queue-depth</a> <i>number</i>
<b>Tree</b>	<a href="#">queue-depth</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-refresh** *number*

<b>Description</b>	Number of BGP ROUTE_REFRESH messages received from the peer over the lifetime of its configuration or since the last clear.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">bgp</a> <a href="#">neighbor</a> <a href="#">peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">received-messages</a> <a href="#">route-refresh</a> <i>number</i>
<b>Tree</b>	<a href="#">route-refresh</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-messages** *number*

<b>Description</b>	Total number of BGP messages received from the peer over the lifetime of its configuration or since the last clear.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">bgp</a> <a href="#">neighbor</a> <a href="#">peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">received-messages</a> <a href="#">total-messages</a> <i>number</i>
<b>Tree</b>	<a href="#">total-messages</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-non-updates** *number*

<b>Description</b>	Number of BGP NON UPDATE messages received from the peer over the lifetime of its configuration or since the last clear.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">received-messages total-non-updates</a> <i>number</i>
<b>Tree</b>	<a href="#">total-non-updates</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-notifications** *number*

<b>Description</b>	Number of BGP Notification messages received from the peer over the lifetime of its configuration or since the last clear.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">received-messages total-notifications</a> <i>number</i>
<b>Tree</b>	<a href="#">total-notifications</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-updates** *number*

<b>Description</b>	Number of BGP UPDATE messages received from the peer over the lifetime of its configuration or since the last clear.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">received-messages total-updates</a> <i>number</i>
<b>Tree</b>	<a href="#">total-updates</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-reflector**

<b>Description</b>	Container with route reflection configuration options.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">route-reflector</a>
<b>Tree</b>	<a href="#">route-reflector</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**client** *boolean*

<b>Description</b>	When this is set to true this BGP session is considered an RR client.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">route-reflector client</a> <i>boolean</i>
<b>Tree</b>	<a href="#">client</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**cluster-id** (*number* | *dotted-quad*)

<b>Description</b>	The cluster-id to insert into the CLUSTER_LIST attribute when reflecting routes received by or sent to this client. The default is inherited from group or instance level configuration.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">route-reflector cluster-id</a> ( <i>number</i>   <i>dotted-quad</i> )
<b>Tree</b>	<a href="#">cluster-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**send-community**

<b>Description</b>	Options for controlling the sending of BGP communities to the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">send-community</a>
<b>Tree</b>	<a href="#">send-community</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**large** *boolean*

<b>Description</b>	The false setting causes BGP to strip all large (12 byte) BGP communities from all outbound routes advertised to the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">send-community large</a> <i>boolean</i>
<b>Tree</b>	<a href="#">large</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **standard** *boolean*

**Description** The false setting causes BGP to strip all standard (4 byte) communities from all outbound routes advertised to the peer

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [send-community standard](#) *boolean*

**Tree** [standard](#)

**Configurable** True

**Platforms** Supported on all platforms

### **send-default-route**

**Description** Options for controlling the generation of default routes towards the peer

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [send-default-route](#)

**Tree** [send-default-route](#)

**Configurable** True

**Platforms** Supported on all platforms

### **export-policy** *reference*

**Description** The name of a policy that should be applied to the advertised default routes, in order to set their attributes to non-default values

Only the default-action of this policy is parsed and applied.

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [send-default-route export-policy](#) *reference*

**Tree** [export-policy](#)

**Reference** [routing-policy policy name](#) *string*

**Configurable** True

**Platforms** Supported on all platforms

**ipv4-unicast** *boolean*

<b>Description</b>	Enables the sending of a synthetically generated default IPv4 route [0/0] to the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">send-default-route</a> <a href="#">ipv4-unicast</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv4-unicast</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ipv6-unicast** *boolean*

<b>Description</b>	Enables the sending of a synthetically generated default IPv6 route [::0] to the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">send-default-route</a> <a href="#">ipv6-unicast</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv6-unicast</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**sent-end-of-rib** *identityref*

<b>Description</b>	List of address families for which this router sent the peer an End of RIB marker
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">sent-end-of-rib</a> <i>identityref</i>
<b>Tree</b>	<a href="#">sent-end-of-rib</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ipv4-unicast</a> Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1)</li> <li>• <a href="#">ipv6-unicast</a> Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1)</li> <li>• <a href="#">l3vpn-ipv4-unicast</a> VPN-IPv4 unicast address family (AFI = 1, SAFI = 128)</li> <li>• <a href="#">l3vpn-ipv6-unicast</a> VPN-IPv6 unicast address family (AFI = 2, SAFI = 128)</li> <li>• <a href="#">ipv4-labeled-unicast</a> Labeled IPv4 unicast routes (AFI 1, SAFI 4)</li> </ul>

- `ipv6-labeled-unicast`  
Labeled IPv6 unicast routes (AFI 2, SAFI 4)
- `evpn`  
EVPN routes (AFI = 25, SAFI = 70)
- `route-target`  
Route target constraint routes (AFI 1, SAFI 132)

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## sent-messages

<b>Description</b>	Container for state information about BGP messages sent to the peer.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">sent-messages</a>
<b>Tree</b>	<a href="#">sent-messages</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## last-notification-error-code *keyword*

<b>Description</b>	The error code in the last NOTIFICATION sent to this peer.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">sent-messages last-notification-error-code</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-notification-error-code</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• Message Header Error</li> <li>• Open Message Error</li> <li>• Update Message Error</li> <li>• Hold Timer Error</li> <li>• Finite State Machine Error</li> <li>• Cease</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## last-notification-error-subcode *keyword*

<b>Description</b>	The error subcode in the last NOTIFICATION sent to this peer.
--------------------	---

---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <a href="#">sent-messages last-notification-error-subcode</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-notification-error-subcode</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• Connection Not Synchronized</li> <li>• Bad Message Length</li> <li>• Bad Message Type</li> <li>• Unsupported Version Number</li> <li>• Bad Peer As</li> <li>• Bad BGP Identifier</li> <li>• Unsupported Optional Parameter</li> <li>• Unacceptable Hold Time</li> <li>• UPDATE Message Error subcodes</li> <li>• Malformed Attribute List</li> <li>• Unrecognized Well-known Attribute</li> <li>• Missing Well-known Attribute</li> <li>• Attribute Flags Error</li> <li>• Attribute Length Error</li> <li>• Invalid ORIGIN Attribute</li> <li>• Invalid NEXT_HOP Attribute</li> <li>• Optional Attribute Error</li> <li>• Invalid Network Field</li> <li>• Malformed AS_PATH</li> <li>• Maximum Number of Prefixes Reached</li> <li>• Administrative Shutdown</li> <li>• Peer De-configured</li> <li>• Administrative Reset</li> <li>• Connection Rejected</li> <li>• Other Configuration Change</li> <li>• Connection Collision Resolution</li> <li>• Out of Resources</li> <li>• Unspecific</li> <li>• Hard Reset</li> <li>• Unsupported Capability</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-notification-time** *string*

<b>Description</b>	Timestamp representing the time of the last Notification message sent to the peer.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">sent-messages last-notification-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-notification-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**queue-depth** *number*

<b>Description</b>	The number of messages queued to be sent to the peer.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">sent-messages queue-depth</a> <i>number</i>
<b>Tree</b>	<a href="#">queue-depth</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-refresh** *number*

<b>Description</b>	Number of BGP ROUTE_REFRESH messages sent to the peer over the lifetime of its configuration or since the last clear.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">sent-messages route-refresh</a> <i>number</i>
<b>Tree</b>	<a href="#">route-refresh</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-messages** *number*

<b>Description</b>	Total number of BGP messages sent to the peer over the lifetime of its configuration or since the last clear.
--------------------	---

<b>Context</b>	<a href="#">network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone   ipv6-address-with-zone) sent-messages total-messages number</a>
<b>Tree</b>	<a href="#">total-messages</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **total-non-updates** *number*

<b>Description</b>	Number of BGP NON UPDATE messages sent to the peer over the lifetime of its configuration or since the last clear.
<b>Context</b>	<a href="#">network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone   ipv6-address-with-zone) sent-messages total-non-updates number</a>
<b>Tree</b>	<a href="#">total-non-updates</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **total-notifications** *number*

<b>Description</b>	Number of BGP Notification messages sent to the peer over the lifetime of its configuration or since the last clear.
<b>Context</b>	<a href="#">network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone   ipv6-address-with-zone) sent-messages total-notifications number</a>
<b>Tree</b>	<a href="#">total-notifications</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **total-updates** *number*

<b>Description</b>	Number of BGP UPDATE messages sent to the peer over the lifetime of its configuration or since the last clear.
<b>Context</b>	<a href="#">network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone   ipv6-address-with-zone) sent-messages total-updates number</a>
<b>Tree</b>	<a href="#">total-updates</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **session-state** *keyword*

<b>Description</b>	Current state of the session
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">session-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">session-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• idle</li> <li>• connect</li> <li>• active</li> <li>• opensent</li> <li>• openconfirm</li> <li>• established</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **slow-peer** *keyword*

<b>Description</b>	<p>Set to 'yes' if, after the last BGP restart, the session was in a lesser state than established when the min-wait-to-advertise timer expired</p> <p>Set to unknown if the min-wait-to-advertise time has not yet elapsed.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">slow-peer</a> <i>keyword</i>
<b>Tree</b>	<a href="#">slow-peer</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• yes</li> <li>• no</li> <li>• unknown</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **timers**

<b>Description</b>	Enter the timers context
--------------------	--------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <a href="#">timers</a>
<b>Tree</b>	<a href="#">timers</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **connect-retry** *number*

<b>Description</b>	The time interval in seconds between successive attempts to establish a session with a peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <a href="#">timers connect-retry</a> <i>number</i>
<b>Tree</b>	<a href="#">connect-retry</a>
<b>Range</b>	1 to 65535
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **hold-time** *number*

<b>Description</b>	The hold-time interval in seconds that the router proposes to the peer in its OPEN message  The actual in-use hold-time is negotiated to the lowest value proposed by the two peers. A negotiated value of 0 suppresses the sending of keepalives by both peers.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> ) <a href="#">timers hold-time</a> <i>number</i>
<b>Tree</b>	<a href="#">hold-time</a>
<b>Range</b>	0   3 to 65535
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **keepalive-interval** *number*

<b>Description</b>	The interval in seconds between successive keepalive messages sent to the peer
--------------------	--

The period between one keepalive message and the next is the minimum of this configured (or inherited) value and 1/3 of the negotiated hold-time duration. A value of 0 suppresses the sending of keepalives to the peer.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">timers keepalive-interval number</a>
<b>Tree</b>	<a href="#">keepalive-interval</a>
<b>Range</b>	0 to 21845
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### minimum-advertisement-interval *number*

<b>Description</b>	The value assigned to the MinRouteAdvertisementIntervalTimer of RFC 4271, for both EBGp and IBGP sessions  Each session runs its own independent timer and the timer affects both route advertisements and route withdrawals, regardless of address family. For route withdrawals only, this timer is bypassed if rapid-withdrawal is set to true.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">timers minimum-advertisement-interval number</a>
<b>Tree</b>	<a href="#">minimum-advertisement-interval</a>
<b>Range</b>	1 to 255
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### negotiated-hold-time *number*

<b>Description</b>	The operational hold-time  It is negotiated to the lowest value proposed by the two peers. A negotiated value of 0 suppresses the sending of keepalives by both peers.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">timers negotiated-hold-time number</a>
<b>Tree</b>	<a href="#">negotiated-hold-time</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **negotiated-keepalive-interval** *number*

**Description** The operational keepalive interval  
It is the minimum of the configured value and 1/3 of the negotiated-hold-time. A value of 0 suppresses the sending of keepalives to the peer.

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [timers negotiated-keepalive-interval](#) *number*

**Tree** [negotiated-keepalive-interval](#)

**Configurable** False

**Platforms** Supported on all platforms

### **next-connect-retry-time** *string*

**Description** The time when the next connect retry attempt will occur

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [timers next-connect-retry-time](#) *string*

**Tree** [next-connect-retry-time](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** Supported on all platforms

### **prefix-limit-restart-timer** *number*

**Description** Time interval in seconds after which the BGP session is re-established after being torn down due to exceeding any prefix limit (of any address family)  
This only applies if prevent-teardown is false.

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [timers prefix-limit-restart-timer](#) *number*

**Tree** [prefix-limit-restart-timer](#)

**Units** seconds

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## trace-options

**Description** Debug traceoptions for BGP

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [trace-options](#)

**Tree** [trace-options](#)

**Configurable** True

**Platforms** Supported on all platforms

## flag *name keyword*

**Description** Tracing parameters

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [trace-options flag name keyword](#)

**Tree** [flag](#)

**Configurable** True

**Platforms** Supported on all platforms

## name *keyword*

**Description** Enter the name context

**Context** [network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [trace-options flag name keyword](#)

**Options**

- events  
Trace all BGP events.
- packets  
Trace all BGP protocol packets.
- open  
Trace BGP open packets.
- keepalive  
Trace BGP keepalive packets.
- graceful-restart

- Trace Graceful Restart events.
  - timers
    - Trace routing protocol timer processing.
  - route
    - Trace BGP route table manager.
  - notification
    - Trace Bgp notification.
  - socket
    - Trace socket info.
  - update
    - Trace update info.

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **modifier** *keyword*

<b>Description</b>	Enter the modifier context
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">bgp</a> <a href="#">neighbor</a> <a href="#">peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">trace-options</a> <a href="#">flag</a> <a href="#">name</a> <a href="#">keyword</a> <a href="#">modifier</a> <a href="#">keyword</a>
<b>Tree</b>	<a href="#">modifier</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• detail           <ul style="list-style-type: none"> <li>To enable detailed tracing. Includes both received and sent packets.</li> </ul> </li> <li>• receive           <ul style="list-style-type: none"> <li>To enable tracing for the packets which are received.</li> </ul> </li> <li>• send           <ul style="list-style-type: none"> <li>To enable tracing for the sent packets.</li> </ul> </li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **transport**

<b>Description</b>	Enter the transport context
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">bgp</a> <a href="#">neighbor</a> <a href="#">peer-address</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> ) <a href="#">transport</a>
<b>Tree</b>	<a href="#">transport</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **local-address** (*ipv4-address* | *ipv6-address* | *subinterface-all*)

<b>Description</b>	The local TCP endpoint of used for the BGP session This also the source address for next-hop-self, if it applies. The local-address can be specified as an IP address that is resolvable to a local interface. This address must be the primary address of an interface, otherwise the session will not come up.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">transport local-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i>   <i>subinterface-all</i> )
<b>Tree</b>	<a href="#">local-address</a>
<b>String Length</b>	5 to 25
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **local-port** *number*

<b>Description</b>	Local TCP port used for the TCP connection to the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">transport local-port</a> <i>number</i>
<b>Tree</b>	<a href="#">local-port</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **mtu-discovery** *boolean*

<b>Description</b>	Turns path mtu discovery on (true) or off (false)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">transport mtu-discovery</a> <i>boolean</i>
<b>Tree</b>	<a href="#">mtu-discovery</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**passive-mode** *boolean*

<b>Description</b>	The true setting causes BGP to wait for the peer to initiate the TCP connection  The false setting causes BGP to initiate a TCP connection whenever the BGP session is started or restarted.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">transport passive-mode</a> <i>boolean</i>
<b>Tree</b>	<a href="#">passive-mode</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**remote-port** *number*

<b>Description</b>	Remote TCP port used by the peer for its TCP connection to the local router
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">transport remote-port</a> <i>number</i>
<b>Tree</b>	<a href="#">remote-port</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tcp-mss** *number*

<b>Description</b>	The maximum segment size of BGP TCP packets  The configured value of this leaf is the TCP MSS value advertised to the peer during TCP connection setup (in the TCP MSS option), reduced if necessary to accommodate the outgoing interface IP MTU. The state value of this leaf is the operational TCP MSS used in the data transmit direction towards the peer. It may be less than the received TCP MSS option value due to adjustment for TCP options used in the transit direction and/or the path MTU discovery process (if enabled).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">transport tcp-mss</a> <i>number</i>
<b>Tree</b>	<a href="#">tcp-mss</a>
<b>Range</b>	536 to 9446
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**under-maintenance** *boolean*

<b>Description</b>	State field to determine if this bgp neighbor is in maintenance mode.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone</i>   <i>ipv6-address-with-zone</i> ) <a href="#">under-maintenance</a> <i>boolean</i>
<b>Tree</b>	<a href="#">under-maintenance</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	Enter the oper-state context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Operational state of BGP is up.</li> <li>• down Operational state of BGP is down.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**preference**

<b>Description</b>	Options for controlling the route table preference of BGP routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp preference</a>
<b>Tree</b>	<a href="#">preference</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ebgp** *number*

<b>Description</b>	The default route table preference for all EBGp learned routes BGP import policies can override this preference value on a route by route basis.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp preference ebgp</a> <i>number</i>
<b>Tree</b>	<a href="#">ebgp</a>

<b>Range</b>	1 to 255
<b>Default</b>	170
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **ibgp** *number*

<b>Description</b>	The default route table preference for all IBGP learned routes BGP import policies can override this preference value on a route by route basis.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp preference</a> <a href="#">ibgp number</a>
<b>Tree</b>	<a href="#">ibgp</a>
<b>Range</b>	1 to 255
<b>Default</b>	170
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **rib-management**

<b>Description</b>	Enter the rib-management context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp rib-management</a>
<b>Tree</b>	<a href="#">rib-management</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **table** [address-family](#) *identityref*

<b>Description</b>	List of RIB tables maintained by BGP running in this network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp rib-management table</a> <a href="#">address-family</a> <i>identityref</i>
<b>Tree</b>	<a href="#">table</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**address-family *identityref***

<b>Description</b>	BGP address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp rib-management table address-family <i>identityref</i></a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>ipv4-unicast</b> Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1)</li> <li>• <b>ipv6-unicast</b> Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1)</li> <li>• <b>l3vpn-ipv4-unicast</b> VPN-IPv4 unicast address family (AFI = 1, SAFI = 128)</li> <li>• <b>l3vpn-ipv6-unicast</b> VPN-IPv6 unicast address family (AFI = 2, SAFI = 128)</li> <li>• <b>ipv4-labeled-unicast</b> Labeled IPv4 unicast routes (AFI 1, SAFI 4)</li> <li>• <b>ipv6-labeled-unicast</b> Labeled IPv6 unicast routes (AFI 2, SAFI 4)</li> <li>• <b>evpn</b> EVPN routes (AFI = 25, SAFI = 70)</li> <li>• <b>route-target</b> Route target constraint routes (AFI 1, SAFI 132)</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**route-table-import *reference***

<b>Description</b>	Apply a route policy to accept routes that should be installed in the BGP RIB table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp rib-management table address-family <i>identityref</i> route-table-import <i>reference</i></a>
<b>Tree</b>	<a href="#">route-table-import</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## route-advertisement

<b>Description</b>	Options for controlling route advertisement behavior
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp route-advertisement</a>
<b>Tree</b>	<a href="#">route-advertisement</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## rapid-withdrawal *boolean*

<b>Description</b>	The true setting enables rapid-withdraw towards BGP peers If there is only one BGP route for an NLRI in BGP RIB, and this route is withdrawn or becomes invalid, rapid-withdraw causes BGP to immediately send a withdrawal of the BGP route even if the min-route-advertisement timer has not expired.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp route-advertisement rapid-withdrawal</a> <i>boolean</i>
<b>Tree</b>	<a href="#">rapid-withdrawal</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## wait-for-fib-install *boolean*

<b>Description</b>	The true setting causes BGP to NOT advertise initial reachability to a prefix, or a change of reachability to a prefix, until it receives acknowledgment from FIB manager that the route change has been applied Does not apply to route withdrawals.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp route-advertisement wait-for-fib-install</a> <i>boolean</i>
<b>Tree</b>	<a href="#">wait-for-fib-install</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## route-reflector

<b>Description</b>	Container with route reflection configuration options.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp route-reflector</a>
<b>Tree</b>	<a href="#">route-reflector</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**client** *boolean*

<b>Description</b>	When this is set to true all configured and dynamic sessions of the BGP instance are considered RR clients, subject to overrides at more specific levels of configuration.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp route-reflector client</a> <i>boolean</i>
<b>Tree</b>	<a href="#">client</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**cluster-id** (*number* | *dotted-quad*)

<b>Description</b>	The cluster-id to insert into the CLUSTER_LIST attribute when reflecting routes received by or sent to clients in this scope of this container. The default is the router-id.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp route-reflector cluster-id</a> ( <i>number</i>   <i>dotted-quad</i> )
<b>Tree</b>	<a href="#">cluster-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**router-id** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The BGP identifier used by this BGP instance in all of its OPEN messages. Any non-zero value is supported.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp router-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">router-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## send-community

<b>Description</b>	Options for controlling the sending of BGP communities to all peers
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp send-community</a>
<b>Tree</b>	<a href="#">send-community</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## large *boolean*

<b>Description</b>	The false setting causes BGP to strip all large (12 byte) BGP communities from all outbound routes advertised to peers
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp send-community large boolean</a>
<b>Tree</b>	<a href="#">large</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## standard *boolean*

<b>Description</b>	The false setting causes BGP to strip all standard (4 byte) communities from all outbound routes advertised to peers
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp send-community standard boolean</a>
<b>Tree</b>	<a href="#">standard</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Container for BGP statistics.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**disabled-peers** *number*

<b>Description</b>	The number of configured BGP peers that are administratively disabled
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp statistics disabled-peers</a> <i>number</i>
<b>Tree</b>	<a href="#">disabled-peers</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**dynamic-peers** *number*

<b>Description</b>	The number of dynamic BGP peers that are currently in the established state, counting sessions resulting from accepted incoming TCP connections and outgoing TCP connections triggered by LLDP auto-discovery
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp statistics dynamic-peers</a> <i>number</i>
<b>Tree</b>	<a href="#">dynamic-peers</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**path-memory** *number*

<b>Description</b>	The total number of bytes required to store the path attribute objects used by all received BGP routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp statistics path-memory</a> <i>number</i>
<b>Tree</b>	<a href="#">path-memory</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-active-routes** *number*

<b>Description</b>	The total number of received BGP routes that are active (installed for forwarding), summed across all address families
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp statistics total-active-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">total-active-routes</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-paths** *number*

<b>Description</b>	The total number of path attribute objects used by all received BGP routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp statistics total-paths</a> <i>number</i>
<b>Tree</b>	<a href="#">total-paths</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-peers** *number*

<b>Description</b>	The total number of configured BGP peers
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp statistics total-peers</a> <i>number</i>
<b>Tree</b>	<a href="#">total-peers</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-prefixes** *number*

<b>Description</b>	The total number of unique NLRI contained in all received BGP routes associated with the BGP instance or the peer-group.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp statistics total-prefixes</a> <i>number</i>
<b>Tree</b>	<a href="#">total-prefixes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-received-routes** *number*

<b>Description</b>	The total number of received BGP routes, summed across all address families
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp statistics total-received-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">total-received-routes</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**up-peers** *number*

<b>Description</b>	The number of configured BGP peers that are currently in the established state
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp statistics up-peers</a> <i>number</i>
<b>Tree</b>	<a href="#">up-peers</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**trace-options**

<b>Description</b>	Debug traceoptions for BGP
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**flag** *name* *keyword*

<b>Description</b>	Tracing parameters
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp trace-options flag</a> <i>name</i> <i>keyword</i>
<b>Tree</b>	<a href="#">flag</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *keyword*

<b>Description</b>	Enter the name context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp trace-options flag</a> <i>name</i> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>events</b> Trace all BGP events.</li> <li>• <b>packets</b> Trace all BGP protocol packets.</li> <li>• <b>open</b> Trace BGP open packets.</li> <li>• <b>keepalive</b></li> </ul>

- Trace BGP keepalive packets.
- graceful-restart  
Trace Graceful Restart events.
- timers  
Trace routing protocol timer processing.
- route  
Trace BGP route table manager.
- notification  
Trace Bgp notification.
- socket  
Trace socket info.
- update  
Trace update info.

**Configurable**

[network-instance name](#) *string* [protocols bgp trace-options flag name](#) *keyword*  
[modifier](#) *keyword*

**Tree**[modifier](#)**Options**

- detail  
To enable detailed tracing. Includes both received and sent packets.
- receive  
To enable tracing for the packets which are received.
- send  
To enable tracing for the sent packets.

**Configurable**

True

**Platforms**

Supported on all platforms

**transport****Description**

Options related to the TCP transport of BGP sessions

**Context**

[network-instance name](#) *string* [protocols bgp transport](#)

**Tree**[transport](#)

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### mtu-discovery *boolean*

<b>Description</b>	Turns path mtu discovery for BGP TCP sessions on (true) or off (false) If this is unconfigured then the setting comes from network-instance/mtu/path-mtu-discovery. Changing the value of network-instance/mtu/path-mtu-discovery takes effect only for new connections established after the change
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp transport</a> <a href="#">mtu-discovery</a> <i>boolean</i>
<b>Tree</b>	<a href="#">mtu-discovery</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### single-hop-connected-check *boolean*

<b>Description</b>	Control whether a single-hop BGP session should be allowed to setup if its 'related interface' is down. If single-hop-connected-check is false, a single-hop BGP session (EBGP or IBGP) to any IPv4 or IPv6 neighbor address is permitted to establish if there is ANY valid (IPv6 global unicast, IPv4 link-local, or IPv4 global) route to that neighbor address, regardless of whether the 'related interface' is up or down. If single-hop-connected-check is true (default value), a single-hop BGP session (EBGP or IBGP) to any IPv4 or IPv6 neighbor address is only permitted to transition from idle to a higher state if the 'related interface' is up. The 'related interface' of a single hop peer is the subinterface associated with the IPv6 link local neighbor address or else the subinterface with a primary or secondary IP address and prefix-length that covers the neighbor address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp transport</a> <a href="#">single-hop-connected-check</a> <i>boolean</i>
<b>Tree</b>	<a href="#">single-hop-connected-check</a>

### advertise *boolean*

<b>Description</b>	If set to true then local mac's and local mac-ip pairs will be advertised in this evpn instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp-evpn bgp-instance id</a> <i>reference</i> <a href="#">routes bridge-table mac-ip advertise</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise</a>
<b>Default</b>	true
<b>Configurable</b>	True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### advertise-arp-nd-extended-community *boolean*

**Description** ARP/ND extended community

**Context** [network-instance name](#) *string* [protocols bgp-evpn bgp-instance id](#) *reference*  
[routes bridge-table mac-ip advertise-arp-nd-extended-community](#) *boolean*

**Tree** [advertise-arp-nd-extended-community](#)

**Default** false

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### advertise-arp-nd-only-with-mac-table-entry *boolean*

**Description** If set to true then local mac-ip records will be advertised in this evpn instance only when we have a local mac in the mac-table

**Context** [network-instance name](#) *string* [protocols bgp-evpn bgp-instance id](#) *reference*  
[routes bridge-table mac-ip advertise-arp-nd-only-with-mac-table-entry](#) *boolean*

**Tree** [advertise-arp-nd-only-with-mac-table-entry](#)

**Default** false

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### next-hop (*keyword | ipv4-address | ipv6-address*)

**Description** The ip-address that will be used as the bgp next-hop for all routes advertised in this evpn instance.

**Context** [network-instance name](#) *string* [protocols bgp-evpn bgp-instance id](#) *reference*  
[routes bridge-table next-hop](#) (*keyword | ipv4-address | ipv6-address*)

**Tree** [next-hop](#)

**Default** use-system-ipv4-address

**Options**

- use-system-ipv4-address

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### vlan-aware-bundle-eth-tag *number*

**Description** Configures the Ethernet Tag ID to be encoded in the EVPN routes for control-plane interoperability mode with VLAN-aware bundle services.

When set to a non-zero value, all the EVPN routes advertised for the MAC-VRF will be advertised with this value into the ethernet-tag-id field of the routes.

On reception of EVPN routes with non-zero ethernet-tag-id, BGP will import the routes based on the import route-target as usual. However, the system checks the received ethernet-tag-id field and will process only those routes whose ethernet-tag-id match the local vlan-aware-bundle-eth-tag value.

**Context** [network-instance name](#) *string* [protocols bgp-evpn bgp-instance id](#) *reference*  
[routes bridge-table vlan-aware-bundle-eth-tag](#) *number*

**Tree** [vlan-aware-bundle-eth-tag](#)

**Range** 0 to 16777215

**Default** 0

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### route-table

**Description** Enable the route-table context

**Context** [network-instance name](#) *string* [protocols bgp-evpn bgp-instance id](#) *reference*  
[routes route-table](#)

**Tree** [route-table](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### ip-prefix

**Description** Enter the ip-prefix context

**Context** [network-instance name](#) *string* [protocols bgp-evpn bgp-instance id](#) *reference*  
[routes route-table ip-prefix](#)

**Tree** [ip-prefix](#)

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### evpn-link-bandwidth

<b>Description</b>	Enter the evpn-link-bandwidth context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp-evpn</a> <a href="#">bgp-instance id</a> <i>reference</i> <a href="#">routes route-table ip-prefix evpn-link-bandwidth</a>

### maximum-dynamic-weight *number*

<b>Description</b>	Determines the maximum weight to be advertised in the evpn-link-bandwidth extended community  If weight 'dynamic' is configured, the actual advertised weight is the minimum of the number of BGP PE-CE paths for the prefix and the configured maximum weight.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp-evpn</a> <a href="#">bgp-instance id</a> <i>reference</i> <a href="#">routes route-table ip-prefix evpn-link-bandwidth advertise maximum-dynamic-weight</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-dynamic-weight</a>
<b>Range</b>	1 to 128
<b>Default</b>	128
<b>Configurable</b>	True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **weight** (*number* | *keyword*)

**Description** Determines the weight to be advertised in the evpn-link-bandwidth extended community

If set to dynamic, the weight is dynamically set based on the number of BGP PE-CE paths for the IP Prefix that is advertised in an EVPN IP Prefix route. Alternatively, the weight can be set to a fixed integer value in the range 1..128. The dynamic weight only considers BGP PE-CE paths.

**Context** [network-instance name](#) *string* [protocols bgp-evpn bgp-instance id](#) *reference* [routes route-table ip-prefix evpn-link-bandwidth advertise weight](#) (*number* | *keyword*)

**Tree** [weight](#)

**Range** 1 to 128

**Default** dynamic

**Options**

- dynamic

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **weighted-ecmp**

**Description** Enter the weighted-ecmp context

**Context** [network-instance name](#) *string* [protocols bgp-evpn bgp-instance id](#) *reference* [routes route-table ip-prefix evpn-link-bandwidth weighted-ecmp](#)

**Tree** [weighted-ecmp](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **admin-state** *keyword*

**Description** Setting enable triggers weighted ECMP programming for all eligible multipath EVPN IFL routes

When set to enable, the router processes the evpn-link-bandwidth extended community when installing an ECMP set for an EVPN IP-Prefix route in the ip-vrf route table. Flows to an IP Prefix received with a weight and a zero-ESI are sprayed based on the weight. If the EVPN IP Prefix route received

with the weight has a non-zero ESI, the weight is divided into the number of PEs attached to the Ethernet Segment (and rounded up if the result is not an integer). The command also enables the weighted ECMP functionality for BGP CEs that are configured with the parameter `evpn-link-bandwidth add-weight-to-received-bgp-routes <weight>`.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp-evpn bgp-instance id</a> <i>reference</i> <a href="#">routes route-table ip-prefix evpn-link-bandwidth weighted-ecmp admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True

<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **mac-ip**

<b>Description</b>	Enter the mac-ip context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp-evpn bgp-instance id</a> <i>reference</i> <a href="#">routes route-table mac-ip</a>
<b>Tree</b>	<a href="#">mac-ip</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**advertise-gateway-mac** *boolean*

<b>Description</b>	If set to true in an ip-vrf where bgp-evpn is enabled, a MAC/IP route containing the gateway-MAC is advertised.  This gateway-MAC matches the MAC advertised along with the EVPN IFL routes type 5 for the ip-vrf network-instance. This advertisement is needed so that the EVPN IFL (Interface-Less) model in the ip-vrf can interoperate with a remote system working in EVPN IFF (Interface-ful) Unnumbered mode.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp-evpn bgp-instance id</a> <i>reference</i> <a href="#">routes route-table mac-ip advertise-gateway-mac</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-gateway-mac</a>

**oper-down-reason** *keyword*

<b>Description</b>	Reason for bgp-instance being down
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">bgp-vpn</a> <a href="#">bgp-instance id</a> <i>number</i> <a href="#">oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• no-loopback-address-or-rd</li> <li>• no-autonomous-system-or-rt</li> <li>• network-instance-oper-down</li> <li>• bad-rd-format</li> <li>• none</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-distinguisher**

<b>Description</b>	Route Distinguisher (RD) of the bgp-vpn instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">bgp-vpn</a> <a href="#">bgp-instance id</a> <i>number</i> <a href="#">route-distinguisher</a>
<b>Tree</b>	<a href="#">route-distinguisher</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**rd** (*route-distinguisher-type-0 | route-distinguisher-type-1 | route-distinguisher-type-2 | route-distinguisher-type-2b*)

<b>Description</b>	Route Distinguisher (RD) in the bgp-vpn instance. When used for evpn and if not configured, the RD is auto-derived as <ip-address>:<evi> where 'ip-address' is the ipv4 address associated to the subinterface lo0.1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">bgp-vpn</a> <a href="#">bgp-instance id</a> <i>number</i> <a href="#">route-distinguisher</a> <a href="#">rd</a> ( <i>route-distinguisher-type-0   route-distinguisher-type-1   route-distinguisher-type-2   route-distinguisher-type-2b</i> )
<b>Tree</b>	<a href="#">rd</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**route-distinguisher-origin** *keyword*

<b>Description</b>	Origin of the operational Route Distinguisher (RD) of the bgp-vpn instance. 'Auto-derived-from-evi' refers to an RD that is automatically allocated with the format <ip-address>:<evi> where 'ip-address' is the ipv4 address associated to the subinterface lo0.1. 'Auto-derived-from-system-ip:0' refers to the RD for the EVPN Ethernet Segment routes that is automatically allocated with the format <ip-address>:0 where 'ip-address' is the ipv4 address associated to the subinterface lo0.1. 'Manual' refers to an RD that is configured. 'None' indicates that the RD is neither configured nor auto-derived.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp-vpn bgp-instance id</a> <i>number</i> <a href="#">route-distinguisher route-distinguisher-origin</a> <i>keyword</i>
<b>Tree</b>	<a href="#">route-distinguisher-origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• auto-derived-from-evi</li> <li>• auto-derived-from-system-ip:0</li> <li>• manual</li> <li>• none</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-target**

<b>Description</b>	Route Target (RT) of the bgp-vpn instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp-vpn bgp-instance id</a> <i>number</i> <a href="#">route-target</a>
<b>Tree</b>	<a href="#">route-target</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**export-route-target-origin** *keyword*

<b>Description</b>	Origin of the operational export Route Target (RT) of the bgp-vpn instance. 'Auto-derived-from-evi' refers to an RT that is automatically allocated with the format <asn>:<evi> where 'asn' is the autonomous-system-number configured in the network-instance default. 'Auto-derived-from-esi-bytes-1-6' refers to the ES-import RT for the EVPN Ethernet Segment routes that is derived from bytes 1 to 6 of the Ethernet Segment Identifier of the route. 'Manual' refers to an export RT that is configured. 'None' indicates that the export RT is neither configured nor auto-derived.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp-vpn bgp-instance id</a> <i>number</i> <a href="#">route-target export-route-target-origin</a> <i>keyword</i>
<b>Tree</b>	<a href="#">export-route-target-origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• auto-derived-from-evi</li> <li>• auto-derived-from-esi-bytes-1-6</li> <li>• manual</li> <li>• none</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **export-rt** (*string* | *string* | *string* | *string* | *string* | *string* | *string* | *string*)

<b>Description</b>	Export Route Target (RT) in the bgp-vpn instance. When used for evpn and if not configured, the RT is auto-derived with the format <asn>:<evi> where 'asn' is the autonomous-system configured in the network-instance default.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp-vpn bgp-instance id</a> <i>number</i> <a href="#">route-target export-rt</a> ( <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i> )
<b>Tree</b>	<a href="#">export-rt</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **import-route-target-origin** *keyword*

<b>Description</b>	Origin of the operational import Route Target (RT) of the bgp-vpn instance. 'Auto-derived-from-evi' refers to an RT that is automatically allocated with the format <asn>:<evi> where 'asn' is the autonomous-system-number configured in the network-instance default. 'Auto-derived-from-esi-bytes-1-6' refers to the ES-import RT for the EVPN Ethernet Segment routes that is derived from bytes 1 to 6 of the Ethernet Segment Identifier of the route. 'Manual' refers to an import RT that is configured. 'None' indicates that the import RT is neither configured nor auto-derived.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp-vpn bgp-instance id</a> <i>number</i> <a href="#">route-target import-route-target-origin</a> <i>keyword</i>
<b>Tree</b>	<a href="#">import-route-target-origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• auto-derived-from-evi</li> <li>• auto-derived-from-esi-bytes-1-6</li> <li>• manual</li> <li>• none</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **import-rt** (*string* | *string* | *string* | *string* | *string* | *string* | *string* | *string*)

<b>Description</b>	Import Route Target (RT) in the bgp-vpn instance. When used for evpn and if not configured, the RT is auto-derived with the format <asn>:<evi> where 'asn' is the autonomous-system configured in the network-instance default.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">bgp-vpn</a> <a href="#">bgp-instance id</a> <i>number</i> <a href="#">route-target import-rt</a> ( <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i> )
<b>Tree</b>	<a href="#">import-rt</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **gribi**

<b>Description</b>	Container for gRIBI configuration and state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">gribi</a>
<b>Tree</b>	<a href="#">gribi</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **admin-state** *keyword*

<b>Description</b>	Administratively enable or disable gRIBI support.  The enable setting only has an effect when the network-instance type is ip-vrf or default.  When this is set to disable all IP entries and next-hop-groups associated with the network-instance are deleted from the gRIBI server database and the recovery of this state depends on the gRIBI clients to re-signal all of the deleted entries. While in a disabled state, no entries are accepted for this network-instance. (This is the same behavior when the network-instance does not exist at all.)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">gribi</a> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>enable</li> </ul>

	<ul style="list-style-type: none"> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### default-metric *number*

<b>Description</b>	Set the route table metric to use for all gRIBI-created IPv4 and IPv6 routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols gribi default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">default-metric</a>
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### default-preference *number*

<b>Description</b>	Lower values indicate a higher degree of preference when deciding the route to use from different protocols.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols gribi default-preference</a> <i>number</i>
<b>Tree</b>	<a href="#">default-preference</a>
<b>Range</b>	0 to 255
<b>Default</b>	6
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### max-ecmp-hash-buckets-per-next-hop-group *number*

<b>Description</b>	Specifies the maximum number of ECMP hash buckets per next-hop-group. An error is returned to any gRIBI client that attempts to program more than this number of next-hops in a single next-hop-group. Weighted ECMP weights are normalized based on this number of hash buckets.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols gribi max-ecmp-hash-buckets-per-next-hop-group</a> <i>number</i>
<b>Tree</b>	<a href="#">max-ecmp-hash-buckets-per-next-hop-group</a>
<b>Range</b>	1 to 256
<b>Default</b>	256
<b>Configurable</b>	True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### maximum-routes *number*

**Description** Specifies the maximum number of gRIBI routes (sum of IPv4 and IPv6 entries).  
A value of 0 signifies no limit.

**Context** [network-instance name](#) *string* [protocols gribi maximum-routes number](#)

**Tree** [maximum-routes](#)

**Default** 0

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### oper-state *keyword*

**Description** The operational state of gRIBI with respect to programming of entries in this network network-instance  
By default, even with no configuration, the state is up in all network-instances of type ip-vrf and default

**Context** [network-instance name](#) *string* [protocols gribi oper-state keyword](#)

**Tree** [oper-state](#)

**Options**

- up  
Component or process is operational
- down  
Component or process is not operational
- empty  
Component slot is empty
- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized

- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**isis****Description**

Enable the isis context

<b>Description</b>	This container provides option for handling the ATTached bit in L1 LSPs
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string attached-bit</a>
<b>Tree</b>	<a href="#">attached-bit</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### ignore *boolean*

<b>Description</b>	When set to true, if the attached bit is set on an incoming Level 1 LSP, the local system ignores it. In this case the local system does not set a default route to the L1L2 router advertising the PDU with the attached bit set.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string attached-bit ignore boolean</a>
<b>Tree</b>	<a href="#">ignore</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### suppress *boolean*

<b>Description</b>	When set to true, if the local IS acts as a L1L2 router, then the attached bit is not advertised in locally generated L1 LSPs.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string attached-bit suppress boolean</a>
<b>Tree</b>	<a href="#">suppress</a>
<b>Default</b>	false
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## authentication

**Description** Container for specifying authentication options that apply to the entire IS-IS instance or to an entire level.  
The settings in this container only apply to PDUs without an authentication behavior specified at a more granular level.

**Context** [network-instance name string protocols isis instance name string authentication](#)

**Tree** [authentication](#)

**Configurable** True

**Platforms** Supported on all platforms

## csnp-authentication

**Description** Container with options to control the authentication of CSNP PDUs

**Context** [network-instance name string protocols isis instance name string authentication csnp-authentication](#)

**Tree** [csnp-authentication](#)

**Configurable** True

**Platforms** Supported on all platforms

## check-received *keyword*

**Description** Specifies the type of authentication checks done for received PDUs of the specified type.

**Context** [network-instance name string protocols isis instance name string authentication csnp-authentication check-received keyword](#)

**Tree** [check-received](#)

**Options**

- strict  
Strict authentication option. Reject all packets that do not have an authentication TLV or that do have an authentication TLV that cannot be validated.
- loose  
Loose authentication option. Accept packets received without an authentication TLV; validate packets received with an authentication TLV and reject those packets that cannot be validated.
- disable

This enum disables authentication checks. Do not check authentication TLV (if any) of received PDUs; authentication TLV may still be added self-generated PDUs

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### generate *boolean*

<b>Description</b>	When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">authentication csnp-authentication generate</a> <i>boolean</i>
<b>Tree</b>	<a href="#">generate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### hello-authentication

<b>Description</b>	Container with options to control the authentication of Hello PDUs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">authentication hello-authentication</a>
<b>Tree</b>	<a href="#">hello-authentication</a>

<b>Description</b>	The secret key to use for authentication of PDUs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">authentication key auth-password</a> <i>string</i>
<b>Tree</b>	<a href="#">auth-password</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### crypto-algorithm *keyword*

**Description** The cryptographic algorithm used with the keying material to secure the messages.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string*  
[authentication key crypto-algorithm](#) *keyword*

**Tree** [crypto-algorithm](#)

**Options**

- cleartext  
The authentication-key is encoded in plaintext.
- hmac-md5  
The authentication-key is used to generate a 16-byte (128 bit) MD5 digest using the HMAC algorithm (RFC 2104).
- hmac-sha-256  
The authentication-key is used to generate a SHA2 digest using the HMAC algorithm (RFC 2104). The SHA-256 variant of SHA2 produces an output of 32 bytes (256 bits).

**Configurable** True

**Platforms** Supported on all platforms

### keychain *reference*

**Description** Specifies a keychain to use for the authentication of PDUs when the behavior is controlled at this level of the configuration hierarchy.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string*  
[authentication keychain](#) *reference*

**Tree** [keychain](#)

**Reference** [system authentication keychain name](#) *string*

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### generate *boolean*

<b>Description</b>	When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">authentication lsp-authentication generate</a> <i>boolean</i>
<b>Tree</b>	<a href="#">generate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### psnp-authentication

<b>Description</b>	Container with options to control the authentication of PSNP PDUs
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">authentication psnp-authentication</a>
<b>Tree</b>	<a href="#">psnp-authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**check-received** *keyword*

<b>Description</b>	Specifies the type of authentication checks done for received PDUs of the specified type.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">authentication psnp-authentication check-received</a> <i>keyword</i>
<b>Tree</b>	<a href="#">check-received</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>strict</b> Strict authentication option. Reject all packets that do not have an authentication TLV or that do have an authentication TLV that cannot be validated.</li> <li>• <b>loose</b> Loose authentication option. Accept packets received without an authentication TLV; validate packets received with an authentication TLV and reject those packets that cannot be validated.</li> <li>• <b>disable</b> This enum disables authentication checks. Do not check authentication TLV (if any) of received PDUs; authentication TLV may still be added self-generated PDUs</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**generate** *boolean*

<b>Description</b>	When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">authentication psnp-authentication generate</a> <i>boolean</i>
<b>Tree</b>	<a href="#">generate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**auto-cost**

<b>Description</b>	Enter the auto-cost context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">auto-cost</a>
<b>Tree</b>	<a href="#">auto-cost</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**reference-bandwidth** *number*

<b>Description</b>	<p>Configures the reference bandwidth that provides the basis for interface metrics based on link bandwidth.</p> <p>If the reference bandwidth is defined, then the cost is calculated using the following formula: <math>\text{cost} = \text{reference-bandwidth} / \text{bandwidth}</math></p> <p>When a large reference-bandwidth value is configured, a metric calculation may result in a value higher than the supported protocol cost value. If this occurs, IS-IS automatically reverts to the maximum configurable cost metric.</p> <p>If the reference bandwidth is not configured then all interfaces have a default metric of 10.</p> <p>Note: To use metrics in excess of 63, wide metrics must be deployed</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">auto-cost reference-bandwidth</a> <i>number</i>
<b>Tree</b>	<a href="#">reference-bandwidth</a>
<b>Range</b>	1 to 8000000000
<b>Units</b>	kbps
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**enable-csnp-on-p2p-links** *boolean*

<b>Description</b>	<p>Enable/disable the transmission of periodic CSNP PDUs on point-to-point interfaces</p> <p>When this is set to false, CSNP PDUs will only be sent on a P2P interface when the adjacency is initialized. This setting has no effect on broadcast interfaces.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">enable-csnp-on-p2p-links</a> <i>boolean</i>
<b>Tree</b>	<a href="#">enable-csnp-on-p2p-links</a>
<b>Default</b>	true

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **export-policy** *reference*

<b>Description</b>	Apply an export policy to redistribute non-ISIS routes into ISIS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">export-policy reference</a>
<b>Tree</b>	<a href="#">export-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **graceful-restart**

<b>Description</b>	Container for options related to IS-IS graceful restart
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">graceful-restart</a>
<b>Tree</b>	<a href="#">graceful-restart</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **acceptable-duration** *number*

<b>Description</b>	Initial value of the Remaining Time that is advertised in the Restart TLV with Restart Acknowledgement flag set when this router starts to help another router that has just (re)entered Restart mode.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">graceful-restart acceptable-duration</a> <i>number</i>
<b>Tree</b>	<a href="#">acceptable-duration</a>
<b>Range</b>	1 to 20000
<b>Default</b>	60
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**helper-mode** *boolean*

<b>Description</b>	Enable or disable the IS-IS graceful restart helper function When this leaf is set, the local system supports retaining forwarding information during a neighbor router's restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">graceful-restart helper-mode</a> <i>boolean</i>
<b>Tree</b>	<a href="#">helper-mode</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**hello-padding** *keyword*

<b>Description</b>	Specifies the use of IS-IS Hello PDU padding all interfaces This can be overridden by interface configuration.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">hello-padding</a> <i>keyword</i>
<b>Tree</b>	<a href="#">hello-padding</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>strict Strict padding option. Hello padding is done continuously, regardless of adjacency state or interface type.</li> <li>loose Loose padding option. On p2p interfaces hello PDUs are padded from the initial detection of a new neighbor until the adjacency transitions to the INIT state. On broadcast interfaces hello padding is done until there is at least one UP adjacency on the interface.</li> <li>adaptive Adaptive padding option. On p2p interfaces hello PDUs are padded until the sender declares the adjacency to be UP (based on 3-way handshake or the classic algorithm described in ISO 10589. If the p2p neighbor does not support the adjacency state TLV, then padding continues. On broadcast interfaces hello padding is done until there is at least one UP adjacency on the interface.</li> <li>disable This enum disables hello PDU padding</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**hostnames**

<b>Description</b>	Enter the hostnames context
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string hostnames</a>
<b>Tree</b>	<a href="#">hostnames</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**system-id [host-system-id string](#)**

<b>Description</b>	List of system IDs that have discovered hostnames.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string hostnames system-id host-system-id string</a>
<b>Tree</b>	<a href="#">system-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**host-system-id [string](#)**

<b>Description</b>	The system ID
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string hostnames system-id host-system-id string</a>
<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**hostname [string](#)**

<b>Description</b>	The hostname of the system.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string hostnames system-id host-system-id string hostname string</a>
<b>Tree</b>	<a href="#">hostname</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**iid-tlv** *boolean*

<b>Description</b>	ISIS Instance Identifier TLV. When set to true, IID-TLV identifies the unique instance as well as the topology/topologies to which the PDU applies.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">iid-tlv</a> <i>boolean</i>
<b>Tree</b>	<a href="#">iid-tlv</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**instance-id** *number*

<b>Description</b>	ISIS instance number
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">instance-id</a> <i>number</i>
<b>Tree</b>	<a href="#">instance-id</a>
<b>Range</b>	0 to 127
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**inter-level-propagation-policies**

<b>Description</b>	Container with options to control the propagation of prefixes between levels
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">inter-level-propagation-policies</a>
<b>Tree</b>	<a href="#">inter-level-propagation-policies</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**level1-to-level2**

<b>Description</b>	Container with options to control the propagation of prefixes from level 1 to level 2.
--------------------	--

By default all L1 prefixes are propagated without summarization into L2.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">inter-level-propagation-policies level1-to-level2</a>
<b>Tree</b>	<a href="#">level1-to-level2</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### summary-address [ip-prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#))

<b>Description</b>	List of summarization prefixes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">inter-level-propagation-policies level1-to-level2</a> <a href="#">summary-address ip-prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> )
<b>Tree</b>	<a href="#">summary-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### [ip-prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#))

<b>Description</b>	An IP prefix advertised into L2 that summarizes one or more L1 prefixes and causes them to be suppressed
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">inter-level-propagation-policies level1-to-level2</a> <a href="#">summary-address ip-prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> )
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### [route-tag](#) *number*

<b>Description</b>	Specifies route tag value to assign to the summary route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">inter-level-propagation-policies level1-to-level2</a> <a href="#">summary-address ip-prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">route-tag</a> <i>number</i>
<b>Tree</b>	<a href="#">route-tag</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface** *interface-name string*

<b>Description</b>	List of IS-IS interfaces
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string interface interface-name string</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface-name** *string*

<b>Description</b>	Name of the IS-IS interface
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string interface interface-name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**adjacency** *neighbor-system-id string adjacency-level string*

<b>Description</b>	List of adjacencies formed through this interface.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string interface interface-name string adjacency neighbor-system-id string adjacency-level string</a>
<b>Tree</b>	<a href="#">adjacency</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor-system-id** *string*

<b>Description</b>	The neighbor router's system ID.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string interface interface-name string adjacency neighbor-system-id string adjacency-level string</a>
<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**adjacency-level** *string*

<b>Description</b>	The level of the adjacency that is formed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**area-address** *string*

<b>Description</b>	Area address of the neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <a href="#">area-address</a> <i>string</i>
<b>Tree</b>	<a href="#">area-address</a>
<b>String Length</b>	2 to 38
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**designated-is-system-id** *string*

<b>Description</b>	System id of the designated IS router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <a href="#">designated-is-system-id</a> <i>string</i>
<b>Tree</b>	<a href="#">designated-is-system-id</a>
<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**down-reason** *keyword*

<b>Description</b>	The reason why the adjacency is down.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <a href="#">down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>3-way-handshake-failed</li> </ul>

- address-mismatch
- hold-timer-expired
- area-mismatch
- bad-hello
- bfd-session-down
- interface-down
- interface-level-disabled
- level-changed
- level-mismatch
- mt-topology-changed
- mt-topology-mismatch
- remote-system-id-changed
- isis-protocol-disabled
- unknown

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### last-up-down-transition *string*

<b>Description</b>	The last time when the adjacency entered the up or down state.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">interface interface-name string</a> <a href="#">adjacency neighbor-system-id string</a> <a href="#">adjacency-level string</a> <a href="#">last-up-down-transition string</a>
<b>Tree</b>	<a href="#">last-up-down-transition</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### local-extended-circuit-id *number*

<b>Description</b>	Local extended circuit ID.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">interface interface-name string</a> <a href="#">adjacency neighbor-system-id string</a> <a href="#">adjacency-level string</a> <a href="#">local-extended-circuit-id number</a>
<b>Tree</b>	<a href="#">local-extended-circuit-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor-circuit-type** *keyword*

<b>Description</b>	The circuit type signalled by the neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <b>neighbor-circuit-type</b> <i>keyword</i>
<b>Tree</b>	<a href="#">neighbor-circuit-type</a>
<b>Default</b>	L1L2
<b>Options</b>	<ul style="list-style-type: none"> <li>• L1 This enum describes ISIS level 1</li> <li>• L2 This enum describes ISIS level 2</li> <li>• L1L2 This enum describes ISIS level 1-2</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor-extended-circuit-id** *number*

<b>Description</b>	Extended circuit ID assigned by the neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <b>neighbor-extended-circuit-id</b> <i>number</i>
<b>Tree</b>	<a href="#">neighbor-extended-circuit-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor-hostname** *string*

<b>Description</b>	The hostname of the neighbor, as learned by TLV 137.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <b>neighbor-hostname</b> <i>string</i>
<b>Tree</b>	<a href="#">neighbor-hostname</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor-ipv4** *string*

<b>Description</b>	The IPv4 address of the neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <b>neighbor-ipv4</b> <i>string</i>
<b>Tree</b>	<a href="#">neighbor-ipv4</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor-ipv6** *string*

<b>Description</b>	The IPv6 address of the neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <b>neighbor-ipv6</b> <i>string</i>
<b>Tree</b>	<a href="#">neighbor-ipv6</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor-last-restart** (*keyword* | *date-and-time-delta*)

<b>Description</b>	The last time the neighbor restarted under protection of graceful restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <b>neighbor-last-restart</b> ( <i>keyword</i>   <i>date-and-time-delta</i> )
<b>Tree</b>	<a href="#">neighbor-last-restart</a>
<b>String Length</b>	20 to 32
<b>Options</b>	<ul style="list-style-type: none"> <li>• never</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor-priority** *number*

<b>Description</b>	The priority signalled by the neighbor to become the DIS on a LAN
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <b>neighbor-priority</b> <i>number</i>
<b>Tree</b>	<a href="#">neighbor-priority</a>

<b>Range</b>	0 to 127
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **neighbor-restart-capable** *boolean*

<b>Description</b>	Reads true when the neighbor has signalled that it is restart capable.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <b>neighbor-restart-capable</b> <i>boolean</i>
<b>Tree</b>	<a href="#">neighbor-restart-capable</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **neighbor-restart-status** *keyword*

<b>Description</b>	The status of the neighbor with respect to graceful restart
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <b>neighbor-restart-status</b> <i>keyword</i>
<b>Tree</b>	<a href="#">neighbor-restart-status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• not-helping</li> <li>• helping</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **neighbor-restarts** *number*

<b>Description</b>	The number of times the neighbor has restarted under protection of graceful restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <b>neighbor-restarts</b> <i>number</i>
<b>Tree</b>	<a href="#">neighbor-restarts</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor-snpa** *string*

<b>Description</b>	The SNPA of the neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <b>neighbor-snpa</b> <i>string</i>
<b>Tree</b>	<a href="#">neighbor-snpa</a>
<b>String Length</b>	0 to 20
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**nlpid** *keyword*

<b>Description</b>	List of protocols supported by the adjacency.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <b>nlpid</b> <i>keyword</i>
<b>Tree</b>	<a href="#">nlpid</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPv4 NLPID 0xCC corresponding to IPv4</li> <li>• IPv6 NLPID 0x8E corresponding to IPv6</li> <li>• CLNS NLPID 0x81 corresponding to CLNS</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**remaining-holdtime** *number*

<b>Description</b>	The time remaining until the hold timer will expire.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <b>remaining-holdtime</b> <i>number</i>
<b>Tree</b>	<a href="#">remaining-holdtime</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**state** *keyword*

<b>Description</b>	The current state of the adjacency.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <b>state</b> <i>keyword</i>
<b>Tree</b>	<a href="#">state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up This state describes that adjacency is established.</li> <li>• down This state describes that adjacency is NOT established.</li> <li>• init This state describes that adjacency is establishing.</li> <li>• failed This state describes that adjacency is failed.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**up-down-transitions** *number*

<b>Description</b>	The total number of transitions from Up state to a lower state, since the last clear.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacency neighbor-system-id</a> <i>string</i> <a href="#">adjacency-level</a> <i>string</i> <b>up-down-transitions</b> <i>number</i>
<b>Tree</b>	<a href="#">up-down-transitions</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Used to administratively enable or disable the IS-IS protocol on a routed subinterface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>

<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## authentication

<b>Description</b>	Container for specifying authentication options that apply to the IS-IS instance.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string interface interface-name string authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## hello-authentication

<b>Description</b>	Container with options to control the authentication of Hello PDUs
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string interface interface-name string authentication hello-authentication</a>
<b>Tree</b>	<a href="#">hello-authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## check-received *keyword*

<b>Description</b>	Specifies the type of authentication checks done for received PDUs of the specified type.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string interface interface-name string authentication hello-authentication check-received keyword</a>
<b>Tree</b>	<a href="#">check-received</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• strict Strict authentication option. Reject all packets that do not have an authentication TLV or that do have an authentication TLV that cannot be validated.</li> <li>• loose</li> </ul>

Loose authentication option. Accept packets received without an authentication TLV; validate packets received with an authentication TLV and reject those packets that cannot be validated.

- disable

This enum disables authentication checks. Do not check authentication TLV (if any) of received PDUs; authentication TLV may still be added self-generated PDUs

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **generate** *boolean*

<b>Description</b>	When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">authentication hello-authentication generate</a> <i>boolean</i>
<b>Tree</b>	<a href="#">generate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **key**

<b>Description</b>	Container to specify the secret key and crypto algorithm to use for the authentication of Hello PDUs on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">authentication key</a>
<b>Tree</b>	<a href="#">key</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **auth-password** *string*

<b>Description</b>	The secret key to use for authentication of Hello PDUs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">authentication key auth-password</a> <i>string</i>
<b>Tree</b>	<a href="#">auth-password</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**crypto-algorithm** *keyword*

<b>Description</b>	The cryptographic algorithm used with the keying material to secure the messages.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">authentication key crypto-algorithm</a> <i>keyword</i>
<b>Tree</b>	<a href="#">crypto-algorithm</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>cleartext</b> The authentication-key is encoded in plaintext.</li> <li>• <b>hmac-md5</b> The authentication-key is used to generate a 16-byte (128 bit) MD5 digest using the HMAC algorithm (RFC 2104).</li> <li>• <b>hmac-sha-256</b> The authentication-key is used to generate a SHA2 digest using the HMAC algorithm (RFC 2104).The SHA-256 variant of SHA2 produces an output of 32 bytes (256 bits).</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**keychain** *reference*

<b>Description</b>	Specifies a keychain to use for the authentication of Hello PDUs on this interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">authentication keychain</a> <i>reference</i>
<b>Tree</b>	<a href="#">keychain</a>
<b>Reference</b>	<a href="#">system authentication keychain name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**circuit-id** *number*

<b>Description</b>	The circuit ID assigned by this IS-IS router to its interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">circuit-id</a> <i>number</i>
<b>Tree</b>	<a href="#">circuit-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**circuit-type** *keyword*

<b>Description</b>	Specifies the circuit type as either point-to-point or broadcast
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <b>circuit-type</b> <i>keyword</i>
<b>Tree</b>	<a href="#">circuit-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>point-to-point This enum describes a point-to-point interface</li> <li>broadcast This enum describes a broadcast interface</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**hello-padding** *keyword*

<b>Description</b>	Specifies the use of IS-IS Hello PDU padding on the interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <b>hello-padding</b> <i>keyword</i>
<b>Tree</b>	<a href="#">hello-padding</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>strict Strict padding option. Hello padding is done continuously, regardless of adjacency state or interface type.</li> <li>loose Loose padding option. On p2p interfaces hello PDUs are padded from the initial detection of a new neighbor until the adjacency transitions to the INIT state. On broadcast interfaces hello padding is done until there is at least one UP adjacency on the interface.</li> <li>adaptive Adaptive padding option. On p2p interfaces hello PDUs are padded until the sender declares the adjacency to be UP (based on 3-way handshake or the classic algorithm described in ISO 10589. If the p2p neighbor does not support the adjacency state TLV, then padding continues. On broadcast interfaces hello padding is done until there is at least one UP adjacency on the interface.</li> <li>disable This enum disables hello PDU padding</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface-ref**

<b>Description</b>	Reference to a subinterface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">interface-ref</a>
<b>Tree</b>	<a href="#">interface-ref</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**interface *reference***

<b>Description</b>	Reference to a base interface, for example a port or LAG
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">interface-ref</a> <a href="#">interface reference</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Reference</b>	<a href="#">interface name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**subinterface *reference***

<b>Description</b>	Reference to a subinterface This requires the base interface to be specified using the interface leaf in this container.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">interface-ref</a> <a href="#">subinterface reference</a>
<b>Tree</b>	<a href="#">subinterface</a>
<b>Reference</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4-unicast**

<b>Description</b>	Enter the ipv4-unicast context
--------------------	--------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">ipv4-unicast</a>
<b>Tree</b>	<a href="#">ipv4-unicast</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	When set to true, the interface and level supports IPv4 unicast routing
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">ipv4-unicast admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**enable-bfd** *boolean*

<b>Description</b>	Enable BFD for IPv4
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">ipv4-unicast enable-bfd</a> <i>boolean</i>
<b>Tree</b>	<a href="#">enable-bfd</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**include-bfd-tlv** *boolean*

<b>Description</b>	Specifies whether a BFD-enabled TLV is included for IPv4 on this IS-IS interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">ipv4-unicast include-bfd-tlv</a> <i>boolean</i>
<b>Tree</b>	<a href="#">include-bfd-tlv</a>
<b>Default</b>	false
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## ipv6-unicast

**Description** Enter the ipv6-unicast context

**Context** [network-instance name string protocols isis instance name string interface interface-name string ipv6-unicast](#)

**Tree** [ipv6-unicast](#)

**Configurable** True

**Platforms** Supported on all platforms

## admin-state *keyword*

**Description** When set to true, the interface and level supports IPv6 unicast routing

**Context** [network-instance name string protocols isis instance name string interface interface-name string ipv6-unicast admin-state keyword](#)

**Tree** [admin-state](#)

**Default** enable

**Options**

- enable
- disable

**Configurable** True

**Platforms** Supported on all platforms

## enable-bfd *boolean*

**Description** Enable BFD for IPv6

**Context** [network-instance name string protocols isis instance name string interface interface-name string ipv6-unicast enable-bfd boolean](#)

**Tree** [enable-bfd](#)

**Default** false

**Configurable** True

**Platforms** Supported on all platforms

## include-bfd-tlv *boolean*

**Description** Specifies whether a BFD-enabled TLV is included for IPv6 on this IS-IS interface.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">ipv6-unicast include-bfd-tlv</a> <i>boolean</i>
<b>Tree</b>	<a href="#">include-bfd-tlv</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## ldp-synchronization

<b>Description</b>	Container with configuration options and state that pertains to the operation of LDP-IGP synchronization on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">ldp-synchronization</a>
<b>Tree</b>	<a href="#">ldp-synchronization</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## disable

<b>Description</b>	Disable LDP-IGP synchronization procedures on this interface, even if synchronization is enabled globally
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">ldp-synchronization disable</a>
<b>Tree</b>	<a href="#">disable</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## duration *number*

<b>Description</b>	The length of time that the IGP interface has been in sync or out of sync
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">ldp-synchronization duration</a> <i>number</i>
<b>Tree</b>	<a href="#">duration</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**end-of-lib** *boolean*

<b>Description</b>	<p>When set to true, the IGP restores the normal metric for the IGP adjacency when learning from LDP that all label-FEC mappings have been received from the LDP peer, even if there is remaining time on the hold-down-timer.</p> <p>When set to false, the IGP always waits for the full duration of the hold-down-timer to restore the normal metric for the IGP adjacency.</p> <p>This overrides the global/instance level setting</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">ldp-synchronization end-of-lib</a> <i>boolean</i>
<b>Tree</b>	<a href="#">end-of-lib</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**hold-down-timer** *number*

<b>Description</b>	<p>The maximum amount of time that the IGP advertises a maximum metric for an interface, measured from the time that the LDP adjacency is re-established after going down.</p> <p>This overrides the global/instance level setting</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">ldp-synchronization hold-down-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">hold-down-timer</a>
<b>Range</b>	1 to 1800
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sync-state** *keyword*

<b>Description</b>	The current state of the interface with respect to LDP-IGP sync
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">ldp-synchronization sync-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">sync-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>wait-for-LDP-adjacency           <p>The IGP is waiting for the LDP adjacency to come up. The interface is being advertised with max-metric</p> </li> <li>hold-down-timer-active</li> </ul>

The LDP adjacency has come up and the IGP has started the hold-down-timer, waiting for either end-of-lib or hold-down-timer expiry. The interface is being advertised with max-metric

- end-of-lib-received

The IGP received end-of-lib and has switched to normal operation. The interface is being advertised with a normal metric

- hold-down-timer-expired

The IGP did not receive end-of-lib (or was configured to ignore it) but hold-down-timer has expired and normal metric is restored

- manual-exit

A tools command was performed to exit ldp-sync. Normal operation is resumed, max-metric is removed

- disabled

ldp-sync is not applicable on this interface

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### level *level-number number*

<b>Description</b>	List of IS-IS levels supported by this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i>
<b>Tree</b>	<a href="#">level</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	2

### level-number *number*

<b>Description</b>	Specifies the IS-IS protocol level to which these attributes are applied.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i>
<b>Range</b>	1 to 2
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## authentication

<b>Description</b>	Container for specifying authentication options that apply to the IS-IS instance.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string interface interface-name string level level-number number authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## hello-authentication

<b>Description</b>	Container with options to control the authentication of Hello PDUs
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string interface interface-name string level level-number number authentication hello-authentication</a>
<b>Tree</b>	<a href="#">hello-authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## check-received *keyword*

<b>Description</b>	Specifies the type of authentication checks done for received PDUs of the specified type.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string interface interface-name string level level-number number authentication hello-authentication check-received keyword</a>
<b>Tree</b>	<a href="#">check-received</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>strict</b> Strict authentication option. Reject all packets that do not have an authentication TLV or that do have an authentication TLV that cannot be validated.</li> <li>• <b>loose</b> Loose authentication option. Accept packets received without an authentication TLV; validate packets received with an authentication TLV and reject those packets that cannot be validated.</li> <li>• <b>disable</b> This enum disables authentication checks. Do not check authentication TLV (if any) of received PDUs; authentication TLV may still be added self-generated PDUs</li> </ul>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**generate** *boolean*

<b>Description</b>	When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication hello-authentication generate</a> <i>boolean</i>
<b>Tree</b>	<a href="#">generate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**key**

<b>Description</b>	Container to specify the secret key and crypto algorithm to use for the authentication of Hello PDUs on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication key</a>
<b>Tree</b>	<a href="#">key</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**auth-password** *string*

<b>Description</b>	The secret key to use for authentication of Hello PDUs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication key auth-password</a> <i>string</i>
<b>Tree</b>	<a href="#">auth-password</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**crypto-algorithm** *keyword*

<b>Description</b>	The cryptographic algorithm used with the keying material to secure the messages.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication key crypto-algorithm</a> <i>keyword</i>
<b>Tree</b>	<a href="#">crypto-algorithm</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">cleartext</a> The authentication-key is encoded in plaintext.</li> <li>• <a href="#">hmac-md5</a> The authentication-key is used to generate a 16-byte (128 bit) MD5 digest using the HMAC algorithm (RFC 2104).</li> <li>• <a href="#">hmac-sha-256</a> The authentication-key is used to generate a SHA2 digest using the HMAC algorithm (RFC 2104). The SHA-256 variant of SHA2 produces an output of 32 bytes (256 bits).</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### keychain *reference*

<b>Description</b>	Specifies a keychain to use for the authentication of Hello PDUs on this interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication keychain reference</a>
<b>Tree</b>	<a href="#">keychain</a>
<b>Reference</b>	<a href="#">system authentication keychain name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### disable *boolean*

<b>Description</b>	Disable the Level for the interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">disable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">disable</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ipv6-unicast-metric** *number*

<b>Description</b>	Specifies the interface metric associated with the IPv6-unicast multi-topology. The default is based on reference-bandwidth, or else if this is not configured the default is 10.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">ipv6-unicast-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">ipv6-unicast-metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**metric** *number*

<b>Description</b>	Specifies the interface metric associated with the native routing topology. The default is based on reference-bandwidth, or else if this is not configured the default is 10.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**passive** *boolean*

<b>Description</b>	When set to true the interface is configured as a passive interface for this level and does not send IIH PDUs or try to form an adjacency with other routers.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">passive</a> <i>boolean</i>
<b>Tree</b>	<a href="#">passive</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**priority** *number*

<b>Description</b>	ISIS neighbor priority for becoming Designated IS (LAN hello PDU only).
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">priority</a> <i>number</i>
<b>Tree</b>	<a href="#">priority</a>
<b>Range</b>	0 to 127
<b>Default</b>	64
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Interface per level statistics
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## pdu [pdu-name](#) *keyword*

<b>Description</b>	List of PDUs processed by the IS-IS instance since the IS-IS manager restarted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics pdu pdu-name</a> <i>keyword</i>
<b>Tree</b>	<a href="#">pdu</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## pdu-name *keyword*

<b>Description</b>	The PDU type that was processed
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics pdu pdu-name</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• LSP Link State PDU</li> <li>• IIH IS-to-IS Hello PDU</li> </ul>

- CSNP  
Complete Sequence Number PDU
- PSNP  
Partial Sequence Number PDU
- Unknown  
Unknown PDU type

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### dropped *number*

<b>Description</b>	The number of PDUs that were received and dropped
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics pdu pdu-name</a> <i>keyword</i> <b>dropped</b> <i>number</i>
<b>Tree</b>	<a href="#">dropped</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### processed *number*

<b>Description</b>	The number of PDUs that were received and processed
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics pdu pdu-name</a> <i>keyword</i> <b>processed</b> <i>number</i>
<b>Tree</b>	<a href="#">processed</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### received *number*

<b>Description</b>	The number of PDUs that were received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics pdu pdu-name</a> <i>keyword</i> <b>received</b> <i>number</i>
<b>Tree</b>	<a href="#">received</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**sent** *number*

<b>Description</b>	The number of PDUs that were transmitted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics pdu pdu-name keyword sent</a> <i>number</i>
<b>Tree</b>	<a href="#">sent</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**timers**

<b>Description</b>	Enter the timers context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">timers</a>
<b>Tree</b>	<a href="#">timers</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**hello-interval** *number*

<b>Description</b>	ISIS hello-interval value. The default is 3 seconds on Designated IS interfaces and 9 seconds for non-DIS and p2p interfaces
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">timers hello-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">hello-interval</a>
<b>Range</b>	1 to 20000
<b>Default</b>	9
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**hello-multiplier** *number*

<b>Description</b>	<p>ISIS hello-multiplier value.</p> <p>The neighbor hold time is (hello multiplier x hello interval) on non-designated intermediate system broadcast interfaces and point-to-point interfaces and (hello multiplier x hello interval / 3) on designated intermediate system broadcast interfaces.</p> <p>The hold time is the time in which the neighbor expects to receive the next Hello PDU. If the neighbor receives a Hello within this time, the hold time is reset. If the neighbor does not receive a Hello within the hold time, it brings the adjacency down.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">timers hello-multiplier</a> <i>number</i>
<b>Tree</b>	<a href="#">hello-multiplier</a>
<b>Range</b>	2 to 100
<b>Default</b>	3
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	The operational state of the IS-IS interface. This simply tracks the operational state of the subinterface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> </ul>

- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

Supported on all platforms

**passive** *boolean***Description**

When set to true the interface is configured as a passive interface and does not send IIH PDUs or try to form an adjacency with other routers.

**Context**[network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string* **passive** *boolean***Tree**[passive](#)**Default**

false

**Configurable**

True

**Platforms**

Supported on all platforms

**segment-routing****Description**

Container with interface-specific segment routing options

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">segment-routing</a>
<b>Tree</b>	<a href="#">segment-routing</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## mpls

<b>Description</b>	SR-MPLS interface options
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">segment-routing mpls</a>
<b>Tree</b>	<a href="#">mpls</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv4-adjacency-sid

<b>Description</b>	The IPv4 adjacency SID associated with the interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">segment-routing mpls ipv4-adjacency-sid</a>
<b>Tree</b>	<a href="#">ipv4-adjacency-sid</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## assignment *keyword*

<b>Description</b>	<p>The method that should be used to allocate an adjacency SID or multiple adjacency SIDs for this interface.</p> <p>This overrides the top level configuration to assign dynamic adjacency SIDs to all interfaces.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">segment-routing mpls ipv4-adjacency-sid assignment</a> <i>keyword</i>
<b>Tree</b>	<a href="#">assignment</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>static</li> </ul> <p>The user will statically configure an adjacency SID for the interface. This option is not available if the interface type is not point-to-point.</p>

- **dynamic**  
IS-IS should dynamically allocate one or more dynamic adjacency SIDs for this interface.
- **none**  
No adjacency SIDs should be allocated for this interface.

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **programmed-sids** *label-value number*

**Description** The list of IPv4 adjacency SIDs that have been programmed in association with this interface

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string* [segment-routing mpls ipv4-adjacency-sid programmed-sids label-value](#) *number*

**Tree** [programmed-sids](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **label-value** *number*

**Description** The adjacency SID represented by the MPLS label value.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string* [segment-routing mpls ipv4-adjacency-sid programmed-sids label-value](#) *number*

**Range** 16 to 1048575

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **adjacency-level** *keyword*

**Description** The level of the adjacency that is formed.  
Only populated for dynamic adjacency SIDs on broadcast interfaces.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">segment-routing mpls ipv4-adjacency-sid programmed-sids label-value</a> <i>number</i> <a href="#">adjacency-level</a> <i>keyword</i>
<b>Tree</b>	<a href="#">adjacency-level</a>
<b>Default</b>	L1L2
<b>Options</b>	<ul style="list-style-type: none"> <li>• L1 This enum describes ISIS level 1</li> <li>• L2 This enum describes ISIS level 2</li> <li>• L1L2 This enum describes ISIS level 1-2</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **neighbor-system-id** *string*

<b>Description</b>	The neighbor router's system ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">segment-routing mpls ipv4-adjacency-sid programmed-sids label-value</a> <i>number</i> <a href="#">neighbor-system-id</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor-system-id</a>
<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **static** *number*

<b>Description</b>	Configure a static adjacency SID represented by an MPLS label value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">segment-routing mpls ipv4-adjacency-sid static</a> <i>number</i>
<b>Tree</b>	<a href="#">static</a>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv4-node-sid

**Description** Configuration of IPv4 node SID.  
The (primary) IPv4 address of this interface is advertised as a prefix SID with the node-SID flag set. The associated label is derived from the label index configured in this container.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string* [segment-routing mpls ipv4-node-sid](#)

**Tree** [ipv4-node-sid](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## index number

**Description** Label index to add to SRGB base.  
This causes the V-flag and L-flag in the prefix SID subTLV to be set to zero.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string* [segment-routing mpls ipv4-node-sid index number](#)

**Tree** [index](#)

**Range** 0 to 1048575

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv6-adjacency-sid

**Description** The IPv6 adjacency SID associated with the interface

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string* [segment-routing mpls ipv6-adjacency-sid](#)

**Tree** [ipv6-adjacency-sid](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**assignment** *keyword*

<b>Description</b>	The method that should be used to allocate an adjacency SID or multiple adjacency SIDs for this interface.  This overrides the top level configuration to assign dynamic adjacency SIDs to all interfaces.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">segment-routing mpls ipv6-adjacency-sid assignment</a> <i>keyword</i>
<b>Tree</b>	<a href="#">assignment</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>static The user will statically configure an adjacency SID for the interface. This option is not available if the interface type is not point-to-point.</li> <li>dynamic IS-IS should dynamically allocate one or more dynamic adjacency SIDs for this interface.</li> <li>none No adjacency SIDs should be allocated for this interface.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**programmed-sids** [label-value](#) *number*

<b>Description</b>	The list of IPv4 adjacency SIDs that have been programmed in association with this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">segment-routing mpls ipv6-adjacency-sid programmed-sids label-value</a> <i>number</i>
<b>Tree</b>	<a href="#">programmed-sids</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**label-value** *number*

<b>Description</b>	The adjacency SID represented by the MPLS label value.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">segment-routing mpls ipv6-adjacency-sid programmed-sids label-value</a> <i>number</i>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### adjacency-level *keyword*

<b>Description</b>	The level of the adjacency that is formed. Only populated for dynamic adjacency SIDs on broadcast interfaces.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">segment-routing mpls ipv6-adjacency-sid programmed-sids label-value</a> <i>number</i> <a href="#">adjacency-level</a> <i>keyword</i>
<b>Tree</b>	<a href="#">adjacency-level</a>
<b>Default</b>	L1L2
<b>Options</b>	<ul style="list-style-type: none"> <li>• L1 This enum describes ISIS level 1</li> <li>• L2 This enum describes ISIS level 2</li> <li>• L1L2 This enum describes ISIS level 1-2</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### neighbor-system-id *string*

<b>Description</b>	The neighbor router's system ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">segment-routing mpls ipv6-adjacency-sid programmed-sids label-value</a> <i>number</i> <a href="#">neighbor-system-id</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor-system-id</a>
<b>String Length</b>	14
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### static number

**Description** Configure a static adjacency SID represented by an MPLS label value.

**Context** [network-instance name string protocols isis instance name string interface interface-name string segment-routing mpls ipv6-adjacency-sid static number](#)

**Tree** [static](#)

**Range** 16 to 1048575

**Configurable** True

**Range** 0 to 1048575

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## statistics

**Description** Statistics associated with this IS-IS interface.

**Context** [network-instance name string protocols isis instance name string interface interface-name string statistics](#)

**Tree** [statistics](#)

**Configurable** False

**Platforms** Supported on all platforms

## adjacency-changes *number*

**Description** Number of times an adjacency state change has occurred on this circuit(summed across all adjacencies).

**Context** [network-instance name string protocols isis instance name string interface interface-name string statistics adjacency-changes number](#)

**Tree** [adjacency-changes](#)

**Default** 0

**Configurable** False

**Platforms** Supported on all platforms

## adjacency-number *number*

**Description** Number of adjacencies on this circuit.

**Context** [network-instance name string protocols isis instance name string interface interface-name string statistics adjacency-number number](#)

**Tree** [adjacency-number](#)

**Default** 0

**Configurable** False

**Platforms** Supported on all platforms

## area-address-mismatches *number*

**Description** Number of times an IS-IS L1 hello was received on this circuit with a area address field different from that for this system

**Context** [network-instance name string protocols isis instance name string interface interface-name string statistics area-address-mismatches number](#)

<b>Tree</b>	<a href="#">area-address-mismatches</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **authentication-failures** *number*

<b>Description</b>	Number of times an IS-IS control PDU with the correct auth type has failed to pass authentication validation on the interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">statistics authentication-failures</a> <i>number</i>
<b>Tree</b>	<a href="#">authentication-failures</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **authentication-type-failures** *number*

<b>Description</b>	Number of times an IS-IS control PDU with an auth type field different from that for this system has been received on the interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">statistics authentication-type-failures</a> <i>number</i>
<b>Tree</b>	<a href="#">authentication-type-failures</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **designated-is-changes** *number*

<b>Description</b>	Number of times the Designated IS has changed on this circuit.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">statistics designated-is-changes</a> <i>number</i>
<b>Tree</b>	<a href="#">designated-is-changes</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**max-area-address-mismatches** *number*

<b>Description</b>	Number of times an IS-IS control PDU with a max area address field different from that for this system has been received on the interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">statistics max-area-address-mismatches</a> <i>number</i>
<b>Tree</b>	<a href="#">max-area-address-mismatches</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**rejected-adjacencies** *number*

<b>Description</b>	Number of times an adjacency has been rejected on this circuit.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">statistics rejected-adjacencies</a> <i>number</i>
<b>Tree</b>	<a href="#">rejected-adjacencies</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**system-id-length-mismatches** *number*

<b>Description</b>	Number of times an IS-IS control PDU with a system ID field length different from that for this system has been received on the interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">statistics system-id-length-mismatches</a> <i>number</i>
<b>Tree</b>	<a href="#">system-id-length-mismatches</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**timers**

<b>Description</b>	Enter the timers context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">timers</a>

<b>Tree</b>	<a href="#">timers</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **csnp-interval** *number*

<b>Description</b>	The interval, specified in seconds, at which periodic CSNP packets should be transmitted by the local IS on this interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">timers csnp-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">csnp-interval</a>
<b>Range</b>	1 to 65535
<b>Default</b>	10
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **lsp-pacing-interval** *number*

<b>Description</b>	<p>Controls the interval between (bursts of) LSPs sent from the interface. The interval applies to all LSPs: LSPs generated by the router, and LSPs received from other routers and re-flooded.</p> <p>The burst interval is 100 ms if the lsp-pacing-interval &lt; 100 ms and otherwise it is 1 second. For example, if the lsp-pacing-interval is 2 ms, at most 50 LSPs are sent every 100 ms. On the other hand, if the lsp-pacing-interval is 100 ms, at most 10 LSPs are sent every 1 second.</p> <p>If a value of 0 is configured, no LSPs are sent from the interface.</p> <p>The default pacing interval of 100 milliseconds means that a maximum of 10 LSPs are sent in a burst every second.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">timers lsp-pacing-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">lsp-pacing-interval</a>
<b>Range</b>	0 to 100000
<b>Default</b>	100
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**trace-options**

<b>Description</b>	Interface level debug trace options for IS-IS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**trace keyword**

<b>Description</b>	List of tracing options
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">trace-options</a> <a href="#">trace keyword</a>
<b>Tree</b>	<a href="#">trace</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">adjacencies</a></li> <li>• <a href="#">packets-all</a></li> <li>• <a href="#">packets-p2p-hello</a></li> <li>• <a href="#">packets-l1-hello</a></li> <li>• <a href="#">packets-l2-hello</a></li> <li>• <a href="#">packets-l1-psnp</a></li> <li>• <a href="#">packets-l2-psnp</a></li> <li>• <a href="#">packets-l1-csnp</a></li> <li>• <a href="#">packets-l2-csnp</a></li> <li>• <a href="#">packets-l1-lsp</a></li> <li>• <a href="#">packets-l2-lsp</a></li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**weighted-ecmp**

<b>Description</b>	Enter the weighted-ecmp context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">weighted-ecmp</a>
<b>Tree</b>	<a href="#">weighted-ecmp</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### load-balancing-weight (*number | keyword*)

**Description** The load-balancing weight of the interface, which applies when weighted ECMP is enabled and the interface is part of a multipath set.

**Context** [network-instance name string protocols isis instance name string interface interface-name string weighted-ecmp load-balancing-weight \(number | keyword\)](#)

**Tree** [load-balancing-weight](#)

**Range** 1 to 4294967295

**Default** auto

**Options**

- auto  
Load-balancing weight is based on the bandwidth of the parent interface (port or LAG)
- none  
The interface should not participate in weighted ECMP

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv4-unicast

**Description** Enables/disables IPv4 routing in this ISIS instance.

**Context** [network-instance name string protocols isis instance name string ipv4-unicast](#)

**Tree** [ipv4-unicast](#)

**Configurable** True

**Platforms** Supported on all platforms

### admin-state *keyword*

**Description** When set to true, the IS-IS instance supports IPv4 unicast routing

**Context** [network-instance name string protocols isis instance name string ipv4-unicast admin-state keyword](#)

**Tree** [admin-state](#)

**Default** enable

**Options**

- enable

	<ul style="list-style-type: none"> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## ipv6-unicast

<b>Description</b>	Enables/disables IPv6 routing in this ISIS instance.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string ipv6-unicast</a>
<b>Tree</b>	<a href="#">ipv6-unicast</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## admin-state *keyword*

<b>Description</b>	When set to true, the IS-IS instance supports IPv6 unicast routing
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string ipv6-unicast admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## ldp-synchronization

<b>Description</b>	Enable LDP-IGP synchronization procedures on all P2P interfaces and all LAN interfaces with a single adjacency, except on interfaces where the functionality is explicitly disabled
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string ldp-synchronization</a>
<b>Tree</b>	<a href="#">ldp-synchronization</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**end-of-lib** *boolean*

<b>Description</b>	When set to true, the IGP restores the normal metric for the IGP adjacency when learning from LDP that all label-FEC mappings have been received from the LDP peer, even if there is remaining time on the hold-down-timer.  When set to false, the IGP always waits for the full duration of the hold-down-timer to restore the normal metric for the IGP adjacency
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">ldp-synchronization end-of-lib</a> <i>boolean</i>
<b>Tree</b>	<a href="#">end-of-lib</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**hold-down-timer** *number*

<b>Description</b>	The maximum amount of time that the IGP advertises a maximum metric for an interface, measured from the time that the LDP adjacency is re-established after going down
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">ldp-synchronization hold-down-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">hold-down-timer</a>
<b>Range</b>	1 to 1800
<b>Default</b>	60
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**level** [level-number](#) *number*

<b>Description</b>	List of IS-IS levels supported by this IS (router)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i>
<b>Tree</b>	<a href="#">level</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	2

**level-number** *number*

<b>Description</b>	Specifies the IS-IS protocol level to which these attributes are applied.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i>
<b>Range</b>	1 to 2
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**authentication**

<b>Description</b>	Container for specifying authentication options that apply to the entire IS-IS instance or to an entire level.  The settings in this container only apply to PDUs without an authentication behavior specified at a more granular level.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**csnp-authentication**

<b>Description</b>	Container with options to control the authentication of CSNP PDUs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication csnp-authentication</a>
<b>Tree</b>	<a href="#">csnp-authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**check-received** *keyword*

<b>Description</b>	Specifies the type of authentication checks done for received PDUs of the specified type.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication csnp-authentication check-received</a> <i>keyword</i>
<b>Tree</b>	<a href="#">check-received</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>strict</li> </ul>

Strict authentication option. Reject all packets that do not have an authentication TLV or that do have an authentication TLV that cannot be validated.

- loose

Loose authentication option. Accept packets received without an authentication TLV; validate packets received with an authentication TLV and reject those packets that cannot be validated.

- disable

This enum disables authentication checks. Do not check authentication TLV (if any) of received PDUs; authentication TLV may still be added self-generated PDUs

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### generate *boolean*

<b>Description</b>	When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type
<b>Context</b>	<a href="#">network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> authentication csnp-authentication generate <i>boolean</i></a>
<b>Tree</b>	<a href="#">generate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### hello-authentication

<b>Description</b>	Container with options to control the authentication of Hello PDUs
<b>Context</b>	<a href="#">network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> authentication hello-authentication</a>
<b>Tree</b>	<a href="#">hello-authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### check-received *keyword*

<b>Description</b>	Specifies the type of authentication checks done for received PDUs of the specified type.
<b>Context</b>	<a href="#">network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> authentication hello-authentication check-received <i>keyword</i></a>

<b>Tree</b>	<a href="#">check-received</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>strict</b> Strict authentication option. Reject all packets that do not have an authentication TLV or that do have an authentication TLV that cannot be validated.</li> <li>• <b>loose</b> Loose authentication option. Accept packets received without an authentication TLV; validate packets received with an authentication TLV and reject those packets that cannot be validated.</li> <li>• <b>disable</b> This enum disables authentication checks. Do not check authentication TLV (if any) of received PDUs; authentication TLV may still be added self-generated PDUs</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## generate *boolean*

<b>Description</b>	When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number authentication hello-authentication generate boolean</a>
<b>Tree</b>	<a href="#">generate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## key

<b>Description</b>	Container to specify the secret key and crypto algorithm to use for the authentication of PDUs when the behavior is controlled at this level of the configuration hierarchy
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number authentication key</a>
<b>Tree</b>	<a href="#">key</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**auth-password** *string*

<b>Description</b>	The secret key to use for authentication of PDUs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication key auth-password</a> <i>string</i>
<b>Tree</b>	<a href="#">auth-password</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**crypto-algorithm** *keyword*

<b>Description</b>	The cryptographic algorithm used with the keying material to secure the messages.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication key crypto-algorithm</a> <i>keyword</i>
<b>Tree</b>	<a href="#">crypto-algorithm</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>cleartext</b> The authentication-key is encoded in plaintext.</li> <li>• <b>hmac-md5</b> The authentication-key is used to generate a 16-byte (128 bit) MD5 digest using the HMAC algorithm (RFC 2104).</li> <li>• <b>hmac-sha-256</b> The authentication-key is used to generate a SHA2 digest using the HMAC algorithm (RFC 2104).The SHA-256 variant of SHA2 produces an output of 32 bytes (256 bits).</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**keychain** *reference*

<b>Description</b>	Specifies a keychain to use for the authentication of PDUs when the behavior is controlled at this level of the configuration hierarchy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">authentication keychain</a> <i>reference</i>
<b>Tree</b>	<a href="#">keychain</a>
<b>Reference</b>	<a href="#">system authentication keychain name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## Isp-authentication

<b>Description</b>	Container with options to control the authentication of Link State PDUs
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number authentication Isp-authentication</a>
<b>Tree</b>	<a href="#">Isp-authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## check-received *keyword*

<b>Description</b>	Specifies the type of authentication checks done for received PDUs of the specified type.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number authentication Isp-authentication check-received keyword</a>
<b>Tree</b>	<a href="#">check-received</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>strict</b> Strict authentication option. Reject all packets that do not have an authentication TLV or that do have an authentication TLV that cannot be validated.</li> <li>• <b>loose</b> Loose authentication option. Accept packets received without an authentication TLV; validate packets received with an authentication TLV and reject those packets that cannot be validated.</li> <li>• <b>disable</b> This enum disables authentication checks. Do not check authentication TLV (if any) of received PDUs; authentication TLV may still be added self-generated PDUs</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## generate *boolean*

<b>Description</b>	When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number authentication Isp-authentication generate boolean</a>
<b>Tree</b>	<a href="#">generate</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## psnp-authentication

**Description** Container with options to control the authentication of PSNP PDUs

**Context** [network-instance name string protocols isis instance name string level level-number number authentication psnp-authentication](#)

**Tree** [psnp-authentication](#)

**Configurable** True

**Platforms** Supported on all platforms

## check-received *keyword*

**Description** Specifies the type of authentication checks done for received PDUs of the specified type.

**Context** [network-instance name string protocols isis instance name string level level-number number authentication psnp-authentication check-received keyword](#)

**Tree** [check-received](#)

**Options**

- strict  
Strict authentication option. Reject all packets that do not have an authentication TLV or that do have an authentication TLV that cannot be validated.
- loose  
Loose authentication option. Accept packets received without an authentication TLV; validate packets received with an authentication TLV and reject those packets that cannot be validated.
- disable  
This enum disables authentication checks. Do not check authentication TLV (if any) of received PDUs; authentication TLV may still be added self-generated PDUs

**Configurable** True

**Platforms** Supported on all platforms

## generate *boolean*

**Description** When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type

**Context** [network-instance name string protocols isis instance name string level level-number number authentication psnp-authentication generate boolean](#)

<b>Tree</b>	<a href="#">generate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## link-state-database

<b>Description</b>	State representation of the ISIS LSDB.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database</a>
<b>Tree</b>	<a href="#">link-state-database</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## Isp [Isp-id string](#)

<b>Description</b>	List of LSPs in the LSDB.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database Isp Isp-id string</a>
<b>Tree</b>	<a href="#">Isp</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## Isp-id [string](#)

<b>Description</b>	The value specifies the LSP Id and is given in the format as 6 octets of adjacency system-id followed by 1 octet Lan-ID and 1 octet LSP Number.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database Isp Isp-id string</a>
<b>String Length</b>	20
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**checksum *number***

<b>Description</b>	Checksum of the LSP.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <b>checksum</b> <i>number</i>
<b>Tree</b>	<a href="#">checksum</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**flags *keyword***

<b>Description</b>	LSP Type-Block flags.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <b>flags</b> <i>keyword</i>

**tlv** *type identityref*

<b>Description</b>	List of TLV types in the LSDB for the specified LSP.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">tlv</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**type** *identityref*

<b>Description</b>	The type of TLV being described. The type of TLV is expressed as a canonical name.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i>

## Options

- area-addresses

ISIS TLV 1

- iis-neighbors

ISIS TLV 2

- instance-id

ISIS TLV 7

An Instance Identifier (IID) to uniquely identify an IS-IS instance. When the IID = 0, the list of supported ITIDs MUST NOT be present. An IID-TLV with IID = 0 MUST NOT appear in an SNP or LSP. When the TLV appears (with a non-zero IID) in an SNP or LSP, exactly one ITID. MUST be present indicating the topology with which the PDU is associated. If no ITIDs or multiple ITIDs are present or the IID is zero, then the PDU MUST be ignored

- authentication

ISIS TLV 10

- purge-oi

ISIS TLV 13

If an IS generates a purge, it SHOULD include this TLV in the purge with its own system ID. If an IS receives a purge that does not include this TLV, then it SHOULD add this TLV with both its own system ID and the system ID of the IS from which it received the purge. This allows ISs receiving purges to log the system ID of the originator, or the upstream source of the purge.

- lsp-buffer-size

ISIS TLV 14. The maximum MTU that the advertising system can receive, expressed in bytes.

- extended-is-reachability

ISIS TLV 22. An extended IS reachability TLV that has a different data structure to TLV 2 that introduces the use of sub-TLV object-group.

- is-neighbor-attribute

ISIS TLV 23. Identical in format to TLV 22 and included in Original LSPs or Extended LSPs. Regardless of the type of LSP in which the TLVs appear, the information pertains to the neighbor relationship between the Originating System and the IS identified in the TLV

- isis-alias-id

ISIS TLV 24. IS-Alias TLV which extension-capable ISs to recognize the Originating System of an Extended LSP set. It identifies the Normal system-id of the Originating System

- ipv4-internal-reachability

ISIS TLV 128. TLV defines IP addresses within the routing domain reachable directly via one or more interfaces on this Intermediate system

- nlpid

ISIS TLV 129. TLV defines the set Network Layer Protocol Identifiers for Network Layer protocols that this Intermediate System is capable of relaying

- ipv4-external-reachability

ISIS TLV 130. TLV defines IP addresses outside the routing domain reachable via interfaces on this Intermediate system. This is permitted to appear multiple times, and in an LSP with any LSP number. However, this field must not appear in pseudonode LSPs

- ipv4-interface-addresses

ISIS TLV 132. The IP address of one or more interfaces corresponding to the SNPAs enabled on this Intermediate system (i.e., one or more IP addresses of this router). This is permitted to appear multiple times, and in an LSP with any LSP number.

- ipv4-te-router-id

ISIS TLV 134. Traffic Engineering router ID TLV that contains the 4-octet router ID of the router originating the LSP

- extended-ipv4-reachability

ISIS TLV 135. Extended IP reachability TLV that provides for a 32-bit metric and adds one bit to indicate that a prefix has been redistributed `_down_` in the hierarchy

- dynamic-name

ISIS TLV 137. The Dynamic hostname TLV is optional. This TLV may be present in any fragment of a non-pseudonode LSP. The value field identifies the symbolic name of the router originating the LSP. This symbolic name can be the FQDN for the router, it can be a subset of the FQDN, or it can be any string operators want to use for the router.

- ipv4-srlg

ISIS TLV 138. IPv4 Shared Risk Link Group TLV

- ipv6-srlg

ISIS TLV 139. IPv6 Shared Risk Link Group

- ipv6-te-router-id

ISIS TLV 140. The IPv6 TE Router ID TLV contains a 16-octet IPv6 address. A stable global IPv6 address **MUST** be used, so that the router ID provides a routable address, regardless of the state of a node's interfaces. If a router does not implement traffic engineering, it **MAY** include or omit the IPv6 TE Router ID TLV. If a router implements traffic engineering for IPv6, it **MUST** include this TLV in its LSP. This TLV **MUST NOT** be included more than once in an LSP.

- mt-isn

ISIS TLV 222. TLV is aligned with extended IS reachability TLV type 22 beside an additional two bytes in front at the beginning of the TLV that indicate MT membership.

- mt-is-neighbor-attribute

ISIS TLV 223. It is identical in format to TLV 222. In the event that there is a need to advertise in Extended LSPs such information associated with neighbors of the Originating System, it is necessary to define new TLVs to carry the sub-TLV information.

- multi-topology

ISIS TLV 229. This MT TLV can advertise up to 127 MTs. It is announced in IIHs and LSP fragment 0, and can occur multiple times. The resulting MT set SHOULD be the union of all the MT TLV occurrences in the packet. Any other IS-IS PDU occurrence of this TLV MUST be ignored. Lack of MT TLV in hellos and fragment zero LSPs MUST be interpreted as participation of the advertising interface or router in MT ID #0 only. If a router advertises MT TLV, it has to advertise all the MTs it participates in, specifically including topology ID #0 also.

- ipv6-interface-addresses

ISIS TLV 232. IPv6 Interface Address TLV that maps directly to the IP Interface Address TLV in [RFC1195]. We necessarily modify the contents to be 0-15 16-octet IPv6 interface addresses instead of 0-63 4-octet IPv4 interface addresses

- mt-ipv4-reachability

ISIS TLV 235. TLV is aligned with extended IP reachability TLV type 135 beside an additional two bytes in front to indicate MT membership

- ipv6-reachability

ISIS TLV 236. The IPv6 Reachability TLV describes network reachability through the specification of a routing prefix, metric information, a bit to indicate if the prefix is being advertised down from a higher level, a bit to indicate if the prefix is being distributed from another routing protocol, and OPTIONALLY the existence of Sub-TLVs to allow for later extension.

- mt-ipv6-reachability

ISIS TLV 237. TLV is aligned with IPv6 Reachability TLV type 236 beside an additional two bytes in front to indicate MT membership.

- router-capability

ISIS TLV 242. IS-IS TLV named CAPABILITY, formed of multiple sub-TLVs, which allows a router to announce its capabilities within an IS-IS level or the entire routing domain.

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### router-id *string*

**Description** IPv4 Source router ID address. In cases where the advertisement is an identifier for the advertising router (e.g., with the N-flag set in the Prefix Attribute Flags sub-TLV), it may be useful for other routers to know the source of the advertisement. When reachability advertisement is leaked from one level to another, Router ID advertised is always the Router ID of the IS-IS instance that originated the advertisement. This would be true even if the prefix had been learned from another protocol.

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level level-number number](#) [link-state-database lsp lsp-id string](#) [tlvs tlv type identityref](#) [extended-ipv4-reachability prefixes prefix prefix string](#) [subtlvs subtlv type identityref](#) [ipv4-source-router-id](#) [router-id string](#)

<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**tag64**

<b>Description</b>	This container defines sub-TLV 2.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref extended-ipv4-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">subtlvs subtlv type identityref tag64</a>
<b>Tree</b>	<a href="#">tag64</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**tag64** *number*

<b>Description</b>	List of 64-bit tags associated with the prefix. Example uses of these tags include carrying BGP standard (or extended) communities and controlling redistribution between levels and areas, different routing protocols, or multiple instances of IS-IS running on the same router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref extended-ipv4-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">subtlvs subtlv type identityref tag64 tag64</a> <i>number</i>
<b>Tree</b>	<a href="#">tag64</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**undefined-subtlvs**

<b>Description</b>	This container describes undefined ISIS TLVs.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">extended-ipv4-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">undefined-subtlvs</a>
<b>Tree</b>	<a href="#">undefined-subtlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**undefined-subtlv** *type number*

<b>Description</b>	Sub-TLVs that are not defined in the model or not recognised by system.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">extended-ipv4-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">undefined-subtlvs undefined-subtlv type</a> <i>number</i>
<b>Tree</b>	<a href="#">undefined-subtlv</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**type** *number*

<b>Description</b>	TLV Type.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">extended-ipv4-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">undefined-subtlvs undefined-subtlv type</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**length** *number*

<b>Description</b>	TLV length.
--------------------	-------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-ipv4-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">undefined-subtlvs undefined-subtlv type</a> <i>number</i> <a href="#">length</a> <i>number</i>
<b>Tree</b>	<a href="#">length</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**value** *binary*

<b>Description</b>	TLV value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-ipv4-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">undefined-subtlvs undefined-subtlv type</a> <i>number</i> <a href="#">value</a> <i>binary</i>
<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**up-down** *boolean*

<b>Description</b>	The up/down bit. Set if a prefix is advertised from a higher level to a lower level (e.g., level 2 to level 1), indicating that the prefix has traveled down the hierarchy. Prefixes that have the up/down bit set may only be advertised down the hierarchy, i.e., to lower levels. When a prefix is first injected into IS-IS, the bit is UNSET.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-ipv4-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">up-down</a> <i>boolean</i>
<b>Tree</b>	<a href="#">up-down</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**extended-is-reachability**

<b>Description</b>	This container defines list of ISIS extended reachability neighbors.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">extended-is-reachability</a>
<b>Tree</b>	<a href="#">extended-is-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## neighbors

<b>Description</b>	This container describes IS neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">extended-is-reachability neighbors</a>
<b>Tree</b>	<a href="#">neighbors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## neighbor [system-id](#) *string*

<b>Description</b>	This list describes ISIS extended neighbors and reachability attributes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## system-id *string*

<b>Description</b>	System-id of the neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i>
<b>String Length</b>	14

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## instances

<b>Description</b>	This list contains all instances of an adjacency between the originating IS and the remote IS. Multiple instances are used where there are parallel adjacencies between two systems.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances</a>
<b>Tree</b>	<a href="#">instances</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## instance *id number*

<b>Description</b>	Instance of the TLV to the remote IS neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i>
<b>Tree</b>	<a href="#">instance</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## *id number*

<b>Description</b>	Unique identifier for the instance of the TLV for the IS neighbor. The instance ID is not required to be consistent across readvertisements of the LSP.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i>
<b>Configurable</b>	False

<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>metric number</b>	
<b>Description</b>	Metric value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	1 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>subtlvs</b>	
<b>Description</b>	This container describes IS Neighbor sub-TLVs.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs</a>
<b>Tree</b>	<a href="#">subtlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>subtlv type identityref</b>	
<b>Description</b>	List of subTLV types in the LSDB for the specified TLV.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type identityref</a>
<b>Tree</b>	<a href="#">subtlv</a>
<b>Configurable</b>	False

<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>type</b> <i>identityref</i>	
<b>Description</b>	The type of subTLV being described. The type of subTLV is expressed as a canonical name.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">is-reachability-subtlvs-type</a> Base identity for an ISIS TLV 22, 23, 222, 223, 141 SUB-TLV type.</li> <li>• <a href="#">ip-reachability-subtlvs-type</a> Base identity for an ISIS TLV 135, 235, 236, 237 SUB-TLV type.</li> <li>• <a href="#">router-capability-subtlvs-type</a> Base identity for an ISIS TLV 242 SUB-TLV type.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>adjacency-sids</b>	
<b>Description</b>	This container defines segment routing adjacency SIDs.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">adjacency-sids</a>
<b>Tree</b>	<a href="#">adjacency-sids</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>adjacency-sid</b> <i>value</i> <i>number</i>	
<b>Description</b>	Adjacency Segment-IDs List. An IGP-Adjacency Segment is an IGP segment attached to a unidirectional adjacency or a set of unidirectional adjacencies. By default, an IGP- Adjacency Segment is local to the node which advertises it.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">adjacency-sids adjacency-sid value</a> <i>number</i>
<b>Tree</b>	<a href="#">adjacency-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>value</b> <i>number</i>	
<b>Description</b>	Adjacency-SID value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">adjacency-sids adjacency-sid value</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>flags</b> <i>keyword</i>	
<b>Description</b>	Flags associated with Adj-Segment-ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">adjacency-sids adjacency-sid value</a> <i>number</i> <a href="#">flags</a> <i>keyword</i>
<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">address-family</a> Address-family flag. When unset, the Adj-SID refers to an adjacency with outgoing IPv4 encapsulation. If set then the Adj-SID refers to an adjacency with outgoing IPv6 encapsulation.</li> <li>• <a href="#">backup</a> Backup flag. When set, the Adj-SID refers to an adjacency being protected (e.g.: using IPFRR or MPLS-FRR).</li> <li>• <a href="#">value</a> Value flag. When set, the SID carries a value (instead of an index). By default the flag is SET.</li> </ul>

	<ul style="list-style-type: none"> <li>local Local flag. When set, the value/index carried by the SID has local significance. By default the flag is SET.</li> <li>set Set flag. When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>weight number</b>	
<b>Description</b>	Value that represents the weight of the Adj-SID for the purpose of load balancing.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref extended-is-reachability neighbors neighbor system-id string instances instance id number subtlvs subtlv type identityref adjacency-sids adjacency-sid value number weight number</a>
<b>Tree</b>	<a href="#">weight</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>admin-group</b>	
<b>Description</b>	This container defines sub-TLV 3.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref extended-is-reachability neighbors neighbor system-id string instances instance id number subtlvs subtlv type identityref admin-group</a>

<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

#### application-specific-link-attributes

<b>Description</b>	Application Specific Link Attributes. Sub-TLV = 16.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type identityref application-specific-link-attributes</a>
<b>Tree</b>	<a href="#">application-specific-link-attributes</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

#### legacy *boolean*

<b>Description</b>	When the legacy flag is set, all of the applications specified in the bit mask MUST use the legacy advertisements for the corresponding link found in TLVs 22, 23, 25, 141, 222, and 223, in TLV 138, or in TLV 139 as appropriate.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type identityref application-specific-link-attributes legacy</a> <i>boolean</i>
<b>Tree</b>	<a href="#">legacy</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**loop-free-alternate** *boolean*

<b>Description</b>	F bit is set in the Standard Application Identifier Bit Mask
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">application-specific-link-attributes loop-free-alternate</a> <i>boolean</i>
<b>Tree</b>	<a href="#">loop-free-alternate</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**rsvp-te** *boolean*

<b>Description</b>	R bit is set in the Standard Application Identifier Bit Mask
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">application-specific-link-attributes rsvp-te</a> <i>boolean</i>
<b>Tree</b>	<a href="#">rsvp-te</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sr-policy** *boolean*

<b>Description</b>	S bit is set in the Standard Application Identifier Bit Mask
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">application-specific-link-attributes sr-policy</a> <i>boolean</i>
<b>Tree</b>	<a href="#">sr-policy</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sub-sub-tlvs**

<b>Description</b>	Enter the sub-sub-tlvs context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances</a>

	<a href="#">instance id</a> <i>number</i> <a href="#">subtlvs</a> <a href="#">subtlv</a> <a href="#">type</a> <a href="#">identityref</a> <a href="#">application-specific-link-attributes</a> <a href="#">sub-sub-tlvs</a>
<b>Tree</b>	<a href="#">sub-sub-tlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>admin-group</b> <i>number</i>	
<b>Description</b>	A bit mask representing the administrative groups to which the interface belongs. Sub-Sub-TLV = 3.
<b>Context</b>	<a href="#">network-instance</a> <a href="#">name</a> <i>string</i> <a href="#">protocols</a> <a href="#">isis</a> <a href="#">instance</a> <a href="#">name</a> <i>string</i> <a href="#">level</a> <a href="#">level-number</a> <i>number</i> <a href="#">link-state-database</a> <a href="#">lsp</a> <a href="#">lsp-id</a> <i>string</i> <a href="#">tlvs</a> <a href="#">tlv</a> <a href="#">type</a> <a href="#">identityref</a> <a href="#">extended-is-reachability</a> <a href="#">neighbors</a> <a href="#">neighbor</a> <a href="#">system-id</a> <i>string</i> <a href="#">instances</a> <a href="#">instance</a> <a href="#">id</a> <i>number</i> <a href="#">subtlvs</a> <a href="#">subtlv</a> <a href="#">type</a> <a href="#">identityref</a> <a href="#">application-specific-link-attributes</a> <a href="#">sub-sub-tlvs</a> <a href="#">admin-group</a> <i>number</i>
<b>Tree</b>	<a href="#">admin-group</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>maximum-link-bandwidth</b> <i>number</i>	
<b>Description</b>	The (LAG aware) bandwidth of the interface to the neighbor. Sub-Sub-TLV = 9.
<b>Context</b>	<a href="#">network-instance</a> <a href="#">name</a> <i>string</i> <a href="#">protocols</a> <a href="#">isis</a> <a href="#">instance</a> <a href="#">name</a> <i>string</i> <a href="#">level</a> <a href="#">level-number</a> <i>number</i> <a href="#">link-state-database</a> <a href="#">lsp</a> <a href="#">lsp-id</a> <i>string</i> <a href="#">tlvs</a> <a href="#">tlv</a> <a href="#">type</a> <a href="#">identityref</a> <a href="#">extended-is-reachability</a> <a href="#">neighbors</a> <a href="#">neighbor</a> <a href="#">system-id</a> <i>string</i> <a href="#">instances</a> <a href="#">instance</a> <a href="#">id</a> <i>number</i> <a href="#">subtlvs</a> <a href="#">subtlv</a> <a href="#">type</a> <a href="#">identityref</a> <a href="#">application-specific-link-attributes</a> <a href="#">sub-sub-tlvs</a> <a href="#">maximum-link-bandwidth</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-link-bandwidth</a>
<b>Units</b>	bytes-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>min-max-unidirectional-link-delay</b>	
<b>Description</b>	The minimum and maximum delay between two directly connected IS-IS neighbors.
<b>Context</b>	<a href="#">network-instance</a> <a href="#">name</a> <i>string</i> <a href="#">protocols</a> <a href="#">isis</a> <a href="#">instance</a> <a href="#">name</a> <i>string</i> <a href="#">level</a> <a href="#">level-number</a> <i>number</i> <a href="#">link-state-database</a> <a href="#">lsp</a> <a href="#">lsp-id</a> <i>string</i> <a href="#">tlvs</a> <a href="#">tlv</a> <a href="#">type</a> <a href="#">identityref</a> <a href="#">extended-is-reachability</a> <a href="#">neighbors</a> <a href="#">neighbor</a> <a href="#">system-id</a> <i>string</i> <a href="#">instances</a> <a href="#">instance</a> <a href="#">id</a> <i>number</i> <a href="#">subtlvs</a> <a href="#">subtlv</a> <a href="#">type</a> <a href="#">identityref</a> <a href="#">application-specific-link-attributes</a> <a href="#">sub-sub-tlvs</a> <a href="#">min-max-unidirectional-link-delay</a>

<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**te-default-metric** *number*

<b>Description</b>	An administratively assigned metric used as an alternative to the normal SPF metric based (typically) on link bandwidth.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">application-specific-link-attributes sub-sub-tlvs te-default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">te-default-metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**available-bandwidth**

<b>Description</b>	This container defines unidirectional lavailable bandwidth.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">available-bandwidth</a>
<b>Tree</b>	<a href="#">available-bandwidth</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**bandwidth** *binary*

<b>Description</b>	The available bandwidth on a link, forwarding adjacency, or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, available bandwidth is defined to be residual bandwidth minus the measured bandwidth used for the actual forwarding of non-RSVP-TE label switched path packets. For a bundled link, available bandwidth is defined to be the sum of the component link available bandwidths minus the measured bandwidth used for the actual forwarding of non-RSVP-TE label switched path packets. For a bundled link, available bandwidth is defined to be the sum of the component link available bandwidths.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">available-bandwidth bandwidth</a> <i>binary</i>

**ipv4-interface-address**

<b>Description</b>	This container defines sub-TLV 6.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">ipv4-interface-address</a>
<b>Tree</b>	<a href="#">ipv4-interface-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**address** *string*

<b>Description</b>	A 4-octet IPv4 address for the interface described by the (main) TLV. This sub-TLV can occur multiple times.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">ipv4-interface-address address</a> <i>string</i>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4-neighbor-address**

<b>Description</b>	This container defines sub-TLV 8.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">ipv4-neighbor-address</a>
<b>Tree</b>	<a href="#">ipv4-neighbor-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**address** *string*

<b>Description</b>	A single IPv4 address for a neighboring router on this link. This sub-TLV can occur multiple times.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">ipv4-neighbor-address address</a> <i>string</i>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv6-interface-address**

<b>Description</b>	This container defines sub-TLV 12.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">ipv6-interface-address</a>
<b>Tree</b>	<a href="#">ipv6-interface-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**address** *string*

<b>Description</b>	Contains a 16-octet IPv6 address for the interface described by the containing Extended IS Reachability TLV. This sub-TLV can occur multiple times.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">ipv6-interface-address address</a> <i>string</i>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv6-neighbor-address**

<b>Description</b>	This container defines sub-TLV 13.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">ipv6-neighbor-address</a>
<b>Tree</b>	<a href="#">ipv6-neighbor-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**address** *string*

<b>Description</b>	Contains a 16-octet IPv6 address for a neighboring router on the link described by the (main) TLV. This sub-TLV can occur multiple times.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">ipv6-neighbor-address address</a> <i>string</i>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**lan-adjacency-sids**

<b>Description</b>	This container defines segment routing LAN adjacency SIDs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">lan-adjacency-sids</a>
<b>Tree</b>	<a href="#">lan-adjacency-sids</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**lan-adjacency-sid** *value number*

<b>Description</b>	Adjacency Segment-IDs List. An IGP-Adjacency Segment is an IGP segment attached to a unidirectional adjacency or a set of unidirectional adjacencies. By default, an IGP- Adjacency Segment is local to the node which advertises it.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type identityref lan-adjacency-sids lan-adjacency-sid value</a> <i>number</i>
<b>Tree</b>	<a href="#">lan-adjacency-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**value** *number*

<b>Description</b>	LAN Adjacency-SID value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type identityref lan-adjacency-sids lan-adjacency-sid value</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**flags** *keyword*

<b>Description</b>	Flags associated with LAN-Adj-Segment-ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type identityref lan-adjacency-sids lan-adjacency-sid value</a> <i>number</i> <a href="#">flags</a> <i>keyword</i>
<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>address-family Address-family flag. When unset, the Adj-SID refers to an adjacency with outgoing IPv4 encapsulation. If set then the Adj-SID refers to an adjacency with outgoing IPv6 encapsulation.</li> <li>backup</li> </ul>

	Backup flag. When set, the Adj-SID refers to an adjacency being protected (e.g.: using IPFRR or MPLS-FRR).
	<ul style="list-style-type: none"> <li>value</li> </ul>
	Value flag. When set, the SID carries a value (instead of an index). By default the flag is SET.
	<ul style="list-style-type: none"> <li>local</li> </ul>
	Local flag. When set, the value/index carried by the SID has local significance. By default the flag is SET.
	<ul style="list-style-type: none"> <li>set</li> </ul>
	Set flag. When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>neighbor-id string</b>	
<b>Description</b>	System ID of the neighbor associated with the LAN- Adj-Segment-ID value.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref extended-is-reachability neighbors neighbor system-id string instances instance id number subtlvs subtlv type identityref lan-adjacency-sids lan-adjacency-sid value number neighbor-id string</a>

<b>link-loss number</b>	
<b>Description</b>	Link packet loss as a percentage of the total traffic sent over a configurable interval. The basic unit is 0.000003%, where (2 <sup>24</sup> - 2) is 50.331642%. This value is the highest packet-loss percentage that can be expressed (the assumption being that precision is more important on high-speed links than the ability to advertise loss rates greater than this, and that high-speed links with over 50% loss are unusable). Therefore, measured values that are larger than the field maximum SHOULD be encoded as the maximum value.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref extended-is-reachability neighbors neighbor system-id string instances instance id number subtlvs subtlv type identityref link-loss link-loss number</a>

**residual-bandwidth**

<b>Description</b>	This container defines unidirectional residual bandwidth.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">residual-bandwidth</a>
<b>Tree</b>	<a href="#">residual-bandwidth</a>
<b>Configurable</b>	False

<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>bandwidth <i>binary</i></b>	
<b>Description</b>	Residual bandwidth on a link, forwarding adjacency [RFC4206], or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, residual bandwidth is defined to be the Maximum Bandwidth [RFC5305] minus the bandwidth currently allocated to RSVP-TE label switched paths. For a bundled link, residual bandwidth is defined to be the sum of the component link residual bandwidths.
<b>Context</b>	<a href="#">network-instance name <i>string</i></a> <a href="#">protocols isis instance name <i>string</i></a> <a href="#">level level-number <i>number</i></a> <a href="#">link-state-database lsp lsp-id <i>string</i></a> <a href="#">tlvs tlv type <i>identityref</i></a> <a href="#">extended-is-reachability neighbors neighbor system-id <i>string</i></a> <a href="#">instances instance id <i>number</i></a> <a href="#">subtlvs subtlv type <i>identityref</i></a> <a href="#">residual-bandwidth bandwidth <i>binary</i></a>
<b>Tree</b>	<a href="#">bandwidth</a>
<b>String Length</b>	4
<b>Units</b>	bytes per second
<b>Configurable</b>	False

<b>priority</b> <i>number</i>	
<b>Description</b>	Setup priority level of 0 through 7 to be used by Unreserved Bandwidth sub-TLV 11.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">isis</a> <a href="#">instance name</a> <i>string</i> <a href="#">level</a> <a href="#">level-number</a> <i>number</i> <a href="#">link-state-database</a> <a href="#">lsp</a> <a href="#">lsp-id</a> <i>string</i> <a href="#">tlvs</a> <a href="#">tlv type</a> <a href="#">identityref</a> <a href="#">extended-is-reachability</a> <a href="#">neighbors</a> <a href="#">neighbor</a> <a href="#">system-id</a> <i>string</i> <a href="#">instances</a> <a href="#">instance id</a> <i>number</i> <a href="#">subtlvs</a> <a href="#">subtlv type</a> <a href="#">identityref</a> <a href="#">unreserved-bandwidth</a> <a href="#">setup-priority</a> <a href="#">priority</a> <i>number</i>
<b>Range</b>	0 to 7
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>bandwidth</b> <i>binary</i>	
<b>Description</b>	The amount of bandwidth reservable in this direction on this link. Note that for oversubscription purposes, this can be greater than the bandwidth of the link. It contains eight 32-bit IEEE floating point numbers(one for each priority). The units are bytes (not bits!) per second. The values correspond to the bandwidth that can be reserved with a setup priority of 0 through 7, arranged in increasing order with priority 0 occurring at the start of the sub-TLV, and priority 7 at the end of the sub-TLV.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">isis</a> <a href="#">instance name</a> <i>string</i> <a href="#">level</a> <a href="#">level-number</a> <i>number</i> <a href="#">link-state-database</a> <a href="#">lsp</a> <a href="#">lsp-id</a> <i>string</i> <a href="#">tlvs</a> <a href="#">tlv type</a> <a href="#">identityref</a> <a href="#">extended-is-reachability</a> <a href="#">neighbors</a> <a href="#">neighbor</a> <a href="#">system-id</a> <i>string</i> <a href="#">instances</a> <a href="#">instance id</a> <i>number</i> <a href="#">subtlvs</a> <a href="#">subtlv type</a> <a href="#">identityref</a> <a href="#">unreserved-bandwidth</a> <a href="#">setup-priority</a> <a href="#">priority</a> <i>number</i> <a href="#">bandwidth</a> <i>binary</i>

<b>bandwidth <i>binary</i></b>	
<b>Description</b>	The bandwidth utilization on a link, forwarding adjacency, or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, bandwidth utilization represents the actual utilization of the link (i.e., as measured by the advertising node). For a bundled link, bandwidth utilization is defined to be the sum of the component link bandwidth utilizations.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">extended-is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">utilized-bandwidth bandwidth</a> <i>binary</i>

## hostname *string*

<b>Description</b>	Name of the node.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">hostname</a> <a href="#">hostname</a> <i>string</i>
<b>Tree</b>	<a href="#">hostname</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## instance-ids

<b>Description</b>	This container defines ISIS Instance Identifier TLV.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">instance-ids</a>
<b>Tree</b>	<a href="#">instance-ids</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**instance-id** *instance-id number*

<b>Description</b>	A list of instance IDs received within TLV 7 within an IS-IS LSP. In the case that more than one instance of TLV 7 is included in the LSP, the instance IDs specified within the instances are concatenated within this list.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">instance-ids instance-id instance-id</a> <i>number</i>
<b>Tree</b>	<a href="#">instance-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**instance-id** *number*

<b>Description</b>	An Instance Identifier (IID) to uniquely identify an IS-IS instance. When the IID = 0, the list of supported ITIDs MUST NOT be present. An IID-TLV with IID = 0 MUST NOT appear in an SNP or LSP. When the TLV appears (with a non-zero IID) in an SNP or LSP, exactly one ITID. MUST be present indicating the topology with which the PDU is associated. If no ITIDs or multiple ITIDs are present or the IID is zero, then the PDU MUST be ignored.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">instance-ids instance-id instance-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**topology-id** *number*

<b>Description</b>	Instance-Specific Topology Identifiers (ITIDs).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">instance-ids instance-id instance-id</a> <i>number</i> <a href="#">topology-id</a> <i>number</i>
<b>Tree</b>	<a href="#">topology-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv4-external-reachability

<b>Description</b>	This container defines list of IPv4 external reachability information.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-external-reachability</a>
<b>Tree</b>	<a href="#">ipv4-external-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## prefixes

<b>Description</b>	This container describes IS neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-external-reachability prefixes</a>
<b>Tree</b>	<a href="#">prefixes</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## prefix *prefix* *string*

<b>Description</b>	IPv4 external prefixes and reachability attributes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-external-reachability prefixes prefix prefix</a> <i>string</i>
<b>Tree</b>	<a href="#">prefix</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## prefix *string*

<b>Description</b>	IPv4 prefix contained within reachability TLVs.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-external-reachability prefixes prefix prefix</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## default-metric

<b>Description</b>	This container defines ISIS Default Metric.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-external-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">default-metric</a>
<b>Tree</b>	<a href="#">default-metric</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## flags *keyword*

<b>Description</b>	ISIS Default-Metric Flags.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-external-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">default-metric flags</a> <i>keyword</i>
<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>internal When set to zero, indicates internal metrics.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## metric *number*

<b>Description</b>	ISIS default metric value  This is a metric understood by every Intermediate system in the domain. Each circuit shall have a positive integral value assigned for this metric. The
--------------------	--

value may be associated with any objective function of the circuit, but by convention is intended to measure the capacity of the circuit for handling traffic, for example, its throughput in bits-per-second. Higher values indicate a lower capacity.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref ipv4-external-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">default-metric metric number</a>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	1 to 63
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## delay-metric

<b>Description</b>	This container defines the ISIS delay metric.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref ipv4-external-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">delay-metric</a>
<b>Tree</b>	<a href="#">delay-metric</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## flags *keyword*

<b>Description</b>	ISIS Delay Metric Flags.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref ipv4-external-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">delay-metric flags keyword</a>
<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>internal When this flag is not set, internal metrics are in use.</li> <li>unsupported When this flag (referred to as the S-bit) is set, then the metric is unsupported.</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**metric number**

<b>Description</b>	ISIS delay metric value  This metric measures the transit delay of the associated circuit. It is an optional metric, which if assigned to a circuit shall have a positive integral value. Higher values indicate a longer transit delay.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref ipv4-external-reachability prefixes prefix prefix string delay-metric metric number</a>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	1 to 63
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**error-metric**

<b>Description</b>	This container defines the ISIS error metric.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref ipv4-external-reachability prefixes prefix prefix string error-metric</a>

**flags keyword**

<b>Description</b>	IS-IS error metric flags.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref ipv4-external-reachability prefixes prefix prefix string error-metric flags keyword</a>

<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• internal When this flag is not set, internal metrics are in use.</li> <li>• unsupported When this flag (referred to as the S-bit) is set, then the metric is unsupported.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### metric number

<b>Description</b>	<p>ISIS error metric value</p> <p>This metric measures the residual error probability of the associated circuit. It is an optional metric, which if assigned to a circuit shall have a non-zero value. Higher values indicate a larger probability of undetected errors on the circuit.</p>
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref ipv4-external-reachability prefixes prefix prefix string error-metric metric number</a>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	1 to 63
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### expense-metric

<b>Description</b>	This container defines the ISIS expense metric.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref ipv4-external-reachability prefixes prefix prefix string expense-metric</a>
<b>Tree</b>	<a href="#">expense-metric</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**flags** *keyword*

<b>Description</b>	ISIS Expense Metric Flags.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-external-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">expense-metric flags</a> <i>keyword</i>
<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• internal When this flag is not set, internal metrics are in use.</li> <li>• unsupported When this flag (referred to as the S-bit) is set, then the metric is unsupported.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**metric** *number*

<b>Description</b>	ISIS expense metric value  This metric measures the monetary cost of utilising the associated circuit. It is an optional metric, which if assigned to a circuit shall have a positive integral value <sup>1</sup> ). Higher values indicate a larger monetary expense.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-external-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">expense-metric metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	1 to 63
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**up-down** *boolean*

<b>Description</b>	The up/down bit  Set if a prefix is advertised from a higher level to a lower level (e.g., level 2 to level 1), indicating that the prefix has traveled down the hierarchy. Prefixes
--------------------	--

that have the up/down bit set may only be advertised down the hierarchy, i.e., to lower levels. When a prefix is first injected into IS-IS, the bit is UNSET.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref ipv4-external-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">up-down</a> <i>boolean</i>
<b>Tree</b>	<a href="#">up-down</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv4-interface-addresses

<b>Description</b>	This container defines TLV 132.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref ipv4-interface-addresses</a>
<b>Tree</b>	<a href="#">ipv4-interface-addresses</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### address *string*

<b>Description</b>	IPv4 address(es) of the interface corresponding to the SNPA over which this PDU is to be transmitted.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref ipv4-interface-addresses address</a> <i>string</i>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv4-internal-reachability

<b>Description</b>	This container defines list of IPv4 internal reachability information.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-internal-reachability</a>
<b>Tree</b>	<a href="#">ipv4-internal-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## prefixes

<b>Description</b>	This container describes IS prefixes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-internal-reachability prefixes</a>
<b>Tree</b>	<a href="#">prefixes</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## prefix [prefix](#) *string*

<b>Description</b>	IPv4 prefixes and internal reachability attributes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-internal-reachability prefixes prefix prefix</a> <i>string</i>
<b>Tree</b>	<a href="#">prefix</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## prefix *string*

<b>Description</b>	IPv4 prefix contained within reachability TLVs.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-internal-reachability prefixes prefix prefix</a> <i>string</i>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## default-metric

**Description** This container defines ISIS Default Metric.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref ipv4-internal-reachability prefixes prefix prefix](#) *string* [default-metric](#)

**Tree** [default-metric](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## flags *keyword*

**Description** ISIS Default-Metric Flags.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref ipv4-internal-reachability prefixes prefix prefix](#) *string* [default-metric flags](#) *keyword*

**Tree** [flags](#)

**Options**

- internal  
When set to zero, indicates internal metrics.

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## metric *number*

**Description** ISIS default metric value

This is a metric understood by every Intermediate system in the domain. Each circuit shall have a positive integral value assigned for this metric. The value may be associated with any objective function of the circuit, but by convention is intended to measure the capacity of the circuit for handling traffic, for example, its throughput in bits-per-second. Higher values indicate a lower capacity.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-internal-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">default-metric metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	1 to 63
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## delay-metric

<b>Description</b>	This container defines the ISIS delay metric.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-internal-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">delay-metric</a>
<b>Tree</b>	<a href="#">delay-metric</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## flags *keyword*

<b>Description</b>	ISIS Delay Metric Flags.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-internal-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">delay-metric flags</a> <i>keyword</i>
<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>internal When this flag is not set, internal metrics are in use.</li> <li>unsupported When this flag (referred to as the S-bit) is set, then the metric is unsupported.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**metric number**

<b>Description</b>	ISIS delay metric value  This metric measures the transit delay of the associated circuit. It is an optional metric, which if assigned to a circuit shall have a positive integral value. Higher values indicate a longer transit delay.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref ipv4-internal-reachability prefixes prefix prefix string delay-metric metric number</a>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	1 to 63
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**error-metric**

<b>Description</b>	This container defines the ISIS error metric.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref ipv4-internal-reachability prefixes prefix prefix string error-metric</a>
<b>Tree</b>	<a href="#">error-metric</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**flags keyword**

<b>Description</b>	IS-IS error metric flags.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref ipv4-internal-reachability prefixes prefix prefix string error-metric flags keyword</a>

<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## expense-metric

<b>Description</b>	This container defines the ISIS expense metric.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref ipv4-internal-reachability prefixes prefix prefix string expense-metric</a>
<b>Tree</b>	<a href="#">expense-metric</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## flags keyword

<b>Description</b>	ISIS Expense Metric Flags.
--------------------	----------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref ipv4-internal-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">expense-metric flags</a> <i>keyword</i>
<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>internal When this flag is not set, internal metrics are in use.</li> <li>unsupported When this flag (referred to as the S-bit) is set, then the metric is unsupported.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**metric** *number*

<b>Description</b>	ISIS expense metric value  This metric measures the monetary cost of utilising the associated circuit. It is an optional metric, which if assigned to a circuit shall have a positive integral value <sup>1</sup> ). Higher values indicate a larger monetary expense.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref ipv4-internal-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">expense-metric metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	1 to 63
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**up-down** *boolean*

<b>Description</b>	The up/down bit  Set if a prefix is advertised from a higher level to a lower level (e.g., level 2 to level 1), indicating that the prefix has traveled down the hierarchy. Prefixes that have the up/down bit set may only be advertised down the hierarchy, i.e., to lower levels. When a prefix is first injected into IS-IS, the bit is UNSET.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-internal-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">up-down</a> <i>boolean</i>
<b>Tree</b>	<a href="#">up-down</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv4-srlgs

<b>Description</b>	This container defines ISIS SRLG TLV 138.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-srlgs</a>
<b>Tree</b>	<a href="#">ipv4-srlgs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv4-srlg [instance-number](#) *number*

<b>Description</b>	Instance of the IPv4 SRLG TLV
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-srlgs</a> <a href="#">ipv4-srlg</a> <a href="#">instance-number</a> <i>number</i>
<b>Tree</b>	<a href="#">ipv4-srlg</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## [instance-number](#) *number*

<b>Description</b>	An arbitrary unsigned 32-bit integer used to disambiguate the instance of TLV 138. The instance identifier is synthesised by the system and may be renumbered for the same SRLG definition in subsequent advertised LSPs if (and only if) the entire list of SRLGs is replaced.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref ipv4-srlgs ipv4-srlg instance-number</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**flags** *keyword*

<b>Description</b>	SRLG flags.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref ipv4-srlgs ipv4-srlg instance-number</a> <i>number</i> <b>flags</b> <i>keyword</i>
<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>numbered</li> </ul> <p>When set, the interface is numbered, whereas if unset indicates that the interface is unnumbered.</p>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4-interface-address** *string*

<b>Description</b>	IPv4 interface address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref ipv4-srlgs ipv4-srlg instance-number</a> <i>number</i> <b>ipv4-interface-address</b> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-interface-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4-neighbor-address** *string*

<b>Description</b>	IPv4 neighbor address.
--------------------	------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-srlgs ipv4-srlg instance-number</a> <i>number</i> <a href="#">ipv4-neighbor-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-neighbor-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**psn-number** *number*

<b>Description</b>	Pseudonode number if the neighbor is on a LAN interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-srlgs ipv4-srlg instance-number</a> <i>number</i> <a href="#">psn-number</a> <i>number</i>
<b>Tree</b>	<a href="#">psn-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**srlg-value** *number*

<b>Description</b>	List of SRLG values.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-srlgs ipv4-srlg instance-number</a> <i>number</i> <a href="#">srlg-value</a> <i>number</i>
<b>Tree</b>	<a href="#">srlg-value</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**system-id** *string*

<b>Description</b>	Neighbor system ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv4-srlgs ipv4-srlg instance-number</a> <i>number</i> <a href="#">system-id</a> <i>string</i>
<b>Tree</b>	<a href="#">system-id</a>

<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv4-te-router-id

<b>Description</b>	This container defines TLV 134.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref ipv4-te-router-id</a>
<b>Tree</b>	<a href="#">ipv4-te-router-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## router-id *string*

<b>Description</b>	IPv4 Traffic Engineering router ID of the node. For traffic engineering, it guarantees that we have a single stable address that can always be referenced in a path that will be reachable from multiple hops away, regardless of the state of the node's interfaces.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref ipv4-te-router-id router-id string</a>
<b>Tree</b>	<a href="#">router-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv6-interface-addresses

<b>Description</b>	This container defines TLV 232.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref ipv6-interface-addresses</a>
<b>Tree</b>	<a href="#">ipv6-interface-addresses</a>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### address *string*

<b>Description</b>	IPv6 interface addresses of the node. MUST contain only the non-link-local IPv6 addresses assigned to the IS.
<b>Context</b>	<a href="#">network-instance name <i>string</i></a> <a href="#">protocols isis instance name <i>string</i></a> <a href="#">level level-number <i>number</i></a> <a href="#">link-state-database lsp lsp-id <i>string</i></a> <a href="#">tlvs tlv type <i>identityref</i></a> <a href="#">ipv6-interface-addresses address <i>string</i></a>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv6-reachability

<b>Description</b>	This container defines list of IPv6 reachability information.
<b>Context</b>	<a href="#">network-instance name <i>string</i></a> <a href="#">protocols isis instance name <i>string</i></a> <a href="#">level level-number <i>number</i></a> <a href="#">link-state-database lsp lsp-id <i>string</i></a> <a href="#">tlvs tlv type <i>identityref</i></a> <a href="#">ipv6-reachability</a>
<b>Tree</b>	<a href="#">ipv6-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### prefixes

<b>Description</b>	This container describes IS prefixes.
<b>Context</b>	<a href="#">network-instance name <i>string</i></a> <a href="#">protocols isis instance name <i>string</i></a> <a href="#">level level-number <i>number</i></a> <a href="#">link-state-database lsp lsp-id <i>string</i></a> <a href="#">tlvs tlv type <i>identityref</i></a> <a href="#">ipv6-reachability prefixes</a>
<b>Tree</b>	<a href="#">prefixes</a>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### prefix *prefix string*

**Description** This list defines IPv6 extended prefix attributes.

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level level-number number](#) [link-state-database lsp lsp-id string](#) [tlvs tlv type identityref](#) [ipv6-reachability prefixes prefix prefix string](#)

**Tree** [prefix](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### prefix *string*

**Description** IPv6 prefix contained within extended reachability TLVs.

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level level-number number](#) [link-state-database lsp lsp-id string](#) [tlvs tlv type identityref](#) [ipv6-reachability prefixes prefix prefix string](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### metric *number*

**Description** ISIS metric value.

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level level-number number](#) [link-state-database lsp lsp-id string](#) [tlvs tlv type identityref](#) [ipv6-reachability prefixes prefix prefix string](#) [metric number](#)

**Tree** [metric](#)

**Range** 0 to 16777215

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**s-bit** *boolean*

<b>Description</b>	The sub-tlv present bit. If UNSET, the octets of Sub-TLVs are not present. Otherwise, the bit is set and the octet following the prefix will contain the length of the Sub-TLV portion of the structure.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">ipv6-reachability prefixes prefix</a> <i>string</i> <b>s-bit</b> <i>boolean</i>
<b>Tree</b>	<a href="#">s-bit</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**subtlvs**

<b>Description</b>	This container describes IS prefix sub-TLVs.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">ipv6-reachability prefixes prefix</a> <i>string</i> <b>subtlvs</b>
<b>Tree</b>	<a href="#">subtlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**subtlv** *type identityref*

<b>Description</b>	List of subTLV types in the LSDB for the specified TLV.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">ipv6-reachability prefixes prefix</a> <i>string</i> <a href="#">subtlvs</a> <b>subtlv type</b> <i>identityref</i>
<b>Tree</b>	<a href="#">subtlv</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**type** *identityref*

<b>Description</b>	The type of subTLV being described. The type of subTLV is expressed as a canonical name.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">ipv6-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">is-reachability-subtlvs-type</a> Base identity for an ISIS TLV 22, 23, 222, 223, 141 SUB-TLV type.</li> <li>• <a href="#">ip-reachability-subtlvs-type</a> Base identity for an ISIS TLV 135, 235, 236, 237 SUB-TLV type.</li> <li>• <a href="#">router-capability-subtlvs-type</a> Base identity for an ISIS TLV 242 SUB-TLV type.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**flags**

<b>Description</b>	This container defines sub-TLV 4.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">ipv6-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">flags</a>
<b>Tree</b>	<a href="#">flags</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**flags** *keyword*

<b>Description</b>	Additional prefix reachability flags.

<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• readvertisement Readvertisement flag. When set, the prefix to which this Prefix-SID is attached, has been propagated by the router either from another level or from redistribution.</li> <li>• node</li> </ul>

Node flag. When set, the Prefix-SID refers to the router identified by the prefix. Typically, the N-Flag is set on Prefix-SIDs attached to a router loopback address.

- no-php

Penultimate-Hop-Popping flag. When set, then the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.

- explicit-null

Explicit-Null flag. When set, any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID having an Explicit-NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet.

- value

Value flag. When set, the Prefix-SID carries a value (instead of an index). By default the flag is UNSET.

- local

Local flag. When set, the value/index carried by the Prefix-SID has local significance. By default the flag is UNSET.

**Configurable**

False

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **length** *number*

<b>Description</b>	TLV length.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">ipv6-reachability prefixes prefix prefix</a> <i>string</i> <a href="#">undefined-subtlvs</a> <a href="#">undefined-subtlv type</a> <i>number</i> <a href="#">length</a> <i>number</i>
<b>Tree</b>	<a href="#">length</a>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>value binary</b>	
<b>Description</b>	TLV value.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level level-number number</a> <a href="#">link-state-database lsp lsp-id string</a> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv6-reachability prefixes prefix prefix string</a> <a href="#">undefined-subtlvs undefined-subtlv type number value binary</a>
<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>up-down boolean</b>	
<b>Description</b>	The up/down bit. Set if a prefix is advertised from a higher level to a lower level (e.g., level 2 to level 1), indicating that the prefix has traveled down the hierarchy. Prefixes that have the up/down bit set may only be advertised down the hierarchy, i.e., to lower levels. When a prefix is first injected into IS-IS, the bit is UNSET.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level level-number number</a> <a href="#">link-state-database lsp lsp-id string</a> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv6-reachability prefixes prefix prefix string</a> <a href="#">up-down boolean</a>

<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>x-bit boolean</b>	
<b>Description</b>	The external bit. Set when the prefix was distributed into IS-IS from another routing protocol.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level level-number number</a> <a href="#">link-state-database lsp lsp-id string</a> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv6-reachability prefixes prefix prefix string</a> <a href="#">x-bit boolean</a>
<b>Tree</b>	<a href="#">x-bit</a>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv6-srlgs

<b>Description</b>	This container defines ISIS SRLG TLV.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv6-srlgs</a>
<b>Tree</b>	<a href="#">ipv6-srlgs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv6-srlg [instance-number](#) *number*

<b>Description</b>	Instance of the IPv6 SRLG TLV.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv6-srlgs</a> <a href="#">ipv6-srlg instance-number</a> <i>number</i>
<b>Tree</b>	<a href="#">ipv6-srlg</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## [instance-number](#) *number*

<b>Description</b>	An arbitrary unsigned 32-bit integer used to disambiguate the instance of TLV 138. The instance identifier is synthesised by the system and may be renumbered for the same SRLG definition in subsequent advertised LSPs if (and only if) the entire list of SRLGs is replaced.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv6-srlgs</a> <a href="#">ipv6-srlg instance-number</a> <i>number</i>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### flags *keyword*

**Description** IPv6 SRLG flags.

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level level-number number](#) [link-state-database lsp lsp-id string](#) [tlvs tlv type identityref](#) [ipv6-srlgs ipv6-srlg instance-number number](#) **flags keyword**

**Tree** [flags](#)

**Options**

- na

When set, the IPv6 neighbour address is included, whereas if unset, it is omitted

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv6-interface-address *string*

**Description** IPv6 interface address or Link Local Identifier.

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level level-number number](#) [link-state-database lsp lsp-id string](#) [tlvs tlv type identityref](#) [ipv6-srlgs ipv6-srlg instance-number number](#) **ipv6-interface-address string**

**Tree** [ipv6-interface-address](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv6-neighbor-address *string*

**Description** IPv6 neighbor address or Link Remote Identifier.

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level level-number number](#) [link-state-database lsp lsp-id string](#) [tlvs tlv type identityref](#) [ipv6-srlgs ipv6-srlg instance-number number](#) **ipv6-neighbor-address string**

**Tree** [ipv6-neighbor-address](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **psn-number** *number*

**Description** Pseudonode number if the neighbor is on a LAN interface.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref ipv6-srlgs ipv6-srlg instance-number](#) *number* **psn-number** *number*

**Tree** [psn-number](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **srlg-value** *number*

**Description** SRLG values.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref ipv6-srlgs ipv6-srlg instance-number](#) *number* **srlg-value** *number*

**Tree** [srlg-value](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **system-id** *string*

**Description** Neighbor system ID.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref ipv6-srlgs ipv6-srlg instance-number](#) *number* **system-id** *string*

**Tree** [system-id](#)

**String Length** 14

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv6-te-router-id

<b>Description</b>	This container defines TLV 140.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv6-te-router-id</a>
<b>Tree</b>	<a href="#">ipv6-te-router-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## router-id *string*

<b>Description</b>	IPv6 Traffic Engineering router ID of the node. For traffic engineering, it guarantees that we have a single stable address that can always be referenced in a path that will be reachable from multiple hops away, regardless of the state of the node's interfaces.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">ipv6-te-router-id</a> <a href="#">router-id</a> <i>string</i>
<b>Tree</b>	<a href="#">router-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## is-alias-id

<b>Description</b>	This container defines the IS-Alias TLV which allows extension-capable ISs to recognize the Originating System of an Extended LSP set. It identifies the Normal system-id of the Originating System.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">is-alias-id</a>
<b>Tree</b>	<a href="#">is-alias-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**alias-id string**

<b>Description</b>	List of alias ID(s).
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref is-alias-id alias-id string</a>
<b>Tree</b>	<a href="#">alias-id</a>
<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**is-reachability**

<b>Description</b>	This container describes list of ISIS neighbors and attributes.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref is-reachability</a>
<b>Tree</b>	<a href="#">is-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**neighbors**

<b>Description</b>	This container describes IS neighbors.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref is-reachability neighbors</a>
<b>Tree</b>	<a href="#">neighbors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**neighbor** *system-id string*

<b>Description</b>	IS reachability neighbor attributes.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level level-number number</a> <a href="#">link-state-database lsp lsp-id string</a> <a href="#">tlvs tlv type identityref is-reachability neighbors neighbor system-id string</a>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**system-id** *string*

<b>Description</b>	System-ID of IS neighbor.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level level-number number</a> <a href="#">link-state-database lsp lsp-id string</a> <a href="#">tlvs tlv type identityref is-reachability neighbors neighbor system-id string</a>
<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**default-metric**

<b>Description</b>	This container defines ISIS Default Metric.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level level-number number</a> <a href="#">link-state-database lsp lsp-id string</a> <a href="#">tlvs tlv type identityref is-reachability neighbors neighbor system-id string</a> <a href="#">default-metric</a>
<b>Tree</b>	<a href="#">default-metric</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**flags** *keyword*

<b>Description</b>	ISIS Default-Metric Flags.
--------------------	----------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">default-metric flags</a> <i>keyword</i>
<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>internal</li> </ul> <p>When set to zero, indicates internal metrics.</p>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**metric** *number*

<b>Description</b>	<p>ISIS default metric value</p> <p>This is a metric understood by every Intermediate system in the domain. Each circuit shall have a positive integral value assigned for this metric. The value may be associated with any objective function of the circuit, but by convention is intended to measure the capacity of the circuit for handling traffic, for example, its throughput in bits-per-second. Higher values indicate a lower capacity.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">default-metric metric number</a>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	1 to 63
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**delay-metric**

<b>Description</b>	This container defines the ISIS delay metric.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">delay-metric</a>
<b>Tree</b>	<a href="#">delay-metric</a>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## flags keyword

**Description** ISIS Delay Metric Flags.

**Context** [network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref is-reachability neighbors neighbor system-id string delay-metric flags keyword](#)

**Tree** [flags](#)

**Options**

- internal  
When this flag is not set, internal metrics are in use.
- unsupported  
When this flag (referred to as the S-bit) is set, then the metric is unsupported.

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## metric number

**Description** ISIS delay metric value

This metric measures the transit delay of the associated circuit. It is an optional metric, which if assigned to a circuit shall have a positive integral value. Higher values indicate a longer transit delay.

**Context** [network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref is-reachability neighbors neighbor system-id string delay-metric metric number](#)

**Tree** [metric](#)

**Range** 1 to 63

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**error-metric**

<b>Description</b>	This container defines the ISIS error metric.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">error-metric</a>
<b>Tree</b>	<a href="#">error-metric</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**flags** *keyword*

<b>Description</b>	IS-IS error metric flags.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">error-metric flags</a> <i>keyword</i>
<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>internal</b> When this flag is not set, internal metrics are in use.</li> <li>• <b>unsupported</b> When this flag (referred to as the S-bit) is set, then the metric is unsupported.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**metric** *number*

<b>Description</b>	<p>ISIS error metric value</p> <p>This metric measures the residual error probability of the associated circuit. It is an optional metric, which if assigned to a circuit shall have a non-zero value. Higher values indicate a larger probability of undetected errors on the circuit.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">error-metric metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>

<b>Range</b>	1 to 63
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## expense-metric

<b>Description</b>	This container defines the ISIS expense metric.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp</a> <a href="#">lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <a href="#">identityref is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">expense-metric</a>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## metric *number*

<b>Description</b>	ISIS expense metric value
--------------------	---------------------------

This metric measures the monetary cost of utilising the associated circuit. It is an optional metric, which if assigned to a circuit shall have a positive integral value<sup>1</sup>). Higher values indicate a larger monetary expense.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref is-reachability neighbors neighbor system-id</a> <i>string</i> <a href="#">expense-metric metric number</a>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	1 to 63
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## isis-neighbor-attribute

<b>Description</b>	This container defines list of ISIS topology neighbors for extended ISIS LSP (multiple system IDs).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref isis-neighbor-attribute</a>
<b>Tree</b>	<a href="#">isis-neighbor-attribute</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## neighbors

<b>Description</b>	This container describes IS neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref isis-neighbor-attribute neighbors</a>
<b>Tree</b>	<a href="#">neighbors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**neighbor** *system-id string*

<b>Description</b>	This list describes ISIS extended neighbors and reachability attributes.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level level-number number</a> <a href="#">link-state-database lsp lsp-id string</a> <a href="#">tlvs tlv type identityref</a> <a href="#">isis-neighbor-attribute neighbors neighbor system-id string</a>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**system-id** *string*

<b>Description</b>	System-id of the neighbor.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level level-number number</a> <a href="#">link-state-database lsp lsp-id string</a> <a href="#">tlvs tlv type identityref</a> <a href="#">isis-neighbor-attribute neighbors neighbor system-id string</a>
<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**instances**

<b>Description</b>	This list contains all instances of an adjacency between the originating IS and the remote IS. Multiple instances are used where there are parallel adjacencies between two systems.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level level-number number</a> <a href="#">link-state-database lsp lsp-id string</a> <a href="#">tlvs tlv type identityref</a> <a href="#">isis-neighbor-attribute neighbors neighbor system-id string</a> <a href="#">instances</a>
<b>Tree</b>	<a href="#">instances</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**instance** *id number*

<b>Description</b>	Instance of the TLV to the remote IS neighbor.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">isis-neighbor-attribute neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i>
<b>Tree</b>	<a href="#">instance</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>id</b> <i>number</i>	
<b>Description</b>	Unique identifier for the instance of the TLV for the IS neighbor. The instance ID is not required to be consistent across across readvertisements of the LSP.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">isis-neighbor-attribute neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>metric</b> <i>number</i>	
<b>Description</b>	Metric value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">isis-neighbor-attribute neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	1 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>subtlvs</b>	
<b>Description</b>	This container describes IS Neighbor sub-TLVs.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a>

	<a href="#">isis-neighbor-attribute neighbors neighbor system-id string instances instance id number subtlvs</a>
<b>Tree</b>	<a href="#">subtlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>subtlv type identityref</b>	
<b>Description</b>	List of subTLV types in the LSDB for the specified TLV.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref isis-neighbor-attribute neighbors neighbor system-id string instances instance id number subtlvs subtlv type identityref</a>

<b>type identityref</b>	
<b>Description</b>	The type of subTLV being described. The type of subTLV is expressed as a canonical name.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref isis-neighbor-attribute neighbors neighbor system-id string instances instance id number subtlvs subtlv type identityref</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">is-reachability-subtlvs-type</a> Base identity for an ISIS TLV 22, 23, 222, 223, 141 SUB-TLV type.</li> <li>• <a href="#">ip-reachability-subtlvs-type</a> Base identity for an ISIS TLV 135, 235, 236, 237 SUB-TLV type.</li> <li>• <a href="#">router-capability-subtlvs-type</a> Base identity for an ISIS TLV 242 SUB-TLV type.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**adjacency-sids**

<b>Description</b>	This container defines segment routing adjacency SIDs.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">isis-neighbor-attribute neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">adjacency-sids</a>
<b>Tree</b>	<a href="#">adjacency-sids</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**adjacency-sid** *value number*

<b>Description</b>	Adjacency Segment-IDs List. An IGP-Adjacency Segment is an IGP segment attached to a unidirectional adjacency or a set of unidirectional adjacencies. By default, an IGP- Adjacency Segment is local to the node which advertises it.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">isis-neighbor-attribute neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">adjacency-sids adjacency-sid</a> <i>value number</i>
<b>Tree</b>	<a href="#">adjacency-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**value** *number*

<b>Description</b>	Adjacency-SID value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">isis-neighbor-attribute neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">adjacency-sids adjacency-sid</a> <i>value number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**flags** *keyword*

<b>Description</b>	Flags associated with Adj-Segment-ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">isis-neighbor-attribute neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">adjacency-sids adjacency-sid value</a> <i>number</i> <b>flags</b> <i>keyword</i>
<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>address-family</b> Address-family flag. When unset, the Adj-SID refers to an adjacency with outgoing IPv4 encapsulation. If set then the Adj-SID refers to an adjacency with outgoing IPv6 encapsulation.</li> <li>• <b>backup</b> Backup flag. When set, the Adj-SID refers to an adjacency being protected (e.g.: using IPFRR or MPLS-FRR).</li> <li>• <b>value</b> Value flag. When set, the SID carries a value (instead of an index). By default the flag is SET.</li> <li>• <b>local</b> Local flag. When set, the value/index carried by the SID has local significance. By default the flag is SET.</li> <li>• <b>set</b> Set flag. When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.</li> </ul>
<b>Configurable</b>	False

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>bandwidth <i>binary</i></b>	
<b>Description</b>	The available bandwidth on a link, forwarding adjacency, or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, available bandwidth is defined to be residual bandwidth minus the measured bandwidth used for the actual forwarding of non-RSVP-TE label switched path packets. For a bundled link, available bandwidth is defined to be the sum of the component link available bandwidths minus the measured bandwidth used for the actual forwarding of non-RSVP-TE label switched path packets. For a bundled link, available bandwidth is defined to be the sum of the component link available bandwidths.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">isis-neighbor-attribute neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">available-bandwidth bandwidth</a> <i>binary</i>

**lan-adjacency-sids**

<b>Description</b>	This container defines segment routing LAN adjacency SIDs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">isis-neighbor-attribute neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type identityref</a> <a href="#">lan-adjacency-sids</a>
<b>Tree</b>	<a href="#">lan-adjacency-sids</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**lan-adjacency-sid** *value number*

<b>Description</b>	Adjacency Segment-IDs List. An IGP-Adjacency Segment is an IGP segment attached to a unidirectional adjacency or a set of unidirectional adjacencies. By default, an IGP- Adjacency Segment is local to the node which advertises it.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">isis-neighbor-attribute neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type identityref</a> <a href="#">lan-adjacency-sids</a> <a href="#">lan-adjacency-sid value</a> <i>number</i>
<b>Tree</b>	<a href="#">lan-adjacency-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**value** *number*

<b>Description</b>	LAN Adjacency-SID value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">isis-neighbor-attribute neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type identityref</a> <a href="#">lan-adjacency-sids</a> <a href="#">lan-adjacency-sid value</a> <i>number</i>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>flags keyword</b>	
<b>Description</b>	Flags associated with LAN-Adj-Segment-ID.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref isis-neighbor-attribute neighbors neighbor system-id string instances instance id number subtlvs subtlv type identityref lan-adjacency-sids lan-adjacency-sid value number flags keyword</a>
<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• address-family Address-family flag. When unset, the Adj-SID refers to an adjacency with outgoing IPv4 encapsulation. If set then the Adj-SID refers to an adjacency with outgoing IPv6 encapsulation.</li> <li>• backup Backup flag. When set, the Adj-SID refers to an adjacency being protected (e.g.: using IPFRR or MPLS-FRR).</li> <li>• value Value flag. When set, the SID carries a value (instead of an index). By default the flag is SET.</li> <li>• local Local flag. When set, the value/index carried by the SID has local significance. By default the flag is SET.</li> <li>• set Set flag. When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>neighbor-id string</b>	
<b>Description</b>	System ID of the neighbor associated with the LAN- Adj-Segment-ID value.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref isis-neighbor-attribute neighbors neighbor system-id string instances</a>

**link-loss**

<b>Description</b>	This container defines unidirectional link loss delay.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">isis-neighbor-attribute neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">link-loss</a>
<b>Tree</b>	<a href="#">link-loss</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**a-bit** *boolean*

<b>Description</b>	The A bit is set when the measured value of this parameter exceeds its configured maximum threshold. The A bit is cleared when the measured value falls below its configured reuse threshold.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">isis-neighbor-attribute neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">link-loss a-bit</a> <i>boolean</i>
<b>Tree</b>	<a href="#">a-bit</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**link-loss** *number*

<b>Description</b>	Link packet loss as a percentage of the total traffic sent over a configurable interval. The basic unit is 0.000003%, where $(2^{24} - 2)$ is 50.331642%. This value is the highest packet-loss percentage that can be expressed (the assumption being that precision is more important on high-speed links than the ability to advertise loss rates greater than this, and that high-speed links with over 50% loss are unusable). Therefore, measured values that are larger than the field maximum SHOULD be encoded as the maximum value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">isis-neighbor-attribute neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">link-loss link-loss number</a>

### type *keyword*

**Description** Link protection capabilities.

**Context** [network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref isis-neighbor-attribute neighbors neighbor system-id string instances instance id number subtlvs subtlv type identityref link-protection-type type keyword](#)

**Tree** [type](#)

### Options

- extra-traffic  
If set the link has extra traffic protection. If the link is of type Extra Traffic, it means that the link is protecting another link or links. The LSPs on a link of this type will be lost if any of the links it is protecting fail.
- unprotected  
If set, the link is unprotected. If the link is of type Unprotected, it means that there is no other link protecting this link. The LSPs on a link of this type will be lost if the link fails.
- shared  
If set, the link has shared protection. If the link is of type Shared, it means that there are one or more disjoint links of type Extra Traffic that are protecting this link. These Extra Traffic links are shared between one or more links of type Shared.
- one-one  
If set, the link has dedicated 1:1 protection. If the link is of type Dedicated 1:1, it means that there is one dedicated disjoint link of type Extra Traffic that is protecting this link.

	<ul style="list-style-type: none"> <li>plus-one If set, the link has dedicated 1+1 protection. If the link is of type Dedicated 1+1, it means that a dedicated disjoint link is protecting this link. However, the protecting link is not advertised in the link state database and is therefore not available for the routing of LSPs.</li> <li>enhanced If set the link has enhanced protection. If the link is of type Enhanced, it means that a protection scheme that is more reliable than Dedicated 1+1, e.g., 4 fiber BLSR/MS-SPRING, is being used to protect this link.</li> </ul>
<b>Configurable</b>	False

**bandwidth** *binary*

<b>Description</b>	Residual bandwidth on a link,forwarding adjacency [RFC4206], or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, residual bandwidth is defined to be the Maximum Bandwidth [RFC5305] minus the bandwidth currently allocated to RSVP-TE label switched paths. For a bundled link, residual bandwidth is defined to be the sum of the component link residual bandwidths.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">isis-neighbor-attribute neighbors neighbor system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">residual-bandwidth bandwidth</a> <i>binary</i>

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### priority [number](#)

**Description** Setup priority level of 0 through 7 to be used by Unreserved Bandwidth sub-TLV 11.

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level level-number number](#) [link-state-database lsp lsp-id string](#) [tlvs tlv type identityref](#) [isis-neighbor-attribute neighbors neighbor system-id string](#) [instances instance id number](#) [subtlvs subtlv type identityref](#) [unreserved-bandwidth setup-priority priority number](#)

**Range** 0 to 7

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### bandwidth *binary*

**Description** The amount of bandwidth reservable in this direction on this link. Note that for oversubscription purposes, this can be greater than the bandwidth of the link. It contains eight 32-bit IEEE floating point numbers(one for each priority). The units are bytes (not bits!) per second. The values correspond to the bandwidth that can be reserved with a setup priority of 0 through 7, arranged in increasing order with priority 0 occurring at the start of the sub-TLV, and priority 7 at the end of the sub-TLV.

**Context** [network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref isis-neighbor-attribute neighbors neighbor system-id string instances instance id number subtlvs subtlv type identityref unreserved-bandwidth setup-priority priority number bandwidth binary](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### utilized-bandwidth

**Description** This container defines unidirectional utilized bandwidth.

**Context** [network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref isis-neighbor-attribute neighbors neighbor system-id string instances instance id number subtlvs subtlv type identityref utilized-bandwidth](#)

**Tree** [utilized-bandwidth](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### bandwidth *binary*

**Description** The bandwidth utilization on a link, forwarding adjacency, or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, bandwidth utilization represents the actual utilization

of the link (i.e., as measured by the advertising node). For a bundled link, bandwidth utilization is defined to be the sum of the component link bandwidth utilizations.

## prefixes

<b>Description</b>	This container describes IS prefixes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">mt-ipv4-reachability prefixes</a>
<b>Tree</b>	<a href="#">prefixes</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## prefix [mt-id](#) *number* [prefix](#) *string*

<b>Description</b>	IPv4 prefixes that are contained within MT reachability TLV.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">mt-ipv4-reachability prefixes</a> <a href="#">prefix mt-id</a> <i>number</i> <a href="#">prefix</a> <i>string</i>
<b>Tree</b>	<a href="#">prefix</a>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### mt-id *number*

**Description** Multi-topology ID

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level level-number number](#) [link-state-database lsp lsp-id string](#) [tlvs tlv type identityref](#) [mt-ipv4-reachability prefixes prefix mt-id number prefix string](#)

**Range** 0 to 4095

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### prefix *string*

**Description** IPv4 prefix contained within extended reachability TLVs.

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level level-number number](#) [link-state-database lsp lsp-id string](#) [tlvs tlv type identityref](#) [mt-ipv4-reachability prefixes prefix mt-id number prefix string](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### metric *number*

**Description** ISIS metric value.

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level level-number number](#) [link-state-database lsp lsp-id string](#) [tlvs tlv type identityref](#) [mt-ipv4-reachability prefixes prefix mt-id number prefix string metric number](#)

**Tree** [metric](#)

**Range** 0 to 16777215

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**s-bit** *boolean*

<b>Description</b>	The Sub-TLV present bit. If UNSET, the octets of Sub-TLVs are not present. Otherwise, the bit is set and the octet following the prefix will contain the length of the Sub-TLV portion of the structure.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">mt-ipv4-reachability prefixes prefix mt-id</a> <i>number</i> <a href="#">prefix</a> <i>string</i> <b>s-bit</b> <i>boolean</i>
<b>Tree</b>	<a href="#">s-bit</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**subtlvs**

<b>Description</b>	This container describes IS prefix sub-TLVs.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">mt-ipv4-reachability prefixes prefix mt-id</a> <i>number</i> <a href="#">prefix</a> <i>string</i> <b>subtlvs</b>
<b>Tree</b>	<a href="#">subtlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**subtlv** *type identityref*

<b>Description</b>	List of subTLV types in the LSDB for the specified TLV.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">mt-ipv4-reachability prefixes prefix mt-id</a> <i>number</i> <a href="#">prefix</a> <i>string</i> <a href="#">subtlvs</a> <b>subtlv</b> <i>type identityref</i>
<b>Tree</b>	<a href="#">subtlv</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**type** *identityref*

<b>Description</b>	The type of subTLV being described. The type of subTLV is expressed as a canonical name.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-ipv4-reachability prefixes prefix mt-id</a> <i>number</i> <a href="#">prefix string</a> <a href="#">subtlvs subtlv type</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>is-reachability-subtlvs-type Base identity for an ISIS TLV 22, 23, 222, 223, 141 SUB-TLV type.</li> <li>ip-reachability-subtlvs-type Base identity for an ISIS TLV 135, 235, 236, 237 SUB-TLV type.</li> <li>router-capability-subtlvs-type Base identity for an ISIS TLV 242 SUB-TLV type.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**flags**

<b>Description</b>	This container defines sub-TLV 4.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-ipv4-reachability prefixes prefix mt-id</a> <i>number</i> <a href="#">prefix string</a> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">flags</a>

<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• readvertisement</li> </ul>

Readvertisement flag. When set, the prefix to which this Prefix-SID is attached, has been propagated by the router either from another level or from redistribution.

- node

Node flag. When set, the Prefix-SID refers to the router identified by the prefix. Typically, the N-Flag is set on Prefix-SIDs attached to a router loopback address.

- no-php

Penultimate-Hop-Popping flag. When set, then the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.

- explicit-null

Explicit-Null flag. When set, any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID having an Explicit-NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet.

- value

Value flag. When set, the Prefix-SID carries a value (instead of an index). By default the flag is UNSET.

- local

Local flag. When set, the value/index carried by the Prefix-SID has local significance. By default the flag is UNSET.

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## prefixes

<b>Description</b>	This container describes IS prefixes.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">mt-ipv6-reachability prefixes</a>
<b>Tree</b>	<a href="#">prefixes</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## prefix *prefix string mt-id number*

<b>Description</b>	List of IPv6 prefixes contained within MT reachability TLV.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">mt-ipv6-reachability prefixes prefix</a> <i>prefix string mt-id number</i>
<b>Tree</b>	<a href="#">prefix</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## prefix *string*

<b>Description</b>	IPv6 prefix contained within extended reachability TLVs.
--------------------	--

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref mt-ipv6-reachability prefixes prefix prefix](#) *string* [mt-id](#) *number*

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **mt-id** *number*

**Description** Multi-topology ID

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref mt-ipv6-reachability prefixes prefix prefix](#) *string* [mt-id](#) *number*

**Range** 0 to 4095

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **metric** *number*

**Description** ISIS metric value.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref mt-ipv6-reachability prefixes prefix prefix](#) *string* [mt-id](#) *number* [metric](#) *number*

**Tree** [metric](#)

**Range** 0 to 16777215

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **s-bit** *boolean*

**Description** The sub-tlv present bit. If UNSET, the octets of Sub-TLVs are not present. Otherwise, the bit is set and the octet following the prefix will contain the length of the Sub-TLV portion of the structure.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref mt-ipv6-reachability prefixes prefix prefix](#) *string* [mt-id](#) *number* [s-bit](#) *boolean*

<b>Tree</b>	<a href="#">s-bit</a>

<b>flags keyword</b>	
<b>Description</b>	Flags associated with Prefix Segment-ID.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-ipv6-reachability prefixes prefix prefix string mt-id number subtlvs subtlv type identityref prefix-sids prefix-sid value number flags keyword</a>
<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• readvertisement           <p>Readvertisement flag. When set, the prefix to which this Prefix-SID is attached, has been propagated by the router either from another level or from redistribution.</p> </li> <li>• node           <p>Node flag. When set, the Prefix-SID refers to the router identified by the prefix. Typically, the N-Flag is set on Prefix-SIDs attached to a router loopback address.</p> </li> <li>• no-php           <p>Penultimate-Hop-Popping flag. When set, then the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.</p> </li> <li>• explicit-null           <p>Explicit-Null flag. When set, any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID having an Explicit-NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet.</p> </li> <li>• value</li> </ul>

Value flag. When set, the Prefix-SID carries a value (instead of an index). By default the flag is UNSET.

- local

Local flag. When set, the value/index carried by the Prefix-SID has local significance. By default the flag is UNSET.

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**type** *identityref*

<b>Description</b>	The type of subTLV being described. The type of subTLV is expressed as a canonical name.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isis-neighbor-attribute neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">is-reachability-subtlvs-type</a> Base identity for an ISIS TLV 22, 23, 222, 223, 141 SUB-TLV type.</li> <li>• <a href="#">ip-reachability-subtlvs-type</a> Base identity for an ISIS TLV 135, 235, 236, 237 SUB-TLV type.</li> <li>• <a href="#">router-capability-subtlvs-type</a> Base identity for an ISIS TLV 242 SUB-TLV type.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**adjacency-sids**

<b>Description</b>	This container defines segment routing adjacency SIDs.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isis-neighbor-attribute neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">adjacency-sids</a>
<b>Tree</b>	<a href="#">adjacency-sids</a>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**adjacency-sid** *value number*

**Description** Adjacency Segment-IDs List. An IGP-Adjacency Segment is an IGP segment attached to a unidirectional adjacency or a set of unidirectional adjacencies. By default, an IGP- Adjacency Segment is local to the node which advertises it.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref mt-isis-neighbor-attribute neighbors neighbor mt-id](#) *number* [system-id](#) *string* [instances instance id](#) *number* [subtlvs subtlv type identityref adjacency-sids adjacency-sid](#) *value number*

**Tree** [adjacency-sid](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**value** *number*

**Description** Adjacency-SID value.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref mt-isis-neighbor-attribute neighbors neighbor mt-id](#) *number* [system-id](#) *string* [instances instance id](#) *number* [subtlvs subtlv type identityref adjacency-sids adjacency-sid](#) *value number*

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**flags** *keyword*

**Description** Flags associated with Adj-Segment-ID.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref mt-isis-neighbor-attribute neighbors neighbor mt-id](#) *number* [system-id](#) *string* [instances instance id](#) *number* [subtlvs subtlv type identityref adjacency-sids adjacency-sid](#) *value number* [flags](#) *keyword*

**Tree** [flags](#)

**Options**

- address-family

Address-family flag. When unset, the Adj-SID refers to an adjacency with outgoing IPv4 encapsulation. If set then the Adj-SID refers to an adjacency with outgoing IPv6 encapsulation.

- backup

Backup flag. When set, the Adj-SID refers to an adjacency being protected (e.g.: using IPFRR or MPLS-FRR).

- value

Value flag. When set, the SID carries a value (instead of an index). By default the flag is SET.

- local

Local flag. When set, the value/index carried by the SID has local significance. By default the flag is SET.

- set

Set flag. When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.

#### Configurable

False

#### Platforms

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

#### weight *number*

##### Description

Value that represents the weight of the Adj-SID for the purpose of load balancing.

##### Context

<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**min-delay** *number*

<b>Description</b>	Minimum forward-path delay (from the advertising router to the remote neighbor)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isis-neighbor-attribute neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay min-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">min-delay</a>
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**te-default-metric** *number*

<b>Description</b>	An administratively assigned metric used as an alternative to the normal SPF metric based (typically) on link bandwidth.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isis-neighbor-attribute neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">application-specific-link-attributes sub-sub-tlvs te-default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">te-default-metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**available-bandwidth**

<b>Description</b>	This container defines unidirectional lavailable bandwidth.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isis-neighbor-attribute neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">available-bandwidth</a>
<b>Tree</b>	<a href="#">available-bandwidth</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**bandwidth** *binary*

<b>Description</b>	The available bandwidth on a link, forwarding adjacency, or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, available bandwidth is defined to be residual bandwidth minus the measured bandwidth used for the actual forwarding of non-RSVP-TE label switched path packets. For a bundled link, available bandwidth is defined to be the sum of the component link available bandwidths minus the measured bandwidth used for the actual forwarding of non-RSVP-TE label switched path packets. For a bundled link, available bandwidth is defined to be the sum of the component link available bandwidths.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isis-neighbor-attribute neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">available-bandwidth bandwidth</a> <i>binary</i>
<b>Tree</b>	<a href="#">bandwidth</a>
<b>String Length</b>	4
<b>Units</b>	bytes per second
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**type** *identityref*

<b>Description</b>	The type of subTLV being described. The type of subTLV is expressed as a canonical name.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isis-neighbor-attribute neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">available-bandwidth type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">is-reachability-subtlvs-type</a> Base identity for an ISIS TLV 22, 23, 222, 223, 141 SUB-TLV type.</li> <li>• <a href="#">ip-reachability-subtlvs-type</a> Base identity for an ISIS TLV 135, 235, 236, 237 SUB-TLV type.</li> <li>• <a href="#">router-capability-subtlvs-type</a> Base identity for an ISIS TLV 242 SUB-TLV type.</li> </ul>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### bandwidth-constraints

**Description** This container defines bandwidth-constraints. For DS-TE, the existing Maximum Reservable link bandwidth parameter is retained, but its semantics is generalized and interpreted as the aggregate bandwidth constraint across all Class-Types

**Context** [network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isis-neighbor-attribute neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref bandwidth-constraints](#)

**Tree** [bandwidth-constraints](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### bandwidth-constraint [model-id number](#)

**Description** List of the Bandwidth Constraints sub-TLV instances present in the TLV.

**Context** [network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isis-neighbor-attribute neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref bandwidth-constraints bandwidth-constraint model-id number](#)

**Tree** [bandwidth-constraint](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### model-id [number](#)

**Description** Identifier for the Bandwidth Constraints Model currently in use by the LSR initiating the IGP advertisement.

**Context** [network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isis-neighbor-attribute neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref bandwidth-constraints bandwidth-constraint model-id number](#)

<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### lan-adjacency-sids

**Description** This container defines segment routing LAN adjacency SIDs

**Context** [network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isis-neighbor-attribute neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref lan-adjacency-sids](#)

**Tree** [lan-adjacency-sids](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### lan-adjacency-sid [value number](#)

**Description** Adjacency Segment-IDs List. An IGP-Adjacency Segment is an IGP segment attached to a unidirectional adjacency or a set of unidirectional adjacencies. By default, an IGP- Adjacency Segment is local to the node which advertises it.

**Context** [network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isis-neighbor-attribute neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref lan-adjacency-sids lan-adjacency-sid value number](#)

**Tree** [lan-adjacency-sid](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### [value number](#)

**Description** LAN Adjacency-SID value.

**Context** [network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isis-neighbor-attribute neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref lan-adjacency-sids lan-adjacency-sid value number](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**flags** *keyword*

**Description** Flags associated with LAN-Adj-Segment-ID.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref mt-isis-neighbor-attribute neighbors neighbor mt-id](#) *number* [system-id](#) *string* [instances instance id](#) *number* [subtlvs subtlv type identityref lan-adjacency-sids lan-adjacency-sid value](#) *number* **flags** *keyword*

**Tree** [flags](#)

**Options**

- **address-family**

Address-family flag. When unset, the Adj-SID refers to an adjacency with outgoing IPv4 encapsulation. If set then the Adj-SID refers to an adjacency with outgoing IPv6 encapsulation.

- **backup**

Backup flag. When set, the Adj-SID refers to an adjacency being protected (e.g.: using IPFRR or MPLS-FRR).

- **value**

Value flag. When set, the SID carries a value (instead of an index). By default the flag is SET.

- **local**

Local flag. When set, the value/index carried by the SID has local significance. By default the flag is SET.

- **set**

Set flag. When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**neighbor-id** *string*

**Description** System ID of the neighbor associated with the LAN- Adj-Segment-ID value.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref mt-isis-neighbor-attribute neighbors neighbor mt-id](#) *number* [system-id](#) *string* [instances instance id](#) *number* [subtlvs subtlv type identityref lan-adjacency-sids lan-adjacency-sid value](#) *number* **neighbor-id** *string*

### link-loss *number*

**Description** Link packet loss as a percentage of the total traffic sent over a configurable interval. The basic unit is 0.000003%, where  $(2^{24} - 2)$  is 50.331642%. This value is the highest packet-loss percentage that can be expressed (the assumption being that precision is more important on high-speed links than the ability to advertise loss rates greater than this, and that high-speed links with over 50% loss are unusable). Therefore, measured values that are larger than the field maximum SHOULD be encoded as the maximum value.

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level level-number number](#) [link-state-database lsp lsp-id string](#) [tlvs tlv type identityref](#)

The LSPs on a link of this type will be lost if any of the links it is protecting fail.</li> <li>• <b>unprotected</b> If set, the link is unprotected. If the link is of type Unprotected, it means that there is no other link protecting this link. The LSPs on a link of this type will be lost if the link fails.</li> <li>• <b>shared</b> If set, the link has shared protection. If the link is of type Shared, it means that there are one or more disjoint links of type Extra Traffic that are</li> </ul>

protecting this link. These Extra Traffic links are shared between one or more links of type Shared.

- one-one

If set, the link has dedicated 1:1 protection. If the link is of type Dedicated 1:1, it means that there is one dedicated disjoint link of type Extra Traffic that is protecting this link.

- plus-one

If set, the link has dedicated 1+1 protection. If the link is of type Dedicated 1+1, it means that a dedicated disjoint link is protecting this link. However, the protecting link is not advertised in the link state database and is therefore not available for the routing of LSPs.

- enhanced

If set the link has enhanced protection. If the link is of type Enhanced, it means that a protection scheme that is more reliable than Dedicated 1+1, e.g., 4 fiber BLSR/MS-SPRING, is being used to protect this link.

#### Configurable

False

<b>bandwidth</b> <i>binary</i>	
<b>Description</b>	Residual bandwidth on a link,forwarding adjacency [RFC4206], or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, residual bandwidth is defined to be the Maximum Bandwidth [RFC5305] minus the bandwidth currently allocated to RSVP-TE label switched paths. For a bundled link, residual bandwidth is defined to be the sum of the component link residual bandwidths.

<b>bandwidth <i>binary</i></b>	
<b>Description</b>	The amount of bandwidth reservable in this direction on this link. Note that for oversubscription purposes, this can be greater than the bandwidth of the link. It contains eight 32-bit IEEE floating point numbers(one for each priority). The units are bytes (not bits!) per second. The values correspond to the bandwidth that can be reserved with a setup priority of 0 through 7, arranged in increasing order with priority 0 occurring at the start of the sub-TLV, and priority 7 at the end of the sub-TLV.

**bandwidth** *binary*

<b>Description</b>	The bandwidth utilization on a link, forwarding adjacency, or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, bandwidth utilization represents the actual utilization of the link (i.e., as measured by the advertising node). For a bundled link, bandwidth utilization is defined to be the sum of the component link bandwidth utilizations.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isis-neighbor-attribute neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">utilized-bandwidth bandwidth</a> <i>binary</i>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **neighbor** *mt-id* *number* *system-id* *string*

<b>Description</b>	This container describes IS neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **mt-id** *number*

<b>Description</b>	Identifier of a topology being announced.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i>
<b>Range</b>	0 to 4095
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **system-id** *string*

<b>Description</b>	System-id of the IS neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i>
<b>String Length</b>	14

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## instances

<b>Description</b>	This list contains all instances of an adjacency between the originating and remote IS. Multiple instances are used to indicate where there are arallel adjacencies between systems.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances</a>
<b>Tree</b>	<a href="#">instances</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## instance *id number*

<b>Description</b>	Instance of TLV-222 between the originating and remote IS.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i>
<b>Tree</b>	<a href="#">instance</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## *id number*

<b>Description</b>	Unique identifier for the TLV instance for the neighbor. The ID is not required to be consistent across readvertisements of the LSP.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i>
<b>Configurable</b>	False

<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>metric number</b>	
<b>Description</b>	ISIS metric value.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isn neighbors neighbor mt-id number system-id string instances instance id number metric number</a>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>subtlvs</b>	
<b>Description</b>	This container describes IS Neighbor sub-TLVs.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isn neighbors neighbor mt-id number system-id string instances instance id number subtlvs</a>
<b>Tree</b>	<a href="#">subtlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>subtlv type identityref</b>	
<b>Description</b>	List of subTLV types in the LSDB for the specified TLV.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isn neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref</a>
<b>Tree</b>	<a href="#">subtlv</a>
<b>Configurable</b>	False

<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>type</b> <i>identityref</i>	
<b>Description</b>	The type of subTLV being described. The type of subTLV is expressed as a canonical name.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">is-reachability-subtlvs-type</a> Base identity for an ISIS TLV 22, 23, 222, 223, 141 SUB-TLV type.</li> <li>• <a href="#">ip-reachability-subtlvs-type</a> Base identity for an ISIS TLV 135, 235, 236, 237 SUB-TLV type.</li> <li>• <a href="#">router-capability-subtlvs-type</a> Base identity for an ISIS TLV 242 SUB-TLV type.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>adjacency-sids</b>	
<b>Description</b>	This container defines segment routing adjacency SIDs.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">adjacency-sids</a>
