<b>Description</b>	Adjacency Segment-IDs List. An IGP-Adjacency Segment is an IGP segment attached to a unidirectional adjacency or a set of unidirectional adjacencies. By default, an IGP- Adjacency Segment is local to the node which advertises it.

<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isn neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref adjacency-sids adjacency-sid value number</a>
<b>Tree</b>	<a href="#">adjacency-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>value number</b>	
<b>Description</b>	Adjacency-SID value.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isn neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref adjacency-sids adjacency-sid value number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>flags keyword</b>	
<b>Description</b>	Flags associated with Adj-Segment-ID.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isn neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref adjacency-sids adjacency-sid value number flags keyword</a>
<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>address-family</b> Address-family flag. When unset, the Adj-SID refers to an adjacency with outgoing IPv4 encapsulation. If set then the Adj-SID refers to an adjacency with outgoing IPv6 encapsulation.</li> <li>• <b>backup</b> Backup flag. When set, the Adj-SID refers to an adjacency being protected (e.g.: using IPFRR or MPLS-FRR).</li> <li>• <b>value</b> Value flag. When set, the SID carries a value (instead of an index). By default the flag is SET.</li> </ul>

	<ul style="list-style-type: none"> <li>local Local flag. When set, the value/index carried by the SID has local significance. By default the flag is SET.</li> <li>set Set flag. When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>weight number</b>	
<b>Description</b>	Value that represents the weight of the Adj-SID for the purpose of load balancing.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isn neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref adjacency-sids adjacency-sid value number weight number</a>
<b>Tree</b>	<a href="#">weight</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>admin-group</b>	
<b>Description</b>	This container defines sub-TLV 3.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isn neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref admin-group</a>
<b>Tree</b>	<a href="#">admin-group</a>

<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### application-specific-link-attributes

<b>Description</b>	Application Specific Link Attributes. Sub-TLV = 16.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type identityref application-specific-link-attributes</a>
<b>Tree</b>	<a href="#">application-specific-link-attributes</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### legacy *boolean*

<b>Description</b>	When the legacy flag is set, all of the applications specified in the bit mask MUST use the legacy advertisements for the corresponding link found in TLVs 22, 23, 25, 141, 222, and 223, in TLV 138, or in TLV 139 as appropriate.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type identityref application-specific-link-attributes legacy</a> <i>boolean</i>
<b>Tree</b>	<a href="#">legacy</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### loop-free-alternate *boolean*

<b>Description</b>	F bit is set in the Standard Application Identifier Bit Mask
--------------------	--

<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type <i>identityref</i> mt-isn neighbors neighbor mt-id <i>number</i> system-id <i>string</i> instances instance id <i>number</i> subtlvs subtlv type <i>identityref</i> application-specific-link-attributes loop-free-alternate <i>boolean</i>
<b>Tree</b>	loop-free-alternate
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>rsvp-te</b> <i>boolean</i>	
<b>Description</b>	R bit is set in the Standard Application Identifier Bit Mask
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type <i>identityref</i> mt-isn neighbors neighbor mt-id <i>number</i> system-id <i>string</i> instances instance id <i>number</i> subtlvs subtlv type <i>identityref</i> application-specific-link-attributes rsvp-te <i>boolean</i>
<b>Tree</b>	rsvp-te
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>sr-policy</b> <i>boolean</i>	
<b>Description</b>	S bit is set in the Standard Application Identifier Bit Mask
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type <i>identityref</i> mt-isn neighbors neighbor mt-id <i>number</i> system-id <i>string</i> instances instance id <i>number</i> subtlvs subtlv type <i>identityref</i> application-specific-link-attributes sr-policy <i>boolean</i>
<b>Tree</b>	sr-policy
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>sub-sub-tlvs</b>	
<b>Description</b>	Enter the sub-sub-tlvs context
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type <i>identityref</i> mt-isn neighbors neighbor mt-id <i>number</i> system-id <i>string</i> instances instance id <i>number</i> subtlvs subtlv type <i>identityref</i> application-specific-link-attributes sub-sub-tlvs
<b>Tree</b>	sub-sub-tlvs

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**admin-group** *number*

<b>Description</b>	A bit mask representing the administrative groups to which the interface belongs. Sub-Sub-TLV = 3.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">application-specific-link-attributes sub-sub-tlvs</a> <a href="#">admin-group</a> <i>number</i>
<b>Tree</b>	<a href="#">admin-group</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**maximum-link-bandwidth** *number*

<b>Description</b>	The (LAG aware) bandwidth of the interface to the neighbor. Sub-Sub-TLV = 9.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">application-specific-link-attributes sub-sub-tlvs</a> <a href="#">maximum-link-bandwidth</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-link-bandwidth</a>
<b>Units</b>	bytes-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**min-max-unidirectional-link-delay**

<b>Description</b>	The minimum and maximum delay between two directly connected IS-IS neighbors.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">application-specific-link-attributes sub-sub-tlvs</a> <a href="#">min-max-unidirectional-link-delay</a>
<b>Tree</b>	<a href="#">min-max-unidirectional-link-delay</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**anomolous** *boolean*

<b>Description</b>	If the A bit is cleared, the values represent steady-state link performance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay anomolous</a> <i>boolean</i>
<b>Tree</b>	<a href="#">anomolous</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**max-delay** *number*

<b>Description</b>	Maximum forward-path delay (from the advertising router to the remote neighbor)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay max-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">max-delay</a>
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**min-delay** *number*

<b>Description</b>	Minimum forward-path delay (from the advertising router to the remote neighbor)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay min-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">min-delay</a>
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**te-default-metric** *number*

<b>Description</b>	An administratively assigned metric used as an alternative to the normal SPF metric based (typically) on link bandwidth.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">application-specific-link-attributes sub-sub-tlvs</a> <a href="#">te-default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">te-default-metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**available-bandwidth**

<b>Description</b>	This container defines unidirectional lavailable bandwidth.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">available-bandwidth</a>
<b>Tree</b>	<a href="#">available-bandwidth</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**bandwidth** *binary*

<b>Description</b>	The available bandwidth on a link, forwarding adjacency, or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, available bandwidth is defined to be residual bandwidth minus the measured bandwidth used for the actual forwarding of non-RSVP-TE label switched path packets. For a bundled link, available bandwidth is defined to be the sum of the component link available bandwidths minus the measured bandwidth used for the actual forwarding of non-RSVP-TE label switched path packets. For a bundled link, available bandwidth is defined to be the sum of the component link available bandwidths.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">available-bandwidth</a> <a href="#">bandwidth</a> <i>binary</i>

<b>Tree</b>	<a href="#">bandwidth</a>

#### **model-id** *number*

**Description** Identifier for the Bandwidth Constraints Model currently in use by the LSR initiating the IGP advertisement.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref mt-isn neighbors neighbor mt-id](#) *number* [system-id](#) *string* [instances instance id](#) *number* [subtlvs subtlv type identityref bandwidth-constraints bandwidth-constraint model-id](#) *number*

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

#### **constraints**

**Description** Constraints contained within the Bandwidth Constraints sub-TLV

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref mt-isn neighbors neighbor mt-id](#) *number* [system-id](#) *string* [instances instance id](#) *number* [subtlvs subtlv type identityref bandwidth-constraints bandwidth-constraint model-id](#) *number* [constraints](#)

**Tree** [constraints](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**constraint** *constraint-id number*

**Description** List of the constraints within the Bandwidth Constraints sub-TLV. The BC0 level is indicated by the constraint-id leaf being set to 0, with BCN being indicated by constraint-id N.

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level level-number number](#) [link-state-database lsp lsp-id string](#) [tlvs tlv type identityref mt-isn neighbors neighbor mt-id number](#) [system-id string](#) [instances instance id number](#) [subtlvs subtlv type identityref bandwidth-constraints bandwidth-constraint model-id number](#) [constraints constraint constraint-id number](#)

**Tree** [constraint](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**constraint-id** *number*

**Description** Unique reference for the bandwidth constraint level. BC0 is indicated by this leaf being set to zero, with BCN represented by this leaf being set to N.

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level level-number number](#) [link-state-database lsp lsp-id string](#) [tlvs tlv type identityref mt-isn neighbors neighbor mt-id number](#) [system-id string](#) [instances instance id number](#) [subtlvs subtlv type identityref bandwidth-constraints bandwidth-constraint model-id number](#) [constraints constraint constraint-id number](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**bandwidth** *binary*

**Description** The bandwidth constraint, expressed as a 32-bit IEEE floating point number expressed in bytes per second.

**Context** [network-instance name string](#) [protocols isis instance name string](#) [level level-number number](#) [link-state-database lsp lsp-id string](#) [tlvs tlv type identityref mt-isn neighbors neighbor mt-id number](#) [system-id string](#) [instances instance id number](#) [subtlvs subtlv type identityref bandwidth-constraints bandwidth-constraint model-id number](#) [constraints constraint constraint-id number](#) [bandwidth binary](#)

<b>link-loss number</b>	
<b>Description</b>	Link packet loss as a percentage of the total traffic sent over a configurable interval. The basic unit is 0.000003%, where (2 <sup>24</sup> - 2) is 50.331642%. This value is the highest packet-loss percentage that can be expressed (the assumption being that precision is more important on high-speed links than the ability to advertise loss rates greater than this, and that high-speed links with over 50% loss are unusable). Therefore, measured values that are larger than the field maximum SHOULD be encoded as the maximum value.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isn neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref link-loss link-loss number</a>

<b>Tree</b>	<a href="#">type</a>

**Options**

- extra-traffic

If set the link has extra traffic protection. If the link is of type Extra Traffic, it means that the link is protecting another link or links. The LSPs on a link of this type will be lost if any of the links it is protecting fail.

- unprotected

If set, the link is unprotected. If the link is of type Unprotected, it means that there is no other link protecting this link. The LSPs on a link of this type will be lost if the link fails.

- shared

If set, the link has shared protection. If the link is of type Shared, it means that there are one or more disjoint links of type Extra Traffic that are protecting this link. These Extra Traffic links are shared between one or more links of type Shared.

- one-one

If set, the link has dedicated 1:1 protection. If the link is of type Dedicated 1:1, it means that there is one dedicated disjoint link of type Extra Traffic that is protecting this link.

- plus-one

If set, the link has dedicated 1+1 protection. If the link is of type Dedicated 1+1, it means that a dedicated disjoint link is protecting this link. However, the protecting link is not advertised in the link state database and is therefore not available for the routing of LSPs.

- enhanced

If set the link has enhanced protection. If the link is of type Enhanced, it means that a protection scheme that is more reliable than Dedicated 1+1, e.g., 4 fiber BLSR/MS-SPRING, is being used to protect this link.

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**max-link-bandwidth****Description**

<b>bandwidth <i>binary</i></b>	
<b>Description</b>	Residual bandwidth on a link, forwarding adjacency [RFC4206], or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, residual bandwidth is defined to be the Maximum Bandwidth [RFC5305] minus the bandwidth currently allocated to RSVP-TE label switched paths. For a bundled link, residual bandwidth is defined to be the sum of the component link residual bandwidths.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isn neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref residual-bandwidth bandwidth <i>binary</i></a>

**bandwidth** *binary*

<b>Description</b>	The amount of bandwidth reservable in this direction on this link. Note that for oversubscription purposes, this can be greater than the bandwidth of the link. It contains eight 32-bit IEEE floating point numbers(one for each priority). The units are bytes (not bits!) per second. The values correspond to the bandwidth that can be reserved with a setup priority of 0 through 7, arranged in increasing order with priority 0 occurring at the start of the sub-TLV, and priority 7 at the end of the sub-TLV.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref mt-isn neighbors neighbor mt-id</a> <i>number</i> <a href="#">system-id</a> <i>string</i> <a href="#">instances instance id</a> <i>number</i> <a href="#">subtlvs subtlv type identityref unreserved-bandwidth setup-priority priority</a> <i>number</i> <a href="#">bandwidth</a> <i>binary</i>

## attributes *keyword*

<b>Description</b>	Attributes of the LSP for the associated topology.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref multi-topology topologies topology mt-id</a> <i>number</i> <a href="#">attributes</a> <i>keyword</i>
<b>Tree</b>	<a href="#">attributes</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>overload</b> When set, node is overloaded, still part of the topology but cannot be used for transit.</li> <li>• <b>attached</b> When set, node is attached to another area using the referred metric and can be used as default gateway.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## nlpid

<b>Description</b>	This container defines TLV 129.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref nlpid</a>
<b>Tree</b>	<a href="#">nlpid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## nlpid keyword

<b>Description</b>	Protocol supported. IPv4 is defined as (0xcc) and IPv6 -(0x8e)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref nlpid nlpid keyword</a>
<b>Tree</b>	<a href="#">nlpid</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>ipv4</b> IPv4 Address family.</li> <li>• <b>ipv6</b> IPv6 Address family.</li> </ul>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## purge-oi

**Description** This container defines ISIS purge TLV.

**Context** [network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref purge-oi](#)

**Tree** [purge-oi](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## received-system-id *string*

**Description** System ID of the Intermediate System from which the purge was received.

**Context** [network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref purge-oi received-system-id string](#)

**Tree** [received-system-id](#)

**String Length** 14

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## source-system-id *string*

**Description** System ID of the Intermediate System that inserted this TLV.

**Context** [network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref purge-oi source-system-id string](#)

**Tree** [source-system-id](#)

**String Length** 14

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### system-id-count *number*

**Description** Number of system IDs carried in this TLV.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref](#) [purge-oi system-id-count](#) *number*

**Tree** [system-id-count](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### router-capabilities

**Description** This container defines router capabilities.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref](#) [router-capabilities](#)

**Tree** [router-capabilities](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### capability [instance-number](#) *number*

**Description** This list describes IS Router capabilities.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref](#) [router-capabilities capability instance-number](#) *number*

**Tree** [capability](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**instance-number** *number*

<b>Description</b>	A unique instance number for the instance of the router capabilities TLV. The instance number should be autogenerated by the producer of the data and may be renumbered if the entire LSP contents are replaced in subsequent advertisements.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">router-capabilities capability instance-number</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**flags** *keyword*

<b>Description</b>	Router capability flags.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">router-capabilities capability instance-number</a> <i>number</i> <a href="#">flags</a> <i>keyword</i>
<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>flood           <p>When the S bit is set(1), the IS - IS Router CAPABILITY TLV MUST be flooded across the entire routing domain. When the S bit is not set(0), the TLV MUST NOT be leaked between levels . This bit MUST NOT be altered during the TLV leaking.</p> </li> <li>down           <p>When the IS-IS Router CAPABILITY TLV is leaked from level - 2 to level-1, the Down bit MUST be set. Otherwise, this bit MUST be clear. IS - IS Router capability TLVs with the Down bit set MUST NOT be leaked from level - 1 to level-2. This is to prevent TLV looping.</p> </li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**router-id** *string*

<b>Description</b>	IPv4 router-id.
--------------------	-----------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">router-capabilities capability</a> <a href="#">instance-number</a> <i>number</i> <a href="#">router-id</a> <i>string</i>
<b>Tree</b>	<a href="#">router-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## subtlvs

<b>Description</b>	This container describes router capability TLV sub-TLVs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">router-capabilities capability</a> <a href="#">instance-number</a> <i>number</i> <a href="#">subtlvs</a>
<b>Tree</b>	<a href="#">subtlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## subtlv *type identityref*

<b>Description</b>	List of subTLV types in the LSDB for the specified TLV
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">router-capabilities capability</a> <a href="#">instance-number</a> <i>number</i> <a href="#">subtlvs</a> <a href="#">subtlv type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">subtlv</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## type *identityref*

<b>Description</b>	The type of subTLV being described. The type of subTLV is expressed as a canonical name.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i>

	<a href="#">router-capabilities capability instance-number number subtlvs subtlv type identityref</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">is-reachability-subtlvs-type</a> Base identity for an ISIS TLV 22, 23, 222, 223, 141 SUB-TLV type.</li> <li>• <a href="#">ip-reachability-subtlvs-type</a> Base identity for an ISIS TLV 135, 235, 236, 237 SUB-TLV type.</li> <li>• <a href="#">router-capability-subtlvs-type</a> Base identity for an ISIS TLV 242 SUB-TLV type.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>node-msds</b>	
<b>Description</b>	The Maximum Segment Depth (MSD) values supported by the advertising node. sub-tlv 23.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref router-capabilities capability instance-number number subtlvs subtlv type identityref node-msds</a>
<b>Tree</b>	<a href="#">node-msds</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>bmi-msd number</b>	
<b>Description</b>	Base MPLS Imposition MSD (BMI-MSD) signals the total number of MPLS labels that can be imposed, including all service/transport/special labels. sub-tlv 1
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref router-capabilities capability instance-number number subtlvs subtlv type identityref node-msds bmi-msd number</a>
<b>Tree</b>	<a href="#">bmi-msd</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**erld-msd** *number*

<b>Description</b>	Entropy capable Readable Label Depth MSD (ERLD-MSD), is defined to advertise the ERLD [RFC8662] of a given router. sub-tlv 2.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">router-capabilities capability instance-number</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">node-msds erld-msd</a> <i>number</i>
<b>Tree</b>	<a href="#">erld-msd</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sbfd-discriminators**

<b>Description</b>	This container defines sbfd discriminators sub-TLV 20.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">router-capabilities capability instance-number</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">sbfd-discriminators</a>
<b>Tree</b>	<a href="#">sbfd-discriminators</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**discriminator** *number*

<b>Description</b>	Advertised Seamless BFD (S-BFD) Discriminator.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type</a> <i>identityref</i> <a href="#">router-capabilities capability instance-number</a> <i>number</i> <a href="#">subtlvs subtlv type</a> <i>identityref</i> <a href="#">sbfd-discriminators discriminator</a> <i>number</i>
<b>Tree</b>	<a href="#">discriminator</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## segment-routing-algorithms

<b>Description</b>	This container defines SR algorithm sub-TLV 19.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">router-capabilities capability instance-number</a> <i>number</i> <a href="#">subtlvs subtlv type identityref</a> <a href="#">segment-routing-algorithms</a>
<b>Tree</b>	<a href="#">segment-routing-algorithms</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### algorithm *keyword*

<b>Description</b>	The Segment Routing algorithm that is described by the TLV.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a> <a href="#">router-capabilities capability instance-number</a> <i>number</i> <a href="#">subtlvs subtlv type identityref</a> <a href="#">segment-routing-algorithms algorithm</a> <i>keyword</i>
<b>Tree</b>	<a href="#">algorithm</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>spf           <p>Shortest Path First (SPF) algorithm based on link metric. This is the well-known shortest path algorithm as computed by the IS-IS Decision process. Consistent with the deployed practice for link-state protocols, algorithm 0 permits any node to overwrite the SPF path with a different path based on local policy.</p> </li> <li>strict-spf           <p>Strict Shortest Path First (SPF) algorithm based on link metric. The algorithm is identical to algorithm 0 but algorithm 1 requires that all nodes along the path will honor the SPF routing decision. Local policy MUST NOT alter the forwarding decision computed by algorithm 1 at the node claiming to support algorithm 1.</p> </li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## segment-routing-capability

<b>Description</b>	This container defines SR Capability sub-TLV 2.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">tlvs tlv type identityref</a>

	<a href="#">router-capabilities capability instance-number number subtlvs subtlv type identityref segment-routing-capability</a>
<b>Tree</b>	<a href="#">segment-routing-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>flags keyword</b>	
<b>Description</b>	Segment Routing Capability Flags.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref router-capabilities capability instance-number number subtlvs subtlv type identityref segment-routing-capability flags keyword</a>
<b>Tree</b>	<a href="#">flags</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ipv4-mpls</a> When set, the router is capable of processing SR MPLS encapsulated IPv4 packets on all interfaces.</li> <li>• <a href="#">ipv6-mpls</a> When set, the router is capable of processing SR MPLS encapsulated IPv6 packets on all interfaces.</li> <li>• <a href="#">ipv6-sr</a> When set, the router is capable of processing the IPv6 Segment Routing Header on all interfaces.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>srgb-descriptors</b>	
<b>Description</b>	SRGB Descriptors included within the SR capability sub-TLV
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref router-capabilities capability instance-number number subtlvs subtlv type identityref segment-routing-capability srgb-descriptors</a>
<b>Tree</b>	<a href="#">srgb-descriptors</a>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### srgb-descriptor *range number*

**Description** Descriptor entry within the SR capability sub-TLV

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref](#) [router-capabilities capability instance-number](#) *number* [subtlvs subtlv type identityref](#) [segment-routing-capability srgb-descriptors srgb-descriptor range](#) *number*

**Tree** [srgb-descriptor](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### range *number*

**Description** Number of SRGB elements. The range value MUST be greater than 0.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref](#) [router-capabilities capability instance-number](#) *number* [subtlvs subtlv type identityref](#) [segment-routing-capability srgb-descriptors srgb-descriptor range](#) *number*

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### label *number*

**Description** The first value of the SRGB when expressed as an MPLS label.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [tlvs tlv type identityref](#) [router-capabilities capability instance-number](#) *number* [subtlvs subtlv type identityref](#) [segment-routing-capability srgb-descriptors srgb-descriptor range](#) *number* [label](#) *number*

**Tree** [label](#)

**Range** 16 to 1048575

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## undefined-tlvs

**Description** Surrounding container for a list of unknown TLVs.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [undefined-tlvs](#)

**Tree** [undefined-tlvs](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## undefined-tlv *type number*

**Description** List of TLVs that are not defined within the model, or are not recognised by the system.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [undefined-tlvs undefined-tlv type](#) *number*

**Tree** [undefined-tlv](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## type *number*

**Description** TLV Type.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level level-number](#) *number* [link-state-database lsp lsp-id](#) *string* [undefined-tlvs undefined-tlv type](#) *number*

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**length** *number*

<b>Description</b>	TLV length.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">undefined-tlvs undefined-tlv type</a> <i>number</i> <a href="#">length</a> <i>number</i>
<b>Tree</b>	<a href="#">length</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**value** *binary*

<b>Description</b>	TLV value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">undefined-tlvs undefined-tlv type</a> <i>number</i> <a href="#">value</a> <i>binary</i>
<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**version** *number*

<b>Description</b>	PDU version. This is set to 1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">version</a> <i>number</i>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**version2** *number*

<b>Description</b>	PDU version2. This is set to 1
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">link-state-database lsp lsp-id</a> <i>string</i> <a href="#">version2</a> <i>number</i>

<b>Tree</b>	<a href="#">version2</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **metric-style** *keyword*

<b>Description</b>	Specifies the metric style to be wide or narrow for the level
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">metric-style</a> <i>keyword</i>
<b>Tree</b>	<a href="#">metric-style</a>
<b>Default</b>	wide
<b>Options</b>	<ul style="list-style-type: none"> <li>• narrow This enum describes narrow metric style</li> <li>• wide This enum describes wide metric style</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **route-preference**

<b>Description</b>	Specify the route preference (admin distance) for IP routes associated with the level
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">route-preference</a>
<b>Tree</b>	<a href="#">route-preference</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **external** *number*

<b>Description</b>	Specify the route preference of external routes carried in this level. By default the route preference of external L1 routes is 160. By default the route preference of external L2 routes is 165.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">route-preference external</a> <i>number</i>
<b>Tree</b>	<a href="#">external</a>

<b>Range</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **internal** *number*

<b>Description</b>	Specify the route preference of internal routes carried in this level. By default the route preference of internal L1 routes is 15. By default the route preference of internal L2 routes is 18.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">route-preference internal</a> <i>number</i>
<b>Tree</b>	<a href="#">internal</a>
<b>Range</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **statistics**

<b>Description</b>	Per level statistics in an ISIS instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **authentication-failures** *number*

<b>Description</b>	Number of times an IS-IS control PDU associated with this level had the correct auth type but failed to pass authentication validation
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics authentication-failures</a> <i>number</i>
<b>Tree</b>	<a href="#">authentication-failures</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**authentication-type-failures** *number*

<b>Description</b>	Number of times an IS-IS control PDU associated with this level had an auth type field different from that for this system
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics authentication-type-failures</a> <i>number</i>
<b>Tree</b>	<a href="#">authentication-type-failures</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**corrupted-lsps** *number*

<b>Description</b>	Number of corrupted in-memory LSPs detected. LSPs received from the wire with a bad checksum are silently dropped and not counted. LSPs received from the wire with parse errors are counted by lsp-errors
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics corrupted-lsps</a> <i>number</i>
<b>Tree</b>	<a href="#">corrupted-lsps</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**database-overloads** *number*

<b>Description</b>	Number of times the database has become overloaded
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics database-overloads</a> <i>number</i>
<b>Tree</b>	<a href="#">database-overloads</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**exceeded-max-sequence-number** *number*

<b>Description</b>	Number of times the system has attempted to exceed the maximum sequence number
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics exceeded-max-sequence-number</a> <i>number</i>

<b>Tree</b>	<a href="#">exceeded-max-sequence-number</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **lsp-errors** *number*

<b>Description</b>	Number of received LSPs with parse errors
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics lsp-errors</a> <i>number</i>
<b>Tree</b>	<a href="#">lsp-errors</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **manual-address-drop-from-area** *number*

<b>Description</b>	number of times a manual address has been dropped from area
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics manual-address-drop-from-area</a> <i>number</i>
<b>Tree</b>	<a href="#">manual-address-drop-from-area</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **max-area-address-mismatches** *number*

<b>Description</b>	Number of times an IS-IS control PDU associated with this level was received with a max area address field different from that for this system
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics max-area-address-mismatches</a> <i>number</i>
<b>Tree</b>	<a href="#">max-area-address-mismatches</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**own-lsp-purges** *number*

<b>Description</b>	Number of times a zero-aged copy of the system's own LSP is received from some other node
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics own-lsp-purges</a> <i>number</i>
<b>Tree</b>	<a href="#">own-lsp-purges</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**sequence-number-skips** *number*

<b>Description</b>	Number of times a sequence number skip has occurred
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics sequence-number-skips</a> <i>number</i>
<b>Tree</b>	<a href="#">sequence-number-skips</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**spf-runs** *number*

<b>Description</b>	number of times a full SPF run has been performed on the level LSDB since the IS-IS manager restarted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics spf-runs</a> <i>number</i>
<b>Tree</b>	<a href="#">spf-runs</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**system-id-length-mismatches** *number*

<b>Description</b>	Number of times an IS-IS control PDU associated with this level was received with a system ID field length different from that for this system
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics system-id-length-mismatches</a> <i>number</i>

<b>Tree</b>	<a href="#">system-id-length-mismatches</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **total-lsps** *number*

<b>Description</b>	Number of LSPs in the database at the system level
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">statistics total-lsps</a> <i>number</i>
<b>Tree</b>	<a href="#">total-lsps</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **trace-options**

<b>Description</b>	Level debug trace options for IS-IS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **trace** *keyword*

<b>Description</b>	List of tracing options
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level level-number</a> <i>number</i> <a href="#">trace-options</a> <a href="#">trace</a> <i>keyword</i>
<b>Tree</b>	<a href="#">trace</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">adjacencies</a></li> <li>• <a href="#">lsdb</a></li> <li>• <a href="#">routes</a></li> <li>• <a href="#">spf</a></li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**level-capability** *keyword*

<b>Description</b>	The level-capability of the intermediate system (router)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-capability</a> <i>keyword</i>
<b>Tree</b>	<a href="#">level-capability</a>
<b>Default</b>	L2
<b>Options</b>	<ul style="list-style-type: none"> <li>• L1 This enum describes ISIS level 1</li> <li>• L2 This enum describes ISIS level 2</li> <li>• L1L2 This enum describes ISIS level 1-2</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**level-database** [level-number](#) *number* [lsp-id](#) *string*

<b>Description</b>	Link State database
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i>
<b>Tree</b>	<a href="#">level-database</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**level-number** *number*

<b>Description</b>	Specifies the IS-IS protocol level to which these attributes are applied.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i>
<b>Range</b>	1 to 2
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3,

7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### Isp-id *string*

<b>Description</b>	The value specifies the LSP Id and is given in the format as 6 octets of adjacency system-id followed by 1 octet Lan-ID and 1 octet LSP Number.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">isp-id</a> <i>string</i>
<b>String Length</b>	20
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### attributes

<b>Description</b>	Enter the attributes context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">isp-id</a> <i>string</i> <a href="#">attributes</a>
<b>Tree</b>	<a href="#">attributes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### attached *boolean*

<b>Description</b>	Set to true in the L1 LSP when the IS has a Level 2 adjacency.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">isp-id</a> <i>string</i> <a href="#">attributes attached</a> <i>boolean</i>
<b>Tree</b>	<a href="#">attached</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**level1-is-type** *boolean*

<b>Description</b>	Set to true when the router participates in L1
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">attributes level1-is-type</a> <i>boolean</i>
<b>Tree</b>	<a href="#">level1-is-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**level2-is-type** *boolean*

<b>Description</b>	Set to true when the router participates in L2
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">attributes level2-is-type</a> <i>boolean</i>
<b>Tree</b>	<a href="#">level2-is-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**overload** *boolean*

<b>Description</b>	Set to true when the IS is in overload state and should be avoided for transit.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">attributes overload</a> <i>boolean</i>
<b>Tree</b>	<a href="#">overload</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**checksum** *string*

<b>Description</b>	The value indicates the checksum of contents of LSP from the SourceID field in the LSP till the end. The checksum is computed using the Fletcher checksum algorithm.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">checksum</a> <i>string</i>
<b>Tree</b>	<a href="#">checksum</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

## defined-tlvs

<b>Description</b>	List of defined TLV-s contained in LSP.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a>
<b>Tree</b>	<a href="#">defined-tlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

## application-specific-srlg [neighbor](#) *string*

<b>Description</b>	List of application-specific SRLGs. TLV = 238.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">application-specific-srlg</a> <a href="#">neighbor</a> <i>string</i>
<b>Tree</b>	<a href="#">application-specific-srlg</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## neighbor *string*

<b>Description</b>	A neighbor, identified by its System ID and one octet to indicate the pseudonode number
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">application-specific-srlg</a> <a href="#">neighbor</a> <i>string</i>
<b>String Length</b>	17
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### legacy *boolean*

**Description** When the legacy flag is set, all of the applications specified in the bit mask MUST use the legacy advertisements for the corresponding link found in TLV 138 or TLV 139.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs application-specific-srlg neighbor](#) *string* **legacy** *boolean*

**Tree** [legacy](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### loop-free-alternate *boolean*

**Description** F bit is set in the Standard Application Identifier Bit Mask

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs application-specific-srlg neighbor](#) *string* **loop-free-alternate** *boolean*

**Tree** [loop-free-alternate](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### rsvp-te *boolean*

**Description** R bit is set in the Standard Application Identifier Bit Mask

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs application-specific-srlg neighbor](#) *string* **rsvp-te** *boolean*

**Tree** [rsvp-te](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### sr-policy *boolean*

**Description** S bit is set in the Standard Application Identifier Bit Mask

<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs application-specific-srlg neighbor <i>string</i> sr-policy <i>boolean</i>
<b>Tree</b>	sr-policy
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### sub-tlvs

<b>Description</b>	Enter the sub-tlvs context
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs application-specific-srlg neighbor <i>string</i> sub-tlvs
<b>Tree</b>	sub-tlvs
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv4-interface-address *string*

<b>Description</b>	The IPv4 address of the interface to the neighbor
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs application-specific-srlg neighbor <i>string</i> sub-tlvs ipv4-interface-address <i>string</i>
<b>Tree</b>	ipv4-interface-address
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv4-neighbor-address *string*

<b>Description</b>	The IPv4 address of the neighbor
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs application-specific-srlg neighbor <i>string</i> sub-tlvs ipv4-neighbor-address <i>string</i>
<b>Tree</b>	ipv4-neighbor-address
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv6-interface-address** *string*

<b>Description</b>	The IPv6 address of the interface to the neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs application-specific-srlg neighbor</a> <i>string</i> <a href="#">sub-tlvs ipv6-interface-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv6-interface-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv6-neighbor-address** *string*

<b>Description</b>	The IPv6 address of the neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs application-specific-srlg neighbor</a> <i>string</i> <a href="#">sub-tlvs ipv6-neighbor-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv6-neighbor-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**link-local-identifier** *number*

<b>Description</b>	A local identifier of the link
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs application-specific-srlg neighbor</a> <i>string</i> <a href="#">sub-tlvs link-local-identifier</a> <i>number</i>
<b>Tree</b>	<a href="#">link-local-identifier</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**link-remote-identifier** *number*

<b>Description</b>	A remote identifier of the link
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs application-specific-srlg neighbor</a> <i>string</i> <a href="#">sub-tlvs link-remote-identifier</a> <i>number</i>
<b>Tree</b>	<a href="#">link-remote-identifier</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**shared-risk-link-group** *number*

<b>Description</b>	List of SRLGs that apply to the adjacency with this neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs application-specific-srlg neighbor</a> <i>string</i> <a href="#">sub-tlvs shared-risk-link-group</a> <i>number</i>
<b>Tree</b>	<a href="#">shared-risk-link-group</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**area-addresses** *string*

<b>Description</b>	Each item represents an area address advertised by the LSP.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs area-addresses</a> <i>string</i>
<b>Tree</b>	<a href="#">area-addresses</a>
<b>String Length</b>	2 to 38
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**authentication**

<b>Description</b>	Authentication TLV. TLV type = 10
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**auth-data** *string*

<b>Description</b>	The authentication data
--------------------	-------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs authentication auth-data</a> <i>string</i>
<b>Tree</b>	<a href="#">auth-data</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### **auth-type** *keyword*

<b>Description</b>	Enter the auth-type context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs authentication auth-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">auth-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">cleartext</a></li> <li>• <a href="#">crypto</a></li> <li>• <a href="#">hmac-md5</a></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### **extended-ipv4-reachability** [ipv4-prefix](#) *string*

<b>Description</b>	TLV specifying extended IPv4 Reachability information in the LSP. TLV type = 135
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i>
<b>Tree</b>	<a href="#">extended-ipv4-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**ipv4-prefix** *string*

<b>Description</b>	An IPv4 prefix that is reachable to the router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**down** *boolean*

<b>Description</b>	Reads true when the IPv4 prefix was leaked down from Level2 to Level1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">down</a> <i>boolean</i>
<b>Tree</b>	<a href="#">down</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**metric** *number*

<b>Description</b>	The default metric to reach the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

## sub-tlvs

<b>Description</b>	SubTLVs of TLV 135, TLV 235, TLV 236 and TLV 237
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">extended-ipv4-reachability</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs</a>
<b>Tree</b>	<a href="#">sub-tlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

## prefix-attribute-flags

<b>Description</b>	This sub-TLV supports the advertisement of additional flags associated with a given prefix advertisement.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">extended-ipv4-reachability</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">prefix-attribute-flags</a>
<b>Tree</b>	<a href="#">prefix-attribute-flags</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## external-prefix *boolean*

<b>Description</b>	Set if the prefix has been redistributed from another protocol (or another IS-IS instance).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">extended-ipv4-reachability</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">prefix-attribute-flags</a> <a href="#">external-prefix</a> <i>boolean</i>
<b>Tree</b>	<a href="#">external-prefix</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## node-identifier *boolean*

<b>Description</b>	Set when the prefix identifies the advertising router; i.e. it is a host prefix advertising a globally reachable address typically associated with a loopback address.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags node-identifier</a> <i>boolean</i>
<b>Tree</b>	<a href="#">node-identifier</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**re-advertised** *boolean*

<b>Description</b>	Set when the prefix has been leaked from one level to another (upwards or downwards).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags re-advertised</a> <i>boolean</i>
<b>Tree</b>	<a href="#">re-advertised</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**route-tag-32bit** *number*

<b>Description</b>	List of 32-bit administrative tag values associated with the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs route-tag-32bit</a> <i>number</i>
<b>Tree</b>	<a href="#">route-tag-32bit</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**route-tag-64bit** *number*

<b>Description</b>	List of 64-bit administrative tag values associated with the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs route-tag-64bit</a> <i>number</i>

<b>Tree</b>	<a href="#">route-tag-64bit</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

## segment-routing-prefix-sid

<b>Description</b>	Carries a segment routing prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a>
<b>Tree</b>	<a href="#">segment-routing-prefix-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## algorithm *keyword*

<b>Description</b>	Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <i>algorithm keyword</i>
<b>Tree</b>	<a href="#">algorithm</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• spf</li> <li>• strict-spf</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## explicit-null *boolean*

<b>Description</b>	If set any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID that has an Explicit NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <i>explicit-null boolean</i>

<b>Tree</b>	<a href="#">explicit-null</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**local** *boolean*

<b>Description</b>	If set, then the value/index carried by the Prefix-SID has local significance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <a href="#">local</a> <i>boolean</i>
<b>Tree</b>	<a href="#">local</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**node-sid** *boolean*

<b>Description</b>	If set the prefix SID refers to the router identified by the prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <a href="#">node-sid</a> <i>boolean</i>
<b>Tree</b>	<a href="#">node-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**penultimate-hop-popping** *boolean*

<b>Description</b>	If set the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <a href="#">penultimate-hop-popping</a> <i>boolean</i>
<b>Tree</b>	<a href="#">penultimate-hop-popping</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**re-advertised** *boolean*

<b>Description</b>	If set the prefix to which this Prefix-SID is attached has been propagated by the router from either another level or from another protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid re-advertised</a> <i>boolean</i>
<b>Tree</b>	<a href="#">re-advertised</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sr-index-or-label** *number*

<b>Description</b>	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid sr-index-or-label</a> <i>number</i>
<b>Tree</b>	<a href="#">sr-index-or-label</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**value** *boolean*

<b>Description</b>	If set then the Prefix-SID carries a value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid value</a> <i>boolean</i>
<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**extended-is-reachability** [neighbor](#) *string*

<b>Description</b>	Each TLV encodes the identity of an adjacent IS neighbor. TLV type = 22
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i>
<b>Tree</b>	<a href="#">extended-is-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**neighbor** *string*

<b>Description</b>	An adjacent IS neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i>
<b>String Length</b>	17
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**default-metric** *number*

<b>Description</b>	The default metric to reach this adjacent neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">default-metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**sub-tlvs**

<b>Description</b>	SubTLVs of TLV 22 and TLV 222
--------------------	-------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs</a>
<b>Tree</b>	<a href="#">sub-tlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### **admin-group** *number*

<b>Description</b>	A bit mask representing the administrative groups to which the interface belongs. Sub-TLV = 3.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs admin-group</a> <i>number</i>
<b>Tree</b>	<a href="#">admin-group</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **application-specific-link-attributes**

<b>Description</b>	Application Specific Link Attributes. Sub-TLV = 16.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes</a>
<b>Tree</b>	<a href="#">application-specific-link-attributes</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **legacy** *boolean*

<b>Description</b>	When the legacy flag is set, all of the applications specified in the bit mask MUST use the legacy advertisements for the corresponding link found in TLVs 22, 23, 25, 141, 222, and 223, in TLV 138, or in TLV 139 as appropriate.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes legacy</a> <i>boolean</i>

<b>Tree</b>	<a href="#">legacy</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **loop-free-alternate** *boolean*

<b>Description</b>	F bit is set in the Standard Application Identifier Bit Mask
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes loop-free-alternate</a> <i>boolean</i>
<b>Tree</b>	<a href="#">loop-free-alternate</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **rsvp-te** *boolean*

<b>Description</b>	R bit is set in the Standard Application Identifier Bit Mask
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes rsvp-te</a> <i>boolean</i>
<b>Tree</b>	<a href="#">rsvp-te</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **sr-policy** *boolean*

<b>Description</b>	S bit is set in the Standard Application Identifier Bit Mask
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sr-policy</a> <i>boolean</i>
<b>Tree</b>	<a href="#">sr-policy</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sub-sub-tlvs**

<b>Description</b>	Enter the sub-sub-tlvs context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs</a>
<b>Tree</b>	<a href="#">sub-sub-tlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**admin-group** *number*

<b>Description</b>	A bit mask representing the administrative groups to which the interface belongs. Sub-Sub-TLV = 3.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs admin-group</a> <i>number</i>
<b>Tree</b>	<a href="#">admin-group</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**maximum-link-bandwidth** *number*

<b>Description</b>	The (LAG aware) bandwidth of the interface to the neighbor. Sub-Sub-TLV = 9.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs maximum-link-bandwidth</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-link-bandwidth</a>
<b>Units</b>	bytes-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**min-max-unidirectional-link-delay**

<b>Description</b>	The minimum and maximum delay between two directly connected IS-IS neighbors.
--------------------	---

<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay
<b>Tree</b>	min-max-unidirectional-link-delay
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **anomolous** *boolean*

<b>Description</b>	If the A bit is cleared, the values represent steady-state link performance.
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay anomolous <i>boolean</i>
<b>Tree</b>	anomolous
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **max-delay** *number*

<b>Description</b>	Maximum forward-path delay (from the advertising router to the remote neighbor)
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay max-delay <i>number</i>
<b>Tree</b>	max-delay
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **min-delay** *number*

<b>Description</b>	Minimum forward-path delay (from the advertising router to the remote neighbor)
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay min-delay <i>number</i>

<b>Tree</b>	<a href="#">min-delay</a>
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### te-default-metric *number*

<b>Description</b>	An administratively assigned metric used as an alternative to the normal SPF metric based (typically) on link bandwidth.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs te-default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">te-default-metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv4-interface-address *string*

<b>Description</b>	The IPv4 address of the interface to the neighbor. Sub-TLV = 6.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs ipv4-interface-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-interface-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### ipv4-neighbor-address *string*

<b>Description</b>	The IPv4 address of the neighbor. Sub-TLV = 8.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs ipv4-neighbor-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-neighbor-address</a>
<b>Configurable</b>	False

**Platforms** Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### ipv6-interface-address *string*

**Description** The IPv6 address of the interface to the neighbor. Sub-TLV = 12.

**Context** [network-instance name \*string\*](#) [protocols isis instance name \*string\*](#) [level-database level-number \*number\*](#) [lsp-id \*string\*](#) [defined-tlvs extended-is-reachability neighbor \*string\*](#) [sub-tlvs ipv6-interface-address \*string\*](#)

**Tree** [ipv6-interface-address](#)

**Configurable** False

**Platforms** Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### ipv6-neighbor-address *string*

**Description** The IPv4 address of the neighbor. Sub-TLV = 13.

**Context** [network-instance name \*string\*](#) [protocols isis instance name \*string\*](#) [level-database level-number \*number\*](#) [lsp-id \*string\*](#) [defined-tlvs extended-is-reachability neighbor \*string\*](#) [sub-tlvs ipv6-neighbor-address \*string\*](#)

**Tree** [ipv6-neighbor-address](#)

**Configurable** False

**Platforms** Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### link-msd

**Description** The maximum segment depth of the link to the neighbor. Sub-TLV = 15.

**Context** [network-instance name \*string\*](#) [protocols isis instance name \*string\*](#) [level-database level-number \*number\*](#) [lsp-id \*string\*](#) [defined-tlvs extended-is-reachability neighbor \*string\*](#) [sub-tlvs link-msd](#)

**Tree** [link-msd](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**msd-info** *msd-type (keyword | number) msd-value number*

<b>Description</b>	List of MSD entries
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs link-msd msd-info msd-type (keyword   number) msd-value</a> <i>number</i>
<b>Tree</b>	<a href="#">msd-info</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**msd-type** *(keyword | number)*

<b>Description</b>	MSD type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs link-msd msd-info msd-type (keyword   number) msd-value</a> <i>number</i>
<b>Range</b>	2 to 254
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">base-mpls-imposition-msd</a></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**msd-value** *number*

<b>Description</b>	A number in the range of 0-255 representing the maximum SID depth; for all MSD-Types, 0 represents the lack of ability to support a SID stack of any depth
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs link-msd msd-info msd-type (keyword   number) msd-value</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**maximum-link-bandwidth** *number*

<b>Description</b>	The (LAG aware) bandwidth of the interface to the neighbor. Sub-TLV = 9.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs maximum-link-bandwidth</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-link-bandwidth</a>
<b>Units</b>	bytes-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### min-max-unidirectional-link-delay

<b>Description</b>	The minimum and maximum delay between two directly connected IS-IS neighbors. Sub-TLV = 34.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs min-max-unidirectional-link-delay</a>
<b>Tree</b>	<a href="#">min-max-unidirectional-link-delay</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### anomalous *boolean*

<b>Description</b>	If the A bit is cleared, the values represent steady-state link performance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs min-max-unidirectional-link-delay anomalous</a> <i>boolean</i>
<b>Tree</b>	<a href="#">anomalous</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### max-delay *number*

<b>Description</b>	Maximum forward-path delay (from the advertising router to the remote neighbor)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs min-max-unidirectional-link-delay max-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">max-delay</a>

<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **min-delay** *number*

<b>Description</b>	Minimum forward-path delay (from the advertising router to the remote neighbor)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs min-max-unidirectional-link-delay min-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">min-delay</a>
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **segment-routing-adjacency-sid** [sr-index-or-label](#) *number*

<b>Description</b>	List of Adj-SID sub-TLVs associated with the neighbor. Sub-TLV = 31.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i>
<b>Tree</b>	<a href="#">segment-routing-adjacency-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **sr-index-or-label** *number*

<b>Description</b>	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**adj-set** *boolean*

<b>Description</b>	When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i> <b>adj-set</b> <i>boolean</i>
<b>Tree</b>	<a href="#">adj-set</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**backup** *boolean*

<b>Description</b>	If set, the Adj-SID is eligible for protection
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i> <b>backup</b> <i>boolean</i>
<b>Tree</b>	<a href="#">backup</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv6-family** *boolean*

<b>Description</b>	If set, then the Adj-SID is used for forwarding IPv6 traffic to the neighbor; else the Adj-SID is used for forwarding IPv4 traffic.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i> <b>ipv6-family</b> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv6-family</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**local** *boolean*

<b>Description</b>	If set, then the value/index carried by the Adj-SID has local significance.
--------------------	---

<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-adjacency-sid sr-index-or-label <i>number</i> local <i>boolean</i>
<b>Tree</b>	local
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**persistent** *boolean*

<b>Description</b>	When set, the P-Flag indicates that the Adj-SID is persistently allocated, i.e., the Adj-SID value remains consistent across router restart and/or interface flap
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-adjacency-sid sr-index-or-label <i>number</i> persistent <i>boolean</i>
<b>Tree</b>	persistent
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**value** *boolean*

<b>Description</b>	If set then the Adj-SID carries a value
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-adjacency-sid sr-index-or-label <i>number</i> value <i>boolean</i>
<b>Tree</b>	value
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**weight** *number*

<b>Description</b>	The value represents the weight of the Adj-SID for the purpose of load balancing
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-adjacency-sid sr-index-or-label <i>number</i> weight <i>number</i>

<b>Tree</b>	<a href="#">weight</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **segment-routing-lan-adjacency-sid** [sr-index-or-label](#) *number*

<b>Description</b>	List of LAN Adj-SID sub-TLVs. Each describes the set of Adj-SIDs the router assigned to each of its LAN neighbors. Sub-TLV = 32.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i>
<b>Tree</b>	<a href="#">segment-routing-lan-adjacency-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **sr-index-or-label** *number*

<b>Description</b>	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **adj-set** *boolean*

<b>Description</b>	When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">adj-set</a> <i>boolean</i>
<b>Tree</b>	<a href="#">adj-set</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**backup** *boolean*

<b>Description</b>	If set, the Adj-SID is eligible for protection
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <b>backup</b> <i>boolean</i>
<b>Tree</b>	<a href="#">backup</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv6-family** *boolean*

<b>Description</b>	If set, then the Adj-SID is used for forwarding IPv6 traffic to the neighbor; else the Adj-SID is used for forwarding IPv4 traffic.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <b>ipv6-family</b> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv6-family</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**local** *boolean*

<b>Description</b>	If set, then the value/index carried by the Adj-SID has local significance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <b>local</b> <i>boolean</i>
<b>Tree</b>	<a href="#">local</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**neighbor-system-id** *string*

<b>Description</b>	IS-IS system-ID of the LAN neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-</a>

	<a href="#">reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">neighbor-system-id</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor-system-id</a>
<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**persistent** *boolean*

<b>Description</b>	When set, the P-Flag indicates that the Adj-SID is persistently allocated, i.e., the Adj-SID value remains consistent across router restart and/or interface flap
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">persistent</a> <i>boolean</i>
<b>Tree</b>	<a href="#">persistent</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**value** *boolean*

<b>Description</b>	If set then the Adj-SID carries a value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">value</a> <i>boolean</i>
<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**weight** *number*

<b>Description</b>	The value represents the weight of the Adj-SID for the purpose of load balancing
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">weight</a> <i>number</i>
<b>Tree</b>	<a href="#">weight</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### te-default-metric *number*

<b>Description</b>	An administratively assigned metric used as an alternative to the normal SPF metric based (typically) on link bandwidth. Sub-TLV = 18.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs extended-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs te-default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">te-default-metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### hostname *string*

<b>Description</b>	Host name that advertised this LSP.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs hostname</a> <i>string</i>
<b>Tree</b>	<a href="#">hostname</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### ipv4-external-reachability [ipv4-prefix](#) *string*

<b>Description</b>	TLV specifying external IPv4 Reachability information in the LSP. External reachability is typically routing information learned from another protocol. TLV type = 130
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-external-reachability</a> <a href="#">ipv4-prefix</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-external-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3,

7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### ipv4-prefix *string*

<b>Description</b>	An IPv4 prefix that is reachable to the router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-external-reachability ipv4-prefix</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### default-metric *number*

<b>Description</b>	The default metric to reach the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-external-reachability ipv4-prefix</a> <i>string</i> <a href="#">default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">default-metric</a>
<b>Range</b>	0 to 63
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### default-metric-type *keyword*

<b>Description</b>	The default metric type: internal or external.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-external-reachability ipv4-prefix</a> <i>string</i> <a href="#">default-metric-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">default-metric-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>internal This enum describes internal route type</li> <li>external This enum describes external route type</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**down** *boolean*

<b>Description</b>	Reads true when the IPv4 prefix was leaked down from Level2 to Level1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-external-reachability ipv4-prefix</a> <i>string</i> <b>down</b> <i>boolean</i>
<b>Tree</b>	<a href="#">down</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**ipv4-interface-addresses** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Each item represents an IPv4 address configured on an interface in this IS-IS instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-interface-addresses</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">ipv4-interface-addresses</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**ipv4-internal-reachability** *ipv4-prefix string*

<b>Description</b>	TLV specifying internal IPv4 Reachability information in the LSP. TLV type = 128
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-internal-reachability ipv4-prefix</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-internal-reachability</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### ipv4-prefix *string*

<b>Description</b>	An IPv4 prefix that is reachable to the router.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs ipv4-internal-reachability ipv4-prefix string</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### default-metric *number*

<b>Description</b>	The default metric to reach the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs ipv4-internal-reachability ipv4-prefix string default-metric number</a>
<b>Tree</b>	<a href="#">default-metric</a>
<b>Range</b>	0 to 63
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### default-metric-type *keyword*

<b>Description</b>	The default metric type: internal or external.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs ipv4-internal-reachability ipv4-prefix string default-metric-type keyword</a>
<b>Tree</b>	<a href="#">default-metric-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>internal</li> </ul>

This enum describes internal route type

- external

This enum describes external route type

**Configurable**

False

**Platforms**

Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### down *boolean*

**Description**

Reads true when the IPv4 prefix was leaked down from Level2 to Level1.

**Context**

[network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs ipv4-internal-reachability ipv4-prefix](#) *string* [down](#) *boolean*

**Tree**

[down](#)

**Configurable**

False

**Platforms**

Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### ipv4-srlg [neighbor](#) *string*

**Description**

List of SRLGs advertised by the router. TLV = 138.

**Context**

[network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs ipv4-srlg neighbor](#) *string*

**Tree**

[ipv4-srlg](#)

**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### neighbor *string*

**Description**

A neighbor, identified by its System ID and one octet to indicate the pseudonode number

**Context**

[network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs ipv4-srlg neighbor](#) *string*

<b>String Length</b>	17
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ipv4-interface-address** *string*

<b>Description</b>	The IPv4 address of the interface to the neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-srlg neighbor</a> <i>string</i> <b>ipv4-interface-address</b> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-interface-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ipv4-neighbor-address** *string*

<b>Description</b>	The IPv4 address of the neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-srlg neighbor</a> <i>string</i> <b>ipv4-neighbor-address</b> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-neighbor-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **numbered** *boolean*

<b>Description</b>	When set, the interface to the neighbor is numbered. When unset it is unnumbered.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-srlg neighbor</a> <i>string</i> <b>numbered</b> <i>boolean</i>
<b>Tree</b>	<a href="#">numbered</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **shared-risk-link-group** *number*

<b>Description</b>	List of SRLGs that apply to the adjacency with this neighbor
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv4-srlg neighbor</a> <i>string</i> <a href="#">shared-risk-link-group</a> <i>number</i>
<b>Tree</b>	<a href="#">shared-risk-link-group</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv6-interface-addresses ([ipv4-address](#) | [ipv6-address](#))

<b>Description</b>	Each item represents an IPv6 address configured on an interface in this IS-IS instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-interface-addresses</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> )
<b>Tree</b>	<a href="#">ipv6-interface-addresses</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### ipv6-reachability [ipv6-prefix](#) *string*

<b>Description</b>	TLV specifying IPv6 Reachability information in the LSP. TLV type = 236
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv6-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### ipv6-prefix *string*

<b>Description</b>	An IPv6 prefix that is reachable to the router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**down** *boolean*

<b>Description</b>	Reads true when the IPv6 prefix was leaked down from Level2 to Level1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <b>down</b> <i>boolean</i>
<b>Tree</b>	<a href="#">down</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**external** *boolean*

<b>Description</b>	Reads true when the IPv6 prefix reachability is external (learned from another protocol).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <b>external</b> <i>boolean</i>
<b>Tree</b>	<a href="#">external</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**metric** *number*

<b>Description</b>	The metric to reach this IPv6 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <b>metric</b> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	0 to 16777215

<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### sub-tlvs

<b>Description</b>	SubTLVs of TLV 135, TLV 235, TLV 236 and TLV 237
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">ipv6-reachability</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs</a>
<b>Tree</b>	<a href="#">sub-tlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### prefix-attribute-flags

<b>Description</b>	This sub-TLV supports the advertisement of additional flags associated with a given prefix advertisement.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">ipv6-reachability</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">prefix-attribute-flags</a>
<b>Tree</b>	<a href="#">prefix-attribute-flags</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### external-prefix *boolean*

<b>Description</b>	Set if the prefix has been redistributed from another protocol (or another IS-IS instance).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">ipv6-reachability</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">prefix-attribute-flags</a> <a href="#">external-prefix</a> <i>boolean</i>
<b>Tree</b>	<a href="#">external-prefix</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**node-identifier** *boolean*

<b>Description</b>	Set when the prefix identifies the advertising router; i.e. it is a host prefix advertising a globally reachable address typically associated with a loopback address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags node-identifier</a> <i>boolean</i>
<b>Tree</b>	<a href="#">node-identifier</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**re-advertised** *boolean*

<b>Description</b>	Set when the prefix has been leaked from one level to another (upwards or downwards).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags re-advertised</a> <i>boolean</i>
<b>Tree</b>	<a href="#">re-advertised</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**route-tag-32bit** *number*

<b>Description</b>	List of 32-bit administrative tag values associated with the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs route-tag-32bit</a> <i>number</i>
<b>Tree</b>	<a href="#">route-tag-32bit</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**route-tag-64bit** *number*

<b>Description</b>	List of 64-bit administrative tag values associated with the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs route-tag-64bit</a> <i>number</i>
<b>Tree</b>	<a href="#">route-tag-64bit</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**segment-routing-prefix-sid**

<b>Description</b>	Carries a segment routing prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a>
<b>Tree</b>	<a href="#">segment-routing-prefix-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**algorithm** *keyword*

<b>Description</b>	Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid algorithm</a> <i>keyword</i>
<b>Tree</b>	<a href="#">algorithm</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• spf</li> <li>• strict-spf</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**explicit-null** *boolean*

<b>Description</b>	If set any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID that has an Explicit NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid explicit-null</a> <i>boolean</i>
<b>Tree</b>	<a href="#">explicit-null</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**local** *boolean*

<b>Description</b>	If set, then the value/index carried by the Prefix-SID has local significance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid local</a> <i>boolean</i>
<b>Tree</b>	<a href="#">local</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**node-sid** *boolean*

<b>Description</b>	If set the prefix SID refers to the router identified by the prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid node-sid</a> <i>boolean</i>
<b>Tree</b>	<a href="#">node-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**penultimate-hop-popping** *boolean*

<b>Description</b>	If set the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid penultimate-hop-popping</a> <i>boolean</i>

<b>Tree</b>	<a href="#">penultimate-hop-popping</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**re-advertised** *boolean*

<b>Description</b>	If set the prefix to which this Prefix-SID is attached has been propagated by the router from either another level or from another protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid re-advertised</a> <i>boolean</i>
<b>Tree</b>	<a href="#">re-advertised</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sr-index-or-label** *number*

<b>Description</b>	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid sr-index-or-label</a> <i>number</i>
<b>Tree</b>	<a href="#">sr-index-or-label</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**value** *boolean*

<b>Description</b>	If set then the Prefix-SID carries a value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid value</a> <i>boolean</i>
<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv6-srlg neighbor string**

<b>Description</b>	List of IPv6 SRLGs advertised by the router. TLV = 139.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level-database level-number number</a> <a href="#">lsp-id string</a> <a href="#">defined-tlvs ipv6-srlg neighbor string</a>
<b>Tree</b>	<a href="#">ipv6-srlg</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**neighbor string**

<b>Description</b>	A neighbor, identified by its System ID and one octet to indicate the pseudonode number
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level-database level-number number</a> <a href="#">lsp-id string</a> <a href="#">defined-tlvs ipv6-srlg neighbor string</a>
<b>String Length</b>	17
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv6-interface-address string**

<b>Description</b>	The IPv6 address of the interface to the neighbor
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level-database level-number number</a> <a href="#">lsp-id string</a> <a href="#">defined-tlvs ipv6-srlg neighbor string</a> <a href="#">ipv6-interface-address string</a>
<b>Tree</b>	<a href="#">ipv6-interface-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv6-neighbor-address string**

<b>Description</b>	The IPv6 address of the neighbor
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">level-database level-number number</a> <a href="#">lsp-id string</a> <a href="#">defined-tlvs ipv6-srlg neighbor string</a> <a href="#">ipv6-neighbor-address string</a>
<b>Tree</b>	<a href="#">ipv6-neighbor-address</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### neighbor-address-included *boolean*

**Description** When set, the IPv6 neighbor address is included.

**Context** [network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs ipv6-srlg neighbor string neighbor-address-included boolean](#)

**Tree** [neighbor-address-included](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### shared-risk-link-group *number*

**Description** List of SRLGs that apply to the adjacency with this neighbor

**Context** [network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs ipv6-srlg neighbor string shared-risk-link-group number](#)

**Tree** [shared-risk-link-group](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv6-te-router-id *string*

**Description** A single stable address that can always be referenced in a path that will be reachable from multiple hops away. TLV = 140.

**Context** [network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs ipv6-te-router-id string](#)

**Tree** [ipv6-te-router-id](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### is-reachability [neighbor string](#)

**Description** Each TLV encodes the identity of an adjacent IS neighbor. TLV type = 2

**Context** [network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs is-reachability neighbor string](#)

<b>Tree</b>	<a href="#">is-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### **neighbor *string***

<b>Description</b>	An adjacent IS neighbor
<b>Context</b>	<a href="#">network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs is-reachability neighbor <i>string</i></a>
<b>String Length</b>	17
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### **default-metric *number***

<b>Description</b>	The default metric to reach this adjacent neighbor.
<b>Context</b>	<a href="#">network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs is-reachability neighbor <i>string</i> default-metric <i>number</i></a>
<b>Tree</b>	<a href="#">default-metric</a>
<b>Range</b>	0 to 63
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### **default-metric-type *keyword***

<b>Description</b>	The default metric type: internal or external.
<b>Context</b>	<a href="#">network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs is-reachability neighbor <i>string</i> default-metric-type <i>keyword</i></a>

<b>Tree</b>	<a href="#">default-metric-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• internal</li> <li>• external</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### mt-ipv4-reachability [ipv4-prefix string](#)

<b>Description</b>	TLV specifying multi-topology IPv4 reachability information in the LSP. TLV type = 235
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs mt-ipv4-reachability ipv4-prefix string</a>
<b>Tree</b>	<a href="#">mt-ipv4-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### ipv4-prefix [string](#)

<b>Description</b>	An IPv4 prefix that is reachable to the router.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs mt-ipv4-reachability ipv4-prefix string</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### down [boolean](#)

<b>Description</b>	Reads true when the IPv4 prefix was leaked down from Level2 to Level1.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">down</a> <i>boolean</i>
<b>Tree</b>	<a href="#">down</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**metric number**

<b>Description</b>	The default metric to reach the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**mt-id number**

<b>Description</b>	A multi-topology ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">mt-id</a> <i>number</i>
<b>Tree</b>	<a href="#">mt-id</a>
<b>Range</b>	0 to 4095
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**sub-tlvs**

<b>Description</b>	SubTLVs of TLV 135, TLV 235, TLV 236 and TLV 237
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs</a>
<b>Tree</b>	<a href="#">sub-tlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**prefix-attribute-flags**

<b>Description</b>	This sub-TLV supports the advertisement of additional flags associated with a given prefix advertisement.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags</a>
<b>Tree</b>	<a href="#">prefix-attribute-flags</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**external-prefix** *boolean*

<b>Description</b>	Set if the prefix has been redistributed from another protocol (or another IS-IS instance).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags external-prefix</a> <i>boolean</i>
<b>Tree</b>	<a href="#">external-prefix</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**node-identifier** *boolean*

<b>Description</b>	Set when the prefix identifies the advertising router; i.e. it is a host prefix advertising a globally reachable address typically associated with a loopback address.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags node-identifier</a> <i>boolean</i>
<b>Tree</b>	<a href="#">node-identifier</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**re-advertised** *boolean*

<b>Description</b>	Set when the prefix has been leaked from one level to another (upwards or downwards).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags re-advertised</a> <i>boolean</i>
<b>Tree</b>	<a href="#">re-advertised</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**route-tag-32bit** *number*

<b>Description</b>	List of 32-bit administrative tag values associated with the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs route-tag-32bit</a> <i>number</i>
<b>Tree</b>	<a href="#">route-tag-32bit</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**route-tag-64bit** *number*

<b>Description</b>	List of 64-bit administrative tag values associated with the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs route-tag-64bit</a> <i>number</i>
<b>Tree</b>	<a href="#">route-tag-64bit</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### segment-routing-prefix-sid

<b>Description</b>	Carries a segment routing prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a>
<b>Tree</b>	<a href="#">segment-routing-prefix-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### algorithm *keyword*

<b>Description</b>	Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <a href="#">algorithm</a> <i>keyword</i>
<b>Tree</b>	<a href="#">algorithm</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• spf</li> <li>• strict-spf</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### explicit-null *boolean*

<b>Description</b>	If set any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID that has an Explicit NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv4-reachability ipv4-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <a href="#">explicit-null</a> <i>boolean</i>
<b>Tree</b>	<a href="#">explicit-null</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **local** *boolean*

**Description** If set, then the value/index carried by the Prefix-SID has local significance.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv4-reachability ipv4-prefix](#) *string* [sub-tlvs segment-routing-prefix-sid](#) [local](#) *boolean*

**Tree** [local](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **node-sid** *boolean*

**Description** If set the prefix SID refers to the router identified by the prefix.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv4-reachability ipv4-prefix](#) *string* [sub-tlvs segment-routing-prefix-sid](#) [node-sid](#) *boolean*

**Tree** [node-sid](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **penultimate-hop-popping** *boolean*

**Description** If set the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv4-reachability ipv4-prefix](#) *string* [sub-tlvs segment-routing-prefix-sid](#) [penultimate-hop-popping](#) *boolean*

**Tree** [penultimate-hop-popping](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **re-advertised** *boolean*

**Description** If set the prefix to which this Prefix-SID is attached has been propagated by the router from either another level or from another protocol.

<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid re-advertised <i>boolean</i>
<b>Tree</b>	re-advertised
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### sr-index-or-label *number*

<b>Description</b>	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid sr-index-or-label <i>number</i>
<b>Tree</b>	sr-index-or-label
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### value *boolean*

<b>Description</b>	If set then the Prefix-SID carries a value
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid value <i>boolean</i>
<b>Tree</b>	value
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### mt-ipv6-reachability ipv6-prefix *string*

<b>Description</b>	TLV specifying IPv6 Reachability information in the LSP. TLV type = 237
<b>Context</b>	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv6-reachability ipv6-prefix <i>string</i>
<b>Tree</b>	mt-ipv6-reachability
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3,

7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### ipv6-prefix *string*

<b>Description</b>	An IPv6 prefix that is reachable to the router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### down *boolean*

<b>Description</b>	Reads true when the IPv6 prefix was leaked down from Level2 to Level1.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">down</a> <i>boolean</i>
<b>Tree</b>	<a href="#">down</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### external *boolean*

<b>Description</b>	Reads true when the IPv6 prefix reachability is external (learned from another protocol).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">external</a> <i>boolean</i>
<b>Tree</b>	<a href="#">external</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**metric number**

<b>Description</b>	The metric to reach this IPv6 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**mt-id number**

<b>Description</b>	A multi-topology ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">mt-id</a> <i>number</i>
<b>Tree</b>	<a href="#">mt-id</a>
<b>Range</b>	0 to 4095
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**sub-tlvs**

<b>Description</b>	SubTLVs of TLV 135, TLV 235, TLV 236 and TLV 237
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs</a>
<b>Tree</b>	<a href="#">sub-tlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**prefix-attribute-flags**

<b>Description</b>	This sub-TLV supports the advertisement of additional flags associated with a given prefix advertisement.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags</a>
<b>Tree</b>	<a href="#">prefix-attribute-flags</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**external-prefix** *boolean*

<b>Description</b>	Set if the prefix has been redistributed from another protocol (or another IS-IS instance).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags external-prefix</a> <i>boolean</i>
<b>Tree</b>	<a href="#">external-prefix</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**node-identifier** *boolean*

<b>Description</b>	Set when the prefix identifies the advertising router; i.e. it is a host prefix advertising a globally reachable address typically associated with a loopback address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags node-identifier</a> <i>boolean</i>
<b>Tree</b>	<a href="#">node-identifier</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**re-advertised** *boolean*

<b>Description</b>	Set when the prefix has been leaked from one level to another (upwards or downwards).
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs prefix-attribute-flags re-advertised</a> <i>boolean</i>
<b>Tree</b>	<a href="#">re-advertised</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### route-tag-32bit *number*

<b>Description</b>	List of 32-bit administrative tag values associated with the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs route-tag-32bit</a> <i>number</i>
<b>Tree</b>	<a href="#">route-tag-32bit</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### route-tag-64bit *number*

<b>Description</b>	List of 64-bit administrative tag values associated with the IPv4 prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs route-tag-64bit</a> <i>number</i>
<b>Tree</b>	<a href="#">route-tag-64bit</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### segment-routing-prefix-sid

<b>Description</b>	Carries a segment routing prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a>

<b>Tree</b>	<a href="#">segment-routing-prefix-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**algorithm** *keyword*

<b>Description</b>	Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid algorithm</a> <i>keyword</i>
<b>Tree</b>	<a href="#">algorithm</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">spf</a></li> <li>• <a href="#">strict-spf</a></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**explicit-null** *boolean*

<b>Description</b>	If set any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID that has an Explicit NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid explicit-null</a> <i>boolean</i>
<b>Tree</b>	<a href="#">explicit-null</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**local** *boolean*

<b>Description</b>	If set, then the value/index carried by the Prefix-SID has local significance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid local</a> <i>boolean</i>
<b>Tree</b>	<a href="#">local</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**node-sid** *boolean*

<b>Description</b>	If set the prefix SID refers to the router identified by the prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <a href="#">node-sid</a> <i>boolean</i>
<b>Tree</b>	<a href="#">node-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**penultimate-hop-popping** *boolean*

<b>Description</b>	If set the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <a href="#">penultimate-hop-popping</a> <i>boolean</i>
<b>Tree</b>	<a href="#">penultimate-hop-popping</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**re-advertised** *boolean*

<b>Description</b>	If set the prefix to which this Prefix-SID is attached has been propagated by the router from either another level or from another protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <a href="#">re-advertised</a> <i>boolean</i>
<b>Tree</b>	<a href="#">re-advertised</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sr-index-or-label** *number*

<b>Description</b>	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability</a>

	<a href="#">ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">segment-routing-prefix-sid</a> <a href="#">sr-index-or-label</a> <i>number</i>
<b>Tree</b>	<a href="#">sr-index-or-label</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**value** *boolean*

<b>Description</b>	If set then the Prefix-SID carries a value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-ipv6-reachability ipv6-prefix</a> <i>string</i> <a href="#">sub-tlvs segment-routing-prefix-sid</a> <a href="#">value</a> <i>boolean</i>
<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**mt-is-reachability** [neighbor](#) *string*

<b>Description</b>	Each TLV encodes the identity of an adjacent IS neighbor in a specific topology. TLV type = 222
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i>
<b>Tree</b>	<a href="#">mt-is-reachability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**neighbor** *string*

<b>Description</b>	An adjacent IS neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i>
<b>String Length</b>	17
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3,

7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### default-metric *number*

<b>Description</b>	The default metric to reach this adjacent neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">default-metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### mt-id *number*

<b>Description</b>	A multi-topology ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">mt-id</a> <i>number</i>
<b>Tree</b>	<a href="#">mt-id</a>
<b>Range</b>	0 to 4095
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### sub-tlvs

<b>Description</b>	SubTLVs of TLV 22 and TLV 222
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs</a>
<b>Tree</b>	<a href="#">sub-tlvs</a>
<b>Configurable</b>	False

**Platforms** Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### admin-group *number*

**Description** A bit mask representing the administrative groups to which the interface belongs. Sub-TLV = 3.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs admin-group](#) *number*

**Tree** [admin-group](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### application-specific-link-attributes

**Description** Application Specific Link Attributes. Sub-TLV = 16.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs application-specific-link-attributes](#)

**Tree** [application-specific-link-attributes](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### legacy *boolean*

**Description** When the legacy flag is set, all of the applications specified in the bit mask MUST use the legacy advertisements for the corresponding link found in TLVs 22, 23, 25, 141, 222, and 223, in TLV 138, or in TLV 139 as appropriate.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs application-specific-link-attributes legacy](#) *boolean*

**Tree** [legacy](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**loop-free-alternate** *boolean*

<b>Description</b>	F bit is set in the Standard Application Identifier Bit Mask
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes loop-free-alternate</a> <i>boolean</i>
<b>Tree</b>	<a href="#">loop-free-alternate</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**rsvp-te** *boolean*

<b>Description</b>	R bit is set in the Standard Application Identifier Bit Mask
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes rsvp-te</a> <i>boolean</i>
<b>Tree</b>	<a href="#">rsvp-te</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sr-policy** *boolean*

<b>Description</b>	S bit is set in the Standard Application Identifier Bit Mask
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sr-policy</a> <i>boolean</i>
<b>Tree</b>	<a href="#">sr-policy</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sub-sub-tlvs**

<b>Description</b>	Enter the sub-sub-tlvs context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs</a>
<b>Tree</b>	<a href="#">sub-sub-tlvs</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **admin-group** *number*

**Description** A bit mask representing the administrative groups to which the interface belongs. Sub-Sub-TLV = 3.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs application-specific-link-attributes sub-sub-tlvs admin-group](#) *number*

**Tree** [admin-group](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **maximum-link-bandwidth** *number*

**Description** The (LAG aware) bandwidth of the interface to the neighbor. Sub-Sub-TLV = 9.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs application-specific-link-attributes sub-sub-tlvs maximum-link-bandwidth](#) *number*

**Tree** [maximum-link-bandwidth](#)

**Units** bytes-per-second

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **min-max-unidirectional-link-delay**

**Description** The minimum and maximum delay between two directly connected IS-IS neighbors.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay](#)

**Tree** [min-max-unidirectional-link-delay](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**anomolous** *boolean*

<b>Description</b>	If the A bit is cleared, the values represent steady-state link performance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay</a> <a href="#">anomolous</a> <i>boolean</i>
<b>Tree</b>	<a href="#">anomolous</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**max-delay** *number*

<b>Description</b>	Maximum forward-path delay (from the advertising router to the remote neighbor)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay</a> <a href="#">max-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">max-delay</a>
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**min-delay** *number*

<b>Description</b>	Minimum forward-path delay (from the advertising router to the remote neighbor)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay</a> <a href="#">min-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">min-delay</a>
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**te-default-metric** *number*

<b>Description</b>	An administratively assigned metric used as an alternative to the normal SPF metric based (typically) on link bandwidth.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs application-specific-link-attributes sub-sub-tlvs te-default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">te-default-metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4-interface-address** *string*

<b>Description</b>	The IPv4 address of the interface to the neighbor. Sub-TLV = 6.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs ipv4-interface-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-interface-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**ipv4-neighbor-address** *string*

<b>Description</b>	The IPv4 address of the neighbor. Sub-TLV = 8.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs ipv4-neighbor-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-neighbor-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**ipv6-interface-address** *string*

<b>Description</b>	The IPv6 address of the interface to the neighbor. Sub-TLV = 12.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs ipv6-interface-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv6-interface-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**ipv6-neighbor-address** *string*

<b>Description</b>	The IPv4 address of the neighbor. Sub-TLV = 13.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs ipv6-neighbor-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv6-neighbor-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**link-msd**

<b>Description</b>	The maximum segment depth of the link to the neighbor. Sub-TLV = 15.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs link-msd</a>
<b>Tree</b>	<a href="#">link-msd</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**msd-info** [msd-type](#) (*keyword* | *number*) [msd-value](#) *number*

<b>Description</b>	List of MSD entries
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability</a>

	<a href="#">neighbor</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">link-msd</a> <a href="#">msd-info</a> <a href="#">msd-type</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">msd-value</a> <i>number</i>
<b>Tree</b>	<a href="#">msd-info</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**msd-type** (*keyword* | *number*)

<b>Description</b>	MSD type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">isis</a> <a href="#">instance name</a> <i>string</i> <a href="#">level-database</a> <a href="#">level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">mt-is-reachability</a> <a href="#">neighbor</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">link-msd</a> <a href="#">msd-info</a> <a href="#">msd-type</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">msd-value</a> <i>number</i>
<b>Range</b>	2 to 254
<b>Options</b>	<ul style="list-style-type: none"> <li>base-mpls-imposition-msd</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**msd-value** *number*

<b>Description</b>	A number in the range of 0-255 representing the maximum SID depth; for all MSD-Types, 0 represents the lack of ability to support a SID stack of any depth
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">isis</a> <a href="#">instance name</a> <i>string</i> <a href="#">level-database</a> <a href="#">level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">mt-is-reachability</a> <a href="#">neighbor</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">link-msd</a> <a href="#">msd-info</a> <a href="#">msd-type</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">msd-value</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**maximum-link-bandwidth** *number*

<b>Description</b>	The (LAG aware) bandwidth of the interface to the neighbor. Sub-TLV = 9.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">isis</a> <a href="#">instance name</a> <i>string</i> <a href="#">level-database</a> <a href="#">level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">mt-is-reachability</a> <a href="#">neighbor</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">maximum-link-bandwidth</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-link-bandwidth</a>
<b>Units</b>	bytes-per-second
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### min-max-unidirectional-link-delay

**Description** The minimum and maximum delay between two directly connected IS-IS neighbors. Sub-TLV = 34.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs min-max-unidirectional-link-delay](#)

**Tree** [min-max-unidirectional-link-delay](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### anomalous *boolean*

**Description** If the A bit is cleared, the values represent steady-state link performance.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs min-max-unidirectional-link-delay anomalous](#) *boolean*

**Tree** [anomalous](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### max-delay *number*

**Description** Maximum forward-path delay (from the advertising router to the remote neighbor)

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs min-max-unidirectional-link-delay max-delay](#) *number*

**Tree** [max-delay](#)

**Units** microseconds

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**min-delay** *number*

<b>Description</b>	Minimum forward-path delay (from the advertising router to the remote neighbor)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs min-max-unidirectional-link-delay min-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">min-delay</a>
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**segment-routing-adjacency-sid** [sr-index-or-label](#) *number*

<b>Description</b>	List of Adj-SID sub-TLVs associated with the neighbor. Sub-TLV = 31.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i>
<b>Tree</b>	<a href="#">segment-routing-adjacency-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sr-index-or-label** *number*

<b>Description</b>	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**adj-set** *boolean*

<b>Description</b>	When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability</a>

	<a href="#">neighbor</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">segment-routing-adjacency-sid</a> <a href="#">sr-index-or-label</a> <i>number</i> <a href="#">adj-set</a> <i>boolean</i>
<b>Tree</b>	<a href="#">adj-set</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**backup** *boolean*

<b>Description</b>	If set, the Adj-SID is eligible for protection
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">isis</a> <a href="#">instance name</a> <i>string</i> <a href="#">level-database</a> <a href="#">level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">mt-is-reachability</a> <a href="#">neighbor</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">segment-routing-adjacency-sid</a> <a href="#">sr-index-or-label</a> <i>number</i> <a href="#">backup</a> <i>boolean</i>
<b>Tree</b>	<a href="#">backup</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv6-family** *boolean*

<b>Description</b>	If set, then the Adj-SID is used for forwarding IPv6 traffic to the neighbor; else the Adj-SID is used for forwarding IPv4 traffic.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">isis</a> <a href="#">instance name</a> <i>string</i> <a href="#">level-database</a> <a href="#">level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">mt-is-reachability</a> <a href="#">neighbor</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">segment-routing-adjacency-sid</a> <a href="#">sr-index-or-label</a> <i>number</i> <a href="#">ipv6-family</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv6-family</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**local** *boolean*

<b>Description</b>	If set, then the value/index carried by the Adj-SID has local significance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">isis</a> <a href="#">instance name</a> <i>string</i> <a href="#">level-database</a> <a href="#">level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs</a> <a href="#">mt-is-reachability</a> <a href="#">neighbor</a> <i>string</i> <a href="#">sub-tlvs</a> <a href="#">segment-routing-adjacency-sid</a> <a href="#">sr-index-or-label</a> <i>number</i> <a href="#">local</a> <i>boolean</i>
<b>Tree</b>	<a href="#">local</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**persistent** *boolean*

<b>Description</b>	When set, the P-Flag indicates that the Adj-SID is persistently allocated, i.e., the Adj-SID value remains consistent across router restart and/or interface flap
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i> <b>persistent</b> <i>boolean</i>
<b>Tree</b>	<a href="#">persistent</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**value** *boolean*

<b>Description</b>	If set then the Adj-SID carries a value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i> <b>value</b> <i>boolean</i>
<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**weight** *number*

<b>Description</b>	The value represents the weight of the Adj-SID for the purpose of load balancing
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-adjacency-sid sr-index-or-label</a> <i>number</i> <b>weight</b> <i>number</i>
<b>Tree</b>	<a href="#">weight</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**segment-routing-lan-adjacency-sid** [sr-index-or-label](#) *number*

<b>Description</b>	List of LAN Adj-SID sub-TLVs. Each describes the set of Adj-SIDs the router assigned to each of its LAN neighbors. Sub-TLV = 32.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i>
<b>Tree</b>	<a href="#">segment-routing-lan-adjacency-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sr-index-or-label** *number*

<b>Description</b>	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**adj-set** *boolean*

<b>Description</b>	When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">adj-set</a> <i>boolean</i>
<b>Tree</b>	<a href="#">adj-set</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**backup** *boolean*

<b>Description</b>	If set, the Adj-SID is eligible for protection
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <a href="#">backup</a> <i>boolean</i>
<b>Tree</b>	<a href="#">backup</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ipv6-family** *boolean*

**Description** If set, then the Adj-SID is used for forwarding IPv6 traffic to the neighbor; else the Adj-SID is used for forwarding IPv4 traffic.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label](#) *number* **ipv6-family** *boolean*

**Tree** [ipv6-family](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **local** *boolean*

**Description** If set, then the value/index carried by the Adj-SID has local significance.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label](#) *number* **local** *boolean*

**Tree** [local](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **neighbor-system-id** *string*

**Description** IS-IS system-ID of the LAN neighbor

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label](#) *number* **neighbor-system-id** *string*

**Tree** [neighbor-system-id](#)

**String Length** 14

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**persistent** *boolean*

<b>Description</b>	When set, the P-Flag indicates that the Adj-SID is persistently allocated, i.e., the Adj-SID value remains consistent across router restart and/or interface flap
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <b>persistent</b> <i>boolean</i>
<b>Tree</b>	<a href="#">persistent</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**value** *boolean*

<b>Description</b>	If set then the Adj-SID carries a value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <b>value</b> <i>boolean</i>
<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**weight** *number*

<b>Description</b>	The value represents the weight of the Adj-SID for the purpose of load balancing
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label</a> <i>number</i> <b>weight</b> <i>number</i>
<b>Tree</b>	<a href="#">weight</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**te-default-metric** *number*

<b>Description</b>	An administratively assigned metric used as an alternative to the normal SPF metric based (typically) on link bandwidth. Sub-TLV = 18.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs mt-is-reachability neighbor</a> <i>string</i> <a href="#">sub-tlvs te-default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">te-default-metric</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## multi-topology

<b>Description</b>	The Multi-Topology TLV, type 229.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs multi-topology</a>
<b>Tree</b>	<a href="#">multi-topology</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

## topology [mt-id](#) *number*

<b>Description</b>	The list of multi-topology IDs that the router is participating in
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs multi-topology topology mt-id</a> <i>number</i>
<b>Tree</b>	<a href="#">topology</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

## mt-id *number*

<b>Description</b>	A multi-topology ID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs multi-topology topology mt-id</a> <i>number</i>
<b>Range</b>	0 to 4095

<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**attached** *boolean*

<b>Description</b>	Reads true when the topology is attached to Level 2
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs multi-topology topology mt-id</a> <i>number</i> <b>attached</b> <i>boolean</i>
<b>Tree</b>	<a href="#">attached</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**overload** *boolean*

<b>Description</b>	Reads true when the topology is in overload state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs multi-topology topology mt-id</a> <i>number</i> <b>overload</b> <i>boolean</i>
<b>Tree</b>	<a href="#">overload</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**nlpid** *keyword*

<b>Description</b>	Each item represents a network layer protocol supported by the IS-IS Instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs nlpid</a> <i>keyword</i>
<b>Tree</b>	<a href="#">nlpid</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>IPv4</li> </ul>

NLPID 0xCC corresponding to IPv4

- IPv6

NLPID 0x8E corresponding to IPv6

- CLNS

NLPID 0x81 corresponding to CLNS

**Configurable**

False

**Platforms**

Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### purge-oi *string*

**Description**

This indicates System ID that originated a purge.

**Context**

[network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs purge-oi](#) *string*

**Tree**

[purge-oi](#)

**String Length**

**Configurable**

False

**Platforms**

Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### router-capability

**Description**

Allows a router to announce its capabilities within an IS-IS level or the entire routing domain. TLV = 242.

**Context**

[network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs router-capability](#)

**Tree**

[router-capability](#)

**Configurable**

False

**Platforms**

Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**leaked-down** *boolean*

<b>Description</b>	When true, the TLV was leaked down from Level 2 to Level 1 and must not be leaked back up to L2
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability leaked-down</a> <i>boolean</i>
<b>Tree</b>	<a href="#">leaked-down</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**router-id** *string*

<b>Description</b>	Router ID indicating the source of the TLV
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability router-id</a> <i>string</i>
<b>Tree</b>	<a href="#">router-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**scope-is-domain-wide** *boolean*

<b>Description</b>	When true, the TLV MUST be flooded across the entire routing domain. When false, the TLV MUST NOT be leaked between levels.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability scope-is-domain-wide</a> <i>boolean</i>
<b>Tree</b>	<a href="#">scope-is-domain-wide</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**sub-tlvs**

<b>Description</b>	Sub-TLVs of TLV 242
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs</a>
<b>Tree</b>	<a href="#">sub-tlvs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

**node-msd**

<b>Description</b>	Used to carry the provisioned SID depth of the router originating the capability TLV. Node MSD is the smallest MSD supported by the node on the set of interfaces configured for use by the advertising IGP instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs node-msd</a>
<b>Tree</b>	<a href="#">node-msd</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**msd-info** [msd-type](#) (*keyword* | *number*) [msd-value](#) *number*

<b>Description</b>	List of MSD entries
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs node-msd msd-info msd-type</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">msd-value</a> <i>number</i>
<b>Tree</b>	<a href="#">msd-info</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**msd-type** (*keyword* | *number*)

<b>Description</b>	MSD type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability</a>

`sub-tlvs node-msd msd-info msd-type (keyword | number) msd-value number`

<b>Range</b>	2 to 254
<b>Options</b>	<ul style="list-style-type: none"> <li>base-mpls-imposition-msd</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **msd-value** *number*

<b>Description</b>	A number in the range of 0-255 representing the maximum SID depth; for all MSD-Types, 0 represents the lack of ability to support a SID stack of any depth
<b>Context</b>	<code>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs router-capability sub-tlvs node-msd msd-info msd-type (keyword   number) msd-value number</code>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **sr-algorithm**

<b>Description</b>	Advertises the IGP algorithms that the router is using
<b>Context</b>	<code>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs router-capability sub-tlvs sr-algorithm</code>
<b>Tree</b>	<code>sr-algorithm</code>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **algorithm** *number*

<b>Description</b>	List of algorithm types supported by the router. Algorithm 0 should always be in the list
<b>Context</b>	<code>network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs router-capability sub-tlvs sr-algorithm algorithm number</code>
<b>Tree</b>	<code>algorithm</code>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sr-capabilities**

<b>Description</b>	Used to advertise its SR data plane capability and the range of MPLS label values each router uses for Segment Routing in the case where global SIDs are allocated.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs sr-capabilities</a>
<b>Tree</b>	<a href="#">sr-capabilities</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4-support** *boolean*

<b>Description</b>	When true, the router is capable of processing SR-MPLS-encapsulated IPv4 packets on all interfaces
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs sr-capabilities ipv4-support</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv4-support</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv6-support** *boolean*

<b>Description</b>	When true, the router is capable of processing SR-MPLS-encapsulated IPv6 packets on all interfaces
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs sr-capabilities ipv6-support</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv6-support</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**srgb-descriptor** [sr-index-or-label](#) *number range number*

<b>Description</b>	List of Segment Routing Global Block descriptors
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability</a>

	<a href="#">sub-tlvs sr-capabilities srgb-descriptor sr-index-or-label</a> <i>number range number</i>
<b>Tree</b>	<a href="#">srgb-descriptor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sr-index-or-label** *number*

<b>Description</b>	An index representing the first value of the SRGB. The meaning (index or label) is determined from the length of the sub-tlv.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs sr-capabilities srgb-descriptor sr-index-or-label</a> <i>number range number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**range** *number*

<b>Description</b>	The number of SRGB elements
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs sr-capabilities srgb-descriptor sr-index-or-label</a> <i>number range number</i>
<b>Range</b>	1 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sr-local-block**

<b>Description</b>	Used to advertise the range of labels the node has reserved for local SIDs.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs sr-local-block</a>
<b>Tree</b>	<a href="#">sr-local-block</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**srlb-descriptor** *sr-index-or-label number range number*

<b>Description</b>	List of Segment Routing Local Block descriptors
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs sr-local-block srlb-descriptor sr-index-or-label</a> <i>number range number</i>
<b>Tree</b>	<a href="#">srlb-descriptor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sr-index-or-label** *number*

<b>Description</b>	An index representing the first value of the SRLB. The meaning (index or label) is determined from the length of the sub-tlv.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs sr-local-block srlb-descriptor sr-index-or-label</a> <i>number range number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**range** *number*

<b>Description</b>	The number of SRLB elements
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs router-capability sub-tlvs sr-local-block srlb-descriptor sr-index-or-label</a> <i>number range number</i>
<b>Range</b>	1 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**te-router-id** *string*

<b>Description</b>	A single stable address that can always be referenced in a path that will be reachable from multiple hops away. TLV = 134.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">defined-tlvs te-router-id</a> <i>string</i>
<b>Tree</b>	<a href="#">te-router-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3,

7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### **maximum-area-addresses** *number*

<b>Description</b>	The value indicates the maximum number of areas supported by the originator of the LSP. A value of 0 indicates a default of 3 areas.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">maximum-area-addresses</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-area-addresses</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### **pdu-length** *number*

<b>Description</b>	The value indicates the PDU length for instance LSPs, CSNPs OR PSNPs at both IS-IS protocol levels i.e. L1 and L2 as maintained in the database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">pdu-length</a> <i>number</i>
<b>Tree</b>	<a href="#">pdu-length</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### **pdu-type** *number*

<b>Description</b>	The value indicates the PDU type for instance LSPs, CSNPs OR PSNPs at both IS-IS protocol levels i.e. L1 and L2 as maintained in of the object packet-type.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">pdu-type</a> <i>number</i>
<b>Tree</b>	<a href="#">pdu-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3,

7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### pkt-version *number*

<b>Description</b>	The value indicates the version of the ISIS protocol that has generated the Packet.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <b>pkt-version</b> <i>number</i>
<b>Tree</b>	<a href="#">pkt-version</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### remaining-lifetime *number*

<b>Description</b>	The value indicates the remaining lifetime of this LSP and is a decrementing counter that decrements in seconds starting from the value as received in the LSP if not self-originated OR from lsp-life-time for self originated LSPs. When the remaining lifetime becomes zero, the contents of the LSP should not be considered for SPF calculation.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <b>remaining-lifetime</b> <i>number</i>
<b>Tree</b>	<a href="#">remaining-lifetime</a>
<b>Range</b>	0 to 65535
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### sequence-number *string*

<b>Description</b>	The value indicates the sequence number of an LSP and is a four byte quantity that represents the version of an LSP. The higher the sequence number, the more up to date the information. The sequence number is always incremented by the system that originated the LSP and ensures that there is only one version of that LSP in the entire network.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">sequence-number</a> <i>string</i>
<b>Tree</b>	<a href="#">sequence-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### **system-id-len** *number*

<b>Description</b>	The value indicates the length of the system-id as used by the originator.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">system-id-len</a> <i>number</i>
<b>Tree</b>	<a href="#">system-id-len</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### **undefined-tlvs** *string*

<b>Description</b>	Undefined TLV-s as contents of the LSP.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">undefined-tlvs</a> <i>string</i>
<b>Tree</b>	<a href="#">undefined-tlvs</a>
<b>String Length</b>	27 to 9190
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### **version** *number*

<b>Description</b>	The value indicates the version of the ISIS protocol that has generated the LSP
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">level-database level-number</a> <i>number</i> <a href="#">lsp-id</a> <i>string</i> <a href="#">version</a> <i>number</i>

<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

### **max-ecmp-paths** *number*

<b>Description</b>	The maximum number of ECMP next-hops to program into the FIB for every IP prefix
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">max-ecmp-paths</a> <i>number</i>
<b>Tree</b>	<a href="#">max-ecmp-paths</a>
<b>Range</b>	1 to 64
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **net** *string*

<b>Description</b>	ISIS network entity title (NET)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">net</a> <i>string</i>
<b>Tree</b>	<a href="#">net</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	1

### **oper-area-id** *string*

<b>Description</b>	The list of area IDs associated with this IS router
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">oper-area-id</a> <i>string</i>
<b>Tree</b>	<a href="#">oper-area-id</a>
<b>String Length</b>	2 to 38
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	The value of the this object indicates the operational state of the destination.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <b>oper-state</b> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"><li>• up Component or process is operational</li><li>• down Component or process is not operational</li><li>• empty Component slot is empty</li><li>• downloading Component is downloading image into memory</li><li>• booting Component is booting downloaded image</li><li>• starting Component image operational, application processes starting</li><li>• failed Component or process has failed</li><li>• synchronizing Component is currently being synchronized</li><li>• upgrading Component is currently being upgraded</li><li>• low-power Component is offline due to insufficient system power</li><li>• degraded Component or process is in a degraded state</li><li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li><li>• waiting Component or process is currently waiting</li></ul>

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **oper-system-id** *string*

<b>Description</b>	The ID for this instance of the Integrated IS-IS protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">oper-system-id</a> <i>string</i>
<b>Tree</b>	<a href="#">oper-system-id</a>
<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **overload**

<b>Description</b>	Specifies isis routing instance behavior regarding overload
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload</a>
<b>Tree</b>	<a href="#">overload</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **advertise-external** *boolean*

<b>Description</b>	When set to true, external (non-ISIS) routes continue to be advertised when the router is in overload.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload</a> <a href="#">advertise-external</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-external</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**advertise-interlevel** *boolean*

<b>Description</b>	When set to true, L1->L2 and L2->L1 inter-level routes continue to be advertised when the router is in overload.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload advertise-interlevel</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-interlevel</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**immediate**

<b>Description</b>	Options for advertising an overloaded state immediately
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload immediate</a>
<b>Tree</b>	<a href="#">immediate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-metric** *boolean*

<b>Description</b>	When set to true transit links are advertised with a wide metric of 0xfffffe and a narrow metric of 0x3f
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload immediate max-metric</a> <i>boolean</i>
<b>Tree</b>	<a href="#">max-metric</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**set-bit** *boolean*

<b>Description</b>	When set to true, the Overload bit is set
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload immediate set-bit</a> <i>boolean</i>
<b>Tree</b>	<a href="#">set-bit</a>
<b>Default</b>	false

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **instance-is-in-overload** *boolean*

<b>Description</b>	When set to true the IS-IS instance is currently in overload state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload instance-is-in-overload</a> <i>boolean</i>
<b>Tree</b>	<a href="#">instance-is-in-overload</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **on-boot**

<b>Description</b>	Options for advertising an overloaded state whenever the IS-IS process restarts
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload on-boot</a>
<b>Tree</b>	<a href="#">on-boot</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **max-metric** *boolean*

<b>Description</b>	When set to true transit links are advertised with a wide metric of 0xfffffe and a narrow metric of 0x3f
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload on-boot max-metric</a> <i>boolean</i>
<b>Tree</b>	<a href="#">max-metric</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **set-bit** *boolean*

<b>Description</b>	When set to true, the Overload bit is set
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload on-boot set-bit</a> <i>boolean</i>
<b>Tree</b>	<a href="#">set-bit</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**timeout** *number*

<b>Description</b>	Specifies the time that the router should remain in overload state after the IS-IS process restarts
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">overload on-boot timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">timeout</a>
<b>Range</b>	60 to 1800
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**poi-tlv** *boolean*

<b>Description</b>	When set to true, a TLV is added to purge to record the system ID of the IS generating the purge.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">poi-tlv</a> <i>boolean</i>
<b>Tree</b>	<a href="#">poi-tlv</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**restarting-neighbor-list**

<b>Description</b>	The list of neighbors that have restarted recently and that are currently being helped.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">restarting-neighbor-list</a>
<b>Tree</b>	<a href="#">restarting-neighbor-list</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**neighbor** *system-id string*

<b>Description</b>	The list of neighbors that have restarted recently and that are currently being helped.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">restarting-neighbor-list neighbor system-id string</a>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**system-id** *string*

<b>Description</b>	The neighbor router's system ID.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">restarting-neighbor-list neighbor system-id string</a>
<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**hostname** *string*

<b>Description</b>	The hostname of the neighbor, as learned by TLV 137.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">restarting-neighbor-list neighbor system-id string</a> <a href="#">hostname string</a>
<b>Tree</b>	<a href="#">hostname</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**segment-routing**

<b>Description</b>	Enter the segment-routing context
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">protocols isis instance name string</a> <a href="#">segment-routing</a>
<b>Tree</b>	<a href="#">segment-routing</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**mpls**

<b>Description</b>	Context used to configure SR-MPLS options
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls</a>
<b>Tree</b>	<a href="#">mpls</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**dynamic-adjacency-sids**

<b>Description</b>	Enter the dynamic-adjacency-sids context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls dynamic-adjacency-sids</a>
<b>Tree</b>	<a href="#">dynamic-adjacency-sids</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**all-interfaces** *boolean*

<b>Description</b>	When true, IS-IS is instructed to assign a dynamic adjacency SID to all IS-IS interfaces in all levels, except for the interfaces configured with an adjacency SID assignment of 'none' or 'static'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls dynamic-adjacency-sids all-interfaces</a> <i>boolean</i>
<b>Tree</b>	<a href="#">all-interfaces</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**hold-time** (*keyword* | *number*)

<b>Description</b>	Adjacency SID hold time that is applicable to dynamically allocated adjacency SIDs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls dynamic-adjacency-sids hold-time</a> ( <i>keyword</i>   <i>number</i> )

<b>Tree</b>	<a href="#">hold-time</a>
<b>Range</b>	1 to 300
<b>Default</b>	15
<b>Units</b>	seconds
<b>Options</b>	• none
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## sid-database

<b>Description</b>	Database of all prefix SIDs associated with the IS-IS instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database</a>
<b>Tree</b>	<a href="#">sid-database</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## **prefix-sid** [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [sid-label-value](#) *number* [multi-topology-id](#) *number* [algorithm](#) *number*

<b>Description</b>	List of prefix SIDs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database</a> <a href="#">prefix-sid</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Tree</b>	<a href="#">prefix-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## **prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	The IPv4 or IPv6 prefix associated with the SID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database</a> <a href="#">prefix-sid</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sid-label-value** *number*

<b>Description</b>	The MPLS label value associated with the SID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**multi-topology-id** *number*

<b>Description</b>	The multi-topology ID that provided the prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Range</b>	0 to 4095
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**algorithm** *number*

<b>Description</b>	Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**active** *boolean*

<b>Description</b>	When false, the prefix SID is inactive. It could be inactive for any of these reasons:
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">active</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **prefix-conflict** *boolean*

<b>Description</b>	Reads true when the prefix SID entry is involved in a prefix conflict within the scope of this IS-IS instance. This occurs when there are multiple entries for the same (prefix, multi-topology-id, algorithm). All the conflicting entries become inactive except for the one with the smallest sid-index.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">prefix-conflict</a> <i>boolean</i>
<b>Tree</b>	<a href="#">prefix-conflict</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **sid-conflict** *boolean*

<b>Description</b>	Reads true when the prefix SID entry is involved in a SID conflict within the scope of this IS-IS instance. This occurs when the same SID has been assigned to different prefixes after first eliminating entries that have lost the prefix-conflict comparison. All entries involved in a SID conflict that do not have the absolute lowest 'preference' value become inactive. In the SRL implementation SID entries associated with interfaces of this IS-IS instance are considered to have a lower numerical preference than remote prefix-sid entries. If there are still SID conflicts then all the remaining conflicting entries become inactive except for the one with the smallest sid-index.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">sid-conflict</a> <i>boolean</i>
<b>Tree</b>	<a href="#">sid-conflict</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **sid-out-of-range** *boolean*

<b>Description</b>	Reads true when a received prefix SID from another router has a SID index or label value that is not within the locally defined SRGB range of the network instance; the prefix SID entry will be inactive.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">sid-out-of-range</a> <i>boolean</i>
<b>Tree</b>	<a href="#">sid-out-of-range</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **source-router** [system-id](#) *string* [level-number](#) *number*

<b>Description</b>	The ISIS routers that provided the prefix SID. (Multiple in the case of redistribution.)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">source-router system-id</a> <i>string</i> <a href="#">level-number</a> <i>number</i>
<b>Tree</b>	<a href="#">source-router</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **system-id** *string*

<b>Description</b>	The system-id of an ISIS router that originated or redistributed the prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">source-router system-id</a> <i>string</i> <a href="#">level-number</a> <i>number</i>
<b>String Length</b>	14
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **level-number** *number*

<b>Description</b>	The level of the LSP that advertises the prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">source-router system-id</a> <i>string</i> <a href="#">level-number</a> <i>number</i>
<b>Range</b>	1 to 2
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## flags

**Description** Flags that characterize the prefix SID

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [segment-routing mpls sid-database prefix-sid prefix](#) (*ipv4-prefix | ipv6-prefix*) [sid-label-value](#) *number* [multi-topology-id](#) *number* [algorithm](#) *number* [source-router system-id](#) *string* [level-number](#) *number* [flags](#)

**Tree** [flags](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## explicit-null *boolean*

**Description** If set any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID that has an Explicit NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [segment-routing mpls sid-database prefix-sid prefix](#) (*ipv4-prefix | ipv6-prefix*) [sid-label-value](#) *number* [multi-topology-id](#) *number* [algorithm](#) *number* [source-router system-id](#) *string* [level-number](#) *number* [flags explicit-null](#) *boolean*

**Tree** [explicit-null](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## local *boolean*

**Description** If set, then the value/index carried by the Prefix-SID has local significance.

**Context** [network-instance name](#) *string* [protocols isis instance name](#) *string* [segment-routing mpls sid-database prefix-sid prefix](#) (*ipv4-prefix | ipv6-prefix*) [sid-label-value](#) *number* [multi-topology-id](#) *number* [algorithm](#) *number* [source-router system-id](#) *string* [level-number](#) *number* [flags local](#) *boolean*

**Tree** [local](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**node-sid** *boolean*

<b>Description</b>	If set the prefix SID refers to the router identified by the prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">source-router system-id</a> <i>string</i> <a href="#">level-number</a> <i>number</i> <a href="#">flags</a> <a href="#">node-sid</a> <i>boolean</i>
<b>Tree</b>	<a href="#">node-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**penultimate-hop-popping** *boolean*

<b>Description</b>	If set the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">source-router system-id</a> <i>string</i> <a href="#">level-number</a> <i>number</i> <a href="#">flags</a> <a href="#">penultimate-hop-popping</a> <i>boolean</i>
<b>Tree</b>	<a href="#">penultimate-hop-popping</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**re-advertised** *boolean*

<b>Description</b>	If set the prefix to which this Prefix-SID is attached was propagated from another level or from another protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">source-router system-id</a> <i>string</i> <a href="#">level-number</a> <i>number</i> <a href="#">flags</a> <a href="#">re-advertised</a> <i>boolean</i>
<b>Tree</b>	<a href="#">re-advertised</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**local-system** *boolean*

<b>Description</b>	True when the system ID belongs to the local system.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">sid-label-</a>

	<a href="#">value</a> <i>number</i> <a href="#">multi-topology-id</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">source-router</a> <a href="#">system-id</a> <i>string</i> <a href="#">level-number</a> <i>number</i> <a href="#">local-system</a> <i>boolean</i>
<b>Tree</b>	<a href="#">local-system</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### static-label-block *reference*

<b>Description</b>	Reference to a static label block to use an SRLB.  Configuration of this label block is mandatory in order to assign static adjacency SID labels.  This label block is advertised as an SRLB in the router capabilities TLV.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls static-label-block</a> <i>reference</i>
<b>Tree</b>	<a href="#">static-label-block</a>
<b>Reference</b>	<a href="#">system mpls label-ranges static name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### static-label-block-status *keyword*

<b>Description</b>	Status of the label block.  The label block may show as unavailable if there is pending cleanup.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">segment-routing mpls static-label-block-status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">static-label-block-status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• available</li> <li>• unavailable</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### statistics

<b>Description</b>	Instance level statistics
--------------------	---------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-partial-spf** *string*

<b>Description</b>	The elapsed time since the last time a partial SPF run was run on either the L1 or L2 LSDB
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">statistics</a> <a href="#">last-partial-spf</a> <i>string</i>
<b>Tree</b>	<a href="#">last-partial-spf</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-spf** *string*

<b>Description</b>	The elapsed time since the last time a full SPF run was run on either the L1 or L2 LSDB
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">statistics</a> <a href="#">last-spf</a> <i>string</i>
<b>Tree</b>	<a href="#">last-spf</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **partial-spf-runs** *number*

<b>Description</b>	The number of times a partial SPF run has been performed on either the L1 or L2 LSDB since the IS-IS manager restarted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">statistics</a> <a href="#">partial-spf-runs</a> <i>number</i>
<b>Tree</b>	<a href="#">partial-spf-runs</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pdu pdu-name keyword**

<b>Description</b>	List of PDUs processed by the IS-IS instance since the IS-IS manager restarted
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string statistics pdu pdu-name keyword</a>
<b>Tree</b>	<a href="#">pdu</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pdu-name keyword**

<b>Description</b>	The PDU type that was processed
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string statistics pdu pdu-name keyword</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• LSP Link State PDU</li> <li>• IIH IS-to-IS Hello PDU</li> <li>• CSNP Complete Sequence Number PDU</li> <li>• PSNP Partial Sequence Number PDU</li> <li>• Unknown Unknown PDU type</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**dropped number**

<b>Description</b>	The number of PDUs that were received and dropped
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string statistics pdu pdu-name keyword dropped number</a>
<b>Tree</b>	<a href="#">dropped</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**processed** *number*

<b>Description</b>	The number of PDUs that were received and processed
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">statistics pdu pdu-name</a> <i>keyword</i> <a href="#">processed</a> <i>number</i>
<b>Tree</b>	<a href="#">processed</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**received** *number*

<b>Description</b>	The number of PDUs that were received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">statistics pdu pdu-name</a> <i>keyword</i> <a href="#">received</a> <i>number</i>
<b>Tree</b>	<a href="#">received</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**sent** *number*

<b>Description</b>	The number of PDUs that were transmitted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">statistics pdu pdu-name</a> <i>keyword</i> <a href="#">sent</a> <i>number</i>
<b>Tree</b>	<a href="#">sent</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**spf-runs** *number*

<b>Description</b>	The number of times a full SPF run has been performed on either the L1 or L2 LSDB since the IS-IS manager restarted
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">statistics spf-runs</a> <i>number</i>
<b>Tree</b>	<a href="#">spf-runs</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## timers

<b>Description</b>	Container for IS-IS timers applicable at the instance level
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string timers</a>
<b>Tree</b>	<a href="#">timers</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## Isp-generation

<b>Description</b>	Container with options for specifying LSP generation timer values
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string timers lsp-generation</a>
<b>Tree</b>	<a href="#">lsp-generation</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## initial-wait *number*

<b>Description</b>	Time interval between the detection of topology change and when the new LSP is generated.  The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string timers lsp-generation initial-wait number</a>
<b>Tree</b>	<a href="#">initial-wait</a>
<b>Range</b>	10 to 100000
<b>Default</b>	10
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-wait** *number*

<b>Description</b>	Specifies the maximum interval between two consecutive generations of an LSP.  The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers lsp-generation max-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">max-wait</a>
<b>Range</b>	10 to 120000
<b>Default</b>	5000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**second-wait** *number*

<b>Description</b>	Time interval between the the first and second LSP generation.  The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers lsp-generation second-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">second-wait</a>
<b>Range</b>	10 to 100000
<b>Default</b>	1000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**lsp-lifetime** *number*

<b>Description</b>	Time interval in seconds that the LSPs originated by this IS (router) remain valid in the LSDB before they must be refreshed or else they are purged.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers lsp-lifetime</a> <i>number</i>
<b>Tree</b>	<a href="#">lsp-lifetime</a>

<b>Range</b>	350 to 65535
<b>Default</b>	1200
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## Isp-refresh

<b>Description</b>	Configure LSP refresh timers.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string timers lsp-refresh</a>
<b>Tree</b>	<a href="#">lsp-refresh</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## half-lifetime *boolean*

<b>Description</b>	When set to true, the LSP refresh interval is half the lsp-lifetime
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string timers lsp-refresh half-lifetime boolean</a>
<b>Tree</b>	<a href="#">half-lifetime</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## interval *number*

<b>Description</b>	Time interval in seconds since the last advertisement of its LSP when the router attempts to refresh the LSP. Must not exceed 90% of the lsp-lifetime. This value is ignored when half-lifetime is set to true.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string timers lsp-refresh interval number</a>
<b>Tree</b>	<a href="#">interval</a>
<b>Range</b>	150 to 65535
<b>Default</b>	600
<b>Units</b>	seconds
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## spf

**Description** Container with options for specifying SPF timer values

**Context** [network-instance name string protocols isis instance name string timers spf](#)

**Tree** [spf](#)

**Configurable** True

**Platforms** Supported on all platforms

## initial-wait *number*

**Description** Time interval between the detection of topology change and when the SPF algorithm runs.  
The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms

**Context** [network-instance name string protocols isis instance name string timers spf initial-wait number](#)

**Tree** [initial-wait](#)

**Range** 10 to 100000

**Default** 1000

**Units** milliseconds

**Configurable** True

**Platforms** Supported on all platforms

## max-wait *number*

**Description** Specifies the maximum interval between two consecutive SPF calculations in milliseconds.  
The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms

**Context** [network-instance name string protocols isis instance name string timers spf max-wait number](#)

**Tree** [max-wait](#)

**Range** 10 to 120000

**Default** 10000

<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **second-wait** *number*

<b>Description</b>	Time interval between the the first and second SPF run. The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">timers spf second-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">second-wait</a>
<b>Range</b>	10 to 100000
<b>Default</b>	1000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **trace-options**

<b>Description</b>	Instance level debug trace options for IS-IS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **trace** *keyword*

<b>Description</b>	List of tracing options
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">trace-options</a> <a href="#">trace</a> <i>keyword</i>
<b>Tree</b>	<a href="#">trace</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">adjacencies</a></li> <li>• <a href="#">graceful-restart</a></li> <li>• <a href="#">interfaces</a></li> </ul>

- packets-all
- packets-p2p-hello
- packets-l1-hello
- packets-l2-hello
- packets-l1-psnp
- packets-l2-psnp
- packets-l1-csnp
- packets-l2-csnp
- packets-l1-lsp
- packets-l2-lsp
- routes
- summary-addresses

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## traffic-engineering

<b>Description</b>	container for traffic engineering information
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">traffic-engineering</a>
<b>Tree</b>	<a href="#">traffic-engineering</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## advertisement *boolean*

<b>Description</b>	A setting of false means that no TE-related TLVs and subTLVs should be added to LSAs or LSPs originated by this IGP instance. A setting of true means that TE-related TLVs and subTLVs should be added to LSAs or LSPs originated by this IGP instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">traffic-engineering advertisement</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertisement</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4-te-router-id** *string*

<b>Description</b>	<p>A routable IPv4 address to identify the router uniquely in a TE domain. TLV = 134.</p> <p>The ipv4-te-router-id contains the 4-octet router ID of the router originating the LSP. The ipv4-te-router-id guarantees a single stable address that can always be referenced in a path that will be reachable from multiple hops away, regardless of the state of the node's interfaces.</p> <p>The configured ipv4-te-router-id address must be active and reachable within the routing instance and must be associated to either a system or loopback interface. The state value represents the operational advertised of ipv4-te-router-id</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">traffic-engineering ipv4-te-router-id</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-te-router-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv6-te-router-id** *string*

<b>Description</b>	<p>A routable IPv6 address to identify the router uniquely in a TE domain. TLV = 140.</p> <p>The ipv6-te-router-id contains the 4-octet router ID of the router originating the LSP. The ipv6-te-router-id guarantees a single stable address that can always be referenced in a path that will be reachable from multiple hops away, regardless of the state of the node's interfaces.</p> <p>The configured ipv6-te-router-id address must be active and reachable within the routing instance and must be associated to either a system or loopback interface. The state value represents the operational advertised of ipv6-te-router-id</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">traffic-engineering ipv6-te-router-id</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv6-te-router-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**legacy-link-attribute-advertisement** *boolean*

<b>Description</b>	<p>The advertisement mode for TE link attributes.</p> <p>A setting of true means that TE properties should be advertised in legacy mode as defined in RFC 8919 and RFC 8920.</p>
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">traffic-engineering legacy-link-attribute-advertisement</a> <i>boolean</i>
<b>Tree</b>	<a href="#">legacy-link-attribute-advertisement</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## transport

<b>Description</b>	Enter the transport context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">transport</a>
<b>Tree</b>	<a href="#">transport</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## **lsp-mtu-size** *number*

<b>Description</b>	Sets the maximum size of LSPs generated by this router
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">transport lsp-mtu-size</a> <i>number</i>
<b>Tree</b>	<a href="#">lsp-mtu-size</a>
<b>Range</b>	490 to 9490
<b>Default</b>	1492
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## weighted-ecmp

<b>Description</b>	Enter the weighted-ecmp context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">weighted-ecmp</a>
<b>Tree</b>	<a href="#">weighted-ecmp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**admin-state** *keyword*

<b>Description</b>	Setting enable triggers weighted ECMP programming for all eligible multipath IS-IS routes associated with the instance  An IS-IS route is eligible for weighted ECMP if all the next-hop interfaces in the multipath set have a load-balancing-weight other than 'none'.  When weighted ECMP is disabled in an IS-IS instance all IS-IS multipath routes are programmed as normal ECMP, even if some or all of the next-hop interfaces in any particular multipath set have a load-balancing-weight other than 'none'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">weighted-ecmp admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**max-ecmp-hash-buckets-per-next-hop-group** *number*

<b>Description</b>	Specifies the maximum number of ECMP hash buckets per next-hop-group. Weighted ECMP weights are normalized based on this number of hash buckets.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">weighted-ecmp max-ecmp-hash-buckets-per-next-hop-group</a> <i>number</i>
<b>Tree</b>	<a href="#">max-ecmp-hash-buckets-per-next-hop-group</a>
<b>Range</b>	1 to 128
<b>Default</b>	128
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**non-stop-forwarding**

<b>Description</b>	Enter the non-stop-forwarding context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis non-stop-forwarding</a>
<b>Tree</b>	<a href="#">non-stop-forwarding</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **admin-state** *keyword*

**Description** Used to administratively enable or disable the IS-IS non-stop forwarding functionality.

**Context** [network-instance name](#) *string* [protocols isis non-stop-forwarding admin-state](#) *keyword*

**Tree** [admin-state](#)

**Default** disable

**Options**

- enable
- disable

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ldp**

**Description** Container for LDP configuration and state

**Context** [network-instance name](#) *string* [protocols ldp](#)

**Tree** [ldp](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **admin-state** *keyword*

**Description** Administratively enable or disable LDP

**Context** [network-instance name](#) *string* [protocols ldp admin-state](#) *keyword*

**Tree** [admin-state](#)

**Default** disable

**Options**

- enable
- disable

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**discovery**

<b>Description</b>	Neighbor discovery configuration and operational state
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery</a>
<b>Tree</b>	<a href="#">discovery</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**interfaces**

<b>Description</b>	The complete set of interfaces used for LDP Basic Discovery
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces</a>
<b>Tree</b>	<a href="#">interfaces</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**hello-holdtime** *number*

<b>Description</b>	The time interval for which a LDP Hello adjacency is maintained in the absence of Hello messages from the LDP neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces hello-holdtime</a> <i>number</i>
<b>Tree</b>	<a href="#">hello-holdtime</a>
<b>Range</b>	15 to 3600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**hello-interval** *number*

<b>Description</b>	The interval between consecutive LDP Hello messages used in LDP discovery
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces hello-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">hello-interval</a>
<b>Range</b>	5 to 1200
<b>Units</b>	seconds

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### interface *name string*

<b>Description</b>	List of LDP interfaces used for LDP Basic Discovery
<b>Context</b>	<a href="#">network-instance name string protocols ldp discovery interfaces interface name string</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### name *string*

<b>Description</b>	Reference to a specific subinterface that is bound to the network instance
<b>Context</b>	<a href="#">network-instance name string protocols ldp discovery interfaces interface name string</a>
<b>String Length</b>	5 to 25
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### hello-holdtime *number*

<b>Description</b>	The time interval for which a LDP Hello adjacency is maintained in the absence of Hello messages from the LDP neighbor
<b>Context</b>	<a href="#">network-instance name string protocols ldp discovery interfaces interface name string hello-holdtime number</a>
<b>Tree</b>	<a href="#">hello-holdtime</a>
<b>Range</b>	15 to 3600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### hello-interval *number*

<b>Description</b>	The interval between consecutive LDP Hello messages used in LDP discovery
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">hello-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">hello-interval</a>
<b>Range</b>	5 to 1200
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv4

<b>Description</b>	Enter the ipv4 context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4</a>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## admin-state *keyword*

<b>Description</b>	Administratively enable or disable LDP discovery for IPv4 on a particular interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## hello-adjacencies

<b>Description</b>	Container with a list of hello adjacencies
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 hello-adjacencies</a>
<b>Tree</b>	<a href="#">hello-adjacencies</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### adjacency [lsr-id reference](#) [label-space-id reference](#)

**Description** List of hello adjacencies

**Context** [network-instance name](#) *string* [protocols ldp discovery interfaces interface name](#) *string* [ipv4 hello-adjacencies adjacency lsr-id reference](#) [label-space-id reference](#)

**Tree** [adjacency](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### lsr-id [reference](#)

**Description** The LSR ID of the peer, as a portion of the peer LDP ID

**Context** [network-instance name](#) *string* [protocols ldp discovery interfaces interface name](#) *string* [ipv4 hello-adjacencies adjacency lsr-id reference](#) [label-space-id reference](#)

**Reference** [network-instance name](#) *string* [protocols ldp peers peer lsr-id \(ipv4-address | ipv6-address\)](#) [label-space-id number](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### label-space-id [reference](#)

**Description** The Label Space ID of the peer, as a portion of the peer LDP ID

**Context** [network-instance name](#) *string* [protocols ldp discovery interfaces interface name](#) *string* [ipv4 hello-adjacencies adjacency lsr-id reference](#) [label-space-id reference](#)

**Reference** [network-instance name](#) *string* [protocols ldp peers peer lsr-id \(ipv4-address | ipv6-address\)](#) [label-space-id number](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### hello-holdtime

**Description** Container for hello holdtime state information

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 hello-adjacencies adjacency lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">hello-holdtime</a>
<b>Tree</b>	<a href="#">hello-holdtime</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **negotiated** *number*

<b>Description</b>	The holdtime negotiated between this LSR and the adjacent LSR
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 hello-adjacencies adjacency lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">hello-holdtime</a> <a href="#">negotiated</a> <i>number</i>
<b>Tree</b>	<a href="#">negotiated</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **neighbor-proposed** *number*

<b>Description</b>	The holdtime value learned from the adjacent LSR
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 hello-adjacencies adjacency lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">hello-holdtime</a> <a href="#">neighbor-proposed</a> <i>number</i>
<b>Tree</b>	<a href="#">neighbor-proposed</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **remaining** *number*

<b>Description</b>	The time remaining until the holdtime timer expires
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 hello-adjacencies adjacency lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">hello-holdtime</a> <a href="#">remaining</a> <i>number</i>
<b>Tree</b>	<a href="#">remaining</a>
<b>Units</b>	seconds
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### hello-received *number*

**Description** The number of Hello messages received

**Context** [network-instance name](#) *string* [protocols ldp discovery interfaces interface name](#) *string* [ipv4 hello-adjacencies adjacency lsr-id](#) *reference* [label-space-id](#) *reference* [hello-received](#) *number*

**Tree** [hello-received](#)

**Default** 0

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### hello-sent *number*

**Description** The number of Hello messages sent

**Context** [network-instance name](#) *string* [protocols ldp discovery interfaces interface name](#) *string* [ipv4 hello-adjacencies adjacency lsr-id](#) *reference* [label-space-id](#) *reference* [hello-sent](#) *number*

**Tree** [hello-sent](#)

**Default** 0

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### local-address *string*

**Description** Local address of the hello adjacency

**Context** [network-instance name](#) *string* [protocols ldp discovery interfaces interface name](#) *string* [ipv4 hello-adjacencies adjacency lsr-id](#) *reference* [label-space-id](#) *reference* [local-address](#) *string*

**Tree** [local-address](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### remote-address *string*

**Description** Remote address of the hello adjacency

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 hello-adjacencies adjacency lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">remote-address</a> <i>string</i>
<b>Tree</b>	<a href="#">remote-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-oper-state-change** *string*

<b>Description</b>	The last time when the IPv4 oper-state changed
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 last-oper-state-change</a> <i>string</i>
<b>Tree</b>	<a href="#">last-oper-state-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **oper-down-reason** *keyword*

<b>Description</b>	Reason for the LDP interface being down from an IPv4 perspective
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ldp-interface-admin-down</li> <li>• ldp-instance-oper-down</li> <li>• network-instance-subinterface-down</li> <li>• out-of-resources</li> <li>• unknown</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **oper-state** *keyword*

<b>Description</b>	Operational state of IPv4 on the LDP interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>

<b>Options</b>	<ul style="list-style-type: none"> <li>• up</li> <li>• down</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## statistics

<b>Description</b>	Statistics objects
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## hello-message-errors

<b>Description</b>	Counters for received Hello message errors
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 statistics hello-message-errors</a>
<b>Tree</b>	<a href="#">hello-message-errors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## bad-message-length *number*

<b>Description</b>	The number of Hello messages received with a bad message length
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 statistics hello-message-errors bad-message-length</a> <i>number</i>
<b>Tree</b>	<a href="#">bad-message-length</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## bad-pdu-length *number*

<b>Description</b>	The number of Hello messages received with a bad PDU length
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 statistics hello-message-errors bad-pdu-length</a> <i>number</i>
<b>Tree</b>	<a href="#">bad-pdu-length</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **bad-protocol-version** *number*

<b>Description</b>	The number of Hello messages received with a bad protocol version
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 statistics hello-message-errors bad-protocol-version</a> <i>number</i>
<b>Tree</b>	<a href="#">bad-protocol-version</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **malformed-tlv-value** *number*

<b>Description</b>	The number of Hello messages received with a malformed TLV value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 statistics hello-message-errors malformed-tlv-value</a> <i>number</i>
<b>Tree</b>	<a href="#">malformed-tlv-value</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **hello-received** *number*

<b>Description</b>	The number of Hello messages received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 statistics hello-received</a> <i>number</i>
<b>Tree</b>	<a href="#">hello-received</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**hello-sent** *number*

<b>Description</b>	The number of Hello messages sent
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 statistics hello-sent</a> <i>number</i>
<b>Tree</b>	<a href="#">hello-sent</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**trace-options**

<b>Description</b>	Configure event/packet tracing for one specific LDP interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**trace** *keyword*

<b>Description</b>	Specifies the trace information to be captured
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 trace-options trace</a> <i>keyword</i>
<b>Tree</b>	<a href="#">trace</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all Trace all events and packets</li> <li>• events-discovery Trace session related events</li> <li>• messages-hello Trace Hello packets</li> <li>• messages-hello-detail Trace LDP Hello packets with detailed output</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**trace-options**

<b>Description</b>	Configure event/packet tracing for all LDP interfaces
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**trace keyword**

<b>Description</b>	Specifies the trace information to be captured
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces trace-options trace keyword</a>
<b>Tree</b>	<a href="#">trace</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all Trace all events and packets</li> <li>• events-discovery Trace session related events</li> <li>• messages-hello Trace Hello packets</li> <li>• messages-hello-detail Trace LDP Hello packets with detailed output</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**dynamic-label-block reference**

<b>Description</b>	Reference to a dynamic label block
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp dynamic-label-block reference</a>
<b>Tree</b>	<a href="#">dynamic-label-block</a>
<b>Reference</b>	<a href="#">system mpls label-ranges dynamic name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**dynamic-label-block-status** *keyword*

<b>Description</b>	Status of the label block The label block may show as unavailable if there is pending cleanup
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp dynamic-label-block-status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">dynamic-label-block-status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• available</li> <li>• unavailable</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**fec-resolution**

<b>Description</b>	Container with options for controlling IP prefix FEC resolution
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp fec-resolution</a>
<b>Tree</b>	<a href="#">fec-resolution</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**longest-prefix** *boolean*

<b>Description</b>	<p>When this is set to true IPv4/IPv6 prefix FECs can be resolved by less-specific IPv4/IPv6 routes in the route table, as long as the prefix bits of the route match the prefix bits of the FEC; the IP route with the longest prefix match is the route that is used to resolve the FEC.</p> <p>When this is set to false, IPv4/IPv6 prefix FECs can only be resolved by routes that are an exact match of the FEC in terms of prefix length</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp fec-resolution longest-prefix</a> <i>boolean</i>
<b>Tree</b>	<a href="#">longest-prefix</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**graceful-restart**

<b>Description</b>	Attributes for graceful restart
--------------------	---------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp graceful-restart</a>
<b>Tree</b>	<a href="#">graceful-restart</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **helper-enable** *boolean*

<b>Description</b>	Enable or disable graceful restart as a helper
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp graceful-restart helper-enable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">helper-enable</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **max-reconnect-time** *number*

<b>Description</b>	Specifies the maximum time interval, in seconds, that this router is willing to wait for the remote LDP peer to reconnect after an LDP communication failure
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp graceful-restart max-reconnect-time</a> <i>number</i>
<b>Tree</b>	<a href="#">max-reconnect-time</a>
<b>Range</b>	10 to 1800
<b>Default</b>	120
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **max-recovery-time** *number*

<b>Description</b>	Specifies the maximum time interval, in seconds, that this router is willing to preserve its MPLS forwarding state after receiving the Initialization message from the restarted LDP peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp graceful-restart max-recovery-time</a> <i>number</i>
<b>Tree</b>	<a href="#">max-recovery-time</a>
<b>Range</b>	30 to 3600

<b>Default</b>	120
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv4

<b>Description</b>	Container for configuration and state related to the IPv4 address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## bindings

<b>Description</b>	LDP address and label binding information
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a> <a href="#">bindings</a>
<b>Tree</b>	<a href="#">bindings</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## advertised-address

<b>Description</b>	Enter the advertised-address context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a> <a href="#">bindings</a> <a href="#">advertised-address</a>
<b>Tree</b>	<a href="#">advertised-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## peer [lsr-id](#) *reference* [label-space-id](#) *reference*

<b>Description</b>	List of LDP peers towards which IPv4 address bindings have been sent
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a> <a href="#">bindings</a> <a href="#">advertised-address</a> <a href="#">peer</a> <a href="#">lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">peer</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### lsr-id reference

**Description** The LSR ID of the peer, as a portion of the peer LDP ID

**Context** [network-instance name](#) [string](#) [protocols](#) [ldp](#) [ipv4](#) [bindings](#) [advertised-address](#) [peer](#) [lsr-id reference](#) [label-space-id reference](#)

**Reference** [network-instance name](#) [string](#) [protocols](#) [ldp](#) [peers](#) [peer](#) [lsr-id \(ipv4-address | ipv6-address\)](#) [label-space-id](#) [number](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### label-space-id reference

**Description** The Label Space ID of the peer, as a portion of the peer LDP ID

**Context** [network-instance name](#) [string](#) [protocols](#) [ldp](#) [ipv4](#) [bindings](#) [advertised-address](#) [peer](#) [lsr-id reference](#) [label-space-id reference](#)

**Reference** [network-instance name](#) [string](#) [protocols](#) [ldp](#) [peers](#) [peer](#) [lsr-id \(ipv4-address | ipv6-address\)](#) [label-space-id](#) [number](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ip-address string

**Description** The list of IPv4 address bindings sent to the peer

**Context** [network-instance name](#) [string](#) [protocols](#) [ldp](#) [ipv4](#) [bindings](#) [advertised-address](#) [peer](#) [lsr-id reference](#) [label-space-id reference](#) [ip-address](#) [string](#)

**Tree** [ip-address](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### advertised-prefix-fecs [fec](#) [string](#) [lsr-id reference](#) [label-space-id reference](#)

**Description** List of IPv4 FEC-label bindings advertised to LDP peers

**Context** [network-instance name](#) [string](#) [protocols](#) [ldp](#) [ipv4](#) [bindings](#) [advertised-prefix-fecs](#) [fec](#) [string](#) [lsr-id reference](#) [label-space-id reference](#)

**Tree** [advertised-prefix-fecs](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### fec string

**Description** The prefix FEC value in the FEC-label binding, advertised in a Label Mapping message sent to a peer

**Context** [network-instance name string protocols ldp ipv4 bindings advertised-prefix-fecs fec string lsr-id reference label-space-id reference](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### lsr-id reference

**Description** The LSR ID of the peer, as a portion of the peer LDP ID

**Context** [network-instance name string protocols ldp ipv4 bindings advertised-prefix-fecs fec string lsr-id reference label-space-id reference](#)

**Reference** [network-instance name string protocols ldp peers peer lsr-id \(ipv4-address | ipv6-address\) label-space-id number](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### label-space-id reference

**Description** The Label Space ID of the peer, as a portion of the peer LDP ID

**Context** [network-instance name string protocols ldp ipv4 bindings advertised-prefix-fecs fec string lsr-id reference label-space-id reference](#)

**Reference** [network-instance name string protocols ldp peers peer lsr-id \(ipv4-address | ipv6-address\) label-space-id number](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### egress-lsr-fec boolean

**Description** When set true, the router is the egress LSR for the FEC (the FEC is locally originated)

**Context** [network-instance name string protocols ldp ipv4 bindings advertised-prefix-fecs fec string lsr-id reference label-space-id reference egress-lsr-fec boolean](#)

**Tree** [egress-lsr-fec](#)

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **label** (*number* | *keyword*)

<b>Description</b>	Advertised label value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings advertised-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a> <b>label</b> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> <li>• IMPLICIT_NULL</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **label-status** *keyword*

<b>Description</b>	Label status
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings advertised-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a> <b>label-status</b> <i>keyword</i>
<b>Tree</b>	<a href="#">label-status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• released</li> <li>• withdrawn</li> <li>• wdraw-pending</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **label-type** *keyword*

<b>Description</b>	The label type of the advertised label
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings advertised-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a> <b>label-type</b> <i>keyword</i>
<b>Tree</b>	<a href="#">label-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• pop</li> </ul>

- An advertised label that is programmed with a POP operation
- swap
- An advertised label that is programmed with a SWAP operation

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## received-address

<b>Description</b>	Enter the received-address context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a> <a href="#">bindings</a> <a href="#">received-address</a>
<b>Tree</b>	<a href="#">received-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## peer [lsr-id reference](#) [label-space-id reference](#)

<b>Description</b>	List of LDP peers from which IPv4 address bindings have been received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a> <a href="#">bindings</a> <a href="#">received-address</a> <a href="#">peer</a> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a>
<b>Tree</b>	<a href="#">peer</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## [lsr-id reference](#)

<b>Description</b>	The LSR ID of the peer, as a portion of the peer LDP ID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a> <a href="#">bindings</a> <a href="#">received-address</a> <a href="#">peer</a> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## [label-space-id reference](#)

<b>Description</b>	The Label Space ID of the peer, as a portion of the peer LDP ID
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-address peer lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ip-address** *string*

<b>Description</b>	The list of IPv4 address bindings received from the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-address peer lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">ip-address</a> <i>string</i>
<b>Tree</b>	<a href="#">ip-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **received-prefix-fecs** [fec](#) *string* [lsr-id](#) *reference* [label-space-id](#) *reference*

<b>Description</b>	List of IPv4 FEC-label bindings received from LDP peers
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i>
<b>Tree</b>	<a href="#">received-prefix-fecs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **fec** *string*

<b>Description</b>	The prefix FEC value in the FEC-label binding, learned in a Label Mapping message received from a peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **lsr-id** *reference*

<b>Description</b>	The LSR ID of the peer, as a portion of the peer LDP ID
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer</a> <a href="#">lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **label-space-id** *reference*

<b>Description</b>	The Label Space ID of the peer, as a portion of the peer LDP ID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer</a> <a href="#">lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **entropy-label-transmit** *boolean*

<b>Description</b>	Entropy label (EL/ELI) is pushed when transmitting to this peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">entropy-label-transmit</a> <i>boolean</i>
<b>Tree</b>	<a href="#">entropy-label-transmit</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ingress-lsr-fec** *boolean*

<b>Description</b>	When set true, the router is an ingress LSR for the FEC
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">ingress-lsr-fec</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ingress-lsr-fec</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**label** (*number* | *keyword*)

<b>Description</b>	Received label value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a> <b>label</b> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> <li>• IMPLICIT_NULL</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**next-hop** [index number](#)

<b>Description</b>	List of ECMP next-hops towards the LDP peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a> <b>next-hop</b> <a href="#">index number</a>
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**index** *number*

<b>Description</b>	Label ID index entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a> <b>next-hop</b> <a href="#">index number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**interface** *string*

<b>Description</b>	The outgoing interface towards the LDP peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a> <b>next-hop</b> <a href="#">index number</a> <b>interface</b> <i>string</i>

<b>Tree</b>	<a href="#">interface</a>
<b>String Length</b>	5 to 25
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **next-hop** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP next-hop towards the LDP peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a> <a href="#">bindings</a> <a href="#">received-prefix-fecs</a> <a href="#">fec</a> <i>string</i> <a href="#">lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i> <a href="#">next-hop</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **next-hop-type** *keyword*

<b>Description</b>	Type of next-hop
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a> <a href="#">bindings</a> <a href="#">received-prefix-fecs</a> <a href="#">fec</a> <i>string</i> <a href="#">lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i> <a href="#">next-hop-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">next-hop-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• primary</li> <li>• alternate</li> <li>• rifa</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **outer-label** (*number* | *keyword*)

<b>Description</b>	Outer label value for RLFA
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a> <a href="#">bindings</a> <a href="#">received-prefix-fecs</a> <a href="#">fec</a> <i>string</i> <a href="#">lsr-id</a> <i>reference</i> <a href="#">label-space-id</a> <i>reference</i> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i> <a href="#">outer-label</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">outer-label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> </ul>

	<ul style="list-style-type: none"> <li>IPV6_EXPLICIT_NULL</li> <li>IMPLICIT_NULL</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### not-used-reason *keyword*

<b>Description</b>	The reason why the label mapping is not being used in the dataplane
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a> <b>not-used-reason</b> <i>keyword</i>
<b>Tree</b>	<a href="#">not-used-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>rejected-on-rx The received FEC was rejected either because non-host FEC or rejected by import policy</li> <li>exceeds-multipath-limit The LDP multipath ECMP limit has been reached</li> <li>exceeds-fec-limit The FEC limit has been reached</li> <li>fec-unresolved The IP prefix FEC is unused because there is no resolving route matching the IP prefix</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### used-in-forwarding *boolean*

<b>Description</b>	Reads true if the label is used in forwarding and has been programmed for a push operation
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings received-prefix-fecs fec</a> <i>string</i> <a href="#">lsr-id reference</a> <a href="#">label-space-id reference</a> <b>used-in-forwarding</b> <i>boolean</i>
<b>Tree</b>	<a href="#">used-in-forwarding</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**service-fec128** *virtual-circuit-type* *keyword* *virtual-circuit-identifier* *number* *peer-lsr-id*  
(*ipv4-address* | *ipv6-address*)

<b>Description</b>	Service FEC128 binding
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings service-fec128 virtual-circuit-type</a> <i>keyword</i> <a href="#">virtual-circuit-identifier</a> <i>number</i> <a href="#">peer-lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">service-fec128</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**virtual-circuit-type** *keyword*

<b>Description</b>	The virtual circuit (VC) type of the pseudowire
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings service-fec128 virtual-circuit-type</a> <i>keyword</i> <a href="#">virtual-circuit-identifier</a> <i>number</i> <a href="#">peer-lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Options</b>	<ul style="list-style-type: none"> <li>• ethernet</li> <li>• vlan</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**virtual-circuit-identifier** *number*

<b>Description</b>	The virtual circuit identifier of the pseudowire
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings service-fec128 virtual-circuit-type</a> <i>keyword</i> <a href="#">virtual-circuit-identifier</a> <i>number</i> <a href="#">peer-lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**peer-lsr-id** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Peer IP address, LSR-id
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings service-fec128 virtual-circuit-type</a> <i>keyword</i> <a href="#">virtual-circuit-identifier</a> <i>number</i> <a href="#">peer-lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## advertised

**Description** Configuration and state related to advertised service FECs

**Context** [network-instance name](#) *string* [protocols ldp ipv4 bindings service-fec128 virtual-circuit-type](#) *keyword* [virtual-circuit-identifier](#) *number* [peer-lsr-id \(ipv4-address | ipv6-address\)](#) [advertised](#)

**Tree** [advertised](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## control-word *boolean*

**Description** Whether control word capability is advertised

**Context** [network-instance name](#) *string* [protocols ldp ipv4 bindings service-fec128 virtual-circuit-type](#) *keyword* [virtual-circuit-identifier](#) *number* [peer-lsr-id \(ipv4-address | ipv6-address\)](#) [advertised control-word](#) *boolean*

**Tree** [control-word](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## l2-mtu *number*

**Description** Layer-2 MTU advertised to the remote peer in bytes

**Context** [network-instance name](#) *string* [protocols ldp ipv4 bindings service-fec128 virtual-circuit-type](#) *keyword* [virtual-circuit-identifier](#) *number* [peer-lsr-id \(ipv4-address | ipv6-address\)](#) [advertised l2-mtu](#) *number*

**Tree** [l2-mtu](#)

**Units** bytes

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## label (*number* | *keyword*)

**Description** The received label from the remote peer

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings service-fec128 virtual-circuit-type</a> <i>keyword</i> <a href="#">virtual-circuit-identifier</a> <i>number</i> <a href="#">peer-lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">advertised label</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> <li>• IMPLICIT_NULL</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**label-status** *keyword*

<b>Description</b>	The status of the advertised label
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings service-fec128 virtual-circuit-type</a> <i>keyword</i> <a href="#">virtual-circuit-identifier</a> <i>number</i> <a href="#">peer-lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">advertised label-status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">label-status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• in-use-pop</li> <li>• released</li> <li>• withdrawn</li> <li>• withdraw-pending</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**pw-status** *boolean*

<b>Description</b>	Whether or not the router advertising the associated label supports pseudowire status signaling
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings service-fec128 virtual-circuit-type</a> <i>keyword</i> <a href="#">virtual-circuit-identifier</a> <i>number</i> <a href="#">peer-lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">advertised pw-status</a> <i>boolean</i>
<b>Tree</b>	<a href="#">pw-status</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**signaling-status** *keyword*

<b>Description</b>	Indicates the signaling status
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings service-fec128 virtual-circuit-type</a> <i>keyword</i> <a href="#">virtual-circuit-identifier</a> <i>number</i> <a href="#">peer-lsr-id (ipv4-address   ipv6-address)</a> <a href="#">advertised signaling-status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">signaling-status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• pseudowire-not-forwarding</li> <li>• local-attachment-circuit-ingress-fault</li> <li>• local-attachment-circuit-egress-fault</li> <li>• provider-service-network-ingress-fault</li> <li>• provider-service-network-egress-fault</li> <li>• pseudowire-forwarding-standby</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**withdraw-reason** *keyword*

<b>Description</b>	Indicates the reason of withdrawl of the ingress label
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings service-fec128 virtual-circuit-type</a> <i>keyword</i> <a href="#">virtual-circuit-identifier</a> <i>number</i> <a href="#">peer-lsr-id (ipv4-address   ipv6-address)</a> <a href="#">advertised withdraw-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">withdraw-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• local-fault</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**binding-oper-down-reason** *keyword*

<b>Description</b>	The reason why the binding is operationally down
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings service-fec128 virtual-circuit-type</a> <i>keyword</i> <a href="#">virtual-circuit-identifier</a> <i>number</i> <a href="#">peer-lsr-id (ipv4-address   ipv6-address)</a> <a href="#">binding-oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">binding-oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• vc-type-mismatch</li> <li>• control-word-mismatch</li> </ul>

- transport-tunnel-oper-down
- ldp-resource-exhausted
- no-egress-label

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **binding-oper-state** *keyword*

<b>Description</b>	Operational state of the binding
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings service-fec128 virtual-circuit-type</a> <i>keyword</i> <a href="#">virtual-circuit-identifier</a> <i>number</i> <a href="#">peer-lsr-id (ipv4-address   ipv6-address)</a> <a href="#">binding-oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">binding-oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up</li> <li>• down</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **received**

<b>Description</b>	Configuration and state related to received service FECs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings service-fec128 virtual-circuit-type</a> <i>keyword</i> <a href="#">virtual-circuit-identifier</a> <i>number</i> <a href="#">peer-lsr-id (ipv4-address   ipv6-address)</a> <a href="#">received</a>
<b>Tree</b>	<a href="#">received</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **control-word** *boolean*

<b>Description</b>	Whether control word capability is received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings service-fec128 virtual-circuit-type</a> <i>keyword</i> <a href="#">virtual-circuit-identifier</a> <i>number</i> <a href="#">peer-lsr-id (ipv4-address   ipv6-address)</a> <a href="#">received control-word</a> <i>boolean</i>
<b>Tree</b>	<a href="#">control-word</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**l2-mtu** *number*

<b>Description</b>	Layer-2 MTU received from the remote peer in bytes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings service-fec128 virtual-circuit-type</a> <i>keyword</i> <a href="#">virtual-circuit-identifier</a> <i>number</i> <a href="#">peer-lsr-id (ipv4-address   ipv6-address)</a> <a href="#">received l2-mtu</a> <i>number</i>
<b>Tree</b>	<a href="#">l2-mtu</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**label** (*number* | *keyword*)

<b>Description</b>	The received label from the remote peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings service-fec128 virtual-circuit-type</a> <i>keyword</i> <a href="#">virtual-circuit-identifier</a> <i>number</i> <a href="#">peer-lsr-id (ipv4-address   ipv6-address)</a> <a href="#">received label</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> <li>• IMPLICIT_NULL</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**label-status** *keyword*

<b>Description</b>	The status of the received label
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 bindings service-fec128 virtual-circuit-type</a> <i>keyword</i> <a href="#">virtual-circuit-identifier</a> <i>number</i> <a href="#">peer-lsr-id (ipv4-address   ipv6-address)</a> <a href="#">received label-status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">label-status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• in-use-push</li> <li>• released</li> <li>• withdrawn</li> <li>• withdraw-pending</li> </ul>
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **pw-status** *boolean*

**Description** Whether or not the router advertising the associated label supports pseudowire status signaling

**Context** [network-instance name](#) *string* [protocols ldp ipv4 bindings service-fec128 virtual-circuit-type](#) *keyword* [virtual-circuit-identifier](#) *number* [peer-lsr-id \(ipv4-address | ipv6-address\)](#) [received pw-status](#) *boolean*

**Tree** [pw-status](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **signaling-status** *keyword*

**Description** Indicates the signaling status

**Context** [network-instance name](#) *string* [protocols ldp ipv4 bindings service-fec128 virtual-circuit-type](#) *keyword* [virtual-circuit-identifier](#) *number* [peer-lsr-id \(ipv4-address | ipv6-address\)](#) [received signaling-status](#) *keyword*

**Tree** [signaling-status](#)

**Options**

- none
- pseudowire-not-forwarding
- local-attachment-circuit-ingress-fault
- local-attachment-circuit-egress-fault
- provider-service-network-ingress-fault
- provider-service-network-egress-fault
- pseudowire-forwarding-standby

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-oper-state-change** *string*

**Description** The last time that the IPv4 oper-state changed

**Context** [network-instance name](#) *string* [protocols ldp ipv4 last-oper-state-change](#) *string*

**Tree** [last-oper-state-change](#)

**String Length** 20 to 32

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**lsr-id** *string*

<b>Description</b>	Returns the value that is being used as the LDP LSR ID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 lsr-id</a> <i>string</i>
<b>Tree</b>	<a href="#">lsr-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**oper-down-reason** *keyword*

<b>Description</b>	The reason for the LDP for IPv4 being operationally down
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ldp-admin-disabled</li> <li>• mpls-admin-disabled</li> <li>• no-system-ipv4-address System IPv4 address is used as the LSR ID. If this dependency is missing LDP is down</li> <li>• net-instance-mgr-down</li> <li>• label-block-unavailable</li> <li>• no-resource Memory allocation failure</li> <li>• unknown Other failure reason</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**oper-state** *keyword*

<b>Description</b>	The operational state of LDP for IPv4
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp ipv4 oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up</li> </ul>

- Component or process is operational
- down
- Component or process is not operational
- empty
- Component slot is empty
- downloading
- Component is downloading image into memory
- booting
- Component is booting downloaded image
- starting
- Component image operational, application processes starting
- failed
- Component or process has failed
- synchronizing
- Component is currently being synchronized
- upgrading
- Component is currently being upgraded
- low-power
- Component is offline due to insufficient system power
- degraded
- Component or process is in a degraded state
- warm-reboot
- Component or process is currently warm rebooting
- This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
- Component or process is currently waiting
- This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**oper-up-to-down-transitions** *number***Description**

The number of times the oper state for IPv4 has transitioned from up to down

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">ipv4</a> <a href="#">oper-up-to-down-transitions</a> <i>number</i>
<b>Tree</b>	<a href="#">oper-up-to-down-transitions</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## multipath

<b>Description</b>	Container with options to configure load-balancing over equal-cost paths
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">multipath</a>
<b>Tree</b>	<a href="#">multipath</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## max-paths *number*

<b>Description</b>	Specifies the maximum number of next-hops used for load-balancing toward towards a given FEC
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">multipath</a> <a href="#">max-paths</a> <i>number</i>
<b>Tree</b>	<a href="#">max-paths</a>
<b>Range</b>	1 to 64
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## peers

<b>Description</b>	Configuration and state related to peers
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a>
<b>Tree</b>	<a href="#">peers</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## peer [lsr-id](#) ([ipv4-address](#) | [ipv6-address](#)) [label-space-id](#) *number*

<b>Description</b>	List of peers
--------------------	---------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i>
<b>Tree</b>	<a href="#">peer</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **lsr-id** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The LSR ID of the peer, to identify the globally unique LSR. This leaf is used together with the leaf 'label-space-id' to form the LDP ID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **label-space-id** *number*

<b>Description</b>	The Label Space ID of the peer, to identify a specific label space within the LSR. This is the last two octets of the LDP ID. This leaf is used together with the leaf 'lsr-id' to form the LDP ID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **adjacency-type** *keyword*

<b>Description</b>	The value indicates the adjacency type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">adjacency-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">adjacency-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>link</li> <li>targeted</li> <li>both</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**end-of-lib**

<b>Description</b>	Container with state information pertaining to sent and received End of LIB markers
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">end-of-lib</a>
<b>Tree</b>	<a href="#">end-of-lib</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4-prefix-fecs**

<b>Description</b>	Enter the ipv4-prefix-fecs context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">end-of-lib</a> <a href="#">ipv4-prefix-fecs</a>
<b>Tree</b>	<a href="#">ipv4-prefix-fecs</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**received** *boolean*

<b>Description</b>	When this is true, an End-of-LIB marker was received from the LDP peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">end-of-lib</a> <a href="#">ipv4-prefix-fecs</a> <a href="#">received</a> <i>boolean</i>
<b>Tree</b>	<a href="#">received</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sent** *boolean*

<b>Description</b>	When this is true, an End-of-LIB marker was sent to the LDP peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">end-of-lib</a> <a href="#">ipv4-prefix-fecs</a> <a href="#">sent</a> <i>boolean</i>
<b>Tree</b>	<a href="#">sent</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**fec-limit** *number*

<b>Description</b>	The maximum number of FECs of all types combined that will be accepted from the peer The value 0 implies no limit
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <b>fec-limit</b> <i>number</i>
<b>Tree</b>	<a href="#">fec-limit</a>
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**fec-limit-exceeded** *boolean*

<b>Description</b>	Reads true when the peer has sent more FECs than the configured limit
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <b>fec-limit-exceeded</b> <i>boolean</i>
<b>Tree</b>	<a href="#">fec-limit-exceeded</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**graceful-restart**

<b>Description</b>	Graceful restart operational state
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <b>graceful-restart</b>
<b>Tree</b>	<a href="#">graceful-restart</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**peer-reconnect-time** *number*

<b>Description</b>	The requested reconnect time
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <b>graceful-restart</b> <b>peer-reconnect-time</b> <i>number</i>
<b>Tree</b>	<a href="#">peer-reconnect-time</a>
<b>Range</b>	10 to 1800

<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### peer-recovery-time *number*

<b>Description</b>	The requested recovery time
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">graceful-restart peer-recovery-time</a> <i>number</i>
<b>Tree</b>	<a href="#">peer-recovery-time</a>
<b>Range</b>	30 to 3600
<b>Default</b>	120
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### peer-restarting *boolean*

<b>Description</b>	If true, the peer is currently in the process of restarting
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">graceful-restart peer-restarting</a> <i>boolean</i>
<b>Tree</b>	<a href="#">peer-restarting</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### label-advertisement-mode

<b>Description</b>	Label advertisement mode state
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">label-advertisement-mode</a>
<b>Tree</b>	<a href="#">label-advertisement-mode</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**negotiated** *keyword*

<b>Description</b>	Negotiated Label Advertisement Mode
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">label-advertisement-mode negotiated</a> <i>keyword</i>
<b>Tree</b>	<a href="#">negotiated</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>downstream-unsolicited Downstream Unsolicited</li> <li>downstream-on-demand Downstream on Demand</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-oper-state-change** *string*

<b>Description</b>	Last time the peer state changed
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">last-oper-state-change</a> <i>string</i>
<b>Tree</b>	<a href="#">last-oper-state-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**overload**

<b>Description</b>	Overload state of the session
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">overload</a>
<b>Tree</b>	<a href="#">overload</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**local-router-is-overloaded** *boolean*

<b>Description</b>	This router transmitted an overload TLV requesting that the peer stop advertising new FECs
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">overload</a> <a href="#">local-router-is-overloaded</a> <i>boolean</i>
<b>Tree</b>	<a href="#">local-router-is-overloaded</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **peer-is-overloaded** *boolean*

<b>Description</b>	The peer has sent an overload TLV to this router requesting that we stop advertising new FECs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">overload</a> <a href="#">peer-is-overloaded</a> <i>boolean</i>
<b>Tree</b>	<a href="#">peer-is-overloaded</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **received-capabilities**

<b>Description</b>	Capabilities signalled by the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities</a>
<b>Tree</b>	<a href="#">received-capabilities</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **dual-stack-capability** *boolean*

<b>Description</b>	Dual stack capability. TLV 0x0701
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities</a> <a href="#">dual-stack-capability</a> <i>boolean</i>
<b>Tree</b>	<a href="#">dual-stack-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**dynamic-capability** *boolean*

<b>Description</b>	Dynamic capability advertisement capability. Indicates support for Capability messages. TLV 0x0506
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities dynamic-capability</a> <i>boolean</i>
<b>Tree</b>	<a href="#">dynamic-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**entropy-label-capability** *boolean*

<b>Description</b>	Entropy label capability. TLV 0x0206
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities entropy-label-capability</a> <i>boolean</i>
<b>Tree</b>	<a href="#">entropy-label-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**graceful-restart-capability** *boolean*

<b>Description</b>	Fault tolerance protection TLV 0x0503
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities graceful-restart-capability</a> <i>boolean</i>
<b>Tree</b>	<a href="#">graceful-restart-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**make-before-break-capability** *boolean*

<b>Description</b>	Make before break capability. TLV 0x050A
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities make-before-break-capability</a> <i>boolean</i>
<b>Tree</b>	<a href="#">make-before-break-capability</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **multipoint-to-multipoint-capability** *boolean*

**Description** Multipoint to multipoint FEC capability. TLV 0x0509

**Context** [network-instance name](#) *string* [protocols](#) [ldp](#) [peers](#) [peer](#) [lsr-id](#) ([ipv4-address](#) | [ipv6-address](#)) [label-space-id](#) *number* [received-capabilities](#) [multipoint-to-multipoint-capability](#) *boolean*

**Tree** [multipoint-to-multipoint-capability](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **nokia-vendor-overload-capability** *boolean*

**Description** Overload capability

**Context** [network-instance name](#) *string* [protocols](#) [ldp](#) [peers](#) [peer](#) [lsr-id](#) ([ipv4-address](#) | [ipv6-address](#)) [label-space-id](#) *number* [received-capabilities](#) [nokia-vendor-overload-capability](#) *boolean*

**Tree** [nokia-vendor-overload-capability](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **point-to-multipoint-capability** *boolean*

**Description** Point to multipoint FEC capability. TLV 0x0508

**Context** [network-instance name](#) *string* [protocols](#) [ldp](#) [peers](#) [peer](#) [lsr-id](#) ([ipv4-address](#) | [ipv6-address](#)) [label-space-id](#) *number* [received-capabilities](#) [point-to-multipoint-capability](#) *boolean*

**Tree** [point-to-multipoint-capability](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **state-advertisement-control**

**Description** State advertisement control capability. TLV 0x050D

**Context** [network-instance name](#) *string* [protocols](#) [ldp](#) [peers](#) [peer](#) [lsr-id](#) ([ipv4-address](#) | [ipv6-address](#)) [label-space-id](#) *number* [received-capabilities](#) [state-advertisement-control](#)

<b>Tree</b>	<a href="#">state-advertisement-control</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ipv4-prefix-disable** *boolean*

<b>Description</b>	Indicates desire to not receive IPv4 prefix FECs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities</a> <a href="#">state-advertisement-control</a> <a href="#">ipv4-prefix-disable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv4-prefix-disable</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **p2p-pseudowire-fec-128-disable** *boolean*

<b>Description</b>	Indicates desire to not receive P2P PW FEC 128 FECs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities</a> <a href="#">state-advertisement-control</a> <a href="#">p2p-pseudowire-fec-128-disable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">p2p-pseudowire-fec-128-disable</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **p2p-pseudowire-fec-129-disable** *boolean*

<b>Description</b>	Indicates desire to not receive P2P PW FEC 129 FECs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities</a> <a href="#">state-advertisement-control</a> <a href="#">p2p-pseudowire-fec-129-disable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">p2p-pseudowire-fec-129-disable</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **unrecognized-notification-capability** *boolean*

<b>Description</b>	Unrecognized notification capability. TLV 0x0603
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">received-capabilities unrecognized-notification-capability</a> <i>boolean</i>
<b>Tree</b>	<a href="#">unrecognized-notification-capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### session-holdtime

<b>Description</b>	Session holdtime state
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">session-holdtime</a>
<b>Tree</b>	<a href="#">session-holdtime</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### negotiated *number*

<b>Description</b>	Negotiated holdtime
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">session-holdtime</a> <a href="#">negotiated</a> <i>number</i>
<b>Tree</b>	<a href="#">negotiated</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### peer-proposed *number*

<b>Description</b>	Peer holdtime
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">session-holdtime</a> <a href="#">peer-proposed</a> <i>number</i>
<b>Tree</b>	<a href="#">peer-proposed</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**remaining** *number*

<b>Description</b>	Remaining holdtime
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">session-holdtime</a> <a href="#">remaining</a> <i>number</i>
<b>Tree</b>	<a href="#">remaining</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**session-state** *keyword*

<b>Description</b>	Representing the operational status of the LDP session
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">session-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">session-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• non-existent NON EXISTENT state. Transport disconnected</li> <li>• initialized INITIALIZED state</li> <li>• openrec OPENREC state</li> <li>• opensent OPENSENT state</li> <li>• operational OPERATIONAL state</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**statistics**

<b>Description</b>	Statistics objects
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**address-statistics**

<b>Description</b>	Enter the address-statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">address-statistics</a>
<b>Tree</b>	<a href="#">address-statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4**

<b>Description</b>	Enter the ipv4 context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">address-statistics</a> <a href="#">ipv4</a>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**advertised-addresses** *number*

<b>Description</b>	The number of IPv4 addresses advertised to a peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">address-statistics</a> <a href="#">ipv4</a> <a href="#">advertised-addresses</a> <i>number</i>
<b>Tree</b>	<a href="#">advertised-addresses</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**received-addresses** *number*

<b>Description</b>	The number of IPv4 addresses received from a peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">address-statistics</a> <a href="#">ipv4</a> <a href="#">received-addresses</a> <i>number</i>
<b>Tree</b>	<a href="#">received-addresses</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### fec-statistics

<b>Description</b>	Enter the fec-statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics fec-statistics</a>
<b>Tree</b>	<a href="#">fec-statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv4-prefix

<b>Description</b>	Enter the ipv4-prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics fec-statistics ipv4-prefix</a>
<b>Tree</b>	<a href="#">ipv4-prefix</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### advertised-fecs *number*

<b>Description</b>	The number of advertised IPv4 prefix FECs to a single peer or all peers. In the overall summary the same FEC prefix advertised to multiple peers counts as 1
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics fec-statistics ipv4-prefix advertised-fecs</a> <i>number</i>
<b>Tree</b>	<a href="#">advertised-fecs</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### received-fecs *number*

<b>Description</b>	The number of received IPv4 prefix FECs from a single peer or all peers. In the overall summary the same FEC prefix from different peers counts as 1
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics fec-statistics</a> <a href="#">ipv4-prefix received-fecs</a> <i>number</i>
<b>Tree</b>	<a href="#">received-fecs</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## received-messages

<b>Description</b>	Inbound statistics
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics received-messages</a>
<b>Tree</b>	<a href="#">received-messages</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## address *number*

<b>Description</b>	The number of address messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics received-messages address</a> <i>number</i>
<b>Tree</b>	<a href="#">address</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## address-withdraw *number*

<b>Description</b>	The number of address-withdraw messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics received-messages address-withdraw</a> <i>number</i>
<b>Tree</b>	<a href="#">address-withdraw</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**capability number**

<b>Description</b>	The number of messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">received-messages</a> <a href="#">capability number</a>
<b>Tree</b>	<a href="#">capability</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**initialization number**

<b>Description</b>	The number of initialization messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">received-messages</a> <a href="#">initialization number</a>
<b>Tree</b>	<a href="#">initialization</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**keepalive number**

<b>Description</b>	The number of keepalive messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">received-messages</a> <a href="#">keepalive number</a>
<b>Tree</b>	<a href="#">keepalive</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**label-abort-request number**

<b>Description</b>	The number of label-abort-request messages sent or received
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">received-messages</a> <a href="#">label-abort-request</a> <i>number</i>
<b>Tree</b>	<a href="#">label-abort-request</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### label-mapping *number*

<b>Description</b>	The number of label-mapping messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">received-messages</a> <a href="#">label-mapping</a> <i>number</i>
<b>Tree</b>	<a href="#">label-mapping</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### label-release *number*

<b>Description</b>	The number of label-release messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">received-messages</a> <a href="#">label-release</a> <i>number</i>
<b>Tree</b>	<a href="#">label-release</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### label-request *number*

<b>Description</b>	The number of label-request messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">received-messages</a> <a href="#">label-request</a> <i>number</i>
<b>Tree</b>	<a href="#">label-request</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### label-withdraw *number*

<b>Description</b>	The number of label-withdraw messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics received-messages label-withdraw</a> <i>number</i>
<b>Tree</b>	<a href="#">label-withdraw</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### notification *number*

<b>Description</b>	The number of messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics received-messages notification</a> <i>number</i>
<b>Tree</b>	<a href="#">notification</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### total-messages *number*

<b>Description</b>	The number of messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics received-messages total-messages</a> <i>number</i>
<b>Tree</b>	<a href="#">total-messages</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sent-messages**

<b>Description</b>	Outbound statistics
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">statistics</a> <a href="#">sent-messages</a>
<b>Tree</b>	<a href="#">sent-messages</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**address number**

<b>Description</b>	The number of address messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">statistics</a> <a href="#">sent-messages</a> <a href="#">address</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">address</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**address-withdraw number**

<b>Description</b>	The number of address-withdraw messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">statistics</a> <a href="#">sent-messages</a> <a href="#">address-withdraw</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">address-withdraw</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**capability number**

<b>Description</b>	The number of messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">statistics</a> <a href="#">sent-messages</a> <a href="#">capability</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">capability</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **initialization number**

<b>Description</b>	The number of initialization messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages initialization number</a>
<b>Tree</b>	<a href="#">initialization</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **keepalive number**

<b>Description</b>	The number of keepalive messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages keepalive number</a>
<b>Tree</b>	<a href="#">keepalive</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **label-abort-request number**

<b>Description</b>	The number of label-abort-request messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages label-abort-request number</a>
<b>Tree</b>	<a href="#">label-abort-request</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**label-mapping** *number*

<b>Description</b>	The number of label-mapping messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages label-mapping</a> <i>number</i>
<b>Tree</b>	<a href="#">label-mapping</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**label-release** *number*

<b>Description</b>	The number of label-release messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages label-release</a> <i>number</i>
<b>Tree</b>	<a href="#">label-release</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**label-request** *number*

<b>Description</b>	The number of label-request messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages label-request</a> <i>number</i>
<b>Tree</b>	<a href="#">label-request</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**label-withdraw** *number*

<b>Description</b>	The number of label-withdraw messages sent or received
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers peer lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">statistics sent-messages label-withdraw</a> <i>number</i>

<b>Tree</b>	<a href="#">label-withdraw</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **notification number**

<b>Description</b>	The number of messages sent or received
<b>Context</b>	<a href="#">network-instance name string protocols ldp peers peer lsr-id (ipv4-address   ipv6-address) label-space-id number statistics sent-messages notification number</a>
<b>Tree</b>	<a href="#">notification</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **total-messages number**

<b>Description</b>	The number of messages sent or received
<b>Context</b>	<a href="#">network-instance name string protocols ldp peers peer lsr-id (ipv4-address   ipv6-address) label-space-id number statistics sent-messages total-messages number</a>
<b>Tree</b>	<a href="#">total-messages</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **tcp-transport**

<b>Description</b>	Enter the tcp-transport context
<b>Context</b>	<a href="#">network-instance name string protocols ldp peers peer lsr-id (ipv4-address   ipv6-address) label-space-id number tcp-transport</a>
<b>Tree</b>	<a href="#">tcp-transport</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**local-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Local address
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">tcp-transport</a> <a href="#">local-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">local-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**local-port** *number*

<b>Description</b>	Local port number
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">tcp-transport</a> <a href="#">local-port</a> <i>number</i>
<b>Tree</b>	<a href="#">local-port</a>
<b>Range</b>	0 to 65535
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**remote-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Remote address
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">tcp-transport</a> <a href="#">remote-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">remote-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**remote-port** *number*

<b>Description</b>	Remote port number
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">label-space-id</a> <i>number</i> <a href="#">tcp-transport</a> <a href="#">remote-port</a> <i>number</i>
<b>Tree</b>	<a href="#">remote-port</a>
<b>Range</b>	0 to 65535
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## trace-options

**Description** Configure event/packet tracing for one specific session

**Context** [network-instance name](#) *string* [protocols ldp peers peer lsr-id](#) (*ipv4-address* | *ipv6-address*) [label-space-id](#) *number* [trace-options](#)

**Tree** [trace-options](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## trace keyword

**Description** Specifies the trace information to be captured

**Context** [network-instance name](#) *string* [protocols ldp peers peer lsr-id](#) (*ipv4-address* | *ipv6-address*) [label-space-id](#) *number* [trace-options](#) [trace keyword](#)

**Tree** [trace](#)

**Options**

- all  
Trace all events and packets
- events-all  
Trace all events
- events-session  
Trace session related events
- events-binding  
Trace binding related events
- messages-all  
Trace all LDP messages
- messages-all-detail  
Trace all LDP messages with detailed output
- messages-initialization  
Trace LDP Initialization packets
- messages-initialization-detail  
Trace LDP Initialization packets with detailed output
- messages-keepalive  
Trace LDP Keepalive packets
- messages-label

Trace LDP Label Mapping, Label Request, Label Abort Request, Label Withdraw and Label Release packets

- messages-label-detail

Trace LDP Label Mapping, Label Request, Label Abort Request, Label Withdraw and Label Release packets with detailed output

- messages-hello

Trace Hello packets

- messages-hello-detail

Trace LDP Hello packets with detailed output

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **session-keepalive-holdtime** *number*

<b>Description</b>	The time interval after which an inactive LDP session terminates and the corresponding TCP session closes. Inactivity is defined as not receiving LDP packets from the peer
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers session-keepalive-holdtime</a> <i>number</i>
<b>Tree</b>	<a href="#">session-keepalive-holdtime</a>
<b>Range</b>	45 to 3600
<b>Default</b>	180
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **session-keepalive-interval** *number*

<b>Description</b>	The interval between successive transmissions of keepalive packets. Keepalive packets are only sent in the absence of other LDP packets transmitted over the LDP session
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers session-keepalive-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">session-keepalive-interval</a>
<b>Range</b>	15 to 1200
<b>Default</b>	60
<b>Units</b>	seconds
<b>Configurable</b>	True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## trace-options

**Description** Configure event/packet tracing for all sessions (configured and dynamic)

**Context** [network-instance name](#) *string* [protocols ldp peers trace-options](#)

**Tree** [trace-options](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## trace keyword

**Description** Specifies the trace information to be captured

**Context** [network-instance name](#) *string* [protocols ldp peers trace-options trace keyword](#)

**Tree** [trace](#)

### Options

- all  
Trace all events and packets
- events-all  
Trace all events
- events-session  
Trace session related events
- events-binding  
Trace binding related events
- messages-all  
Trace all LDP messages
- messages-all-detail  
Trace all LDP messages with detailed output
- messages-initialization  
Trace LDP Initialization packets
- messages-initialization-detail  
Trace LDP Initialization packets with detailed output
- messages-keepalive  
Trace LDP Keepalive packets
- messages-label  
Trace LDP Label Mapping, Label Request, Label Abort Request, Label Withdraw and Label Release packets

- `messages-label-detail`  
Trace LDP Label Mapping, Label Request, Label Abort Request, Label Withdraw and Label Release packets with detailed output
- `messages-hello`  
Trace Hello packets
- `messages-hello-detail`  
Trace LDP Hello packets with detailed output

**Configurable**

True

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## statistics

**Description**

LDP instance level statistics

**Context**[network-instance name](#) *string* [protocols ldp statistics](#)**Tree**[statistics](#)**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## fec-statistics

**Description**

Enter the fec-statistics context

**Context**[network-instance name](#) *string* [protocols ldp statistics fec-statistics](#)**Tree**[fec-statistics](#)**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv4-prefix

**Description**

Enter the ipv4-prefix context

**Context**[network-instance name](#) *string* [protocols ldp statistics fec-statistics ipv4-prefix](#)**Tree**[ipv4-prefix](#)**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**advertised-fecs** *number*

<b>Description</b>	The number of advertised IPv4 prefix FECs to a single peer or all peers. In the overall summary the same FEC prefix advertised to multiple peers counts as 1
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics fec-statistics ipv4-prefix advertised-fecs</a> <i>number</i>
<b>Tree</b>	<a href="#">advertised-fecs</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**received-fecs** *number*

<b>Description</b>	The number of received IPv4 prefix FECs from a single peer or all peers. In the overall summary the same FEC prefix from different peers counts as 1
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics fec-statistics ipv4-prefix received-fecs</a> <i>number</i>
<b>Tree</b>	<a href="#">received-fecs</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**protocol-errors**

<b>Description</b>	Enter the protocol-errors context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors</a>
<b>Tree</b>	<a href="#">protocol-errors</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**bad-ldp-identifier** *number*

<b>Description</b>	The number of notification messages sent to advise of a bad LDP identifier
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors bad-ldp-identifier</a> <i>number</i>
<b>Tree</b>	<a href="#">bad-ldp-identifier</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **bad-message-length** *number*

<b>Description</b>	The number of notification messages sent to advise of a bad message length
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors bad-message-length</a> <i>number</i>
<b>Tree</b>	<a href="#">bad-message-length</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **bad-pdu-length** *number*

<b>Description</b>	The number of notification messages sent to advise of a bad PDU length
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors bad-pdu-length</a> <i>number</i>
<b>Tree</b>	<a href="#">bad-pdu-length</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **bad-protocol-version** *number*

<b>Description</b>	The number of notification messages sent to advise of a bad protocol version
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors bad-protocol-version</a> <i>number</i>
<b>Tree</b>	<a href="#">bad-protocol-version</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **bad-tlv-length** *number*

<b>Description</b>	The number of notification messages sent to advise of a bad TLV length
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors bad-tlv-length</a> <i>number</i>
<b>Tree</b>	<a href="#">bad-tlv-length</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **malformed-tlv-value** *number*

<b>Description</b>	The number of notification messages sent to advise of a malformed TLV value
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors malformed-tlv-value</a> <i>number</i>
<b>Tree</b>	<a href="#">malformed-tlv-value</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **missing-message-parameters** *number*

<b>Description</b>	The number of notification messages sent to advise of missing mandatory parameters
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors missing-message-parameters</a> <i>number</i>
<b>Tree</b>	<a href="#">missing-message-parameters</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **session-rejected-bad-keepalive-time** *number*

<b>Description</b>	The number of notification messages sent to advise that a TCP connection was closed because the requested keepalive time is not acceptable
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors session-rejected-bad-keepalive-time</a> <i>number</i>
<b>Tree</b>	<a href="#">session-rejected-bad-keepalive-time</a>
<b>Default</b>	0
<b>Configurable</b>	False

---

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **session-rejected-no-hello** *number*

**Description** The number of notification messages sent to advise that a TCP connection was closed because there was no matching Hello adjacency

**Context** [network-instance name](#) *string* [protocols ldp statistics protocol-errors session-rejected-no-hello](#) *number*

**Tree** [session-rejected-no-hello](#)

**Default** 0

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **session-rejected-parameters-adv-mode** *number*

**Description** The number of notification messages sent to advise that a TCP connection was closed because the requested label advertisement mode is not acceptable

**Context** [network-instance name](#) *string* [protocols ldp statistics protocol-errors session-rejected-parameters-adv-mode](#) *number*

**Tree** [session-rejected-parameters-adv-mode](#)

**Default** 0

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **session-rejected-parameters-label-range** *number*

**Description** The number of notification messages sent to advise that a TCP connection was closed because the requested label range is not acceptable

**Context** [network-instance name](#) *string* [protocols ldp statistics protocol-errors session-rejected-parameters-label-range](#) *number*

**Tree** [session-rejected-parameters-label-range](#)

**Default** 0

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**session-rejected-parameters-max-pdu-length** *number*

<b>Description</b>	The number of notification messages sent to advise that a TCP connection was closed because the requested Maximum PDU Length is not acceptable
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors session-rejected-parameters-max-pdu-length</a> <i>number</i>
<b>Tree</b>	<a href="#">session-rejected-parameters-max-pdu-length</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**unknown-message-type** *number*

<b>Description</b>	The number of notification messages sent to advise of an unknown message type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors unknown-message-type</a> <i>number</i>
<b>Tree</b>	<a href="#">unknown-message-type</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**unknown-tlv** *number*

<b>Description</b>	The number of notification messages sent to advise of an unknown TLV
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors unknown-tlv</a> <i>number</i>
<b>Tree</b>	<a href="#">unknown-tlv</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**unsupported-address-family** *number*

<b>Description</b>	The number of notification messages sent to advise that a TCP connection was closed because the FEC type is not IPv4 or IPv6
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics protocol-errors unsupported-address-family</a> <i>number</i>

<b>Tree</b>	<a href="#">unsupported-address-family</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **sessions-terminated-holdtime-expiry** *number*

<b>Description</b>	The total number of LDP sessions that were terminated due to keepalive holdtime expiry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics sessions-terminated-holdtime-expiry</a> <i>number</i>
<b>Tree</b>	<a href="#">sessions-terminated-holdtime-expiry</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **total-discovery-interfaces** *number*

<b>Description</b>	The total number of IP subinterfaces on which basic LDP discovery is active
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics total-discovery-interfaces</a> <i>number</i>
<b>Tree</b>	<a href="#">total-discovery-interfaces</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **total-interface-hello-adjacencies** *number*

<b>Description</b>	The total number of interface hello adjacencies that are up
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics total-interface-hello-adjacencies</a> <i>number</i>
<b>Tree</b>	<a href="#">total-interface-hello-adjacencies</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **total-peers** *number*

<b>Description</b>	The total number of LDP TCP sessions that are established
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp statistics total-peers</a> <i>number</i>

<b>Tree</b>	<a href="#">total-peers</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## linux

<b>Description</b>	Enables routing interaction with the Linux kernel
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols linux</a>
<b>Tree</b>	<a href="#">linux</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## export-neighbors *boolean*

<b>Description</b>	Export neighbors to linux routing table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols linux export-neighbors</a> <i>boolean</i>
<b>Tree</b>	<a href="#">export-neighbors</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## export-routes *boolean*

<b>Description</b>	Export routes to linux routing table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols linux export-routes</a> <i>boolean</i>
<b>Tree</b>	<a href="#">export-routes</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## import-routes *boolean*

<b>Description</b>	Import routes from linux routing table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols linux import-routes</a> <i>boolean</i>
<b>Tree</b>	<a href="#">import-routes</a>
<b>Default</b>	false

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## ospf

<b>Description</b>	Top-level configuration and operational state for Open Shortest Path First (OSPF)
<b>Context</b>	<a href="#">network-instance name string protocols ospf</a>
<b>Tree</b>	<a href="#">ospf</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## instance [name string](#)

<b>Description</b>	List of OSPF protocol instances associated with this network-instance.
<b>Context</b>	<a href="#">network-instance name string protocols ospf instance name string</a>
<b>Tree</b>	<a href="#">instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	3

## name [string](#)

<b>Description</b>	The name of the OSPF instance
<b>Context</b>	<a href="#">network-instance name string protocols ospf instance name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## address-family [identityref](#)

<b>Description</b>	The address family that this instance supports. Only valid for OSPFv3.
<b>Context</b>	<a href="#">network-instance name string protocols ospf instance name string address-family identityref</a>
<b>Tree</b>	<a href="#">address-family</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ipv6-unicast</li> </ul>

- IPv6 unicast address family
- ipv4-unicast
- IPv4 unicast address family

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **admin-state** *keyword*

<b>Description</b>	Used to administratively enable or disable the OSPF instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <b>admin-state</b> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **advertise-router-capability** *keyword*

<b>Description</b>	Scope to advertise router-capability.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <b>advertise-router-capability</b> <i>keyword</i>
<b>Tree</b>	<a href="#">advertise-router-capability</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• false</li> <li>• link</li> <li>• area</li> <li>• as</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **area** [area-id](#)

<b>Description</b>	The OSPF areas within which the local system exists
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <b>area</b> <a href="#">area-id</a>

<b>Tree</b>	<a href="#">area</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### area-id

<b>Description</b>	the area identifier as a dotted-quad.
<b>Context</b>	<a href="#">network-instance name string protocols ospf instance name string area area-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### active-interfaces *number*

<b>Description</b>	The number of active interfaces in this area.
<b>Context</b>	<a href="#">network-instance name string protocols ospf instance name string area area-id active-interfaces number</a>
<b>Tree</b>	<a href="#">active-interfaces</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### advertise-router-capability *boolean*

<b>Description</b>	Allow router advertisement capabilities
<b>Context</b>	<a href="#">network-instance name string protocols ospf instance name string area area-id advertise-router-capability boolean</a>
<b>Tree</b>	<a href="#">advertise-router-capability</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### area-bdr-rtr-count

<b>Description</b>	The total number of area border routers reachable within this area.
<b>Context</b>	<a href="#">network-instance name string protocols ospf instance name string area area-id area-bdr-rtr-count</a>
<b>Tree</b>	<a href="#">area-bdr-rtr-count</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **area-range ip-prefix-mask** (*ipv4-prefix | ipv6-prefix*)

<b>Description</b>	Enter the area-range context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">area-range ip-prefix-mask</a> ( <i>ipv4-prefix   ipv6-prefix</i> )
<b>Tree</b>	<a href="#">area-range</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **ip-prefix-mask** (*ipv4-prefix | ipv6-prefix*)

<b>Description</b>	ip-prefix with host bits set to 0
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">area-range ip-prefix-mask</a> ( <i>ipv4-prefix   ipv6-prefix</i> )
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **advertise** *boolean*

<b>Description</b>	Advertise summarized range of addresses to other areas
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">area-range ip-prefix-mask</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">advertise</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **as-bdr-rtr-count**

<b>Description</b>	The total number of autonomous system border routers reachable within this area.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">as-bdr-rtr-count</a>
<b>Tree</b>	<a href="#">as-bdr-rtr-count</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **blackhole-aggregate** *boolean*

<b>Description</b>	Enables the creation of a blackhole for generated aggregates
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">blackhole-aggregate</a> <i>boolean</i>
<b>Tree</b>	<a href="#">blackhole-aggregate</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **export-policy** *reference*

<b>Description</b>	Apply an export policy when summarizing from this area to other areas.. Summary LSAs for prefixes matching the policy will still be in the linkstate database but are not flooded.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">export-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">export-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **full-spf-runs**

<b>Description</b>	The total number of times that complete SPF has been run on the router since OSPF was last enabled.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">full-spf-runs</a>
<b>Tree</b>	<a href="#">full-spf-runs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **interface** [interface-name](#) *string*

<b>Description</b>	List of OSPF interfaces
--------------------	-------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface-name** *string*

<b>Description</b>	Router logical interface name.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i>
<b>String Length</b>	5 to 25
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Administrative state of the OSPF
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**advertise-router-capability** *boolean*

<b>Description</b>	Allow router advertisement capabilities
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">advertise-router-capability</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-router-capability</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**advertise-subnet** *boolean*

<b>Description</b>	Advertise point-to-point interfaces as subnet routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <b>advertise-subnet</b> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise-subnet</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**authentication**

<b>Description</b>	Container with authentication options that apply to all peers in this peer-group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <b>authentication</b>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**keychain** *reference*

<b>Description</b>	Reference to a keychain. The keychain type must be ospf
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <b>authentication keychain</b> <i>reference</i>
<b>Tree</b>	<a href="#">keychain</a>
<b>Reference</b>	<a href="#">system authentication keychain name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**bad-packets**

<b>Description</b>	Bad packets counters
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <b>bad-packets</b>
<b>Tree</b>	<a href="#">bad-packets</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

## auth-failures

**Description** The total number of OSPF packets received with an invalid authorization key since admin-state was last set to 'enabled'.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [bad-packets auth-failures](#)

**Tree** [auth-failures](#)

**Configurable** False

**Platforms** Supported on all platforms

## bad-area

**Description** The total number of OSPF packets received with an area mismatch since admin-state was last set to 'enabled'.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [bad-packets bad-area](#)

**Tree** [bad-area](#)

**Configurable** False

**Platforms** Supported on all platforms

## bad-auth-type

**Description** The total number of OSPF packets received with an invalid authorization type since admin-state was last set to 'enabled'.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [bad-packets bad-auth-type](#)

**Tree** [bad-auth-type](#)

**Configurable** False

**Platforms** Supported on all platforms

## bad-checksum

**Description** The count of LS-as received with bad checksums.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [bad-packets bad-checksum](#)

**Tree** [bad-checksum](#)

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### bad-dead-interval

<b>Description</b>	The total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">bad-packets bad-dead-interval</a>
<b>Tree</b>	<a href="#">bad-dead-interval</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### bad-dest-address

<b>Description</b>	The total number of OSPF packets received with the incorrect IP destination address since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">bad-packets bad-dest-address</a>
<b>Tree</b>	<a href="#">bad-dest-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### bad-hello-interval

<b>Description</b>	the value of bad-hello-intervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">bad-packets bad-hello-interval</a>
<b>Tree</b>	<a href="#">bad-hello-interval</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-length

<b>Description</b>	The total number of OSPF packets received with a total length not equal to the length given in the packet itself since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">bad-packets</a> <a href="#">bad-length</a>
<b>Tree</b>	<a href="#">bad-length</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-neighbors

<b>Description</b>	The total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">bad-packets</a> <a href="#">bad-neighbors</a>
<b>Tree</b>	<a href="#">bad-neighbors</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-network

<b>Description</b>	The total number of OSPF packets received with invalid network or mask since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">bad-packets</a> <a href="#">bad-network</a>
<b>Tree</b>	<a href="#">bad-network</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-options

<b>Description</b>	The total number of OSPF packets received with an option that does not match those configured for this interface or area since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">bad-packets</a> <a href="#">bad-options</a>
<b>Tree</b>	<a href="#">bad-options</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### bad-packet-type

<b>Description</b>	The total number of OSPF packets received with an invalid OSPF packet type since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">bad-packets bad-packet-type</a>
<b>Tree</b>	<a href="#">bad-packet-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### bad-version

<b>Description</b>	The total number of OSPF packets received with bad OSPF version numbers since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">bad-packets bad-version</a>
<b>Tree</b>	<a href="#">bad-version</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### bad-virtual-link

<b>Description</b>	The total number of OSPF packets received that are destined to a virtual link that does not exist since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">bad-packets bad-virtual-link</a>
<b>Tree</b>	<a href="#">bad-virtual-link</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### bdr-id

<b>Description</b>	the value of BDR-id indicates the router ID of the backup designated router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">bdr-id</a>

<b>Tree</b>	<a href="#">bdr-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **dead-interval** *number*

<b>Description</b>	Time OSPF waits without receiving Hello packets before declaring a neighbor down
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <b>dead-interval</b> <i>number</i>
<b>Tree</b>	<a href="#">dead-interval</a>
<b>Range</b>	2 to 65535
<b>Default</b>	40
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **dr-id**

<b>Description</b>	the value of DR-id indicates the router ID of the designated router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <b>dr-id</b>
<b>Tree</b>	<a href="#">dr-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **events**

<b>Description</b>	the value of events indicates the number of times this OSPF interface has changed its state, or an error has occurred.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <b>events</b>
<b>Tree</b>	<a href="#">events</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**failure-detection**

<b>Description</b>	Options related to methods of detecting BGP session failure
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">failure-detection</a>
<b>Tree</b>	<a href="#">failure-detection</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**enable-bfd** *boolean*

<b>Description</b>	Enables the use of BFD for liveliness detection
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">failure-detection enable-bfd</a> <i>boolean</i>
<b>Tree</b>	<a href="#">enable-bfd</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**hello-interval** *number*

<b>Description</b>	Time between OSPF Hellos of this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">hello-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">hello-interval</a>
<b>Range</b>	1 to 65535
<b>Default</b>	10
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface-type** *keyword*

<b>Description</b>	Interface type to broadcast or point-to-point
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">interface-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">interface-type</a>

<b>Options</b>	<ul style="list-style-type: none"> <li>• broadcast</li> <li>• point-to-point</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### last-enabled-time *string*

<b>Description</b>	the value of last-enabled-time indicates the sys-up-time value when ospf-if-admin-stat was last set to enabled (1) to run the ospf on this interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <b>last-enabled-time</b> <i>string</i>
<b>Tree</b>	<a href="#">last-enabled-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### last-event-time *string*

<b>Description</b>	the value of last-event-time indicates the value of sys-up-time when an event was last associated with this OSPF interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <b>last-event-time</b> <i>string</i>
<b>Tree</b>	<a href="#">last-event-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### ldp-synchronization

<b>Description</b>	Container with configuration options and state that pertains to the operation of LDP-IGP synchronization on this interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <b>ldp-synchronization</b>
<b>Tree</b>	<a href="#">ldp-synchronization</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**disable**

<b>Description</b>	Disable LDP-IGP synchronization procedures on this interface, even if synchronization is enabled globally
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">ldp-synchronization disable</a>
<b>Tree</b>	<a href="#">disable</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**duration** *number*

<b>Description</b>	The length of time that the IGP interface has been in sync or out of sync
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">ldp-synchronization duration</a> <i>number</i>
<b>Tree</b>	<a href="#">duration</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**end-of-lib** *boolean*

<b>Description</b>	When set to true, the IGP restores the normal metric for the IGP adjacency when learning from LDP that all label-FEC mappings have been received from the LDP peer, even if there is remaining time on the hold-down-timer. When set to false, the IGP always waits for the full duration of the hold-down-timer to restore the normal metric for the IGP adjacency. This overrides the global/instance level setting
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">ldp-synchronization end-of-lib</a> <i>boolean</i>
<b>Tree</b>	<a href="#">end-of-lib</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**hold-down-timer** *number*

<b>Description</b>	The maximum amount of time that the IGP advertises a maximum metric for an interface, measured from the time that the LDP adjacency is re-established after going down.
--------------------	---

	This overrides the global/instance level setting
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">ldp-synchronization hold-down-timer number</a>
<b>Tree</b>	<a href="#">hold-down-timer</a>
<b>Range</b>	1 to 1800
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **sync-state** *keyword*

<b>Description</b>	The current state of the interface with respect to LDP-IGP sync
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">ldp-synchronization sync-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">sync-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>wait-for-LDP-adjacency</b> The IGP is waiting for the LDP adjacency to come up. The interface is being advertised with max-metric</li> <li>• <b>hold-down-timer-active</b> The LDP adjacency has come up and the IGP has started the hold-down-timer, waiting for either end-of-lib or hold-down-timer expiry. The interface is being advertised with max-metric</li> <li>• <b>end-of-lib-received</b> The IGP received end-of-lib and has switched to normal operation. The interface is being advertised with a normal metric</li> <li>• <b>hold-down-timer-expired</b> The IGP did not receive end-of-lib (or was configured to ignore it) but hold-down-timer has expired and normal metric is restored</li> <li>• <b>manual-exit</b> A tools command was performed to exit ldp-sync. Normal operation is resumed, max-metric is removed</li> <li>• <b>disabled</b> ldp-sync is not applicable on this interface</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**link-lsa-cksum-sum** *string*

<b>Description</b>	the value of link-lsa-cksum-sum indicates the 32-bit unsigned sum of the link-scope link-state advertisements' LS checksums contained in this link's link-state database. the sum can be used to determine if there has been a change in a router's link-state database, and to compare the link state database of two routers.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">link-lsa-cksum-sum</a> <i>string</i>
<b>Tree</b>	<a href="#">link-lsa-cksum-sum</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**link-lsa-count**

<b>Description</b>	the value of link-lsa-count indicates the total number of link-scope link-state advertisements in this link's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">link-lsa-count</a>
<b>Tree</b>	<a href="#">link-lsa-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**local-ip-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	the value of local-ip-address indicates the IP address of this OSPF interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">local-ip-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">local-ip-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**lsa-filter-out** *keyword*

<b>Description</b>	LSA flooding reduction
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">lsa-filter-out</a> <i>keyword</i>
<b>Tree</b>	<a href="#">lsa-filter-out</a>

<b>Default</b>	none
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• all</li> <li>• except-own-rtrlsa</li> <li>• except-own-rtrlsa-and-defaults</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### lsa-totals

<b>Description</b>	The number of LSAs of each type in this interface's database
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">lsa-totals</a>
<b>Tree</b>	<a href="#">lsa-totals</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### e-link-lsa

<b>Description</b>	The number of extended link LSAs in this interface's database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">lsa-totals e-link-lsa</a>
<b>Tree</b>	<a href="#">e-link-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### link-lsa

<b>Description</b>	The number of link LSAs in this interface's database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">lsa-totals link-lsa</a>
<b>Tree</b>	<a href="#">link-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**link-opaque-lsa**

<b>Description</b>	The number of link opaque LSAs in this interface's database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">lsa-totals link-opaque-lsa</a>
<b>Tree</b>	<a href="#">link-opaque-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**router-info-lsa**

<b>Description</b>	The number of link scoped router information LSAs in this interface's AS database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">lsa-totals router-info-lsa</a>
<b>Tree</b>	<a href="#">router-info-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**metric** *number*

<b>Description</b>	Explicit route cost metric that is applied to the interface
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">metric number</a>
<b>Tree</b>	<a href="#">metric</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mtu** *number*

<b>Description</b>	MTU for the OSPF to use on the interface. For OSPFv3 this must be minimum 1280. If the MTU defined here exceeds the actual IP-MTU of the interface, then the IP-MTU of the interface is used.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">mtu number</a>
<b>Tree</b>	<a href="#">mtu</a>
<b>Range</b>	512 to 9486
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## neighbor [router-id](#)

**Description** List of neighbors associated with this OSPF interface

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id](#)

**Tree** [neighbor](#)

**Configurable** False

**Platforms** Supported on all platforms

## router-id

**Description** The router-id advertised by the neighbor

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id](#)

**Configurable** False

**Platforms** Supported on all platforms

## address (*ipv4-address-with-zone | ipv6-address-with-zone*)

**Description** the value of address indicates the IP address of the neighbor associated with the local link.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id address](#) (*ipv4-address-with-zone | ipv6-address-with-zone*)

**Tree** [address](#)

**Configurable** False

**Platforms** Supported on all platforms

## adjacency-state *identityref*

**Description** Current OSPF Neighbor state

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id adjacency-state identityref](#)

**Tree** [adjacency-state](#)

**Options**

- down

The initial state of a neighbor, indicating that no recent information has been received from the neighbor.

- attempt

Utilised for neighbors that are attached to NBMA networks, it indicates that no information has been recently received from the neighbor but that Hello packets should be directly sent to that neighbor.

- init

Indicates that a Hello packet has been received from the neighbor but bi-directional communication has not yet been established. That is to say that the local Router ID does not appear in the list of neighbors in the remote system's Hello packet.

- two-way

Communication between the local and remote system is bi-directional such that the local system's Router ID is listed in the received remote system's Hello packet.

- exstart

An adjacency with the remote system is being formed. The local system is currently transmitting empty database description packets in order to establish the primary/standby relationship for the adjacency.

- exchange

The local and remote systems are currently exchanging database description packets in order to determine which elements of their local LSDBs are out of date.

- loading

The local system is sending Link State Request packets to the remote system in order to receive the more recently LSAs that were discovered during the Exchange phase of the procedure establishing the adjacency.

- full

The neighboring routers are fully adjacent such that both LSDBs are synchronized. The adjacency will appear in Router and Network LSAs

**Configurable**

False

**Platforms**

Supported on all platforms

## backup-designated-router

**Description**

Advertised backup designated router

**Context**

[network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id backup-designated-router](#)

**Tree**

[backup-designated-router](#)

**Configurable**

False

**Platforms** Supported on all platforms

### **dead-time** *number*

**Description** The remaining number of seconds remaining in the neighbor's dead time interval

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id dead-time](#) *number*

**Tree** [dead-time](#)

**Configurable** False

**Platforms** Supported on all platforms

### **designated-router**

**Description** Advertised designated router

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id designated-router](#)

**Tree** [designated-router](#)

**Configurable** False

**Platforms** Supported on all platforms

### **last-established-time** *number*

**Description** Time then OSPF neighbor was last established

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id last-established-time](#) *number*

**Tree** [last-established-time](#)

**Configurable** False

**Platforms** Supported on all platforms

### **last-event-time** *string*

**Description** the value of last-event-time indicates the value of sys-up-time when the last event occurred that affected the adjacency to the neighbour.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id last-event-time](#) *string*

**Tree** [last-event-time](#)

<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-restart-time** *string*

<b>Description</b>	the value of last-restart-time indicates the last time the neighbor attempted restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">neighbor router-id last-restart-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-restart-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **optional-capabilities**

<b>Description</b>	Advertised Optional Capabilities
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">neighbor router-id optional-capabilities</a>
<b>Tree</b>	<a href="#">optional-capabilities</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **priority** *number*

<b>Description</b>	Router priority advertised by neighbor
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">neighbor router-id priority</a> <i>number</i>
<b>Tree</b>	<a href="#">priority</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **restart-helper-age** *number*

<b>Description</b>	the value of restart-helper-age indicates the remaining time in the current OSPF graceful restart interval, if the router is acting as a restart helper for the neighbor.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">neighbor router-id restart-helper-age</a> <i>number</i>
<b>Tree</b>	<a href="#">restart-helper-age</a>
<b>Range</b>	0 to 1800
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **restart-helper-exit-rc** *keyword*

<b>Description</b>	the value of restart-helper-exit-rc indicates the outcome of the last attempt at acting as a graceful restart helper for the neighbor. none no restart has yet been attempted. in-progress A restart attempt is currently underway. completed the last restart completed successfully. timed-out the last restart timed out. topology-changed the last restart was aborted due to a topology change.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">neighbor router-id restart-helper-exit-rc</a> <i>keyword</i>
<b>Tree</b>	<a href="#">restart-helper-exit-rc</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• in-progress</li> <li>• completed</li> <li>• timed-out</li> <li>• topology-changed</li> <li>• bfd-down</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **restart-helper-status** *keyword*

<b>Description</b>	the value of restart-helper-status indicates whether the router is acting as a graceful restart helper for the neighbor.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">neighbor router-id restart-helper-status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">restart-helper-status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• not-helping</li> </ul>

	<ul style="list-style-type: none"> <li>helping</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### restart-reason (*number* | *keyword*)

<b>Description</b>	the value of restart-reason indicates the OSPF neighbor's graceful restart reason.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">neighbor router-id restart-reason</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">restart-reason</a>
<b>Range</b>	4 to 4294967295
<b>Options</b>	<ul style="list-style-type: none"> <li>unknown</li> <li>sw-restart</li> <li>sw-reload</li> <li>switch-red</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### retransmission-queue-length *number*

<b>Description</b>	Enter the retransmission-queue-length context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">neighbor router-id retransmission-queue-length</a> <i>number</i>
<b>Tree</b>	<a href="#">retransmission-queue-length</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### state-changes *number*

<b>Description</b>	total numer of OSPF state changes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">neighbor router-id state-changes</a> <i>number</i>
<b>Tree</b>	<a href="#">state-changes</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

## statistics

**Description** Enter the statistics context

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id statistics](#)

**Tree** [statistics](#)

**Configurable** False

**Platforms** Supported on all platforms

## bad-mtu

**Description** the value of bad-MT-us indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since admin-state was last set to 'enabled'.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id statistics bad-mtu](#)

**Tree** [bad-mtu](#)

**Configurable** False

**Platforms** Supported on all platforms

## bad-nbr-states

**Description** the value of bad-nbr-states indicates the total number of OSPF packets received when the neighbor state was not expecting to receive this packet type since admin-state was last set to 'enabled'.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id statistics bad-nbr-states](#)

**Tree** [bad-nbr-states](#)

**Configurable** False

**Platforms** Supported on all platforms

## bad-packets

**Description** the value of bad-packets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since admin-state was last set to 'enabled'.

---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">neighbor router-id statistics bad-packets</a>
<b>Tree</b>	<a href="#">bad-packets</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## bad-seq-nums

<b>Description</b>	the value of bad-seq-nums indicates the total number of times when a database description packet was received with a sequence number mismatch since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">neighbor router-id statistics bad-seq-nums</a>
<b>Tree</b>	<a href="#">bad-seq-nums</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## duplicates

<b>Description</b>	the value of duplicates indicates the total number of times when a duplicate database description packet was received during the exchange state since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">neighbor router-id statistics duplicates</a>
<b>Tree</b>	<a href="#">duplicates</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## events

<b>Description</b>	the value of events indicates the number of times this neighbor relationship has changed state, or an error has occurred.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">neighbor router-id statistics events</a>
<b>Tree</b>	<a href="#">events</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## Isa-install-failed

<b>Description</b>	the value of Isa-install-failed indicates the total number of times an LSA could not be installed into the LSDB due to a resource allocation issue since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">neighbor router-id</a> <a href="#">statistics Isa-install-failed</a>
<b>Tree</b>	<a href="#">Isa-install-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## Isa-not-in-Isdbs

<b>Description</b>	the value of Isa-not-in-Isdbs indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">neighbor router-id</a> <a href="#">statistics Isa-not-in-Isdbs</a>
<b>Tree</b>	<a href="#">Isa-not-in-Isdbs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## num-restarts

<b>Description</b>	the value of num-restarts indicates the number of times the neighbor has attempted restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">neighbor router-id</a> <a href="#">statistics num-restarts</a>
<b>Tree</b>	<a href="#">num-restarts</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## option-mismatches

<b>Description</b>	the value of option-mismatches indicates the total number of times when a LS update was received with an option mismatch since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">neighbor router-id</a> <a href="#">statistics option-mismatches</a>

<b>Tree</b>	<a href="#">option-mismatches</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **up-time** *number*

<b>Description</b>	the value of up-time indicates the uninterrupted time, in hundredths of seconds, the adjacency to this neighbour has been up.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">neighbor router-id up-time</a> <i>number</i>
<b>Tree</b>	<a href="#">up-time</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **neighbor-count**

<b>Description</b>	The total number of OSPF neighbors adjacent on this interface, in a state of INIT or greater, since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">neighbor-count</a>
<b>Tree</b>	<a href="#">neighbor-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **oper-state** *keyword*

<b>Description</b>	the OSPF interface state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• down</li> <li>• loopback</li> <li>• waiting</li> <li>• point-to-point</li> <li>• designated-router</li> </ul>

- backup-designated-router
- other-designated-router

**Configurable**

False

**Platforms**

Supported on all platforms

**packets****Description**

Packet counters

**Context**[network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [packets](#)**Tree**[packets](#)**Configurable**

False

**Platforms**

Supported on all platforms

**discarded****Description**

The total number of OSPF packets discarded since admin-state was last set to 'enabled'.

**Context**[network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [packets discarded](#)**Tree**[discarded](#)**Configurable**

False

**Platforms**

Supported on all platforms

**retransmits****Description**

The total number of OSPF retransmits since admin-state was last set to 'enabled'.

**Context**[network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [packets retransmits](#)**Tree**[retransmits](#)**Configurable**

False

**Platforms**

Supported on all platforms

**rx-db-description****Description**

The total number of OSPF database description packets received since admin-state was last set to 'enabled'.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">packets rx-db-description</a>
<b>Tree</b>	<a href="#">rx-db-description</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## rx-hello

<b>Description</b>	The total number of OSPF hello packets received since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">packets rx-hello</a>
<b>Tree</b>	<a href="#">rx-hello</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## rx-ls-ack

<b>Description</b>	The total number of link state acknowledgements received since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">packets rx-ls-ack</a>
<b>Tree</b>	<a href="#">rx-ls-ack</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## rx-ls-request

<b>Description</b>	The total number of link state requests (LS-rs) received since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">packets rx-ls-request</a>
<b>Tree</b>	<a href="#">rx-ls-request</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## rx-ls-update

<b>Description</b>	The total number of link state updates (LS-us) received since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">packets rx-ls-update</a>
<b>Tree</b>	<a href="#">rx-ls-update</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## rx-total

<b>Description</b>	The total number of OSPF packets received since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">packets rx-total</a>
<b>Tree</b>	<a href="#">rx-total</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## tx-db-description

<b>Description</b>	The total number of OSPF database description packets transmitted since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">packets tx-db-description</a>
<b>Tree</b>	<a href="#">tx-db-description</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## tx-hello

<b>Description</b>	The total number of OSPF hello packets transmitted since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">packets tx-hello</a>
<b>Tree</b>	<a href="#">tx-hello</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## tx-ls-ack

<b>Description</b>	The total number of OSPF link state acknowledgements transmitted since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">packets tx-ls-ack</a>
<b>Tree</b>	<a href="#">tx-ls-ack</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## tx-ls-request

<b>Description</b>	The total number of OSPF link state requests (LS-rs) transmitted since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">packets tx-ls-request</a>
<b>Tree</b>	<a href="#">tx-ls-request</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## tx-ls-update

<b>Description</b>	The total number of OSPF link state updates (LS-us) transmitted since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">packets tx-ls-update</a>
<b>Tree</b>	<a href="#">tx-ls-update</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## tx-total

<b>Description</b>	The total number of OSPF packets transmitted since admin-state was last set to 'enabled'.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">packets tx-total</a>
<b>Tree</b>	<a href="#">tx-total</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **passive** *boolean*

**Description** Allow interface to be advertised as an OSPF interface without running the OSPF protocol

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* **passive** *boolean*

**Tree** [passive](#)

**Configurable** True

**Platforms** Supported on all platforms

### **priority** *number*

**Description** Priority of the interface to apply in the designated router election on the subnet

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* **priority** *number*

**Tree** [priority](#)

**Range** 0 to 255

**Default** 1

**Configurable** True

**Platforms** Supported on all platforms

### **retransmit-interval** *number*

**Description** Time before OSPF retransmits an unacknowledged LSA to a neighbor

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* **retransmit-interval** *number*

**Tree** [retransmit-interval](#)

**Range** 1 to 1800

**Default** 5

**Units** seconds

**Configurable** True

**Platforms** Supported on all platforms

## trace-options

<b>Description</b>	Enter the trace-options context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## trace

<b>Description</b>	Tracing parameter flags
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">trace-options trace</a>
<b>Tree</b>	<a href="#">trace</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## adjacencies

<b>Description</b>	Enable tracing all BGP events.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">trace-options trace adjacencies</a>
<b>Tree</b>	<a href="#">adjacencies</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## interfaces

<b>Description</b>	Enable tracing all interface events.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id interface interface-name</a> <i>string</i> <a href="#">trace-options trace interfaces</a>
<b>Tree</b>	<a href="#">interfaces</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**packet**

<b>Description</b>	Trace OSPF Packet types Only one type can be enabled at a time
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">trace-options</a> <a href="#">trace</a> <a href="#">packet</a>
<b>Tree</b>	<a href="#">packet</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**detail**

<b>Description</b>	To enable detailed tracing. Includes both received and sent packets.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">trace-options</a> <a href="#">trace</a> <a href="#">packet</a> <a href="#">detail</a>
<b>Tree</b>	<a href="#">detail</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**modifier** *keyword*

<b>Description</b>	Enter the modifier context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">trace-options</a> <a href="#">trace</a> <a href="#">packet</a> <a href="#">modifier</a> <i>keyword</i>
<b>Tree</b>	<a href="#">modifier</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ingress To enable tracing for the packets which are received.</li> <li>• egress To enable tracing for the sent packets.</li> <li>• in-and-egress To enable tracing for both sent and received packets</li> <li>• drop To enable tracing for the sent packets.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	Enter the type context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">trace-options</a> <a href="#">trace packet type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all Enable tracing of all OSPF packets</li> <li>• hello Enable tracing of OSPF Hello packets</li> <li>• dbdescr Enable tracing of OSPF database Descriptor packets</li> <li>• ls-request Enable tracing of OSPF link-state request packets</li> <li>• ls-update Enable tracing of OSPF link-state update packets</li> <li>• ls-ack Enable tracing of OSPF link-state Ack packets</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**transit-delay** *number*

<b>Description</b>	Time required to transmit an LSA on the interface, virtual link, or sham link
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">interface interface-name</a> <i>string</i> <a href="#">transit-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">transit-delay</a>
<b>Range</b>	1 to 1800
<b>Default</b>	1
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**last-spf-run-time** *string*

<b>Description</b>	The sys-up-time when intra-area SPF was last run on this area.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">last-spf-run-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-spf-run-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### lsa-filter-totals

<b>Description</b>	The number of LSAs not sent due to area policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-filter-totals</a>
<b>Tree</b>	<a href="#">lsa-filter-totals</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### export-filtered

<b>Description</b>	The number of LSAs not sent due to area export policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-filter-totals</a> <a href="#">export-filtered</a>
<b>Tree</b>	<a href="#">export-filtered</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### import-filtered

<b>Description</b>	The number of LSAs not sent due to area import policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-filter-totals</a> <a href="#">import-filtered</a>
<b>Tree</b>	<a href="#">import-filtered</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### lsa-totals

<b>Description</b>	The number of LSAs of each type in this area's database
--------------------	---

<b>Context</b>	<a href="#">network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals</a>
<b>Tree</b>	<a href="#">lsa-totals</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### area-opaque-lsa

<b>Description</b>	The number of NSSA LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals area-opaque-lsa</a>
<b>Tree</b>	<a href="#">area-opaque-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### asbr-summary-lsa

<b>Description</b>	The number of ASBR summary LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals asbr-summary-lsa</a>
<b>Tree</b>	<a href="#">asbr-summary-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### e-inter-area-prefix-lsa

<b>Description</b>	The number of OSPFv3 E-inter-area-prefix LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals e-inter-area-prefix-lsa</a>
<b>Tree</b>	<a href="#">e-inter-area-prefix-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### e-inter-area-router-lsa

<b>Description</b>	The number of OSPFv3 E-inter-area-router LSAs in this area's link-state database.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals e-inter-area-router-lsa</a>
<b>Tree</b>	<a href="#">e-inter-area-router-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### e-intra-area-prefix-lsa

<b>Description</b>	The number of OSPFv3 E-intra-area-prefix LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals e-intra-area-prefix-lsa</a>
<b>Tree</b>	<a href="#">e-intra-area-prefix-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### e-network-lsa

<b>Description</b>	The number of OSPFv3 E-network LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals e-network-lsa</a>
<b>Tree</b>	<a href="#">e-network-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### e-nssa-lsa

<b>Description</b>	The number of OSPFv3 E-NSSA LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals e-nssa-lsa</a>
<b>Tree</b>	<a href="#">e-nssa-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### e-router-lsa

<b>Description</b>	The number of OSPFv3 E-router LSAs in this area's link-state database.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals</a> <a href="#">e-router-lsa</a>
<b>Tree</b>	<a href="#">e-router-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### inter-area-prefix-lsa

<b>Description</b>	The number of OSPFv3 inter-area-prefix LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals</a> <a href="#">inter-area-prefix-lsa</a>
<b>Tree</b>	<a href="#">inter-area-prefix-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### inter-area-router-lsa

<b>Description</b>	The number of OSPFv3 inter-area-router LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals</a> <a href="#">inter-area-router-lsa</a>
<b>Tree</b>	<a href="#">inter-area-router-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### intra-area-prefix-lsa

<b>Description</b>	The number of OSPFv3 intra-area-prefix LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals</a> <a href="#">intra-area-prefix-lsa</a>
<b>Tree</b>	<a href="#">intra-area-prefix-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## network-lsa

<b>Description</b>	The number of network LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals network-lsa</a>
<b>Tree</b>	<a href="#">network-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## network-summary-lsa

<b>Description</b>	The number of network summary LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals network-summary-lsa</a>
<b>Tree</b>	<a href="#">network-summary-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## nssa-lsa

<b>Description</b>	The number of NSSA LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals nssa-lsa</a>
<b>Tree</b>	<a href="#">nssa-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## router-info-lsa

<b>Description</b>	The number of OSPFv3 router-info LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals router-info-lsa</a>
<b>Tree</b>	<a href="#">router-info-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**router-lsa**

<b>Description</b>	The number of router LSAs in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals router-lsa</a>
<b>Tree</b>	<a href="#">router-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total**

<b>Description</b>	The number of area scope LSAs within this area.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals total</a>
<b>Tree</b>	<a href="#">total</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-lsa-cksum-sum** *string*

<b>Description</b>	The 32-bit unsigned sum of the area scope LSA checksums contained in this area's link-state database. The sum can be used to determine if there has been a change in a router's link-state database, and to compare the link-state database of two routers.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals total-lsa-cksum-sum</a> <i>string</i>
<b>Tree</b>	<a href="#">total-lsa-cksum-sum</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**unknown-lsa**

<b>Description</b>	The number of unknown LSA advertisements in this area's link-state database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">lsa-totals unknown-lsa</a>
<b>Tree</b>	<a href="#">unknown-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**nssa**

<b>Description</b>	This command creates the context to configure the associated OSPF or OSPF3 area as Not So Stubby Area (NSSA).  NSSAs are similar to stub areas in that no external routes are imported into the area from other OSPF areas. The major difference between a stub area and an NSSA is an NSSA has the capability to flood external routes that it learns throughout its area and via an ABR to the entire OSPF or OSPF3 domain.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">nssa</a>
<b>Tree</b>	<a href="#">nssa</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**area-range** [ip-prefix-mask](#) (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the area-range context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">nssa</a> <a href="#">area-range ip-prefix-mask</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Tree</b>	<a href="#">area-range</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ip-prefix-mask** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	ip-prefix with host bits set to 0
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">nssa</a> <a href="#">area-range ip-prefix-mask</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**advertise** *boolean*

<b>Description</b>	Advertise summarized range of addresses to other areas
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id</a> <a href="#">nssa</a> <a href="#">area-range ip-prefix-mask</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">advertise</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertise</a>

<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### originate-default-route

<b>Description</b>	Enter the originate-default-route context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id nssa originate-default-route</a>
<b>Tree</b>	<a href="#">originate-default-route</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### adjacency-check *boolean*

<b>Description</b>	Default route to remove if there is no adjacency
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id nssa originate-default-route adjacency-check</a> <i>boolean</i>
<b>Tree</b>	<a href="#">adjacency-check</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### type-nssa *boolean*

<b>Description</b>	Generate a default route using NSSA-LSA type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id nssa originate-default-route type-nssa</a> <i>boolean</i>
<b>Tree</b>	<a href="#">type-nssa</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**redistribute-external** *boolean*

<b>Description</b>	Enables the redistribution of external routes into the Not So Stubby Area (NSSA) or an NSSA area border router (ABR) that is exporting the routes into non-NSSA areas
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id nssa redistribute-external</a> <i>boolean</i>
<b>Tree</b>	<a href="#">redistribute-external</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**summaries** *boolean*

<b>Description</b>	Enables sending summary (type 3) advertisements into a stub area or Not So Stubby Area (NSSA) on an Area Border Router (ABR)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id nssa summaries</a> <i>boolean</i>
<b>Tree</b>	<a href="#">summaries</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**stub**

<b>Description</b>	Enable the stub context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id stub</a>
<b>Tree</b>	<a href="#">stub</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**default-metric** *number*

<b>Description</b>	Defines the default OSPF metric for associated stub area
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id stub default-metric</a> <i>number</i>
<b>Tree</b>	<a href="#">default-metric</a>

<b>Range</b>	1 to 65535
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### summaries *boolean*

<b>Description</b>	Enables sending summary (type 3) advertisements into a stub area or Not So Stubby Area (NSSA) on an Area Border Router (ABR)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area area-id stub summaries</a> <i>boolean</i>
<b>Tree</b>	<a href="#">summaries</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### area-border-router *boolean*

<b>Description</b>	This indicates whether this router is an area border router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">area-border-router</a> <i>boolean</i>
<b>Tree</b>	<a href="#">area-border-router</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### as-border-router *boolean*

<b>Description</b>	This indicates whether this router is an AS border router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">as-border-router</a> <i>boolean</i>
<b>Tree</b>	<a href="#">as-border-router</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### asbr

<b>Description</b>	Configure the router as an ASBR (Autonomous System Boundary Router)
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">asbr</a>
<b>Tree</b>	<a href="#">asbr</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **trace-path** (*number* | *keyword*)

<b>Description</b>	Domain identity
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">asbr</a> <a href="#">trace-path</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">trace-path</a>
<b>Range</b>	0 to 31
<b>Default</b>	none
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **backbone-router** *boolean*

<b>Description</b>	This indicates whether or not this router is configured as an OSPF back bone router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">backbone-router</a> <i>boolean</i>
<b>Tree</b>	<a href="#">backbone-router</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **export-limit**

<b>Description</b>	Enter the export-limit context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">export-limit</a>
<b>Tree</b>	<a href="#">export-limit</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**log-percent** *number*

<b>Description</b>	Export limit at which warning a log message and SNMP notification are sent
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">export-limit log-percent</a> <i>number</i>
<b>Tree</b>	<a href="#">log-percent</a>
<b>Range</b>	1 to 100
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**number** *number*

<b>Description</b>	Maximum number of routes or prefixes to be exported into IGP instance from route table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">export-limit number</a> <i>number</i>
<b>Tree</b>	<a href="#">number</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**export-policy** *reference*

<b>Description</b>	Apply an export policy to redistribute routes into OSPF
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">export-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">export-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**extern-lsa-cksum-sum** *string*

<b>Description</b>	the value of extern-lsa-cksum-sum indicates the 32-bit unsigned sum of the LS checksums of the external link-state advertisements contained in the link-state database. This sum can be used to determine if there has been a change in a router's link state database, and to compare the link-state database of two routers.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">extern-lsa-cksum-sum</a> <i>string</i>
<b>Tree</b>	<a href="#">extern-lsa-cksum-sum</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### extern-lsa-count

<b>Description</b>	the value of extern-lsa-count indicates the number of external LS-as (LS type 0x4005) in the link-state database
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">extern-lsa-count</a>
<b>Tree</b>	<a href="#">extern-lsa-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### external-db-overflow

<b>Description</b>	Enable the external-db-overflow context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">external-db-overflow</a>
<b>Tree</b>	<a href="#">external-db-overflow</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### interval *number*

<b>Description</b>	Enter the interval context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">external-db-overflow interval</a> <i>number</i>
<b>Tree</b>	<a href="#">interval</a>
<b>Range</b>	0 to 2147483647
<b>Default</b>	0
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**limit** *number*

<b>Description</b>	Enter the limit context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">external-db-overflow limit</a> <i>number</i>
<b>Tree</b>	<a href="#">limit</a>
<b>Range</b>	0 to 2147483647
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**external-preference** *number*

<b>Description</b>	Configure the route preference associated with OSPF external routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">external-preference</a> <i>number</i>
<b>Tree</b>	<a href="#">external-preference</a>
<b>Default</b>	150
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**graceful-restart**

<b>Description</b>	Container for options related to OSPF graceful restart
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">graceful-restart</a>
<b>Tree</b>	<a href="#">graceful-restart</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**helper-mode** *boolean*

<b>Description</b>	Enable or disable the OSPF graceful restart helper function. When this leaf is set, the local system supports retaining forwarding information during a neighbor router's restart.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">graceful-restart helper-mode</a> <i>boolean</i>

<b>Tree</b>	<a href="#">helper-mode</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **strict-lsa-checking** *boolean*

<b>Description</b>	Enter the strict-lsa-checking context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">graceful-restart strict-lsa-checking</a> <i>boolean</i>
<b>Tree</b>	<a href="#">strict-lsa-checking</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **instance-id** *number*

<b>Description</b>	The OSPF multi instance identity as defined in RFC6549 or RFC5838. Supported values are: For OSPFv2 it is between 0 and 31, default is 0. For OSPFv3 address-family ipv6-unicast it is between 0 and 31, default is 0. For OSPFv3 address-family ipv4-unicast it is between 64 and 95, default is 64.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">instance-id</a> <i>number</i>
<b>Tree</b>	<a href="#">instance-id</a>
<b>Range</b>	0 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **last-disabled-reason** *string*

<b>Description</b>	Reason why the disabled state was entered the last time.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">last-disabled-reason</a> <i>string</i>
<b>Tree</b>	<a href="#">last-disabled-reason</a>
<b>String Length</b>	0 to 20
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-enabled-time** *string*

<b>Description</b>	the value of last-enabled-time indicates the value of sys-up-time when admin-state was last set to 'enabled'. when admin-state is set to 'disabled', the OSPF counters are stopped when admin-state is reset to 'enabled', the counters are reset to zero.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">last-enabled-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-enabled-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-overflow-entered-time** *string*

<b>Description</b>	The value of last-ovrflw-entered-time indicates the value of sys-up-time the last time we entered overflow state. this overflow state occurs when the number of non-default AS-external-LS-as entries exceed the link-state database capability.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">last-overflow-entered-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-overflow-entered-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-overflow-exit-time** *string*

<b>Description</b>	the value of last-overflow-exit-time indicates the value of sys-up-time the last time we exited overflow state. this overflow state occurs when the number of non-default AS-external-LS-as entries exceed the link-state database capability.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">last-overflow-exit-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-overflow-exit-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-overload-enter-code** *keyword*

<b>Description</b>	the value of last-overload-enter-code indicates the condition which caused OSPF to get into overload.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">last-overload-enter-code</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-overload-enter-code</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• spf-failed</li> <li>• boot-overload</li> <li>• manual-overload</li> <li>• sfm-overload</li> <li>• fib-add-fail</li> <li>• rtm-add-fail</li> <li>• rtr-adv-lsa-limit</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-overload-entered-time** *string*

<b>Description</b>	the value of last-overload-entrd-time indicates the time at which the system last went into overload state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">last-overload-entered-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-overload-entered-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-overload-exit-code** *keyword*

<b>Description</b>	the value of last-overload-exit-code indicates the reason why OSPF came out of overload state the last time, since reset.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">last-overload-exit-code</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-overload-exit-code</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> </ul>

- `bgp-sig-recv`
- `timer-expired`
- `manual-exit`
- `sfm-overload-done`

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-overload-exit-time** *string*

<b>Description</b>	the value of <code>last-overload-exit-time</code> indicates the time at which the system last came out of overload state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">last-overload-exit-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-overload-exit-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **ldp-synchronization**

<b>Description</b>	Enable LDP-IGP synchronization procedures on all P2P interfaces and all LAN interfaces with a single adjacency, except on interfaces where the functionality is explicitly disabled
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">ldp-synchronization</a>
<b>Tree</b>	<a href="#">ldp-synchronization</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **end-of-lib** *boolean*

<b>Description</b>	When set to true, the IGP restores the normal metric for the IGP adjacency when learning from LDP that all label-FEC mappings have been received from the LDP peer, even if there is remaining time on the hold-down-timer.  When set to false, the IGP always waits for the full duration of the hold-down-timer to restore the normal metric for the IGP adjacency
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">ldp-synchronization end-of-lib</a> <i>boolean</i>

<b>Tree</b>	<a href="#">end-of-lib</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### hold-down-timer *number*

<b>Description</b>	The maximum amount of time that the IGP advertises a maximum metric for an interface, measured from the time that the LDP adjacency is re-established after going down
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">ldp-synchronization hold-down-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">hold-down-timer</a>
<b>Range</b>	1 to 1800
<b>Default</b>	60
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### lsa-totals

<b>Description</b>	The number of LSAs of each type in this instance's AS database
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">lsa-totals</a>
<b>Tree</b>	<a href="#">lsa-totals</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### as-external-lsa

<b>Description</b>	The number of AS External LSAs in this instance's AS database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">lsa-totals as-external-lsa</a>
<b>Tree</b>	<a href="#">as-external-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**as-opaque-lsa**

<b>Description</b>	The number of AS opaque LSAs in this instance's AS database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">lsa-totals as-opaque-lsa</a>
<b>Tree</b>	<a href="#">as-opaque-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**e-as-external-lsa**

<b>Description</b>	The number of extended AS External LSAs in this instance's AS database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">lsa-totals e-as-external-lsa</a>
<b>Tree</b>	<a href="#">e-as-external-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**router-info-lsa**

<b>Description</b>	The number of AS scoped router information LSAs in this instance's AS database.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">lsa-totals router-info-lsa</a>
<b>Tree</b>	<a href="#">router-info-lsa</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**max-ecmp-paths** *number*

<b>Description</b>	The maximum number of ECMP next-hops to program into the FIB for every IP prefix
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">max-ecmp-paths</a> <i>number</i>
<b>Tree</b>	<a href="#">max-ecmp-paths</a>
<b>Range</b>	1 to 64
<b>Default</b>	1
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **new-lsas-originated**

**Description** The number of new link-state advertisements that have been originated. This number is incremented each time the router originates a new LSA.

**Context** [network-instance name string protocols ospf instance name string new-lsas-originated](#)

**Tree** [new-lsas-originated](#)

**Configurable** False

**Platforms** Supported on all platforms

### **new-lsas-received**

**Description** The number of link-state advertisements received determined to be new instantiations. This number does not include newer instantiations of self-originated link-state advertisements.

**Context** [network-instance name string protocols ospf instance name string new-lsas-received](#)

**Tree** [new-lsas-received](#)

**Configurable** False

**Platforms** Supported on all platforms

### **opaque-lsa-support *boolean***

**Description** the value of opaque-lsa-support indicates the router's support for opaque LSA types. this object is valid only when version is 'version2'.

**Context** [network-instance name string protocols ospf instance name string opaque-lsa-support boolean](#)

**Tree** [opaque-lsa-support](#)

**Configurable** False

**Platforms** Supported on all platforms

### **oper-state *keyword***

**Description** Used to report operational state of the OSPF instance

**Context** [network-instance name string protocols ospf instance name string oper-state keyword](#)

<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**overflow** *boolean*

<b>Description</b>	The value of in-overflow-state indicates the current overflow state (true/false). This overflow state occurs when the number of non-default AS-external-LS-as entries exceed the link-state database capability.
<b>Context</b>	<a href="#">network-instance name string protocols ospf instance name string overflow boolean</a>
<b>Tree</b>	<a href="#">overflow</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**overload**

<b>Description</b>	Enter the overload context
<b>Context</b>	<a href="#">network-instance name string protocols ospf instance name string overload</a>
<b>Tree</b>	<a href="#">overload</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**active** *boolean*

<b>Description</b>	Enter the active context
<b>Context</b>	<a href="#">network-instance name string protocols ospf instance name string overload active boolean</a>
<b>Tree</b>	<a href="#">active</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**overload-include-ext-1** *boolean*

<b>Description</b>	Enter the overload-include-ext-1 context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload overload-include-ext-1</a> <i>boolean</i>
<b>Tree</b>	<a href="#">overload-include-ext-1</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**overload-include-ext-2** *boolean*

<b>Description</b>	Enter the overload-include-ext-2 context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload overload-include-ext-2</a> <i>boolean</i>
<b>Tree</b>	<a href="#">overload-include-ext-2</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**overload-include-stub** *boolean*

<b>Description</b>	Enter the overload-include-stub context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload overload-include-stub</a> <i>boolean</i>
<b>Tree</b>	<a href="#">overload-include-stub</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**overload-on-boot**

<b>Description</b>	Enable the overload-on-boot context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload overload-on-boot</a>
<b>Tree</b>	<a href="#">overload-on-boot</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **timeout** *number*

**Description** Enter the timeout context

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [overload](#) [overload-on-boot timeout](#) *number*

**Tree** [timeout](#)

**Range** 60 to 1800

**Default** 60

**Units** seconds

**Configurable** True

**Platforms** Supported on all platforms

### **rtr-adv-lsa-limit**

**Description** Enter the rtr-adv-lsa-limit context

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [overload](#) [rtr-adv-lsa-limit](#)

**Tree** [rtr-adv-lsa-limit](#)

**Configurable** True

**Platforms** Supported on all platforms

### **log-only** *boolean*

**Description** Enter the log-only context

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [overload](#) [rtr-adv-lsa-limit log-only](#) *boolean*

**Tree** [log-only](#)

**Configurable** True

**Platforms** Supported on all platforms

### **max-lsa-count** *number*

**Description** Enter the max-lsa-count context

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [overload](#) [rtr-adv-lsa-limit max-lsa-count](#) *number*

<b>Tree</b>	<a href="#">max-lsa-count</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **overload-timeout** *number*

<b>Description</b>	Enter the overload-timeout context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload rtr-adv-lsa-limit overload-timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">overload-timeout</a>
<b>Range</b>	1 to 1800
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **warning-threshold** *number*

<b>Description</b>	Enter the warning-threshold context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload rtr-adv-lsa-limit warning-threshold</a> <i>number</i>
<b>Tree</b>	<a href="#">warning-threshold</a>
<b>Range</b>	0 to 100
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **overload-rem-interval** *number*

<b>Description</b>	the value of overload-rem-interval indicates the time for which the system will be in overload state if OSPF is in overload state. the value of 0 implies that the system is indefinitely in overload state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload-rem-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">overload-rem-interval</a>
<b>Range</b>	0 to 65535
<b>Units</b>	seconds
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **overload-state** *keyword*

**Description** the value of overload-oper-state indicates whether or not the OSPF application is presently in overload state or not.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [overload-state](#) *keyword*

**Tree** [overload-state](#)

**Options**

- overload
- no-overload

**Configurable** False

**Platforms** Supported on all platforms

### **ovld-lsa-limit-rem-interval** *number*

**Description** the value of ovld-lsa-limit-rem-interval indicates the remaining time in seconds for which the system will be in overload state due to advertising router LSA limit exceeded. the value of 0 implies that the system is either not in overload or indefinitely in overload state.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [ovld-lsa-limit-rem-interval](#) *number*

**Tree** [ovld-lsa-limit-rem-interval](#)

**Range** 0 to 65535

**Units** seconds

**Configurable** False

**Platforms** Supported on all platforms

### **preference** *number*

**Description** Sets the route preference for OSPF sourced routes

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [preference](#) *number*

**Tree** [preference](#)

**Range** 1 to 255

**Default** 10

**Configurable** True

**Platforms** Supported on all platforms

### reference-bandwidth *number*

**Description** Configures the reference bandwidth that provides the basis for interface metrics based on link Bandwidth

If the reference bandwidth is defined, then the cost is calculated using the following formula:  $\text{cost} = \text{reference-bandwidth} / \text{bandwidth}$

When a large reference-bandwidth value is configured, a metric calculation may result in a value higher than the supported protocol cost value. If this occurs, OSPF automatically reverts to the maximum configurable cost metric.

**Context** [network-instance name string protocols ospf instance name string reference-bandwidth number](#)

**Tree** [reference-bandwidth](#)

**Range** 1 to 8000000000

**Default** 400000000

**Units** kbps

**Configurable** True

**Platforms** Supported on all platforms

### router-id

**Description** Enter the router-id context

**Context** [network-instance name string protocols ospf instance name string router-id](#)

**Tree** [router-id](#)

**Configurable** True

**Platforms** Supported on all platforms

### routes-submitted

**Description** the value of routes-submitted indicates the number of routes submitted to the route table manager (RTM) by this instance of OSPF.

**Context** [network-instance name string protocols ospf instance name string routes-submitted](#)

**Tree** [routes-submitted](#)

**Configurable** False

**Platforms** Supported on all platforms

**spf**

<b>Description</b>	SPF related information
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf</a>
<b>Tree</b>	<a href="#">spf</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**avg-spf-run-interval** *number*

<b>Description</b>	the value of avg-spf-run-interval indicates the average time, in hundredths of seconds, of all the total SPF calculations performed by this OSPF router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf avg-spf-run-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">avg-spf-run-interval</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ext-spf-runs**

<b>Description</b>	The total number of times that only the external portion of the SPF has been run since OSPF was last enabled.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf ext-spf-runs</a>
<b>Tree</b>	<a href="#">ext-spf-runs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**full-spf-runs**

<b>Description</b>	The total number of times that complete SPF has been run on the router since OSPF was last enabled.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf full-spf-runs</a>
<b>Tree</b>	<a href="#">full-spf-runs</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### incremental-ext-spf-runs

<b>Description</b>	The total number of incremental SPF runs triggered by new or updated external LS-as.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf incremental-ext-spf-runs</a>
<b>Tree</b>	<a href="#">incremental-ext-spf-runs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### incremental-inter-spf-runs

<b>Description</b>	The total number of incremental SPF runs triggered by new or updated inter-area prefix or inter-area router LS-as.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf incremental-inter-spf-runs</a>
<b>Tree</b>	<a href="#">incremental-inter-spf-runs</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### last-ext-spf

<b>Description</b>	Information about the last external SPF run
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-ext-spf</a>
<b>Tree</b>	<a href="#">last-ext-spf</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### interval *number*

<b>Description</b>	the value of ext-spf-run-interval indicates the time, in hundredths of seconds, used to perform the most recent total external (not incremental) SPF calculation.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-ext-spf interval</a> <i>number</i>
<b>Tree</b>	<a href="#">interval</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **run-time** *string*

<b>Description</b>	the value of last-ext-spf-run-time indicates the value of sys-up-time when the external OSPF dijkstra (SPF) was last run.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-ext-spf run-time</a> <i>string</i>
<b>Tree</b>	<a href="#">run-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-full-spf**

<b>Description</b>	Information about the last full SPF run
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-full-spf</a>
<b>Tree</b>	<a href="#">last-full-spf</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **extern-spf-time** *number*

<b>Description</b>	Time it took, in hundredths of seconds, to complete the external LSA calculations.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-full-spf extern-spf-time</a> <i>number</i>
<b>Tree</b>	<a href="#">extern-spf-time</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **inter-spf-time** *number*

<b>Description</b>	Time it took, in hundredths of seconds, to complete the inter-area SPF calculations.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-full-spf inter-spf-time</a> <i>number</i>
<b>Tree</b>	<a href="#">inter-spf-time</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **intra-spf-time** *number*

<b>Description</b>	Time it took, in hundredths of seconds, to complete the intra-area SPF calculations.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-full-spf intra-spf-time</a> <i>number</i>
<b>Tree</b>	<a href="#">intra-spf-time</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **rtm-update-time** *number*

<b>Description</b>	Time it took, in hundredths of seconds, to complete the RTM updates.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-full-spf rtm-update-time</a> <i>number</i>
<b>Tree</b>	<a href="#">rtm-update-time</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**run-time** *string*

<b>Description</b>	the value of last-full-spf-run-time indicates the time at which the system last performed a full dijkstra (SPF) run.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-full-spf run-time</a> <i>string</i>
<b>Tree</b>	<a href="#">run-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-time** *number*

<b>Description</b>	Time it took, in hundredths of seconds, to complete the last SPF run completely.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf last-full-spf total-time</a> <i>number</i>
<b>Tree</b>	<a href="#">total-time</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**max-spf-run-interval** *number*

<b>Description</b>	the value of max-spf-run-interval indicates the maximum time, in hundredths of seconds, used to perform a total SPF calculation.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf max-spf-run-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">max-spf-run-interval</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**min-spf-run-interval** *number*

<b>Description</b>	the value of min-spf-run-interval indicates the minimum time, in hundredths of seconds, used to perform a total SPF calculation.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf min-spf-run-interval</a> <i>number</i>
<b>Tree</b>	<a href="#">min-spf-run-interval</a>
<b>Range</b>	0 to 2147483647
<b>Units</b>	centiseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**spf-attempts-failed**

<b>Description</b>	The number of times an attempt to run SPF has failed because SPF runs have been stopped as a result of insufficient memory resources.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">spf spf-attempts-failed</a>
<b>Tree</b>	<a href="#">spf-attempts-failed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**timers**

<b>Description</b>	Enter the timers context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers</a>
<b>Tree</b>	<a href="#">timers</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**incremental-spf-wait** *number*

<b>Description</b>	Delay time before an incremental SPF calculation is started
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers incremental-spf-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">incremental-spf-wait</a>
<b>Range</b>	0 to 1000
<b>Default</b>	1000

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### Isa-accumulate *number*

<b>Description</b>	Delay time for accumulating multiple LSAs before advertising them to neighbors
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers isa-accumulate</a> <i>number</i>
<b>Tree</b>	<a href="#">isa-accumulate</a>
<b>Range</b>	0 to 1000
<b>Default</b>	1000
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### Isa-arrival *number*

<b>Description</b>	Minimum delay between receipt of the same LSAs arriving from neighbors
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers isa-arrival</a> <i>number</i>
<b>Tree</b>	<a href="#">isa-arrival</a>
<b>Range</b>	0 to 600000
<b>Default</b>	1000
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### Isa-generate

<b>Description</b>	Enter the isa-generate context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers isa-generate</a>
<b>Tree</b>	<a href="#">isa-generate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**Isa-initial-wait** *number*

<b>Description</b>	First waiting period between link state advertisements LSA originates
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers lsa-generate lsa-initial-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">lsa-initial-wait</a>
<b>Range</b>	10 to 600000
<b>Default</b>	5000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**Isa-second-wait** *number*

<b>Description</b>	Hold time between the first and second LSA generation
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers lsa-generate lsa-second-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">lsa-second-wait</a>
<b>Range</b>	10 to 600000
<b>Default</b>	5000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-lsa-wait** *number*

<b>Description</b>	Maximum time between two consecutive occurrences of an LSA being generated
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers lsa-generate max-lsa-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">max-lsa-wait</a>
<b>Range</b>	10 to 600000
<b>Default</b>	5000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**redistribute-delay** *number*

<b>Description</b>	Hold down timer for external routes that are redistributed in OSPF
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers redistribute-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">redistribute-delay</a>
<b>Range</b>	0 to 1000
<b>Default</b>	1000
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**spf-wait**

<b>Description</b>	Enter the spf-wait context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers spf-wait</a>
<b>Tree</b>	<a href="#">spf-wait</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**spf-initial-wait** *number*

<b>Description</b>	Initial SPF calculation delay after a topology change
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers spf-wait spf-initial-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">spf-initial-wait</a>
<b>Range</b>	10 to 100000
<b>Default</b>	1000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**spf-max-wait** *number*

<b>Description</b>	Maximum interval between two consecutive SPF calculations
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers spf-wait spf-max-wait</a> <i>number</i>

<b>Tree</b>	<a href="#">spf-max-wait</a>
<b>Range</b>	10 to 120000
<b>Default</b>	10000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **spf-second-wait** *number*

<b>Description</b>	Hold time between the first and second SPF calculation
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">timers spf-wait spf-second-wait</a> <i>number</i>
<b>Tree</b>	<a href="#">spf-second-wait</a>
<b>Range</b>	10 to 100000
<b>Default</b>	1000
<b>Units</b>	milliseconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **total-exported-routes**

<b>Description</b>	the value of total-exported-routes indicates the total number of routes exported into OSPF from the route table manager when an export policy is configured. value of total-exported-routes would be 0 when no export policy is configured.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">total-exported-routes</a>
<b>Tree</b>	<a href="#">total-exported-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **trace-options**

<b>Description</b>	Enter the trace-options context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## trace

<b>Description</b>	Tracing parameter flags
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace</a>
<b>Tree</b>	<a href="#">trace</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## adjacencies

<b>Description</b>	Enable tracing all BGP events.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace adjacencies</a>
<b>Tree</b>	<a href="#">adjacencies</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## graceful-restart

<b>Description</b>	Enable tracing all graceful-restart events.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace graceful-restart</a>
<b>Tree</b>	<a href="#">graceful-restart</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## interfaces

<b>Description</b>	Enable tracing all interface events.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace interfaces</a>
<b>Tree</b>	<a href="#">interfaces</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## Isdb

**Description** Trace OSPF LSDB events Only one type can be enabled at a time

**Context** [network-instance name string protocols ospf instance name string trace-options trace Isdb](#)

**Tree** [Isdb](#)

**Configurable** True

**Platforms** Supported on all platforms

## link-state-id *string*

**Description** Enter the link-state-id context

**Context** [network-instance name string protocols ospf instance name string trace-options trace Isdb link-state-id string](#)

**Tree** [link-state-id](#)

**Configurable** True

**Platforms** Supported on all platforms

## router-id *string*

**Description** Enter the router-id context

**Context** [network-instance name string protocols ospf instance name string trace-options trace Isdb router-id string](#)

**Tree** [router-id](#)

**Configurable** True

**Platforms** Supported on all platforms

## type *keyword*

**Description** Enter the type context

**Context** [network-instance name string protocols ospf instance name string trace-options trace Isdb type keyword](#)

**Tree** [type](#)

**Options**

- all  
Enable tracing of all LSDB events

- router  
Enable tracing of LSDB router LSA events
- network  
Enable tracing of OSPF LSDB network LSA events
- summary  
Enable tracing of OSPF LSDB summary LSA events
- nssa  
Enable tracing of OSPF LSDB NSSA LSA events
- external  
Enable tracing of OSPF LSDB events for External LSA
- opaque  
Enable tracing of OSPF LSDB events involving opaque LSA
- inter-area-prefix  
Enable tracing of OSPF LSDB events for inter-area prefixes
- inter-area-router  
Enable tracing of OSPF LSDB events for inter-area routers
- intra-area-prefix  
Enable tracing of OSPF LSDB events for intra-area prefixes

**Configurable**

True

**Platforms**

Supported on all platforms

**misc****Description**

Enable tracing all Config events.

**Context**[network-instance name string protocols ospf instance name string trace-options trace misc](#)**Tree**[misc](#)**Configurable**

True

**Platforms**

Supported on all platforms

**packet****Description**

Trace OSPF Packet types Only one type can be enabled at a time

**Context**[network-instance name string protocols ospf instance name string trace-options trace packet](#)**Tree**[packet](#)**Configurable**

True

**Platforms** Supported on all platforms

### detail

**Description** To enable detailed tracing. Includes both received and sent packets.

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [trace-options trace packet detail](#)

**Tree** [detail](#)

**Configurable** True

**Platforms** Supported on all platforms

### modifier *keyword*

**Description** Enter the modifier context

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [trace-options trace packet modifier](#) *keyword*

**Tree** [modifier](#)

**Options**

- ingress  
To enable tracing for the packets which are received.
- egress  
To enable tracing for the sent packets.
- in-and-egress  
To enable tracing for both sent and received packets
- drop  
To enable tracing for the sent packets.

**Configurable** True

**Platforms** Supported on all platforms

### type *keyword*

**Description** Enter the type context

**Context** [network-instance name](#) *string* [protocols ospf instance name](#) *string* [trace-options trace packet type](#) *keyword*

**Tree** [type](#)

**Options**

- all  
Enable tracing of all OSPF packets
- hello

- Enable tracing of OSPF Hello packets
- dbdescr  
Enable tracing of OSPF database Descriptor packets
- ls-request  
Enable tracing of OSPF link-state request packets
- ls-update  
Enable tracing of OSPF link-state update packets
- ls-ack  
Enable tracing of OSPF link-state Ack packets

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## routes

<b>Description</b>	Enable the routes context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace routes</a>
<b>Tree</b>	<a href="#">routes</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## dest-address (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Enter the dest-address context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace routes dest-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">dest-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## spf

<b>Description</b>	Enable the spf context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace spf</a>
<b>Tree</b>	<a href="#">spf</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **dest-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Enter the dest-address context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">trace-options trace spf dest-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">dest-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **traffic-engineering**

<b>Description</b>	container for traffic engineering information
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">traffic-engineering</a>
<b>Tree</b>	<a href="#">traffic-engineering</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **advertisement** *boolean*

<b>Description</b>	A setting of false means that no TE-related TLVs and subTLVs should be added to LSAs or LSPs originated by this IGP instance. A setting of true means that TE-related TLVs and subTLVs should be added to LSAs or LSPs originated by this IGP instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">traffic-engineering advertisement</a> <i>boolean</i>
<b>Tree</b>	<a href="#">advertisement</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **version** *identityref*

<b>Description</b>	The version that this ospf instance supports.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">version identityref</a>
<b>Tree</b>	<a href="#">version</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>ospf-v2 Version 2 of the OSPF protocol</li> <li>ospf-v3 Version 3 of the OSPF protocol</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## route-table

<b>Description</b>	Enter the route-table context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a>
<b>Tree</b>	<a href="#">route-table</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## ipv4-unicast

<b>Description</b>	The container for the IPv4 unicast routing table of the network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a>
<b>Tree</b>	<a href="#">ipv4-unicast</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## route [ipv4-prefix](#) *string* [route-type](#) *identityref* [route-owner](#) *string* [id](#) *number* [origin-network-instance](#) *reference*

<b>Description</b>	Enter the route list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <i>identityref</i> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv4-prefix** *string*

<b>Description</b>	The IPv4 prefix associated with the route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <a href="#">reference</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-type** *identityref*

<b>Description</b>	The type of the IP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <a href="#">reference</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• aggregate Locally configured aggregate route</li> <li>• arp-nd IP route added by ARP ND.</li> <li>• bgp Border Gateway Protocol version 4</li> <li>• bgp-label Border Gateway Protocol labeled routes</li> <li>• bgp-evpn BGP Ethernet VPN (EVPN)</li> <li>• bgp-vpn Border Gateway Protocol VPN routes</li> <li>• dhcp IP (default) route added by DHCP.</li> <li>• gribi A gRIBI route</li> <li>• host A host route</li> <li>• isis IS-IS</li> <li>• local A directly connected route</li> </ul>

- linux  
IP route added by the linux kernel.
- ndk1  
Route added by an agent application using the NDK
- ndk2  
Route added by an agent application using the NDK
- ospfv2  
OSPFv2
- ospfv3  
OSPFv3
- static  
Locally configured static route

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **route-owner** *string*

<b>Description</b>	The application name of the owner of the IP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <i>reference</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **id** *number*

<b>Description</b>	An owner-assigned index value that is unique for each of the routes for a given prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <i>reference</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **origin-network-instance** *reference*

<b>Description</b>	Origin network instance of the route (where it was originally learned or configured)
--------------------	--

If the route was leaked from another network instance, the value of this leaf reflects the network-instance from which it was learned. If it was not leaked the value is the same as the parent network-instance.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <i>identityref</i> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <i>reference</i>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **active** *boolean*

<b>Description</b>	If set to true then the route is installed as the active route for the IP prefix in the FIB. A route can be inactive because there is a more preferred route for the same prefix or else its next-hops are unresolved.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <i>identityref</i> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <i>reference</i> <a href="#">active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">active</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **fib-programming**

<b>Description</b>	Container for state related to the FIB programming of the object
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <i>identityref</i> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <i>reference</i> <a href="#">fib-programming</a>
<b>Tree</b>	<a href="#">fib-programming</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-failed-complexes** *string*

<b>Description</b>	List of forwarding complexes that reported a failure for the last operation. They appear in the format (slot-number,complex-number).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <i>identityref</i> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <i>reference</i> <a href="#">fib-programming</a> <a href="#">last-failed-complexes</a> <i>string</i>
<b>Tree</b>	<a href="#">last-failed-complexes</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-failed-operation-type** *keyword*

<b>Description</b>	The last operation type that failed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv4-unicast route ipv4-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string id number</i> <a href="#">origin-network-instance reference fib-programming last-failed-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-failed-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>add</b> The current or last operation was an attempt to create a new entry.</li> <li>• <b>delete</b> The current or last operation was an attempt to delete an existing entry.</li> <li>• <b>modify</b> The current or last operation was an attempt to modify an existing entry.</li> <li>• <b>none</b> There was no prior operation for this entry or there is no current operation that is in process</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-successful-operation-timestamp** *string*

<b>Description</b>	<p>The date and time of the last operation to complete successfully, if the entry was not suppressed.</p> <p>A delete operation is immediately timestamped by FIB manager on the assumption that it will ultimately be successful on all complexes. For other operations the timestamp is generated when the last complex that was expected to respond has responded with a success acknowledgement.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv4-unicast route ipv4-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string id number</i> <a href="#">origin-network-instance reference fib-programming last-successful-operation-timestamp</a> <i>string</i>
<b>Tree</b>	<a href="#">last-successful-operation-timestamp</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-successful-operation-type** *keyword*

<b>Description</b>	The last operation type that completed successfully, if the entry was not suppressed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <a href="#">reference</a> <a href="#">fib-programming</a> <a href="#">last-successful-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-successful-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>add</b> The current or last operation was an attempt to create a new entry.</li> <li>• <b>delete</b> The current or last operation was an attempt to delete an existing entry.</li> <li>• <b>modify</b> The current or last operation was an attempt to modify an existing entry.</li> <li>• <b>none</b> There was no prior operation for this entry or there is no current operation that is in process</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pending-operation-type** *keyword*

<b>Description</b>	The current operation type that is in progress because not all complexes have responded.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <a href="#">reference</a> <a href="#">fib-programming</a> <a href="#">pending-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">pending-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>add</b> The current or last operation was an attempt to create a new entry.</li> <li>• <b>delete</b> The current or last operation was an attempt to delete an existing entry.</li> <li>• <b>modify</b> The current or last operation was an attempt to modify an existing entry.</li> <li>• <b>none</b> There was no prior operation for this entry or there is no current operation that is in process</li> </ul>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### suppressed *boolean*

**Description** When true, FIB programming for this entry has been suppressed and it is only installed in the control plane route table

**Context** [network-instance name string](#) [route-table ipv4-unicast route ipv4-prefix string](#) [route-type identityref](#) [route-owner string id number](#) [origin-network-instance reference](#) [fib-programming suppressed boolean](#)

**Tree** [suppressed](#)

**Configurable** False

**Platforms** Supported on all platforms

### gribi-metadata *binary*

**Description** Metadata persistently stored with the entry.

**Context** [network-instance name string](#) [route-table ipv4-unicast route ipv4-prefix string](#) [route-type identityref](#) [route-owner string id number](#) [origin-network-instance reference](#) [gribi-metadata binary](#)

**Tree** [gribi-metadata](#)

**String Length** 0 to 8

**Configurable** False

**Platforms** Supported on all platforms

### internal-tags *string*

**Description** Internal route tag written in the route/tunnel tables or BGP rib  
The internal-tag value is shown with the format 'type-string = hex-value-string'. For example:

**Context** [network-instance name string](#) [route-table ipv4-unicast route ipv4-prefix string](#) [route-type identityref](#) [route-owner string id number](#) [origin-network-instance reference](#) [internal-tags string](#)

**Tree** [internal-tags](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**Max. Elements** 2

**last-app-update** *string*

<b>Description</b>	The date and time of the last update of this route by the owning application or protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <a href="#">reference</a> <a href="#">last-app-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-app-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**leakable** *boolean*

<b>Description</b>	Reads true when the route was matched and accepted by the route-leaking inter-instance export-policy
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <a href="#">reference</a> <a href="#">leakable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">leakable</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**metric** *number*

<b>Description</b>	The metric of the IP route. In general, when comparing two routes with the same owner and preference, the route with the lower metric is the one that is activated and used for forwarding.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <a href="#">reference</a> <a href="#">metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop-group** *reference*

<b>Description</b>	The next-hop-group indirection object used by this route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance reference</a> <a href="#">next-hop-group reference</a>
<b>Tree</b>	<a href="#">next-hop-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop-group-network-instance** *reference*

<b>Description</b>	The network instance where the next-hop-group can be found. If unspecified, the next hop group is in the local network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance reference</a> <a href="#">next-hop-group-network-instance reference</a>
<b>Tree</b>	<a href="#">next-hop-group-network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**preference** *number*

<b>Description</b>	The IP route table preference. This is sometimes called the administrative distance of the route. In general, when comparing any two routes, the route with the lower preference is the one that is activated and used for forwarding.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance reference</a> <a href="#">preference</a> <i>number</i>
<b>Tree</b>	<a href="#">preference</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**resilient-hash** *boolean*

<b>Description</b>	Set to true if the route is covered by a resilient-hash-prefix entry
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <i>identityref</i> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <i>reference</i> <a href="#">resilient-hash</a> <i>boolean</i>
<b>Tree</b>	<a href="#">resilient-hash</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **target-network-instances** *reference*

<b>Description</b>	List of network-instances that have imported this route as a result of matching and accepting it in their inter-instance import-policy
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast route</a> <a href="#">ipv4-prefix</a> <i>string</i> <a href="#">route-type</a> <i>identityref</i> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <i>reference</i> <a href="#">target-network-instances</a> <i>reference</i>
<b>Tree</b>	<a href="#">target-network-instances</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **route-summary**

<b>Description</b>	Route summary information
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">route-summary</a>
<b>Tree</b>	<a href="#">route-summary</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **route-type** [ip-route-type-name](#) *identityref*

<b>Description</b>	Enter the route-type list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">route-summary</a> <a href="#">route-type</a> <a href="#">ip-route-type-name</a> <i>identityref</i>
<b>Tree</b>	<a href="#">route-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ip-route-type-name** *identityref*

<b>Description</b>	IP route type
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">route-summary</a> <a href="#">route-type</a> <a href="#">ip-route-type-name</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• aggregate Locally configured aggregate route</li> <li>• arp-nd IP route added by ARP ND.</li> <li>• bgp Border Gateway Protocol version 4</li> <li>• bgp-label Border Gateway Protocol labeled routes</li> <li>• bgp-evpn BGP Ethernet VPN (EVPN)</li> <li>• bgp-vpn Border Gateway Protocol VPN routes</li> <li>• dhcp IP (default) route added by DHCP.</li> <li>• gribi A gRIBI route</li> <li>• host A host route</li> <li>• isis IS-IS</li> <li>• local A directly connected route</li> <li>• linux IP route added by the linux kernel.</li> <li>• ndk1 Route added by an agent application using the NDK</li> <li>• ndk2 Route added by an agent application using the NDK</li> <li>• ospfv2 OSPFv2</li> <li>• ospfv3 OSPFv3</li> </ul>

- static  
Locally configured static route

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **active-routes** *number*

<b>Description</b>	Total number of prefixes associated with this route type that were submitted to fib-mgr and that fib-mgr successfully installed as active routes
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">route-summary</a> <a href="#">route-type</a> <a href="#">ip-route-type-name</a> <i>identityref</i> <a href="#">active-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">active-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **active-routes** *number*

<b>Description</b>	The total number of prefixes, belonging to this address family, with an active route in the FIB.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast</a> <a href="#">statistics</a> <a href="#">active-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">active-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **active-routes-with-ecmp** *number*

<b>Description</b>	The total number of prefixes, belonging to this address family, that have an active route in the FIB with multiple ECMP next-hops.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast statistics active-routes-with-ecmp</a> <i>number</i>
<b>Tree</b>	<a href="#">active-routes-with-ecmp</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **fib-failed-routes** *number*

<b>Description</b>	The total number of prefixes, belonging to this address family, that were not installed successfully because datapath resources were unavailable.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast statistics fib-failed-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">fib-failed-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **resilient-hash-routes** *number*

<b>Description</b>	The total number of prefixes, belonging to this address family, with an active route in the FIB that have resilient hash support.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast statistics resilient-hash-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">resilient-hash-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **total-routes** *number*

<b>Description</b>	The total number of routes, active and inactive, belonging to this address family, that are present in the routing table.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv4-unicast statistics total-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">total-routes</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv6-unicast**

<b>Description</b>	The container for the IPv6 unicast routing table of the network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a>
<b>Tree</b>	<a href="#">ipv6-unicast</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route** [ipv6-prefix](#) *string* [route-type](#) [identityref](#) [route-owner](#) *string* [id](#) *number* [origin-network-instance](#) *reference*

<b>Description</b>	Enter the route list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv6-prefix** *string*

<b>Description</b>	The IPv6 prefix associated with the route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <i>reference</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-type** [identityref](#)

<b>Description</b>	The type of the IP route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <i>reference</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">aggregate</a> Locally configured aggregate route</li> <li>• <a href="#">arp-nd</a> IP route added by ARP ND.</li> <li>• <a href="#">bgp</a></li> </ul>

- Border Gateway Protocol version 4
- bgp-label  
Border Gateway Protocol labeled routes
- bgp-evpn  
BGP Ethernet VPN (EVPN)
- bgp-vpn  
Border Gateway Protocol VPN routes
- dhcp  
IP (default) route added by DHCP.
- gribi  
A gRIBI route
- host  
A host route
- isis  
IS-IS
- local  
A directly connected route
- linux  
IP route added by the linux kernel.
- ndk1  
Route added by an agent application using the NDK
- ndk2  
Route added by an agent application using the NDK
- ospfv2  
OSPFv2
- ospfv3  
OSPFv3
- static  
Locally configured static route

**Configurable**

False

**Platforms**

Supported on all platforms

**route-owner string****Description**

The application name of the owner of the IP route

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv6-unicast route ipv6-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number</a> <a href="#">origin-network-instance reference</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**id number**

<b>Description</b>	An owner-assigned index value that is unique for each of the routes for a given prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv6-unicast route ipv6-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number</a> <a href="#">origin-network-instance reference</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**origin-network-instance reference**

<b>Description</b>	Origin network instance of the route (where it was originally learned or configured)  If the route was leaked from another network instance, the value of this leaf reflects the network-instance from which it was learned. If it was not leaked the value is the same as the parent network-instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv6-unicast route ipv6-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number</a> <a href="#">origin-network-instance reference</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active boolean**

<b>Description</b>	If set to true then the route is installed as the active route for the IP prefix in the FIB. A route can be inactive because there is a more preferred route for the same prefix or else its next-hops are unresolved.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv6-unicast route ipv6-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number</a> <a href="#">origin-network-instance reference</a> <a href="#">active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">active</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

## fib-programming

**Description** Container for state related to the FIB programming of the object

**Context** [network-instance name string](#) [route-table ipv6-unicast route ipv6-prefix string route-type identityref route-owner string id number origin-network-instance reference fib-programming](#)

**Tree** [fib-programming](#)

**Configurable** False

**Platforms** Supported on all platforms

## last-failed-complexes *string*

**Description** List of forwarding complexes that reported a failure for the last operation. They appear in the format (slot-number,complex-number).

**Context** [network-instance name string](#) [route-table ipv6-unicast route ipv6-prefix string route-type identityref route-owner string id number origin-network-instance reference fib-programming last-failed-complexes string](#)

**Tree** [last-failed-complexes](#)

**Configurable** False

**Platforms** Supported on all platforms

## last-failed-operation-type *keyword*

**Description** The last operation type that failed.

**Context** [network-instance name string](#) [route-table ipv6-unicast route ipv6-prefix string route-type identityref route-owner string id number origin-network-instance reference fib-programming last-failed-operation-type keyword](#)

**Tree** [last-failed-operation-type](#)

**Options**

- add  
The current or last operation was an attempt to create a new entry.
- delete  
The current or last operation was an attempt to delete an existing entry.
- modify  
The current or last operation was an attempt to modify an existing entry.
- none

There was no prior operation for this entry or there is no current operation that is in process

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-successful-operation-timestamp** *string*

<b>Description</b>	The date and time of the last operation to complete successfully, if the entry was not suppressed.  A delete operation is immediately timestamped by FIB manager on the assumption that it will ultimately be successful on all complexes. For other operations the timestamp is generated when the last complex that was expected to respond has responded with a success acknowledgement.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv6-unicast route ipv6-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number</a> <a href="#">origin-network-instance reference fib-programming last-successful-operation-timestamp</a> <i>string</i>
<b>Tree</b>	<a href="#">last-successful-operation-timestamp</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-successful-operation-type** *keyword*

<b>Description</b>	The last operation type that completed successfully, if the entry was not suppressed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv6-unicast route ipv6-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number</a> <a href="#">origin-network-instance reference fib-programming last-successful-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-successful-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• add The current or last operation was an attempt to create a new entry.</li> <li>• delete The current or last operation was an attempt to delete an existing entry.</li> <li>• modify The current or last operation was an attempt to modify an existing entry.</li> <li>• none There was no prior operation for this entry or there is no current operation that is in process</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **pending-operation-type** *keyword*

<b>Description</b>	The current operation type that is in progress because not all complexes have responded.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv6-unicast route ipv6-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number</a> <a href="#">origin-network-instance reference fib-programming pending-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">pending-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>add</b> The current or last operation was an attempt to create a new entry.</li> <li>• <b>delete</b> The current or last operation was an attempt to delete an existing entry.</li> <li>• <b>modify</b> The current or last operation was an attempt to modify an existing entry.</li> <li>• <b>none</b> There was no prior operation for this entry or there is no current operation that is in process</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **suppressed** *boolean*

<b>Description</b>	When true, FIB programming for this entry has been suppressed and it is only installed in the control plane route table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv6-unicast route ipv6-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number</a> <a href="#">origin-network-instance reference fib-programming suppressed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">suppressed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **gribi-metadata** *binary*

<b>Description</b>	Metadata persistently stored with the entry.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv6-unicast route ipv6-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number</a> <a href="#">origin-network-instance reference</a> <a href="#">gribi-metadata</a> <i>binary</i>
<b>Tree</b>	<a href="#">gribi-metadata</a>
<b>String Length</b>	0 to 8
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**internal-tags** *string*

<b>Description</b>	Internal route tag written in the route/tunnel tables or BGP rib The internal-tag value is shown with the format 'type-string = hex-value-string'. For example:
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv6-unicast route ipv6-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number</a> <a href="#">origin-network-instance reference</a> <a href="#">internal-tags</a> <i>string</i>
<b>Tree</b>	<a href="#">internal-tags</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	2

**last-app-update** *string*

<b>Description</b>	The date and time of the last update of this route by the owning application or protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table ipv6-unicast route ipv6-prefix</a> <i>string</i> <a href="#">route-type identityref route-owner</a> <i>string</i> <a href="#">id number</a> <a href="#">origin-network-instance reference</a> <a href="#">last-app-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-app-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**leakable** *boolean*

<b>Description</b>	Reads true when the route was matched and accepted by the route-leaking inter-instance export-policy
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <a href="#">reference</a> <a href="#">leakable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">leakable</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**metric** *number*

<b>Description</b>	The metric of the IP route. In general, when comparing two routes with the same owner and preference, the route with the lower metric is the one that is activated and used for forwarding.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <a href="#">reference</a> <a href="#">metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop-group** *reference*

<b>Description</b>	The next-hop-group indirection object used by this route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <a href="#">reference</a> <a href="#">next-hop-group</a> <a href="#">reference</a>
<b>Tree</b>	<a href="#">next-hop-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop-group-network-instance** *reference*

<b>Description</b>	The network instance where the next-hop-group can be found. If unspecified, the next hop group is in the local network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <a href="#">reference</a> <a href="#">next-hop-group-network-instance</a> <a href="#">reference</a>
<b>Tree</b>	<a href="#">next-hop-group-network-instance</a>

<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **preference** *number*

<b>Description</b>	The IP route table preference. This is sometimes called the administrative distance of the route. In general, when comparing any two routes, the route with the lower preference is the one that is activated and used for forwarding.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <a href="#">reference</a> <a href="#">preference</a> <i>number</i>
<b>Tree</b>	<a href="#">preference</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **resilient-hash** *boolean*

<b>Description</b>	Set to true if the route is covered by a resilient-hash-prefix entry
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <a href="#">reference</a> <a href="#">resilient-hash</a> <i>boolean</i>
<b>Tree</b>	<a href="#">resilient-hash</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **target-network-instances** *reference*

<b>Description</b>	List of network-instances that have imported this route as a result of matching and accepting it in their inter-instance import-policy
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast route</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">route-type</a> <a href="#">identityref</a> <a href="#">route-owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">origin-network-instance</a> <a href="#">reference</a> <a href="#">target-network-instances</a> <a href="#">reference</a>
<b>Tree</b>	<a href="#">target-network-instances</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-summary**

<b>Description</b>	Route summary information
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">route-summary</a>
<b>Tree</b>	<a href="#">route-summary</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-type** [ip-route-type-name](#) *identityref*

<b>Description</b>	Enter the route-type list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">route-summary</a> <a href="#">route-type</a> <a href="#">ip-route-type-name</a> <i>identityref</i>
<b>Tree</b>	<a href="#">route-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ip-route-type-name** *identityref*

<b>Description</b>	IP route type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">route-summary</a> <a href="#">route-type</a> <a href="#">ip-route-type-name</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• aggregate Locally configured aggregate route</li> <li>• arp-nd IP route added by ARP ND.</li> <li>• bgp Border Gateway Protocol version 4</li> <li>• bgp-label Border Gateway Protocol labeled routes</li> <li>• bgp-evpn BGP Ethernet VPN (EVPN)</li> <li>• bgp-vpn Border Gateway Protocol VPN routes</li> <li>• dhcp IP (default) route added by DHCP.</li> <li>• gribi</li> </ul>

- A gRIBI route
- host
  - A host route
- isis
  - IS-IS
- local
  - A directly connected route
- linux
  - IP route added by the linux kernel.
- ndk1
  - Route added by an agent application using the NDK
- ndk2
  - Route added by an agent application using the NDK
- ospfv2
  - OSPFv2
- ospfv3
  - OSPFv3
- static
  - Locally configured static route

**Configurable**

False

**Platforms**

Supported on all platforms

**active-routes** *number***Description**

Total number of prefixes associated with this route type that were submitted to fib-mgr and that fib-mgr successfully installed as active routes

Enter the statistics context

**Context**[network-instance name](#) *string* [route-table ipv6-unicast statistics](#)

<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **active-routes** *number*

<b>Description</b>	The total number of prefixes, belonging to this address family, with an active route in the FIB.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">statistics</a> <a href="#">active-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">active-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **active-routes-with-ecmp** *number*

<b>Description</b>	The total number of prefixes, belonging to this address family, that have an active route in the FIB with multiple ECMP next-hops.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">statistics</a> <a href="#">active-routes-with-ecmp</a> <i>number</i>
<b>Tree</b>	<a href="#">active-routes-with-ecmp</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **fib-failed-routes** *number*

<b>Description</b>	The total number of prefixes, belonging to this address family, that were not installed successfully because datapath resources were unavailable.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast</a> <a href="#">statistics</a> <a href="#">fib-failed-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">fib-failed-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **resilient-hash-routes** *number*

<b>Description</b>	The total number of prefixes, belonging to this address family, with an active route in the FIB that have resilient hash support.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast statistics</a> <a href="#">resilient-hash-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">resilient-hash-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-routes** *number*

<b>Description</b>	The total number of routes, active and inactive, belonging to this address family, that are present in the routing table.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">ipv6-unicast statistics</a> <a href="#">total-routes</a> <i>number</i>
<b>Tree</b>	<a href="#">total-routes</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**mpls**

<b>Description</b>	The container for the MPLS routing table of the network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls</a>
<b>Tree</b>	<a href="#">mpls</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**label-entry** [label-value](#) *number*

<b>Description</b>	Enter the label-entry list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls</a> <a href="#">label-entry</a> <a href="#">label-value</a> <i>number</i>
<b>Tree</b>	<a href="#">label-entry</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**label-value** *number*

<b>Description</b>	The MPLS label value
--------------------	----------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls label-entry</a> <a href="#">label-value</a> <a href="#">number</a>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **entry-type** *identityref*

<b>Description</b>	The entry type of the MPLS FIB entry.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls label-entry</a> <a href="#">label-value</a> <a href="#">number</a> <a href="#">entry-type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">entry-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• esi ESI mpls label entry, used by BGP-EVPN</li> <li>• pseudowire Pseudowire mpls label entry</li> <li>• ldp Label distribution protocol</li> <li>• network-instance Network Instance mpls label entry, used by EVPN or IP-VPN</li> <li>• sr-mpls Segment routing using MPLS dataplane, programmed by segment routing manager.</li> <li>• static-mpls Locally configured static MPLS route.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-app-update** *string*

<b>Description</b>	The date and time of the last update of this MPLS label entry by the owning application or protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls label-entry</a> <a href="#">label-value</a> <a href="#">number</a> <a href="#">last-app-update</a> <i>string</i>
<b>Tree</b>	<a href="#">last-app-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### next-bgp-instance *reference*

**Description** Enter the next-bgp-instance context

**Context** [network-instance name string route-table mpls label-entry label-value number next-bgp-instance reference](#)

**Tree** [next-bgp-instance](#)

**Reference** [network-instance name string protocols bgp-vpn bgp-instance id number](#)

**Configurable** False

**Platforms** Supported on all platforms

### next-ethernet-segment *reference*

**Description** If this ILM entry is for a pop label, and this label is below an EVPN label at the bottom of the stack, the label will identify an Ethernet Segment and forwarding in the network-instance may exclude the bridged subinterfaces associated with the Ethernet Segment

**Context** [network-instance name string route-table mpls label-entry label-value number next-ethernet-segment reference](#)

**Tree** [next-ethernet-segment](#)

**Reference** [system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string](#)

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### next-hop-group *reference*

**Description** The next-hop-group indirection object used by this route. Applicable only if the operation is SWAP.

**Context** [network-instance name string route-table mpls label-entry label-value number next-hop-group reference](#)

**Tree** [next-hop-group](#)

**Reference** [network-instance name string route-table next-hop-group index number](#)

**Configurable** False

**Platforms** Supported on all platforms

**next-network-instance** *reference*

<b>Description</b>	If this ILM entry is for a pop label, and this label is at the bottom of the stack, the next forwarding lookup will be done in the referenced network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls</a> <a href="#">label-entry</a> <a href="#">label-value</a> <i>number</i> <a href="#">next-network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">next-network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**operation** *keyword*

<b>Description</b>	The forwarding operation associated with the MPLS label entry.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls</a> <a href="#">label-entry</a> <a href="#">label-value</a> <i>number</i> <a href="#">operation</a> <i>keyword</i>
<b>Tree</b>	<a href="#">operation</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• pop</li> <li>• swap</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active-entries** *number*

<b>Description</b>	The total number of MPLS entries that are active in the FIB.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">mpls</a> <a href="#">statistics</a> <a href="#">active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### next-hop *index number*

<b>Description</b>	Enter the next-hop list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <i>index number</i>
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### *index number*

<b>Description</b>	A system-wide unique identifier of a next-hop object (system allocated).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <i>index number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### decapsulate-header *keyword*

<b>Description</b>	Packets matching this next-hop are decapsulated by removing the specified header.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <i>index number</i> <a href="#">decapsulate-header</a> <i>keyword</i>
<b>Tree</b>	<a href="#">decapsulate-header</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• gre The encapsulation header is a Generic Routing Encapsulation header.</li> <li>• ipv4 The encapsulation header is an IPv4 packet header</li> <li>• ipv6 The encapsulation header is an IPv6 packet header</li> <li>• mpls The encapsulation header is one or more MPLS labels indicated by the pushed and popped label stack lists.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**encapsulate-header** *keyword*

<b>Description</b>	Packets matching this next-hop are encapsulated by adding the specified header.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table next-hop index</a> <i>number</i> <a href="#">encapsulate-header</a> <i>keyword</i>
<b>Tree</b>	<a href="#">encapsulate-header</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• gre The encapsulation header is a Generic Routing Encapsulation header.</li> <li>• ipv4 The encapsulation header is an IPv4 packet header</li> <li>• ipv6 The encapsulation header is an IPv6 packet header</li> <li>• mpls The encapsulation header is one or more MPLS labels indicated by the pushed and popped label stack lists.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ip-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The next-hop IP address. Only populated when the next-hop type is indirect or tunnel or static-mpls. For a VXLAN tunnel this is the destination VTEP address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table next-hop index</a> <i>number</i> <a href="#">ip-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">ip-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ip-in-ip**

<b>Description</b>	Specifies details of the IP-in-IP header added to the packet. This is valid only when encapsulate-header is ipv4 or ipv6
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table next-hop index</a> <i>number</i> <a href="#">ip-in-ip</a>
<b>Tree</b>	<a href="#">ip-in-ip</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **dst-ip** (*ipv4-address* | *ipv6-address*)

**Description** Destination IP address to use for the encapsulated packet.

**Context** [network-instance name](#) *string* [route-table](#) [next-hop](#) [index](#) *number* [ip-in-ip](#) [dst-ip](#) (*ipv4-address* | *ipv6-address*)

**Tree** [dst-ip](#)

**Configurable** False

**Platforms** Supported on all platforms

### **src-ip** (*ipv4-address* | *ipv6-address*)

**Description** Source IP address to use for the encapsulated packet.

**Context** [network-instance name](#) *string* [route-table](#) [next-hop](#) [index](#) *number* [ip-in-ip](#) [src-ip](#) (*ipv4-address* | *ipv6-address*)

**Tree** [src-ip](#)

**Configurable** False

**Platforms** Supported on all platforms

### **mac-address** *string*

**Description** The MAC address of the next-hop that has been provided directly.  
No value is populated if the next-hop IP is resolved by an ARP or IPv6 ND entry.

**Context** [network-instance name](#) *string* [route-table](#) [next-hop](#) [index](#) *number* [mac-address](#) *string*

**Tree** [mac-address](#)

**Configurable** False

**Platforms** Supported on all platforms

### **mpls**

**Description** Enter the mpls context

**Context** [network-instance name](#) *string* [route-table](#) [next-hop](#) [index](#) *number* [mpls](#)

**Tree** [mpls](#)

**Configurable** False

**Platforms** Supported on all platforms

### entropy-label-transmit *boolean*

**Description** Entropy label (EL/ELI) is pushed when transmitting to this next-hop

**Context** [network-instance name](#) *string* [route-table](#) [next-hop](#) [index](#) *number* [mpls entropy-label-transmit](#) *boolean*

**Tree** [entropy-label-transmit](#)

**Configurable** False

**Platforms** Supported on all platforms

### pushed-mpls-label-stack (*number* | *keyword*)

**Description** The list of MPLS labels to push onto the packet when forwarding to this particular next-hop.

**Context** [network-instance name](#) *string* [route-table](#) [next-hop](#) [index](#) *number* [mpls pushed-mpls-label-stack](#) (*number* | *keyword*)

**Tree** [pushed-mpls-label-stack](#)

**Range** 16 to 1048575

**Options**

- IPV4\_EXPLICIT\_NULL
- IPV6\_EXPLICIT\_NULL
- IMPLICIT\_NULL

**Configurable** False

**Platforms** Supported on all platforms

**Max. Elements** 1

### network-instance *reference*

**Description** Indicates that the next-hop is another network instance. If this is specified but an IP address or interface is not provided, the meaning is that a new IP lookup should occur in the other network instance.

**Context** [network-instance name](#) *string* [route-table](#) [next-hop](#) [index](#) *number* [network-instance reference](#)

**Tree** [network-instance](#)

**Reference** [network-instance name](#) *string*

**Configurable** False

**Platforms** Supported on all platforms

**programmed-index** *number*

<b>Description</b>	The index assigned to the next-hop by the gRIBI client
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop index</a> <i>number</i> <a href="#">programmed-index</a> <i>number</i>
<b>Tree</b>	<a href="#">programmed-index</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**resolving-route**

<b>Description</b>	Enter the resolving-route context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop index</a> <i>number</i> <a href="#">resolving-route</a>
<b>Tree</b>	<a href="#">resolving-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ip-prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	The prefix of the resolving route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop index</a> <i>number</i> <a href="#">resolving-route</a> <a href="#">ip-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Tree</b>	<a href="#">ip-prefix</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-owner** *string*

<b>Description</b>	The application name of the owner of the resolving route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop index</a> <i>number</i> <a href="#">resolving-route</a> <a href="#">route-owner</a> <i>string</i>
<b>Tree</b>	<a href="#">route-owner</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## **route-type** *identityref*

<b>Description</b>	The type of the resolving route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i> <a href="#">resolving-route</a> <a href="#">route-type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">route-type</a>
<b>Options</b>	<ul style="list-style-type: none"><li>• <b>aggregate</b> Locally configured aggregate route</li><li>• <b>arp-nd</b> IP route added by ARP ND.</li><li>• <b>bgp</b> Border Gateway Protocol version 4</li><li>• <b>bgp-label</b> Border Gateway Protocol labeled routes</li><li>• <b>bgp-evpn</b> BGP Ethernet VPN (EVPN)</li><li>• <b>bgp-vpn</b> Border Gateway Protocol VPN routes</li><li>• <b>dhcp</b> IP (default) route added by DHCP.</li><li>• <b>gribi</b> A gRIBI route</li><li>• <b>host</b> A host route</li><li>• <b>isis</b> IS-IS</li><li>• <b>local</b> A directly connected route</li><li>• <b>linux</b> IP route added by the linux kernel.</li><li>• <b>ndk1</b> Route added by an agent application using the NDK</li><li>• <b>ndk2</b> Route added by an agent application using the NDK</li><li>• <b>ospfv2</b> OSPFv2</li><li>• <b>ospfv3</b></li></ul>

- OSPFv3
- static
- Locally configured static route

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## resolving-tunnel

<b>Description</b>	Enter the resolving-tunnel context
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <a href="#">number</a> <a href="#">resolving-tunnel</a>
<b>Tree</b>	<a href="#">resolving-tunnel</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	The prefix of the resolving tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <a href="#">number</a> <a href="#">resolving-tunnel</a> <a href="#">ip-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Tree</b>	<a href="#">ip-prefix</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## tunnel-owner *string*

<b>Description</b>	The application name of the owner of the resolving tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <a href="#">number</a> <a href="#">resolving-tunnel</a> <a href="#">tunnel-owner</a> <i>string</i>
<b>Tree</b>	<a href="#">tunnel-owner</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## tunnel-type *identityref*

<b>Description</b>	The type of the tunnel.
--------------------	-------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i> <a href="#">resolving-tunnel</a> <a href="#">tunnel-type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">tunnel-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ip-in-ip</a> Tunnels with IP-in-IP encapsulation</li> <li>• <a href="#">gre</a> Tunnels with GRE encapsulation</li> <li>• <a href="#">sr-isis</a> Segment routing using MPLS dataplane, programmed by IS-IS</li> <li>• <a href="#">sr-ospfv2</a> Segment routing using MPLS dataplane, programmed by OSPFv2</li> <li>• <a href="#">sr-ospfv3</a> Segment routing using MPLS dataplane, programmed by OSPFv3</li> <li>• <a href="#">sr-policy-mpls-colored</a> Tunnel setup using TE-POLICY.</li> <li>• <a href="#">sr-policy-mpls-uncolored</a> Tunnel setup using TE-POLICY.</li> <li>• <a href="#">vxlan</a> Tunnels based on VXLAN encapsulation</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **subinterface** *reference*

<b>Description</b>	The next-hop interface. Only populated when the next-hop type is direct.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i> <a href="#">subinterface</a> <i>reference</i>
<b>Tree</b>	<a href="#">subinterface</a>
<b>Reference</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **type** *identityref*

<b>Description</b>	The next-hop type used by the datapath.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i> <a href="#">type</a> <a href="#">identityref</a>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>extract</b> Next-hop will cause matching packets to be delivered to the CPM.</li> <li>• <b>direct</b> Next-hop was resolved by a local route - i.e. it is an address on a connected subnet.</li> <li>• <b>discard</b> Next-hop will cause matching packets to be dropped without ICMP generation.</li> <li>• <b>reject</b> Next-hop will cause matching packets to be dropped with ICMP generation.</li> <li>• <b>indirect</b> Next-hop was resolved by a non-local route - i.e. it is not an address on a connected subnet.</li> <li>• <b>mpls</b> An MPLS label will be pushed when forwarding to this next-hop.</li> <li>• <b>tunnel</b> Next-hop is a tunnel.</li> <li>• <b>broadcast</b> Next-hop will cause matching subnet-broadcast packets to be delivered to the control plane.</li> <li>• <b>redirect</b> Next-hop will redirect to another network-instance.</li> <li>• <b>interface-with-mac</b> Next-hop is associated with an outbound interface plus MAC address</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## vxlan

<b>Description</b>	Enter the vxlan context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i> <a href="#">vxlan</a>
<b>Tree</b>	<a href="#">vxlan</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **destination-mac** *string*

**Description** VXLAN inner ethernet destination mac-address.  
**Context** [network-instance name](#) *string* [route-table next-hop index](#) *number* [vxlan destination-mac](#) *string*  
**Tree** [destination-mac](#)  
**Configurable** False  
**Platforms** Supported on all platforms

### **source-mac** *string*

**Description** VXLAN inner ethernet source mac-address.  
**Context** [network-instance name](#) *string* [route-table next-hop index](#) *number* [vxlan source-mac](#) *string*  
**Tree** [source-mac](#)  
**Configurable** False  
**Platforms** Supported on all platforms

### **vni** *number*

**Description** VXLAN Network Identifier of the destination.  
**Context** [network-instance name](#) *string* [route-table next-hop index](#) *number* [vxlan vni number](#)  
**Tree** [vni](#)  
**Range** 1 to 16777215  
**Configurable** False  
**Platforms** Supported on all platforms

### **next-hop-group** [index](#) *number*

**Description** Enter the next-hop-group list instance  
**Context** [network-instance name](#) *string* [route-table next-hop-group index](#) *number*  
**Tree** [next-hop-group](#)  
**Configurable** False  
**Platforms** Supported on all platforms

**index number**

<b>Description</b>	A system-wide unique identifier of a next-hop-group indirection object (system allocated).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**backup-next-hop id number**

<b>Description</b>	List of backup next-hops associated with the NHG
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">backup-next-hop id</a> <i>number</i>
<b>Tree</b>	<a href="#">backup-next-hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**id number**

<b>Description</b>	A unique identifier of a next-hop member (system allocated).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">backup-next-hop id</a> <i>number</i>
<b>Range</b>	0 to 1023
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop reference**

<b>Description</b>	Enter the next-hop context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">backup-next-hop id</a> <i>number</i> <a href="#">next-hop</a> <i>reference</i>
<b>Tree</b>	<a href="#">next-hop</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**resolved** *keyword*

<b>Description</b>	Set to true when the next-hop was resolved. This reads not-applicable for resolve=false next-hops.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table next-hop-group index</a> <i>number</i> <a href="#">backup-next-hop id</a> <i>number</i> <b>resolved</b> <i>keyword</i>
<b>Tree</b>	<a href="#">resolved</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• true</li> <li>• false</li> <li>• not-applicable</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**backup-next-hop-group** *reference*

<b>Description</b>	The backup next-hop-group for the current group. When all entries within the next-hop group become unusable, the backup next-hop group is used if specified.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table next-hop-group index</a> <i>number</i> <a href="#">backup-next-hop-group</a> <i>reference</i>
<b>Tree</b>	<a href="#">backup-next-hop-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table next-hop-group index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**fib-programming**

<b>Description</b>	Container for state related to the FIB programming of the object
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table next-hop-group index</a> <i>number</i> <a href="#">fib-programming</a>
<b>Tree</b>	<a href="#">fib-programming</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-failed-complexes** *string*

<b>Description</b>	List of forwarding complexes that reported a failure for the last operation. They appear in the format (slot-number,complex-number).
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">fib-programming</a> <a href="#">last-failed-complexes</a> <i>string</i>
<b>Tree</b>	<a href="#">last-failed-complexes</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-failed-operation-type** *keyword*

<b>Description</b>	The last operation type that failed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">fib-programming</a> <a href="#">last-failed-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-failed-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>add</b> The current or last operation was an attempt to create a new entry.</li> <li>• <b>delete</b> The current or last operation was an attempt to delete an existing entry.</li> <li>• <b>modify</b> The current or last operation was an attempt to modify an existing entry.</li> <li>• <b>none</b> There was no prior operation for this entry or there is no current operation that is in process</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-successful-operation-timestamp** *string*

<b>Description</b>	<p>The date and time of the last operation to complete successfully, if the entry was not suppressed.</p> <p>A delete operation is immediately timestamped by FIB manager on the assumption that it will ultimately be successful on all complexes. For other operations the timestamp is generated when the last complex that was expected to respond has responded with a success acknowledgement.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">fib-programming</a> <a href="#">last-successful-operation-timestamp</a> <i>string</i>
<b>Tree</b>	<a href="#">last-successful-operation-timestamp</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-successful-operation-type** *keyword*

<b>Description</b>	The last operation type that completed successfully, if the entry was not suppressed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">fib-programming</a> <a href="#">last-successful-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-successful-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>add</b> The current or last operation was an attempt to create a new entry.</li> <li>• <b>delete</b> The current or last operation was an attempt to delete an existing entry.</li> <li>• <b>modify</b> The current or last operation was an attempt to modify an existing entry.</li> <li>• <b>none</b> There was no prior operation for this entry or there is no current operation that is in process</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pending-operation-type** *keyword*

<b>Description</b>	The current operation type that is in progress because not all complexes have responded.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group</a> <a href="#">index</a> <i>number</i> <a href="#">fib-programming</a> <a href="#">pending-operation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">pending-operation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>add</b> The current or last operation was an attempt to create a new entry.</li> <li>• <b>delete</b> The current or last operation was an attempt to delete an existing entry.</li> <li>• <b>modify</b> The current or last operation was an attempt to modify an existing entry.</li> <li>• <b>none</b> There was no prior operation for this entry or there is no current operation that is in process</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**suppressed** *boolean*

<b>Description</b>	When true, FIB programming for this entry has been suppressed and it is only installed in the control plane route table
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group index</a> <i>number</i> <a href="#">fib-programming suppressed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">suppressed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**group-name-alias** *string*

<b>Description</b>	The alias name associated with this next-hop-group.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group index</a> <i>number</i> <a href="#">group-name-alias</a> <i>string</i>
<b>Tree</b>	<a href="#">group-name-alias</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop id** *number*

<b>Description</b>	List of primary next-hops associated with the NHG
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group index</a> <i>number</i> <a href="#">next-hop id</a> <i>number</i>
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**id** *number*

<b>Description</b>	A unique identifier of a next-hop member (system allocated).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group index</a> <i>number</i> <a href="#">next-hop id</a> <i>number</i>
<b>Range</b>	0 to 1023
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop** *reference*

<b>Description</b>	Enter the next-hop context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group index</a> <i>number</i> <a href="#">next-hop id</a> <i>number</i> <a href="#">next-hop reference</a>
<b>Tree</b>	<a href="#">next-hop</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**resolved** *keyword*

<b>Description</b>	Set to true when the next-hop was resolved. This reads not-applicable for resolve=false next-hops.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group index</a> <i>number</i> <a href="#">next-hop id</a> <i>number</i> <a href="#">resolved keyword</a>
<b>Tree</b>	<a href="#">resolved</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• true</li> <li>• false</li> <li>• not-applicable</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**weight** *number*

<b>Description</b>	<p>The configured/programmed weight assigned to the next-hop within the group</p> <p>This may be different from the actual weight used by the datapath, which changes depending on the next-hops that are up/down in the group. Traffic is balanced across the next-hops within the group in proportion of the actual weight.</p>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table</a> <a href="#">next-hop-group index</a> <i>number</i> <a href="#">next-hop id</a> <i>number</i> <a href="#">weight</a> <i>number</i>
<b>Tree</b>	<a href="#">weight</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**programmed-index** *number*

<b>Description</b>	The index assigned to the next-hop-group by the gRIBI client
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table next-hop-group index</a> <i>number</i> <a href="#">programmed-index</a> <i>number</i>
<b>Tree</b>	<a href="#">programmed-index</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**router-id** *string*

<b>Description</b>	A identifier for the local network instance - typically used within associated routing protocols or signalling routing information in another network instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">router-id</a> <i>string</i>
<b>Tree</b>	<a href="#">router-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**segment-routing**

<b>Description</b>	Container with segment routing configuration options
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing</a>
<b>Tree</b>	<a href="#">segment-routing</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**mpls**

<b>Description</b>	Adding this container activates datapath support for SR-MPLS
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls</a>
<b>Tree</b>	<a href="#">mpls</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**global-block**

<b>Description</b>	Container with SRGB configuration that is applicable to all IGP protocol instances
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls global-block</a>
<b>Tree</b>	<a href="#">global-block</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**label-range** *reference*

<b>Description</b>	Reference to a static label range
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls global-block label-range reference</a>
<b>Tree</b>	<a href="#">label-range</a>
<b>Reference</b>	<a href="#">system mpls label-ranges static name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**label-range-status** *keyword*

<b>Description</b>	Status of the label block. The label block may show as unavailable if there is pending cleanup.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls global-block label-range-status keyword</a>
<b>Tree</b>	<a href="#">label-range-status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• available</li> <li>• unavailable</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**local-prefix-sid** [prefix-sid-index](#) *number*

<b>Description</b>	List of configured protocol-independent prefix SIDs associated with the network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls local-prefix-sid prefix-sid-index</a> <i>number</i>
<b>Tree</b>	<a href="#">local-prefix-sid</a>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	4

### **prefix-sid-index number**

<b>Description</b>	An index to enumerate the different prefix sids
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls local-prefix-sid prefix-sid-index</a> <i>number</i>
<b>Range</b>	1 to 4
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **interface string**

<b>Description</b>	Reference to the subinterface that owns the prefix(es) to be advertised. If ipv4-label-index is assigned a value then the primary IPv4 address of the referenced subinterface is advertised as a prefix SID. If ipv6-label-index is assigned a value then the primary IPv6 address of the referenced subinterface is advertised as a prefix SID.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls local-prefix-sid prefix-sid-index</a> <i>number</i> <a href="#">interface</a> <i>string</i>
<b>Tree</b>	<a href="#">interface</a>
<b>String Length</b>	5 to 25
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ipv4-label-index number**

<b>Description</b>	Label index to add to SRGB base.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls local-prefix-sid prefix-sid-index</a> <i>number</i> <a href="#">ipv4-label-index</a> <i>number</i>
<b>Tree</b>	<a href="#">ipv4-label-index</a>

<b>Range</b>	0 to 1048575
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv6-label-index *number*

<b>Description</b>	Label index to add to SRGB base.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls local-prefix-sid prefix-sid-index</a> <i>number</i> <a href="#">ipv6-label-index</a> <i>number</i>
<b>Tree</b>	<a href="#">ipv6-label-index</a>
<b>Range</b>	0 to 1048575
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### node-sid *boolean*

<b>Description</b>	If set, the prefix SID(s) identity the router as a whole.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls local-prefix-sid prefix-sid-index</a> <i>number</i> <a href="#">node-sid</a> <i>boolean</i>
<b>Tree</b>	<a href="#">node-sid</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### sid-database

<b>Description</b>	Database of all known prefix SIDs, local and remote.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database</a>
<b>Tree</b>	<a href="#">sid-database</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**prefix-sid** *prefix (ipv4-prefix | ipv6-prefix) sid-label-value number protocol keyword protocol-instance number protocol-multi-topology number algorithm number*

<b>Description</b>	List of prefix SIDs
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">segment-routing mpls sid-database prefix-sid prefix (ipv4-prefix   ipv6-prefix) sid-label-value number protocol keyword protocol-instance number protocol-multi-topology number algorithm number</a>
<b>Tree</b>	<a href="#">prefix-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**prefix** *(ipv4-prefix | ipv6-prefix)*

<b>Description</b>	The IPv4 or IPv6 prefix associated with the SID.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">segment-routing mpls sid-database prefix-sid prefix (ipv4-prefix   ipv6-prefix) sid-label-value number protocol keyword protocol-instance number protocol-multi-topology number algorithm number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sid-label-value** *number*

<b>Description</b>	The MPLS label value associated with the SID.
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">segment-routing mpls sid-database prefix-sid prefix (ipv4-prefix   ipv6-prefix) sid-label-value number protocol keyword protocol-instance number protocol-multi-topology number algorithm number</a>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**protocol** *keyword*

<b>Description</b>	The protocol that provided the prefix SID
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">segment-routing mpls sid-database prefix-sid prefix (ipv4-prefix   ipv6-prefix) sid-label-value number protocol keyword protocol-instance number protocol-multi-topology number algorithm number</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>isis</li> <li>direct</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **protocol-instance** *number*

<b>Description</b>	The instance ID that provided the prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">sid-label-value</a> <i>number</i> <a href="#">protocol keyword protocol-instance</a> <i>number</i> <a href="#">protocol-multi-topology</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **protocol-multi-topology** *number*

<b>Description</b>	The multi-topology ID that provided the prefix SID
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">sid-label-value</a> <i>number</i> <a href="#">protocol keyword protocol-instance</a> <i>number</i> <a href="#">protocol-multi-topology</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Range</b>	0 to 4095
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **algorithm** *number*

<b>Description</b>	Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">sid-label-value</a> <i>number</i> <a href="#">protocol keyword protocol-instance</a> <i>number</i> <a href="#">protocol-multi-topology</a> <i>number</i> <a href="#">algorithm</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **active** *boolean*

<b>Description</b>	When false, the prefix SID is inactive. It could be inactive because it is involved in a prefix or SID conflict that occurred between different protocol-instance. It could also be inactive because datapath programming failed.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">protocol keyword</a> <a href="#">protocol-instance</a> <i>number</i> <a href="#">protocol-multi-topology</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">active</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **prefix-conflict** *boolean*

<b>Description</b>	Reads true when the prefix SID entry is involved in a prefix conflict that has occurred between protocols. This occurs when there are multiple entries in the SID database for the same prefix. All the conflicting entries become inactive except for the one with the smallest sid-index.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">protocol keyword</a> <a href="#">protocol-instance</a> <i>number</i> <a href="#">protocol-multi-topology</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">prefix-conflict</a> <i>boolean</i>
<b>Tree</b>	<a href="#">prefix-conflict</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **sid-conflict** *boolean*

<b>Description</b>	Reads true when the prefix SID entry is involved in a SID conflict that has occurred between protocols (after first removing inter-protocol prefix conflict entries). All entries involved in a SID conflict that do not have the absolute lowest 'preference' value become inactive. In the SRL implementation local-prefix-sid entries are considered to have a lower numerical preference than remote prefix-sid entries. If there are still SID conflicts then all the remaining conflicting entries become inactive except for the one with the smallest sid-index.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">segment-routing mpls sid-database prefix-sid prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">sid-label-value</a> <i>number</i> <a href="#">protocol keyword</a> <a href="#">protocol-instance</a> <i>number</i> <a href="#">protocol-multi-topology</a> <i>number</i> <a href="#">algorithm</a> <i>number</i> <a href="#">sid-conflict</a> <i>boolean</i>
<b>Tree</b>	<a href="#">sid-conflict</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**static-routes**

<b>Description</b>	Enable the static-routes context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">static-routes</a>
<b>Tree</b>	<a href="#">static-routes</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Enter the admin-state context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">static-routes</a> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**route** [prefix](#) (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the route list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Tree</b>	<a href="#">route</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	16384

**prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the prefix context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">static-routes</a> <a href="#">route</a> <a href="#">prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Used to disable the static route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">static-routes route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**installed** *boolean*

<b>Description</b>	If set to true, this indicates that the static route was installed into the datapath. If this is false then there are 3 possible reasons: (a) the admin-state is disable (b) there is another IP route for the same prefix that has a superior preference (c) the next-hop-group has no resolvable next-hops
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">static-routes route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">installed</a> <i>boolean</i>
<b>Tree</b>	<a href="#">installed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**metric** *number*

<b>Description</b>	IGP metric of the static route.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">static-routes route prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">metric</a> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**next-hop-group** *reference*

<b>Description</b>	Enter the next-hop-group context
--------------------	----------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">static-routes route prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">next-hop-group reference</a>
<b>Tree</b>	<a href="#">next-hop-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">next-hop-groups group name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **preference number**

<b>Description</b>	Route preference with lower values indicating a higher degree of preference.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">static-routes route prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">preference number</a>
<b>Tree</b>	<a href="#">preference</a>
<b>Range</b>	0 to 255
<b>Default</b>	5
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **tag-set reference**

<b>Description</b>	Tag set to associate with the static route
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">static-routes route prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">tag-set reference</a>
<b>Tree</b>	<a href="#">tag-set</a>
<b>Reference</b>	<a href="#">routing-policy tag-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **system-ipv4-address**

<b>Description</b>	Container for displaying information about the system IPv4 address of the default network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">system-ipv4-address</a>
<b>Tree</b>	<a href="#">system-ipv4-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-down-reason** *keyword*

<b>Description</b>	The reason why the default network instance does not have a system IPv4 address
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">system-ipv4-address</a> <a href="#">oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• system-interface-not-bound</li> <li>• system-interface-has-no-ipv4-address</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	The operational state of the system IPv4 address binding
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">system-ipv4-address</a> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power</li> </ul>

- Component is offline due to insufficient system power
- degraded
  - Component or process is in a degraded state
- warm-reboot
  - Component or process is currently warm rebooting
  - This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
  - Component or process is currently waiting
  - This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### system-ipv6-address

<b>Description</b>	Container for displaying information about the system IPv6 address of the default network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">system-ipv6-address</a>
<b>Tree</b>	<a href="#">system-ipv6-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### oper-down-reason *keyword*

<b>Description</b>	The reason why the default network instance does not have a system IPv6 address
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">system-ipv6-address</a> <a href="#">oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• system-interface-not-bound</li> <li>• system-interface-has-no-ipv6-address</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	The operational state of the system IPv6 address binding
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">system-ipv6-address</a> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>• waiting Component or process is currently waiting This state can be set by event handler when the <code>reinvoke-with-delay</code> action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.</li> </ul>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

## tcp

**Description** State for TCP connections that have been established or could be established using the route tables of this network instance.

**Context** [network-instance name](#) *string* [tcp](#)

**Tree** [tcp](#)

**Configurable** False

**Platforms** Supported on all platforms

## **connection** [local-address](#) (*ipv4-address* | *ipv6-address*) [local-port](#) *number* [remote-address](#) (*ipv4-address* | *ipv6-address*) [remote-port](#) *number*

**Description** List of TCP connections that are established or that are in the process of being established – i.e. excluding those in the LISTEN state. An entry in this list is transient in that it ceases to exist when (or soon after) the connection makes the transition to the CLOSED state.

**Context** [network-instance name](#) *string* [tcp connection](#) [local-address](#) (*ipv4-address* | *ipv6-address*) [local-port](#) *number* [remote-address](#) (*ipv4-address* | *ipv6-address*) [remote-port](#) *number*

**Tree** [connection](#)

**Configurable** False

**Platforms** Supported on all platforms

## **local-address** (*ipv4-address* | *ipv6-address*)

**Description** The local IP address for this TCP connection.

**Context** [network-instance name](#) *string* [tcp connection](#) [local-address](#) (*ipv4-address* | *ipv6-address*) [local-port](#) *number* [remote-address](#) (*ipv4-address* | *ipv6-address*) [remote-port](#) *number*

**Configurable** False

**Platforms** Supported on all platforms

## **local-port** *number*

**Description** The local port number for this TCP connection.

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp connection</a> <a href="#">local-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">local-port</a> <i>number</i> <a href="#">remote-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">remote-port</a> <i>number</i>
<b>Range</b>	0 to 65535
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **remote-address** ([ipv4-address](#) | [ipv6-address](#))

<b>Description</b>	The remote IP address for this TCP connection.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp connection</a> <a href="#">local-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">local-port</a> <i>number</i> <a href="#">remote-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">remote-port</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **remote-port** *number*

<b>Description</b>	The remote port number for this TCP connection.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp connection</a> <a href="#">local-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">local-port</a> <i>number</i> <a href="#">remote-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">remote-port</a> <i>number</i>
<b>Range</b>	0 to 65535
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **process-id** *number*

<b>Description</b>	The process ID of the application that owns the socket.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp connection</a> <a href="#">local-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">local-port</a> <i>number</i> <a href="#">remote-address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">remote-port</a> <i>number</i> <a href="#">process-id</a> <i>number</i>
<b>Tree</b>	<a href="#">process-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**session-state** *keyword*

<b>Description</b>	The state of this TCP connection.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp connection</a> <a href="#">local-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">local-port</a> <i>number</i> <a href="#">remote-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">remote-port</a> <i>number</i> <a href="#">session-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">session-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• closed</li> <li>• syn-sent</li> <li>• syn-received</li> <li>• established</li> <li>• fin-wait1</li> <li>• fin-wait2</li> <li>• close-wait</li> <li>• last-ack</li> <li>• closing</li> <li>• time-wait</li> <li>• delete-tcb</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**listening-application** [local-address](#) (*ipv4-address* | *ipv6-address*) [local-port](#) *number*

<b>Description</b>	List of applications that are listening on a particular TCP port bound to the network-instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp listening-application</a> <a href="#">local-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">local-port</a> <i>number</i>
<b>Tree</b>	<a href="#">listening-application</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**local-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The local IP address accepted by the application. An all-zeroes value for the <i>ipv4-address</i> means that any IPv4 address is accepted. An all-zeroes value for the <i>ipv6-address</i> means that any IPv6 address is accepted.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp listening-application</a> <a href="#">local-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">local-port</a> <i>number</i>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **local-port** *number*

<b>Description</b>	The local port number accepted by the application.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp listening-application</a> <a href="#">local-address</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">local-port</a> <i>number</i>
<b>Range</b>	0 to 65535
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **process-id** *number*

<b>Description</b>	The process ID of the application that owns the socket.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp listening-application</a> <a href="#">local-address</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">local-port</a> <i>number</i> <a href="#">process-id</a> <i>number</i>
<b>Tree</b>	<a href="#">process-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **active-opens** *number*

<b>Description</b>	The total number of times that TCP connections have made a direct transition to the SYN-SENT state from the CLOSED state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics</a> <a href="#">active-opens</a> <i>number</i>
<b>Tree</b>	<a href="#">active-opens</a>
<b>Default</b>	0
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **attempt-fails** *number*

**Description** The total number of times that TCP connections have made a direct transition to the CLOSED state from either the SYN-SENT state or the SYN-RCVD state, plus the number of times that TCP connections have made a direct transition to the LISTEN state from the SYN-RCVD state.

**Context** [network-instance name](#) *string* [tcp statistics attempt-fails](#) *number*

**Tree** [attempt-fails](#)

**Default** 0

**Configurable** False

**Platforms** Supported on all platforms

### **established-resets** *number*

**Description** The total number of times that TCP connections have made a direct transition to the CLOSED state from either the ESTABLISHED state or the CLOSE-WAIT state.

**Context** [network-instance name](#) *string* [tcp statistics established-resets](#) *number*

**Tree** [established-resets](#)

**Default** 0

**Configurable** False

**Platforms** Supported on all platforms

### **in-checksum-errors** *number*

**Description** The total number of segments that are received as bad TCP checksum errors.

**Context** [network-instance name](#) *string* [tcp statistics in-checksum-errors](#) *number*

**Tree** [in-checksum-errors](#)

**Default** 0

**Configurable** False

**Platforms** Supported on all platforms

### **in-error-segments** *number*

**Description** The total number of segments received in error (e.g., bad TCP checksums).

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics in-error-segments</a> <i>number</i>
<b>Tree</b>	<a href="#">in-error-segments</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **in-segments** *number*

<b>Description</b>	The total number of segments received, including those received in error. This count includes segments received on currently established connections.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics in-segments</a> <i>number</i>
<b>Tree</b>	<a href="#">in-segments</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-rst-segments** *number*

<b>Description</b>	The total number of TCP segments sent containing the RST flag.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics out-rst-segments</a> <i>number</i>
<b>Tree</b>	<a href="#">out-rst-segments</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-segments** *number*

<b>Description</b>	The total number of segments sent, including those on current connections but excluding those containing only retransmitted octets.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics out-segments</a> <i>number</i>
<b>Tree</b>	<a href="#">out-segments</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**passive-opens** *number*

<b>Description</b>	The total number of times TCP connections have made a direct transition to the SYN-RCVD state from the LISTEN state.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics</a> <a href="#">passive-opens</a> <i>number</i>
<b>Tree</b>	<a href="#">passive-opens</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**retransmitted-segments** *number*

<b>Description</b>	The total number of segments retransmitted; that is, the number of TCP segments transmitted containing one or more previously transmitted octets.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tcp statistics</a> <a href="#">retransmitted-segments</a> <i>number</i>
<b>Tree</b>	<a href="#">retransmitted-segments</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**traffic-engineering**

<b>Description</b>	Container with traffic engineering options for the network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering</a>
<b>Tree</b>	<a href="#">traffic-engineering</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**admin-groups**

<b>Description</b>	Container for configuring admin groups
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering</a> <a href="#">admin-groups</a>
<b>Tree</b>	<a href="#">admin-groups</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**group name** *string*

<b>Description</b>	List of admin groups defined for this network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering admin-groups group name</a> <i>string</i>
<b>Tree</b>	<a href="#">group</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**name** *string*

<b>Description</b>	The name of the admin group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering admin-groups group name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**bit-position** *number*

<b>Description</b>	The bit-position value for the admin-group. The value for the admin group is an integer that represents one of the bit positions in the admin-group bitmask.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering admin-groups group name</a> <i>string</i> <a href="#">bit-position</a> <i>number</i>
<b>Tree</b>	<a href="#">bit-position</a>
<b>Range</b>	0 to 31
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**autonomous-system** *number*

<b>Description</b>	The autonomous system number of the network-instance, for protocols and pseudo-protocols that do not have their own configuration of AS number.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering autonomous-system</a> <i>number</i>
<b>Tree</b>	<a href="#">autonomous-system</a>
<b>Range</b>	1 to 4294967295

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### interface *interface-name string*

<b>Description</b>	List of routed subinterfaces that have associated TE information
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">traffic-engineering interface interface-name string</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### interface-name *string*

<b>Description</b>	Name of a subinterface
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">traffic-engineering interface interface-name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### admin-group *reference*

<b>Description</b>	The list of admin-groups generically associated with the interface (not application specific)
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">traffic-engineering interface interface-name string</a> <a href="#">admin-group reference</a>
<b>Tree</b>	<a href="#">admin-group</a>
<b>Reference</b>	<a href="#">network-instance name string</a> <a href="#">traffic-engineering admin-groups group name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### interface-ref

<b>Description</b>	Reference to a subinterface
<b>Context</b>	<a href="#">network-instance name string</a> <a href="#">traffic-engineering interface interface-name string</a> <a href="#">interface-ref</a>

<b>Tree</b>	<a href="#">interface-ref</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **interface reference**

<b>Description</b>	Reference to a base interface, for example a port or LAG
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering interface interface-name</a> <i>string</i> <a href="#">interface-ref interface reference</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Reference</b>	<a href="#">interface name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **subinterface reference**

<b>Description</b>	Reference to a subinterface  This requires the base interface to be specified using the interface leaf in this container.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering interface interface-name</a> <i>string</i> <a href="#">interface-ref subinterface reference</a>
<b>Tree</b>	<a href="#">subinterface</a>
<b>Reference</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index number</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **srlg-membership reference**

<b>Description</b>	The list of srlgs generically associated with the interface (not application specific)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering interface interface-name</a> <i>string</i> <a href="#">srlg-membership reference</a>
<b>Tree</b>	<a href="#">srlg-membership</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering shared-risk-link-groups group name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**te-metric** *number*

<b>Description</b>	The TE metric associated with the interface (not application specific)
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering interface interface-name</a> <i>string</i> <a href="#">te-metric number</a>
<b>Tree</b>	<a href="#">te-metric</a>
<b>Range</b>	1 to 16777215
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4-te-router-id** *string*

<b>Description</b>	A routable IPv4 address to identify the router uniquely in a TE domain.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering ipv4-te-router-id</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv4-te-router-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv6-te-router-id** *string*

<b>Description</b>	A routable IPv6 address to identify the router uniquely in a TE domain.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering ipv6-te-router-id</a> <i>string</i>
<b>Tree</b>	<a href="#">ipv6-te-router-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**shared-risk-link-groups**

<b>Description</b>	Container for configuring SRLGs
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering shared-risk-link-groups</a>
<b>Tree</b>	<a href="#">shared-risk-link-groups</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**group name** *string*

<b>Description</b>	List of shared risk link groups defined for this network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering shared-risk-link-groups group name</a> <i>string</i>
<b>Tree</b>	<a href="#">group</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**name** *string*

<b>Description</b>	The name of the shared risk link group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering shared-risk-link-groups group name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**value** *number*

<b>Description</b>	Group ID for the SRLG
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering shared-risk-link-groups group name</a> <i>string</i> <a href="#">value</a> <i>number</i>
<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**tunnel-table**

<b>Description</b>	Enter the tunnel-table context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a>
<b>Tree</b>	<a href="#">tunnel-table</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## ipv4

<b>Description</b>	The container for the IPv4 tunnels associated with the network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv4</a>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv4</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## active-tunnels *number*

<b>Description</b>	The total number of tunnels, belonging to this address family, that are active.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv4</a> <a href="#">statistics</a> <a href="#">active-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">active-tunnels</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## inactive-tunnels *number*

<b>Description</b>	The total number of tunnels, belonging to this address family, that are inactive (not programmed).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv4</a> <a href="#">statistics</a> <a href="#">inactive-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">inactive-tunnels</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-tunnels** *number*

<b>Description</b>	The total number of tunnels, active and inactive, belonging to this address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 statistics total-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">total-tunnels</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tunnel** [ipv4-prefix](#) *string* [type identityref](#) [owner](#) *string* [id](#) *number*

<b>Description</b>	Enter the tunnel list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string</i> <a href="#">type identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Tree</b>	<a href="#">tunnel</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv4-prefix** *string*

<b>Description</b>	The IPv4 prefix associated with the endpoint of the tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string</i> <a href="#">type identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *identityref*

<b>Description</b>	The tunnel (encapsulation) type
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string</i> <a href="#">type identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ip-in-ip Tunnels with IP-in-IP encapsulation</li> <li>• gre Tunnels with GRE encapsulation</li> <li>• sr-isis</li> </ul>

- Segment routing using MPLS dataplane, programmed by IS-IS
- sr-ospfv2
  - Segment routing using MPLS dataplane, programmed by OSPFv2
- sr-ospfv3
  - Segment routing using MPLS dataplane, programmed by OSPFv3
- sr-policy-mpls-colored
  - Tunnel setup using TE-POLICY.
- sr-policy-mpls-uncolored
  - Tunnel setup using TE-POLICY.
- vxlan
  - Tunnels based on VXLAN encapsulation

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **owner string**

<b>Description</b>	The name of the application that submitted the tunnel to TTM
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string type identityref owner string id number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **id number**

<b>Description</b>	An owner-assigned index value that is unique for each of the tunnels terminating at a particular prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string type identityref owner string id number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **encapsulation-type keyword**

<b>Description</b>	The type of encapsulation used by the tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string type identityref owner string id number encapsulation-type keyword</i>
<b>Tree</b>	<a href="#">encapsulation-type</a>

<b>Options</b>	<ul style="list-style-type: none"> <li>• vxlan</li> <li>• mpls</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## fib-programming

<b>Description</b>	Container for state related to the FIB programming of the tunnel
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string type identityref</i> <a href="#">owner</a> <i>string id number</i> <a href="#">fib-programming</a>
<b>Tree</b>	<a href="#">fib-programming</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## not-programmed-reason *keyword*

<b>Description</b>	The reason why the tunnel is not programmed
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string type identityref</i> <a href="#">owner</a> <i>string id number</i> <a href="#">fib-programming not-programmed-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">not-programmed-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• out-of-tunnel-resources</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## status *keyword*

<b>Description</b>	The status of the tunnel programming
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string type identityref</i> <a href="#">owner</a> <i>string id number</i> <a href="#">fib-programming status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• active The tunnel is active and programmed into the datapath.</li> <li>• inactive The tunnel is inactive and not programmed into the datapath.</li> </ul>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

## ip-in-ip

**Description** Enter the ip-in-ip context

**Context** [network-instance name string](#) [tunnel-table ipv4 tunnel ipv4-prefix string type identityref owner string id number ip-in-ip](#)

**Tree** [ip-in-ip](#)

**Configurable** False

**Platforms** Supported on all platforms

## destination-address (*ipv4-address | ipv6-address*)

**Description** The IP address that identifies the destination of the tunnel.

**Context** [network-instance name string](#) [tunnel-table ipv4 tunnel ipv4-prefix string type identityref owner string id number ip-in-ip destination-address \(\*ipv4-address | ipv6-address\*\)](#)

**Tree** [destination-address](#)

**Configurable** False

**Platforms** Supported on all platforms

## source-address (*ipv4-address | ipv6-address*)

**Description** The IP address that identifies the source of the tunnel.

**Context** [network-instance name string](#) [tunnel-table ipv4 tunnel ipv4-prefix string type identityref owner string id number ip-in-ip source-address \(\*ipv4-address | ipv6-address\*\)](#)

**Tree** [source-address](#)

**Configurable** False

**Platforms** Supported on all platforms

## last-app-update *string*

**Description** The date and time of the last update of this tunnel by the owning application or protocol.

**Context** [network-instance name string](#) [tunnel-table ipv4 tunnel ipv4-prefix string type identityref owner string id number last-app-update string](#)

**Tree** [last-app-update](#)

<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **metric number**

<b>Description</b>	The metric of the tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string type identityref owner string id number metric number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **next-hop-group reference**

<b>Description</b>	Leaf reference to a next-hop-group that has the direct next-hops towards the tunnel far-end
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string type identityref owner string id number next-hop-group reference</i>
<b>Tree</b>	<a href="#">next-hop-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table next-hop-group index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **preference number**

<b>Description</b>	The tunnel table preference.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string type identityref owner string id number preference number</i>
<b>Tree</b>	<a href="#">preference</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **vxlan**

<b>Description</b>	Enter the vxlan context
--------------------	-------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string</i> <a href="#">type identityref owner</a> <i>string</i> <a href="#">id number vxlan</a>
<b>Tree</b>	<a href="#">vxlan</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **destination-address** (*ipv4-address | ipv6-address*)

<b>Description</b>	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string</i> <a href="#">type identityref owner</a> <i>string</i> <a href="#">id number vxlan destination-address</a> ( <i>ipv4-address   ipv6-address</i> )
<b>Tree</b>	<a href="#">destination-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **destination-udp-port** *number*

<b>Description</b>	The destination UDP port number written into the outer IP/UDP header of VXLAN packets associated with this tunnel and originated by this router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string</i> <a href="#">type identityref owner</a> <i>string</i> <a href="#">id number vxlan destination-udp-port</a> <i>number</i>
<b>Tree</b>	<a href="#">destination-udp-port</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **source-address** (*ipv4-address | ipv6-address*)

<b>Description</b>	The IP address that identifies the local VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string</i> <a href="#">type identityref owner</a> <i>string</i> <a href="#">id number vxlan source-address</a> ( <i>ipv4-address   ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**time-to-live** *number*

<b>Description</b>	The Time To Live (TTL) value written into the outer IP header of VXLAN packets associated with this tunnel and originated by this router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel ipv4-prefix</a> <i>string</i> <a href="#">type identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">vxlan time-to-live</a> <i>number</i>
<b>Tree</b>	<a href="#">time-to-live</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tunnel-summary**

<b>Description</b>	Tunnel summary information
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel-summary</a>
<b>Tree</b>	<a href="#">tunnel-summary</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tunnel-type** [type](#) *identityref*

<b>Description</b>	Enter the tunnel-type list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel-summary</a> <a href="#">tunnel-type</a> <a href="#">type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">tunnel-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *identityref*

<b>Description</b>	Tunneling encapsulation format
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel-summary</a> <a href="#">tunnel-type</a> <a href="#">type</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ip-in-ip</a> Tunnels with IP-in-IP encapsulation</li> <li>• <a href="#">gre</a> Tunnels with GRE encapsulation</li> <li>• <a href="#">sr-isis</a> Segment routing using MPLS dataplane, programmed by IS-IS</li> </ul>

- `sr-ospfv2`  
Segment routing using MPLS dataplane, programmed by OSPFv2
- `sr-ospfv3`  
Segment routing using MPLS dataplane, programmed by OSPFv3
- `sr-policy-mpls-colored`  
Tunnel setup using TE-POLICY.
- `sr-policy-mpls-uncolored`  
Tunnel setup using TE-POLICY.
- `vxlan`  
Tunnels based on VXLAN encapsulation

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **active-tunnels** *number*

<b>Description</b>	The total number of tunnels, using this encapsulation type, that are active.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel-summary tunnel-type type</a> <a href="#">identityref active-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">active-tunnels</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **inactive-tunnels** *number*

<b>Description</b>	The total number of tunnels, using this encapsulation type, that are inactive (not programmed).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4 tunnel-summary tunnel-type type</a> <a href="#">identityref inactive-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">inactive-tunnels</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **total-tunnels** *number*

<b>Description</b>	The total number of tunnels, active and inactive, using this encapsulation type.
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv4</a> <a href="#">tunnel-summary</a> <a href="#">tunnel-type</a> <a href="#">type</a> <a href="#">identityref</a> <a href="#">total-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">total-tunnels</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## ipv6

<b>Description</b>	The container for the IPv6 tunnels associated with the network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6</a>
<b>Tree</b>	<a href="#">ipv6</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## active-tunnels *number*

<b>Description</b>	The total number of tunnels, belonging to this address family, that are active.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6</a> <a href="#">statistics</a> <a href="#">active-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">active-tunnels</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## inactive-tunnels *number*

<b>Description</b>	The total number of tunnels, belonging to this address family, that are inactive (not programmed).
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6 statistics</a> <a href="#">inactive-tunnels number</a>
<b>Tree</b>	<a href="#">inactive-tunnels</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-tunnels** *number*

<b>Description</b>	The total number of tunnels, active and inactive, belonging to this address family
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6 statistics</a> <a href="#">total-tunnels number</a>
<b>Tree</b>	<a href="#">total-tunnels</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tunnel** [ipv6-prefix](#) *string* [type](#) [identityref](#) [owner](#) *string* [id](#) *number*

<b>Description</b>	Enter the tunnel list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6 tunnel</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">type</a> <a href="#">identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Tree</b>	<a href="#">tunnel</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ipv6-prefix** *string*

<b>Description</b>	The IPv6 prefix associated with the endpoint of the tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table</a> <a href="#">ipv6 tunnel</a> <a href="#">ipv6-prefix</a> <i>string</i> <a href="#">type</a> <a href="#">identityref</a> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *identityref*

<b>Description</b>	The tunnel (encapsulation) type
--------------------	---------------------------------

---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref</i> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ip-in-ip</a> Tunnels with IP-in-IP encapsulation</li> <li>• <a href="#">gre</a> Tunnels with GRE encapsulation</li> <li>• <a href="#">sr-isis</a> Segment routing using MPLS dataplane, programmed by IS-IS</li> <li>• <a href="#">sr-ospfv2</a> Segment routing using MPLS dataplane, programmed by OSPFv2</li> <li>• <a href="#">sr-ospfv3</a> Segment routing using MPLS dataplane, programmed by OSPFv3</li> <li>• <a href="#">sr-policy-mpls-colored</a> Tunnel setup using TE-POLICY.</li> <li>• <a href="#">sr-policy-mpls-uncolored</a> Tunnel setup using TE-POLICY.</li> <li>• <a href="#">vxlan</a> Tunnels based on VXLAN encapsulation</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms
 <b>owner</b> <i>string</i>	
<b>Description</b>	The name of the application that submitted the tunnel to TTM
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref</i> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms
 <b>id</b> <i>number</i>	
<b>Description</b>	An owner-assigned index value that is unique for each of the tunnels terminating at a particular prefix.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref</i> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**encapsulation-type** *keyword*

<b>Description</b>	The type of encapsulation used by the tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref</i> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">encapsulation-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">encapsulation-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• vxlan</li> <li>• mpls</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**fib-programming**

<b>Description</b>	Container for state related to the FIB programming of the tunnel
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref</i> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">fib-programming</a>
<b>Tree</b>	<a href="#">fib-programming</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**not-programmed-reason** *keyword*

<b>Description</b>	The reason why the tunnel is not programmed
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref</i> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">fib-programming not-programmed-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">not-programmed-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• out-of-tunnel-resources</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**status** *keyword*

<b>Description</b>	The status of the tunnel programming
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref</i> <a href="#">owner</a> <i>string</i> <a href="#">id</a> <i>number</i> <a href="#">fib-programming status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">status</a>

<b>Options</b>	<ul style="list-style-type: none"> <li>• active The tunnel is active and programmed into the datapath.</li> <li>• inactive The tunnel is inactive and not programmed into the datapath.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## ip-in-ip

<b>Description</b>	Enter the ip-in-ip context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref owner string id number ip-in-ip</i>
<b>Tree</b>	<a href="#">ip-in-ip</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## destination-address (*ipv4-address | ipv6-address*)

<b>Description</b>	The IP address that identifies the destination of the tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref owner string id number ip-in-ip destination-address (ipv4-address   ipv6-address)</i>
<b>Tree</b>	<a href="#">destination-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## source-address (*ipv4-address | ipv6-address*)

<b>Description</b>	The IP address that identifies the source of the tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref owner string id number ip-in-ip source-address (ipv4-address   ipv6-address)</i>
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-app-update** *string*

<b>Description</b>	The date and time of the last update of this tunnel by the owning application or protocol.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref owner</i> <i>string id number last-app-update</i> <i>string</i>
<b>Tree</b>	<a href="#">last-app-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**metric** *number*

<b>Description</b>	The metric of the tunnel.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref owner</i> <i>string id number metric</i> <i>number</i>
<b>Tree</b>	<a href="#">metric</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**next-hop-group** *reference*

<b>Description</b>	Leaf reference to a next-hop-group that has the direct next-hops towards the tunnel far-end
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref owner</i> <i>string id number next-hop-group</i> <i>reference</i>
<b>Tree</b>	<a href="#">next-hop-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">route-table next-hop-group index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**preference** *number*

<b>Description</b>	The tunnel table preference.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string type identityref owner</i> <i>string id number preference</i> <i>number</i>
<b>Tree</b>	<a href="#">preference</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

## vxlan

**Description** Enter the vxlan context

**Context** [network-instance name string](#) [tunnel-table ipv6 tunnel ipv6-prefix string type identityref owner string id number vxlan](#)

**Tree** [vxlan](#)

**Configurable** False

**Platforms** Supported on all platforms

## destination-address (*ipv4-address | ipv6-address*)

**Description** The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).

**Context** [network-instance name string](#) [tunnel-table ipv6 tunnel ipv6-prefix string type identityref owner string id number vxlan destination-address \(\*ipv4-address | ipv6-address\*\)](#)

**Tree** [destination-address](#)

**Configurable** False

**Platforms** Supported on all platforms

## destination-udp-port *number*

**Description** The destination UDP port number written into the outer IP/UDP header of VXLAN packets associated with this tunnel and originated by this router.

**Context** [network-instance name string](#) [tunnel-table ipv6 tunnel ipv6-prefix string type identityref owner string id number vxlan destination-udp-port \*number\*](#)

**Tree** [destination-udp-port](#)

**Configurable** False

**Platforms** Supported on all platforms

## source-address (*ipv4-address | ipv6-address*)

**Description** The IP address that identifies the local VXLAN Termination Endpoint (VTEP).

**Context** [network-instance name string](#) [tunnel-table ipv6 tunnel ipv6-prefix string type identityref owner string id number vxlan source-address \(\*ipv4-address | ipv6-address\*\)](#)

<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **time-to-live** *number*

<b>Description</b>	The Time To Live (TTL) value written into the outer IP header of VXLAN packets associated with this tunnel and originated by this router.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel ipv6-prefix</a> <i>string</i> <a href="#">type identityref owner</a> <i>string</i> <a href="#">id number vxlan time-to-live</a> <i>number</i>
<b>Tree</b>	<a href="#">time-to-live</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **tunnel-summary**

<b>Description</b>	Tunnel summary information
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel-summary</a>
<b>Tree</b>	<a href="#">tunnel-summary</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **tunnel-type** [type identityref](#)

<b>Description</b>	Enter the tunnel-type list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel-summary tunnel-type</a> <a href="#">type identityref</a>
<b>Tree</b>	<a href="#">tunnel-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **type** [identityref](#)

<b>Description</b>	Tunneling encapsulation format
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel-summary tunnel-type</a> <a href="#">type identityref</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>ip-in-ip</li> </ul>

- Tunnels with IP-in-IP encapsulation
- gre
  - Tunnels with GRE encapsulation
- sr-isis
  - Segment routing using MPLS dataplane, programmed by IS-IS
- sr-ospfv2
  - Segment routing using MPLS dataplane, programmed by OSPFv2
- sr-ospfv3
  - Segment routing using MPLS dataplane, programmed by OSPFv3
- sr-policy-mpls-colored
  - Tunnel setup using TE-POLICY.
- sr-policy-mpls-uncolored
  - Tunnel setup using TE-POLICY.
- vxlan
  - Tunnels based on VXLAN encapsulation

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **active-tunnels** *number*

<b>Description</b>	The total number of tunnels, using this encapsulation type, that are active.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6</a> <a href="#">tunnel-summary</a> <a href="#">tunnel-type type</a> <a href="#">identityref</a> <a href="#">active-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">active-tunnels</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **inactive-tunnels** *number*

<b>Description</b>	The total number of tunnels, using this encapsulation type, that are inactive (not programmed).
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6</a> <a href="#">tunnel-summary</a> <a href="#">tunnel-type type</a> <a href="#">identityref</a> <a href="#">inactive-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">inactive-tunnels</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-tunnels** *number*

<b>Description</b>	The total number of tunnels, active and inactive, using this encapsulation type.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">tunnel-table ipv6 tunnel-summary tunnel-type</a> <i>type</i> <a href="#">identityref</a> <a href="#">total-tunnels</a> <i>number</i>
<b>Tree</b>	<a href="#">total-tunnels</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *identityref*

<b>Description</b>	The type of network instance. The value of this leaf indicates the type of forwarding entries that should be supported by this network instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">type</a>
<b>Default</b>	default
<b>Options</b>	<ul style="list-style-type: none"> <li>• host A special routing instances that refers to the hosts network instance (i.e. the network namespace of PID 1)</li> <li>• default A special routing instance which acts as the 'default' routing instance for a network device.</li> <li>• ip-vrf A private Layer 3 only routing instance.</li> <li>• mac-vrf A private Layer 2 only switching instance.</li> <li>• vpws A private Layer 2 point-to-point instance.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**udp**

<b>Description</b>	State for UDP datagrams routed using the route tables of this network instance.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp</a>
<b>Tree</b>	<a href="#">udp</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **listening-application** [local-address](#) (*ipv4-address* | *ipv6-address*) [local-port](#) *number*

<b>Description</b>	List of applications that are listening on a particular UDP port bound to the network-instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp</a> <a href="#">listening-application</a> <a href="#">local-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">local-port</a> <i>number</i>
<b>Tree</b>	<a href="#">listening-application</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **local-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The local IP address accepted by the application. An all-zeroes value for the <i>ipv4-address</i> means that any IPv4 address is accepted. An all-zeroes value for the <i>ipv6-address</i> means that any IPv6 address is accepted.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp</a> <a href="#">listening-application</a> <a href="#">local-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">local-port</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **local-port** *number*

<b>Description</b>	The local port number accepted by the application.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp</a> <a href="#">listening-application</a> <a href="#">local-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">local-port</a> <i>number</i>
<b>Range</b>	0 to 65535
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **process-id** *number*

<b>Description</b>	The process ID of the application that owns the socket.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp listening-application</a> <a href="#">local-address</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">local-port</a> <i>number</i> <a href="#">process-id</a> <i>number</i>
<b>Tree</b>	<a href="#">process-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## ignored-multicast-packets *number*

<b>Description</b>	The total number of ignored multicast UDP datagrams.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp</a> <a href="#">statistics</a> <a href="#">ignored-multicast-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">ignored-multicast-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## in-checksum-errors *number*

<b>Description</b>	Increased when a received UDP packet has an invalid checksum.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp</a> <a href="#">statistics</a> <a href="#">in-checksum-errors</a> <i>number</i>
<b>Tree</b>	<a href="#">in-checksum-errors</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## in-error-packets *number*

<b>Description</b>	The total number of received UDP datagrams that could not be delivered for reasons other than the lack of an application at the destination port.
--------------------	---

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp statistics in-error-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-error-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **in-no-open-ports-packets** *number*

<b>Description</b>	The total number of received UDP datagrams for which there was no application at the destination port.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp statistics in-no-open-ports-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-no-open-ports-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **in-packets** *number*

<b>Description</b>	The total number of UDP datagrams delivered to UDP users.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp statistics in-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **out-packets** *number*

<b>Description</b>	The total number of UDP datagrams sent from this network instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp statistics out-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**receive-buffer-errors** *number*

<b>Description</b>	Increased when memory cannot be allocated to process an incoming UDP packet.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp statistics</a> <a href="#">receive-buffer-errors</a> <i>number</i>
<b>Tree</b>	<a href="#">receive-buffer-errors</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**send-buffer-errors** *number*

<b>Description</b>	Increased when memory cannot be allocated to send a UDP packet.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">udp statistics</a> <a href="#">send-buffer-errors</a> <i>number</i>
<b>Tree</b>	<a href="#">send-buffer-errors</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**vxlan-interface** *name string*

<b>Description</b>	List of vxlan-interfaces used by this network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">vxlan-interface</a> <i>name string</i>
<b>Tree</b>	<a href="#">vxlan-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
<b>Max. Elements</b>	1

**name** *string*

<b>Description</b>	Identifier of vxlan-interface used in this network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">vxlan-interface</a> <i>name string</i>
<b>String Length</b>	8 to 17
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**oper-down-reason** *keyword*

<b>Description</b>	The reason for the vxlan-interface being down in the network-instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">vxlan-interface name</a> <i>string</i> <a href="#">oper-down-reason keyword</a>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• vxlan-tunnel-down</li> <li>• net-inst-down</li> <li>• vxlan-if-default-net-inst-source-address-missing</li> <li>• vxlan-if-default-net-inst-source-if-down</li> <li>• vrf-type-mismatch</li> <li>• no-mcid</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**oper-state** *keyword*

<b>Description</b>	The operational state of this vxlan-interface.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">vxlan-interface name</a> <i>string</i> <a href="#">oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> </ul>

- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## 7.1 oam Descriptions

### oam

<b>Description</b>	Enclosing container for OAM
<b>Context</b>	<a href="#">oam</a>
<b>Tree</b>	<a href="#">oam</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ippm

<b>Description</b>	Enable the ippm context
<b>Context</b>	<a href="#">oam ippm</a>
<b>Tree</b>	<a href="#">ippm</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### source-udp-port-pools

<b>Description</b>	The source-udp-port-pools allocation
<b>Context</b>	<a href="#">oam ippm source-udp-port-pools</a>
<b>Tree</b>	<a href="#">source-udp-port-pools</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### port [port-number](#) *number*

<b>Description</b>	The UDP port list instance
<b>Context</b>	<a href="#">oam ippm source-udp-port-pools port <a href="#">port-number</a> <i>number</i></a>
<b>Tree</b>	<a href="#">port</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**port-number** *number*

<b>Description</b>	IPPM source UDP port pools port number
<b>Context</b>	<a href="#">oam ippm source-udp-port-pools port port-number</a> <i>number</i>
<b>Range</b>	64374 to 64383
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**application-assignment** *keyword*

<b>Description</b>	Optionally assign an available reserved UDP port to a specific IPPM application
<b>Context</b>	<a href="#">oam ippm source-udp-port-pools port port-number</a> <i>number</i> <a href="#">application-assignment</a> <i>keyword</i>
<b>Tree</b>	<a href="#">application-assignment</a>
<b>Default</b>	unassigned
<b>Options</b>	<ul style="list-style-type: none"> <li>• oam-pm-ip</li> <li>• link-measurement</li> <li>• unassigned</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**in-use** *boolean*

<b>Description</b>	Indicates if an application has a configured test that is referencing the UDP port  Value 'false' means no test or test session is referencing the UDP port. Value 'true' means a test or test session is referencing the UDP. The application assignment can only be changed when the UDP in-use value is 'false'
<b>Context</b>	<a href="#">oam ippm source-udp-port-pools port port-number</a> <i>number</i> <a href="#">in-use</a> <i>boolean</i>
<b>Tree</b>	<a href="#">in-use</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**lsp-ping**

<b>Description</b>	Container of last ping results for different MPLS and segment routing tunnels
<b>Context</b>	<a href="#">oam lsp-ping</a>

<b>Tree</b>	<a href="#">lsp-ping</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ldp

<b>Description</b>	Container of LSP ping results for different LDP tunnels
<b>Context</b>	<a href="#">oam lsp-ping ldp</a>
<b>Tree</b>	<a href="#">ldp</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## fec prefix (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the fec list instance
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (<i>ipv4-prefix</i>   <i>ipv6-prefix</i>)</a>
<b>Tree</b>	<a href="#">fec</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## prefix (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	The IPv4 or IPv6 prefix associated with the fec This is the destination that was pinged.
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (<i>ipv4-prefix</i>   <i>ipv6-prefix</i>)</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## session-id *id number*

<b>Description</b>	List of recent sessions (up to 10) with saved LSP ping results for the prefix
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (<i>ipv4-prefix</i>   <i>ipv6-prefix</i>) session-id <i>id number</i></a>
<b>Tree</b>	<a href="#">session-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	10

**id number**

<b>Description</b>	The system-assigned session ID
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**path-destination**

<b>Description</b>	Enter the path-destination context
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number path-destination</a>
<b>Tree</b>	<a href="#">path-destination</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ip-address (ipv4-address | ipv6-address)**

<b>Description</b>	IP address of the path destination
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number path-destination ip-address (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">ip-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**next-hop (ipv4-address | ipv6-address)**

<b>Description</b>	Egress IP next hop address used with path destination
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number path-destination next-hop (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**subinterface string**

<b>Description</b>	Egress router sub-interface used with the path destination
--------------------	--

<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">session-id id number</a> <a href="#">path-destination subinterface string</a>
<b>Tree</b>	<a href="#">subinterface</a>
<b>String Length</b>	5 to 25
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **sequence** [sequence-id number](#)

<b>Description</b>	List of probes sent during the test
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">session-id id number</a> <a href="#">sequence sequence-id number</a>
<b>Tree</b>	<a href="#">sequence</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **sequence-id** [number](#)

<b>Description</b>	Sequence ID of the probe, starting with 1 and incrementing by 1
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">session-id id number</a> <a href="#">sequence sequence-id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **out-interface** [string](#)

<b>Description</b>	The subinterface that was used to transmit the echo-request message
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">session-id id number</a> <a href="#">sequence sequence-id number</a> <a href="#">out-interface string</a>
<b>Tree</b>	<a href="#">out-interface</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **probe-size** [number](#)

<b>Description</b>	The size of the IP packet MPLS echo-request message. Probe size does not include MPLS headers, if any
--------------------	---

<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence-id number probe-size number</a>
<b>Tree</b>	<a href="#">probe-size</a>
<b>Range</b>	1 to 9500
<b>Default</b>	64
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## reply

<b>Description</b>	Details about the reply message for this sequence number or hop
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence-id number reply</a>
<b>Tree</b>	<a href="#">reply</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## mpls-ttl *number*

<b>Description</b>	The value of the MPLS TTL in the top label stack entry of the received echo-reply message
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence-id number reply mpls-ttl number</a>
<b>Tree</b>	<a href="#">mpls-ttl</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## received *boolean*

<b>Description</b>	Reads true if the reply message was received
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence-id number reply received boolean</a>
<b>Tree</b>	<a href="#">received</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**reply-sender** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address of the sender of the echo-reply message
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">session-id id number sequence sequence-id number reply reply-sender</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">reply-sender</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**return-code** *keyword*

<b>Description</b>	Return code value in the echo-reply
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">session-id id number sequence sequence-id number reply return-code</a> <i>keyword</i>
<b>Tree</b>	<a href="#">return-code</a>
<b>Default</b>	no-return-code
<b>Options</b>	<ul style="list-style-type: none"> <li>no-return-code</li> <li>malformed-echo-request-received</li> <li>one-or-more-tlvs-not-understood</li> <li>replying-router-is-egress-for-fec-at-stack-depth-n</li> <li>replying-router-has-no-mapping-for-fec-at-stack-depth-n</li> <li>downstream-mapping-mismatch</li> <li>upstream-interface-index-unknown</li> <li>reserved</li> <li>label-switched-at-stack-depth-n</li> <li>label-switched-but-no-MPLS-at-stack-depth-n</li> <li>fec-does-not-use-given-label-at-stack-depth-n</li> <li>no-label-entry-at-stack-depth-n</li> <li>protocol-unavailable-at-stack-depth-n</li> <li>premature-termination</li> <li>ddmap-tlv-has-return-code-subcode-details</li> <li>label-switched-with-fec-change</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**return-subcode** *number*

<b>Description</b>	Return subcode in the echo-reply
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number reply return-subcode number</a>
<b>Tree</b>	<a href="#">return-subcode</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**round-trip-time** *number*

<b>Description</b>	The round trip-time between the request and reply for this sequence number or hop
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number reply round-trip-time number</a>
<b>Tree</b>	<a href="#">round-trip-time</a>
<b>Default</b>	0
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**udp-data-length** *number*

<b>Description</b>	The length of the UDP payload
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number reply udp-data-length number</a>
<b>Tree</b>	<a href="#">udp-data-length</a>
<b>Default</b>	0
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**request-sent** *boolean*

<b>Description</b>	True when it is possible for the datapath to send the request message
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number request-sent boolean</a>

<b>Tree</b>	<a href="#">request-sent</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **send-failure-reason** *keyword*

<b>Description</b>	Indicates the reason why the OAM manager could not send the request message
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">session-id id number sequence sequence-id number</a> <a href="#">send-failure-reason keyword</a>
<b>Tree</b>	<a href="#">send-failure-reason</a>
<b>Default</b>	no errors
<b>Options</b>	<ul style="list-style-type: none"> <li>• timeout</li> <li>• source-ip-not-local</li> <li>• invalid-prefix</li> <li>• sr-prefix-is-local</li> <li>• ldp-prefix-is-local</li> <li>• invalid-dest-ip</li> <li>• dest-address-type-mismatch</li> <li>• next-hop-ip-not-found</li> <li>• next-hop-if-name-not-found</li> <li>• packet-size-too-big</li> <li>• far-end-unreachable</li> <li>• prefix-unknown</li> <li>• ds-map-not-supported</li> <li>• unexpected-error</li> <li>• no errors</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **statistics**

<b>Description</b>	Summary statistics for the test
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix</a> ( <a href="#">ipv4-prefix</a>   <a href="#">ipv6-prefix</a> ) <a href="#">session-id id number statistics</a>
<b>Tree</b>	<a href="#">statistics</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### round-trip-time

<b>Description</b>	Statistics for the round trip time, considering all the probes sent in the test
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number statistics round-trip-time</a>
<b>Tree</b>	<a href="#">round-trip-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### average number

<b>Description</b>	The average round trip-time across all probes
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number statistics round-trip-time average number</a>
<b>Tree</b>	<a href="#">average</a>
<b>Default</b>	0
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### maximum number

<b>Description</b>	The maximum round trip-time across all probes
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number statistics round-trip-time maximum number</a>
<b>Tree</b>	<a href="#">maximum</a>
<b>Default</b>	0
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### minimum number

<b>Description</b>	The minimum round trip-time across all probes
--------------------	---

<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number statistics round-trip-time minimum number</a>
<b>Tree</b>	<a href="#">minimum</a>
<b>Default</b>	0
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **standard-deviation** *number*

<b>Description</b>	The standard deviation of the round trip-time across all probes
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number statistics round-trip-time standard-deviation number</a>
<b>Tree</b>	<a href="#">standard-deviation</a>
<b>Default</b>	0
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **test-active** *boolean*

<b>Description</b>	Indicates if the test is still running (true) or not (false)
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number test-active boolean</a>
<b>Tree</b>	<a href="#">test-active</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **sr-isis**

<b>Description</b>	Container of LSP ping results for different SR-ISIS tunnels
<b>Context</b>	<a href="#">oam lsp-ping sr-isis</a>
<b>Tree</b>	<a href="#">sr-isis</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**prefix-sid** *prefix (ipv4-prefix | ipv6-prefix)*

<b>Description</b>	Enter the prefix-sid list instance
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a>
<b>Tree</b>	<a href="#">prefix-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**prefix** *(ipv4-prefix | ipv6-prefix)*

<b>Description</b>	The IPv4 or IPv6 prefix associated with the SID This is the destination that was pinged.
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**session-id** *id number*

<b>Description</b>	List of recent sessions (up to 10) with saved LSP ping results for the prefix
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number</a>
<b>Tree</b>	<a href="#">session-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	10

**id** *number*

<b>Description</b>	The system-assigned session ID
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**path-destination**

<b>Description</b>	Enter the path-destination context
--------------------	------------------------------------

<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number path-destination</a>
<b>Tree</b>	<a href="#">path-destination</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ip-address** (*ipv4-address | ipv6-address*)

<b>Description</b>	IP address of the path destination
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number path-destination ip-address (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">ip-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **next-hop** (*ipv4-address | ipv6-address*)

<b>Description</b>	Egress IP next hop address used with path destination
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number path-destination next-hop (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **subinterface** *string*

<b>Description</b>	Egress router sub-interface used with the path destination
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number path-destination subinterface string</a>
<b>Tree</b>	<a href="#">subinterface</a>
<b>String Length</b>	5 to 25
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **sequence** [sequence-id](#) *number*

<b>Description</b>	List of probes sent during the test
--------------------	-------------------------------------

<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number</a>
<b>Tree</b>	<a href="#">sequence</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **sequence-id number**

<b>Description</b>	Sequence ID of the probe, starting with 1 and incrementing by 1
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **out-interface string**

<b>Description</b>	The subinterface that was used to transmit the echo-request message
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number out-interface string</a>
<b>Tree</b>	<a href="#">out-interface</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **probe-size number**

<b>Description</b>	The size of the IP packet MPLS echo-request message. Probe size does not include MPLS headers, if any
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number probe-size number</a>
<b>Tree</b>	<a href="#">probe-size</a>
<b>Range</b>	1 to 9500
<b>Default</b>	64
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**reply**

<b>Description</b>	Details about the reply message for this sequence number or hop
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number reply</a>
<b>Tree</b>	<a href="#">reply</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**mpls-ttl number**

<b>Description</b>	The value of the MPLS TTL in the top label stack entry of the received echo-reply message
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number reply mpls-ttl number</a>
<b>Tree</b>	<a href="#">mpls-ttl</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**received boolean**

<b>Description</b>	Reads true if the reply message was received
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number reply received boolean</a>
<b>Tree</b>	<a href="#">received</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**reply-sender (ipv4-address | ipv6-address)**

<b>Description</b>	The IP address of the sender of the echo-reply message
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number reply reply-sender (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">reply-sender</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**return-code** *keyword*

<b>Description</b>	Return code value in the echo-reply
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number reply return-code keyword</a>
<b>Tree</b>	<a href="#">return-code</a>
<b>Default</b>	no-return-code
<b>Options</b>	<ul style="list-style-type: none"> <li>no-return-code</li> <li>malformed-echo-request-received</li> <li>one-or-more-tlvs-not-understood</li> <li>replying-router-is-egress-for-fec-at-stack-depth-n</li> <li>replying-router-has-no-mapping-for-fec-at-stack-depth-n</li> <li>downstream-mapping-mismatch</li> <li>upstream-interface-index-unknown</li> <li>reserved</li> <li>label-switched-at-stack-depth-n</li> <li>label-switched-but-no-MPLS-at-stack-depth-n</li> <li>fec-does-not-use-given-label-at-stack-depth-n</li> <li>no-label-entry-at-stack-depth-n</li> <li>protocol-unavailable-at-stack-depth-n</li> <li>premature-termination</li> <li>ddmap-tlv-has-return-code-subcode-details</li> <li>label-switched-with-fec-change</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**return-subcode** *number*

<b>Description</b>	Return subcode in the echo-reply
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number reply return-subcode number</a>
<b>Tree</b>	<a href="#">return-subcode</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**round-trip-time** *number*

<b>Description</b>	The round trip-time between the request and reply for this sequence number or hop
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number reply round-trip-time number</a>
<b>Tree</b>	<a href="#">round-trip-time</a>
<b>Default</b>	0
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**udp-data-length** *number*

<b>Description</b>	The length of the UDP payload
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number reply udp-data-length number</a>
<b>Tree</b>	<a href="#">udp-data-length</a>
<b>Default</b>	0
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**request-sent** *boolean*

<b>Description</b>	True when it is possible for the datapath to send the request message
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence sequence-id number request-sent boolean</a>
<b>Tree</b>	<a href="#">request-sent</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**send-failure-reason** *keyword*

<b>Description</b>	Indicates the reason why the OAM manager could not send the request message
--------------------	---

<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number sequence-id number send-failure-reason keyword</a>
<b>Tree</b>	<a href="#">send-failure-reason</a>
<b>Default</b>	no errors
<b>Options</b>	<ul style="list-style-type: none"> <li>• timeout</li> <li>• source-ip-not-local</li> <li>• invalid-prefix</li> <li>• sr-prefix-is-local</li> <li>• ldp-prefix-is-local</li> <li>• invalid-dest-ip</li> <li>• dest-address-type-mismatch</li> <li>• next-hop-ip-not-found</li> <li>• next-hop-if-name-not-found</li> <li>• packet-size-too-big</li> <li>• far-end-unreachable</li> <li>• prefix-unknown</li> <li>• ds-map-not-supported</li> <li>• unexpected-error</li> <li>• no errors</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## statistics

<b>Description</b>	Summary statistics for the test
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## round-trip-time

<b>Description</b>	Statistics for the round trip time, considering all the probes sent in the test
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number statistics round-trip-time</a>

<b>Tree</b>	<a href="#">round-trip-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### average number

<b>Description</b>	The average round trip-time across all probes
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number statistics round-trip-time average number</a>
<b>Tree</b>	<a href="#">average</a>
<b>Default</b>	0
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### maximum number

<b>Description</b>	The maximum round trip-time across all probes
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number statistics round-trip-time maximum number</a>
<b>Tree</b>	<a href="#">maximum</a>
<b>Default</b>	0
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### minimum number

<b>Description</b>	The minimum round trip-time across all probes
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number statistics round-trip-time minimum number</a>
<b>Tree</b>	<a href="#">minimum</a>
<b>Default</b>	0
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**standard-deviation** *number*

<b>Description</b>	The standard deviation of the round trip-time across all probes
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number statistics round-trip-time standard-deviation number</a>
<b>Tree</b>	<a href="#">standard-deviation</a>
<b>Default</b>	0
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**test-active** *boolean*

<b>Description</b>	Indicates if the test is still running (true) or not (false)
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number test-active boolean</a>
<b>Tree</b>	<a href="#">test-active</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**lsp-trace**

<b>Description</b>	Container of last trace results for different MPLS and segment routing tunnels
<b>Context</b>	<a href="#">oam lsp-trace</a>
<b>Tree</b>	<a href="#">lsp-trace</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ldp**

<b>Description</b>	Container of LSP trace results for different LDP tunnels
<b>Context</b>	<a href="#">oam lsp-trace ldp</a>
<b>Tree</b>	<a href="#">ldp</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**fec prefix** (*ipv4-prefix | ipv6-prefix*)

<b>Description</b>	Enter the fec list instance
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> )
<b>Tree</b>	<a href="#">fec</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**prefix** (*ipv4-prefix | ipv6-prefix*)

<b>Description</b>	The IPv4 or IPv6 prefix associated with the fec This is the destination that was traced.
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> )
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**session-id id number**

<b>Description</b>	List of recent sessions (up to 10) with saved LSP trace results for the prefix
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">session-id id number</a>
<b>Tree</b>	<a href="#">session-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	10

**id number**

<b>Description</b>	The system-assigned session ID
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">session-id id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**hop hop-index number**

<b>Description</b>	List of hops traced
--------------------	---------------------

<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number</a>
<b>Tree</b>	<a href="#">hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### hop-index *number*

<b>Description</b>	The hop index, starting at minimum-mpls-ttl and incrementing by 1 up to maximum-mpls-ttl or until the destination is reached
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### probe [probe-index number](#)

<b>Description</b>	Probes sent to a given hop
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number</a>
<b>Tree</b>	<a href="#">probe</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### probe-index *number*

<b>Description</b>	The probe index, probes received from a given hop. A given LSR may respond one than once, typically once with EgressRouter and once with Destination Router Match Label identifier
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### downstream-detailed-mapping [id number](#)

<b>Description</b>	List of DDMAP TLVs included in the echo-reply from this hop The first one (with id 1) will be used by the sender.
--------------------	--

<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number</a>
<b>Tree</b>	<a href="#">downstream-detailed-mapping</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**id number**

<b>Description</b>	Identifier of the DDMAP TLV
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**address-type keyword**

<b>Description</b>	Indicates the addressing of the downstream interface
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number address-type keyword</a>
<b>Tree</b>	<a href="#">address-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ipv4-numbered</li> <li>• ipv4-unnumbered</li> <li>• ipv6-numbered</li> <li>• ipv6-unnumbered</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**downstream-interface-address (ipv4-address | ipv6-address)**

<b>Description</b>	The interface address of the next-hop router
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number downstream-interface-address (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">downstream-interface-address</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### downstream-router-address (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The router ID or interface address of the next-hop router
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number downstream-router-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">downstream-router-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### mpls-label *index number*

<b>Description</b>	List of labels in the label stack that would have appeared if this router were forwarding the packet through this downstream interface
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mpls-label index number</a>
<b>Tree</b>	<a href="#">mpls-label</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### *index number*

<b>Description</b>	Index of label stack entry, starting at 1 (topmost label)
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mpls-label index number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### label (*number* | *keyword*)

<b>Description</b>	MPLS label value
--------------------	------------------

<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mpls-label index number label (number   keyword)</a>
<b>Tree</b>	<a href="#">label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> <li>• IMPLICIT_NULL</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **protocol** *keyword*

<b>Description</b>	The label distribution protocol for the downstream label
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mpls-label index number protocol keyword</a>
<b>Tree</b>	<a href="#">protocol</a>
<b>Default</b>	unknown
<b>Options</b>	<ul style="list-style-type: none"> <li>• unknown</li> <li>• static</li> <li>• bgp</li> <li>• ldp</li> <li>• rsvp-te</li> <li>• ospf</li> <li>• isis</li> <li>• ospfv3</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **mtu** *number*

<b>Description</b>	The size in octets of the largest MPLS frame (including label stack) that fits on this downstream interface
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mtu number</a>

<b>Tree</b>	<a href="#">mtu</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-probe-send-failure-reason** *keyword*

<b>Description</b>	Indicates the reason why the OAM manager could not send the request message
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number last-probe-send-failure-reason keyword</a>
<b>Tree</b>	<a href="#">last-probe-send-failure-reason</a>
<b>Default</b>	no errors
<b>Options</b>	<ul style="list-style-type: none"> <li>• timeout</li> <li>• source-ip-not-local</li> <li>• invalid-prefix</li> <li>• sr-prefix-is-local</li> <li>• ldp-prefix-is-local</li> <li>• invalid-dest-ip</li> <li>• dest-address-type-mismatch</li> <li>• next-hop-ip-not-found</li> <li>• next-hop-if-name-not-found</li> <li>• packet-size-too-big</li> <li>• far-end-unreachable</li> <li>• prefix-unknown</li> <li>• ds-map-not-supported</li> <li>• unexpected-error</li> <li>• no errors</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **probe-size** *number*

<b>Description</b>	The size of the IP packet MPLS trace message. Probe size does not include MPLS headers, if any
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number probe-size number</a>

<b>Tree</b>	<a href="#">probe-size</a>
<b>Range</b>	1 to 9500
<b>Default</b>	64
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **probes-sent** *number*

<b>Description</b>	The number of echo-request messages sent to the hop until a reply was received
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number probes-sent number</a>
<b>Tree</b>	<a href="#">probes-sent</a>
<b>Range</b>	1 to 10
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **reply**

<b>Description</b>	Details about the reply message for this sequence number or hop
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply</a>
<b>Tree</b>	<a href="#">reply</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **mpls-ttl** *number*

<b>Description</b>	The value of the MPLS TTL in the top label stack entry of the received echo-reply message
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply mpls-ttl number</a>
<b>Tree</b>	<a href="#">mpls-ttl</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**received** *boolean*

<b>Description</b>	Reads true if the reply message was received
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply received boolean</a>
<b>Tree</b>	<a href="#">received</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**reply-sender** (*ipv4-address | ipv6-address*)

<b>Description</b>	The IP address of the sender of the echo-reply message
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply reply-sender (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">reply-sender</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**return-code** *keyword*

<b>Description</b>	Return code value in the echo-reply
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply return-code keyword</a>
<b>Tree</b>	<a href="#">return-code</a>
<b>Default</b>	no-return-code
<b>Options</b>	<ul style="list-style-type: none"> <li>• no-return-code</li> <li>• malformed-echo-request-received</li> <li>• one-or-more-tlvs-not-understood</li> <li>• replying-router-is-egress-for-fec-at-stack-depth-n</li> <li>• replying-router-has-no-mapping-for-fec-at-stack-depth-n</li> <li>• downstream-mapping-mismatch</li> <li>• upstream-interface-index-unknown</li> <li>• reserved</li> <li>• label-switched-at-stack-depth-n</li> <li>• label-switched-but-no-MPLS-at-stack-depth-n</li> <li>• fec-does-not-use-given-label-at-stack-depth-n</li> </ul>

- no-label-entry-at-stack-depth-n
- protocol-unavailable-at-stack-depth-n
- premature-termination
- ddmapi-tlv-has-return-code-subcode-details
- label-switched-with-fec-change

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### return-subcode *number*

<b>Description</b>	Return subcode in the echo-reply
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply return-subcode number</a>
<b>Tree</b>	<a href="#">return-subcode</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### round-trip-time *number*

<b>Description</b>	The round trip-time between the request and reply for this sequence number or hop
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply round-trip-time number</a>
<b>Tree</b>	<a href="#">round-trip-time</a>
<b>Default</b>	0
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### udp-data-length *number*

<b>Description</b>	The length of the UDP payload
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply udp-data-length number</a>

<b>Tree</b>	<a href="#">udp-data-length</a>
<b>Default</b>	0
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## path-destination

<b>Description</b>	Enter the path-destination context
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number path-destination</a>
<b>Tree</b>	<a href="#">path-destination</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ip-address (*ipv4-address | ipv6-address*)

<b>Description</b>	IP address of the path destination
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number path-destination ip-address (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">ip-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## next-hop (*ipv4-address | ipv6-address*)

<b>Description</b>	Egress IP next hop address used with path destination
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number path-destination next-hop (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## subinterface *string*

<b>Description</b>	Egress router sub-interface used with the path destination
--------------------	--

<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number path-destination subinterface string</a>
<b>Tree</b>	<a href="#">subinterface</a>
<b>String Length</b>	5 to 25
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**test-active** *boolean*

<b>Description</b>	Indicates if the test is still running (true) or not (false)
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) session-id id number test-active boolean</a>
<b>Tree</b>	<a href="#">test-active</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sr-isis**

<b>Description</b>	Container of LSP trace results for different SR-ISIS tunnels
<b>Context</b>	<a href="#">oam lsp-trace sr-isis</a>
<b>Tree</b>	<a href="#">sr-isis</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**prefix-sid** [prefix \(ipv4-prefix | ipv6-prefix\)](#)

<b>Description</b>	Enter the prefix-sid list instance
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a>
<b>Tree</b>	<a href="#">prefix-sid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**prefix** [\(ipv4-prefix | ipv6-prefix\)](#)

<b>Description</b>	The IPv4 or IPv6 prefix associated with the SID This is the destination that was traced.
--------------------	---

<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### session-id *id number*

<b>Description</b>	List of recent sessions (up to 10) with saved LSP trace results for the prefix
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">session-id id number</a>
<b>Tree</b>	<a href="#">session-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	10

### id *number*

<b>Description</b>	The system-assigned session ID
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">session-id id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### hop *hop-index number*

<b>Description</b>	List of hops traced
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">session-id id number</a> <a href="#">hop hop-index number</a>
<b>Tree</b>	<a href="#">hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### hop-index *number*

<b>Description</b>	The hop index, starting at minimum-mpls-ttl and incrementing by 1 up to maximum-mpls-ttl or until the destination is reached
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">session-id id number</a> <a href="#">hop hop-index number</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### probe [probe-index number](#)

<b>Description</b>	Probes sent to a given hop
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number</a>
<b>Tree</b>	<a href="#">probe</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### probe-index [number](#)

<b>Description</b>	The probe index, probes received from a given hop. A given LSR may respond one than once, typically once with EgressRouter and once with Destination Router Match Label identifier
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### downstream-detailed-mapping [id number](#)

<b>Description</b>	List of DDMAP TLVs included in the echo-reply from this hop The first one (with id 1) will be used by the sender.
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number</a>
<b>Tree</b>	<a href="#">downstream-detailed-mapping</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### id [number](#)

<b>Description</b>	Identifier of the DDMAP TLV
--------------------	-----------------------------

<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **address-type keyword**

<b>Description</b>	Indicates the addressing of the downstream interface
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number address-type keyword</a>
<b>Tree</b>	<a href="#">address-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ipv4-numbered</li> <li>• ipv4-unnumbered</li> <li>• ipv6-numbered</li> <li>• ipv6-unnumbered</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **downstream-interface-address (ipv4-address | ipv6-address)**

<b>Description</b>	The interface address of the next-hop router
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number downstream-interface-address (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">downstream-interface-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **downstream-router-address (ipv4-address | ipv6-address)**

<b>Description</b>	The router ID or interface address of the next-hop router
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number downstream-router-address (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">downstream-router-address</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **mpls-label** *index number*

<b>Description</b>	List of labels in the label stack that would have appeared if this router were forwarding the packet through this downstream interface
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mpls-label index number</a>
<b>Tree</b>	<a href="#">mpls-label</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **index** *number*

<b>Description</b>	Index of label stack entry, starting at 1 (topmost label)
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mpls-label index number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **label** (*number | keyword*)

<b>Description</b>	MPLS label value
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mpls-label index number label (number   keyword)</a>
<b>Tree</b>	<a href="#">label</a>
<b>Range</b>	16 to 1048575
<b>Options</b>	<ul style="list-style-type: none"> <li>• IPV4_EXPLICIT_NULL</li> <li>• IPV6_EXPLICIT_NULL</li> <li>• IMPLICIT_NULL</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**protocol** *keyword*

<b>Description</b>	The label distribution protocol for the downstream label
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mpls-label index number protocol keyword</a>
<b>Tree</b>	<a href="#">protocol</a>
<b>Default</b>	unknown
<b>Options</b>	<ul style="list-style-type: none"> <li>• unknown</li> <li>• static</li> <li>• bgp</li> <li>• ldp</li> <li>• rsvp-te</li> <li>• ospf</li> <li>• isis</li> <li>• ospfv3</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**mtu** *number*

<b>Description</b>	The size in octets of the largest MPLS frame (including label stack) that fits on this downstream interface
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mtu number</a>
<b>Tree</b>	<a href="#">mtu</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-probe-send-failure-reason** *keyword*

<b>Description</b>	Indicates the reason why the OAM manager could not send the request message
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number last-probe-send-failure-reason keyword</a>
<b>Tree</b>	<a href="#">last-probe-send-failure-reason</a>

<b>Default</b>	no errors
<b>Options</b>	<ul style="list-style-type: none"> <li>• timeout</li> <li>• source-ip-not-local</li> <li>• invalid-prefix</li> <li>• sr-prefix-is-local</li> <li>• ldp-prefix-is-local</li> <li>• invalid-dest-ip</li> <li>• dest-address-type-mismatch</li> <li>• next-hop-ip-not-found</li> <li>• next-hop-if-name-not-found</li> <li>• packet-size-too-big</li> <li>• far-end-unreachable</li> <li>• prefix-unknown</li> <li>• ds-map-not-supported</li> <li>• unexpected-error</li> <li>• no errors</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **probe-size** *number*

<b>Description</b>	The size of the IP packet MPLS trace message. Probe size does not include MPLS headers, if any
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number probe-size number</a>
<b>Tree</b>	<a href="#">probe-size</a>
<b>Range</b>	1 to 9500
<b>Default</b>	64
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **probes-sent** *number*

<b>Description</b>	The number of echo-request messages sent to the hop until a reply was received
--------------------	--

<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number probes-sent number</a>
<b>Tree</b>	<a href="#">probes-sent</a>
<b>Range</b>	1 to 10
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## reply

<b>Description</b>	Details about the reply message for this sequence number or hop
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply</a>
<b>Tree</b>	<a href="#">reply</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## mpls-ttl *number*

<b>Description</b>	The value of the MPLS TTL in the top label stack entry of the received echo-reply message
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply mpls-ttl number</a>
<b>Tree</b>	<a href="#">mpls-ttl</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## received *boolean*

<b>Description</b>	Reads true if the reply message was received
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply received boolean</a>
<b>Tree</b>	<a href="#">received</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**reply-sender** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address of the sender of the echo-reply message
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">session-id id number hop hop-index number probe probe-index number reply reply-sender</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">reply-sender</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**return-code** *keyword*

<b>Description</b>	Return code value in the echo-reply
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">session-id id number hop hop-index number probe probe-index number reply return-code keyword</a>
<b>Tree</b>	<a href="#">return-code</a>
<b>Default</b>	no-return-code
<b>Options</b>	<ul style="list-style-type: none"> <li>no-return-code</li> <li>malformed-echo-request-received</li> <li>one-or-more-tlvs-not-understood</li> <li>replying-router-is-egress-for-fec-at-stack-depth-n</li> <li>replying-router-has-no-mapping-for-fec-at-stack-depth-n</li> <li>downstream-mapping-mismatch</li> <li>upstream-interface-index-unknown</li> <li>reserved</li> <li>label-switched-at-stack-depth-n</li> <li>label-switched-but-no-MPLS-at-stack-depth-n</li> <li>fec-does-not-use-given-label-at-stack-depth-n</li> <li>no-label-entry-at-stack-depth-n</li> <li>protocol-unavailable-at-stack-depth-n</li> <li>premature-termination</li> <li>ddmap-tlv-has-return-code-subcode-details</li> <li>label-switched-with-fec-change</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**return-subcode** *number*

<b>Description</b>	Return subcode in the echo-reply
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply return-subcode number</a>
<b>Tree</b>	<a href="#">return-subcode</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**round-trip-time** *number*

<b>Description</b>	The round trip-time between the request and reply for this sequence number or hop
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply round-trip-time number</a>
<b>Tree</b>	<a href="#">round-trip-time</a>
<b>Default</b>	0
<b>Units</b>	microseconds
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**udp-data-length** *number*

<b>Description</b>	The length of the UDP payload
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply udp-data-length number</a>
<b>Tree</b>	<a href="#">udp-data-length</a>
<b>Default</b>	0
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**path-destination**

<b>Description</b>	Enter the path-destination context
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number path-destination</a>
<b>Tree</b>	<a href="#">path-destination</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ip-address (ipv4-address | ipv6-address)**

<b>Description</b>	IP address of the path destination
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number path-destination ip-address (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">ip-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**next-hop (ipv4-address | ipv6-address)**

<b>Description</b>	Egress IP next hop address used with path destination
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number path-destination next-hop (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**subinterface *string***

<b>Description</b>	Egress router sub-interface used with the path destination
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number path-destination subinterface string</a>
<b>Tree</b>	<a href="#">subinterface</a>
<b>String Length</b>	5 to 25
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**test-active** *boolean*

<b>Description</b>	Indicates if the test is still running (true) or not (false)
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) session-id id number test-active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">test-active</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**stamp**

<b>Description</b>	Enable the stamp context
<b>Context</b>	<a href="#">oam stamp</a>
<b>Tree</b>	<a href="#">stamp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**session-reflector**

<b>Description</b>	STAMP Session-Reflector configuration and state
<b>Context</b>	<a href="#">oam stamp session-reflector</a>
<b>Tree</b>	<a href="#">session-reflector</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**inactivity-timer** *number*

<b>Description</b>	STAMP test session timeout on inactivity The amount of time (ref-wait) a test session must be inactive, no packets arriving, before the test session is removed from the Session-Reflector stateful table.
<b>Context</b>	<a href="#">oam stamp session-reflector inactivity-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">inactivity-timer</a>
<b>Range</b>	1 to 604800
<b>Default</b>	900
<b>Units</b>	seconds
<b>Configurable</b>	True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### network-instance *name reference*

**Description** The list of network instances configured for STAMP Session-Reflector function

**Context** [oam stamp session-reflector network-instance name reference](#)

**Tree** [network-instance](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### name *reference*

**Description** The name of the network instances to which the Session-Reflector state and configuration applies

**Context** [oam stamp session-reflector network-instance name reference](#)

**Reference** [network-instance name string](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### admin-state *keyword*

**Description** This attribute specifies whether the STAMP Session-Reflector is enabled or disabled

**Context** [oam stamp session-reflector network-instance name reference admin-state keyword](#)

**Tree** [admin-state](#)

**Default** disable

**Options**

- enable
- disable

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### allow-ipv6-udp-checksum-zero *boolean*

**Description** Process IPv6 packets with a zero UDP checksum

When the value of the leaf is 'false' IPv6 test sessions packets arriving with IPv6 UDP checksum 0 will be discarded. When the value is 'true' the Session-Reflector UDP port will be registered to allow test session packets arriving with IPv6 UDP checksum 0 to be processed by the Session-Reflector.

<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name</a> <i>reference</i> <a href="#">allow-ipv6-udp-checksum-zero</a> <i>boolean</i>
<b>Tree</b>	<a href="#">allow-ipv6-udp-checksum-zero</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **description** *string*

<b>Description</b>	A string describing the STAMP Session-Reflector
<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name</a> <i>reference</i> <a href="#">description</a> <i>string</i>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ip-prefix** [ip-prefix](#) (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	The list of IP source addresses or ranges allowed to send STAMP test packets to Session-Reflector
<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name</a> <i>reference</i> <a href="#">ip-prefix ip-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Tree</b>	<a href="#">ip-prefix</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ip-prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	The IP address or range allowed to send STAMP test packets to the Session-Reflector
<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name</a> <i>reference</i> <a href="#">ip-prefix ip-prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Configurable</b>	True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **oper-state** *keyword*

<b>Description</b>	Enter the oper-state context
<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name</a> <i>reference</i> <a href="#">oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>• waiting Component or process is currently waiting</li> </ul>

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name</a> <i>reference</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## malformed-packet *number*

<b>Description</b>	Session-Reflector was able to identify STAMP test packet but the packet was incorrectly formatted, packet discarded  This counter will be increased if the malformation affects the mapping of the test packet to the test session. This would be the case where the session cannot be identified.
<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name</a> <i>reference</i> <a href="#">statistics malformed-packet</a> <i>number</i>
<b>Tree</b>	<a href="#">malformed-packet</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## packet-discards-source-destination-equal *number*

<b>Description</b>	Session-Reflector discarded the received test packet because source IP and destination IP are the same  The test session is never created in the case where source IP and destination IP are the same.
<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name</a> <i>reference</i> <a href="#">statistics packet-discards-source-destination-equal</a> <i>number</i>
<b>Tree</b>	<a href="#">packet-discards-source-destination-equal</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **prefix-match-failure** *number*

<b>Description</b>	Session-Sender IP does not have a prefix match configured on the Session-Reflector
<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name</a> <i>reference</i> <a href="#">statistics prefix-match-failure</a> <i>number</i>
<b>Tree</b>	<a href="#">prefix-match-failure</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **session-reflector-udp-port-registration-failure** *number*

<b>Description</b>	The Session-Reflector was unable to allocate the UDP port for this network instance reflector
<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name</a> <i>reference</i> <a href="#">statistics session-reflector-udp-port-registration-failure</a> <i>number</i>
<b>Tree</b>	<a href="#">session-reflector-udp-port-registration-failure</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **test-frames-received** *number*

<b>Description</b>	STAMP test frames received
<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name</a> <i>reference</i> <a href="#">statistics test-frames-received</a> <i>number</i>
<b>Tree</b>	<a href="#">test-frames-received</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**test-frames-sent** *number*

<b>Description</b>	STAMP test frames transmitted
<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name</a> <i>reference</i> <a href="#">statistics test-frames-sent number</a>
<b>Tree</b>	<a href="#">test-frames-sent</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**test-sessions** *number*

<b>Description</b>	STAMP test session count
<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name</a> <i>reference</i> <a href="#">statistics test-sessions number</a>
<b>Tree</b>	<a href="#">test-sessions</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### malformed-tlv *number*

<b>Description</b>	<p>Session-Reflector was able to identify STAMP test packet but the packet was incorrectly formatted, packet discarded</p> <p>This counter will be increased if the malformation does not affect the mapping of the test packet to the test session. This would be the case if a TLV is malformed.</p>
<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name reference test-session-statistics session-sender-ip (ipv4-address   ipv6-address) session-sender-udp number session-reflector-ip (ipv4-address   ipv6-address) session-reflector-udp number session-identifier number malformed-tlv number</a>
<b>Tree</b>	<a href="#">malformed-tlv</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### test-frames-received *number*

<b>Description</b>	STAMP test frames received
<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name reference test-session-statistics session-sender-ip (ipv4-address   ipv6-address) session-sender-udp number session-reflector-ip (ipv4-address   ipv6-address) session-reflector-udp number session-identifier number test-frames-received number</a>
<b>Tree</b>	<a href="#">test-frames-received</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### test-frames-sent *number*

<b>Description</b>	STAMP test frames transmitted
<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name reference test-session-statistics session-sender-ip (ipv4-address   ipv6-address) session-sender-udp number session-reflector-ip (ipv4-address   ipv6-address) session-reflector-udp number session-identifier number test-frames-sent number</a>

<b>Tree</b>	<a href="#">test-frames-sent</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **udp-port** *number*

<b>Description</b>	The UDP Port listening port of the STAMP Session-Reflector
<b>Context</b>	<a href="#">oam stamp session-reflector network-instance name</a> <i>reference</i> <a href="#">udp-port number</a>
<b>Tree</b>	<a href="#">udp-port</a>
<b>Range</b>	862   64364 to 64373
<b>Default</b>	862
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">oam stamp session-reflector statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **packet-discards-on-reception** *number*

<b>Description</b>	Received STAMP test packets discarded lack of resources or resource contention
<b>Context</b>	<a href="#">oam stamp session-reflector statistics packet-discards-on-reception</a> <i>number</i>
<b>Tree</b>	<a href="#">packet-discards-on-reception</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**packet-discards-on-transmission** *number*

<b>Description</b>	Transmitted STAMP test packets discarded due to lack of resources or resource contention
<b>Context</b>	<a href="#">oam stamp session-reflector statistics packet-discards-on-transmission number</a>
<b>Tree</b>	<a href="#">packet-discards-on-transmission</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**reflector-table-entries-full** *number*

<b>Description</b>	Session-Reflector no available state table entries to add new test session
<b>Context</b>	<a href="#">oam stamp session-reflector statistics reflector-table-entries-full number</a>
<b>Tree</b>	<a href="#">reflector-table-entries-full</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**reflectors-configured** *number*

<b>Description</b>	Count of STAMP Session-Reflectors administratively enabled regardless of operational state
<b>Context</b>	<a href="#">oam stamp session-reflector statistics reflectors-configured number</a>
<b>Tree</b>	<a href="#">reflectors-configured</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**reflectors-not-operational** *number*

<b>Description</b>	Count of STAMP Session-Reflectors with an administrative state 'enable' and operational state 'down'
<b>Context</b>	<a href="#">oam stamp session-reflector statistics reflectors-not-operational number</a>
<b>Tree</b>	<a href="#">reflectors-not-operational</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **reflectors-operational** *number*

<b>Description</b>	Count of STAMP Session-Reflectors with an administrative state 'enable' and operational state 'up'
<b>Context</b>	<a href="#">oam stamp session-reflector statistics reflectors-operational</a> <i>number</i>
<b>Tree</b>	<a href="#">reflectors-operational</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **session-reflector-not-found** *number*

<b>Description</b>	<p>Session-Sender is sending to a destination UDP port that is not part of the Session-Reflector</p> <p>The Session-Reflector has not allocated the UDP port for this network instance reflector. This counter may increase when the Session-Reflector is deleted and packets for that specific Session-Reflector had been queued for processing. This counter does not increment when there is failure to map UDP port to the STAMP protocol.</p>
<b>Context</b>	<a href="#">oam stamp session-reflector statistics session-reflector-not-found</a> <i>number</i>
<b>Tree</b>	<a href="#">session-reflector-not-found</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **test-frames-received** *number*

<b>Description</b>	STAMP test frames received
<b>Context</b>	<a href="#">oam stamp session-reflector statistics test-frames-received</a> <i>number</i>
<b>Tree</b>	<a href="#">test-frames-received</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**test-frames-sent** *number*

<b>Description</b>	STAMP test frames transmitted
<b>Context</b>	<a href="#">oam stamp session-reflector statistics test-frames-sent</a> <i>number</i>
<b>Tree</b>	<a href="#">test-frames-sent</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**test-session-count** *number*

<b>Description</b>	STAMP test session count
<b>Context</b>	<a href="#">oam stamp session-reflector statistics test-session-count</a> <i>number</i>
<b>Tree</b>	<a href="#">test-session-count</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## 8.1 platform Descriptions

### platform

<b>Description</b>	Enclosing container for platform components
<b>Context</b>	<a href="#">platform</a>
<b>Tree</b>	<a href="#">platform</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### chassis

<b>Description</b>	Top-level container for chassis configuration and state
<b>Context</b>	<a href="#">platform chassis</a>
<b>Tree</b>	<a href="#">chassis</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### clei-code *string*

<b>Description</b>	The Common Language Identification Code for this component
<b>Context</b>	<a href="#">platform chassis clei-code string</a>
<b>Tree</b>	<a href="#">clei-code</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### failure-reason *string*

<b>Description</b>	The reason the component transitioned to a failed state Field is empty if the component is not currently in a failure state
<b>Context</b>	<a href="#">platform chassis failure-reason string</a>
<b>Tree</b>	<a href="#">failure-reason</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## healthz

<b>Description</b>	<p>The health of the component</p> <p>The parameters within this container indicate the status of the component beyond whether it is operationally up or down. When a signal is received that a component is in an unhealthy state the gNOI.Healthz service can be used to retrieve further diagnostic information relating to the component. The contents of this directory relate only to the specific component that it is associated with.</p>
<b>Context</b>	<a href="#">platform chassis healthz</a>
<b>Tree</b>	<a href="#">healthz</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## last-unhealthy *string*

<b>Description</b>	<p>Last unhealthy time</p> <p>The time at which the component was last observed to transition from the healthy state to any other state, represented as nanoseconds since the Unix epoch.</p>
<b>Context</b>	<a href="#">platform chassis healthz last-unhealthy string</a>
<b>Tree</b>	<a href="#">last-unhealthy</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## status *keyword*

<b>Description</b>	<p>Health status</p> <p>The status of the component, indicating its current health.</p>
<b>Context</b>	<a href="#">platform chassis healthz status keyword</a>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>unspecified</li> </ul> <p>Unspecified status</p> <p>The component's health status has not yet been checked by the system.</p>

- **healthy**  
Healthy status  
The component is in a healthy state, and is operating within the expected parameters.
- **unhealthy**  
Unhealthy status  
The component is in a unhealthy state, it is not performing the function expected of it.

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **unhealthy-count** *number*

**Description** Unhealthy count  
The number of times the component has transitioned from the healthy state to any other state.

**Context** [platform chassis healthz unhealthy-count number](#)

**Tree** [unhealthy-count](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **hw-mac-address** *string*

**Description** The chassis MAC address  
Read from hardware, or derived from the systems UUID

**Context** [platform chassis hw-mac-address string](#)

**Tree** [hw-mac-address](#)

**Configurable** False

**Platforms** Supported on all platforms

### **id** *number*

**Description** A user configured chassis ID

	This value is not used by the system, but is provided for user convenience.
<b>Context</b>	<a href="#">platform chassis id</a> <i>number</i>
<b>Tree</b>	<a href="#">id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **last-boot-type** *string*

<b>Description</b>	The type of boot the chassis initialized from This field indicates what type of reboot occurred, whether it be warm, normal, or otherwise.
<b>Context</b>	<a href="#">platform chassis last-boot-type</a> <i>string</i>
<b>Tree</b>	<a href="#">last-boot-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-booted** *string*

<b>Description</b>	The date and time this component last booted For components that do not boot, this is the time the component was last discovered by the active control module
<b>Context</b>	<a href="#">platform chassis last-booted</a> <i>string</i>
<b>Tree</b>	<a href="#">last-booted</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-booted-reason** *identityref*

<b>Description</b>	The reason this component last booted or rebooted For components without the ability to 'boot' this field is never populated
<b>Context</b>	<a href="#">platform chassis last-booted-reason</a> <i>identityref</i>
<b>Tree</b>	<a href="#">last-booted-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• user-initiated-reboot A user initiated the reboot directly via a management interface</li> <li>• power-failure</li> </ul>

- The system rebooted the component due to insufficient power
- critical-error
  - The system rebooted the component due to an internal critical error

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-change** *string*

<b>Description</b>	The date and time this component last changed state
<b>Context</b>	<a href="#">platform chassis last-change</a> <i>string</i>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **manufactured-date** *string*

<b>Description</b>	The date this component was manufactured
<b>Context</b>	<a href="#">platform chassis manufactured-date</a> <i>string</i>
<b>Tree</b>	<a href="#">manufactured-date</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **oper-state** *keyword*

<b>Description</b>	The operational state of this component
<b>Context</b>	<a href="#">platform chassis oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>up           <ul style="list-style-type: none"> <li>Component or process is operational</li> </ul> </li> <li>down           <ul style="list-style-type: none"> <li>Component or process is not operational</li> </ul> </li> <li>empty           <ul style="list-style-type: none"> <li>Component slot is empty</li> </ul> </li> <li>downloading</li> </ul>

- Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

Supported on all platforms

**part-number** *string***Description**

Part number for this component

**Context**[platform chassis part-number](#) *string***Tree**[part-number](#)**Configurable**

False

**Platforms**

Supported on all platforms

**power**

<b>Description</b>	Top-level container for chassis-wide power state
<b>Context</b>	<a href="#">platform chassis power</a>
<b>Tree</b>	<a href="#">power</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**control**

<b>Description</b>	Top-level container for power usage of control modules
<b>Context</b>	<a href="#">platform chassis power control</a>
<b>Tree</b>	<a href="#">control</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**peak number**

<b>Description</b>	Peak power used
<b>Context</b>	<a href="#">platform chassis power control peak number</a>
<b>Tree</b>	<a href="#">peak</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**required number**

<b>Description</b>	Power required to power on all present admin enabled components as part of power management
<b>Context</b>	<a href="#">platform chassis power control required number</a>
<b>Tree</b>	<a href="#">required</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**used number**

<b>Description</b>	Used power
<b>Context</b>	<a href="#">platform chassis power control used number</a>

<b>Tree</b>	<a href="#">used</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **fabric**

<b>Description</b>	Top-level container for power usage of fabric modules
<b>Context</b>	<a href="#">platform chassis power fabric</a>
<b>Tree</b>	<a href="#">fabric</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **peak number**

<b>Description</b>	Peak power used
<b>Context</b>	<a href="#">platform chassis power fabric peak number</a>
<b>Tree</b>	<a href="#">peak</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **required number**

<b>Description</b>	Power required to power on all present admin enabled components as part of power management
<b>Context</b>	<a href="#">platform chassis power fabric required number</a>
<b>Tree</b>	<a href="#">required</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **used number**

<b>Description</b>	Used power
<b>Context</b>	<a href="#">platform chassis power fabric used number</a>
<b>Tree</b>	<a href="#">used</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## fan-tray

<b>Description</b>	Top-level container for power usage of fan-trays
<b>Context</b>	<a href="#">platform chassis power fan-tray</a>
<b>Tree</b>	<a href="#">fan-tray</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## peak number

<b>Description</b>	Peak power used
<b>Context</b>	<a href="#">platform chassis power fan-tray peak number</a>
<b>Tree</b>	<a href="#">peak</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## required number

<b>Description</b>	Power required to power on all present admin enabled components as part of power management
<b>Context</b>	<a href="#">platform chassis power fan-tray required number</a>
<b>Tree</b>	<a href="#">required</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## used number

<b>Description</b>	Used power
<b>Context</b>	<a href="#">platform chassis power fan-tray used number</a>
<b>Tree</b>	<a href="#">used</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## linecard

<b>Description</b>	Top-level container for power usage of linecard modules
--------------------	---

<b>Context</b>	<a href="#">platform chassis power linecard</a>
<b>Tree</b>	<a href="#">linecard</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**peak number**

<b>Description</b>	Peak power used
<b>Context</b>	<a href="#">platform chassis power linecard peak number</a>
<b>Tree</b>	<a href="#">peak</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**required number**

<b>Description</b>	Power required to power on all present admin enabled components as part of power management
<b>Context</b>	<a href="#">platform chassis power linecard required number</a>
<b>Tree</b>	<a href="#">required</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**used number**

<b>Description</b>	Used power
<b>Context</b>	<a href="#">platform chassis power linecard used number</a>
<b>Tree</b>	<a href="#">used</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**total**

<b>Description</b>	Top-level container for total power usage and capacity
<b>Context</b>	<a href="#">platform chassis power total</a>
<b>Tree</b>	<a href="#">total</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **capacity number**

**Description** Total power capacity provided by all power supplies  
**Context** [platform chassis power total capacity number](#)  
**Tree** [capacity](#)  
**Configurable** False  
**Platforms** Supported on all platforms

### **peak number**

**Description** Peak power used  
**Context** [platform chassis power total peak number](#)  
**Tree** [peak](#)  
**Configurable** False  
**Platforms** Supported on all platforms

### **required number**

**Description** Power required to power on all present admin enabled components as part of power management  
**Context** [platform chassis power total required number](#)  
**Tree** [required](#)  
**Configurable** False  
**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **used number**

**Description** Used power  
**Context** [platform chassis power total used number](#)  
**Tree** [used](#)  
**Configurable** False  
**Platforms** Supported on all platforms

**rebooting-at** *string*

<b>Description</b>	Indicates the date and time this component will reboot If empty, no delayed reboots are queued for this component. A non empty value implies that a delayed reboot operation has been triggered for this component, which can be aborted using 'tools platform <component> reboot cancel'.
<b>Context</b>	<a href="#">platform chassis rebooting-at</a> <i>string</i>
<b>Tree</b>	<a href="#">rebooting-at</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**removable** *boolean*

<b>Description</b>	Details if this component can be removed from the system
<b>Context</b>	<a href="#">platform chassis removable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">removable</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**secondary-mac-address** *string*

<b>Description</b>	MAC address programmed as a secondary terminating MAC address on every IP interface, across all network instances If an IP packet is received on a routed subinterface and it arrives with a DMAC equal to the secondary-mac-address then it is terminated and forwarded exactly the same way it would be forwarded if it had arrived on this subinterface with a DMAC equal to the subinterface MAC address.
<b>Context</b>	<a href="#">platform chassis secondary-mac-address</a> <i>string</i>
<b>Tree</b>	<a href="#">secondary-mac-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**serial-number** *string*

<b>Description</b>	The serial number for this component
<b>Context</b>	<a href="#">platform chassis serial-number</a> <i>string</i>

<b>Tree</b>	<a href="#">serial-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**slots** *number*

<b>Description</b>	The number of line card slots supported by the chassis
<b>Context</b>	<a href="#">platform chassis slots</a> <i>number</i>
<b>Tree</b>	<a href="#">slots</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *string*

<b>Description</b>	The chassis type
<b>Context</b>	<a href="#">platform chassis type</a> <i>string</i>
<b>Tree</b>	<a href="#">type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**control** [slot](#) *string*

<b>Description</b>	Top-level container for control module configuration and state
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i>
<b>Tree</b>	<a href="#">control</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**slot** *string*

<b>Description</b>	Slot identifier for the control module This is set to 'A' for systems without removable control modules.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**bios**

<b>Description</b>	State related to the BIOS of this component
<b>Context</b>	<a href="#">platform control slot string bios</a>
<b>Tree</b>	<a href="#">bios</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**manufacturer string**

<b>Description</b>	The manufacturer of this component
<b>Context</b>	<a href="#">platform control slot string bios manufacturer string</a>
<b>Tree</b>	<a href="#">manufacturer</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**software-version string**

<b>Description</b>	The software version of this component
<b>Context</b>	<a href="#">platform control slot string bios software-version string</a>
<b>Tree</b>	<a href="#">software-version</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**bootloader**

<b>Description</b>	State related to the boot loader of this component
<b>Context</b>	<a href="#">platform control slot string bootloader</a>
<b>Tree</b>	<a href="#">bootloader</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**manufacturer string**

<b>Description</b>	The manufacturer of this component
<b>Context</b>	<a href="#">platform control slot string bootloader manufacturer string</a>

<b>Tree</b>	<a href="#">manufacturer</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **software-version** *string*

<b>Description</b>	The software version of this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">bootloader</a> <a href="#">software-version</a> <i>string</i>
<b>Tree</b>	<a href="#">software-version</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **cgroup name** *string*

<b>Description</b>	List of cgroups present in the system
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i>
<b>Tree</b>	<a href="#">cgroup</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **name** *string*

<b>Description</b>	Name of the cgroup, as defined by its directory location in the filesystem
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **cpuacct-statistics**

<b>Description</b>	Top-level container for cgroup cpuacct statistics
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">cpuacct-statistics</a>
<b>Tree</b>	<a href="#">cpuacct-statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**system number**

<b>Description</b>	CPU usage user system
<b>Context</b>	<a href="#">platform control slot string cgroup name string cpuacct-statistics system number</a>
<b>Tree</b>	<a href="#">system</a>
<b>Units</b>	useconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**user number**

<b>Description</b>	CPU usage user mode
<b>Context</b>	<a href="#">platform control slot string cgroup name string cpuacct-statistics user number</a>
<b>Tree</b>	<a href="#">user</a>
<b>Units</b>	useconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**memory-statistics**

<b>Description</b>	Top-level container for cgroup memory statistics
<b>Context</b>	<a href="#">platform control slot string cgroup name string memory-statistics</a>
<b>Tree</b>	<a href="#">memory-statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**anon number**

<b>Description</b>	Amount of memory used in anonymous mappings such as brk(), sbrk(), and mmap(MAP_ANONYMOUS)
<b>Context</b>	<a href="#">platform control slot string cgroup name string memory-statistics anon number</a>
<b>Tree</b>	<a href="#">anon</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**anon-thp** *number*

<b>Description</b>	Amount of memory used in anonymous mappings backed by transparent hugepages
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics anon-thp number</a>
<b>Tree</b>	<a href="#">anon-thp</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**current** *number*

<b>Description</b>	The total amount of memory currently being used by the cgroup and its descendants. Read from <code>memory.current</code>
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics current number</a>
<b>Tree</b>	<a href="#">current</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**current-swap** *number*

<b>Description</b>	The total amount of swap currently being used by the cgroup and its descendants. Read from <code>memory.swap.current</code>
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics current-swap number</a>
<b>Tree</b>	<a href="#">current-swap</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**file** *number*

<b>Description</b>	Amount of memory used to cache filesystem data, including tmpfs and shared memory
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics file number</a>

<b>Tree</b>	<a href="#">file</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **file-dirty *number***

<b>Description</b>	Amount of cached filesystem data that was modified but not yet written back to disk
<b>Context</b>	<a href="#">platform control slot string cgroup name string memory-statistics file-dirty number</a>
<b>Tree</b>	<a href="#">file-dirty</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **file-writeback *number***

<b>Description</b>	Amount of cached filesystem data that was modified and is currently being written back to disk
<b>Context</b>	<a href="#">platform control slot string cgroup name string memory-statistics file-writeback number</a>
<b>Tree</b>	<a href="#">file-writeback</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **kernel-stack *number***

<b>Description</b>	Amount of memory allocated to kernel stacks
<b>Context</b>	<a href="#">platform control slot string cgroup name string memory-statistics kernel-stack number</a>
<b>Tree</b>	<a href="#">kernel-stack</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**memory-events**

<b>Description</b>	Top-level container for cgroup memory events
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics</a> <a href="#">memory-events</a>
<b>Tree</b>	<a href="#">memory-events</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**high number**

<b>Description</b>	The number of times processes of the cgroup are throttled and routed to perform direct memory reclaim because the high memory boundary was exceeded.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics</a> <a href="#">memory-events</a> <a href="#">high number</a>
<b>Tree</b>	<a href="#">high</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**low number**

<b>Description</b>	The number of times the cgroup is reclaimed due to high memory pressure even though its usage is under the low boundary.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics</a> <a href="#">memory-events</a> <a href="#">low number</a>
<b>Tree</b>	<a href="#">low</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**max number**

<b>Description</b>	The number of times the cgroup's memory usage was about to go over the max boundary
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cgroup name</a> <i>string</i> <a href="#">memory-statistics</a> <a href="#">memory-events</a> <a href="#">max number</a>
<b>Tree</b>	<a href="#">max</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **oom number**

**Description** The number of time the cgroup's memory usage had reached the limit and allocation was about to fail

**Context** [platform control slot](#) *string* [cgroup name](#) *string* [memory-statistics](#) [memory-events](#) [oom number](#)

**Tree** [oom](#)

**Configurable** False

**Platforms** Supported on all platforms

### **oom-kill number**

**Description** The number of processes belonging to this cgroup killed by any kind of out-of-memory killer

**Context** [platform control slot](#) *string* [cgroup name](#) *string* [memory-statistics](#) [memory-events](#) [oom-kill number](#)

**Tree** [oom-kill](#)

**Configurable** False

**Platforms** Supported on all platforms

### **slab number**

**Description** Amount of memory used for storing in-kernel data structures

**Context** [platform control slot](#) *string* [cgroup name](#) *string* [memory-statistics](#) [slab number](#)

**Tree** [slab](#)

**Units** bytes

**Configurable** False

**Platforms** Supported on all platforms

### **sock number**

**Description** Amount of memory used in network transmission buffers

**Context** [platform control slot](#) *string* [cgroup name](#) *string* [memory-statistics](#) [sock number](#)

**Tree** [sock](#)

<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**clei-code** *string*

<b>Description</b>	The Common Language Identification Code for this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">clei-code</a> <i>string</i>
<b>Tree</b>	<a href="#">clei-code</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**cpu index** (*keyword | number*)

<b>Description</b>	List of all CPUs in the system
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> )
<b>Tree</b>	<a href="#">cpu</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**index** (*keyword | number*)

<b>Description</b>	CPU index for each processor core on the system On a single-core system, the index should be zero. The 'all' index signifies an aggregation of the CPU utilization statistics over all cores in the system.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> )
<b>Options</b>	<ul style="list-style-type: none"> <li>all Index value indicating all CPUs in the system</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**architecture** *keyword*

<b>Description</b>	Architecture supported by the CPU
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">architecture</a> <i>keyword</i>

<b>Tree</b>	<a href="#">architecture</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">x86_64</a></li> <li>• <a href="#">aarch64</a></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## hardware-interrupt

<b>Description</b>	Time spent servicing hardware interrupts
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">hardware-interrupt</a>
<b>Tree</b>	<a href="#">hardware-interrupt</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## average-1 *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last minute
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">hardware-interrupt</a> <a href="#">average-1</a> <i>number</i>
<b>Tree</b>	<a href="#">average-1</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## average-15 *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last fifteen minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">hardware-interrupt</a> <a href="#">average-15</a> <i>number</i>
<b>Tree</b>	<a href="#">average-15</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-5 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last five minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">hardware-interrupt</a> <a href="#">average-5 number</a>
<b>Tree</b>	<a href="#">average-5</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**instant number**

<b>Description</b>	The instantaneous percentage value
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">hardware-interrupt</a> <a href="#">instant number</a>
<b>Tree</b>	<a href="#">instant</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**idle**

<b>Description</b>	Time spent idle
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">idle</a>
<b>Tree</b>	<a href="#">idle</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-1 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last minute
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">idle</a> <a href="#">average-1</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">average-1</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-15** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last fifteen minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">idle average-15 number</a>
<b>Tree</b>	<a href="#">average-15</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-5** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last five minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">idle average-5 number</a>
<b>Tree</b>	<a href="#">average-5</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**instant** *number*

<b>Description</b>	The instantaneous percentage value
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">idle instant number</a>
<b>Tree</b>	<a href="#">instant</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**iowait**

<b>Description</b>	Time spent idle, waiting for an outstanding disk I/O request
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">iowait</a>
<b>Tree</b>	<a href="#">iowait</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-1 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last minute
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) iowait average-1 number</a>
<b>Tree</b>	<a href="#">average-1</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-15 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last fifteen minutes
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) iowait average-15 number</a>
<b>Tree</b>	<a href="#">average-15</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-5 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last five minutes
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) iowait average-5 number</a>
<b>Tree</b>	<a href="#">average-5</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**instant number**

<b>Description</b>	The instantaneous percentage value
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) iowait instant number</a>
<b>Tree</b>	<a href="#">instant</a>
<b>Range</b>	0 to 100

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## nice

<b>Description</b>	Time spent running low-priority (niced) user processes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">nice</a>
<b>Tree</b>	<a href="#">nice</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## average-1 *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last minute
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">nice</a> <a href="#">average-1</a> <i>number</i>
<b>Tree</b>	<a href="#">average-1</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## average-15 *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last fifteen minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">nice</a> <a href="#">average-15</a> <i>number</i>
<b>Tree</b>	<a href="#">average-15</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## average-5 *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last five minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">nice</a> <a href="#">average-5</a> <i>number</i>
<b>Tree</b>	<a href="#">average-5</a>

<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**instant** *number*

<b>Description</b>	The instantaneous percentage value
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">nice instant</a> <i>number</i>
<b>Tree</b>	<a href="#">instant</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**software-interrupt**

<b>Description</b>	Time spent servicing software interrupts
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">software-interrupt</a>
<b>Tree</b>	<a href="#">software-interrupt</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-1** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last minute
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">software-interrupt</a> <a href="#">average-1</a> <i>number</i>
<b>Tree</b>	<a href="#">average-1</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-15** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last fifteen minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">software-interrupt</a> <a href="#">average-15</a> <i>number</i>

<b>Tree</b>	<a href="#">average-15</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **average-5** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last five minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">software-interrupt</a> <a href="#">average-5</a> <i>number</i>
<b>Tree</b>	<a href="#">average-5</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **instant** *number*

<b>Description</b>	The instantaneous percentage value
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">software-interrupt</a> <a href="#">instant</a> <i>number</i>
<b>Tree</b>	<a href="#">instant</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **speed** *decimal-number*

<b>Description</b>	Capable speed of the CPU
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">speed</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">speed</a>
<b>Units</b>	gigahertz
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## system

<b>Description</b>	Time spent executing at the system level This can otherwise be known as kernel time, and does not include time spent servicing hardware and software interrupts.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">system</a>
<b>Tree</b>	<a href="#">system</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## average-1 *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last minute
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">system</a> <a href="#">average-1</a> <i>number</i>
<b>Tree</b>	<a href="#">average-1</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## average-15 *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last fifteen minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">system</a> <a href="#">average-15</a> <i>number</i>
<b>Tree</b>	<a href="#">average-15</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## average-5 *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last five minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">system</a> <a href="#">average-5</a> <i>number</i>
<b>Tree</b>	<a href="#">average-5</a>
<b>Range</b>	0 to 100

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**instant** *number*

<b>Description</b>	The instantaneous percentage value
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">system instant number</a>
<b>Tree</b>	<a href="#">instant</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total**

<b>Description</b>	Total CPU utilization
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">total</a>
<b>Tree</b>	<a href="#">total</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-1** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last minute
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">total average-1 number</a>
<b>Tree</b>	<a href="#">average-1</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-15** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last fifteen minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword</i>   <i>number</i> ) <a href="#">total average-15 number</a>
<b>Tree</b>	<a href="#">average-15</a>

<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **average-5** *number*

<b>Description</b>	The arithmetic mean value of this statistic over the last five minutes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">total average-5 number</a>
<b>Tree</b>	<a href="#">average-5</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **instant** *number*

<b>Description</b>	The instantaneous percentage value
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">total instant number</a>
<b>Tree</b>	<a href="#">instant</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **type** *string*

<b>Description</b>	Model name of the CPU
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">type string</a>
<b>Tree</b>	<a href="#">type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **user**

<b>Description</b>	Time spent executing at the user level This can otherwise be known as application or user space time.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">user</a>

<b>Tree</b>	<a href="#">user</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-1 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last minute
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) user average-1 number</a>
<b>Tree</b>	<a href="#">average-1</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-15 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last fifteen minutes
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) user average-15 number</a>
<b>Tree</b>	<a href="#">average-15</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**average-5 number**

<b>Description</b>	The arithmetic mean value of this statistic over the last five minutes
<b>Context</b>	<a href="#">platform control slot string cpu index (keyword   number) user average-5 number</a>
<b>Tree</b>	<a href="#">average-5</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**instant number**

<b>Description</b>	The instantaneous percentage value
--------------------	------------------------------------

<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">cpu index</a> ( <i>keyword   number</i> ) <a href="#">user instant</a> <i>number</i>
<b>Tree</b>	<a href="#">instant</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**disk** [name](#) *string*

<b>Description</b>	List of disks present in the system
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i>
<b>Tree</b>	<a href="#">disk</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the disk, as defined by its physical location in the system
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**model-number** *string*

<b>Description</b>	Model name of the disk
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">model-number</a> <i>string</i>
<b>Tree</b>	<a href="#">model-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**partition** [name](#) *string*

<b>Description</b>	List of partitions available on this disk
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">partition name</a> <i>string</i>
<b>Tree</b>	<a href="#">partition</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the partition
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">partition name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**free** *number*

<b>Description</b>	Space free on the partition
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">partition name</a> <i>string</i> <a href="#">free number</a>
<b>Tree</b>	<a href="#">free</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**mount-point** *string*

<b>Description</b>	Path to where this partition is mounted
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">partition name</a> <i>string</i> <a href="#">mount-point</a> <i>string</i>
<b>Tree</b>	<a href="#">mount-point</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**mount-status** *keyword*

<b>Description</b>	Current mount status of this partition
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">partition name</a> <i>string</i> <a href="#">mount-status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">mount-status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ro Partition is currently mounted read-only</li> <li>• rw Partition is currently mounted read-write</li> </ul>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **percent-used** *number*

**Description** Percentage of the partition in use

**Context** [platform control slot](#) *string* [disk name](#) *string* [partition name](#) *string* [percent-used](#) *number*

**Tree** [percent-used](#)

**Range** 0 to 100

**Configurable** False

**Platforms** Supported on all platforms

### **size** *number*

**Description** Size of the partition

**Context** [platform control slot](#) *string* [disk name](#) *string* [partition name](#) *string* [size](#) *number*

**Tree** [size](#)

**Units** bytes

**Configurable** False

**Platforms** Supported on all platforms

### **used** *number*

**Description** Space used on the partition

**Context** [platform control slot](#) *string* [disk name](#) *string* [partition name](#) *string* [used](#) *number*

**Tree** [used](#)

**Units** bytes

**Configurable** False

**Platforms** Supported on all platforms

### **uuid** *string*

**Description** UUID of the partition

**Context** [platform control slot](#) *string* [disk name](#) *string* [partition name](#) *string* [uuid](#) *string*

**Tree** [uuid](#)

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**serial-number** *string*

<b>Description</b>	Serial number of the disk
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">serial-number</a> <i>string</i>
<b>Tree</b>	<a href="#">serial-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**size** *number*

<b>Description</b>	Total size of the disk
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">size</a> <i>number</i>
<b>Tree</b>	<a href="#">size</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Top-level container for disk statistics
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**io-errors** *number*

<b>Description</b>	Enter the io-errors context
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">statistics</a> <a href="#">io-errors</a> <i>number</i>
<b>Tree</b>	<a href="#">io-errors</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**max-erase-count** *number*

<b>Description</b>	Enter the max-erase-count context
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">statistics max-erase-count</a> <i>number</i>
<b>Tree</b>	<a href="#">max-erase-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**read-per-second** *decimal-number*

<b>Description</b>	Indicates the amount of data read from the device per second
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">statistics read-per-second</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">read-per-second</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**transfers-per-second** *decimal-number*

<b>Description</b>	Indicates the number of transfers per second that were issued to the device. A transfer is an I/O request to the device. Multiple logical requests can be combined into a single I/O request to the device. A transfer is of indeterminate size.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">statistics transfers-per-second</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">transfers-per-second</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**utilization** *number*

<b>Description</b>	The current tps utilization of the disk, expressed as a percentage
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">disk name</a> <i>string</i> <a href="#">statistics utilization</a> <i>number</i>
<b>Tree</b>	<a href="#">utilization</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### written-per-second *decimal-number*

**Description** Indicates the amount of data written to the device per second

**Context** [platform control slot](#) *string* [disk name](#) *string* [statistics](#) [written-per-second](#) *decimal-number*

**Tree** [written-per-second](#)

**Units** bytes

**Configurable** False

**Platforms** Supported on all platforms

### type *keyword*

**Description** Type of disk

**Context** [platform control slot](#) *string* [disk name](#) *string* [type](#) *keyword*

**Tree** [type](#)

**Options**

- compactflash
- ssd
- hdd
- usb

**Configurable** False

**Platforms** Supported on all platforms

### failure-reason *string*

**Description** The reason the component transitioned to a failed state  
Field is empty if the component is not currently in a failure state

**Context** [platform control slot](#) *string* [failure-reason](#) *string*

**Tree** [failure-reason](#)

**Configurable** False

**Platforms** Supported on all platforms

### healthz

**Description** The health of the component

The parameters within this container indicate the status of the component beyond whether it is operationally up or down. When a signal is received that a component is in an unhealthy state the gNOI.Healthz service can be used to retrieve further diagnostic information relating to the component. The contents of this directory relate only to the specific component that it is associated with.

<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">healthz</a>
<b>Tree</b>	<a href="#">healthz</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-unhealthy** *string*

<b>Description</b>	Last unhealthy time The time at which the component was last observed to transition from the healthy state to any other state, represented as nanoseconds since the Unix epoch.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">healthz</a> <a href="#">last-unhealthy</a> <i>string</i>
<b>Tree</b>	<a href="#">last-unhealthy</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **status** *keyword*

<b>Description</b>	Health status The status of the component, indicating its current health.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">healthz</a> <a href="#">status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>unspecified Unspecified status The component's health status has not yet been checked by the system.</li> <li>healthy Healthy status</li> </ul>

The component is in a healthy state, and is operating within the expected parameters.

- unhealthy

Unhealthy status

The component is in a unhealthy state, it is not performing the function expected of it.

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **unhealthy-count** *number*

**Description**

Unhealthy count

The number of times the component has transitioned from the healthy state to any other state.

**Context**

[platform control slot](#) *string* [healthz unhealthy-count](#) *number*

**Tree**

[unhealthy-count](#)

**Default**

0

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-booted** *string*

**Description**

The date and time this component last booted

For components that do not boot, this is the time the component was last discovered by the active control module

**Context**

[platform control slot](#) *string* [last-booted](#) *string*

**Tree**

[last-booted](#)

**String Length**

20 to 32

**Configurable**

False

**Platforms**

Supported on all platforms

### **last-booted-reason** *identityref*

**Description**

The reason this component last booted or rebooted

	For components without the ability to 'boot' this field is never populated
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">last-booted-reason</a> <i>identityref</i>
<b>Tree</b>	<a href="#">last-booted-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">user-initiated-reboot</a> A user initiated the reboot directly via a management interface</li> <li>• <a href="#">power-failure</a> The system rebooted the component due to insufficient power</li> <li>• <a href="#">critical-error</a> The system rebooted the component due to an internal critical error</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-change** *string*

<b>Description</b>	The date and time this component last changed state
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">last-change</a> <i>string</i>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-switchover-reason**

<b>Description</b>	State information relating to the last control module switchover
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">last-switchover-reason</a>
<b>Tree</b>	<a href="#">last-switchover-reason</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **details** *string*

<b>Description</b>	Any additional details relating to the last switchover This field is not populated if the system has not performed a switchover since initial startup.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">last-switchover-reason</a> <a href="#">details</a> <i>string</i>
<b>Tree</b>	<a href="#">details</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **trigger** *identityref*

<b>Description</b>	Indicates the trigger of the last switchover  This field is not populated if the system has not performed a switchover since initial startup.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">last-switchover-reason</a> <a href="#">trigger identityref</a>
<b>Tree</b>	<a href="#">trigger</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• user-initiated A user initiated the switchover directly via the tools schema</li> <li>• control-reboot A user initiated the switchover indirectly via rebooting the active control module</li> <li>• control-failure The system has forced a switchover due to a failure on the active control module</li> <li>• linecard-connectivity The system has forced a switchover due to a loss of connectivity between the active control module and one or more linecards</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **locator-state** *keyword*

<b>Description</b>	Details if the locator LED is active on this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">locator-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">locator-state</a>
<b>Default</b>	inactive
<b>Options</b>	<ul style="list-style-type: none"> <li>• active Locator LED is currently active</li> <li>• inactive Locator LED is currently inactive</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**manufactured-date** *string*

<b>Description</b>	The date this component was manufactured
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">manufactured-date</a> <i>string</i>
<b>Tree</b>	<a href="#">manufactured-date</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**memory**

<b>Description</b>	Top-level container for system memory state
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">memory</a>
<b>Tree</b>	<a href="#">memory</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**free** *number*

<b>Description</b>	Memory available for system use
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">memory</a> <a href="#">free</a> <i>number</i>
<b>Tree</b>	<a href="#">free</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**physical** *number*

<b>Description</b>	Total physical memory available on this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">memory</a> <a href="#">physical</a> <i>number</i>
<b>Tree</b>	<a href="#">physical</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**reserved number**

<b>Description</b>	Memory reserved for system use
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">memory reserved number</a>
<b>Tree</b>	<a href="#">reserved</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**utilization number**

<b>Description</b>	Total memory utilized
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">memory utilization number</a>
<b>Tree</b>	<a href="#">utilization</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state keyword**

<b>Description</b>	The operational state of this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed</li> </ul>

- Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **part-number** *string*

<b>Description</b>	Part number for this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">part-number</a> <i>string</i>
<b>Tree</b>	<a href="#">part-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **power**

<b>Description</b>	State related to power consumption and allocation for this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">power</a>
<b>Tree</b>	<a href="#">power</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**required** *number*

<b>Description</b>	The power budget required to enable this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">power required</a> <i>number</i>
<b>Tree</b>	<a href="#">required</a>
<b>Units</b>	watts
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**used** *number*

<b>Description</b>	The power in use by this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">power used</a> <i>number</i>
<b>Tree</b>	<a href="#">used</a>
<b>Units</b>	watts
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**process** [pid](#) *number*

<b>Description</b>	List of system processes
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid</a> <i>number</i>
<b>Tree</b>	<a href="#">process</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pid** *number*

<b>Description</b>	The process ID
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**args** *string*

<b>Description</b>	Current process command line arguments Arguments with a parameter (e.g., --option 10 or -option=10) should be represented as a single element of the list with the argument name and parameter together. Flag arguments, i.e., those without a parameter should also be in their own list element.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid</a> <i>number</i> <a href="#">args</a> <i>string</i>
<b>Tree</b>	<a href="#">args</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**cpu-utilization** *number*

<b>Description</b>	The percentage of CPU that is being used by the process
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid</a> <i>number</i> <a href="#">cpu-utilization</a> <i>number</i>
<b>Tree</b>	<a href="#">cpu-utilization</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**memory-usage** *number*

<b>Description</b>	Bytes allocated and in use by the process
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid</a> <i>number</i> <a href="#">memory-usage</a> <i>number</i>
<b>Tree</b>	<a href="#">memory-usage</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**memory-utilization** *number*

<b>Description</b>	The percentage of RAM that is being used by the process
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid</a> <i>number</i> <a href="#">memory-utilization</a> <i>number</i>
<b>Tree</b>	<a href="#">memory-utilization</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	The process name
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid</a> <i>number</i> <a href="#">name</a> <i>string</i>
<b>Tree</b>	<a href="#">name</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**start-time** *string*

<b>Description</b>	The time at which this process started
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid</a> <i>number</i> <a href="#">start-time</a> <i>string</i>
<b>Tree</b>	<a href="#">start-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**rebooting-at** *string*

<b>Description</b>	Indicates the date and time this component will reboot If empty, no delayed reboots are queued for this component. A non empty value implies that a delayed reboot operation has been triggered for this component, which can be aborted using 'tools platform <component> reboot cancel'.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">rebooting-at</a> <i>string</i>
<b>Tree</b>	<a href="#">rebooting-at</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**removable** *boolean*

<b>Description</b>	Details if this component can be removed from the system
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">removable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">removable</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **role** *keyword*

**Description** Control module role, detailing active or standby state  
This field is not present on systems without removable control modules.

**Context** [platform control slot string role keyword](#)

**Tree** [role](#)

**Options**

- active
- standby

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **serial-number** *string*

**Description** The serial number for this component

**Context** [platform control slot string serial-number string](#)

**Tree** [serial-number](#)

**Configurable** False

**Platforms** Supported on all platforms

### **software-version** *string*

**Description** Image version version running on this component  
This version is the squashfs version, and may not represent the current per-application versions if versions have been modified after the system has been installed.

**Context** [platform control slot string software-version string](#)

**Tree** [software-version](#)

**Configurable** False

**Platforms** Supported on all platforms

### **temperature**

**Description** State related to temperature for this component

**Context** [platform control slot string temperature](#)

<b>Tree</b>	<a href="#">temperature</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **alarm-status** *boolean*

<b>Description</b>	Indicates if a temperature sensor of this component is currently in an alarm state  An alarm state is triggered if the margin is $\leq 2$ degrees, indicating that a thermal protection shut down is imminent unless adequate system cooling is provided to bring the temperature sensor back into safe operating ranges.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">temperature alarm-status</a> <i>boolean</i>
<b>Tree</b>	<a href="#">alarm-status</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **instant** *number*

<b>Description</b>	Represents the highest current temperature of any sensor on this component  Note that as multiple sensors may feed in, that this field and the margin field may be referencing different sensors.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">temperature instant</a> <i>number</i>
<b>Tree</b>	<a href="#">instant</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **margin** *number*

<b>Description</b>	Indicates the lowest alarm margin of any sensor on this component  The margin is the delta between the current sensor temperature and the thermal protection threshold for that sensor. Note that as multiple sensors may feed in, that this field and the instant field may be referencing different sensors.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">temperature margin</a> <i>number</i>
<b>Tree</b>	<a href="#">margin</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**maximum number**

<b>Description</b>	Represents the highest temperature any sensor on this component has reached since it booted
<b>Context</b>	<a href="#">platform control slot string temperature maximum number</a>
<b>Tree</b>	<a href="#">maximum</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**maximum-time string**

<b>Description</b>	Indicates the time this component reached the temperature referenced in the maximum field
<b>Context</b>	<a href="#">platform control slot string temperature maximum-time string</a>
<b>Tree</b>	<a href="#">maximum-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type string**

<b>Description</b>	Control module type, as translated from the components EEPROM
<b>Context</b>	<a href="#">platform control slot string type string</a>
<b>Tree</b>	<a href="#">type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**fabric slot number**

<b>Description</b>	Top-level container for fabric configuration and state
<b>Context</b>	<a href="#">platform fabric slot number</a>
<b>Tree</b>	<a href="#">fabric</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**slot number**

<b>Description</b>	Numeric identifier for the fabric module
<b>Context</b>	<a href="#">platform fabric slot number</a>
<b>Range</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**admin-state keyword**

<b>Description</b>	The administrative state of this component
<b>Context</b>	<a href="#">platform fabric slot number admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**clei-code string**

<b>Description</b>	The Common Language Identification Code for this component
<b>Context</b>	<a href="#">platform fabric slot number clei-code string</a>
<b>Tree</b>	<a href="#">clei-code</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**failure-reason string**

<b>Description</b>	The reason the component transitioned to a failed state Field is empty if the component is not currently in a failure state
<b>Context</b>	<a href="#">platform fabric slot number failure-reason string</a>
<b>Tree</b>	<a href="#">failure-reason</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## healthz

<b>Description</b>	The health of the component  The parameters within this container indicate the status of the component beyond whether it is operationally up or down. When a signal is received that a component is in an unhealthy state the gNOI.Healthz service can be used to retrieve further diagnostic information relating to the component. The contents of this directory relate only to the specific component that it is associated with.
<b>Context</b>	<a href="#">platform fabric slot number healthz</a>
<b>Tree</b>	<a href="#">healthz</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## last-unhealthy string

<b>Description</b>	Last unhealthy time  The time at which the component was last observed to transition from the healthy state to any other state, represented as nanoseconds since the Unix epoch.
<b>Context</b>	<a href="#">platform fabric slot number healthz last-unhealthy string</a>
<b>Tree</b>	<a href="#">last-unhealthy</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## status keyword

<b>Description</b>	Health status  The status of the component, indicating its current health.
<b>Context</b>	<a href="#">platform fabric slot number healthz status keyword</a>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>unspecified Unspecified status The component's health status has not yet been checked by the system.</li> </ul>

- **healthy**  
Healthy status  
The component is in a healthy state, and is operating within the expected parameters.
- **unhealthy**  
Unhealthy status  
The component is in a unhealthy state, it is not performing the function expected of it.

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**unhealthy-count** *number***Description**

Unhealthy count

The number of times the component has transitioned from the healthy state to any other state.

**Context**[platform fabric slot number healthz unhealthy-count number](#)**Tree**[unhealthy-count](#)**Default**

0

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-booted** *string***Description**

The date and time this component last booted

For components that do not boot, this is the time the component was last discovered by the active control module

**Context**[platform fabric slot number last-booted string](#)**Tree**[last-booted](#)**String Length**

20 to 32

**Configurable**

False

**Platforms**

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-booted-reason** *identityref*

<b>Description</b>	The reason this component last booted or rebooted For components without the ability to 'boot' this field is never populated
<b>Context</b>	<a href="#">platform fabric slot number last-booted-reason identityref</a>
<b>Tree</b>	<a href="#">last-booted-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• user-initiated-reboot A user initiated the reboot directly via a management interface</li> <li>• power-failure The system rebooted the component due to insufficient power</li> <li>• critical-error The system rebooted the component due to an internal critical error</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-change** *string*

<b>Description</b>	The date and time this component last changed state
<b>Context</b>	<a href="#">platform fabric slot number last-change string</a>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**locator-state** *keyword*

<b>Description</b>	Details if the locator LED is active on this component
<b>Context</b>	<a href="#">platform fabric slot number locator-state keyword</a>
<b>Tree</b>	<a href="#">locator-state</a>
<b>Default</b>	inactive
<b>Options</b>	<ul style="list-style-type: none"> <li>• active Locator LED is currently active</li> <li>• inactive Locator LED is currently inactive</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**manufactured-date** *string*

<b>Description</b>	The date this component was manufactured
<b>Context</b>	<a href="#">platform fabric slot number manufactured-date string</a>
<b>Tree</b>	<a href="#">manufactured-date</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**oper-state** *keyword*

<b>Description</b>	The operational state of this component
<b>Context</b>	<a href="#">platform fabric slot number oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"><li>• up Component or process is operational</li><li>• down Component or process is not operational</li><li>• empty Component slot is empty</li><li>• downloading Component is downloading image into memory</li><li>• booting Component is booting downloaded image</li><li>• starting Component image operational, application processes starting</li><li>• failed Component or process has failed</li><li>• synchronizing Component is currently being synchronized</li><li>• upgrading Component is currently being upgraded</li><li>• low-power Component is offline due to insufficient system power</li><li>• degraded Component or process is in a degraded state</li></ul>

- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

<b>Units</b>	watts
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**rebooting-at** *string*

<b>Description</b>	Indicates the date and time this component will reboot If empty, no delayed reboots are queued for this component. A non empty value implies that a delayed reboot operation has been triggered for this component, which can be aborted using 'tools platform <component> reboot cancel'.
<b>Context</b>	<a href="#">platform fabric slot number rebooting-at string</a>
<b>Tree</b>	<a href="#">rebooting-at</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**removable** *boolean*

<b>Description</b>	Details if this component can be removed from the system
<b>Context</b>	<a href="#">platform fabric slot number removable boolean</a>
<b>Tree</b>	<a href="#">removable</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**serial-number** *string*

<b>Description</b>	The serial number for this component
<b>Context</b>	<a href="#">platform fabric slot number serial-number string</a>
<b>Tree</b>	<a href="#">serial-number</a>
<b>Configurable</b>	False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## temperature

**Description** State related to temperature for this component

**Context** [platform fabric slot number temperature](#)

**Tree** [temperature](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## alarm-status *boolean*

**Description** Indicates if a temperature sensor of this component is currently in an alarm state

An alarm state is triggered if the margin is  $\leq 2$  degrees, indicating that a thermal protection shut down is imminent unless adequate system cooling is provided to bring the temperature sensor back into safe operating ranges.

**Context** [platform fabric slot number temperature alarm-status boolean](#)

**Tree** [alarm-status](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## instant *number*

**Description** Represents the highest current temperature of any sensor on this component  
Note that as multiple sensors may feed in, that this field and the margin field may be referencing different sensors.

**Context** [platform fabric slot number temperature instant number](#)

**Tree** [instant](#)

**Configurable** False

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## margin *number*

**Description** Indicates the lowest alarm margin of any sensor on this component

The margin is the delta between the current sensor temperature and the thermal protection threshold for that sensor. Note that as multiple sensors

may feed in, that this field and the instant field may be referencing different sensors.

<b>Context</b>	<a href="#">platform fabric slot number temperature margin number</a>
<b>Tree</b>	<a href="#">margin</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **maximum number**

<b>Description</b>	Represents the highest temperature any sensor on this component has reached since it booted
<b>Context</b>	<a href="#">platform fabric slot number temperature maximum number</a>
<b>Tree</b>	<a href="#">maximum</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **maximum-time string**

<b>Description</b>	Indicates the time this component reached the temperature referenced in the maximum field
<b>Context</b>	<a href="#">platform fabric slot number temperature maximum-time string</a>
<b>Tree</b>	<a href="#">maximum-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **type string**

<b>Description</b>	Fabric module type, as translated from the components EEPROM
<b>Context</b>	<a href="#">platform fabric slot number type string</a>
<b>Tree</b>	<a href="#">type</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **fan-tray id number**

<b>Description</b>	Top-level container for fan module configuration and state
--------------------	--

<b>Context</b>	<a href="#">platform fan-tray id number</a>
<b>Tree</b>	<a href="#">fan-tray</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**id number**

<b>Description</b>	Numeric identifier for the fan tray
<b>Context</b>	<a href="#">platform fan-tray id number</a>
<b>Range</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**clei-code string**

<b>Description</b>	The Common Language Identification Code for this component
<b>Context</b>	<a href="#">platform fan-tray id number clei-code string</a>
<b>Tree</b>	<a href="#">clei-code</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**failure-reason string**

<b>Description</b>	The reason the component transitioned to a failed state Field is empty if the component is not currently in a failure state
<b>Context</b>	<a href="#">platform fan-tray id number failure-reason string</a>
<b>Tree</b>	<a href="#">failure-reason</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**healthz**

<b>Description</b>	The health of the component  The paramaters within this container indicate the status of the component beyond whether it is operationally up or down. When a signal is received that a component is in an unhealthy state the gNOI.Healthz service can be used to retrieve further diagnostic information relating to the component.
--------------------	--

The contents of this directory relate only to the specific component that it is associated with.

<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">healthz</a>
<b>Tree</b>	<a href="#">healthz</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-unhealthy** *string*

<b>Description</b>	Last unhealthy time The time at which the component was last observed to transition from the healthy state to any other state, represented as nanoseconds since the Unix epoch.
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">healthz</a> <a href="#">last-unhealthy</a> <i>string</i>
<b>Tree</b>	<a href="#">last-unhealthy</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **status** *keyword*

<b>Description</b>	Health status The status of the component, indicating its current health.
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">healthz</a> <a href="#">status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>unspecified Unspecified status The component's health status has not yet been checked by the system.</li> <li>healthy Healthy status The component is in a healthy state, and is operating within the expected parameters.</li> <li>unhealthy Unhealthy status</li> </ul>

The component is in a unhealthy state, it is not performing the function expected of it.

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **unhealthy-count** *number*

<b>Description</b>	Unhealthy count The number of times the component has transitioned from the healthy state to any other state.
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">healthz unhealthy-count</a> <i>number</i>
<b>Tree</b>	<a href="#">unhealthy-count</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-booted** *string*

<b>Description</b>	The date and time this component last booted For components that do not boot, this is the time the component was last discovered by the active control module
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">last-booted</a> <i>string</i>
<b>Tree</b>	<a href="#">last-booted</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-booted-reason** *identityref*

<b>Description</b>	The reason this component last booted or rebooted For components without the ability to 'boot' this field is never populated
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">last-booted-reason</a> <i>identityref</i>
<b>Tree</b>	<a href="#">last-booted-reason</a>

<b>Options</b>	<ul style="list-style-type: none"> <li>• user-initiated-reboot A user initiated the reboot directly via a management interface</li> <li>• power-failure The system rebooted the component due to insufficient power</li> <li>• critical-error The system rebooted the component due to an internal critical error</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-change** *string*

<b>Description</b>	The date and time this component last changed state
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">last-change</a> <i>string</i>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**locator-state** *keyword*

<b>Description</b>	Details if the locator LED is active on this component
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">locator-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">locator-state</a>
<b>Default</b>	inactive
<b>Options</b>	<ul style="list-style-type: none"> <li>• active Locator LED is currently active</li> <li>• inactive Locator LED is currently inactive</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**manufactured-date** *string*

<b>Description</b>	The date this component was manufactured
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">manufactured-date</a> <i>string</i>

<b>Tree</b>	<a href="#">manufactured-date</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **oper-reason** *keyword*

<b>Description</b>	Indicates the reason for the current state of this fan tray
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">oper-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>fault</b> Hardware fault detected</li> <li>• <b>eprom-invalid</b> EEPROM of this fan tray is either invalid or corrupt</li> <li>• <b>airflow-mismatch</b> The detected airflow of this fan tray does not match the system-calculated airflow direction  The logic for determining the system-calculated direction is: - Majority wins between present fan trays - In the case where there are equal F2B or B2F fan-trays, PSUs are used as a tie break (PSUs only are counted in the event a tie breaker is needed) - F2B wins if no tie break can be used</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **oper-state** *keyword*

<b>Description</b>	The operational state of this component
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>up</b> Component or process is operational</li> <li>• <b>down</b> Component or process is not operational</li> <li>• <b>empty</b> Component slot is empty</li> <li>• <b>downloading</b> Component is downloading image into memory</li> </ul>

- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *identityref*

<b>Description</b>	The name of the ACL resource
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword</a> <i>acl resource name identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">input-ipv4-filter-instances</a> This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on the forwarding complex. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every subinterface using the IPv4 filter.</li> <li>• <a href="#">input-ipv4-qos-multifield-instances</a></li> </ul>

This resource is used every time an IPv4 multifield classifier policy is applied to ingress traffic on a subinterface.

- input-ipv4-filter-instances-routed

This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on routed subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every routed subinterface using the IPv4 filter.

- input-ipv4-filter-instances-bridged

This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on bridged subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every bridged subinterface using the IPv4 filter.

- input-ipv6-filter-instances

This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on the forwarding complex. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every subinterface using the IPv6 filter.

- input-ipv6-qos-multifield-instances

This resource is used every time an IPv6 multifield classifier policy is applied to ingress traffic on a subinterface.

- input-ipv6-filter-instances-routed

This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on routed subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every routed subinterface using the IPv6 filter.

- input-ipv6-filter-instances-bridged

This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on bridged subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every bridged subinterface using the IPv6 filter.

- if-input-ipv4-stats

Resource pool of stats entries available for ingress IPv4 ACLs

- if-input-ipv6-stats

Resource pool of stats entries available for ingress IPv6 ACLs

- if-output-ipv4-stats

Resource pool of stats entries available for egress IPv4 ACLs

- if-output-ipv6-stats

Resource pool of stats entries available for egress IPv6 ACLs

- **if-output-cpm-stats**  
Resource pool of stats entries shared by egress IPv4/IPv6/MAC TCAM entries, and CPM-filter IPv4/IPv6/MAC TCAM entries  
Egress Ipv4 -> uses single stat counter Egress Ipv6 -> uses single stat counter Egress MAC -> uses single stat counter Cpm Ipv4 -> uses two stat counters Cpm Ipv6 -> uses two stat counters Cpm MAC -> uses two stat counters
- **input-acl-qos-template-policers**  
This resource is used every time an IPv4 or IPv6 input subinterface filter entry uses a rate-limit policer, or subinterface policer-template is used.
- **input-qos-template-policers**  
This resource is used every time a QoS subinterface policer-template is used.
- **input-acl-ipv4-policers**  
This resource is used every time an IPv4 input subinterface filter entry uses a rate-limit policer.
- **input-acl-ipv6-policers**  
This resource is used every time an IPv6 input subinterface filter entry uses a rate-limit policer.
- **output-acl-cpm-filter-policers**  
This resource is used every time an IPv4 or IPv6 output subinterface filter or CPM filter entry uses a rate-limit policer.

In non-ALPM mode, free entries is the remaining number of single-wide + double-wide entries (i.e. it assumes no other types of routes consume those entries). In</li> </ul>

ALPM mode, free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

7220 H2/H3: Reports the number of IPv6 entries with prefix length less than 65 bits installed in the FIB. Free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

- ip-lpm-ipv6-longer-routes

IPv6 longest prefix match route resources when the prefix length is greater than 64

7220 D1/D2/D3: Reports the number of IPv6 entries with prefix length greater than 64 bits in the hardware LPM table. In non-ALPM mode, free entries is the remaining number of double-wide entries (i.e. it assumes no other types of routes consume those entries). In ALPM mode, free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

7220 H2/H3: Reports the number of IPv6 entries with prefix length greater than 64 bits installed in the FIB. Free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

- exact-match-entries

IP exact match lookup table resources

Reports the number of half-wide entries used in the LEM table. Each MPLS ILM record uses one half-wide entry. Each IPv4 address used as a host route, ARP entry or subnet broadcast address requires a half-wide entry. An IPv6 address used as a host route, or ND entry requires a single-wide entry (2 half-wide entries). Free entries is the remaining number of half-wide entries.

- underlay-ecmp-groups

Underlay ECMP group resources

ECMP groups are partitioned into overlay and underlay groups. The underlay partition is further subdivided into groups used for underlay ECMP and groups used for VP LAGs (EVPN M-H). This counts the utilization of the sub-resource used for ECMP.

- vp-lag-groups

VP LAG group resources

ECMP groups are partitioned into overlay and underlay groups. The underlay partition is further subdivided into groups used for underlay ECMP and groups used for VP LAGs (EVPN M-H). This counts the utilization of the sub-resource used for VP LAGs.

- overlay-ecmp-groups

Overlay ECMP group resources

ECMP groups are partitioned into overlay and underlay groups. This counts the utilization of the overlay ECMP partition.

- underlay-ecmp-members

Underlay ECMP member resources

ECMP members are partitioned into overlay and underlay. This counts the utilization of the partition used for underlay.

- overlay-ecmp-members

Overlay ECMP member resources

ECMP members are partitioned into overlay and underlay. This counts the utilization of the partition used for overlay.

- underlay-egress-next-hops

Underlay egress next-hop resources

Egress next-hops are partitioned into overlay and underlay. This counts the utilization of the partition used for underlay.

- overlay-egress-next-hops

Overlay egress next-hop resources

Egress next-hops are partitioned into overlay and underlay. This counts the utilization of the partition used for overlay.

- dgpp-module-ids

DGPP module ID resources

DGPPs are an aggregate id consisting of a module\_id and a port\_id. There are 64 modules and 120 ports per module. Each 'network' ARP entry (IP next-hop) needs a DGPP - the module\_id is allocated against the network interface (port) and a port\_id is allocated from within the module. A module\_id will only be allocated when the first ArpEntry is added (freed when last is removed) but is owned exclusively by that network interface. A network interface may require more than one module\_id - i.e. if there are 245 ArpEntries on ethernet-1/1 (possibly spread across multiple network-instance interfaces) then 3 module\_ids are required.

- egress-vlan-translate-egress-vnis

EGR\_VLAN\_XLATE\_1 resources

Corresponds to the 'EGR\_VLAN\_XLATE\_1' HW table (8K entries).

These entries are used for finding the egress VNI to be used for VXLAN packets.

- egress-vlan-translate-local-bias-pairs

EGR\_VLAN\_XLATE\_2 resources

Corresponds to the 'EGR\_VLAN\_XLATE\_2' HW table (24K entries).

These entries are used for local bias (ES pruning).

- level-1-ecmp-groups

Level 1 (top level) ECMP group resources.

- level-2-ecmp-groups

Level 2 (middle level) ECMP group resources.

- level-3-ecmp-groups

Level 3 (bottom level) ECMP group resources.

- level-1-ecmp-members  
Level 1 (top level) ECMP member resources.
- level-2-ecmp-members  
Level 2 (middle level) ECMP member resources.
- level-3-ecmp-members  
Level 3 (bottom level) ECMP member resources.
- level-1-non-ecmp-fecs  
Level 1 (top level) non-ECMP FEC resources.
- level-2-non-ecmp-fecs  
Level 2 (middle level) non-ECMP FEC resources.
- level-3-non-ecmp-fecs  
Level 3 (bottom level) non-ECMP FEC resources.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## name [identityref](#)

<b>Description</b>	The name of the XDP datapath resource
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword datapath xdp resource name identityref</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>arp-nd-entries           <p>IPv4 ARP and IPv6 neighbor discovery resources</p> <p>Each IPv4 ARP and each IPv6 neighbor entry counts as 1 used resource against a total that is platform dependent.</p> </li> <li>ip-hosts           <p>IP host route resources</p> <p>7220 D1/D2/D3: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address</p> </li> </ul>

requires 1 entry. Every IPv4 multicast snoop entry requires 2 entries. In non-ALPM operation every remote /32 route also requires 1 entry. Every local host /128 route, and ND entry requires 2 entries. Every IPv6 multicast snoop entry requires 4 entries. In non-ALPM operation every remote /128 route also requires 2 entries. Free entries reflects the total number of entries remaining in shared + dedicated UFT banks.

7220 D4/D5: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. Every local host /128 route, and ND entry requires 2 entries. Every (\*, G) IPv4 multicast snoop entry requires 1 entry. Every (S, G) IPv4 multicast snoop entry requires 2 entries. Every (\*, G) IPv6 multicast snoop entry requires 2 entries. Every (S, G) IPv6 multicast snoop entry requires 4 entries.

7220 H2/H3/H4: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. Every local host /128 route, and ND entry requires 2 entries.

- ip-lpm-routes

IP longest prefix match route resources

7250 IXR/IXRe: Every installed IPv4 and IPv6 route counts as one used route.

7220 D1/D2/D3: In ALPM-disabled mode: Reports the number of half-wide entries. An IPv4 route requires a half-wide entry. An IPv6 route that is /64 or less requires a single-wide entry (2 half-wide entries). An IPv6 route that is more than /64 requires a double-wide entry (4 half-wide entries). In ALPM mode: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 2 used routes.

7220 D4/D5: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 4 used routes.

- mac-addresses

MAC lookup table resources

Reports the number of entries used in the MAC lookup table. On 7220 D1/D2/D3, free entries reflects the total number of entries remaining in shared + dedicated UFT banks

- mac-next-hops

Direct MAC next-hop resources

A resource consumed by every next-hop of a gRIBI route that is specified as an interface name plus MAC address

- direct-ip-next-hops

Direct IP next-hop resources

Reports the number of entries, where 1 entry is used for every next-hop of an IP route or MPLS route/tunnel that is resolved directly to a local interface.

- indirect-ip-next-hops

#### Indirect IP next-hop resources

Reports the number of entries, where 1 entry is used for every next-hop of an IP route that requires resolution by a non-local route. This does not consider underlying ASIC resources.

- tunnel-next-hops

#### Tunnel next-hop resources

Reports the number of tunnel next-hop entries. 1 tunnel next-hop is required every time an indirect next-hop (e.g. a BGP next-hop) is resolved by a tunnel (BGP-LU, LDP, SR-ISIS or VXLAN)

- ecmp-groups

#### ECMP group resources

7250 IXR/IXRe: Reports the used number of ECMP FECs, adding L1 ECMP FECs, L2 ECMP FECs and L3 ECMP FECs.

7220 D1/D2/D3/D4/D5: Reports the used number of ECMP groups, adding overlay and underlay ECMP groups (if applicable).

7220 H2/H3/H4: Reports used number of ECMP groups.

- ecmp-members

#### ECMP member resources

7250 IXR/IXRe: Reports the used number of ECMP member FECs, adding L1 ECMP member FECs, L2 ECMP member FECs and L3 ECMP member FECs.

7220 D1/D2/D3/D4/D5: Reports the used number of ECMP members, adding overlay and underlay ECMP members (if applicable).

7220 H2/H3/H4: Reports used number of ECMP members.

- egress-next-hops

#### Egress next-hop resources

7220 D2/D3/D4/D5: Reports the number of entries used in the egress next-hop table, counting entries in the overlay partition and entries in the underlay partition. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.

7220 H2/H3/H4: Reports the number of entries used in the egress next-hop table. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.

- lag-groups

#### LAG group resources

Reports the number of LAG resources used, including DGPP LAGs.

- lag-members

#### LAG member resources

Reports the number of LAG member resources used, including DGPP LAG members.

- subinterfaces

## Subinterface resources

There are a maximum of 127 subinterfaces per TH3 pipeline (limited by VFP/EFP TCAM resources). This counts the utilization of those resources.

- mpls-next-hops

## MPLS next-hop (NHLFE) resources

One resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an ILM entry that performs a 'swap'. One additional resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an MPLS tunnel.

- mpls-incoming-labels

## MPLS label lookup (ILM) resources

One resource is used for every MPLS ILM entry that performs either a 'swap' or a 'pop' operation.

- originating-tunnels

## Originating tunnel resources

One resource is used for every VXLAN, LDP, SR-ISIS or IPinIP tunnel originating on this node as head-end. On TD3 and TD4 systems this equates to a DVP resource.

- terminating-tunnels

## Terminating tunnel resources

One resource is used for every IPinIP tunnel terminating entry on this node.

**oper-state keyword**

<b>Description</b>	The operational state of this component
<b>Context</b>	<a href="#">platform</a> <a href="#">linecard</a> <a href="#">slot</a> <a href="#">number</a> <a href="#">forwarding-complex</a> <a href="#">name</a> <a href="#">keyword</a> <a href="#">oper-state</a> <a href="#">keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> </ul>

- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False

## name [identityref](#)

**Description** The name of the XDP datapath resource

**Context** [platform linecard slot number forwarding-complex name keyword pipeline index \(number | keyword\) datapath xdp resource name identityref](#)

- Options**
- arp-nd-entries  
IPv4 ARP and IPv6 neighbor discovery resources  
Each IPv4 ARP and each IPv6 neighbor entry counts as 1 used resource against a total that is platform dependent.
  - ip-hosts  
IP host route resources  
7220 D1/D2/D3: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. Every IPv4 multicast snoop entry requires 2 entries. In non-ALPM operation every remote /32 route also requires 1 entry.

Every local host /128 route, and ND entry requires 2 entries. Every IPv6 multicast snoop entry requires 4 entries. In non-ALPM operation every remote /128 route also requires 2 entries. Free entries reflects the total number of entries remaining in shared + dedicated UFT banks.

7220 D4/D5: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. Every local host /128 route, and ND entry requires 2 entries. Every (\*, G) IPv4 multicast snoop entry requires 1 entry. Every (S, G) IPv4 multicast snoop entry requires 2 entries. Every (\*, G) IPv6 multicast snoop entry requires 2 entries. Every (S, G) IPv6 multicast snoop entry requires 4 entries.

7220 H2/H3/H4: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. Every local host /128 route, and ND entry requires 2 entries.

- ip-lpm-routes

IP longest prefix match route resources

7250 IXR/IXRe: Every installed IPv4 and IPv6 route counts as one used route.

7220 D1/D2/D3: In ALPM-disabled mode: Reports the number of half-wide entries. An IPv4 route requires a half-wide entry. An IPv6 route that is /64 or less requires a single-wide entry (2 half-wide entries). An IPv6 route that is more than /64 requires a double-wide entry (4 half-wide entries). In ALPM mode: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 2 used routes.

7220 D4/D5: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 4 used routes.

- mac-addresses

MAC lookup table resources

Reports the number of entries used in the MAC lookup table. On 7220 D1/D2/D3, free entries reflects the total number of entries remaining in shared + dedicated UFT banks

- mac-next-hops

Direct MAC next-hop resources

A resource consumed by every next-hop of a gRIBI route that is specified as an interface name plus MAC address

- direct-ip-next-hops

Direct IP next-hop resources

Reports the number of entries, where 1 entry is used for every next-hop of an IP route or MPLS route/tunnel that is resolved directly to a local interface.

- indirect-ip-next-hops

Indirect IP next-hop resources

Reports the number of entries, where 1 entry is used for every next-hop of an IP route that requires resolution by a non-local route. This does not consider underlying ASIC resources.

- tunnel-next-hops

Tunnel next-hop resources

Reports the number of tunnel next-hop entries. 1 tunnel next-hop is required every time an indirect next-hop (e.g. a BGP next-hop) is resolved by a tunnel (BGP-LU, LDP, SR-ISIS or VXLAN)

- ecmp-groups

ECMP group resources

7250 IXR/IXRe: Reports the used number of ECMP FECs, adding L1 ECMP FECs, L2 ECMP FECs and L3 ECMP FECs.

7220 D1/D2/D3/D4/D5: Reports the used number of ECMP groups, adding overlay and underlay ECMP groups (if applicable).

7220 H2/H3/H4: Reports used number of ECMP groups.

- ecmp-members

ECMP member resources

7250 IXR/IXRe: Reports the used number of ECMP member FECs, adding L1 ECMP member FECs, L2 ECMP member FECs and L3 ECMP member FECs.

7220 D1/D2/D3/D4/D5: Reports the used number of ECMP members, adding overlay and underlay ECMP members (if applicable).

7220 H2/H3/H4: Reports used number of ECMP members.

- egress-next-hops

Egress next-hop resources

7220 D2/D3/D4/D5: Reports the number of entries used in the egress next-hop table, counting entries in the overlay partition and entries in the underlay partition. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.

7220 H2/H3/H4: Reports the number of entries used in the egress next-hop table. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.

- lag-groups

LAG group resources

Reports the number of LAG resources used, including DGPP LAGs.

- lag-members

LAG member resources

Reports the number of LAG member resources used, including DGPP LAG members.

- subinterfaces

Subinterface resources

There are a maximum of 127 subinterfaces per TH3 pipeline (limited by VFP/EFP TCAM resources). This counts the utilization of those resources.

- **mpls-next-hops**

MPLS next-hop (NHLFE) resources

One resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an ILM entry that performs a 'swap'. One additional resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an MPLS tunnel.

- **mpls-incoming-labels**

MPLS label lookup (ILM) resources

One resource is used for every MPLS ILM entry that performs either a 'swap' or a 'pop' operation.

- **originating-tunnels**

Originating tunnel resources

One resource is used for every VXLAN, LDP, SR-ISIS or IPinIP tunnel originating on this node as head-end. On TD3 and TD4 systems this equates to a DVP resource.

- **terminating-tunnels**

Terminating tunnel resources

One resource is used for every IPinIP tunnel terminating entry on this node.

- DHCP packets; UDP ports 67,68
- ip-other-terminating  
Any other IP packets that are locally destined
- ip-blackhole-icmp  
Traffic matched a blackhole route with generate-icmp=true
- ipv6-multicast  
IPv6 DA = FF01:0:0:0:0:0:1 or IPv6 DA = FF01:0:0:0:0:0:2
- ipv6-link-local  
IPv6 DA = FE80::/10 address
- ipv4-broadcast  
IPv4 packets were received with a subnet broadcast address or a limited broadcast and not recognized as another type
- ip-no-route  
IPv4 and IPv6 packets for which there was no route to the destination
- ip-header-errors  
IP version error, IP header checksum error, IP header length error, IP header total length error, IPv6 next-header is null, IPv6 SA is link-local while IPv6 DA is global
- ip-ttl-expired  
The IP packet is not destined for this router and it was received with TTL 0 or TTL 1
- mpls-ttl-expired  
The MPLS packet was received with MPLS label stack TTL 0 or TTL 1
- ip-arp-miss  
The IP DA itself or the next-hop of the route used to forward the packet has no ARP/IPv6 neighbor entry
- ip-arp  
The received frame is an ARP packet recognized by ethertype 0x0806
- lldp  
The received frame is an LLDP packet recognized by ethertype 0x88cc
- isis  
The received frame is an ISIS packet
- lacp  
The received frame is an LACP packet
- google-discovery  
The received frame is a GDP packet recognized by ethertype 0x6007
- capture-filter-copy  
Packets matching a capture-filter copy rule

- `cpm-filter-log`  
Packets matching a CPM-filter rule with log action
- `ingress-acl-log`  
Packets matching an interface IP filter rule with log action
- `egress-acl-log`  
Packet matched an egress ACL rule with log action.
- `ip-mpls-mtu-exceeded`  
The egress subinterface IP MTU or MPLS MTU (as applicable) is less than the size of the IP or MPLS packet that needs to be transmitted.

A rewrite-policy resource is used every time a different DSCP or MPLS traffic-class rewrite-rule policy is applied to an egress subinterface of the 7250 IXR IMM. There are 32 of these resources.

- dscp-rewrite-policies

Every user-defined dscp rewrite policy that is configured uses one of these resources.

- dot1p-classifier-policies

Every user-defined dot1p classifier policy that is configured uses one of these resources

- dot1p-rewrite-policies

Every user-defined dot1p rewrite policy that is configured uses one of these resources

- if-output-cpm-mac  
Resource pool of TCAM entries used by MAC egress ACLs and MAC cpm-filter ACLs
- policy-forwarding-vrf-selection-ipv4  
Resource pool of TCAM entries used by IPv4 policy-forwarding entries that redirect flows to a different network-instance
- policy-forwarding-nhg-ipv4

Resource pool of TCAM entries used by IPv4 policy-forwarding entries that redirect flows to a NHG of IP next-hops or tunnels

- policy-forwarding-nhg-ipv6

Resource pool of TCAM entries used by IPv6 policy-forwarding entries that redirect flows to a NHG of IP next-hops or tunnels

- if-input-policer

Resource pool of TCAM entries used by ingress subinterface policer templates

- if-input-ipv4-qos

Resource pool of TCAM entries associated with IPv4 multi-field QoS classification entries, when applied to subinterface input

- if-input-ipv6-qos

Resource pool of TCAM entries associated with IPv6 multi-field QoS classification entries, when applied to subinterface input

- mrouter-mfib-redirect

Resource pool of TCAM entries used by multicast snooping protocols in MAC-VRF network-instances

One TCAM entry is used per multicast snooping protocol enabled in a MAC-VRF. For instance, if igmp-snooping and mld-snooping are enabled on a MAC-VRF, two entries are used. If only igmp-snooping is enabled, only one entry is used.

**Configurable**

False

**Platforms**

Supported on all platforms

## free-dynamic *number*

**Description**

The number of available and unused TCAM entries for the entry type, assuming that all the remaining unused TCAM slices would be dynamically allocated to this one type of entry (subject to chip level constraints on the placement of double-wide and triple-wide TCAM slice groups).

**Context**

[platform linecard slot number forwarding-complex name keyword tcam resource name identityref free-dynamic number](#)

**Tree**

**free-static number**

<b>Description</b>	The number of available and unused TCAM entries for the entry type, assuming that the number of dynamic TCAM slices that are currently allocated to the entry type remains constant at its current value.
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword tcam resource name identityref free-static number</a>
<b>Tree</b>	<a href="#">free-static</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**programmed number**

<b>Description</b>	The number of TCAM entries belonging to this resource that are currently programmed into hardware. When the number of programmed entries equals the number of reserved entries HW programming of this resource type has finished.
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword tcam resource name identityref programmed number</a>
<b>Tree</b>	<a href="#">programmed</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**reserved number**

<b>Description</b>	The number of TCAM entries that are currently reserved in this resource pool. Reservation happens when a configuration change is committed. Reserved entries may not be programmed yet if the commit has just occurred.
<b>Context</b>	<a href="#">platform linecard slot number forwarding-complex name keyword tcam resource name identityref reserved number</a>
<b>Tree</b>	<a href="#">reserved</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**healthz**

<b>Description</b>	The health of the component  The paramaters within this container indicate the status of the component beyond whether it is operationally up or down. When a signal is received that a component is in an unhealthy state the gNOI.Healthz service can be
--------------------	---

used to retrieve further diagnostic information relating to the component. The contents of this directory relate only to the specific component that it is associated with.

<b>Context</b>	<a href="#">platform linecard slot number healthz</a>
<b>Tree</b>	<a href="#">healthz</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-unhealthy string**

<b>Description</b>	Last unhealthy time The time at which the component was last observed to transition from the healthy state to any other state, represented as nanoseconds since the Unix epoch.
<b>Context</b>	<a href="#">platform linecard slot number healthz last-unhealthy string</a>
<b>Tree</b>	<a href="#">last-unhealthy</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **status keyword**

<b>Description</b>	Health status The status of the component, indicating its current health.
<b>Context</b>	<a href="#">platform linecard slot number healthz status keyword</a>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>unspecified Unspecified status The component's health status has not yet been checked by the system.</li> <li>healthy Healthy status The component is in a healthy state, and is operating within the expected parameters.</li> <li>unhealthy</li> </ul>

**Unhealthy status**

The component is in a unhealthy state, it is not performing the function expected of it.

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**unhealthy-count *number*****Description**

Unhealthy count

The number of times the component has transitioned from the healthy state to any other state.

**Context**

[platform linecard slot number healthz unhealthy-count number](#)

**Tree**

[unhealthy-count](#)

**Default**

0

**Configurable**

False

**Platforms**

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-booted *string*****Description**

The date and time this component last booted

For components that do not boot, this is the time the component was last discovered by the active control module

**Context**

[platform linecard slot number last-booted string](#)

**Tree**

[last-booted](#)

**String Length**

20 to 32

**Configurable**

False

**Platforms**

Supported on all platforms

**last-booted-reason *identityref*****Description**

The reason this component last booted or rebooted

For components without the ability to 'boot' this field is never populated

**Context**

[platform linecard slot number last-booted-reason identityref](#)

<b>Tree</b>	<a href="#">last-booted-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• user-initiated-reboot A user initiated the reboot directly via a management interface</li> <li>• power-failure The system rebooted the component due to insufficient power</li> <li>• critical-error The system rebooted the component due to an internal critical error</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-change** *string*

<b>Description</b>	The date and time this component last changed state
<b>Context</b>	<a href="#">platform linecard slot number last-change string</a>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**locator-state** *keyword*

<b>Description</b>	Details if the locator LED is active on this component
<b>Context</b>	<a href="#">platform linecard slot number locator-state keyword</a>
<b>Tree</b>	<a href="#">locator-state</a>
<b>Default</b>	inactive
<b>Options</b>	<ul style="list-style-type: none"> <li>• active Locator LED is currently active</li> <li>• inactive Locator LED is currently inactive</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**manufactured-date** *string*

<b>Description</b>	The date this component was manufactured
--------------------	--

<b>Context</b>	<a href="#">platform</a> <a href="#">linecard</a> <a href="#">slot</a> <a href="#">number</a> <a href="#">manufactured-date</a> <a href="#">string</a>
<b>Tree</b>	<a href="#">manufactured-date</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **oper-state** *keyword*

<b>Description</b>	The operational state of this component
<b>Context</b>	<a href="#">platform</a> <a href="#">linecard</a> <a href="#">slot</a> <a href="#">number</a> <a href="#">oper-state</a> <a href="#">keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting</li> </ul>

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **part-number** *string*

<b>Description</b>	Part number for this component
<b>Context</b>	<a href="#">platform linecard slot number part-number string</a>
<b>Tree</b>	<a href="#">part-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **power**

<b>Description</b>	State related to power consumption and allocation for this component
<b>Context</b>	<a href="#">platform linecard slot number power</a>
<b>Tree</b>	<a href="#">power</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **required** *number*

<b>Description</b>	The power budget required to enable this component
<b>Context</b>	<a href="#">platform linecard slot number power required number</a>
<b>Tree</b>	<a href="#">required</a>
<b>Units</b>	watts
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**used** *number*

<b>Description</b>	The power in use by this component
<b>Context</b>	<a href="#">platform linecard slot number power used number</a>
<b>Tree</b>	<a href="#">used</a>
<b>Units</b>	watts
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**rebooting-at** *string*

<b>Description</b>	Indicates the date and time this component will reboot If empty, no delayed reboots are queued for this component. A non empty value implies that a delayed reboot operation has been triggered for this component, which can be aborted using 'tools platform <component> reboot cancel'.
<b>Context</b>	<a href="#">platform linecard slot number rebooting-at string</a>
<b>Tree</b>	<a href="#">rebooting-at</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**removable** *boolean*

<b>Description</b>	Details if this component can be removed from the system
<b>Context</b>	<a href="#">platform linecard slot number removable boolean</a>
<b>Tree</b>	<a href="#">removable</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**serial-number** *string*

<b>Description</b>	The serial number for this component
<b>Context</b>	<a href="#">platform linecard slot number serial-number string</a>
<b>Tree</b>	<a href="#">serial-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**software-version string**

<b>Description</b>	Image version version running on this component  This version is the squashfs version, and may not represent the current per-application versions if versions have been modified after the system has been installed.
<b>Context</b>	<a href="#">platform linecard slot number software-version string</a>
<b>Tree</b>	<a href="#">software-version</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**temperature**

<b>Description</b>	State related to temperature for this component
<b>Context</b>	<a href="#">platform linecard slot number temperature</a>
<b>Tree</b>	<a href="#">temperature</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**alarm-status boolean**

<b>Description</b>	Indicates if a temperature sensor of this component is currently in an alarm state  An alarm state is triggered if the margin is $\leq 2$ degrees, indicating that a thermal protection shut down is imminent unless adequate system cooling is provided to bring the temperature sensor back into safe operating ranges.
<b>Context</b>	<a href="#">platform linecard slot number temperature alarm-status boolean</a>
<b>Tree</b>	<a href="#">alarm-status</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**instant number**

<b>Description</b>	Represents the highest current temperature of any sensor on this component  Note that as multiple sensors may feed in, that this field and the margin field may be referencing different sensors.
<b>Context</b>	<a href="#">platform linecard slot number temperature instant number</a>

<b>Tree</b>	<a href="#">instant</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **margin number**

<b>Description</b>	Indicates the lowest alarm margin of any sensor on this component  The margin is the delta between the current sensor temperature and the thermal protection threshold for that sensor. Note that as multiple sensors may feed in, that this field and the instant field may be referencing different sensors.
<b>Context</b>	<a href="#">platform linecard slot number temperature margin number</a>
<b>Tree</b>	<a href="#">margin</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **maximum number**

<b>Description</b>	Represents the highest temperature any sensor on this component has reached since it booted
<b>Context</b>	<a href="#">platform linecard slot number temperature maximum number</a>
<b>Tree</b>	<a href="#">maximum</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **maximum-time string**

<b>Description</b>	Indicates the time this component reached the temperature referenced in the maximum field
<b>Context</b>	<a href="#">platform linecard slot number temperature maximum-time string</a>
<b>Tree</b>	<a href="#">maximum-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**type** *string*

<b>Description</b>	Linecard type, as translated from the components EEPROM
<b>Context</b>	<a href="#">platform linecard slot number type string</a>
<b>Tree</b>	<a href="#">type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**power-supply** *id number*

<b>Description</b>	Top-level container for power supply module configuration and state
<b>Context</b>	<a href="#">platform power-supply id number</a>
<b>Tree</b>	<a href="#">power-supply</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**id** *number*

<b>Description</b>	Numeric identifier for the power supply module
<b>Context</b>	<a href="#">platform power-supply id number</a>
<b>Range</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**capacity** *number*

<b>Description</b>	The total capacity the power supply module can provide
<b>Context</b>	<a href="#">platform power-supply id number capacity number</a>
<b>Tree</b>	<a href="#">capacity</a>
<b>Units</b>	watts
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**clei-code** *string*

<b>Description</b>	The Common Language Identification Code for this component
--------------------	--

<b>Context</b>	<a href="#">platform power-supply id</a> <i>number</i> <a href="#">clei-code</a> <i>string</i>
<b>Tree</b>	<a href="#">clei-code</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**failure-reason** *string*

<b>Description</b>	The reason the component transitioned to a failed state Field is empty if the component is not currently in a failure state
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number</i> <a href="#">failure-reason</a> <i>string</i>
<b>Tree</b>	<a href="#">failure-reason</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**fan**

<b>Description</b>	Top-level container for state relating to fans
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number</i> <a href="#">fan</a>
<b>Tree</b>	<a href="#">fan</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**speed** *number*

<b>Description</b>	The current speed of the fan
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number</i> <a href="#">fan speed</a> <i>number</i>
<b>Tree</b>	<a href="#">speed</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**speed-rpm** *number*

<b>Description</b>	The current RPM of the fan
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number</i> <a href="#">fan speed-rpm</a> <i>number</i>
<b>Tree</b>	<a href="#">speed-rpm</a>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**feed id number**

<b>Description</b>	List of feeds on this power-supply
<b>Context</b>	<a href="#">platform power-supply id number feed id number</a>
<b>Tree</b>	<a href="#">feed</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

**id number**

<b>Description</b>	ID of the feed
<b>Context</b>	<a href="#">platform power-supply id number feed id number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

**current decimal-number**

<b>Description</b>	Current input amperage of this feed
<b>Context</b>	<a href="#">platform power-supply id number feed id number current decimal-number</a>
<b>Tree</b>	<a href="#">current</a>
<b>Units</b>	amps
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

**voltage decimal-number**

<b>Description</b>	Current input voltage for this feed
<b>Context</b>	<a href="#">platform power-supply id number feed id number voltage decimal-number</a>
<b>Tree</b>	<a href="#">voltage</a>
<b>Units</b>	volts
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## healthz

<b>Description</b>	The health of the component  The parameters within this container indicate the status of the component beyond whether it is operationally up or down. When a signal is received that a component is in an unhealthy state the gNOI.Healthz service can be used to retrieve further diagnostic information relating to the component. The contents of this directory relate only to the specific component that it is associated with.
<b>Context</b>	<a href="#">platform power-supply id number healthz</a>
<b>Tree</b>	<a href="#">healthz</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## last-unhealthy *string*

<b>Description</b>	Last unhealthy time  The time at which the component was last observed to transition from the healthy state to any other state, represented as nanoseconds since the Unix epoch.
<b>Context</b>	<a href="#">platform power-supply id number healthz last-unhealthy string</a>
<b>Tree</b>	<a href="#">last-unhealthy</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## status *keyword*

<b>Description</b>	Health status  The status of the component, indicating its current health.
<b>Context</b>	<a href="#">platform power-supply id number healthz status keyword</a>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>unspecified Unspecified status The component's health status has not yet been checked by the system.</li> </ul>

- **healthy**  
Healthy status  
The component is in a healthy state, and is operating within the expected parameters.
- **unhealthy**  
Unhealthy status  
The component is in a unhealthy state, it is not performing the function expected of it.

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **unhealthy-count** *number*

**Description** Unhealthy count  
The number of times the component has transitioned from the healthy state to any other state.

**Context** [platform power-supply id number healthz unhealthy-count number](#)

**Tree** [unhealthy-count](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **input**

**Description** Top-level container for power-supply input state

**Context** [platform power-supply id number input](#)

**Tree** [input](#)

**Configurable** False

**Platforms** Supported on all platforms

### **current** *decimal-number*

**Description** Current amperage input/output for the power-supply

**Context** [platform power-supply id number input current decimal-number](#)

---

<b>Tree</b>	<a href="#">current</a>
<b>Units</b>	amps
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**power** *decimal-number*

<b>Description</b>	Current power input/output for the power-supply
<b>Context</b>	<a href="#">platform power-supply id number input power decimal-number</a>
<b>Tree</b>	<a href="#">power</a>
<b>Units</b>	watts
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**voltage** *decimal-number*

<b>Description</b>	Current voltage input/output for the power-supply
<b>Context</b>	<a href="#">platform power-supply id number input voltage decimal-number</a>
<b>Tree</b>	<a href="#">voltage</a>
<b>Units</b>	volts
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-booted** *string*

<b>Description</b>	The date and time this component last booted For components that do not boot, this is the time the component was last discovered by the active control module
<b>Context</b>	<a href="#">platform power-supply id number last-booted string</a>
<b>Tree</b>	<a href="#">last-booted</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-booted-reason** *identityref*

<b>Description</b>	The reason this component last booted or rebooted For components without the ability to 'boot' this field is never populated
<b>Context</b>	<a href="#">platform power-supply id number last-booted-reason identityref</a>
<b>Tree</b>	<a href="#">last-booted-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• user-initiated-reboot A user initiated the reboot directly via a management interface</li> <li>• power-failure The system rebooted the component due to insufficient power</li> <li>• critical-error The system rebooted the component due to an internal critical error</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-change** *string*

<b>Description</b>	The date and time this component last changed state
<b>Context</b>	<a href="#">platform power-supply id number last-change string</a>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**manufactured-date** *string*

<b>Description</b>	The date this component was manufactured
<b>Context</b>	<a href="#">platform power-supply id number manufactured-date string</a>
<b>Tree</b>	<a href="#">manufactured-date</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-reason** *keyword*

<b>Description</b>	Indicates the reason for the current state of the component
--------------------	---

<b>Context</b>	<a href="#">platform power-supply id number oper-reason keyword</a>
<b>Tree</b>	<a href="#">oper-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>no-input/fault No power input, or other hardware fault detected</li> <li>eprom-invalid EEPROM of this power supply is either invalid or corrupt</li> <li>airflow-mismatch The detected airflow of this power supply does not match the system-calculated airflow direction  The logic for determining the system-calculated direction is: - Majority wins between present fan trays - In the case where there are equal F2B or B2F fan-trays, PSUs are used as a tie break (PSUs only are counted in the event a tie breaker is needed) - F2B wins if no tie break can be used</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	The operational state of this component
<b>Context</b>	<a href="#">platform power-supply id number oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>up Component or process is operational</li> <li>down Component or process is not operational</li> <li>empty Component slot is empty</li> <li>downloading Component is downloading image into memory</li> <li>booting Component is booting downloaded image</li> <li>starting Component image operational, application processes starting</li> <li>failed Component or process has failed</li> <li>synchronizing Component is currently being synchronized</li> </ul>

- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## output

<b>Description</b>	Top-level container for power-supply output state
<b>Context</b>	<a href="#">platform power-supply id number output</a>
<b>Tree</b>	<a href="#">output</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## current *decimal-number*

<b>Description</b>	Current amperage input/output for the power-supply
<b>Context</b>	<a href="#">platform power-supply id number output current decimal-number</a>
<b>Tree</b>	<a href="#">current</a>
<b>Units</b>	amps
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**power** *decimal-number*

<b>Description</b>	Current power input/output for the power-supply
<b>Context</b>	<a href="#">platform power-supply id number output power decimal-number</a>
<b>Tree</b>	<a href="#">power</a>
<b>Units</b>	watts
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**voltage** *decimal-number*

<b>Description</b>	Current voltage input/output for the power-supply
<b>Context</b>	<a href="#">platform power-supply id number output voltage decimal-number</a>
<b>Tree</b>	<a href="#">voltage</a>
<b>Units</b>	volts
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**part-number** *string*

<b>Description</b>	Part number for this component
<b>Context</b>	<a href="#">platform power-supply id number part-number string</a>
<b>Tree</b>	<a href="#">part-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**removable** *boolean*

<b>Description</b>	Details if this component can be removed from the system
<b>Context</b>	<a href="#">platform power-supply id number removable boolean</a>
<b>Tree</b>	<a href="#">removable</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**serial-number** *string*

<b>Description</b>	The serial number for this component
--------------------	--------------------------------------

<b>Context</b>	<a href="#">platform power-supply id</a> <i>number</i> <a href="#">serial-number</a> <i>string</i>
<b>Tree</b>	<a href="#">serial-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## temperature

<b>Description</b>	State related to temperature for this component
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number</i> <a href="#">temperature</a>
<b>Tree</b>	<a href="#">temperature</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## alarm-status *boolean*

<b>Description</b>	Indicates if a temperature sensor of this component is currently in an alarm state  An alarm state is triggered if the margin is $\leq 2$ degrees, indicating that a thermal protection shut down is imminent unless adequate system cooling is provided to bring the temperature sensor back into safe operating ranges.
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number</i> <a href="#">temperature</a> <a href="#">alarm-status</a> <i>boolean</i>
<b>Tree</b>	<a href="#">alarm-status</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## instant *number*

<b>Description</b>	Represents the highest current temperature of any sensor on this component  Note that as multiple sensors may feed in, that this field and the margin field may be referencing different sensors.
<b>Context</b>	<a href="#">platform power-supply id</a> <i>number</i> <a href="#">temperature</a> <a href="#">instant</a> <i>number</i>
<b>Tree</b>	<a href="#">instant</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**maximum number**

<b>Description</b>	Represents the highest temperature any sensor on this component has reached since it booted
<b>Context</b>	<a href="#">platform power-supply id number temperature maximum number</a>
<b>Tree</b>	<a href="#">maximum</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**maximum-time string**

<b>Description</b>	Indicates the time this component reached the temperature referenced in the maximum field
<b>Context</b>	<a href="#">platform power-supply id number temperature maximum-time string</a>
<b>Tree</b>	<a href="#">maximum-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type string**

<b>Description</b>	Power-supply type, as translated from the components EEPROM
<b>Context</b>	<a href="#">platform power-supply id number type string</a>
<b>Tree</b>	<a href="#">type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**redundancy**

<b>Description</b>	Top-level container for platform redundancy
<b>Context</b>	<a href="#">platform redundancy</a>
<b>Tree</b>	<a href="#">redundancy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**active-module** *keyword*

<b>Description</b>	Control module currently active
<b>Context</b>	<a href="#">platform redundancy active-module</a> <i>keyword</i>
<b>Tree</b>	<a href="#">active-module</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• A</li> <li>• B</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**failover-time** *string*

<b>Description</b>	Date and time of the last control module failover
<b>Context</b>	<a href="#">platform redundancy failover-time</a> <i>string</i>
<b>Tree</b>	<a href="#">failover-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**synchronization**

<b>Description</b>	Top-level container for redundancy synchronization
<b>Context</b>	<a href="#">platform redundancy synchronization</a>
<b>Tree</b>	<a href="#">synchronization</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-synchronization** *string*

<b>Description</b>	Last date and time a synchronization of system files occurred
<b>Context</b>	<a href="#">platform redundancy synchronization last-synchronization</a> <i>string</i>
<b>Tree</b>	<a href="#">last-synchronization</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**overlay**

<b>Description</b>	Top-level container for overlay synchronization
<b>Context</b>	<a href="#">platform redundancy synchronization overlay</a>
<b>Tree</b>	<a href="#">overlay</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-synchronization *string***

<b>Description</b>	Last date and time a synchronization of the overlay occurred
<b>Context</b>	<a href="#">platform redundancy synchronization overlay last-synchronization <i>string</i></a>
<b>Tree</b>	<a href="#">last-synchronization</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**next-synchronization *string***

<b>Description</b>	Next date and time a synchronization of the overlay will occur
<b>Context</b>	<a href="#">platform redundancy synchronization overlay next-synchronization <i>string</i></a>
<b>Tree</b>	<a href="#">next-synchronization</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**synchronization-frequency *number***

<b>Description</b>	Sets the frequency of overlay synchronizations This has no effect if overlay is not a configured synchronization mode. Changing this value results in the timer to the next synchronization being reset.
<b>Context</b>	<a href="#">platform redundancy synchronization overlay synchronization-frequency <i>number</i></a>
<b>Tree</b>	<a href="#">synchronization-frequency</a>
<b>Range</b>	30 to 65535

<b>Default</b>	60
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **state keyword**

<b>Description</b>	Current synchronization status
<b>Context</b>	<a href="#">platform redundancy synchronization state keyword</a>
<b>Tree</b>	<a href="#">state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>synchronized</b> Standby control module is ready and synchronized</li> <li>• <b>synchronizing</b> Standby control module is currently synchronizing</li> <li>• <b>not-ready</b> Standby control module is not synchronized</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **resource-management**

<b>Description</b>	Container for managing resources in a system-wide context
<b>Context</b>	<a href="#">platform resource-management</a>
<b>Tree</b>	<a href="#">resource-management</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **tcam**

<b>Description</b>	Container for managing the allocation of TCAM banks to different applications.
<b>Context</b>	<a href="#">platform resource-management tcam</a>
<b>Tree</b>	<a href="#">tcam</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## unified-forwarding-resources

<b>Description</b>	Container for managing Broadcom-specific UFT resources.
<b>Context</b>	<a href="#">platform resource-management unified-forwarding-resources</a>
<b>Tree</b>	<a href="#">unified-forwarding-resources</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3

## allocated-extra-ip-host-entries *number*

<b>Description</b>	The extra number of host entries that have been allocated from UFT shared banks.
<b>Context</b>	<a href="#">platform resource-management unified-forwarding-resources allocated-extra-ip-host-entries <i>number</i></a>
<b>Tree</b>	<a href="#">allocated-extra-ip-host-entries</a>
<b>Range</b>	0 to 262144
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

## allocated-extra-mac-entries *number*

<b>Description</b>	The extra number of MAC address entries that have been allocated from UFT shared banks.
<b>Context</b>	<a href="#">platform resource-management unified-forwarding-resources allocated-extra-mac-entries <i>number</i></a>
<b>Tree</b>	<a href="#">allocated-extra-mac-entries</a>
<b>Range</b>	0 to 262144
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

## alpm *keyword*

<b>Description</b>	Controls the ALPM mode.  If this is set to disabled then no UFT banks are allocated to ALPM. This mode is not supported by 7220 IXR-D4 or 7220 IXR-D5.  If this is set to enabled then 4 UFT shared banks are allocated to ALPM. This mode is not supported by 7220 IXR-D2 or 7220 IXR-D3.
--------------------	--

If this is set to high-scale then 8 UFT shared banks are allocated to ALPM. This mode is not supported by 7220 IXR-D1.

<b>Context</b>	<a href="#">platform resource-management unified-forwarding-resources alpm</a> <i>keyword</i>
<b>Tree</b>	<a href="#">alpm</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• disabled</li> <li>• enabled</li> <li>• high-scale</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **ipv6-128bit-lpm-entries** *number*

<b>Description</b>	Sets the value for num_ipv6_lpm_128b_entries, which affects IP FIB scale. H2/H3 range: 0-1024 D1 range: 0-4096 D2/D3 range: 0-8192
<b>Context</b>	<a href="#">platform resource-management unified-forwarding-resources ipv6-128bit-lpm-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">ipv6-128bit-lpm-entries</a>
<b>Range</b>	0 to 8192
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-H2, 7220 IXR-H3

### **requested-extra-ip-host-entries** *number*

<b>Description</b>	<p>The extra number of host entries that are desired.</p> <p>The number of UFT shared banks that are reserved for IPv4 and IPv6 host entries is given by: <math>\min(N/X, P-A)</math></p> <p>where: N = configured value of requested-extra-ip-host-entries X = the size of each shared bank, which is platform specific P-A = platform-specific number of shared banks, subtracting the ALPM banks</p> <p>requested-extra-ip-host-entries is interpreted in terms of IPv4 hosts (single-wide entries). IPv6 host entries are double-wide so 1 IPv4 host entry + 1 IPv6 host-entry counts as 3 entries.</p> <p>All UFT shared banks that are not reserved by ALPM and not reserved for extra IP host entries are used for extra MAC entries.</p> <p>On D1 the default value is 48K entries, which provides 3 shared banks, max is 96K. On D2/D3 the default value is 128K entries, which provides 4 shared banks, max is 256K.</p>
--------------------	--

<b>Context</b>	<a href="#">platform resource-management unified-forwarding-resources requested-extra-ip-host-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">requested-extra-ip-host-entries</a>
<b>Range</b>	0 to 262144
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

### **xdp-restart-required** *boolean*

<b>Description</b>	Reads true if the user has committed a change to one or more of the configurable values in the uft container but has not yet restarted XDP so the operational values are still the values initialized at the last XDP restart.
<b>Context</b>	<a href="#">platform resource-management unified-forwarding-resources xdp-restart-required</a> <i>boolean</i>
<b>Tree</b>	<a href="#">xdp-restart-required</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3

### **resource-monitoring**

<b>Description</b>	Enter the resource-monitoring context
<b>Context</b>	<a href="#">platform resource-monitoring</a>
<b>Tree</b>	<a href="#">resource-monitoring</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **acl**

<b>Description</b>	Enter the acl context
<b>Context</b>	<a href="#">platform resource-monitoring acl</a>
<b>Tree</b>	<a href="#">acl</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**resource name** *identityref*

<b>Description</b>	Enter the resource list instance
<b>Context</b>	<a href="#">platform resource-monitoring acl resource name</a> <i>identityref</i>
<b>Tree</b>	<a href="#">resource</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *identityref*

<b>Description</b>	The name of the ACL resource
<b>Context</b>	<a href="#">platform resource-monitoring acl resource name</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">input-ipv4-filter-instances</a> This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on the forwarding complex. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every subinterface using the IPv4 filter.</li> <li>• <a href="#">input-ipv4-qos-multifield-instances</a> This resource is used every time an IPv4 multifield classifier policy is applied to ingress traffic on a subinterface.</li> <li>• <a href="#">input-ipv4-filter-instances-routed</a> This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on routed subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every routed subinterface using the IPv4 filter.</li> <li>• <a href="#">input-ipv4-filter-instances-bridged</a> This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on bridged subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every bridged subinterface using the IPv4 filter.</li> <li>• <a href="#">input-ipv6-filter-instances</a> This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on the forwarding complex. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every subinterface using the IPv6 filter.</li> <li>• <a href="#">input-ipv6-qos-multifield-instances</a> This resource is used every time an IPv6 multifield classifier policy is applied to ingress traffic on a subinterface.</li> <li>• <a href="#">input-ipv6-filter-instances-routed</a></li> </ul>

This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on routed subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every routed subinterface using the IPv6 filter.

- input-ipv6-filter-instances-bridged

This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on bridged subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every bridged subinterface using the IPv6 filter.

- if-input-ipv4-stats

Resource pool of stats entries available for ingress IPv4 ACLs

- if-input-ipv6-stats

Resource pool of stats entries available for ingress IPv6 ACLs

- if-output-ipv4-stats

Resource pool of stats entries available for egress IPv4 ACLs

- if-output-ipv6-stats

Resource pool of stats entries available for egress IPv6 ACLs

- if-output-cpm-stats

Resource pool of stats entries shared by egress IPv4/IPv6/MAC TCAM entries, and CPM-filter IPv4/IPv6/MAC TCAM entries

Egress Ipv4 -> uses single stat counter Egress Ipv6 -> uses single stat counter Egress MAC -> uses single stat counter Cpm Ipv4 -> uses two stat counters Cpm Ipv6 -> uses two stat counters Cpm MAC -> uses two stat counters

- input-acl-qos-template-policers

This resource is used every time an IPv4 or IPv6 input subinterface filter entry uses a rate-limit policer, or subinterface policer-template is used.

- input-qos-template-policers

This resource is used every time a QoS subinterface policer-template is used.

- input-acl-ipv4-policers

This resource is used every time an IPv4 input subinterface filter entry uses a rate-limit policer.

- input-acl-ipv6-policers

This resource is used every time an IPv6 input subinterface filter entry uses a rate-limit policer.

- output-acl-cpm-filter-policers

This resource is used every time an IPv4 or IPv6 output subinterface filter or CPM filter entry uses a rate-limit policer.

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### falling-threshold-log *number*

<b>Description</b>	Sets the threshold that triggers the generation of a NOTICE log whenever the utilization of the ACL resource in any linecard/complex/core falls reaches this value in a falling direction
<b>Context</b>	<a href="#">platform resource-monitoring acl resource name <i>identityref</i> falling-threshold-log <i>number</i></a>

In non-ALPM mode, free</li> </ul>

entries is the remaining number of single-wide + double-wide entries (i.e. it assumes no other types of routes consume those entries). In ALPM mode, free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

7220 H2/H3: Reports the number of IPv6 entries with prefix length less than 65 bits installed in the FIB. Free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

- ip-lpm-ipv6-longer-routes

IPv6 longest prefix match route resources when the prefix length is greater than 64

7220 D1/D2/D3: Reports the number of IPv6 entries with prefix length greater than 64 bits in the hardware LPM table. In non-ALPM mode, free entries is the remaining number of double-wide entries (i.e. it assumes no other types of routes consume those entries). In ALPM mode, free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

7220 H2/H3: Reports the number of IPv6 entries with prefix length greater than 64 bits installed in the FIB. Free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

- exact-match-entries

IP exact match lookup table resources

Reports the number of half-wide entries used in the LEM table. Each MPLS ILM record uses one half-wide entry. Each IPv4 address used as a host route, ARP entry or subnet broadcast address requires a half-wide entry. An IPv6 address used as a host route, or ND entry requires a single-wide entry (2 half-wide entries). Free entries is the remaining number of half-wide entries.

- underlay-ecmp-groups

Underlay ECMP group resources

ECMP groups are partitioned into overlay and underlay groups. The underlay partition is further subdivided into groups used for underlay ECMP and groups used for VP LAGs (EVPN M-H). This counts the utilization of the sub-resource used for ECMP.

- vp-lag-groups

VP LAG group resources

ECMP groups are partitioned into overlay and underlay groups. The underlay partition is further subdivided into groups used for underlay ECMP and groups used for VP LAGs (EVPN M-H). This counts the utilization of the sub-resource used for VP LAGs.

- overlay-ecmp-groups

Overlay ECMP group resources

ECMP groups are partitioned into overlay and underlay groups. This counts the utilization of the overlay ECMP partition.

- underlay-ecmp-members

#### Underlay ECMP member resources

ECMP members are partitioned into overlay and underlay. This counts the utilization of the partition used for underlay.

- overlay-ecmp-members

#### Overlay ECMP member resources

ECMP members are partitioned into overlay and underlay. This counts the utilization of the partition used for overlay.

- underlay-egress-next-hops

#### Underlay egress next-hop resources

Egress next-hops are partitioned into overlay and underlay. This counts the utilization of the partition used for underlay.

- overlay-egress-next-hops

#### Overlay egress next-hop resources

Egress next-hops are partitioned into overlay and underlay. This counts the utilization of the partition used for overlay.

- dgpp-module-ids

#### DGPP module ID resources

DGPPs are an aggregate id consisting of a module\_id and a port\_id. There are 64 modules and 120 ports per module. Each 'network' ARP entry (IP next-hop) needs a DGPP - the module\_id is allocated against the network interface (port) and a port\_id is allocated from within the module. A module\_id will only be allocated when the first ArpEntry is added (freed when last is removed) but is owned exclusively by that network interface. A network interface may require more than one module\_id - i.e. if there are 245 ArpEntries on ethernet-1/1 (possibly spread across multiple network-instance interfaces) then 3 module\_ids are required.

- egress-vlan-translate-egress-vnis

#### EGR\_VLAN\_XLATE\_1 resources

Corresponds to the 'EGR\_VLAN\_XLATE\_1' HW table (8K entries). These entries are used for finding the egress VNI to be used for VXLAN packets.

- egress-vlan-translate-local-bias-pairs

#### EGR\_VLAN\_XLATE\_2 resources

Corresponds to the 'EGR\_VLAN\_XLATE\_2' HW table (24K entries). These entries are used for local bias (ES pruning).

- level-1-ecmp-groups

Level 1 (top level) ECMP group resources.

- level-2-ecmp-groups

Level 2 (middle level) ECMP group resources.

- level-3-ecmp-groups

- Level 3 (bottom level) ECMP group resources.
- level-1-ecmp-members
- Level 1 (top level) ECMP member resources.
- level-2-ecmp-members
- Level 2 (middle level) ECMP member resources.
- level-3-ecmp-members
- Level 3 (bottom level) ECMP member resources.
- level-1-non-ecmp-fecs
- Level 1 (top level) non-ECMP FEC resources.
- level-2-non-ecmp-fecs
- Level 2 (middle level) non-ECMP FEC resources.
- level-3-non-ecmp-fecs
- Level 3 (bottom level) non-ECMP FEC resources.

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### upper-threshold-clear *number*

<b>Description</b>	Sets the threshold that triggers the generation of a NOTICE log whenever the utilization of the datapath resource in any linecard (if applicable) or forwarding complex or pipeline (if applicable) reaches this value in a falling direction
<b>Context</b>	<a href="#">platform resource-monitoring datapath asic resource name</a> <i>identityref</i> <a href="#">upper-threshold-clear</a> <i>number</i>
<b>Tree</b>	<a href="#">upper-threshold-clear</a>
<b>Range</b>	0 to 100

<b>Platforms</b>	Supported on all platforms

## xdp

<b>Description</b>	Container for monitoring datapath resources that are generic in concept.
<b>Context</b>	<a href="#">platform resource-monitoring datapath xdp</a>
<b>Tree</b>	<a href="#">xdp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## resource name *identityref*

<b>Description</b>	List of generic datapath resources
<b>Context</b>	<a href="#">platform resource-monitoring datapath xdp resource name <i>identityref</i></a>
<b>Tree</b>	<a href="#">resource</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## name *identityref*

<b>Description</b>	<p>The name of the XDP datapath resource.</p> <p>Some of these resources may be software only (i.e. no correspondence to a hardware table).</p> <p>Some of these resources may depend on multiple HW tables and when the utilization is reported it represents an aggregated or summarized view.</p>
<b>Context</b>	<a href="#">platform resource-monitoring datapath xdp resource name <i>identityref</i></a>
<b>Options</b>	<ul style="list-style-type: none"> <li>arp-nd-entries           <p>IPv4 ARP and IPv6 neighbor discovery resources</p> <p>Each IPv4 ARP and each IPv6 neighbor entry counts as 1 used resource against a total that is platform dependent.</p> </li> <li>ip-hosts           <p>IP host route resources</p> </li> </ul>

7220 D1/D2/D3: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. Every IPv4 multicast snoop entry requires 2 entries. In non-ALPM operation every remote /32 route also requires 1 entry. Every local host /128 route, and ND entry requires 2 entries. Every IPv6 multicast snoop entry requires 4 entries. In non-ALPM operation every remote /128 route also requires 2 entries. Free entries reflects the total number of entries remaining in shared + dedicated UFT banks.

7220 D4/D5: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. Every local host /128 route, and ND entry requires 2 entries. Every (\*, G) IPv4 multicast snoop entry requires 1 entry. Every (S, G) IPv4 multicast snoop entry requires 2 entries. Every (\*, G) IPv6 multicast snoop entry requires 2 entries. Every (S, G) IPv6 multicast snoop entry requires 4 entries.

7220 H2/H3/H4: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. Every local host /128 route, and ND entry requires 2 entries.

- ip-lpm-routes

IP longest prefix match route resources

7250 IXR/IXRe: Every installed IPv4 and IPv6 route counts as one used route.

7220 D1/D2/D3: In ALPM-disabled mode: Reports the number of half-wide entries. An IPv4 route requires a half-wide entry. An IPv6 route that is /64 or less requires a single-wide entry (2 half-wide entries). An IPv6 route that is more than /64 requires a double-wide entry (4 half-wide entries). In ALPM mode: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 2 used routes.

7220 D4/D5: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 4 used routes.

- mac-addresses

MAC lookup table resources

Reports the number of entries used in the MAC lookup table. On 7220 D1/D2/D3, free entries reflects the total number of entries remaining in shared + dedicated UFT banks

- mac-next-hops

Direct MAC next-hop resources

A resource consumed by every next-hop of a gRIBI route that is specified as an interface name plus MAC address

- direct-ip-next-hops

Direct IP next-hop resources

Reports the number of entries, where 1 entry is used for every next-hop of an IP route or MPLS route/tunnel that is resolved directly to a local interface.

- indirect-ip-next-hops

Indirect IP next-hop resources

Reports the number of entries, where 1 entry is used for every next-hop of an IP route that requires resolution by a non-local route. This does not consider underlying ASIC resources.

- tunnel-next-hops

Tunnel next-hop resources

Reports the number of tunnel next-hop entries. 1 tunnel next-hop is required every time an indirect next-hop (e.g. a BGP next-hop) is resolved by a tunnel (BGP-LU, LDP, SR-ISIS or VXLAN)

- ecmp-groups

ECMP group resources

7250 IXR/IXRe: Reports the used number of ECMP FECs, adding L1 ECMP FECs, L2 ECMP FECs and L3 ECMP FECs.

7220 D1/D2/D3/D4/D5: Reports the used number of ECMP groups, adding overlay and underlay ECMP groups (if applicable).

7220 H2/H3/H4: Reports used number of ECMP groups.

- ecmp-members

ECMP member resources

7250 IXR/IXRe: Reports the used number of ECMP member FECs, adding L1 ECMP member FECs, L2 ECMP member FECs and L3 ECMP member FECs.

7220 D1/D2/D3/D4/D5: Reports the used number of ECMP members, adding overlay and underlay ECMP members (if applicable).

7220 H2/H3/H4: Reports used number of ECMP members.

- egress-next-hops

Egress next-hop resources

7220 D2/D3/D4/D5: Reports the number of entries used in the egress next-hop table, counting entries in the overlay partition and entries in the underlay partition. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.

7220 H2/H3/H4: Reports the number of entries used in the egress next-hop table. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.

- lag-groups

LAG group resources

Reports the number of LAG resources used, including DGPP LAGs.

- lag-members

## LAG member resources

Reports the number of LAG member resources used, including DGPP LAG members.

- subinterfaces

## Subinterface resources

There are a maximum of 127 subinterfaces per TH3 pipeline (limited by VFP/EFP TCAM resources). This counts the utilization of those resources.

- mpls-next-hops

## MPLS next-hop (NHLFE) resources

One resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an ILM entry that performs a 'swap'. One additional resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an MPLS tunnel.

- mpls-incoming-labels

## MPLS label lookup (ILM) resources

One resource is used for every MPLS ILM entry that performs either a 'swap' or a 'pop' operation.

- originating-tunnels

## Originating tunnel resources

One resource is used for every VXLAN, LDP, SR-ISIS or IPinIP tunnel originating on this node as head-end. On TD3 and TD4 systems this equates to a DVP resource.

- terminating-tunnels

## Terminating tunnel resources

One resource is used for every IPinIP tunnel terminating entry on this node.

**Configurable**

<b>Description</b>	The name of the TCAM resource
<b>Context</b>	<a href="#">platform resource-monitoring tcam resource name identityref</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">if-input-ipv4</a> Resource pool of TCAM entries used by IPv4 ACLs applied as subinterface-input filters</li> <li>• <a href="#">if-output-ipv4</a> Resource pool of TCAM entries used by IPv4 ACLs applied as subinterface-output filters</li> <li>• <a href="#">if-input-ipv6</a> Resource pool of TCAM entries used by IPv6 ACLs applied as subinterface-input filters</li> <li>• <a href="#">if-output-ipv6</a></li> </ul>

- Resource pool of TCAM entries used by IPv6 ACLs applied as subinterface-output filters
- cpm-capture-ipv4  
Resource pool of TCAM entries used by IPv4 cpm-filter ACLs and capture-filter ACLs
- cpm-capture-ipv6  
Resource pool of TCAM entries used by IPv6 cpm-filter ACLs and capture-filter ACLs
- system-capture-ipv4  
Resource pool of TCAM entries used by IPv4 capture-filter ACLs and IPv4 system-filter ACLs
- system-capture-ipv6  
Resource pool of TCAM entries used by IPv6 capture-filter ACLs and IPv6 system-filter ACLs
- system-capture  
Resource pool of TCAM entries used by IPv4 + IPv6 capture-filter ACLs and system-filter ACLs
- capture-ipv4  
Resource pool of TCAM entries used by IPv4 capture-filter ACLs
- capture-ipv6  
Resource pool of TCAM entries used by IPv6 capture-filter ACLs
- if-output-cpm-ipv4  
Resource pool of TCAM entries used by IPv4 egress ACLs and cpm-filter ACLs
- if-output-cpm-ipv6  
Resource pool of TCAM entries used by IPv6 egress ACLs and cpm-filter ACLs
- if-output-cpm  
Resource pool of TCAM entries used by IPv4 + IPv6 egress ACLs and cpm-filter ACLs
- if-input-mac  
Resource pool of TCAM entries used by MAC ACLs applied as subinterface-input filters
- if-output-cpm-mac  
Resource pool of TCAM entries used by MAC egress ACLs and MAC cpm-filter ACLs
- policy-forwarding-vrf-selection-ipv4  
Resource pool of TCAM entries used by IPv4 policy-forwarding entries that redirect flows to a different network-instance
- policy-forwarding-nhg-ipv4

Resource pool of TCAM entries used by IPv4 policy-forwarding entries that redirect flows to a NHG of IP next-hops or tunnels

- policy-forwarding-nhg-ipv6

Resource pool of TCAM entries used by IPv6 policy-forwarding entries that redirect flows to a NHG of IP next-hops or tunnels

- if-input-policer

Resource pool of TCAM entries used by ingress subinterface policer templates

- if-input-ipv4-qos

Resource pool of TCAM entries associated with IPv4 multi-field QoS classification entries, when applied to subinterface input

- if-input-ipv6-qos

Resource pool of TCAM entries associated with IPv6 multi-field QoS classification entries, when applied to subinterface input

- mrouter-mfib-redirect

Resource pool of TCAM entries used by multicast snooping protocols in MAC-VRF network-instances

One TCAM entry is used per multicast snooping protocol enabled in a MAC-VRF. For instance, if igmp-snooping and mld-snooping are enabled on a MAC-VRF, two entries are used. If only igmp-snooping is enabled, only one entry is used.

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### falling-threshold-log *number*

<b>Description</b>	Sets the threshold that triggers the generation of a NOTICE log whenever the utilization of the TCAM resource in any linecard/complex/core falls reaches this value in a falling direction.  On platforms that support dynamic TCAM the utilization considers both free-dynamic and free-static.
<b>Context</b>	<a href="#">platform resource-monitoring tcam resource name <i>identityref</i> falling-threshold-log <i>number</i></a>
<b>Tree</b>	<a href="#">falling-threshold-log</a>
<b>Range</b>	0 to 100
<b>Default</b>	70
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**rising-threshold-log** *number*

<b>Description</b>	Sets the threshold that triggers the generation of a WARNING log whenever the utilization of the TCAM resource in any linecard/complex/core reaches this value in a rising direction  On platforms that support dynamic TCAM the utilization considers both free-dynamic and free-static.
<b>Context</b>	<a href="#">platform resource-monitoring tcam resource name</a> <i>identityref</i> <a href="#">rising-threshold-log</a> <i>number</i>
<b>Tree</b>	<a href="#">rising-threshold-log</a>
<b>Range</b>	0 to 100
<b>Default</b>	90
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**trust**

<b>Description</b>	State information related to Platform Trust
<b>Context</b>	<a href="#">platform trust</a>
<b>Tree</b>	<a href="#">trust</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**secure-boot**

<b>Description</b>	State information related to Secure Boot
<b>Context</b>	<a href="#">platform trust secure-boot</a>
<b>Tree</b>	<a href="#">secure-boot</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**control** *slot* *string*

<b>Description</b>	Enter the control list instance
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i>
<b>Tree</b>	<a href="#">control</a>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### slot *string*

**Description** Slot identifier for the control module

**Context** [platform trust secure-boot control slot string](#)

**Configurable** False

**Platforms** Supported on all platforms

### oper-state *keyword*

**Description** Secure Boot operational state

**Context** [platform trust secure-boot control slot string oper-state keyword](#)

**Tree** [oper-state](#)

**Options**

- up  
Secure Boot is enabled
- down  
Secure Boot is disabled

**Configurable** False

**Platforms** Supported on all platforms

### uefi-variables [variable string](#)

**Description** Content of the UEFI Secure Boot variables programmed in the control module

**Context** [platform trust secure-boot control slot string uefi-variables variable string](#)

**Tree** [uefi-variables](#)

**Configurable** False

**Platforms** Supported on all platforms

### variable *string*

**Description** UEFI Secure Boot database variable name

**Context** [platform trust secure-boot control slot string uefi-variables variable string](#)

**Configurable** False

**Platforms** Supported on all platforms

**contents**

<b>Description</b>	Content Secure Boot database variable
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables variable</a> <i>string</i> <a href="#">contents</a>
<b>Tree</b>	<a href="#">contents</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**certificate index number**

<b>Description</b>	List of X.509 certificates
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables variable</a> <i>string</i> <a href="#">contents certificate index number</a>
<b>Tree</b>	<a href="#">certificate</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**index number**

<b>Description</b>	The index of the certificate
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables variable</a> <i>string</i> <a href="#">contents certificate index number</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**data binary**

<b>Description</b>	DER encoded X.509 certificate
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables variable</a> <i>string</i> <a href="#">contents certificate index number data binary</a>
<b>Tree</b>	<a href="#">data</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**sha1-hash** *index number*

<b>Description</b>	List of SHA-1 hash digests
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables variable</a> <i>string</i> <a href="#">contents sha1-hash index</a> <i>number</i>
<b>Tree</b>	<a href="#">sha1-hash</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**index** *number*

<b>Description</b>	The index of the hash
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables variable</a> <i>string</i> <a href="#">contents sha1-hash index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**digest-value** *binary*

<b>Description</b>	SHA-1 digest
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables variable</a> <i>string</i> <a href="#">contents sha1-hash index</a> <i>number</i> <a href="#">digest-value</a> <i>binary</i>
<b>Tree</b>	<a href="#">digest-value</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**sha256-hash** *index number*

<b>Description</b>	List of SHA-256 hash digests
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables variable</a> <i>string</i> <a href="#">contents sha256-hash index</a> <i>number</i>
<b>Tree</b>	<a href="#">sha256-hash</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**index** *number*

<b>Description</b>	The index of the hash
--------------------	-----------------------

<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables variable</a> <i>string</i> <a href="#">contents sha256-hash index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**digest-value** *binary*

<b>Description</b>	SHA-256 digest
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables variable</a> <i>string</i> <a href="#">contents sha256-hash index</a> <i>number</i> <a href="#">digest-value</a> <i>binary</i>
<b>Tree</b>	<a href="#">digest-value</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**sha256-hash-cert** [index](#) *number*

<b>Description</b>	List of SHA-256 hash digests of X.509 certificates
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables variable</a> <i>string</i> <a href="#">contents sha256-hash-cert</a> <a href="#">index</a> <i>number</i>
<b>Tree</b>	<a href="#">sha256-hash-cert</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**index** *number*

<b>Description</b>	The index of the hash
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables variable</a> <i>string</i> <a href="#">contents sha256-hash-cert</a> <a href="#">index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**digest-value** *binary*

<b>Description</b>	SHA-256 digest of an X.509 certificate
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables variable</a> <i>string</i> <a href="#">contents sha256-hash-cert</a> <a href="#">index</a> <i>number</i> <a href="#">digest-value</a> <i>binary</i>
<b>Tree</b>	<a href="#">digest-value</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### revocation-time *string*

<b>Description</b>	Certificate revocation start time
<b>Context</b>	<a href="#">platform trust secure-boot control slot string uefi-variables variable string contents sha256-hash-cert index number revocation-time string</a>
<b>Tree</b>	<a href="#">revocation-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### uefi-variables-update

<b>Description</b>	Update status of the UEFI Secure Boot variables PK, KEK, DB and DBx programmed in the control module compared to the UEFI variables update in the modification dataset
<b>Context</b>	<a href="#">platform trust secure-boot control slot string uefi-variables-update</a>
<b>Tree</b>	<a href="#">uefi-variables-update</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### db-update-required *boolean*

<b>Description</b>	The authorized database (db) update status compared to the modification dataset true = the authorized database (db) is not up to date, update required false = the authorized database (db) is up to date
<b>Context</b>	<a href="#">platform trust secure-boot control slot string uefi-variables-update db-update-required boolean</a>
<b>Tree</b>	<a href="#">db-update-required</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### dbx-update-required *boolean*

<b>Description</b>	The forbidden database (dbx) update status compared to the modification dataset true = the forbidden database (dbx) is not up to date, update required false = the forbidden database (dbx) is up to date
--------------------	---

<b>Context</b>	<a href="#">platform</a> <a href="#">trust</a> <a href="#">secure-boot</a> <a href="#">control</a> <a href="#">slot</a> <i>string</i> <a href="#">uefi-variables-update</a> <a href="#">dbx-update-required</a> <i>boolean</i>
<b>Tree</b>	<a href="#">dbx-update-required</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **kek-update-required** *boolean*

<b>Description</b>	The Key Exchange Key database (KEK) update status compared to the modification dataset true = the Key Exchange Key database (KEK) is not up to date, update required false = the Key Exchange Key database (KEK) is up to date
<b>Context</b>	<a href="#">platform</a> <a href="#">trust</a> <a href="#">secure-boot</a> <a href="#">control</a> <a href="#">slot</a> <i>string</i> <a href="#">uefi-variables-update</a> <a href="#">kek-update-required</a> <i>boolean</i>
<b>Tree</b>	<a href="#">kek-update-required</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **modification-dataset-db-conflict** *boolean*

<b>Description</b>	The authorized database (db) conflict status between the modification dataset and the current running image true = conflict false = no conflict
<b>Context</b>	<a href="#">platform</a> <a href="#">trust</a> <a href="#">secure-boot</a> <a href="#">control</a> <a href="#">slot</a> <i>string</i> <a href="#">uefi-variables-update</a> <a href="#">modification-dataset-db-conflict</a> <i>boolean</i>
<b>Tree</b>	<a href="#">modification-dataset-db-conflict</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **modification-dataset-dbx-conflict** *boolean*

<b>Description</b>	The forbidden database (dbx) conflict status between the modification dataset and the current running image true = conflict false = no conflict
<b>Context</b>	<a href="#">platform</a> <a href="#">trust</a> <a href="#">secure-boot</a> <a href="#">control</a> <a href="#">slot</a> <i>string</i> <a href="#">uefi-variables-update</a> <a href="#">modification-dataset-dbx-conflict</a> <i>boolean</i>
<b>Tree</b>	<a href="#">modification-dataset-dbx-conflict</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**modification-dataset-digest** *binary*

<b>Description</b>	The SHA256 digest of the modification dataset file
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables-update modification-dataset-digest</a> <i>binary</i>
<b>Tree</b>	<a href="#">modification-dataset-digest</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**modification-dataset-present** *boolean*

<b>Description</b>	The modification dataset is present
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables-update modification-dataset-present</a> <i>boolean</i>
<b>Tree</b>	<a href="#">modification-dataset-present</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**modification-dataset-valid** *boolean*

<b>Description</b>	The status of the modification dataset true = the modification dataset is valid false = the modification dataset is invalid
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables-update modification-dataset-valid</a> <i>boolean</i>
<b>Tree</b>	<a href="#">modification-dataset-valid</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pk-update-required** *boolean*

<b>Description</b>	The Platform Key (PK) update status compared to the modification dataset true = the Platform Key is not up to date, update required false = the Platform Key is up to date
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables-update pk-update-required</a> <i>boolean</i>
<b>Tree</b>	<a href="#">pk-update-required</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**up-to-date** *boolean*

<b>Description</b>	Status of the Secure Boot variables programmed in the control module compared to the current modification dataset true = UEFI variables are up to date false = UEFI variable update required
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">uefi-variables-update up-to-date</a> <i>boolean</i>
<b>Tree</b>	<a href="#">up-to-date</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tpm**

<b>Description</b>	Enter the tpm context
<b>Context</b>	<a href="#">platform trust tpm</a>
<b>Tree</b>	<a href="#">tpm</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**control slot** *string*

<b>Description</b>	List of TPMs on system control modules with their corresponding status, supported algorithms, PCR Indexes per PCR Bank and certificates
<b>Context</b>	<a href="#">platform trust tpm control slot</a> <i>string</i>
<b>Tree</b>	<a href="#">control</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**slot** *string*

<b>Description</b>	Slot identifier for the control module. The slot identifier is the system wide unique name for the module's TPM
<b>Context</b>	<a href="#">platform trust tpm control slot</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**certificates** *name string*

<b>Description</b>	List of TPM certificates Three main types of certificates can be accessed via this statement, including Endorsement Key Certificate (EK), Attestation Key Certificate (AK), Device ID key Certificate (DevID)
<b>Context</b>	<a href="#">platform trust tpm control slot string certificates name string</a>
<b>Tree</b>	<a href="#">certificates</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	An arbitrary name uniquely identifying a certificate associated to a key within a TPM Endorsement Key Certificate (EK): endorsement-certificate Initial Device ID Certificate (IDevID): initial-device-id-certificate Initial Attestation Key Certificate (IAK): initial-attestation-certificate
<b>Context</b>	<a href="#">platform trust tpm control slot string certificates name string</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**data** *binary*

<b>Description</b>	DER encoded X.509 certificate
<b>Context</b>	<a href="#">platform trust tpm control slot string certificates name string data binary</a>
<b>Tree</b>	<a href="#">data</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**nv-index** *number*

<b>Description</b>	NV index for the certificate
<b>Context</b>	<a href="#">platform trust tpm control slot string certificates name string nv-index number</a>
<b>Tree</b>	<a href="#">nv-index</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	TPM chip self-test status
<b>Context</b>	<a href="#">platform trust tpm control slot</a> <i>string</i> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up The TPM currently is running normally and is ready to accept and process TPM quotes</li> <li>• down TPM is in a state such as startup or shutdown which precludes the processing of TPM quotes</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tpm20-pcr-bank** [tpm20-hash-algo](#) *string*

<b>Description</b>	Specifies the list of PCRs that may be extracted for a specific Hash Algorithm. A TPM2.0 bank is a set of PCRs which are extended using a particular hash algorithm
<b>Context</b>	<a href="#">platform trust tpm control slot</a> <i>string</i> <a href="#">tpm20-pcr-bank</a> <a href="#">tpm20-hash-algo</a> <i>string</i>
<b>Tree</b>	<a href="#">tpm20-pcr-bank</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**tpm20-hash-algo** *string*

<b>Description</b>	The hash algorithm that is used to hash TPM2.0 PCRs
<b>Context</b>	<a href="#">platform trust tpm control slot</a> <i>string</i> <a href="#">tpm20-pcr-bank</a> <a href="#">tpm20-hash-algo</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**pcr-index** *number*

<b>Description</b>	List the TPM2.0 PCRs available to be extracted
<b>Context</b>	<a href="#">platform trust tpm control slot</a> <i>string</i> <a href="#">tpm20-pcr-bank</a> <a href="#">tpm20-hash-algo</a> <i>string</i> <a href="#">pcr-index</a> <i>number</i>
<b>Tree</b>	<a href="#">pcr-index</a>
<b>Range</b>	0 to 31

**Configurable**

False

## 9.1 qos Descriptions

### qos

<b>Description</b>	Top-level container for QoS data
<b>Context</b>	<a href="#">qos</a>
<b>Tree</b>	<a href="#">qos</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### buffer-management

<b>Description</b>	Container for the list of configured queue management profiles
<b>Context</b>	<a href="#">qos buffer-management</a>
<b>Tree</b>	<a href="#">buffer-management</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### buffer-allocation-profile [name string](#)

<b>Description</b>	The name of a buffer-allocation-profile
<b>Context</b>	<a href="#">qos buffer-management buffer-allocation-profile name string</a>
<b>Tree</b>	<a href="#">buffer-allocation-profile</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### [name string](#)

<b>Description</b>	Unique string name used for the buffer-allocation-profile
<b>Context</b>	<a href="#">qos buffer-management buffer-allocation-profile name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**queues**

<b>Description</b>	Buffer allocation parameters for individual queues
<b>Context</b>	<a href="#">qos buffer-management buffer-allocation-profile name</a> <i>string</i> <a href="#">queues</a>
<b>Tree</b>	<a href="#">queues</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**queue** [queue-name](#) *reference*

<b>Description</b>	List of queues
<b>Context</b>	<a href="#">qos buffer-management buffer-allocation-profile name</a> <i>string</i> <a href="#">queues</a> <a href="#">queue</a> <a href="#">queue-name</a> <i>reference</i>
<b>Tree</b>	<a href="#">queue</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**queue-name** *reference*

<b>Description</b>	The queue name
<b>Context</b>	<a href="#">qos buffer-management buffer-allocation-profile name</a> <i>string</i> <a href="#">queues</a> <a href="#">queue</a> <a href="#">queue-name</a> <i>reference</i>
<b>Reference</b>	<a href="#">qos queues</a> <a href="#">queue name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**high-threshold-bytes** *number*

<b>Description</b>	<p>The queue depth that, when crossed in a rising direction, triggers a hardware interrupt and a recording of the current system time.</p> <p>The default value of 0 disables the functionality.</p> <p>On IXR-6/10 this parameter applies to a set of VOQs (and therefore to unicast traffic only). On 7220-D2/D3/H2/H3 this parameter applies to a unicast queue only; the configuration of this leaf is ignored when the queue-template is attached to a queue with queue-type other than unicast.</p> <p>On 7220-D2/D3 the threshold is rounded up the nearest multiple of 2048 bytes. On IXR-6/10 the threshold is rounded up to the nearest multiple of 4096 bytes. On 7220-H2/H3 the threshold is rounded up to the nearest multiple of 254 bytes</p>
--------------------	--

<b>Context</b>	<a href="#">qos buffer-management buffer-allocation-profile name</a> <i>string</i> <a href="#">queues queue queue-name</a> <i>reference</i> <a href="#">high-threshold-bytes</a> <i>number</i>
<b>Tree</b>	<a href="#">high-threshold-bytes</a>
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-H4

### **maximum-burst-size** *number*

<b>Description</b>	<p>Maximum amount of shared buffer memory available to the queue.</p> <p>On IXR-6/10 this parameter applies to a set of VOQs. If the configured value is 0 or no value is configured the limit is 256 MB (268435456 bytes), however the use of 'alpha' may limit the effective value to less than 256 MB. A configured non-zero value sets a static limit without 'alpha'.</p> <p>On 7220-D2/D3/D5/H2/H3 this parameter applies to an egress queue and the default value of zero instructs the forwarding chip to apply its own limit based on 'alpha'. A non-zero value disables 'alpha'. The alpha value is 5 (0.25 multiplier of shared buffer space) for unicast queues and 4 (0.125 multiplier of shared buffer space) for multicast queues.</p> <p>On 7730 this parameter applies to egress-queue and setting value to 0 means default value (still need to determine that)</p> <p>Must be non-zero/non-default in order to add the active-queue-management presence container</p>
<b>Context</b>	<a href="#">qos buffer-management buffer-allocation-profile name</a> <i>string</i> <a href="#">queues queue queue-name</a> <i>reference</i> <a href="#">maximum-burst-size</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-burst-size</a>
<b>Default</b>	0
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### **queue-management-profile** *name string*

<b>Description</b>	The name of a queue management profile
<b>Context</b>	<a href="#">qos buffer-management queue-management-profile name</a> <i>string</i>
<b>Tree</b>	<a href="#">queue-management-profile</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Unique string name used for the queue management profile
<b>Context</b>	<a href="#">qos buffer-management queue-management-profile name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**weight-factor** *number*

<b>Description</b>	Weight factor to use in the calculation of the current (average weighted) queue depth
<b>Context</b>	<a href="#">qos buffer-management queue-management-profile name</a> <i>string</i> <a href="#">weight-factor</a> <i>number</i>
<b>Tree</b>	<a href="#">weight-factor</a>
<b>Range</b>	0 to 15
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**wred**

<b>Description</b>	Configuration and operational state parameters relating to Weighted Random Early Detection (WRED)
<b>Context</b>	<a href="#">qos buffer-management queue-management-profile name</a> <i>string</i> <a href="#">wred</a>
<b>Tree</b>	<a href="#">wred</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**wred-slope** [traffic-type](#) *keyword* [drop-probability](#) *keyword* [enable-ecn](#) *boolean*

<b>Description</b>	List of WRED slopes
<b>Context</b>	<a href="#">qos buffer-management queue-management-profile name</a> <i>string</i> <a href="#">wred</a> <a href="#">wred-slope</a> <a href="#">traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i>
<b>Tree</b>	<a href="#">wred-slope</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**traffic-type** *keyword*

<b>Description</b>	The traffic type to which the WRED slope applies
<b>Context</b>	<a href="#">qos buffer-management queue-management-profile name</a> <i>string</i> <a href="#">wred wred-slope</a> <a href="#">traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>tcp</code> Refers to IPv4/IPv6 packets with a protocol/next-header indicating a value of 6</li> <li>• <code>non-tcp</code> Refers to all packets that are not IPv4/IPv6 packets with a protocol/next-header indicating a value of 6</li> <li>• <code>all</code> Refers to all traffic, whether it is TCP or non-TCP</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**drop-probability** *keyword*

<b>Description</b>	The drop probability to which the WRED slope applies
<b>Context</b>	<a href="#">qos buffer-management queue-management-profile name</a> <i>string</i> <a href="#">wred wred-slope</a> <a href="#">traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>low</code> Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green</li> <li>• <code>medium</code> Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow</li> <li>• <code>high</code> Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red</li> <li>• <code>all</code> All traffic, consisting of traffic marked low, medium and high drop-probability</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**enable-ecn** *boolean*

<b>Description</b>	When this leaf is true and the number of packets in the queue is between the minimum threshold and the maximum threshold, if the ECN field on the packet indicates that the endpoints are ECN capable and the WRED algorithm determines that the packet should have been dropped based on the drop probability, the CE bits for the packet are changed to 1, and the packet is transmitted. When set to false, the such packets will be discarded based on wred-slope
<b>Context</b>	<a href="#">qos buffer-management queue-management-profile name</a> <i>string</i> <a href="#">wred wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-drop-probability-percent** *number*

<b>Description</b>	The probability with which packets are dropped or marked at max-threshold
<b>Context</b>	<a href="#">qos buffer-management queue-management-profile name</a> <i>string</i> <a href="#">wred wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i> <a href="#">max-drop-probability-percent</a> <i>number</i>
<b>Tree</b>	<a href="#">max-drop-probability-percent</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-threshold** *number*

<b>Description</b>	The maximum threshold parameter for a RED-managed queue. When the average queue length exceeds the max-threshold, the packets are dropped (or marked if ECN is enabled).  When both, 'drop' and 'ecn-enable' flags are set to false, packets will be drop only if the mbs of the queue is reached
<b>Context</b>	<a href="#">qos buffer-management queue-management-profile name</a> <i>string</i> <a href="#">wred wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i> <a href="#">max-threshold</a> <i>number</i>
<b>Tree</b>	<a href="#">max-threshold</a>
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-threshold-percent** *number*

<b>Description</b>	The percentage of the MBS that corresponds to the WRED maximum threshold parameter
<b>Context</b>	<a href="#">qos buffer-management queue-management-profile name</a> <i>string</i> <a href="#">wred wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i> <a href="#">max-threshold-percent</a> <i>number</i>
<b>Tree</b>	<a href="#">max-threshold-percent</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**min-threshold** *number*

<b>Description</b>	The minimum threshold parameter for a RED-managed queue. When the average queue length is less than min-threshold, the packets are admitted to the queue (without any ECN marking change)
<b>Context</b>	<a href="#">qos buffer-management queue-management-profile name</a> <i>string</i> <a href="#">wred wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i> <a href="#">min-threshold</a> <i>number</i>
<b>Tree</b>	<a href="#">min-threshold</a>
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**min-threshold-percent** *number*

<b>Description</b>	The percentage of the MBS that corresponds to the WRED minimum threshold parameter
<b>Context</b>	<a href="#">qos buffer-management queue-management-profile name</a> <i>string</i> <a href="#">wred wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i> <a href="#">min-threshold-percent</a> <i>number</i>
<b>Tree</b>	<a href="#">min-threshold-percent</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**slope-enabled** *boolean*

<b>Description</b>	Reads true if traffic is dropped by WRED
<b>Context</b>	<a href="#">qos buffer-management queue-management-profile name</a> <i>string</i> <a href="#">wred</a> <a href="#">wred-slope</a> <a href="#">traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i> <a href="#">slope-enabled</a> <i>boolean</i>
<b>Tree</b>	<a href="#">slope-enabled</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**weight-factor** *number*

<b>Description</b>	Actual Weight factor used in the calculation of the current (average weighted) queue depth
<b>Context</b>	<a href="#">qos buffer-management queue-management-profile name</a> <i>string</i> <a href="#">wred</a> <a href="#">wred-slope</a> <a href="#">traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i> <a href="#">weight-factor</a> <i>number</i>
<b>Tree</b>	<a href="#">weight-factor</a>
<b>Range</b>	0 to 15
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**classifiers**

<b>Description</b>	Enter the classifiers context
<b>Context</b>	<a href="#">qos classifiers</a>
<b>Tree</b>	<a href="#">classifiers</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**dot1p-policy** *name string*

<b>Description</b>	Enter the dot1p-policy list instance
<b>Context</b>	<a href="#">qos classifiers dot1p-policy name</a> <i>string</i>
<b>Tree</b>	<a href="#">dot1p-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**name** *string*

<b>Description</b>	User-configured name for a 802.1p priority code point mapping policy The name 'default' is reserved for the system default dot1p mapping policy
<b>Context</b>	<a href="#">qos classifiers dot1p-policy name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**dot1p** *value number*

<b>Description</b>	Enter the dot1p list instance
<b>Context</b>	<a href="#">qos classifiers dot1p-policy name</a> <i>string</i> <a href="#">dot1p value</a> <i>number</i>
<b>Tree</b>	<a href="#">dot1p</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**value** *number*

<b>Description</b>	Enter the value context
<b>Context</b>	<a href="#">qos classifiers dot1p-policy name</a> <i>string</i> <a href="#">dot1p value</a> <i>number</i>
<b>Range</b>	0 to 7
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**drop-probability** *keyword*

<b>Description</b>	The drop probability to which the dot1p value is mapped
<b>Context</b>	<a href="#">qos classifiers dot1p-policy name</a> <i>string</i> <a href="#">dot1p value</a> <i>number</i> <a href="#">drop-probability</a> <i>keyword</i>
<b>Tree</b>	<a href="#">drop-probability</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>low</li> </ul> <p>Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.</p>

- medium  
Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.
- high  
Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### forwarding-class *reference*

<b>Description</b>	The forwarding class
<b>Context</b>	<a href="#">qos classifiers dot1p-policy name string dot1p value number forwarding-class reference</a>
<b>Tree</b>	<a href="#">forwarding-class</a>
<b>Reference</b>	<a href="#">qos forwarding-classes forwarding-class name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### dscp-policy name *string*

<b>Description</b>	Enter the dscp-policy list instance
<b>Context</b>	<a href="#">qos classifiers dscp-policy name string</a>
<b>Tree</b>	<a href="#">dscp-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### name *string*

<b>Description</b>	User-configured name for a DSCP mapping policy The name 'default' is reserved for the system default DSCP mapping policy
<b>Context</b>	<a href="#">qos classifiers dscp-policy name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**dscp value** (*number | keyword*)

<b>Description</b>	Enter the dscp list instance
<b>Context</b>	<a href="#">qos classifiers dscp-policy name</a> <i>string dscp value (number   keyword)</i>
<b>Tree</b>	<a href="#">dscp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**value** (*number | keyword*)

<b>Description</b>	Enter the value context
<b>Context</b>	<a href="#">qos classifiers dscp-policy name</a> <i>string dscp value (number   keyword)</i>
<b>Range</b>	0 to 63
<b>Options</b>	<ul style="list-style-type: none"> <li>• CS0</li> <li>• LE</li> <li>• CS1</li> <li>• AF11</li> <li>• AF12</li> <li>• AF13</li> <li>• CS2</li> <li>• AF21</li> <li>• AF22</li> <li>• AF23</li> <li>• CS3</li> <li>• AF31</li> <li>• AF32</li> <li>• AF33</li> <li>• CS4</li> <li>• AF41</li> <li>• AF42</li> <li>• AF43</li> <li>• CS5</li> <li>• EF</li> <li>• CS6</li> <li>• CS7</li> </ul>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### drop-probability *keyword*

<b>Description</b>	The drop probability to which the DSCP value is mapped
<b>Context</b>	<a href="#">qos classifiers dscp-policy name string dscp value (number   keyword) drop-probability keyword</a>
<b>Tree</b>	<a href="#">drop-probability</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>low Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.</li> <li>medium Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.</li> <li>high Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### forwarding-class *reference*

<b>Description</b>	The forwarding class
<b>Context</b>	<a href="#">qos classifiers dscp-policy name string dscp value (number   keyword) forwarding-class reference</a>
<b>Tree</b>	<a href="#">forwarding-class</a>
<b>Reference</b>	<a href="#">qos forwarding-classes forwarding-class name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### mpls-traffic-class-policy *name string*

<b>Description</b>	Enter the mpls-traffic-class-policy list instance
<b>Context</b>	<a href="#">qos classifiers mpls-traffic-class-policy name string</a>
<b>Tree</b>	<a href="#">mpls-traffic-class-policy</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **name** *string*

**Description** User-configured name for an MPLS traffic-class mapping policy  
The name 'default' is reserved for the system default MPLS TC mapping policy

**Context** [qos classifiers mpls-traffic-class-policy name](#) *string*

**String Length** 1 to 255

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **traffic-class** *value number*

**Description** Enter the traffic-class list instance

**Context** [qos classifiers mpls-traffic-class-policy name](#) *string* [traffic-class value number](#)

**Tree** [traffic-class](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **value** *number*

**Description** A single traffic-class value

**Context** [qos classifiers mpls-traffic-class-policy name](#) *string* [traffic-class value number](#)

**Range** 0 to 7

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **drop-probability** *keyword*

**Description** The drop probability to which the traffic-class value is mapped

**Context** [qos classifiers mpls-traffic-class-policy name](#) *string* [traffic-class value number](#) [drop-probability keyword](#)

**Tree** [drop-probability](#)

**Options**

- low

Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.

- medium

Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.

- high

Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### forwarding-class *reference*

<b>Description</b>	The forwarding class
<b>Context</b>	<a href="#">qos classifiers mpls-traffic-class-policy name string traffic-class value number forwarding-class reference</a>
<b>Tree</b>	<a href="#">forwarding-class</a>
<b>Reference</b>	<a href="#">qos forwarding-classes forwarding-class name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### multifield-classifier *name string*

<b>Description</b>	List of multifield-classifier QoS policies
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name string</a>
<b>Tree</b>	<a href="#">multifield-classifier</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### name *string*

<b>Description</b>	The name of multifield-classifier QoS policy
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### entry *sequence-id number*

**Description** List of individual QoS multifield-classifier entries

**Context** [qos classifiers multifield-classifier name](#) *string* [entry sequence-id number](#)

**Tree** [entry](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### sequence-id *number*

**Description** A number to indicate the relative evaluation order of the different terms; lower numbered terms are evaluated before higher numbered terms

**Context** [qos classifiers multifield-classifier name](#) *string* [entry sequence-id number](#)

**Range** 0 to 65535

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### action

**Description** Container for the actions to be applied to packets matching the classifier entry.

**Context** [qos classifiers multifield-classifier name](#) *string* [entry sequence-id number](#) [action](#)

**Tree** [action](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### drop-probability *keyword*

**Description** Assign matching packets to the specified drop probability level  
The implicit default, if not specified, is low drop-probability.

<b>Context</b>	<a href="#">qos classifiers multifield-classifier name string entry sequence-id number</a> <a href="#">action drop-probability keyword</a>
<b>Tree</b>	<a href="#">drop-probability</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>low Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.</li> <li>medium Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.</li> <li>high Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### forwarding-class *reference*

<b>Description</b>	The forwarding class to which the DSCP value is mapped
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name string entry sequence-id number</a> <a href="#">action forwarding-class reference</a>
<b>Tree</b>	<a href="#">forwarding-class</a>
<b>Reference</b>	<a href="#">qos forwarding-classes forwarding-class name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### rewrite

<b>Description</b>	Rewrite actions associated with packets that match the classifier entry. Where a packet matches these criteria, the specified rewrite actions should be performed.
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name string entry sequence-id number</a> <a href="#">action rewrite</a>
<b>Tree</b>	<a href="#">rewrite</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7250

**set-dscp** *number*

<b>Description</b>	Sets the 6-bit DSCP (differentiated services code point) value in the IP packet header.
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">action rewrite set-dscp</a> <i>number</i>
<b>Tree</b>	<a href="#">set-dscp</a>
<b>Range</b>	0 to 63
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7250

**match**

<b>Description</b>	Matching conditions for QoS multifield-classifier
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match</a>
<b>Tree</b>	<a href="#">match</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4**

<b>Description</b>	Container for the layer-3 IPv4 match criteria
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match ipv4</a>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**destination-ip**

<b>Description</b>	Packet matching criteria based on destination IPv4 address
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match ipv4 destination-ip</a>
<b>Tree</b>	<a href="#">destination-ip</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### address string

**Description** Match a packet if its destination IP address logically anded with the inverse of the mask equals this IP address.

**Context** [qos classifiers multifield-classifier name string entry sequence-id number match ipv4 destination-ip address string](#)

**Tree** [address](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### mask string

**Description** Match a packet if its destination IP address logically anded with the inverse of this mask equals the configured IP address.

**Context** [qos classifiers multifield-classifier name string entry sequence-id number match ipv4 destination-ip mask string](#)

**Tree** [mask](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### prefix string

**Description** Match a packet if its destination IP address is within the specified IPv4 prefix.

**Context** [qos classifiers multifield-classifier name string entry sequence-id number match ipv4 destination-ip prefix string](#)

**Tree** [prefix](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**dscp-set** (*number* | *keyword*)

<b>Description</b>	A list of DSCP values to be matched for incoming packets. An OR match should be performed, such that a packet must match one of the values defined in this list. If the field is left empty then any DSCP value matches.
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name string entry sequence-id number match ipv4 dscp-set</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">dscp-set</a>
<b>Range</b>	0 to 63
<b>Options</b>	<ul style="list-style-type: none"> <li>• CS0</li> <li>• LE</li> <li>• CS1</li> <li>• AF11</li> <li>• AF12</li> <li>• AF13</li> <li>• CS2</li> <li>• AF21</li> <li>• AF22</li> <li>• AF23</li> <li>• CS3</li> <li>• AF31</li> <li>• AF32</li> <li>• AF33</li> <li>• CS4</li> <li>• AF41</li> <li>• AF42</li> <li>• AF43</li> <li>• CS5</li> <li>• EF</li> <li>• CS6</li> <li>• CS7</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**first-fragment** *boolean*

<b>Description</b>	Match the first fragment of an IPv4 datagram A packet matches the true condition if the IPv4 header indicates that the fragment-offset is zero and the more-fragments bit is 1. It is not valid to configure this leaf without configuring a match value for the fragment leaf.
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match ipv4 first-fragment</a> <i>boolean</i>
<b>Tree</b>	<a href="#">first-fragment</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**fragment** *boolean*

<b>Description</b>	Match an IPv4 fragment A packet matches the true condition if the IPv4 header indicates that the fragment-offset is zero and the more-fragments bit is 1 or if the IPv4 header indicates that the fragment-offset is greater than 0. A packet matches the false condition if it is unfragmented.
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match ipv4 fragment</a> <i>boolean</i>
<b>Tree</b>	<a href="#">fragment</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**icmp**

<b>Description</b>	A packet matches this condition if its ICMP type and code matches one of the specified combinations The rule should also have a condition that the IP protocol equals 1 (ICMP) in order for this to be interpreted correctly.
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match ipv4 icmp</a>
<b>Tree</b>	<a href="#">icmp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**code number**

<b>Description</b>	Match if the ICMP code value is any value in the list Requires ICMP type to be specified because codes are type dependent.
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name string entry sequence-id number match ipv4 icmp code number</a>
<b>Tree</b>	<a href="#">code</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**type (number | keyword)**

<b>Description</b>	Match a single ICMP type value.
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name string entry sequence-id number match ipv4 icmp type (number   keyword)</a>
<b>Tree</b>	<a href="#">type</a>
<b>Range</b>	0 to 255
<b>Options</b>	<ul style="list-style-type: none"> <li>• echo-reply ICMP Echo Reply</li> <li>• dest-unreachable ICMP Destination Unreachable</li> <li>• source-quench ICMP Source Quench</li> <li>• redirect ICMP Redirect</li> <li>• echo ICMP Echo</li> <li>• router-advertise ICMP Router Advertisement</li> <li>• router-solicit ICMP Router Solicitation</li> <li>• time-exceeded ICMP Time Exceeded</li> <li>• param-problem ICMP Parameter Problem</li> <li>• timestamp</li> </ul>

	ICMP Timestamp
	• timestamp-reply
	ICMP Timestamp Reply
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **protocol** (*number* | *keyword*)

<b>Description</b>	An IPv4 packet matches this condition if its IP protocol type field matches the specified value
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name string entry sequence-id number match ipv4 protocol</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">protocol</a>
<b>Range</b>	0 to 255

**Configurable**

True

**Platforms**

7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**source-ip****Description**

Packet matching criteria based on source IPv6 address

**Context**[qos classifiers multifield-classifier name string entry sequence-id number match ipv6 source-ip](#)**Tree**[source-ip](#)**Configurable**

True

**Platforms**

7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**address string****Description**

Match a packet if its source IP address logically anded with the inverse of the mask equals this IP address.

**Context**[qos classifiers multifield-classifier name string entry sequence-id number match ipv6 source-ip address string](#)**Tree**[address](#)**Configurable**

True

**Platforms**

7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**mask string****Description**

Match a packet if its source IP address logically anded with the inverse of this mask equals the configured IP address.

**Context**[qos classifiers multifield-classifier name string entry sequence-id number match ipv6 source-ip mask string](#)**Tree**[mask](#)

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### prefix string

<b>Description</b>	Match a packet if its source IP address is within the specified IPv6 prefix.
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name string entry sequence-id number match ipv6 source-ip prefix string</a>
<b>Tree</b>	<a href="#">prefix</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### transport

<b>Description</b>	Container for the layer-4 transport match criteria
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name string entry sequence-id number match transport</a>
<b>Tree</b>	<a href="#">transport</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### destination-port

<b>Description</b>	<p>A packet matches this condition if its destination TCP or UDP port number matches the value or range that is specified</p> <p>The rule should also have a condition that the IP protocol equals 6 (TCP) or 17 (UDP) in order for this to be interpreted correctly.</p>
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name string entry sequence-id number match transport destination-port</a>
<b>Tree</b>	<a href="#">destination-port</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**operator** *keyword*

<b>Description</b>	Comparison operator eq = equal ge = greater than or equal to le = less than or equal to
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match transport destination-port operator</a> <i>keyword</i>
<b>Tree</b>	<a href="#">operator</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>le Less than or equal.</li> <li>ge Greater than or equal.</li> <li>eq Equal to.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**range**

<b>Description</b>	Container used to specify a contiguous range of TCP/UDP port numbers
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match transport destination-port range</a>
<b>Tree</b>	<a href="#">range</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**end** (*number* | *keyword*)

<b>Description</b>	The ending port number to include in the range
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">match transport destination-port range end</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">end</a>
<b>Range</b>	0 to 65535

**tcp-flags string****Description**

A logical expression using the &amp;, | and ! logical operators and the TCP flag names: rst, syn and ack.

**Context**[qos classifiers multifield-classifier name string entry sequence-id number match transport tcp-flags string](#)**Tree**[tcp-flags](#)**Configurable**

True

**Platforms**

7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**tcam-entries****Description**

Information about the TCAM entries used to implement the ACL entry

**Context**[qos classifiers multifield-classifier name string entry sequence-id number tcam-entries](#)

<b>Tree</b>	<a href="#">tcam-entries</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### forwarding-complex [complex-identifier](#) *string*

<b>Description</b>	List of forwarding complexes in the system
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">tcam-entries forwarding-complex complex-identifier</a> <i>string</i>
<b>Tree</b>	<a href="#">forwarding-complex</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### complex-identifier *string*

<b>Description</b>	A forwarding complex in the format (slot-number,complex-number).
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">tcam-entries forwarding-complex complex-identifier</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### input-total *number*

<b>Description</b>	The number of TCAM entries required to implement this entry on all subinterfaces of this complex where the filter is applied to ingress traffic.  For example, if a single-instance of the entry takes 2 TCAM entries and the filter is an output-only subinterface-specific filter and the filter is applied to 5 subinterfaces on output and to 5 subinterfaces on input then input-total=2. If the entry is not applied to ingress traffic on any subinterfaces of this complex then input-total=0.
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">tcam-entries forwarding-complex complex-identifier</a> <i>string</i> <a href="#">input-total</a> <i>number</i>
<b>Tree</b>	<a href="#">input-total</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**output-total** *number*

<b>Description</b>	The number of TCAM entries required to implement this entry on all subinterfaces of this complex where the filter is applied to egress traffic.  For example, if a single-instance of the entry takes 2 TCAM entries and the filter is an output-only subinterface-specific filter and the filter is applied to 5 subinterfaces on output and to 5 subinterfaces on input then output-total=10. If the entry is not applied to egress traffic on any subinterfaces of this complex then output-total=0.
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">tcam-entries forwarding-complex complex-identifier</a> <i>string</i> <a href="#">output-total</a> <i>number</i>
<b>Tree</b>	<a href="#">output-total</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**single-instance** *number*

<b>Description</b>	The number of TCAM entries required to implement this entry if it is applied to only one subinterface and one traffic direction specific to this slot.  This is non-zero even if the filter is not applied to any subinterfaces of this complex. It captures the effect of TCAM entry expansion to deal with L4 port or VLAN ranges, for example.
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name</a> <i>string</i> <a href="#">entry sequence-id</a> <i>number</i> <a href="#">tcam-entries forwarding-complex complex-identifier</a> <i>string</i> <a href="#">single-instance</a> <i>number</i>
<b>Tree</b>	<a href="#">single-instance</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**type** *keyword*

<b>Description</b>	Type of the QoS multifield-classifier
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name</a> <i>string</i> <a href="#">type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>ipv4</code> Multifield-classifier using ipv4-based matching criteria</li> <li>• <code>ipv6</code></li> </ul>

Multifield-classifier using ipv6-based matching criteria

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### vxlan-default *reference*

<b>Description</b>	Reference to the name of a DSCP mapping policy that applies to terminating VXLAN packets
<b>Context</b>	<a href="#">qos classifiers vxlan-default reference</a>
<b>Tree</b>	<a href="#">vxlan-default</a>
<b>Reference</b>	<a href="#">qos classifiers dscp-policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### explicit-congestion-notification

<b>Description</b>	Enable the explicit-congestion-notification context
<b>Context</b>	<a href="#">qos explicit-congestion-notification</a>
<b>Tree</b>	<a href="#">explicit-congestion-notification</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### ecn-dscp-policy *reference*

<b>Description</b>	Reference to the DSCP rewrite policy to use when DSCP rewrite is required as a side effect of ECN remarking. This is required configuration in order to globally enable ECN on J2 platforms
<b>Context</b>	<a href="#">qos explicit-congestion-notification ecn-dscp-policy reference</a>
<b>Tree</b>	<a href="#">ecn-dscp-policy</a>
<b>Reference</b>	<a href="#">qos rewrite-rules dscp-policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## forwarding-classes

<b>Description</b>	Enclosing container for list of user-defined forwarding class names
<b>Context</b>	<a href="#">qos forwarding-classes</a>
<b>Tree</b>	<a href="#">forwarding-classes</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## forwarding-class *name string*

<b>Description</b>	Enter the forwarding-class list instance
<b>Context</b>	<a href="#">qos forwarding-classes forwarding-class name string</a>
<b>Tree</b>	<a href="#">forwarding-class</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## name *string*

<b>Description</b>	User-defined name of the forwarding class  The following forwarding-class names are the system-reserved default FC names on 7250 IXR systems: fc0 fc1 fc2 fc3 fc4 fc5 fc6 fc7
<b>Context</b>	<a href="#">qos forwarding-classes forwarding-class name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## output

<b>Description</b>	Enter the output context
<b>Context</b>	<a href="#">qos forwarding-classes forwarding-class name string output</a>
<b>Tree</b>	<a href="#">output</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## multicast-queue *reference*

<b>Description</b>	Output queue for multicast packets within this forwarding class
--------------------	---

<b>Context</b>	<a href="#">qos forwarding-classes forwarding-class name</a> <i>string</i> output <a href="#">multicast-queue reference</a>
<b>Tree</b>	<a href="#">multicast-queue</a>
<b>Reference</b>	<a href="#">qos queues queue name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### unicast-queue *reference*

<b>Description</b>	Output queue for unicast packets within this forwarding class For the system-reserved default forwarding classes: fc0 -> unicast-queue = unicast-queue0 fc1 -> unicast-queue = unicast-queue1 fc2 -> unicast-queue = unicast-queue2 fc3 -> unicast-queue = unicast-queue3 fc4 -> unicast-queue = unicast-queue4 fc5 -> unicast-queue = unicast-queue5 fc6 -> unicast-queue = unicast-queue6 fc7 -> unicast-queue = unicast-queue7
<b>Context</b>	<a href="#">qos forwarding-classes forwarding-class name</a> <i>string</i> output <a href="#">unicast-queue reference</a>
<b>Tree</b>	<a href="#">unicast-queue</a>
<b>Reference</b>	<a href="#">qos queues queue name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### interfaces

<b>Description</b>	Interfaces and subinterfaces with QoS configuration and state
<b>Context</b>	<a href="#">qos interfaces</a>
<b>Tree</b>	<a href="#">interfaces</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### interface [interface-id](#) *string*

<b>Description</b>	List of interfaces and subinterfaces referenced by QoS policies
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**interface-id** *string*

<b>Description</b>	Identifier for the interface or subinterface
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**input**

<b>Description</b>	Top-level container for QoS configuration and state relating to ingress traffic on the subinterface
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input</a>
<b>Tree</b>	<a href="#">input</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**classifiers**

<b>Description</b>	Classifiers to be applied to the subinterface
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input</a> <a href="#">classifiers</a>
<b>Tree</b>	<a href="#">classifiers</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**classifier** *type* *keyword*

<b>Description</b>	A list of classifiers that should be applied to the interface
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input</a> <a href="#">classifiers</a> <a href="#">classifier</a> <i>type</i> <i>keyword</i>
<b>Tree</b>	<a href="#">classifier</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**type** *keyword*

<b>Description</b>	Type of packets matched by the classifier.
--------------------	--

<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input classifiers classifier type</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>ipv4</code> Classifier matches IPv4 Unicast packets.</li> <li>• <code>ipv6</code> Classifier matches IPv6 Unicast packets.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**name** *reference*

<b>Description</b>	Reference to the classifier to be applied to ingress traffic on the interface
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input classifiers classifier type</a> <i>keyword name reference</i>
<b>Tree</b>	<a href="#">name</a>
<b>Reference</b>	<a href="#">qos classifiers multifeild-classifier name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**default**

<b>Description</b>	Enable the default context
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input classifiers default</a>
<b>Tree</b>	<a href="#">default</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**drop-probability** *keyword*

<b>Description</b>	The default drop-probability for packets arriving on this subinterface that do not match any classification rule
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input classifiers default drop-probability</a> <i>keyword</i>
<b>Tree</b>	<a href="#">drop-probability</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>low</code></li> </ul>

Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.

- medium

Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.

- high

Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### forwarding-class *reference*

<b>Description</b>	The forwarding class
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input classifiers default forwarding-class</a> <i>reference</i>
<b>Tree</b>	<a href="#">forwarding-class</a>
<b>Reference</b>	<a href="#">qos forwarding-classes forwarding-class name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### dot1p-policy *reference*

<b>Description</b>	Reference to the name of a dot1p mapping policy
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input classifiers dot1p-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">dot1p-policy</a>
<b>Reference</b>	<a href="#">qos classifiers dot1p-policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### dscp-policy *reference*

<b>Description</b>	Reference to the name of a DSCP mapping policy that applies to both IPv4 and IPv6 traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input classifiers dscp-policy</a> <i>reference</i>

<b>Tree</b>	<a href="#">dscp-policy</a>
<b>Reference</b>	<a href="#">qos classifiers dscp-policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4

### ipv4-dscp-policy reference

<b>Description</b>	Reference to the name of a DSCP mapping policy that applies only to IPv4 traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input classifiers ipv4-dscp-policy reference</a>
<b>Tree</b>	<a href="#">ipv4-dscp-policy</a>
<b>Reference</b>	<a href="#">qos classifiers dscp-policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv6-dscp-policy reference

<b>Description</b>	Reference to the name of a DSCP mapping policy that applies only to IPv6 traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input classifiers ipv6-dscp-policy reference</a>
<b>Tree</b>	<a href="#">ipv6-dscp-policy</a>
<b>Reference</b>	<a href="#">qos classifiers dscp-policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### mpls-traffic-class-policy reference

<b>Description</b>	Reference to the name of an MPLS traffic-class mapping policy
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input classifiers mpls-traffic-class-policy reference</a>
<b>Tree</b>	<a href="#">mpls-traffic-class-policy</a>
<b>Reference</b>	<a href="#">qos classifiers mpls-traffic-class-policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**policer-templates**

<b>Description</b>	acl policers
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> input <a href="#">policer-templates</a>
<b>Tree</b>	<a href="#">policer-templates</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**policer** [sequence-id](#) *number*

<b>Description</b>	The list of policer instances belonging to the template definition.
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> input <a href="#">policer-templates</a> <a href="#">policer sequence-id</a> <i>number</i>
<b>Tree</b>	<a href="#">policer</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**sequence-id** *number*

<b>Description</b>	Policer sequence-id
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> input <a href="#">policer-templates</a> <a href="#">policer sequence-id</a> <i>number</i>
<b>Range</b>	1 to 65535
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**committed-burst-size** *number*

<b>Description</b>	The actual/operational maximum CIR bucket depth in bytes as it is programmed into hardware.
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> input <a href="#">policer-templates</a> <a href="#">policer sequence-id</a> <i>number</i> <a href="#">committed-burst-size</a> <i>number</i>
<b>Tree</b>	<a href="#">committed-burst-size</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**committed-rate-kbps** *number*

<b>Description</b>	The actual/operational committed information rate (CIR) of the policer as it is programmed into hardware.
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input policer-templates policer sequence-id</a> <i>number</i> <b>committed-rate-kbps</b> <i>number</i>
<b>Tree</b>	<a href="#">committed-rate-kbps</a>
<b>Units</b>	kbps
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**maximum-burst-size** *number*

<b>Description</b>	The actual/operational maximum PIR bucket depth in bytes as it is programmed into hardware.
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input policer-templates policer sequence-id</a> <i>number</i> <b>maximum-burst-size</b> <i>number</i>
<b>Tree</b>	<a href="#">maximum-burst-size</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**peak-rate-kbps** *number*

<b>Description</b>	The actual/operational peak information rate (PIR) of the policer as it is programmed into hardware.
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input policer-templates policer sequence-id</a> <i>number</i> <b>peak-rate-kbps</b> <i>number</i>
<b>Tree</b>	<a href="#">peak-rate-kbps</a>
<b>Units</b>	kbps
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input policer-templates policer sequence-id</a> <i>number</i> <b>statistics</b>

<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### accepted-octets *number*

<b>Description</b>	The number of octets in packets that were accepted by the policer, counting all drop-probabilities at policer output Not available in forwarding-focus mode
<b>Context</b>	<a href="#">qos interfaces interface interface-id string input policer-templates policer sequence-id number statistics accepted-octets number</a>
<b>Tree</b>	<a href="#">accepted-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### accepted-packets *number*

<b>Description</b>	The number of packets that were accepted by the policer, counting all drop-probabilities at policer output Not available in forwarding-focus mode
<b>Context</b>	<a href="#">qos interfaces interface interface-id string input policer-templates policer sequence-id number statistics accepted-packets number</a>
<b>Tree</b>	<a href="#">accepted-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### committed-octets *number*

<b>Description</b>	The number of octets in packets that were accepted with low drop-probability at policer output Not available in violating-focus mode
<b>Context</b>	<a href="#">qos interfaces interface interface-id string input policer-templates policer sequence-id number statistics committed-octets number</a>
<b>Tree</b>	<a href="#">committed-octets</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **committed-packets** *number*

<b>Description</b>	The number of packets that were accepted with low drop-probability at policer output Not available in violating-focus mode
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input policer-templates policer sequence-id</a> <i>number</i> <a href="#">statistics committed-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">committed-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **exceeding-octets** *number*

<b>Description</b>	The number of octets in packets that were accepted with medium drop-probability at policer output Not available in violating-focus mode
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input policer-templates policer sequence-id</a> <i>number</i> <a href="#">statistics exceeding-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">exceeding-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **exceeding-packets** *number*

<b>Description</b>	The number of packets that were accepted with medium drop-probability at policer output Not available in violating-focus mode
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">input policer-templates policer sequence-id</a> <i>number</i> <a href="#">statistics exceeding-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">exceeding-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **last-clear** *string*

**Description** Time of the last clear command performed by the user at this level

**Context** [qos interfaces interface interface-id](#) *string* [input policer-templates policer sequence-id](#) *number* [statistics last-clear](#) *string*

**Tree** [last-clear](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** Supported on all platforms

### **violating-octets** *number*

**Description** The number of octets in packets that were considered violating by the policer  
Not available in forwarding-focus mode

**Context** [qos interfaces interface interface-id](#) *string* [input policer-templates policer sequence-id](#) *number* [statistics violating-octets](#) *number*

**Tree** [violating-octets](#)

**Default** 0

**Configurable** False

**Platforms** Supported on all platforms

### **violating-packets** *number*

**Description** The number of packets that were considered violating by the policer  
Not available in forwarding-focus mode

**Context** [qos interfaces interface interface-id](#) *string* [input policer-templates policer sequence-id](#) *number* [statistics violating-packets](#) *number*

**Tree** [violating-packets](#)

**Default** 0

**Configurable** False

**Platforms** Supported on all platforms

### **policer-template** *reference*

**Description** The name of the policer template applied to input traffic on the subinterface

<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> input <a href="#">policer-templates policer-template</a> <i>reference</i>
<b>Tree</b>	<a href="#">policer-template</a>
<b>Reference</b>	<a href="#">qos policer-templates policer-template</a> name <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## interface-ref

<b>Description</b>	Reference to an interface or subinterface
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">interface-ref</a>
<b>Tree</b>	<a href="#">interface-ref</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## interface *reference*

<b>Description</b>	Reference to a base interface, for example a port or LAG
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">interface-ref</a> <a href="#">interface</a> <i>reference</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Reference</b>	<a href="#">interface</a> name <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## subinterface *reference*

<b>Description</b>	Reference to a subinterface This requires the base interface to be specified using the interface leaf in this container
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">interface-ref</a> <a href="#">subinterface</a> <i>reference</i>
<b>Tree</b>	<a href="#">subinterface</a>
<b>Reference</b>	<a href="#">interface</a> name <i>string</i> <a href="#">subinterface</a> index <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## output

<b>Description</b>	Top-level container for QoS configuration and state relating to egress traffic on the interface or subinterface
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <b>output</b>
<b>Tree</b>	<a href="#">output</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## buffer-allocation-profile *reference*

<b>Description</b>	Buffer-allocation profile for interface output queues
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <b>output</b> <a href="#">buffer-allocation-profile</a> <i>reference</i>
<b>Tree</b>	<a href="#">buffer-allocation-profile</a>
<b>Reference</b>	<a href="#">qos buffer-management buffer-allocation-profile name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## queues

<b>Description</b>	Container for a list of queues that are instantiated on an interface
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <b>output</b> <a href="#">queues</a>
<b>Tree</b>	<a href="#">queues</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## queue [queue-name](#) *reference*

<b>Description</b>	List of queues
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <b>output</b> <a href="#">queues</a> <a href="#">queue</a> <a href="#">queue-name</a> <i>reference</i>
<b>Tree</b>	<a href="#">queue</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**queue-name** *reference*

<b>Description</b>	The queue name
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i>
<b>Reference</b>	<a href="#">qos queues queue name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**active-queue-management**

<b>Description</b>	Enter the active-queue-management context
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">active-queue-management</a>
<b>Tree</b>	<a href="#">active-queue-management</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**wred-slope** [traffic-type](#) *keyword* [drop-probability](#) *keyword* [enable-ecn](#) *boolean*

<b>Description</b>	List of WRED slopes
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">active-queue-management wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i>
<b>Tree</b>	<a href="#">wred-slope</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**traffic-type** *keyword*

<b>Description</b>	The traffic type to which the WRED slope applies
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">active-queue-management wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>tcp Refers to IPv4/IPv6 packets with a protocol/next-header indicating a value of 6</li> <li>non-tcp</li> </ul>

Refers to all packets that are not IPv4/IPv6 packets with a protocol/next-header indicating a value of 6

- all

Refers to all traffic, whether it is TCP or non-TCP

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **drop-probability** *keyword*

<b>Description</b>	The drop probability to which the WRED slope applies
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">active-queue-management wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• low Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green</li> <li>• medium Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow</li> <li>• high Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red</li> <li>• all All traffic, consisting of traffic marked low, medium and high drop-probability</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **enable-ecn** *boolean*

<b>Description</b>	Indicates that packets should be marked with ecn-bit when the result of wred-slope would discard the packet. It is mutually exclusive with 'drop' flag
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">active-queue-management wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**drop** *boolean*

<b>Description</b>	Indicates that packets will be dropped based on WRED slope policy
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">active-queue-management wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i> <a href="#">drop</a> <i>boolean</i>
<b>Tree</b>	<a href="#">drop</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**max-probability** *number*

<b>Description</b>	The maximum probability of dropping a packet (at or above the max-threshold). On 7250 IXR-6/10 there can be a significant difference between the configured value and the operational value
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">active-queue-management wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i> <a href="#">max-probability</a> <i>number</i>
<b>Tree</b>	<a href="#">max-probability</a>
<b>Range</b>	0 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**max-threshold-bytes** *number*

<b>Description</b>	The queue depth in bytes that corresponds to the WRED maximum threshold parameter
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">active-queue-management wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i> <a href="#">max-threshold-bytes</a> <i>number</i>
<b>Tree</b>	<a href="#">max-threshold-bytes</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**min-threshold-bytes** *number*

<b>Description</b>	The queue depth in bytes that corresponds to the WRED minimum threshold parameter
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">active-queue-management wred-slope traffic-type</a> <i>keyword</i> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">enable-ecn</a> <i>boolean</i> <a href="#">min-threshold-bytes</a> <i>number</i>
<b>Tree</b>	<a href="#">min-threshold-bytes</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**forwarding-class** *string*

<b>Description</b>	The list of forwarding classes that map to this queue
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">forwarding-class</a> <i>string</i>
<b>Tree</b>	<a href="#">forwarding-class</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**queue-depth**

<b>Description</b>	Enter the queue-depth context
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-depth</a>
<b>Tree</b>	<a href="#">queue-depth</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**high-threshold-bytes** *number*

<b>Description</b>	The operational hardware value of the high threshold in bytes
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-depth</a> <a href="#">high-threshold-bytes</a> <i>number</i>
<b>Tree</b>	<a href="#">high-threshold-bytes</a>
<b>Units</b>	bytes
<b>Configurable</b>	False

**Platforms** Supported on all platforms except 7220 IXR-D4/D5

### **last-high-threshold-time** *string*

**Description** The last time the queue depth exceeded the high-threshold in a rising direction

**Context** [qos interfaces interface interface-id](#) *string* [output queues queue queue-name](#) [reference queue-depth last-high-threshold-time](#) *string*

**Tree** [last-high-threshold-time](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** Supported on all platforms except 7220 IXR-D4/D5

### **maximum-burst-size** *number*

**Description** Maximum queue depth in bytes

**Context** [qos interfaces interface interface-id](#) *string* [output queues queue queue-name](#) [reference queue-depth maximum-burst-size](#) *number*

**Tree** [maximum-burst-size](#)

**Units** bytes

**Configurable** False

**Platforms** Supported on all platforms except 7220 IXR-D1

### **queue-management-profile** *reference*

**Description** The queue management profile that is to be used for the queue on the interface.  
  
For example, the system may use a profile which specifies that WRED curves are used for setting an ECN mark in the IP header instead of dropping a packet in order to signal impending congestion and for determining when there is sufficient congestion to tail drop packets

**Context** [qos interfaces interface interface-id](#) *string* [output queues queue queue-name](#) [reference queue-management-profile](#) *reference*

**Tree** [queue-management-profile](#)

**Reference** [qos buffer-management queue-management-profile name](#) *string*

**Configurable** True

**Platforms** Supported on all platforms

## queue-statistics

<b>Description</b>	Enter the queue-statistics context
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics</a>
<b>Tree</b>	<a href="#">queue-statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## aggregate-statistics

<b>Description</b>	Aggregate queue statistics per interface-queue or subinterface-queue
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics aggregate-statistics</a>
<b>Tree</b>	<a href="#">aggregate-statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## dropped-octets *number*

<b>Description</b>	Number of octets dropped by the queue. On 7250-IXR (7250 IXR-6/10-based) systems unicast packet drops related to egress port congestion should show up in the VOQ stats. This statistics is an aggregate of VOQ and EGT drops
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics aggregate-statistics dropped-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">dropped-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## dropped-packets *number*

<b>Description</b>	Number of packets dropped by the queue. On 7250-IXR (7250 IXR-6/10-based) systems unicast packet drops related to egress port congestion should show up in the VOQ stats. This statistics is an aggregate of VOQ and EGT drops
--------------------	---

<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics aggregate-statistics dropped-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">dropped-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **egq-dropped-octets** *number*

<b>Description</b>	Number of octets dropped by the queue at egress
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics aggregate-statistics egq-dropped-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">egq-dropped-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **egq-dropped-packets** *number*

<b>Description</b>	Number of packets dropped by the queue at egress
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics aggregate-statistics egq-dropped-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">egq-dropped-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-clear** *string*

<b>Description</b>	Timestamp of the last time the statistics associated with this queue were cleared
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics aggregate-statistics last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**queue-depth**

<b>Description</b>	Enter the queue-depth context
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics aggregate-statistics queue-depth</a>
<b>Tree</b>	<a href="#">queue-depth</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**high-threshold-bytes** *number*

<b>Description</b>	The operational hardware value of the high threshold in bytes
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics aggregate-statistics queue-depth high-threshold-bytes</a> <i>number</i>
<b>Tree</b>	<a href="#">high-threshold-bytes</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**last-high-threshold-time** *string*

<b>Description</b>	The last time the queue depth exceeded the high-threshold in a rising direction
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics aggregate-statistics queue-depth last-high-threshold-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-high-threshold-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**transmitted-octets** *number*

<b>Description</b>	Number of octets transmitted by the queue. Note that on IXR-6/10 this count is based on the ingress packet size including received MPLS labels plus the Ethernet encapsulation that was present at ingress; popped and pushed MPLS labels are not accounted for
--------------------	--

and neither is the difference, if any, between ingress and egress Ethernet encapsulation size.

Note that on IXR-6e/10e this count is based on the ingress packet size minus terminated/popped MPLS labels minus the Ethernet encapsulation; pushed MPLS labels are not accounted for and neither is the egress Ethernet encapsulation

<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics aggregate-statistics transmitted-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">transmitted-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **transmitted-packets** *number*

<b>Description</b>	Number of packets transmitted by the queue, including transit traffic and locally originated traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics aggregate-statistics transmitted-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">transmitted-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **virtual-output-queue** [slot](#) *number*

<b>Description</b>	List of virtual output queues that can send traffic to this egress queue. The list always has one entry for each IMM slot in the chassis, even if one or more slots are empty
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics aggregate-statistics virtual-output-queue</a> <a href="#">slot</a> <i>number</i>
<b>Tree</b>	<a href="#">virtual-output-queue</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **slot** *number*

<b>Description</b>	The slot identifier for the virtual output queue
--------------------	--

<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number</a>
<b>Range</b>	1 to 8
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### high-drop-probability

<b>Description</b>	The unicast statistics unicast packets transmitted from the VOQ to the egress queue that were classified as high drop-probability. This reads 0 when the IMM associated with the VOQ is not inserted and it resets to 0 whenever the IMM associated with the VOQ is removed
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number high-drop-probability</a>
<b>Tree</b>	<a href="#">high-drop-probability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### dropped-octets *number*

<b>Description</b>	Number of octets transmitted by the queue dropped by the queue
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number high-drop-probability dropped-octets number</a>
<b>Tree</b>	<a href="#">dropped-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### dropped-packets *number*

<b>Description</b>	Number of packets transmitted by the queue dropped by the queue
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number high-drop-probability dropped-packets number</a>
<b>Tree</b>	<a href="#">dropped-packets</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### transmitted-octets *number*

<b>Description</b>	Number of octets transmitted by the queue, including transit traffic and locally originated traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number high-drop-probability transmitted-octets number</a>
<b>Tree</b>	<a href="#">transmitted-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### transmitted-packets *number*

<b>Description</b>	Number of packets transmitted by the queue, including transit traffic and locally originated traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number high-drop-probability transmitted-packets number</a>
<b>Tree</b>	<a href="#">transmitted-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### low-drop-probability

<b>Description</b>	The unicast statistics from the VOQ to the egress queue that were classified as low drop-probability. This reads 0 when the IMM associated with the VOQ is not inserted and it resets to 0 whenever the IMM associated with the VOQ is removed
<b>Context</b>	<a href="#">qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number low-drop-probability</a>
<b>Tree</b>	<a href="#">low-drop-probability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**dropped-octets** *number*

<b>Description</b>	Number of octets transmitted by the queue dropped by the queue
<b>Context</b>	<a href="#">qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number low-drop-probability dropped-octets number</a>
<b>Tree</b>	<a href="#">dropped-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**dropped-packets** *number*

<b>Description</b>	Number of packets transmitted by the queue dropped by the queue
<b>Context</b>	<a href="#">qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number low-drop-probability dropped-packets number</a>
<b>Tree</b>	<a href="#">dropped-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**transmitted-octets** *number*

<b>Description</b>	Number of octets transmitted by the queue, including transit traffic and locally originated traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number low-drop-probability transmitted-octets number</a>
<b>Tree</b>	<a href="#">transmitted-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**transmitted-packets** *number*

<b>Description</b>	Number of packets transmitted by the queue, including transit traffic and locally originated traffic
--------------------	--

<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number low-drop-probability transmitted-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">transmitted-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### medium-drop-probability

<b>Description</b>	The unicast statistics from the VOQ to the egress queue that were classified as medium drop-probability. This reads 0 when the IMM associated with the VOQ is not inserted and it resets to 0 whenever the IMM associated with the VOQ is removed
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number medium-drop-probability</a>
<b>Tree</b>	<a href="#">medium-drop-probability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### dropped-octets *number*

<b>Description</b>	Number of octets transmitted by the queue dropped by the queue
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number medium-drop-probability dropped-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">dropped-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### dropped-packets *number*

<b>Description</b>	Number of packets transmitted by the queue dropped by the queue
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number medium-drop-probability dropped-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">dropped-packets</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### transmitted-octets *number*

<b>Description</b>	Number of octets transmitted by the queue, including transit traffic and locally originated traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number medium-drop-probability transmitted-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">transmitted-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### transmitted-packets *number*

<b>Description</b>	Number of packets transmitted by the queue, including transit traffic and locally originated traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number medium-drop-probability transmitted-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">transmitted-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### queue-depth

<b>Description</b>	Enter the queue-depth context
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number queue-depth</a>
<b>Tree</b>	<a href="#">queue-depth</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**high-threshold-bytes** *number*

<b>Description</b>	The operational hardware value of the high threshold in bytes
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics aggregate-statistics virtual-output-queue slot</a> <a href="#">number queue-depth high-threshold-bytes</a> <i>number</i>
<b>Tree</b>	<a href="#">high-threshold-bytes</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-high-threshold-time** *string*

<b>Description</b>	The last time the depth of either VOQ associated with this slot exceeded the high-threshold in a rising direction
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics aggregate-statistics virtual-output-queue slot</a> <a href="#">number queue-depth last-high-threshold-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-high-threshold-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**per-lag-member-statistics**

<b>Description</b>	Queue statistics per-LAG member. These statistics are relevant only for LAG
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics per-lag-member-statistics</a>
<b>Tree</b>	<a href="#">per-lag-member-statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**member-interface** [member-interface-name](#) *string*

<b>Description</b>	Enter the member-interface list instance
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference queue-statistics per-lag-member-statistics member-interface</a> <a href="#">member-interface-name</a> <i>string</i>

<b>Tree</b>	<a href="#">member-interface</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### **member-interface-name** *string*

<b>Description</b>	Enter the member-interface-name context
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### **dropped-octets** *number*

<b>Description</b>	Number of octets dropped by the queue. On 7250-IXR (7250 IXR-6/10-based) systems unicast packet drops related to egress port congestion should show up in the VOQ stats. This statistics is an aggregate of VOQ and EGT drops
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <b>dropped-octets</b> <i>number</i>
<b>Tree</b>	<a href="#">dropped-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **dropped-packets** *number*

<b>Description</b>	Number of packets dropped by the queue. On 7250-IXR (7250 IXR-6/10-based) systems unicast packet drops related to egress port congestion should show up in the VOQ stats. This statistics is an aggregate of VOQ and EGT drops
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <b>dropped-packets</b> <i>number</i>
<b>Tree</b>	<a href="#">dropped-packets</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **egq-dropped-octets** *number*

<b>Description</b>	Number of octets dropped by the queue at egress
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <b>egq-dropped-octets</b> <i>number</i>
<b>Tree</b>	<a href="#">egq-dropped-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **egq-dropped-packets** *number*

<b>Description</b>	Number of packets dropped by the queue at egress
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <b>egq-dropped-packets</b> <i>number</i>
<b>Tree</b>	<a href="#">egq-dropped-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-clear** *string*

<b>Description</b>	Timestamp of the last time the statistics associated with this queue were cleared
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <b>last-clear</b> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**queue-depth**

<b>Description</b>	Enter the queue-depth context
<b>Context</b>	<a href="#">qos</a> <a href="#">interfaces</a> <a href="#">interface</a> <a href="#">interface-id</a> <i>string</i> <a href="#">output</a> <a href="#">queues</a> <a href="#">queue</a> <a href="#">queue-name</a> <i>reference</i> <a href="#">queue-statistics</a> <a href="#">per-lag-member-statistics</a> <a href="#">member-interface</a> <a href="#">member-interface-name</a> <i>string</i> <a href="#">queue-depth</a>
<b>Tree</b>	<a href="#">queue-depth</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**high-threshold-bytes** *number*

<b>Description</b>	The operational hardware value of the high threshold in bytes
<b>Context</b>	<a href="#">qos</a> <a href="#">interfaces</a> <a href="#">interface</a> <a href="#">interface-id</a> <i>string</i> <a href="#">output</a> <a href="#">queues</a> <a href="#">queue</a> <a href="#">queue-name</a> <i>reference</i> <a href="#">queue-statistics</a> <a href="#">per-lag-member-statistics</a> <a href="#">member-interface</a> <a href="#">member-interface-name</a> <i>string</i> <a href="#">queue-depth</a> <a href="#">high-threshold-bytes</a> <i>number</i>
<b>Tree</b>	<a href="#">high-threshold-bytes</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**last-high-threshold-time** *string*

<b>Description</b>	The last time the queue depth exceeded the high-threshold in a rising direction
<b>Context</b>	<a href="#">qos</a> <a href="#">interfaces</a> <a href="#">interface</a> <a href="#">interface-id</a> <i>string</i> <a href="#">output</a> <a href="#">queues</a> <a href="#">queue</a> <a href="#">queue-name</a> <i>reference</i> <a href="#">queue-statistics</a> <a href="#">per-lag-member-statistics</a> <a href="#">member-interface</a> <a href="#">member-interface-name</a> <i>string</i> <a href="#">queue-depth</a> <a href="#">last-high-threshold-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-high-threshold-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**transmitted-octets** *number*

<b>Description</b>	Number of octets transmitted by the queue.  Note that on IXR-6/10 this count is based on the ingress packet size including received MPLS labels plus the Ethernet encapsulation that was present at ingress; popped and pushed MPLS labels are not accounted for
--------------------	--

and neither is the difference, if any, between ingress and egress Ethernet encapsulation size.

Note that on IXR-6e/10e this count is based on the ingress packet size minus terminated/popped MPLS labels minus the Ethernet encapsulation; pushed MPLS labels are not accounted for and neither is the egress Ethernet encapsulation

<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <a href="#">transmitted-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">transmitted-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **transmitted-packets** *number*

<b>Description</b>	Number of packets transmitted by the queue, including transit traffic and locally originated traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <a href="#">transmitted-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">transmitted-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **virtual-output-queue** *slot* *number*

<b>Description</b>	List of virtual output queues that can send traffic to this egress queue. The list always has one entry for each IMM slot in the chassis, even if one or more slots are empty
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue</a> <i>slot</i> <i>number</i>
<b>Tree</b>	<a href="#">virtual-output-queue</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**slot number**

<b>Description</b>	The slot identifier for the virtual output queue
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue slot number</a>
<b>Range</b>	1 to 8
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**high-drop-probability**

<b>Description</b>	The unicast statistics unicast packets transmitted from the VOQ to the egress queue that were classified as high drop-probability. This reads 0 when the IMM associated with the VOQ is not inserted and it resets to 0 whenever the IMM associated with the VOQ is removed
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue slot number high-drop-probability</a>
<b>Tree</b>	<a href="#">high-drop-probability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**dropped-octets number**

<b>Description</b>	Number of octets transmitted by the queue dropped by the queue
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue slot number high-drop-probability dropped-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">dropped-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**dropped-packets number**

<b>Description</b>	Number of packets transmitted by the queue dropped by the queue
--------------------	---

<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue slot</a> <i>number</i> <a href="#">high-drop-probability dropped-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">dropped-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### transmitted-octets *number*

<b>Description</b>	Number of octets transmitted by the queue, including transit traffic and locally originated traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue slot</a> <i>number</i> <a href="#">high-drop-probability transmitted-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">transmitted-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### transmitted-packets *number*

<b>Description</b>	Number of packets transmitted by the queue, including transit traffic and locally originated traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue slot</a> <i>number</i> <a href="#">high-drop-probability transmitted-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">transmitted-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### low-drop-probability

<b>Description</b>	The unicast statistics from the VOQ to the egress queue that were classified as low drop-probability. This reads 0 when the IMM associated with the VOQ
--------------------	---

is not inserted and it resets to 0 whenever the IMM associated with the VOQ is removed

<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue slot</a> <i>number</i> <a href="#">low-drop-probability</a>
<b>Tree</b>	<a href="#">low-drop-probability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **dropped-octets** *number*

<b>Description</b>	Number of octets transmitted by the queue dropped by the queue
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue slot</a> <i>number</i> <a href="#">low-drop-probability</a> <a href="#">dropped-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">dropped-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **dropped-packets** *number*

<b>Description</b>	Number of packets transmitted by the queue dropped by the queue
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue slot</a> <i>number</i> <a href="#">low-drop-probability</a> <a href="#">dropped-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">dropped-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **transmitted-octets** *number*

<b>Description</b>	Number of octets transmitted by the queue, including transit traffic and locally originated traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface</a>

	<a href="#">member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue</a> <a href="#">slot</a> <i>number</i> <a href="#">low-drop-probability</a> <a href="#">transmitted-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">transmitted-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **transmitted-packets** *number*

<b>Description</b>	Number of packets transmitted by the queue, including transit traffic and locally originated traffic
<b>Context</b>	<a href="#">qos</a> <a href="#">interfaces</a> <a href="#">interface</a> <a href="#">interface-id</a> <i>string</i> <a href="#">output</a> <a href="#">queues</a> <a href="#">queue</a> <a href="#">queue-name</a> <i>reference</i> <a href="#">queue-statistics</a> <a href="#">per-lag-member-statistics</a> <a href="#">member-interface</a> <a href="#">member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue</a> <a href="#">slot</a> <i>number</i> <a href="#">low-drop-probability</a> <a href="#">transmitted-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">transmitted-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **medium-drop-probability**

<b>Description</b>	The unicast statistics from the VOQ to the egress queue that were classified as medium drop-probability. This reads 0 when the IMM associated with the VOQ is not inserted and it resets to 0 whenever the IMM associated with the VOQ is removed
<b>Context</b>	<a href="#">qos</a> <a href="#">interfaces</a> <a href="#">interface</a> <a href="#">interface-id</a> <i>string</i> <a href="#">output</a> <a href="#">queues</a> <a href="#">queue</a> <a href="#">queue-name</a> <i>reference</i> <a href="#">queue-statistics</a> <a href="#">per-lag-member-statistics</a> <a href="#">member-interface</a> <a href="#">member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue</a> <a href="#">slot</a> <i>number</i> <a href="#">medium-drop-probability</a>
<b>Tree</b>	<a href="#">medium-drop-probability</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **dropped-octets** *number*

<b>Description</b>	Number of octets transmitted by the queue dropped by the queue
<b>Context</b>	<a href="#">qos</a> <a href="#">interfaces</a> <a href="#">interface</a> <a href="#">interface-id</a> <i>string</i> <a href="#">output</a> <a href="#">queues</a> <a href="#">queue</a> <a href="#">queue-name</a> <i>reference</i> <a href="#">queue-statistics</a> <a href="#">per-lag-member-statistics</a> <a href="#">member-interface</a>

	<a href="#">member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue slot number</a> <i>number</i> <a href="#">medium-drop-probability</a> <a href="#">dropped-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">dropped-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**dropped-packets** *number*

<b>Description</b>	Number of packets transmitted by the queue dropped by the queue
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue slot number</a> <i>number</i> <a href="#">medium-drop-probability</a> <a href="#">dropped-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">dropped-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**transmitted-octets** *number*

<b>Description</b>	Number of octets transmitted by the queue, including transit traffic and locally originated traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue slot number</a> <i>number</i> <a href="#">medium-drop-probability</a> <a href="#">transmitted-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">transmitted-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**transmitted-packets** *number*

<b>Description</b>	Number of packets transmitted by the queue, including transit traffic and locally originated traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">queue-statistics per-lag-member-statistics member-interface</a>

	<a href="#">member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue</a> <a href="#">slot</a> <i>number</i> <a href="#">medium-drop-probability</a> <a href="#">transmitted-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">transmitted-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## queue-depth

<b>Description</b>	Enter the queue-depth context
<b>Context</b>	<a href="#">qos</a> <a href="#">interfaces</a> <a href="#">interface</a> <a href="#">interface-id</a> <i>string</i> <a href="#">output</a> <a href="#">queues</a> <a href="#">queue</a> <a href="#">queue-name</a> <i>reference</i> <a href="#">queue-statistics</a> <a href="#">per-lag-member-statistics</a> <a href="#">member-interface</a> <a href="#">member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue</a> <a href="#">slot</a> <i>number</i> <a href="#">queue-depth</a>
<b>Tree</b>	<a href="#">queue-depth</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## high-threshold-bytes *number*

<b>Description</b>	The operational hardware value of the high threshold in bytes
<b>Context</b>	<a href="#">qos</a> <a href="#">interfaces</a> <a href="#">interface</a> <a href="#">interface-id</a> <i>string</i> <a href="#">output</a> <a href="#">queues</a> <a href="#">queue</a> <a href="#">queue-name</a> <i>reference</i> <a href="#">queue-statistics</a> <a href="#">per-lag-member-statistics</a> <a href="#">member-interface</a> <a href="#">member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue</a> <a href="#">slot</a> <i>number</i> <a href="#">queue-depth</a> <a href="#">high-threshold-bytes</a> <i>number</i>
<b>Tree</b>	<a href="#">high-threshold-bytes</a>
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## last-high-threshold-time *string*

<b>Description</b>	The last time the depth of either VOQ associated with this slot exceeded the high-threshold in a rising direction
<b>Context</b>	<a href="#">qos</a> <a href="#">interfaces</a> <a href="#">interface</a> <a href="#">interface-id</a> <i>string</i> <a href="#">output</a> <a href="#">queues</a> <a href="#">queue</a> <a href="#">queue-name</a> <i>reference</i> <a href="#">queue-statistics</a> <a href="#">per-lag-member-statistics</a> <a href="#">member-interface</a> <a href="#">member-interface-name</a> <i>string</i> <a href="#">virtual-output-queue</a> <a href="#">slot</a> <i>number</i> <a href="#">queue-depth</a> <a href="#">last-high-threshold-time</a> <i>string</i>
<b>Tree</b>	<a href="#">last-high-threshold-time</a>
<b>String Length</b>	20 to 32

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## scheduling

<b>Description</b>	Container for queue scheduling parameters
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference scheduling</a>
<b>Tree</b>	<a href="#">scheduling</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## peak-rate-bps *number*

<b>Description</b>	The actual/operational peak rate in bits per second
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference scheduling peak-rate-bps</a> <i>number</i>
<b>Tree</b>	<a href="#">peak-rate-bps</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## peak-rate-percent *number*

<b>Description</b>	The maximum percentage of port bandwidth that is available to the traffic in this queue during the PIR scheduling loop. The default is 100
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference scheduling peak-rate-percent</a> <i>number</i>
<b>Tree</b>	<a href="#">peak-rate-percent</a>
<b>Range</b>	1 to 100
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## strict-priority *boolean*

<b>Description</b>	When set to true the queue is serviced as a strict priority queue, regardless of whether a weight is configured or its value. When set to false the queue is serviced using WRR, even if the queue does not have a configured weight; in this case the default weight value of 1 is used
--------------------	--

<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference scheduling strict-priority</a> <i>boolean</i>
<b>Tree</b>	<a href="#">strict-priority</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## weight *number*

<b>Description</b>	Configures the relative weight of a queue. For DWRR, this is determined by the scheduler policy For Strict Priority the weight is as follows J2: unicast-0..unicast-7 -> weight 9..16 multicast-0..multicast-7 -> weight 1..8 TD3 (D2/D3/D5): unicast-0..unicast-7 -> weight 1..8 multicast-0..multicast-7 -> weight 1..8 TH3: unicast-0 -> weight 2 unicast-1 -> weight 3 unicast-2 -> weight 5 unicast-3 -> weight 6 unicast-4 -> weight 8 unicast-5 -> weight 9 unicast-6 -> weight 11 unicast-7 -> weight 12 multicast-0 -> weight 1 multicast-1 -> weight 4 multicast-2 -> weight 7 multicast-3 -> weight 10
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <a href="#">reference scheduling weight</a> <i>number</i>
<b>Tree</b>	<a href="#">weight</a>
<b>Range</b>	1 to 127
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## rewrite-rules

<b>Description</b>	Enable the rewrite-rules context
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output rewrite-rules</a>
<b>Tree</b>	<a href="#">rewrite-rules</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## dot1p-policy *reference*

<b>Description</b>	Reference to the name of a dot1p rewrite policy
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output rewrite-rules dot1p-policy</a> <a href="#">reference</a>

<b>Tree</b>	<a href="#">dot1p-policy</a>
<b>Reference</b>	<a href="#">qos rewrite-rules dot1p-policy name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### dscp-policy *reference*

<b>Description</b>	Reference to the name of a DSCP rewrite-rule policy that applies to both IPv4 and IPv6 traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id string output rewrite-rules dscp-policy reference</a>
<b>Tree</b>	<a href="#">dscp-policy</a>
<b>Reference</b>	<a href="#">qos rewrite-rules dscp-policy name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4

### ipv4-dscp-policy *reference*

<b>Description</b>	Reference to the name of a DSCP rewrite-rule policy that applies only to IPv4 traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id string output rewrite-rules ipv4-dscp-policy reference</a>
<b>Tree</b>	<a href="#">ipv4-dscp-policy</a>
<b>Reference</b>	<a href="#">qos rewrite-rules dscp-policy name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv6-dscp-policy *reference*

<b>Description</b>	Reference to the name of a DSCP rewrite-rule policy that applies only to IPv6 traffic
<b>Context</b>	<a href="#">qos interfaces interface interface-id string output rewrite-rules ipv6-dscp-policy reference</a>
<b>Tree</b>	<a href="#">ipv6-dscp-policy</a>
<b>Reference</b>	<a href="#">qos rewrite-rules dscp-policy name string</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### mpls-traffic-class-policy *reference*

**Description** Reference to the name of an MPLS traffic-class rewrite-rule policy

**Context** [qos interfaces interface interface-id](#) *string* [output rewrite-rules mpls-traffic-class-policy](#) *reference*

**Tree** [mpls-traffic-class-policy](#)

**Reference** [qos rewrite-rules mpls-traffic-class-policy name](#) *string*

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### scheduler

**Description** Output traffic scheduler options

**Context** [qos interfaces interface interface-id](#) *string* [output scheduler](#)

**Tree** [scheduler](#)

**Configurable** True

**Platforms** Supported on all platforms except 7220 IXR-D1

### scheduler-policy *reference*

**Description** The scheduler policy to be applied to traffic on this interface

**Context** [qos interfaces interface interface-id](#) *string* [output scheduler scheduler-policy](#) *reference*

**Tree** [scheduler-policy](#)

**Reference** [qos scheduler-policies scheduler-policy name](#) *string*

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### policer-templates

**Description** Enter the policer-templates context

**Context** [qos policer-templates](#)

**Tree** [policer-templates](#)

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **policer-template** *name string*

<b>Description</b>	List of policer templates.
<b>Context</b>	<a href="#">qos policer-templates policer-template name string</a>
<b>Tree</b>	<a href="#">policer-template</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **name** *string*

<b>Description</b>	The name assigned to the policer template.
<b>Context</b>	<a href="#">qos policer-templates policer-template name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **policer** *sequence-id number*

<b>Description</b>	The list of policer instances belonging to the template definition.
<b>Context</b>	<a href="#">qos policer-templates policer-template name string policer sequence-id number</a>
<b>Tree</b>	<a href="#">policer</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
<b>Max. Elements</b>	32

### **sequence-id** *number*

<b>Description</b>	A number to indicate the relative evaluation order of the different policers in a template; policers with lower sequence-id numbers are evaluated before policers with higher sequence-id numbers
--------------------	---

<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a>
<b>Range</b>	1 to 65535
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### committed-burst-size *number*

<b>Description</b>	Maximum CIR bucket depth in bytes On 7220-D2/D3 the lower limit is 512 Bytes and higher limit is 268 MB
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">committed-burst-size number</a>
<b>Tree</b>	<a href="#">committed-burst-size</a>
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### committed-rate-kbps *number*

<b>Description</b>	The committed information rate (CIR) of the policer, defined in kilobits (1024 bits) per second On 7220-D2/D3 the minimum rate is 8 Kbps
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">committed-rate-kbps number</a>
<b>Tree</b>	<a href="#">committed-rate-kbps</a>
<b>Units</b>	kbps
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### exceed-action

<b>Description</b>	Container with options that specify the handling of packets that the policer has determined are exceeding (yellow)
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">exceed-action</a>
<b>Tree</b>	<a href="#">exceed-action</a>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### drop-probability *keyword*

<b>Description</b>	Recolor exceeding packets to the specified drop-probability level
<b>Context</b>	<a href="#">qos policer-templates policer-template name string policer sequence-id number exceed-action drop-probability keyword</a>
<b>Tree</b>	<a href="#">drop-probability</a>
<b>Default</b>	medium
<b>Options</b>	<ul style="list-style-type: none"> <li>low Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.</li> <li>medium Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.</li> <li>high Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### forwarding-class [fc reference](#)

<b>Description</b>	The list of forwarding classes with traffic to be sent to the policer. If this list is not configured then all subinterface traffic is matched.
<b>Context</b>	<a href="#">qos policer-templates policer-template name string policer sequence-id number forwarding-class <a href="#">fc reference</a></a>
<b>Tree</b>	<a href="#">forwarding-class</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### [fc reference](#)

<b>Description</b>	A forwarding class that has traffic to match to the policer
--------------------	---

<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">forwarding-class fc</a> <i>reference</i>
<b>Reference</b>	<a href="#">qos forwarding-classes forwarding-class name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **forwarding-type** *keyword*

<b>Description</b>	The list of forwarding types, belonging to this forwarding-class, to match to the policer. If none are specified, this implies ALL forwarding types.
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">forwarding-class fc</a> <i>reference</i> <a href="#">forwarding-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">forwarding-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• unicast A packet is 'unicast' if the destination address is unicast and it matches an entry in the FIB</li> <li>• unknown-unicast A packet is 'unknown-unicast' if the destination address is unicast but it doesn't match any entry in the FIB and is therefore conventionally flooded</li> <li>• multicast A packet is 'multicast' if the destination address is a multicast address On TD3 systems this includes multicast packets with a known destination/group address and multicast packets with an unknown destination/group address. On TD4 systems this only includes known multicast packets</li> <li>• unknown-multicast Multicast packets with an unknown destination/group address</li> <li>• broadcast A packet is 'broadcast' if the destination address is a broadcast address</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
<b>Max. Elements</b>	5

### **maximum-burst-size** *number*

<b>Description</b>	Maximum PIR bucket depth in bytes On 7220-D2/D3 the lower limit is 512 Bytes and higher limit is 268 MB
--------------------	--

<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">maximum-burst-size</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-burst-size</a>
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **peak-rate-kbps** *number*

<b>Description</b>	The peak information rate (PIR) of the policer, defined in kilobits (1024 bits) per second. On 7220-D2/D3 the minimum rate is 8 Kbps
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">peak-rate-kbps</a> <i>number</i>
<b>Tree</b>	<a href="#">peak-rate-kbps</a>
<b>Units</b>	kbps
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **violate-action**

<b>Description</b>	Container with options that specify the handling of packets that the policer has determined are violating (red)
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">violate-action</a>
<b>Tree</b>	<a href="#">violate-action</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **drop**

<b>Description</b>	Violating packets should be dropped immediately
<b>Context</b>	<a href="#">qos policer-templates policer-template name</a> <i>string</i> <a href="#">policer sequence-id number</a> <a href="#">violate-action</a> <a href="#">drop</a>
<b>Tree</b>	<a href="#">drop</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### drop-probability *keyword*

**Description** Recolor violating packets to the specified drop-probability level

**Context** [qos policer-templates policer-template name](#) *string* [policer sequence-id number](#) [violate-action drop-probability](#) *keyword*

**Tree** [drop-probability](#)

**Default** high

**Options**

- low  
Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.
- medium  
Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.
- high  
Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### statistics-mode *keyword*

**Description** The statistics mode of all policers belonging to this template

**Context** [qos policer-templates policer-template name](#) *string* [statistics-mode](#) *keyword*

**Tree** [statistics-mode](#)

**Default** violating-focus

**Options**

- violating-focus  
In this statistics mode only 4 counters are provided: accepted-packets, accepted-octets, violating-packets, violating-octets
- forwarding-focus  
In this statistics mode only 4 counters are provided: committed-packets, committed-octets, exceeding-packets, exceeding-octets

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**preserve-dscp** *boolean*

<b>Description</b>	When forwarding an untunneled IP packet or decapsulating an IP-in-IP packet, preserve the received DSCP and use it in the transmitted packet. This should not be enabled unless all IP packets have been classified by a multi-field classifier policy
<b>Context</b>	<a href="#">qos preserve-dscp</a> <i>boolean</i>
<b>Tree</b>	<a href="#">preserve-dscp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

**queues**

<b>Description</b>	Enclosing container for the list of user-defined queue names
<b>Context</b>	<a href="#">qos queues</a>
<b>Tree</b>	<a href="#">queues</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**queue** *name string*

<b>Description</b>	List of user-defined queues
<b>Context</b>	<a href="#">qos queues</a> <a href="#">queue</a> <i>name string</i>
<b>Tree</b>	<a href="#">queue</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**name** *string*

<b>Description</b>	User-defined name of the queue The following queue names are the system-reserved default queue names on 7250 IXR systems: unicast-0 unicast-1 unicast-2 unicast-3 unicast-4 unicast-5 unicast-6 unicast-7
<b>Context</b>	<a href="#">qos queues</a> <a href="#">queue</a> <i>name string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True

**Platforms** Supported on all platforms except 7220 IXR-D1

### queue-index *number*

**Description** The queue index (offset) of the queue within the set of queues allocated to a given interface or subinterface

**Context** [qos queues queue name string queue-index number](#)

**Tree** [queue-index](#)

**Range** 0 to 13

**Configurable** True

**Platforms** Supported on all platforms except 7220 IXR-D1

### rewrite-rules

**Description** Enter the rewrite-rules context

**Context** [qos rewrite-rules](#)

**Tree** [rewrite-rules](#)

**Configurable** True

**Platforms** Supported on all platforms except 7220 IXR-D1

### dot1p-policy *name string*

**Description** Enter the dot1p-policy list instance

**Context** [qos rewrite-rules dot1p-policy name string](#)

**Tree** [dot1p-policy](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### name *string*

**Description** User-configured name for an 802.1p priority code point rewrite policy

**Context** [qos rewrite-rules dot1p-policy name string](#)

**String Length** 1 to 255

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**map forwarding-class** *reference*

<b>Description</b>	Enter the map list instance
<b>Context</b>	<a href="#">qos rewrite-rules dot1p-policy name</a> <i>string</i> <a href="#">map forwarding-class</a> <i>reference</i>
<b>Tree</b>	<a href="#">map</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**forwarding-class** *reference*

<b>Description</b>	The forwarding class
<b>Context</b>	<a href="#">qos rewrite-rules dot1p-policy name</a> <i>string</i> <a href="#">map forwarding-class</a> <i>reference</i>
<b>Reference</b>	<a href="#">qos forwarding-classes forwarding-class name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**dot1p** *number*

<b>Description</b>	The dot1p marking to be used for all packets associated with the FC, except those with a drop-probability-specific or profile-specific override
<b>Context</b>	<a href="#">qos rewrite-rules dot1p-policy name</a> <i>string</i> <a href="#">map forwarding-class</a> <i>reference</i> <a href="#">dot1p</a> <i>number</i>
<b>Tree</b>	<a href="#">dot1p</a>
<b>Range</b>	0 to 7
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**drop-probability** [drop-probability](#) *keyword*

<b>Description</b>	Enter the drop-probability list instance
<b>Context</b>	<a href="#">qos rewrite-rules dot1p-policy name</a> <i>string</i> <a href="#">map forwarding-class</a> <i>reference</i> <a href="#">drop-probability</a> <a href="#">drop-probability</a> <i>keyword</i>
<b>Tree</b>	<a href="#">drop-probability</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**drop-probability** *keyword*

<b>Description</b>	A drop probability level within the FC for which a different remarking is desired
<b>Context</b>	<a href="#">qos rewrite-rules dot1p-policy name</a> <i>string</i> <a href="#">map forwarding-class</a> <i>reference</i> <a href="#">drop-probability drop-probability</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• low Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.</li> <li>• medium Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.</li> <li>• high Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**dot1p** *number*

<b>Description</b>	The dot1p marking to be used for this specific drop-probability
<b>Context</b>	<a href="#">qos rewrite-rules dot1p-policy name</a> <i>string</i> <a href="#">map forwarding-class</a> <i>reference</i> <a href="#">drop-probability drop-probability</a> <i>keyword</i> <a href="#">dot1p</a> <i>number</i>
<b>Tree</b>	<a href="#">dot1p</a>
<b>Range</b>	0 to 7
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**dscp-policy** *name string*

<b>Description</b>	Enter the dscp-policy list instance
<b>Context</b>	<a href="#">qos rewrite-rules dscp-policy name</a> <i>string</i>
<b>Tree</b>	<a href="#">dscp-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**name** *string*

<b>Description</b>	User-configured name for a DSCP rewrite policy
<b>Context</b>	<a href="#">qos rewrite-rules dscp-policy name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**map** [forwarding-class](#) *reference*

<b>Description</b>	Enter the map list instance
<b>Context</b>	<a href="#">qos rewrite-rules dscp-policy name</a> <i>string</i> <a href="#">map forwarding-class</a> <i>reference</i>
<b>Tree</b>	<a href="#">map</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**forwarding-class** *reference*

<b>Description</b>	The forwarding class
<b>Context</b>	<a href="#">qos rewrite-rules dscp-policy name</a> <i>string</i> <a href="#">map forwarding-class</a> <i>reference</i>
<b>Reference</b>	<a href="#">qos forwarding-classes forwarding-class name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**drop-probability** [drop-probability](#) *keyword*

<b>Description</b>	Enter the drop-probability list instance
<b>Context</b>	<a href="#">qos rewrite-rules dscp-policy name</a> <i>string</i> <a href="#">map forwarding-class</a> <i>reference</i> <a href="#">drop-probability</a> <a href="#">drop-probability</a> <i>keyword</i>
<b>Tree</b>	<a href="#">drop-probability</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**drop-probability** *keyword*

<b>Description</b>	A drop probability level within the FC for which a different remarking is desired
--------------------	---

<b>Context</b>	<a href="#">qos rewrite-rules dscp-policy name</a> <i>string</i> <a href="#">map forwarding-class</a> <i>reference</i> <a href="#">drop-probability</a> <a href="#">drop-probability</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>low Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.</li> <li>medium Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.</li> <li>high Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **dscp** (*number* | *keyword*)

<b>Description</b>	The DSCP marking to be used for this specific drop-probability
<b>Context</b>	<a href="#">qos rewrite-rules dscp-policy name</a> <i>string</i> <a href="#">map forwarding-class</a> <i>reference</i> <a href="#">drop-probability</a> <a href="#">drop-probability</a> <i>keyword</i> <a href="#">dscp</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">dscp</a>
<b>Range</b>	0 to 63
<b>Options</b>	<ul style="list-style-type: none"> <li>CS0</li> <li>LE</li> <li>CS1</li> <li>AF11</li> <li>AF12</li> <li>AF13</li> <li>CS2</li> <li>AF21</li> <li>AF22</li> <li>AF23</li> <li>CS3</li> <li>AF31</li> <li>AF32</li> <li>AF33</li> <li>CS4</li> <li>AF41</li> </ul>

	<ul style="list-style-type: none"> <li>• AF42</li> <li>• AF43</li> <li>• CS5</li> <li>• EF</li> <li>• CS6</li> <li>• CS7</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **dscp** (*number | keyword*)

<b>Description</b>	The DSCP marking to be used for all packets associated with the FC, except those with a drop-probability-specific or profile-specific override
<b>Context</b>	<a href="#">qos rewrite-rules dscp-policy name</a> <i>string</i> <a href="#">map forwarding-class reference</a> <a href="#">dscp (number   keyword)</a>
<b>Tree</b>	<a href="#">dscp</a>
<b>Range</b>	0 to 63
<b>Options</b>	<ul style="list-style-type: none"> <li>• CS0</li> <li>• LE</li> <li>• CS1</li> <li>• AF11</li> <li>• AF12</li> <li>• AF13</li> <li>• CS2</li> <li>• AF21</li> <li>• AF22</li> <li>• AF23</li> <li>• CS3</li> <li>• AF31</li> <li>• AF32</li> <li>• AF33</li> <li>• CS4</li> <li>• AF41</li> <li>• AF42</li> <li>• AF43</li> <li>• CS5</li> <li>• EF</li> </ul>

	<ul style="list-style-type: none"> <li>• CS6</li> <li>• CS7</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### **mpls-traffic-class-policy** *name string*

<b>Description</b>	Enter the mpls-traffic-class-policy list instance
<b>Context</b>	<a href="#">qos rewrite-rules mpls-traffic-class-policy name string</a>
<b>Tree</b>	<a href="#">mpls-traffic-class-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **name** *string*

<b>Description</b>	User-configured name for an MPLS traffic-class rewrite policy
<b>Context</b>	<a href="#">qos rewrite-rules mpls-traffic-class-policy name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **map forwarding-class** *reference*

<b>Description</b>	Enter the map list instance
<b>Context</b>	<a href="#">qos rewrite-rules mpls-traffic-class-policy name string map forwarding-class reference</a>
<b>Tree</b>	<a href="#">map</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **forwarding-class** *reference*

<b>Description</b>	The forwarding class
<b>Context</b>	<a href="#">qos rewrite-rules mpls-traffic-class-policy name string map forwarding-class reference</a>
<b>Reference</b>	<a href="#">qos forwarding-classes forwarding-class name string</a>

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### drop-probability *drop-probability keyword*

<b>Description</b>	Enter the drop-probability list instance
<b>Context</b>	<a href="#">qos rewrite-rules mpls-traffic-class-policy name string map forwarding-class reference drop-probability drop-probability keyword</a>
<b>Tree</b>	<a href="#">drop-probability</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### drop-probability *keyword*

<b>Description</b>	A drop probability level within the FC for which a different remarking is desired
<b>Context</b>	<a href="#">qos rewrite-rules mpls-traffic-class-policy name string map forwarding-class reference drop-probability drop-probability keyword</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• low Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green.</li> <li>• medium Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow.</li> <li>• high Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### traffic-class *number*

<b>Description</b>	The MPLS traffic class marking to be used for this specific drop-probability
<b>Context</b>	<a href="#">qos rewrite-rules mpls-traffic-class-policy name string map forwarding-class reference drop-probability drop-probability keyword traffic-class number</a>
<b>Tree</b>	<a href="#">traffic-class</a>
<b>Range</b>	0 to 7
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **traffic-class** *number*

**Description** The MPLS traffic class marking to be used for all packets associated with the FC, except those with a drop-probability-specific or profile-specific override

**Context** [qos rewrite-rules mpls-traffic-class-policy name](#) *string* [map forwarding-class reference traffic-class](#) *number*

**Tree** [traffic-class](#)

**Range** 0 to 7

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **vxlan-outer-header-dscp-policy** *reference*

**Description** Reference to the name of a DSCP rewrite policy that applies to the outer IP header of originating VXLAN packets

**Context** [qos rewrite-rules vxlan-outer-header-dscp-policy](#) *reference*

**Tree** [vxlan-outer-header-dscp-policy](#)

**Reference** [qos rewrite-rules dscp-policy name](#) *string*

**Configurable** True

**Platforms** 7220 IXR-D4, 7220 IXR-D5

### **scheduler-policies**

**Description** Container for the list of configured scheduler policies

**Context** [qos scheduler-policies](#)

**Tree** [scheduler-policies](#)

**Configurable** True

**Platforms** Supported on all platforms except 7220 IXR-D1

### **scheduler-policy** *name string*

**Description** List of scheduler policies. A scheduler policy is a set of schedulers that are to be applied together. Each scheduler within a scheduler policy takes an input, and outputs it according to a scheduling discipline that is specified within it

**Context** [qos scheduler-policies scheduler-policy name](#) *string*

<b>Tree</b>	<a href="#">scheduler-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**name** *string*

<b>Description</b>	Name for the scheduler policy
<b>Context</b>	<a href="#">qos scheduler-policies scheduler-policy name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**scheduler** *sequence number*

<b>Description</b>	List of defined QoS traffic schedulers
<b>Context</b>	<a href="#">qos scheduler-policies scheduler-policy name</a> <i>string</i> <a href="#">scheduler</a> <i>sequence number</i>
<b>Tree</b>	<a href="#">scheduler</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**sequence** *number*

<b>Description</b>	Sequence number for the scheduler within the scheduler policy. Schedulers are processed from lowest sequence to highest
<b>Context</b>	<a href="#">qos scheduler-policies scheduler-policy name</a> <i>string</i> <a href="#">scheduler</a> <i>sequence number</i>
<b>Range</b>	0 to 1
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**input id string**

<b>Description</b>	List of input sources for the scheduler
<b>Context</b>	<a href="#">qos scheduler-policies scheduler-policy name string scheduler sequence number input id string</a>
<b>Tree</b>	<a href="#">input</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**id string**

<b>Description</b>	User-defined identifier for the scheduler input
<b>Context</b>	<a href="#">qos scheduler-policies scheduler-policy name string scheduler sequence number input id string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**input-type keyword**

<b>Description</b>	Enter the input-type context
<b>Context</b>	<a href="#">qos scheduler-policies scheduler-policy name string scheduler sequence number input id string input-type keyword</a>
<b>Tree</b>	<a href="#">input-type</a>
<b>Default</b>	queue
<b>Options</b>	<ul style="list-style-type: none"> <li>• queue</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**peak-rate-percent number**

<b>Description</b>	The maximum percentage of port bandwidth that is available to the traffic in this queue during the PIR scheduling loop. The default is 100
--------------------	--

<b>Context</b>	<a href="#">qos scheduler-policies scheduler-policy name</a> <i>string</i> <a href="#">scheduler sequence number</a> <a href="#">input id</a> <i>string</i> <a href="#">peak-rate-percent</a> <i>number</i>
<b>Tree</b>	<a href="#">peak-rate-percent</a>
<b>Range</b>	1 to 100
<b>Default</b>	100
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**queue-name** *reference*

<b>Description</b>	The queue name
<b>Context</b>	<a href="#">qos scheduler-policies scheduler-policy name</a> <i>string</i> <a href="#">scheduler sequence number</a> <a href="#">input id</a> <i>string</i> <a href="#">queue-name</a> <i>reference</i>
<b>Tree</b>	<a href="#">queue-name</a>
<b>Reference</b>	<a href="#">qos queues queue name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**weight** *number*

<b>Description</b>	For weighted round-robin schedulers, this leaf indicates the weight of the corresponding input
<b>Context</b>	<a href="#">qos scheduler-policies scheduler-policy name</a> <i>string</i> <a href="#">scheduler sequence number</a> <a href="#">input id</a> <i>string</i> <a href="#">weight</a> <i>number</i>
<b>Tree</b>	<a href="#">weight</a>
<b>Range</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**priority** *keyword*

<b>Description</b>	Priority of the scheduler within the scheduler policy
--------------------	---

---

<b>Context</b>	<code>qos scheduler-policies scheduler-policy name</code> <i>string</i> <code>scheduler sequence number</code> <i>priority</i> <i>keyword</i>
<b>Tree</b>	<code>priority</code>
<b>Options</b>	<ul style="list-style-type: none"><li><code>strict</code> This scheduler term is considered as a strict priority term - such that packets that arrive in the queue are immediately serviced</li></ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## 10.1 routing-policy Descriptions

### routing-policy

<b>Description</b>	Top-level container for all routing policy configuration
<b>Context</b>	<a href="#">routing-policy</a>
<b>Tree</b>	<a href="#">routing-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### as-path-set *name string*

<b>Description</b>	AS Path regular expressions for use in policy entries
<b>Context</b>	<a href="#">routing-policy as-path-set name string</a>
<b>Tree</b>	<a href="#">as-path-set</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### name *string*

<b>Description</b>	A name used to identify the AS path regular expression
<b>Context</b>	<a href="#">routing-policy as-path-set name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### expression *string*

<b>Description</b>	A regular expression where each AS number is an elemental term
<b>Context</b>	<a href="#">routing-policy as-path-set name string expression string</a>
<b>Tree</b>	<a href="#">expression</a>
<b>String Length</b>	1 to 65535
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**community-set** *name string*

<b>Description</b>	List of BGP community sets containing standard and large BGP communities
<b>Context</b>	<a href="#">routing-policy community-set name string</a>
<b>Tree</b>	<a href="#">community-set</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	A name used to identify the community set
<b>Context</b>	<a href="#">routing-policy community-set name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**match-set-options** *keyword*

<b>Description</b>	Options that determine the matching criteria that applies to the list of community members
<b>Context</b>	<a href="#">routing-policy community-set name string match-set-options keyword</a>
<b>Tree</b>	<a href="#">match-set-options</a>
<b>Default</b>	all
<b>Options</b>	<ul style="list-style-type: none"> <li>• any Match is true if any of the listed community member values is present in the route</li> <li>• all Match is true if all of the listed community member values are present in the route</li> <li>• invert Match is true if none of the listed community member values are present in the route</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**member** (*identityref* | *bgp-std-community-type* | *bgp-large-community-type* | *string* | *string* | *string* | *string* | *string* | *string* | *string* | *string* | *string* | *string* | *bgp-large-community-regexp-type* | *bgp-std-community-regexp-type*)

<b>Description</b>	A standard BGP community value, regular expression or well-known name or else a large BGP community value or regular expression
<b>Context</b>	<a href="#">routing-policy community-set name string member</a> ( <i>identityref</i>   <i>bgp-std-community-type</i>   <i>bgp-large-community-type</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>bgp-large-community-regexp-type</i>   <i>bgp-std-community-regexp-type</i> )
<b>Tree</b>	<a href="#">member</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>no-export Do not export NLRI received carrying this community outside the bounds of this autonomous system, or this confederation if the local autonomous system is a confederation member AS. This community has a value of 0xFFFFFFFF01.</li> <li>no-advertise All NLRI received carrying this community must not be advertised to other BGP peers. This community has a value of 0xFFFFFFFF02.</li> <li>no-export-subconfed All NLRI received carrying this community must not be advertised to external BGP peers - including over confederation sub-AS boundaries. This community has a value of 0xFFFFFFFF03.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**policy name** *string*

<b>Description</b>	List of policy definitions, keyed by unique name These policy definitions are expected to be referenced (by name) in policy in import-policy and/or export-policy statements.
<b>Context</b>	<a href="#">routing-policy policy name string</a>
<b>Tree</b>	<a href="#">policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	A name used to identify the policy
--------------------	------------------------------------

<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## default-action

<b>Description</b>	Actions for routes that do not match any policy entry
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action</a>
<b>Tree</b>	<a href="#">default-action</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## bgp

<b>Description</b>	Enter the bgp context
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action</a> <a href="#">bgp</a>
<b>Tree</b>	<a href="#">bgp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## as-path

<b>Description</b>	Modify AS Path attribute of routes
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action</a> <a href="#">bgp</a> <a href="#">as-path</a>
<b>Tree</b>	<a href="#">as-path</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## prepend

<b>Description</b>	Prepend a BGP AS number to the AS Path attribute of routes
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action</a> <a href="#">bgp</a> <a href="#">as-path</a> <a href="#">prepend</a>
<b>Tree</b>	<a href="#">prepend</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**as-number** (*number* | *keyword*)

<b>Description</b>	The AS number to prepend to the AS Path attributes If 'auto' is specified then the peer's AS number is used in the context of an import policy and the local AS number is used in the context of an export policy.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp as-path prepend as-number</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">as-number</a>
<b>Range</b>	1 to 4294967295
<b>Options</b>	<ul style="list-style-type: none"> <li>• auto</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**repeat-n** *number*

<b>Description</b>	The number of repetitions of the prepended AS number
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp as-path prepend repeat-n</a> <i>number</i>
<b>Tree</b>	<a href="#">repeat-n</a>
<b>Range</b>	1 to 50
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**remove** *boolean*

<b>Description</b>	Clear the AS path to make it empty.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp as-path remove</a> <i>boolean</i>
<b>Tree</b>	<a href="#">remove</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**replace** *number*

<b>Description</b>	Clear the existing AS path and replace it a new AS_SEQUENCE containing the listed AS numbers.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp as-path replace</a> <i>number</i>

<b>Tree</b>	<a href="#">replace</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## communities

<b>Description</b>	Modify BGP communities attached to routes
<b>Context</b>	<a href="#">routing-policy policy name string default-action bgp communities</a>
<b>Tree</b>	<a href="#">communities</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## add *reference*

<b>Description</b>	Reference to a community-set name All of the non-regex community members in the referenced community-set are added to the COMMUNITIES and LARGE_COMMUNITIES attributes.
<b>Context</b>	<a href="#">routing-policy policy name string default-action bgp communities add reference</a>
<b>Tree</b>	<a href="#">add</a>
<b>Reference</b>	<a href="#">routing-policy community-set name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## remove *reference*

<b>Description</b>	Reference to a community-set name The communities in the route are compared to all of the community members in the referenced community-set, and all matching communities are removed from the COMMUNITIES and LARGE_COMMUNITIES attributes.
<b>Context</b>	<a href="#">routing-policy policy name string default-action bgp communities remove reference</a>
<b>Tree</b>	<a href="#">remove</a>
<b>Reference</b>	<a href="#">routing-policy community-set name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**replace *reference***

<b>Description</b>	Reference to a community-set name  All of the existing communities are deleted and then all of the non-regex community members in the referenced community-set are encoded in new COMMUNITIES and LARGE_COMMUNITIES attributes.
<b>Context</b>	<a href="#">routing-policy policy name <i>string</i> default-action bgp communities replace <i>reference</i></a>
<b>Tree</b>	<a href="#">replace</a>
<b>Reference</b>	<a href="#">routing-policy community-set name <i>string</i></a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**label-allocation**

<b>Description</b>	Actions that determine the method used to assign labels to BGP LU routes matched and accepted by route-table-import policies
<b>Context</b>	<a href="#">routing-policy policy name <i>string</i> default-action bgp label-allocation</a>
<b>Tree</b>	<a href="#">label-allocation</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**local-preference**

<b>Description</b>	Enter the local-preference context
<b>Context</b>	<a href="#">routing-policy policy name <i>string</i> default-action bgp local-preference</a>
<b>Tree</b>	<a href="#">local-preference</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**set *number***

<b>Description</b>	The new value of LOCAL_PREF to write into the matching BGP routes
<b>Context</b>	<a href="#">routing-policy policy name <i>string</i> default-action bgp local-preference set <i>number</i></a>
<b>Tree</b>	<a href="#">set</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## med

**Description** Enter the med context

**Context** [routing-policy policy name](#) *string* [default-action bgp med](#)

**Tree** [med](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## set (*number* | *keyword*)

**Description** The new value of the Multi-Exit Discriminator attribute value to write into the matching BGP routes. The route-table-cost option derives the MED from the route metric.

**Context** [routing-policy policy name](#) *string* [default-action bgp med set](#) (*number* | *keyword*)

**Tree** [set](#)

**Options**

- route-table-cost

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## next-hop

**Description** Container for BGP next-hop modifications

**Context** [routing-policy policy name](#) *string* [default-action bgp next-hop](#)

**Tree** [next-hop](#)

**Configurable** True

**Platforms** Supported on all platforms

## set (*ipv4-address* | *ipv6-address*)

**Description** Set the protocol next-hop address of matched BGP routes

<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp next-hop set</a> ( <i>ipv4-address   ipv6-address</i> )
<b>Tree</b>	<a href="#">set</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## next-hop-resolution

<b>Description</b>	Actions related to next-hop resolution of matched BGP routes
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp next-hop-resolution</a>
<b>Tree</b>	<a href="#">next-hop-resolution</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## set-tag-set *reference*

<b>Description</b>	Reference to a tag-set to be used for controlling next-hop resolution
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp next-hop-resolution set-tag-set</a> <i>reference</i>
<b>Tree</b>	<a href="#">set-tag-set</a>
<b>Reference</b>	<a href="#">routing-policy tag-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## origin

<b>Description</b>	Enter the origin context
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action bgp origin</a>
<b>Tree</b>	<a href="#">origin</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## set *keyword*

<b>Description</b>	The new value of the ORIGIN attribute to write into the matching BGP routes
--------------------	---

<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action</a> <a href="#">bgp origin set</a> <i>keyword</i>
<b>Tree</b>	<a href="#">set</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">igp</a></li> <li>• <a href="#">egp</a></li> <li>• <a href="#">incomplete</a></li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## internal-tags

<b>Description</b>	Configuration of internal tags
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action</a> <a href="#">internal-tags</a>
<b>Tree</b>	<a href="#">internal-tags</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## set-tag-set *reference*

<b>Description</b>	Reference to a tag-set defined under routing-policy
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action</a> <a href="#">internal-tags</a> <a href="#">set-tag-set</a> <i>reference</i>
<b>Tree</b>	<a href="#">set-tag-set</a>
<b>Reference</b>	<a href="#">routing-policy tag-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	1

## policy-result *keyword*

<b>Description</b>	Select the action type for routes that do not match any policy statement.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">default-action</a> <a href="#">policy-result</a> <i>keyword</i>
<b>Tree</b>	<a href="#">policy-result</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">accept</a></li> </ul>

The route is accepted, route property modifications are applied, and evaluation stops immediately

- reject

The route is rejected and evaluation stops immediately

- next-policy

Route policy modifications are applied and evaluation continues to the next policy

**Configurable**

True

**Platforms**

Supported on all platforms

### **statement** *name string*

**Description**

Policy statements group conditions and actions within a policy definition. They are evaluated in configuration order.

**Context**

[routing-policy policy name string statement name string](#)

**Tree**

[statement](#)

**Configurable**

True

**Platforms**

Supported on all platforms

### **name** *string*

**Description**

Name given to the policy statement (rule).

**Context**

[routing-policy policy name string statement name string](#)

**String Length**

1 to 255

**Configurable**

True

**Platforms**

Supported on all platforms

### **action**

**Description**

Actions for routes that match the policy statement

**Context**

[routing-policy policy name string statement name string action](#)

**Tree**

[action](#)

**Configurable**

True

**Platforms**

Supported on all platforms

## bgp

<b>Description</b>	Enter the bgp context
<b>Context</b>	<a href="#">routing-policy policy name string statement name string action bgp</a>
<b>Tree</b>	<a href="#">bgp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## as-path

<b>Description</b>	Modify AS Path attribute of routes
<b>Context</b>	<a href="#">routing-policy policy name string statement name string action bgp as-path</a>
<b>Tree</b>	<a href="#">as-path</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## prepend

<b>Description</b>	Prepend a BGP AS number to the AS Path attribute of routes
<b>Context</b>	<a href="#">routing-policy policy name string statement name string action bgp as-path prepend</a>
<b>Tree</b>	<a href="#">prepend</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## as-number (*number* | *keyword*)

<b>Description</b>	The AS number to prepend to the AS Path attributes If 'auto' is specified then the peer's AS number is used in the context of an import policy and the local AS number is used in the context of an export policy.
<b>Context</b>	<a href="#">routing-policy policy name string statement name string action bgp as-path prepend as-number (<i>number</i>   <i>keyword</i>)</a>
<b>Tree</b>	<a href="#">as-number</a>
<b>Range</b>	1 to 4294967295
<b>Options</b>	<ul style="list-style-type: none"> <li>• auto</li> </ul>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **repeat-n** *number*

**Description** The number of repetitions of the prepended AS number

**Context** [routing-policy policy name string statement name string action bgp as-path prepend repeat-n number](#)

**Tree** [repeat-n](#)

**Range** 1 to 50

**Configurable** True

**Platforms** Supported on all platforms

### **remove** *boolean*

**Description** Clear the AS path to make it empty.

**Context** [routing-policy policy name string statement name string action bgp as-path remove boolean](#)

**Tree** [remove](#)

**Configurable** True

**Platforms** Supported on all platforms

### **replace** *number*

**Description** Clear the existing AS path and replace it a new AS\_SEQUENCE containing the listed AS numbers.

**Context** [routing-policy policy name string statement name string action bgp as-path replace number](#)

**Tree** [replace](#)

**Range** 1 to 4294967295

**Configurable** True

**Platforms** Supported on all platforms

### **communities**

**Description** Modify BGP communities attached to routes

**Context** [routing-policy policy name string statement name string action bgp communities](#)

<b>Tree</b>	<a href="#">communities</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**add reference**

<b>Description</b>	Reference to a community-set name All of the non-regex community members in the referenced community-set are added to the COMMUNITIES and LARGE_COMMUNITIES attributes.
<b>Context</b>	<a href="#">routing-policy policy name string statement name string action bgp communities add reference</a>
<b>Tree</b>	<a href="#">add</a>
<b>Reference</b>	<a href="#">routing-policy community-set name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**remove reference**

<b>Description</b>	Reference to a community-set name The communities in the route are compared to all of the community members in the referenced community-set, and all matching communities are removed from the COMMUNITIES and LARGE_COMMUNITIES attributes.
<b>Context</b>	<a href="#">routing-policy policy name string statement name string action bgp communities remove reference</a>
<b>Tree</b>	<a href="#">remove</a>
<b>Reference</b>	<a href="#">routing-policy community-set name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**replace reference**

<b>Description</b>	Reference to a community-set name All of the existing communities are deleted and then all of the non-regex community members in the referenced community-set are encoded in new COMMUNITIES and LARGE_COMMUNITIES attributes.
<b>Context</b>	<a href="#">routing-policy policy name string statement name string action bgp communities replace reference</a>
<b>Tree</b>	<a href="#">replace</a>

<b>Reference</b>	<a href="#">routing-policy community-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## label-allocation

<b>Description</b>	Actions that determine the method used to assign labels to BGP LU routes matched and accepted by route-table-import policies
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement name</a> <i>string</i> <a href="#">action bgp label-allocation</a>
<b>Tree</b>	<a href="#">label-allocation</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## local-preference

<b>Description</b>	Enter the local-preference context
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement name</a> <i>string</i> <a href="#">action bgp local-preference</a>
<b>Tree</b>	<a href="#">local-preference</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## set *number*

<b>Description</b>	The new value of LOCAL_PREF to write into the matching BGP routes
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement name</a> <i>string</i> <a href="#">action bgp local-preference set</a> <i>number</i>
<b>Tree</b>	<a href="#">set</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## med

<b>Description</b>	Enter the med context
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement name</a> <i>string</i> <a href="#">action bgp med</a>
<b>Tree</b>	<a href="#">med</a>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**set** (*number* | *keyword*)

<b>Description</b>	The new value of the Multi-Exit Discriminator attribute value to write into the matching BGP routes. The route-table-cost option derives the MED from the route metric.
<b>Context</b>	<a href="#">routing-policy policy name string statement name string action bgp med set</a> ( <i>number</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">set</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• route-table-cost</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**next-hop**

<b>Description</b>	Container for BGP next-hop modifications
<b>Context</b>	<a href="#">routing-policy policy name string statement name string action bgp next-hop</a>
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**set** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Set the protocol next-hop address of matched BGP routes
<b>Context</b>	<a href="#">routing-policy policy name string statement name string action bgp next-hop set</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">set</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**next-hop-resolution**

<b>Description</b>	Actions related to next-hop resolution of matched BGP routes
<b>Context</b>	<a href="#">routing-policy</a> <i>policy name string statement name string action bgp next-hop-resolution</i>
<b>Tree</b>	<a href="#">next-hop-resolution</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**set-tag-set** *reference*

<b>Description</b>	Reference to a tag-set to be used for controlling next-hop resolution
<b>Context</b>	<a href="#">routing-policy</a> <i>policy name string statement name string action bgp next-hop-resolution set-tag-set reference</i>
<b>Tree</b>	<a href="#">set-tag-set</a>
<b>Reference</b>	<a href="#">routing-policy</a> <i>tag-set name string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**origin**

<b>Description</b>	Enter the origin context
<b>Context</b>	<a href="#">routing-policy</a> <i>policy name string statement name string action bgp origin</i>
<b>Tree</b>	<a href="#">origin</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**set** *keyword*

<b>Description</b>	The new value of the ORIGIN attribute to write into the matching BGP routes
<b>Context</b>	<a href="#">routing-policy</a> <i>policy name string statement name string action bgp origin set keyword</i>
<b>Tree</b>	<a href="#">set</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>igp</code></li> <li>• <code>egp</code></li> <li>• <code>incomplete</code></li> </ul>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## internal-tags

**Description** Configuration of internal tags

**Context** [routing-policy](#) [policy name](#) *string* [statement name](#) *string* [action](#) [internal-tags](#)

**Tree** [internal-tags](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## set-tag-set *reference*

**Description** Reference to a tag-set defined under routing-policy

**Context** [routing-policy](#) [policy name](#) *string* [statement name](#) *string* [action](#) [internal-tags](#) [set-tag-set](#) *reference*

**Tree** [set-tag-set](#)

**Reference** [routing-policy](#) [tag-set name](#) *string*

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**Max. Elements** 1

## policy-result *keyword*

**Description** Select the action to apply to matching routes  
If no value is configured for the policy-result then the entire statement is skipped and ignored.

**Context** [routing-policy](#) [policy name](#) *string* [statement name](#) *string* [action](#) [policy-result](#) *keyword*

**Tree** [policy-result](#)

**Options**

- **accept**  
The route is accepted, route property modifications are applied, and evaluation stops immediately
- **reject**  
The route is rejected and evaluation stops immediately

- **next-statement**  
Route policy modifications are applied and evaluation continues to the next statement
- **next-policy**  
Route policy modifications are applied and evaluation continues to the next policy

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## match

<b>Description</b>	Match conditions of the policy statement
<b>Context</b>	<a href="#">routing-policy</a> <i>policy name string</i> <a href="#">statement name string</a> <a href="#">match</a>
<b>Tree</b>	<a href="#">match</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## bgp

<b>Description</b>	Configuration for BGP-specific policy match criteria
<b>Context</b>	<a href="#">routing-policy</a> <i>policy name string</i> <a href="#">statement name string</a> <a href="#">match</a> <a href="#">bgp</a>
<b>Tree</b>	<a href="#">bgp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## as-path-length

<b>Description</b>	A BGP route matches this condition if the number of (unique) AS numbers in its AS_PATH matches this value or the range implied by the value+operator.
<b>Context</b>	<a href="#">routing-policy</a> <i>policy name string</i> <a href="#">statement name string</a> <a href="#">match</a> <a href="#">bgp</a> <a href="#">as-path-length</a>
<b>Tree</b>	<a href="#">as-path-length</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**operator** *keyword*

<b>Description</b>	The comparison operator that applies to the value
<b>Context</b>	<a href="#">routing-policy policy name string statement name string match bgp as-path-length operator keyword</a>
<b>Tree</b>	<a href="#">operator</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• eq</li> <li>• ge</li> <li>• le</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**unique** *boolean*

<b>Description</b>	Count a repeated sequence of the same AS number as just 1 element
<b>Context</b>	<a href="#">routing-policy policy name string statement name string match bgp as-path-length unique boolean</a>
<b>Tree</b>	<a href="#">unique</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**value** *number*

<b>Description</b>	The number of (unique) AS numbers in the AS path
<b>Context</b>	<a href="#">routing-policy policy name string statement name string match bgp as-path-length value number</a>
<b>Tree</b>	<a href="#">value</a>
<b>Range</b>	0 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**as-path-set** *reference*

<b>Description</b>	Reference to an as-path-set name A route meets this condition if it matches the regular expression
<b>Context</b>	<a href="#">routing-policy policy name string statement name string match bgp as-path-set reference</a>

<b>Tree</b>	<a href="#">as-path-set</a>
<b>Reference</b>	<a href="#">routing-policy as-path-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **community-set** *reference*

<b>Description</b>	Reference to a community-set name A route meets this condition if has any community value matching a community member in the referenced community-set
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement name</a> <i>string</i> <a href="#">match bgp community-set</a> <i>reference</i>
<b>Tree</b>	<a href="#">community-set</a>
<b>Reference</b>	<a href="#">routing-policy community-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **evpn**

<b>Description</b>	Container for match conditions that are specific to BGP EVPN routes.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement name</a> <i>string</i> <a href="#">match bgp evpn</a>
<b>Tree</b>	<a href="#">evpn</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **route-type** *number*

<b>Description</b>	An EVPN route meets this condition if the route-type field in the NLRI is one of the values provided in this list.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement name</a> <i>string</i> <a href="#">match bgp evpn route-type</a> <i>number</i>
<b>Tree</b>	<a href="#">route-type</a>
<b>Range</b>	1 to 5
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	1

**family** *identityref*

<b>Description</b>	The name of an address family A route meets this condition if the prefix belongs to one of the indicated address families.
<b>Context</b>	<a href="#">routing-policy policy name string statement name string match family identityref</a>
<b>Tree</b>	<a href="#">family</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ipv4-unicast</a> Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1)</li> <li>• <a href="#">ipv6-unicast</a> Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1)</li> <li>• <a href="#">l3vpn-ipv4-unicast</a> VPN-IPv4 unicast address family (AFI = 1, SAFI = 128)</li> <li>• <a href="#">l3vpn-ipv6-unicast</a> VPN-IPv6 unicast address family (AFI = 2, SAFI = 128)</li> <li>• <a href="#">ipv4-labeled-unicast</a> Labeled IPv4 unicast routes (AFI 1, SAFI 4)</li> <li>• <a href="#">ipv6-labeled-unicast</a> Labeled IPv6 unicast routes (AFI 2, SAFI 4)</li> <li>• <a href="#">evpn</a> EVPN routes (AFI = 25, SAFI = 70)</li> <li>• <a href="#">route-target</a> Route target constraint routes (AFI 1, SAFI 132)</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**internal-tags**

<b>Description</b>	Configuration and state of internal tags
<b>Context</b>	<a href="#">routing-policy policy name string statement name string match internal-tags</a>
<b>Tree</b>	<a href="#">internal-tags</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**tag-set** *reference*

<b>Description</b>	Reference to a tag-set defined under routing-policy
<b>Context</b>	<a href="#">routing-policy</a> <i>policy name string statement name string match internal-tags tag-set reference</i>
<b>Tree</b>	<a href="#">tag-set</a>
<b>Reference</b>	<a href="#">routing-policy</a> <i>tag-set name string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	1

**isis**

<b>Description</b>	Configuration for ISIS-specific policy match criteria
<b>Context</b>	<a href="#">routing-policy</a> <i>policy name string statement name string match isis</i>
<b>Tree</b>	<a href="#">isis</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**level** *number*

<b>Description</b>	Match an IS-IS route based on its level
<b>Context</b>	<a href="#">routing-policy</a> <i>policy name string statement name string match isis level number</i>
<b>Tree</b>	<a href="#">level</a>
<b>Range</b>	1 to 2
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**route-type** *keyword*

<b>Description</b>	Match an IS-IS route based on its type An IS-IS IPv4 prefix is external if it is signalled in TLV 130 or TLV135 with RFC 7794 X flag=1. An IS-IS IPv6 prefix is external if the TLV 236/TLV 237 external bit = 1.
--------------------	--

<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement name</a> <i>string</i> <a href="#">match isis route-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">route-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>internal</code> Match internal AND external routes</li> <li>• <code>external</code> Match only external routes</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## ospf

<b>Description</b>	Configuration for OSPF-specific policy match criteria
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement name</a> <i>string</i> <a href="#">match ospf</a>
<b>Tree</b>	<a href="#">ospf</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## area-id

<b>Description</b>	The area identifier as a dotted-quad.
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement name</a> <i>string</i> <a href="#">match ospf area-id</a>
<b>Tree</b>	<a href="#">area-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## instance-id *number*

<b>Description</b>	OSPFv3 instance identifier
<b>Context</b>	<a href="#">routing-policy policy name</a> <i>string</i> <a href="#">statement name</a> <i>string</i> <a href="#">match ospf instance-id</a> <i>number</i>
<b>Tree</b>	<a href="#">instance-id</a>
<b>Range</b>	0 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**route-type** *identityref*

<b>Description</b>	The OSPF route type.
<b>Context</b>	<a href="#">routing-policy policy name string statement name string match ospf route-type identityref</a>
<b>Tree</b>	<a href="#">route-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• type-1-ext The route has path-type type 1 external</li> <li>• type-2-ext The route has path-type type 2 external</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**prefix-set** *reference*

<b>Description</b>	Reference to a prefix set name
<b>Context</b>	<a href="#">routing-policy policy name string statement name string match prefix-set reference</a>
<b>Tree</b>	<a href="#">prefix-set</a>
<b>Reference</b>	<a href="#">routing-policy prefix-set name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**protocol** *identityref*

<b>Description</b>	The route type to match
<b>Context</b>	<a href="#">routing-policy policy name string statement name string match protocol identityref</a>
<b>Tree</b>	<a href="#">protocol</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• routing-policy-protocol-match-type Base type for the types of routes and tunnels that can be matched by a route policy statement</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**prefix-set** *name string*

<b>Description</b>	List of defined prefix sets
<b>Context</b>	<a href="#">routing-policy prefix-set name string</a>
<b>Tree</b>	<a href="#">prefix-set</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	A name used to identify the prefix set
<b>Context</b>	<a href="#">routing-policy prefix-set name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**prefix** *ip-prefix (ipv4-prefix | ipv6-prefix) mask-length-range string*

<b>Description</b>	List of prefixes in the prefix set
<b>Context</b>	<a href="#">routing-policy prefix-set name string prefix ip-prefix (ipv4-prefix   ipv6-prefix) mask-length-range string</a>
<b>Tree</b>	<a href="#">prefix</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ip-prefix** *(ipv4-prefix | ipv6-prefix)*

<b>Description</b>	The IPv4 or IPv6 prefix in CIDR notation
<b>Context</b>	<a href="#">routing-policy prefix-set name string prefix ip-prefix (ipv4-prefix   ipv6-prefix) mask-length-range string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mask-length-range** *string*

<b>Description</b>	The range of prefix lengths to match Example: 10.3.192.0/21 through 10.3.192.0/24 would be expressed as prefix: 10.3.192.0/21, mask-length-range: 21..24.
--------------------	--

Example: 10.3.192.0/21 would be expressed as prefix: 10.3.192.0/21, mask-length-range: exact

<b>Context</b>	<a href="#">routing-policy prefix-set name</a> <i>string</i> <a href="#">prefix ip-prefix</a> ( <i>ipv4-prefix   ipv6-prefix</i> ) <a href="#">mask-length-range</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **tag-set** *name string*

<b>Description</b>	List of administrative tag sets
<b>Context</b>	<a href="#">routing-policy tag-set name</a> <i>string</i>
<b>Tree</b>	<a href="#">tag-set</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	255

### **name** *string*

<b>Description</b>	A name used to identify the tag set
<b>Context</b>	<a href="#">routing-policy tag-set name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **tag-set-index** *number*

<b>Description</b>	System-wide persistent unique identifier assigned to the tag-set
<b>Context</b>	<a href="#">routing-policy tag-set name</a> <i>string</i> <a href="#">tag-set-index</a> <i>number</i>
<b>Tree</b>	<a href="#">tag-set-index</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**tag-value** (*number* | *hex-string*)

<b>Description</b>	Value of the tag set member
<b>Context</b>	<a href="#">routing-policy tag-set name</a> <i>string tag-value</i> ( <i>number</i>   <i>hex-string</i> )
<b>Tree</b>	<a href="#">tag-value</a>
<b>String Length</b>	1 to 11
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	2
<b>Min. Elements</b>	1

## 11.1 system Descriptions

### system

<b>Description</b>	Enclosing container for system management
<b>Context</b>	<a href="#">system</a>
<b>Tree</b>	<a href="#">system</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### aaa

<b>Description</b>	Top-level container for AAA services
<b>Context</b>	<a href="#">system aaa</a>
<b>Tree</b>	<a href="#">aaa</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### accounting

<b>Description</b>	Top-level container for accounting
<b>Context</b>	<a href="#">system aaa accounting</a>
<b>Tree</b>	<a href="#">accounting</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### accounting-method *reference*

<b>Description</b>	Ordered list of server-groups to use for accounting in the system If accounting fails with one method, the next defined method is tried -- failure of all methods results in the accounting request failing.
<b>Context</b>	<a href="#">system aaa accounting accounting-method <i>reference</i></a>
<b>Tree</b>	<a href="#">accounting-method</a>
<b>Reference</b>	<a href="#">system aaa server-group name <i>string</i></a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **event** *event-type identityref*

**Description** List of events subject to accounting  
**Context** [system aaa accounting event event-type identityref](#)  
**Tree** [event](#)  
**Configurable** True  
**Platforms** Supported on all platforms

### **event-type** *identityref*

**Description** The type of activity to record at the accounting server  
**Context** [system aaa accounting event event-type identityref](#)  
**Options**

- `command`  
Specifies interactive command events for AAA accounting

**Configurable** True  
**Platforms** Supported on all platforms

### **record** *identityref*

**Description** Type of record to send to the accounting server for this activity type  
**Context** [system aaa accounting event event-type identityref record identityref](#)  
**Tree** [record](#)  
**Options**

- `start-stop`  
Send start and stop records for user activities  
A start record is sent to the accounting server at the beginning of the activity, and a stop record at the end of the activity
- `stop`  
Send only stop records for user activities  
A stop record is sent to the accounting server when the user activity completes

**Configurable** True  
**Platforms** Supported on all platforms

## authentication

<b>Description</b>	Top-level container for global authentication data
<b>Context</b>	<a href="#">system aaa authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## admin-user

<b>Description</b>	Enclosing container for admin user
<b>Context</b>	<a href="#">system aaa authentication admin-user</a>
<b>Tree</b>	<a href="#">admin-user</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## credentialz

<b>Description</b>	Information relating to the active user credentials as provided via Credentialz State is provided by the gNSI Credentialz service, and can be changed using the gNSI.Credentialz.RotateAccountCredentials RPC
<b>Context</b>	<a href="#">system aaa authentication admin-user credentialz</a>
<b>Tree</b>	<a href="#">credentialz</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## authorized-keys

<b>Description</b>	State relating to the Authorized Keys provided via Credentialz
<b>Context</b>	<a href="#">system aaa authentication admin-user credentialz authorized-keys</a>
<b>Tree</b>	<a href="#">authorized-keys</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**created-on string**

<b>Description</b>	The created on timestamp as provided by the gNSI client at the time of uploading the artifact  The maps to the created_on field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication admin-user credentialz authorized-keys created-on string</a>
<b>Tree</b>	<a href="#">created-on</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**version string**

<b>Description</b>	The version string as provided by the gNSI client at the time of uploading the artifact  The maps to the version field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication admin-user credentialz authorized-keys version string</a>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**authorized-principals**

<b>Description</b>	State relating to the Authorized Principals provided via Credentialz
<b>Context</b>	<a href="#">system aaa authentication admin-user credentialz authorized-principals</a>
<b>Tree</b>	<a href="#">authorized-principals</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**created-on string**

<b>Description</b>	The created on timestamp as provided by the gNSI client at the time of uploading the artifact  The maps to the created_on field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication admin-user credentialz authorized-principals created-on string</a>
<b>Tree</b>	<a href="#">created-on</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**version string**

<b>Description</b>	The version string as provided by the gNSI client at the time of uploading the artifact  The maps to the version field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication admin-user credentialz authorized-principals version string</a>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**password**

<b>Description</b>	State relating to the Password provided via Credentialz.
<b>Context</b>	<a href="#">system aaa authentication admin-user credentialz password</a>
<b>Tree</b>	<a href="#">password</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**created-on** *string*

<b>Description</b>	The created on timestamp as provided by the gNSI client at the time of uploading the artifact  The maps to the created_on field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication admin-user credentialz password created-on string</a>
<b>Tree</b>	<a href="#">created-on</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**version** *string*

<b>Description</b>	The version string as provided by the gNSI client at the time of uploading the artifact  The maps to the version field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication admin-user credentialz password version string</a>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**failed-login-attempts** *number*

<b>Description</b>	Number of failed login attempts from the user
<b>Context</b>	<a href="#">system aaa authentication admin-user failed-login-attempts number</a>
<b>Tree</b>	<a href="#">failed-login-attempts</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-failed-login** *string*

<b>Description</b>	The date and time of the last login failure from this user
<b>Context</b>	<a href="#">system aaa authentication admin-user last-failed-login</a> <i>string</i>
<b>Tree</b>	<a href="#">last-failed-login</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-successful-login** *string*

<b>Description</b>	The date and time of the last successful login from this user
<b>Context</b>	<a href="#">system aaa authentication admin-user last-successful-login</a> <i>string</i>
<b>Tree</b>	<a href="#">last-successful-login</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**lockout**

<b>Description</b>	Information relating to the lockout state of this user
<b>Context</b>	<a href="#">system aaa authentication admin-user lockout</a>
<b>Tree</b>	<a href="#">lockout</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active** *boolean*

<b>Description</b>	Indicates if a lockout is active for the user Lockouts can occur after successive failed logins, and can be cleared by 'tools system aaa authentication user <username> unlock'
<b>Context</b>	<a href="#">system aaa authentication admin-user lockout active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">active</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**end string**

<b>Description</b>	Indicates the time at which the most recent lockout for this user ended or will end
<b>Context</b>	<a href="#">system aaa authentication admin-user lockout end string</a>
<b>Tree</b>	<a href="#">end</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**start string**

<b>Description</b>	Indicates the time at which the most recent lockout for this user started
<b>Context</b>	<a href="#">system aaa authentication admin-user lockout start string</a>
<b>Tree</b>	<a href="#">start</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**password string**

<b>Description</b>	The admin password, supplied either as cleartext or as a hashed value If provided as cleartext, the system will hash the value on input, storing only the hashed value. If provided as a hashed value, the value should include any '\$' characters, for example '\$ar2\$aOvsuj0ALIU=\$r750fMa3ZEA/Di8dIfU2fQ=='
<b>Context</b>	<a href="#">system aaa authentication admin-user password string</a>
<b>Tree</b>	<a href="#">password</a>
<b>Default</b>	\$y\$j9T\$pNVjOgcNNGIWjBcdDfK/7.\$lr4uYxszxtqzVj5AGiZvdWJGs.bpLWBjvHON3YgqnC2
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**password-change-required boolean**

<b>Description</b>	Indicates if the user must change their password on next login
<b>Context</b>	<a href="#">system aaa authentication admin-user password-change-required boolean</a>
<b>Tree</b>	<a href="#">password-change-required</a>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**role reference**

<b>Description</b>	List of roles to assign to this user  The most specific rule for a particular role takes precedence. Rules from all user roles are evaluated together, most permissive privilege taking precedence.
<b>Context</b>	<a href="#">system aaa authentication admin-user role reference</a>
<b>Tree</b>	<a href="#">role</a>
<b>Reference</b>	<a href="#">system aaa authorization role rolename string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	32

**spiffe-ids string**

<b>Description</b>	The SPIFFE ID list for the user, including the spiffe:// URI  This list of IDs is evaluated by TLS-consuming servers (e.g. gNMI, JSON-RPC) that use a TLS server-profile with authenticate-client set to true.  If a match is found in any incoming offered client certificates, the provider of the certificate is associated with this local user, and given resulting permissions.
<b>Context</b>	<a href="#">system aaa authentication admin-user spiffe-ids string</a>
<b>Tree</b>	<a href="#">spiffe-ids</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ssh-key string**

<b>Description</b>	SSH public key(s) for the user  If defined, the user may login to the system over SSH with this key. This should use the SSH public authorized key format.
--------------------	--

<b>Context</b>	<a href="#">system aaa authentication admin-user ssh-key</a> <i>string</i>
<b>Tree</b>	<a href="#">ssh-key</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

### **ssh-principals** *string*

<b>Description</b>	List of principals to associate with this user  If any of the principals in the list are matched in a SSH client's certificate, and that clients username matches this user, and the certificate is verified, the client will authenticate.
<b>Context</b>	<a href="#">system aaa authentication admin-user ssh-principals</a> <i>string</i>
<b>Tree</b>	<a href="#">ssh-principals</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

### **superuser** *boolean*

<b>Description</b>	Indicates if the admin user is a superuser  A superuser is granted implicit authorization to all YANG paths, has the ability to execute all CLI plugins, and by default is permitted to access the device through any interface.  Additionally, users with the superuser attribute are able to execute 'sudo' in bash. A user may also be assigned a role or list of roles, but these are only evaluated for service authorization.
<b>Context</b>	<a href="#">system aaa authentication admin-user superuser</a> <i>boolean</i>
<b>Tree</b>	<a href="#">superuser</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **username** *string*

<b>Description</b>	Assigned username for admin user
--------------------	----------------------------------

<b>Context</b>	<a href="#">system aaa authentication admin-user username</a> <i>string</i>
<b>Tree</b>	<a href="#">username</a>
<b>Default</b>	admin
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **authentication-method** *reference*

<b>Description</b>	Ordered list of server-groups to be used during user authentication If authentication fails with one method, the next defined method is tried -- failure of all methods results in the user being denied access.
<b>Context</b>	<a href="#">system aaa authentication authentication-method</a> <i>reference</i>
<b>Tree</b>	<a href="#">authentication-method</a>
<b>Reference</b>	<a href="#">system aaa server-group name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **dynamic-spiffe**

<b>Description</b>	Dynamic SPIFFE settings
<b>Context</b>	<a href="#">system aaa authentication dynamic-spiffe</a>
<b>Tree</b>	<a href="#">dynamic-spiffe</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **allow** *boolean*

<b>Description</b>	Accept clients with SPIFFE ID values that are not configured under any local user  With this behaviour enabled, when a client using a client certificate containing SPIFFE ID connects the system will accept the client. Otherwise the SPIFFE ID must be configured under some local user. Even if enabled, any client using local user's configured SPIFFE ID will use that user's identity in all operations
<b>Context</b>	<a href="#">system aaa authentication dynamic-spiffe allow</a> <i>boolean</i>
<b>Tree</b>	<a href="#">allow</a>

<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### role *reference*

<b>Description</b>	List of roles to assign to all dynamic SPIFFE clients  Dynamic SPIFFE clients are clients authenticated using a client certificate containing SPIFFE ID value that is not configured under any local user. The most specific rule for a particular role takes precedence. Rules from all user roles are evaluated together, most permissive privilege taking precedence.
<b>Context</b>	<a href="#">system aaa authentication dynamic-spiffe role <i>reference</i></a>
<b>Tree</b>	<a href="#">role</a>
<b>Reference</b>	<a href="#">system aaa authorization role rolename <i>string</i></a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	32

### exit-on-reject *boolean*

<b>Description</b>	Enable/disable exit-on-reject behaviour for authentication attempts  With this behaviour enabled, when a reject is received from any server the system will not try further methods, and will reject the user authentication attempt. Default behaviour is to continue trying methods until one accepts the user, or the system runs out of methods to try.
<b>Context</b>	<a href="#">system aaa authentication exit-on-reject <i>boolean</i></a>
<b>Tree</b>	<a href="#">exit-on-reject</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### idle-timeout *number*

<b>Description</b>	Set the idle timeout of all CLI sessions
--------------------	--

After the timeout is reached, the session is disconnected from the system.

<b>Context</b>	<a href="#">system aaa authentication idle-timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">idle-timeout</a>
<b>Default</b>	600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## linuxadmin-user

<b>Description</b>	Enclosing container for linuxadmin user
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user</a>
<b>Tree</b>	<a href="#">linuxadmin-user</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## credentialz

<b>Description</b>	Information relating to the active user credentials as provided via Credentialz State is provided by the gNSI Credentialz service, and can be changed using the gNSI.Credentialz.RotateAccountCredentials RPC
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user credentialz</a>
<b>Tree</b>	<a href="#">credentialz</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## authorized-keys

<b>Description</b>	State relating to the Authorized Keys provided via Credentialz
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user credentialz authorized-keys</a>
<b>Tree</b>	<a href="#">authorized-keys</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**created-on string**

<b>Description</b>	The created on timestamp as provided by the gNSI client at the time of uploading the artifact  The maps to the created_on field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user credentialz authorized-keys created-on string</a>
<b>Tree</b>	<a href="#">created-on</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**version string**

<b>Description</b>	The version string as provided by the gNSI client at the time of uploading the artifact  The maps to the version field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user credentialz authorized-keys version string</a>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**authorized-principals**

<b>Description</b>	State relating to the Authorized Principals provided via Credentialz
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user credentialz authorized-principals</a>
<b>Tree</b>	<a href="#">authorized-principals</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**created-on string**

<b>Description</b>	The created on timestamp as provided by the gNSI client at the time of uploading the artifact  The maps to the created_on field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user credentialz authorized-principals created-on string</a>
<b>Tree</b>	<a href="#">created-on</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**version string**

<b>Description</b>	The version string as provided by the gNSI client at the time of uploading the artifact  The maps to the version field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user credentialz authorized-principals version string</a>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**password**

<b>Description</b>	State relating to the Password provided via Credentialz.
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user credentialz password</a>
<b>Tree</b>	<a href="#">password</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**created-on string**

<b>Description</b>	The created on timestamp as provided by the gNSI client at the time of uploading the artifact  The maps to the created_on field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user credentialz password created-on string</a>
<b>Tree</b>	<a href="#">created-on</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**version string**

<b>Description</b>	The version string as provided by the gNSI client at the time of uploading the artifact  The maps to the version field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user credentialz password version string</a>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**password string**

<b>Description</b>	The linuxadmin password, supplied either as cleartext or as a hashed value  If provided as cleartext, the system will hash the value on input, storing only the hashed value. If provided as a hashed value, the value should include any '\$' characters, for example '\$6\$c66a15569d3f5952\$kA2Wpt9iqR5uMbaCUBNxsjKyXROQFdJtV1HX0CFY9wk7F326/yB3h.dERX9cH7YpeJ1N872hjzTb2tlaZFwwg0'.
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user password string</a>
<b>Tree</b>	<a href="#">password</a>

<b>Default</b>	\$y\$j9T\$/vKPXdvWQKKPH8qPzbLs0\$Hz98mmTg.j87QMZlTqY2ieGWa3Ed7kzHkp5z6kROEy4
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### ssh-key *string*

<b>Description</b>	SSH public key(s) for the user If defined, the user may login to the system over SSH with this key. This should use the SSH public authorized key format.
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user ssh-key</a> <i>string</i>
<b>Tree</b>	<a href="#">ssh-key</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

### ssh-principals *string*

<b>Description</b>	List of principals to associate with this user If any of the principals in the list are matched in a SSH client's certificate, and that client's username matches this user, and the certificate is verified, the client will authenticate.
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user ssh-principals</a> <i>string</i>
<b>Tree</b>	<a href="#">ssh-principals</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

### username *string*

<b>Description</b>	Assigned username for linuxadmin user
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user username</a> <i>string</i>
<b>Tree</b>	<a href="#">username</a>
<b>Default</b>	linuxadmin
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## password

<b>Description</b>	Top-level container for policies around user passwords
<b>Context</b>	<a href="#">system aaa authentication password</a>
<b>Tree</b>	<a href="#">password</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## aging *number*

<b>Description</b>	Expire user passwords after this period A value of 0 means that the user passwords do not expire
<b>Context</b>	<a href="#">system aaa authentication password aging <i>number</i></a>
<b>Tree</b>	<a href="#">aging</a>
<b>Range</b>	0 to 500
<b>Default</b>	0
<b>Units</b>	days
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## change-on-first-login *boolean*

<b>Description</b>	Enable or disable a user being forced to change their password on first time login
<b>Context</b>	<a href="#">system aaa authentication password change-on-first-login <i>boolean</i></a>
<b>Tree</b>	<a href="#">change-on-first-login</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## complexity-rules

<b>Description</b>	Top-level container for password complexity rules
<b>Context</b>	<a href="#">system aaa authentication password complexity-rules</a>
<b>Tree</b>	<a href="#">complexity-rules</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **allow-username** *boolean*

**Description** Enable or disable using username as part of the user password

**Context** [system aaa authentication password complexity-rules allow-username](#)  
*boolean*

**Tree** [allow-username](#)

**Default** true

**Configurable** True

**Platforms** Supported on all platforms

### **maximum-length** *number*

**Description** The maximum length of the password for local users, including admin and linuxadmin

**Context** [system aaa authentication password complexity-rules maximum-length](#)  
*number*

**Tree** [maximum-length](#)

**Range** 1 to 1023

**Default** 1023

**Configurable** True

**Platforms** Supported on all platforms

### **minimum-length** *number*

**Description** The minimum length of the password for local users, including admin and linuxadmin

**Context** [system aaa authentication password complexity-rules minimum-length](#)  
*number*

**Tree** [minimum-length](#)

**Range** 1 to 12

**Default** 1

**Configurable** True

**Platforms** Supported on all platforms

**minimum-lowercase *number***

<b>Description</b>	The minimum lowercase characters from (a-z) that the user password must include A value of 0 results in no minimum-lowercase being enforced.
<b>Context</b>	<a href="#">system aaa authentication password complexity-rules minimum-lowercase number</a>
<b>Tree</b>	<a href="#">minimum-lowercase</a>
<b>Range</b>	0 to 10
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**minimum-numeric *number***

<b>Description</b>	The minimum numeric digits that the user password must include A value of 0 results in no minimum-numeric being enforced.
<b>Context</b>	<a href="#">system aaa authentication password complexity-rules minimum-numeric number</a>
<b>Tree</b>	<a href="#">minimum-numeric</a>
<b>Range</b>	0 to 10
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**minimum-special-character *number***

<b>Description</b>	The minimum special characters that the user password must include A value of 0 results in no minimum-special-character being enforced.
<b>Context</b>	<a href="#">system aaa authentication password complexity-rules minimum-special-character number</a>
<b>Tree</b>	<a href="#">minimum-special-character</a>
<b>Range</b>	0 to 10
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**minimum-uppercase** *number*

<b>Description</b>	The minimum uppercase characters from (A-Z) that the user password must include  A value of 0 results in no minimum-uppercase being enforced.
<b>Context</b>	<a href="#">system aaa authentication password complexity-rules minimum-uppercase number</a>
<b>Tree</b>	<a href="#">minimum-uppercase</a>
<b>Range</b>	0 to 10
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**hash-method** *keyword*

<b>Description</b>	The hash algorithm for the passwords entered as plain text  If no value is configured, then Yescrypt will be used as the hash algorithm unless overridden for specific leafs using the srl_nokia-extensions:hash-algorithm yang extension. The Argon2 (ar2) hash algorithm is not supported for the linuxadmin user and if selected then the linuxadmin password will be hashed using Yescrypt.
<b>Context</b>	<a href="#">system aaa authentication password hash-method keyword</a>
<b>Tree</b>	<a href="#">hash-method</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ar2 The Argon2 password hashing algorithm</li> <li>• sha2 The SHA512 password hashing algorithm</li> <li>• yescrypt The Yescrypt password hashing algorithm</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**history** *number*

<b>Description</b>	Defines how many previous passwords a new password is matched against, such that a new password can't be one of the previous n passwords
<b>Context</b>	<a href="#">system aaa authentication password history number</a>

<b>Tree</b>	<a href="#">history</a>
<b>Range</b>	0 to 20
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## lockout-policy

<b>Description</b>	Top-level container for lockout policy
<b>Context</b>	<a href="#">system aaa authentication password lockout-policy</a>
<b>Tree</b>	<a href="#">lockout-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## attempts *number*

<b>Description</b>	The number of failed login attempts that will lock the account A value of 0 means unlimited number of failed login attempts is allowed
<b>Context</b>	<a href="#">system aaa authentication password lockout-policy attempts <i>number</i></a>
<b>Tree</b>	<a href="#">attempts</a>
<b>Range</b>	0 to 64
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## lockout *number*

<b>Description</b>	The time duration in minutes the user account will be locked out A value of 0 means that the user account will be locked out/disabled indefinitely
<b>Context</b>	<a href="#">system aaa authentication password lockout-policy lockout <i>number</i></a>
<b>Tree</b>	<a href="#">lockout</a>
<b>Range</b>	0 to 1440
<b>Default</b>	15
<b>Units</b>	minutes

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**time** *number*

<b>Description</b>	The time period in minutes within which the failed login attempts occur
<b>Context</b>	<a href="#">system aaa authentication password lockout-policy time</a> <i>number</i>
<b>Tree</b>	<a href="#">time</a>
<b>Range</b>	0 to 1440
<b>Default</b>	1
<b>Units</b>	minutes
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**require-ntp-sync** *boolean*

<b>Description</b>	Enable or disable dependence of password aging and user lockout on NTP sync status
<b>Context</b>	<a href="#">system aaa authentication password require-ntp-sync</a> <i>boolean</i>
<b>Tree</b>	<a href="#">require-ntp-sync</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**session id** *number*

<b>Description</b>	List of active sessions in the system
<b>Context</b>	<a href="#">system aaa authentication session id</a> <i>number</i>
<b>Tree</b>	<a href="#">session</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**id** *number*

<b>Description</b>	System generated session ID
<b>Context</b>	<a href="#">system aaa authentication session id</a> <i>number</i>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**authentication-method** *string*

<b>Description</b>	Authentication method that authorized the user (the server-group name or local)
<b>Context</b>	<a href="#">system aaa authentication session id number authentication-method string</a>
<b>Tree</b>	<a href="#">authentication-method</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**login-time** *string*

<b>Description</b>	Time the user logged in
<b>Context</b>	<a href="#">system aaa authentication session id number login-time string</a>
<b>Tree</b>	<a href="#">login-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**priv-lvl** *number*

<b>Description</b>	TACACS+ authorization priv-lvl (if TACACS+ authorization is enabled)
<b>Context</b>	<a href="#">system aaa authentication session id number priv-lvl number</a>
<b>Tree</b>	<a href="#">priv-lvl</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**remote-host** *string*

<b>Description</b>	Remote host of the session
<b>Context</b>	<a href="#">system aaa authentication session id number remote-host string</a>
<b>Tree</b>	<a href="#">remote-host</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**role** *string*

<b>Description</b>	List of roles assigned to this user
<b>Context</b>	<a href="#">system aaa authentication session id</a> <i>number</i> <a href="#">role</a> <i>string</i>
<b>Tree</b>	<a href="#">role</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**service-name** *string*

<b>Description</b>	Service name that called login for the session
<b>Context</b>	<a href="#">system aaa authentication session id</a> <i>number</i> <a href="#">service-name</a> <i>string</i>
<b>Tree</b>	<a href="#">service-name</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**spiffe-id** *string*

<b>Description</b>	SPIFFE ID linked to the session
<b>Context</b>	<a href="#">system aaa authentication session id</a> <i>number</i> <a href="#">spiffe-id</a> <i>string</i>
<b>Tree</b>	<a href="#">spiffe-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**tty-name** *string*

<b>Description</b>	Terminal type
<b>Context</b>	<a href="#">system aaa authentication session id</a> <i>number</i> <a href="#">tty-name</a> <i>string</i>
<b>Tree</b>	<a href="#">tty-name</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**username** *string*

<b>Description</b>	Username linked to the session
<b>Context</b>	<a href="#">system aaa authentication session id number username</a> <i>string</i>
<b>Tree</b>	<a href="#">username</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**user** [username](#) *string*

<b>Description</b>	List of local users configured on the system
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i>
<b>Tree</b>	<a href="#">user</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	128

**username** *string*

<b>Description</b>	Assigned username for this user
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i>
<b>String Length</b>	1 to 32
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**credentialz**

<b>Description</b>	Information relating to the active user credentials as provided via Credentialz State is provided by the gNSI Credentialz service, and can be changed using the gNSI.Credentialz.RotateAccountCredentials RPC
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">credentialz</a>
<b>Tree</b>	<a href="#">credentialz</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**authorized-keys**

<b>Description</b>	State relating to the Authorized Keys provided via Credentialz
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">credentialz authorized-keys</a>
<b>Tree</b>	<a href="#">authorized-keys</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**created-on** *string*

<b>Description</b>	The created on timestamp as provided by the gNSI client at the time of uploading the artifact  The maps to the created_on field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">credentialz authorized-keys created-on</a> <i>string</i>
<b>Tree</b>	<a href="#">created-on</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**version** *string*

<b>Description</b>	The version string as provided by the gNSI client at the time of uploading the artifact  The maps to the version field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">credentialz authorized-keys version</a> <i>string</i>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## authorized-principals

<b>Description</b>	State relating to the Authorized Principals provided via Credentialz
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">credentialz authorized-principals</a>
<b>Tree</b>	<a href="#">authorized-principals</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## created-on *string*

<b>Description</b>	The created on timestamp as provided by the gNSI client at the time of uploading the artifact The maps to the created_on field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">credentialz authorized-principals created-on</a> <i>string</i>
<b>Tree</b>	<a href="#">created-on</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## version *string*

<b>Description</b>	The version string as provided by the gNSI client at the time of uploading the artifact The maps to the version field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">credentialz authorized-principals version</a> <i>string</i>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**password**

<b>Description</b>	State relating to the Password provided via Credentialz.
<b>Context</b>	<a href="#">system aaa authentication user username string credentialz password</a>
<b>Tree</b>	<a href="#">password</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**created-on string**

<b>Description</b>	The created on timestamp as provided by the gNSI client at the time of uploading the artifact  The maps to the created_on field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication user username string credentialz password created-on string</a>
<b>Tree</b>	<a href="#">created-on</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**version string**

<b>Description</b>	The version string as provided by the gNSI client at the time of uploading the artifact  The maps to the version field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system aaa authentication user username string credentialz password version string</a>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**failed-login-attempts** *number*

<b>Description</b>	Number of failed login attempts from the user
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">failed-login-attempts</a> <i>number</i>
<b>Tree</b>	<a href="#">failed-login-attempts</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-failed-login** *string*

<b>Description</b>	The date and time of the last login failure from this user
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">last-failed-login</a> <i>string</i>
<b>Tree</b>	<a href="#">last-failed-login</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-successful-login** *string*

<b>Description</b>	The date and time of the last successful login from this user
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">last-successful-login</a> <i>string</i>
<b>Tree</b>	<a href="#">last-successful-login</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**lockout**

<b>Description</b>	Information relating to the lockout state of this user
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">lockout</a>
<b>Tree</b>	<a href="#">lockout</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active** *boolean*

<b>Description</b>	Indicates if a lockout is active for the user  Lockouts can occur after successive failed logins, and can be cleared by 'tools system aaa authentication user <username> unlock'
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">lockout active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">active</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**end** *string*

<b>Description</b>	Indicates the time at which the most recent lockout for this user ended or will end
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">lockout end</a> <i>string</i>
<b>Tree</b>	<a href="#">end</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**start** *string*

<b>Description</b>	Indicates the time at which the most recent lockout for this user started
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">lockout start</a> <i>string</i>
<b>Tree</b>	<a href="#">start</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**password** *string*

<b>Description</b>	The user password, supplied either as cleartext or as a hashed value  If provided as cleartext, the system will hash the value on input, storing only the hashed value. If provided as a hashed value, the value should include any '\$' characters, for example '\$ar2\$aOvsuj0ALIU=\$r750fMa3ZEA/Di8dIfU2fQ=='
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">password</a> <i>string</i>

<b>Tree</b>	<a href="#">password</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **password-change-required** *boolean*

<b>Description</b>	Indicates if the user must change their password on next login
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">password-change-required</a> <i>boolean</i>
<b>Tree</b>	<a href="#">password-change-required</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **role** *reference*

<b>Description</b>	List of roles to assign to this user  The most specific rule for a particular role takes precedence. Rules from all user roles are evaluated together, most permissive privilege taking precedence.
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">role</a> <i>reference</i>
<b>Tree</b>	<a href="#">role</a>
<b>Reference</b>	<a href="#">system aaa authorization role rolename</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

### **spiffe-ids** *string*

<b>Description</b>	The SPIFFE ID list for the user, including the spiffe:// URI  This list of IDs is evaluated by TLS-consuming servers (e.g. gNMI, JSON-RPC) that use a TLS server-profile with authenticate-client set to true.  If a match is found in any incoming offered client certificates, the provider of the certificate is associated with this local user, and given resulting permissions.
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">spiffe-ids</a> <i>string</i>
<b>Tree</b>	<a href="#">spiffe-ids</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ssh-key *string*

**Description** SSH public key(s) for the user  
If defined, the user may login to the system over SSH with this key. This should use the SSH public authorized key format.

**Context** [system aaa authentication user username](#) *string* [ssh-key](#) *string*

**Tree** [ssh-key](#)

**Configurable** True

**Platforms** Supported on all platforms

**Max. Elements** 32

### ssh-principals *string*

**Description** List of principals to associate with this user  
If any of the principals in the list are matched in a SSH client's certificate, and that client's username matches this user, and the certificate is verified, the client will authenticate.

**Context** [system aaa authentication user username](#) *string* [ssh-principals](#) *string*

**Tree** [ssh-principals](#)

**Configurable** True

**Platforms** Supported on all platforms

**Max. Elements** 32

### superuser *boolean*

**Description** Indicates that this user is a superuser  
A superuser is granted implicit authorization to all YANG paths, has the ability to execute all CLI plugins, and by default is permitted to access the device through any interface.  
Additionally, users with the superuser attribute are able to execute 'sudo' in bash. A user may also be assigned a role or list of roles, but these are only evaluated for service authorization.

**Context** [system aaa authentication user username](#) *string* [superuser](#) *boolean*

**Tree** [superuser](#)

<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## authorization

<b>Description</b>	Top-level container for authorization configuration and operational state data
<b>Context</b>	<a href="#">system aaa authorization</a>
<b>Tree</b>	<a href="#">authorization</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## authz-policy

<b>Description</b>	Information relating to the active gRPC authorization policy  This policy is provided by the gNSI gRPC service, and can be changed using the gNSI.Authz.Rotate RPC
<b>Context</b>	<a href="#">system aaa authorization authz-policy</a>
<b>Tree</b>	<a href="#">authz-policy</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## counters

<b>Description</b>	A collection of counters collected by the gNSI.authz module.
<b>Context</b>	<a href="#">system aaa authorization authz-policy counters</a>
<b>Tree</b>	<a href="#">counters</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**rpc name string**

<b>Description</b>	A collection of counters collected by the gNSI.authz module for a RPC identified by the `name`.
<b>Context</b>	<a href="#">system aaa authorization authz-policy counters rpc name string</a>
<b>Tree</b>	<a href="#">rpc</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**name string**

<b>Description</b>	The name of the RPC the counters were collected for.
<b>Context</b>	<a href="#">system aaa authorization authz-policy counters rpc name string</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**access-accepts number**

<b>Description</b>	The total number of times the gNSI.authz module allowed access to a RPC.
<b>Context</b>	<a href="#">system aaa authorization authz-policy counters rpc name string access-accepts number</a>
<b>Tree</b>	<a href="#">access-accepts</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**access-rejects number**

<b>Description</b>	The total number of times the gNSI.authz module denied access to a RPC.
<b>Context</b>	<a href="#">system aaa authorization authz-policy counters rpc name string access-rejects number</a>
<b>Tree</b>	<a href="#">access-rejects</a>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-access-accept** *string*

**Description** A timestamp of the last time the gNSI.authz allowed access to a RPC.

**Context** [system aaa authorization authz-policy counters rpc name string last-access-accept string](#)

**Tree** [last-access-accept](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-access-reject** *string*

**Description** A timestamp of the last time the gNSI.authz denied access to a RPC.

**Context** [system aaa authorization authz-policy counters rpc name string last-access-reject string](#)

**Tree** [last-access-reject](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **created-on** *string*

**Description** The created on timestamp as provided by the gNSI client at the time of uploading the policy  
This maps to the created\_on field within a UploadRequest message in the Authz protobuf.

**Context** [system aaa authorization authz-policy created-on string](#)

**Tree** [created-on](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **policy string**

**Description** The policy definition  
 This JSON string contains the full gRPC authorization rules conforming to the gRPC authorization policy schema:  
 This maps to the policy field within a UploadRequest message in the Authz protobuf.

**Context** [system aaa authorization authz-policy policy string](#)

**Tree** [policy](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **version string**

**Description** The version string as provided by the gNSI client at the time of uploading the policy  
 The maps to the version field within a UploadRequest message in the Authz protobuf.

**Context** [system aaa authorization authz-policy version string](#)

**Tree** [version](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **role rolename string**

**Description** List of local roles configured on the system

**Context** [system aaa authorization role rolename string](#)

**Tree** [role](#)

**Configurable** True

**Platforms** Supported on all platforms

**rolename** *string*

<b>Description</b>	Assigned rolename for this role
<b>Context</b>	<a href="#">system aaa authorization role rolename string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**cli**

<b>Description</b>	Top-level container for cli plugin configuration
<b>Context</b>	<a href="#">system aaa authorization role rolename string cli</a>
<b>Tree</b>	<a href="#">cli</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**allow-command-list** *string*

<b>Description</b>	List of cli commands that are allowed for this role  Python style regular expressions are supported. Every item is left anchored (it matches from the beginning of line). Empty allow-command-list means anything that is not in deny-command-list is allowed. If both lists are empty then everything is allowed.
<b>Context</b>	<a href="#">system aaa authorization role rolename string cli allow-command-list string</a>
<b>Tree</b>	<a href="#">allow-command-list</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	100

**deny-command-list** *string*

<b>Description</b>	List of cli commands that are denied for this role  Python style regular expressions are supported. Every item is left anchored (it matches from the beginning of line). Empty deny-command-list means
--------------------	--

anything that is not in allow-command-list is denied. If both lists are empty then everything is allowed.

<b>Context</b>	<code>system aaa authorization role rolename string cli deny-command-list string</code>
<b>Tree</b>	<code>deny-command-list</code>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	100

### **load-global-plugins** *boolean*

<b>Description</b>	Specifies whether cli should load plugins from global plugin directory (from /etc/opt/srlinux/cli/plugins/).
<b>Context</b>	<code>system aaa authorization role rolename string cli load-global-plugins boolean</code>
<b>Tree</b>	<code>load-global-plugins</code>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **load-user-plugins** *boolean*

<b>Description</b>	Specifies whether cli should load plugins from user home directory (from ~/cli/plugins/).
<b>Context</b>	<code>system aaa authorization role rolename string cli load-user-plugins boolean</code>
<b>Tree</b>	<code>load-user-plugins</code>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **services** *keyword*

<b>Description</b>	Services that members of this role are authorized for Services are additive, if a user is a member of multiple roles, the available services are merged.
--------------------	---

<b>Context</b>	<a href="#">system aaa authorization role rolename string services keyword</a>
<b>Tree</b>	<a href="#">services</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• cli</li> <li>• gnmi</li> <li>• gnoi</li> <li>• gnsi</li> <li>• gribi</li> <li>• netconf</li> <li>• p4rt</li> <li>• json-rpc</li> <li>• ftp</li> <li>• grpc-reflection</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **superuser** *boolean*

<b>Description</b>	<p>Indicates if users with this role are given superuser</p> <p>A superuser is granted implicit authorization to all YANG paths, has the ability to execute all CLI plugins, and by default is permitted to access the device through any interface.</p> <p>Additionally, users with the superuser attribute are able to execute 'sudo' in bash. A user may also be assigned a role or list of roles, but these are only evaluated for service authorization.</p>
<b>Context</b>	<a href="#">system aaa authorization role rolename string superuser boolean</a>
<b>Tree</b>	<a href="#">superuser</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **tacacs**

<b>Description</b>	Top-level container for configuration relating to TACACS+ interworking with roles
<b>Context</b>	<a href="#">system aaa authorization role rolename string tacacs</a>

<b>Tree</b>	<a href="#">tacacs</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**priv-lvl** *number*

<b>Description</b>	The TACACS+ priv-lvl to map to this role All roles matching each specific priv-lvl, and their lessers are merged together to create the final ruleset applied to the user.
<b>Context</b>	<a href="#">system aaa authorization role rolename</a> <i>string tacacs priv-lvl number</i>
<b>Tree</b>	<a href="#">priv-lvl</a>
<b>Range</b>	0 to 15
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**server-group** *name string*

<b>Description</b>	List of AAA server-groups in the system Each server group specifies a type, of which all servers must use. If using the 'local' type, then no servers may be specified.
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i>
<b>Tree</b>	<a href="#">server-group</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	3

**name** *string*

<b>Description</b>	User defined name for the server group
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**priv-lvl-authorization** *boolean*

<b>Description</b>	Use TACACS+ priv-lvl based authorization If false, then authorization is skipped for TACACS+ users granting full admin access for those users.
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">priv-lvl-authorization</a> <i>boolean</i>
<b>Tree</b>	<a href="#">priv-lvl-authorization</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**server** [address](#) (*ipv4-address | ipv6-address*)

<b>Description</b>	List of AAA servers to use within this server-group Servers are tried in a round-robin fashion, with the first server always being tried if it is operationally available
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">server</a> <a href="#">address</a> ( <i>ipv4-address   ipv6-address</i> )
<b>Tree</b>	<a href="#">server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	5

**address** (*ipv4-address | ipv6-address*)

<b>Description</b>	Address used to reach the server
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">server</a> <a href="#">address</a> ( <i>ipv4-address   ipv6-address</i> )
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	User defined name assigned to the server
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">server</a> <a href="#">address</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">name</a> <i>string</i>
<b>Tree</b>	<a href="#">name</a>
<b>String Length</b>	1 to 255

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### network-instance *reference*

<b>Description</b>	Reference to a configured network-instance used for reachability to the server  This network-instance must already exist in the system, and different servers within the same server-group may use difference network-instances for connectivity.
<b>Context</b>	<a href="#">system aaa server-group name string server address (ipv4-address   ipv6-address) network-instance reference</a>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Reference</b>	<a href="#">network-instance name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### oper-state *keyword*

<b>Description</b>	Details the operational state of the server  A server is defined as being down if it fails to respond before the timeout period, or if a path towards the server is not available.
<b>Context</b>	<a href="#">system aaa server-group name string server address (ipv4-address   ipv6-address) oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> </ul>

- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

Supported on all platforms

**radius****Description**

Top-level container for RADIUS server data

**Context**[system aaa server-group name string server address \(ipv4-address | ipv6-address\) radius](#)**Tree**[radius](#)**Configurable**

True

**Platforms**

Supported on all platforms

**acct-port *number*****Description**

Port number for accounting requests

**Context**[system aaa server-group name string server address \(ipv4-address | ipv6-address\) radius acct-port \*number\*](#)**Tree**[acct-port](#)

<b>Range</b>	0 to 65535
<b>Default</b>	1813
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **auth-port** *number*

<b>Description</b>	Port number for authentication requests
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">server address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">radius auth-port</a> <i>number</i>
<b>Tree</b>	<a href="#">auth-port</a>
<b>Range</b>	0 to 65535
<b>Default</b>	1812
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **retransmit-attempts** *number*

<b>Description</b>	Number of times the system may send a request to the unresponsive server
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">server address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">radius retransmit-attempts</a> <i>number</i>
<b>Tree</b>	<a href="#">retransmit-attempts</a>
<b>Default</b>	3
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **secret-key** *string*

<b>Description</b>	The unencrypted shared key used between the system and server
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">server address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">radius secret-key</a> <i>string</i>
<b>Tree</b>	<a href="#">secret-key</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enclosing container for server statistics
<b>Context</b>	<a href="#">system aaa server-group name string server address (ipv4-address   ipv6-address) statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**accounting-connection-failures *number***

<b>Description</b>	Number of accounting connection failures
<b>Context</b>	<a href="#">system aaa server-group name string server address (ipv4-address   ipv6-address) statistics accounting-connection-failures number</a>
<b>Tree</b>	<a href="#">accounting-connection-failures</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**accounting-rejects *number***

<b>Description</b>	Number of accounting rejections
<b>Context</b>	<a href="#">system aaa server-group name string server address (ipv4-address   ipv6-address) statistics accounting-rejects number</a>
<b>Tree</b>	<a href="#">accounting-rejects</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**accounting-success *number***

<b>Description</b>	Number of accounting successes
<b>Context</b>	<a href="#">system aaa server-group name string server address (ipv4-address   ipv6-address) statistics accounting-success number</a>
<b>Tree</b>	<a href="#">accounting-success</a>
<b>Default</b>	0
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **authorization-connection-failures** *number*

**Description** Number of authorization connection failures

**Context** [system aaa server-group name string server address \(ipv4-address | ipv6-address\) statistics authorization-connection-failures number](#)

**Tree** [authorization-connection-failures](#)

**Default** 0

**Configurable** False

**Platforms** Supported on all platforms

### **authorization-rejects** *number*

**Description** Number of authorization rejections

**Context** [system aaa server-group name string server address \(ipv4-address | ipv6-address\) statistics authorization-rejects number](#)

**Tree** [authorization-rejects](#)

**Default** 0

**Configurable** False

**Platforms** Supported on all platforms

### **authorization-success** *number*

**Description** Number of authorization successes

**Context** [system aaa server-group name string server address \(ipv4-address | ipv6-address\) statistics authorization-success number](#)

**Tree** [authorization-success](#)

**Default** 0

**Configurable** False

**Platforms** Supported on all platforms

### **login-connection-failures** *number*

**Description** Number of login connection failures

**Context** [system aaa server-group name string server address \(ipv4-address | ipv6-address\) statistics login-connection-failures number](#)

<b>Tree</b>	<a href="#">login-connection-failures</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **login-rejects** *number*

<b>Description</b>	Number of login rejections
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">server address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">statistics login-rejects</a> <i>number</i>
<b>Tree</b>	<a href="#">login-rejects</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **login-success** *number*

<b>Description</b>	Number of login successes
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">server address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">statistics login-success</a> <i>number</i>
<b>Tree</b>	<a href="#">login-success</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **tacacs**

<b>Description</b>	Top-level container for TACACS+ server data
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">server address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">tacacs</a>
<b>Tree</b>	<a href="#">tacacs</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **port** *number*

<b>Description</b>	The port number on which to contact the TACACS+ server
--------------------	--

<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">server address</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">tacacs port</a> <i>number</i>
<b>Tree</b>	<a href="#">port</a>
<b>Range</b>	0 to 65535
<b>Default</b>	49
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**secret-key** *string*

<b>Description</b>	The unencrypted shared key used between the system and server
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">server address</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">tacacs secret-key</a> <i>string</i>
<b>Tree</b>	<a href="#">secret-key</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**timeout** *number*

<b>Description</b>	Set the timeout in seconds on responses from servers in this group
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">timeout</a>
<b>Range</b>	1 to 3600
<b>Default</b>	10
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type** *identityref*

<b>Description</b>	AAA server type -- all servers in the group must be of this type
<b>Context</b>	<a href="#">system aaa server-group name</a> <i>string</i> <a href="#">type</a> <i>identityref</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">tacacs</a> Specifies servers using the TACACS+ protocol Terminal Access Controller Access Control System (TACACS+)</li> </ul>

- radius  
Specifies servers using RADIUS protocol  
Remote Authentication Dial In User Service (RADIUS) AAA server
- local  
Specifies using Linux local methods  
This type cannot be combined with a server address

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## app-management

<b>Description</b>	Top-level container for application configuration and state
<b>Context</b>	<a href="#">system app-management</a>
<b>Tree</b>	<a href="#">app-management</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## application *name string*

<b>Description</b>	List of all applications managed by the application manager
<b>Context</b>	<a href="#">system app-management application name string</a>
<b>Tree</b>	<a href="#">application</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## name *string*

<b>Description</b>	Unique name of this application instance
<b>Context</b>	<a href="#">system app-management application name string</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## author *string*

<b>Description</b>	The author of the application
<b>Context</b>	<a href="#">system app-management application name string author string</a>

<b>Tree</b>	<a href="#">author</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**cgroup** *string*

<b>Description</b>	Cgroup in with this application is started
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">cgroup</a> <i>string</i>
<b>Tree</b>	<a href="#">cgroup</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**failure-action** *string*

<b>Description</b>	The action taken after 'failure-threshold' failures within 'failure-window' This action can be to reboot the system, wait forever, or wait for a predefined number of seconds
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">failure-action</a> <i>string</i>
<b>Tree</b>	<a href="#">failure-action</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**failure-threshold** *number*

<b>Description</b>	How many restarts within 'failure-window' are required to trigger the failure action Setting this value to 0 will result in no action taking place on application restarts
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">failure-threshold</a> <i>number</i>
<b>Tree</b>	<a href="#">failure-threshold</a>
<b>Range</b>	0 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**failure-window** *number*

<b>Description</b>	Sliding window in seconds, over which to count restarts towards failure-threshold
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">failure-window</a> <i>number</i>
<b>Tree</b>	<a href="#">failure-window</a>
<b>Range</b>	300 to 86400
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-change** *string*

<b>Description</b>	Date and time the application instance last changed state
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">last-change</a> <i>string</i>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-start-type** *keyword*

<b>Description</b>	Indicates the type of the most recent start or restart of this application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">last-start-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">last-start-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• warm A warm start indicates that the application will leave state in IDB during a restart, and recover it post restart This type results in less disruption to surrounding applications and functionality.</li> <li>• cold A cold start indicates that the application will not leave state in IDB during a restart This type is equivalent to a normal application restart, i.e. one where the application's state is purged from the system during the restart, and recreated after.</li> </ul>
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **launch-command** *string*

**Description** The command used to launch the application

**Context** [system app-management application name](#) *string* [launch-command](#) *string*

**Tree** [launch-command](#)

**Configurable** False

**Platforms** Supported on all platforms

### **oom-score-adj** *number*

**Description** OOM score adj value set for this application

**Context** [system app-management application name](#) *string* [oom-score-adj](#) *number*

**Tree** [oom-score-adj](#)

**Configurable** False

**Platforms** Supported on all platforms

### **path** *string*

**Description** The directory where the application can be found

**Context** [system app-management application name](#) *string* [path](#) *string*

**Tree** [path](#)

**Configurable** False

**Platforms** Supported on all platforms

### **pid** *number*

**Description** Process ID of this application instance

**Context** [system app-management application name](#) *string* [pid](#) *number*

**Tree** [pid](#)

**Configurable** False

**Platforms** Supported on all platforms

**restricted-operations** *keyword*

<b>Description</b>	The operations that may not be manually performed on this application
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <b>restricted-operations</b> <i>keyword</i>
<b>Tree</b>	<a href="#">restricted-operations</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• restart This application may not be restarted manually</li> <li>• stop This application may not be stopped manually</li> <li>• start This application may not be started manually</li> <li>• reload This application may not be reloaded manually</li> <li>• quit This application may not be terminated manually</li> <li>• kill This application may not be terminated ungracefully manually</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**search-command** *string*

<b>Description</b>	The command used to search for the applications liveness
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <b>search-command</b> <i>string</i>
<b>Tree</b>	<a href="#">search-command</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**state** *keyword*

<b>Description</b>	Current state of this application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <b>state</b> <i>keyword</i>
<b>Tree</b>	<a href="#">state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• running Application instance is running This is the normal, active state of an application</li> </ul>

- **waiting-for-config**  
Application instance is loaded, but has no configuration  
This state requires wait-for-config true within the applications YAML configuration. This results in the application being loaded into app-mgr, but not starting until the system receives configuration for it
- **error**  
The application has not started successfully, or has failed  
This state can be caused by an application hitting the restart backoff, or an application failing to start following triggering a system reboot
- **starting**  
The application has been asked to start  
All applications enter this state after initial execution, after which application manager will wait five seconds before checking their status. IDB connected applications may announce their state before this five second window has passed, resulting in them transitioning from this state faster than PID-monitored applications.
- **stopped**  
The application is not running  
This state is most likely caused by an operator action

**Configurable**

False

**Platforms**

Supported on all platforms

**statistics****Description**

Top-level container for application statistics

**Context**[system app-management application name](#) *string* [statistics](#)**Tree**[statistics](#)**Configurable**

False

**Platforms**

Supported on all platforms

**restart-count** *number***Description**

The number of times this application instance has restarted

**Context**[system app-management application name](#) *string* [statistics](#) [restart-count](#) *number***Tree**[restart-count](#)**Default**

0

**Configurable**

False

**Platforms** Supported on all platforms

### **supported-restart-types** *keyword*

**Description** Indicates the supported restart types for this application

**Context** [system app-management application name](#) *string* [supported-restart-types](#) *keyword*

**Tree** [supported-restart-types](#)

**Options**

- warm
 

A warm start indicates that the application will leave state in IDB during a restart, and recover it post restart

This type results in less disruption to surrounding applications and functionality.
- cold
 

A cold start indicates that the application will not leave state in IDB during a restart

This type is equivalent to a normal application restart, i.e. one where the application's state is purged from the system during the restart, and recreated after.

**Configurable** False

**Platforms** Supported on all platforms

### **version** *string*

**Description** The version of the application

**Context** [system app-management application name](#) *string* [version](#) *string*

**Tree** [version](#)

**Configurable** False

**Platforms** Supported on all platforms

### **yang**

**Description** Top-level container for application state related to YANG

**Context** [system app-management application name](#) *string* [yang](#)

**Tree** [yang](#)

**Configurable** False

**Platforms** Supported on all platforms

**modules** *string*

<b>Description</b>	YANG module names used by this application instance
<b>Context</b>	<a href="#">system</a> <a href="#">app-management</a> <a href="#">application name</a> <i>string</i> <a href="#">yang</a> <a href="#">modules</a> <i>string</i>
<b>Tree</b>	<a href="#">modules</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**source-directories** *string*

<b>Description</b>	Source directories searched for YANG modules to load These directories are used to load modules indicated in the modules leaf, and any modules imported/included within them
<b>Context</b>	<a href="#">system</a> <a href="#">app-management</a> <a href="#">application name</a> <i>string</i> <a href="#">yang</a> <a href="#">source-directories</a> <i>string</i>
<b>Tree</b>	<a href="#">source-directories</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**authentication**

<b>Description</b>	Container for protocol authentication options available system wide
<b>Context</b>	<a href="#">system</a> <a href="#">authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**keychain** *name string*

<b>Description</b>	List of system keychains
<b>Context</b>	<a href="#">system</a> <a href="#">authentication</a> <a href="#">keychain name</a> <i>string</i>
<b>Tree</b>	<a href="#">keychain</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	1024

**name** *string*

<b>Description</b>	The user configured name for the keychain
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**active-key-for-send** (*keyword* | *reference*)

<b>Description</b>	Provides the key index of the currently active Keychain key
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">active-key-for-send</a> ( <i>keyword</i>   <i>reference</i> )
<b>Tree</b>	<a href="#">active-key-for-send</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none No send key is usable</li> </ul>
<b>Reference</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">key index</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	<p>When set to disable, the keychain is inactive</p> <p>When a protocol refers to a keychain that is inactive, no authentication data is added to the outbound messages and/or all inbound messages with authentication data are dropped, depending on the context.</p> <p>A keychain is operationally disabled in a particular direction (send/receive) if:</p>
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**description** *string*

<b>Description</b>	The user configured description for the keychain
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">description</a> <i>string</i>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**expired** *boolean*

<b>Description</b>	The value of this object indicates whether the keychain is expired Expired can mean past end-time or prior to start-time.
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">expired</a> <i>boolean</i>
<b>Tree</b>	<a href="#">expired</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**key** *index number*

<b>Description</b>	List of keys in the keychain
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">key</a> <i>index number</i>
<b>Tree</b>	<a href="#">key</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**index** *number*

<b>Description</b>	Each key in a keychain requires a unique identifier, the index value specifies this identifier
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">key</a> <i>index number</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**algorithm** *keyword*

<b>Description</b>	The cryptographic algorithm used with the keying material to secure the messages
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">key index number</a> <a href="#">algorithm keyword</a>
<b>Tree</b>	<a href="#">algorithm</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>cleartext</b> The authentication-key is encoded in plaintext</li> <li>• <b>md5</b> The authentication-key is used to generate an MD5 digest (RFC 1321)</li> <li>• <b>hmac-md5</b> The authentication-key is used to generate a 16-byte (128 bit) MD5 digest using the HMAC algorithm (RFC 2104)</li> <li>• <b>hmac-sha-1</b> The authentication-key is used to generate a SHA1 digest using the HMAC algorithm (RFC 2104)</li> <li>• <b>hmac-sha-256</b> The authentication-key is used to generate a SHA2 digest using the HMAC algorithm (RFC 2104) The SHA-256 variant of SHA2 produces an output of 32 bytes (256 bits)</li> <li>• <b>aes-128-cmac</b> The authentication-key is used with the AES-128 encryption algorithm to generate a cipher MAC (RFC 4493)</li> <li>• <b>aes-256-cmac</b> The authentication-key is used with the AES-256 encryption algorithm to generate a cipher MAC (RFC 4493).</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**authentication-key** *string*

<b>Description</b>	The secret key to use for authentication
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string</i> <a href="#">key index number</a> <a href="#">authentication-key string</a>
<b>Tree</b>	<a href="#">authentication-key</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	Specifies the intended use of the keychain  The type constrains the set of crypto algorithms that are available to use with each key in the keychain. It is also used to ensure that this keychain is only used by protocols for which it is intended.
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string type keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• tcp-md5 Keychain intended to be used for TCP-MD5 authentication</li> <li>• isis Keychain intended to be used for authentication of IS-IS PDUs</li> <li>• ospf Keychain intended to be used for authentication of OSPFv2 messages</li> <li>• tcp-ao Keychain intended to be used for TCP-AO authentication</li> <li>• vrrp Keychain intended to be used for authentication of VRRPv2 messages</li> <li>• macsec Keychain intended to be used for key wrapping of SAK in a mka messages.</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**usable** *boolean*

<b>Description</b>	The value of this object indicates if the keychain is usable for authentication
<b>Context</b>	<a href="#">system authentication keychain name</a> <i>string usable boolean</i>
<b>Tree</b>	<a href="#">usable</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**banner**

<b>Description</b>	Contains configuration and state related to system banners
<b>Context</b>	<a href="#">system banner</a>

<b>Tree</b>	<a href="#">banner</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **login-banner** *string*

<b>Description</b>	Banner to display before a user has authenticated
<b>Context</b>	<a href="#">system banner login-banner</a> <i>string</i>
<b>Tree</b>	<a href="#">login-banner</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **motd-banner** *string*

<b>Description</b>	Banner to display after a user has authenticated
<b>Context</b>	<a href="#">system banner motd-banner</a> <i>string</i>
<b>Tree</b>	<a href="#">motd-banner</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **boot**

<b>Description</b>	Top-level container for configuration and state data related to booting the system
<b>Context</b>	<a href="#">system boot</a>
<b>Tree</b>	<a href="#">boot</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **autoboot**

<b>Description</b>	Top-level container for configuration and state data related to autobooting the system
<b>Context</b>	<a href="#">system boot autoboot</a>
<b>Tree</b>	<a href="#">autoboot</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **admin-state** *keyword*

**Description** Administratively enable or disable autoboot functionality

**Context** [system boot autoboot admin-state keyword](#)

**Tree** [admin-state](#)

**Options**

- enable
- disable

**Configurable** True

**Platforms** Supported on all platforms

### **attempts** *number*

**Description** Sets the amount of executions to try autoboot, before rebooting the system

**Context** [system boot autoboot attempts number](#)

**Tree** [attempts](#)

**Range** 1 to 10

**Configurable** True

**Platforms** Supported on all platforms

### **client-id** *keyword*

**Description** The client ID to use on outgoing DHCP requests

**Context** [system boot autoboot client-id keyword](#)

**Tree** [client-id](#)

**Options**

- serial
  - Use the chassis serial number as the client ID

**Configurable** True

**Platforms** Supported on all platforms

### **interface** *reference*

**Description** Sets the interface to use for autoboot functionality

**Context** [system boot autoboot interface reference](#)

<b>Tree</b>	<a href="#">interface</a>
<b>Default</b>	mgmt0
<b>Reference</b>	<a href="#">interface name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mode** *string*

<b>Description</b>	Ztp operation modes. One or more modes can passed
<b>Context</b>	<a href="#">system boot autoboot mode</a> <i>string</i>
<b>Tree</b>	<a href="#">mode</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**oper-state** *string*

<b>Description</b>	The current operational status of the autoboot process
<b>Context</b>	<a href="#">system boot autoboot oper-state</a> <i>string</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**timeout** *number*

<b>Description</b>	Sets the timeout for each attempt to autoboot
<b>Context</b>	<a href="#">system boot autoboot timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">timeout</a>
<b>Range</b>	200 to 3600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**golden-image** *string*

<b>Description</b>	The local image the system reverts to when a factory reset operation is requested
--------------------	---

The value is the folder that contains the initramfs, kernel, and squashfs image. The search path for these directories is /mnt/nokiaos/<folder>

<b>Context</b>	<a href="#">system boot golden-image</a> <i>string</i>
<b>Tree</b>	<a href="#">golden-image</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **image** *string*

<b>Description</b>	Ordered list of local images used to boot the system  This directly translates into boot configuration in grub, where the images are tried in the order specified by the user. Images are sourced via the internal SD card, and the value passed is the folder that contains the initramfs, kernel, and squashfs image. The search path for these directories is /mnt/nokiaos/<folder>
<b>Context</b>	<a href="#">system boot image</a> <i>string</i>
<b>Tree</b>	<a href="#">image</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	3

### **bridge-table**

<b>Description</b>	system bridge-table information
<b>Context</b>	<a href="#">system bridge-table</a>
<b>Tree</b>	<a href="#">bridge-table</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **mac-learning**

<b>Description</b>	Enter the mac-learning context
<b>Context</b>	<a href="#">system bridge-table mac-learning</a>

<b>Tree</b>	<a href="#">mac-learning</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **mac-relearn-only** *boolean*

<b>Description</b>	The value of this leaf indicates that the system will not learn any new mac addresses, but will relearn any that are already programmed
<b>Context</b>	<a href="#">system bridge-table mac-learning mac-relearn-only boolean</a>
<b>Tree</b>	<a href="#">mac-relearn-only</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **mac-limit**

<b>Description</b>	Bridge Table size and thresholds.
<b>Context</b>	<a href="#">system bridge-table mac-limit</a>
<b>Tree</b>	<a href="#">mac-limit</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **maximum-entries** *number*

<b>Description</b>	Maximum number of mac addresses allowed in the system bridge-table.
<b>Context</b>	<a href="#">system bridge-table mac-limit maximum-entries number</a>
<b>Tree</b>	<a href="#">maximum-entries</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **warning-threshold-pct** *number*

<b>Description</b>	Percentage of the configured max-number-macs over which a warning is triggered. The warning message is cleared when the percentage drops below the configured percentage minus 5%
<b>Context</b>	<a href="#">system bridge-table mac-limit warning-threshold-pct number</a>
<b>Tree</b>	<a href="#">warning-threshold-pct</a>
<b>Configurable</b>	False

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ended** *string*

<b>Description</b>	End date and time of the commit This field is not populated if the commit is in progress
<b>Context</b>	<a href="#">system configuration commit id</a> <i>number</i> <a href="#">ended</a> <i>string</i>
<b>Tree</b>	<a href="#">ended</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the configuration candidate the commit was triggered from
<b>Context</b>	<a href="#">system configuration commit id</a> <i>number</i> <a href="#">name</a> <i>string</i>
<b>Tree</b>	<a href="#">name</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**started** *string*

<b>Description</b>	Start date and time of the commit
<b>Context</b>	<a href="#">system configuration commit id</a> <i>number</i> <a href="#">started</a> <i>string</i>
<b>Tree</b>	<a href="#">started</a>
<b>String Length</b>	20 to 32

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**status** *keyword*

<b>Description</b>	Current status of the commit
<b>Context</b>	<a href="#">system configuration commit id</a> <i>number status keyword</i>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• validating</li> <li>• publishing</li> <li>• unconfirmed</li> <li>• checkpoint</li> <li>• save</li> <li>• complete</li> <li>• reverting</li> <li>• failed</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	Type of configuration candidate the commit was triggered from
<b>Context</b>	<a href="#">system configuration commit id</a> <i>number type keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• shared</li> <li>• private</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**username** *string*

<b>Description</b>	User that started the commit
<b>Context</b>	<a href="#">system configuration commit id</a> <i>number username string</i>
<b>Tree</b>	<a href="#">username</a>
<b>String Length</b>	1 to 255

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**idle-timeout** *number*

<b>Description</b>	The idle timeout of configuration candidates After this period of no activity, the candidate is emptied and removed from the system.
<b>Context</b>	<a href="#">system configuration idle-timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">idle-timeout</a>
<b>Default</b>	10080
<b>Units</b>	minutes
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**last-change** *string*

<b>Description</b>	Date and time of the last successful commit Set to the time the configuration was loaded by management server, so is refreshed at boot time.
<b>Context</b>	<a href="#">system configuration last-change</a> <i>string</i>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**max-candidates** *number*

<b>Description</b>	The maximum number of combined private and shared candidates
<b>Context</b>	<a href="#">system configuration max-candidates</a> <i>number</i>
<b>Tree</b>	<a href="#">max-candidates</a>
<b>Range</b>	1 to 255
<b>Default</b>	10
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**max-checkpoints** *number*

<b>Description</b>	The number of checkpoints kept by the system
<b>Context</b>	<a href="#">system configuration max-checkpoints</a> <i>number</i>
<b>Tree</b>	<a href="#">max-checkpoints</a>
<b>Range</b>	1 to 255
<b>Default</b>	10
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**role** *name reference*

<b>Description</b>	List of roles configured in the system
<b>Context</b>	<a href="#">system configuration role name</a> <i>reference</i>
<b>Tree</b>	<a href="#">role</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

**name** *reference*

<b>Description</b>	Enter the name context
<b>Context</b>	<a href="#">system configuration role name</a> <i>reference</i>
<b>Reference</b>	<a href="#">system aaa authorization role rolename</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**rule** *path-reference string*

<b>Description</b>	List of paths to perform access control against
<b>Context</b>	<a href="#">system configuration role name</a> <i>reference</i> <a href="#">rule path-reference</a> <i>string</i>
<b>Tree</b>	<a href="#">rule</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	256

**path-reference** *string*

<b>Description</b>	Reference to a valid YANG path, in CLI notation This path may include keys, wildcards, ranges, and other management server supported constructs. Ranges will be expanded. The root path can be specified with '/'. E.g. / "/interface" "/acl ipv4-filter foo* description"
<b>Context</b>	<a href="#">system configuration role name reference rule path-reference string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**action** *keyword*

<b>Description</b>	Action to allow for this path
<b>Context</b>	<a href="#">system configuration role name reference rule path-reference string action keyword</a>
<b>Tree</b>	<a href="#">action</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• read This path may be read by the role</li> <li>• write This path may be written and read by the role</li> <li>• deny This path may not be read or written to by the role</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**session id** *number*

<b>Description</b>	List of configuration sessions currently active
<b>Context</b>	<a href="#">system configuration session id number</a>
<b>Tree</b>	<a href="#">session</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**id** *number*

<b>Description</b>	System generated ID for the configuration session
<b>Context</b>	<a href="#">system configuration session id</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**exclusive** *boolean*

<b>Description</b>	Details if this session is running in exclusive mode
<b>Context</b>	<a href="#">system configuration session id</a> <i>number</i> <a href="#">exclusive</a> <i>boolean</i>
<b>Tree</b>	<a href="#">exclusive</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the candidate the session is active on Set to 'default' if a non-named candidate is active
<b>Context</b>	<a href="#">system configuration session id</a> <i>number</i> <a href="#">name</a> <i>string</i>
<b>Tree</b>	<a href="#">name</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**started** *string*

<b>Description</b>	Start date and time of the configuration session
<b>Context</b>	<a href="#">system configuration session id</a> <i>number</i> <a href="#">started</a> <i>string</i>
<b>Tree</b>	<a href="#">started</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	Type of configuration session
<b>Context</b>	<a href="#">system configuration session id number type keyword</a>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• shared</li> <li>• private</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**username** *string*

<b>Description</b>	User that started the configuration session
<b>Context</b>	<a href="#">system configuration session id number username string</a>
<b>Tree</b>	<a href="#">username</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**control-plane-traffic**

<b>Description</b>	Container for the control plane traffic.
<b>Context</b>	<a href="#">system control-plane-traffic</a>
<b>Tree</b>	<a href="#">control-plane-traffic</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**input**

<b>Description</b>	Defines parameters determining the handling of system generated traffic.
<b>Context</b>	<a href="#">system control-plane-traffic input</a>
<b>Tree</b>	<a href="#">input</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**acl**

<b>Description</b>	Container for ACL.
<b>Context</b>	<a href="#">system control-plane-traffic input acl</a>
<b>Tree</b>	<a href="#">acl</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**acl-filter** [name reference type reference](#)

<b>Description</b>	List MAC, IPv4, IPv6 ACL filter(s) to be applied on this subinterface direction
<b>Context</b>	<a href="#">system control-plane-traffic input acl acl-filter name reference type reference</a>
<b>Tree</b>	<a href="#">acl-filter</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** [reference](#)

<b>Description</b>	Reference to the ACL Filter policy name
<b>Context</b>	<a href="#">system control-plane-traffic input acl acl-filter name reference type reference</a>
<b>Reference</b>	<a href="#">acl acl-filter name string type keyword</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type** [reference](#)

<b>Description</b>	Reference to the ACL Filter policy type
<b>Context</b>	<a href="#">system control-plane-traffic input acl acl-filter name reference type reference</a>
<b>Reference</b>	<a href="#">acl acl-filter type</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**output**

<b>Description</b>	Defines parameters determining the handling of system generated traffic.
<b>Context</b>	<a href="#">system control-plane-traffic output</a>

<b>Tree</b>	<a href="#">output</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## qos

<b>Description</b>	Parameters describing QoS handling of system generated traffic
<b>Context</b>	<a href="#">system control-plane-traffic output qos</a>
<b>Tree</b>	<a href="#">qos</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## management-protocols-dscp (*number | keyword*)

<b>Description</b>	Defines dscp value the system generated traffic by management-protocols should be marked with
<b>Context</b>	<a href="#">system control-plane-traffic output qos management-protocols-dscp (<i>number   keyword</i>)</a>
<b>Tree</b>	<a href="#">management-protocols-dscp</a>
<b>Range</b>	0 to 63
<b>Default</b>	32
<b>Options</b>	<ul style="list-style-type: none"> <li>• CS0</li> <li>• LE</li> <li>• CS1</li> <li>• AF11</li> <li>• AF12</li> <li>• AF13</li> <li>• CS2</li> <li>• AF21</li> <li>• AF22</li> <li>• AF23</li> <li>• CS3</li> <li>• AF31</li> <li>• AF32</li> <li>• AF33</li> <li>• CS4</li> </ul>

- AF41
- AF42
- AF43
- CS5
- EF
- CS6
- CS7

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## dhcp-server

<b>Description</b>	Configures the dhcp server
<b>Context</b>	<a href="#">system dhcp-server</a>
<b>Tree</b>	<a href="#">dhcp-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## admin-state *keyword*

<b>Description</b>	Globally enable or disable the dhcp server Disabling this will disable all dhcp servers.
<b>Context</b>	<a href="#">system dhcp-server admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## network-instance [name reference](#)

<b>Description</b>	List of network instances to run a dhcp server in
<b>Context</b>	<a href="#">system dhcp-server network-instance name reference</a>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **name** *reference*

**Description** Reference to a configured network instance  
**Context** [system dhcp-server network-instance name](#) *reference*  
**Reference** [network-instance name](#) *string*  
**Configurable** True  
**Platforms** Supported on all platforms

### **dhcpv4**

**Description** Enter the dhcpv4 context  
**Context** [system dhcp-server network-instance name](#) *reference* [dhcpv4](#)  
**Tree** [dhcpv4](#)  
**Configurable** True  
**Platforms** Supported on all platforms

### **admin-state** *keyword*

**Description** Administratively enable or disable the dhcp server  
**Context** [system dhcp-server network-instance name](#) *reference* [dhcpv4 admin-state](#) *keyword*  
**Tree** [admin-state](#)  
**Default** disable  
**Options**

- enable
- disable

**Configurable** True  
**Platforms** Supported on all platforms

### **oper-state** *keyword*

**Description** Details if the dhcp server is operationally available  
**Context** [system dhcp-server network-instance name](#) *reference* [dhcpv4 oper-state](#) *keyword*  
**Tree** [oper-state](#)

**Options**

- up  
Component or process is operational
- down  
Component or process is not operational
- empty  
Component slot is empty
- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

Supported on all platforms

## options

<b>Description</b>	Enter the options context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 options</a>
<b>Tree</b>	<a href="#">options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## bootfile-name *string*

<b>Description</b>	The name of the configuration file the client will use during booting - option 67
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 options bootfile-name</a> <i>string</i>
<b>Tree</b>	<a href="#">bootfile-name</a>
<b>String Length</b>	1 to 128
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## dns-server *string*

<b>Description</b>	An Ordered List of DNS servers to return to the dhcp client - option 6
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 options dns-server</a> <i>string</i>
<b>Tree</b>	<a href="#">dns-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	4

## domain-name *string*

<b>Description</b>	The domain name to return to the dhcp client that the client should use when resolving hostnames via the Domain Name System - option 15
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 options domain-name</a> <i>string</i>
<b>Tree</b>	<a href="#">domain-name</a>
<b>String Length</b>	1 to 253
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### hostname *string*

**Description** Host Name option of the dhcp client - option 12

**Context** [system dhcp-server network-instance name](#) *reference* [dhcpv4 options hostname string](#)

**Tree** [hostname](#)

**String Length** 1 to 63

**Configurable** True

**Platforms** Supported on all platforms

### ntp-server *string*

**Description** List of NTP Servers to return to the dhcp client - option 42

**Context** [system dhcp-server network-instance name](#) *reference* [dhcpv4 options ntp-server string](#)

**Tree** [ntp-server](#)

**Configurable** True

**Platforms** Supported on all platforms

**Max. Elements** 4

### router *string*

**Description** IPv4 address of the gateway for the dhcp client - option 3

**Context** [system dhcp-server network-instance name](#) *reference* [dhcpv4 options router string](#)

**Tree** [router](#)

**Configurable** True

**Platforms** Supported on all platforms

### server-id *string*

**Description** IP address the dhcp server must match any address within the network\_instance e.g. sub-interface primary address, loopback address, anycast gateway address in case of multihoming - option 54

**Context** [system dhcp-server network-instance name](#) *reference* [dhcpv4 options server-id string](#)

<b>Tree</b>	<a href="#">server-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **tftp-server-address** *string*

<b>Description</b>	List of IP address of the TFTP servers the client will use to download bootfile/configuration script - option 150
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 options tftp-server-address</a> <i>string</i>
<b>Tree</b>	<a href="#">tftp-server-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	2

### **tftp-server-name** *string*

<b>Description</b>	FQDN of the TFTP server the client will use to download bootfile/configuration script - option 66
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 options tftp-server-name</a> <i>string</i>
<b>Tree</b>	<a href="#">tftp-server-name</a>
<b>String Length</b>	1 to 63
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **static-allocation**

<b>Description</b>	Enter the static-allocation context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation</a>
<b>Tree</b>	<a href="#">static-allocation</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### host mac string

<b>Description</b>	host name for static ip allocations
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac string</a>
<b>Tree</b>	<a href="#">host</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### mac string

<b>Description</b>	Enter the mac context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### ip-address string

<b>Description</b>	Enter the ip-address context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac string ip-address string</a>
<b>Tree</b>	<a href="#">ip-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### options

<b>Description</b>	Enter the options context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac string options</a>
<b>Tree</b>	<a href="#">options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**bootfile-name** *string*

<b>Description</b>	The name of the configuration file the client will use during booting - option 67
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string</i> <a href="#">options bootfile-name</a> <i>string</i>
<b>Tree</b>	<a href="#">bootfile-name</a>
<b>String Length</b>	1 to 128
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**dns-server** *string*

<b>Description</b>	An Ordered List of DNS servers to return to the dhcp client - option 6
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string</i> <a href="#">options dns-server</a> <i>string</i>
<b>Tree</b>	<a href="#">dns-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	4

**domain-name** *string*

<b>Description</b>	The domain name to return to the dhcp client that the client should use when resolving hostnames via the Domain Name System - option 15
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string</i> <a href="#">options domain-name</a> <i>string</i>
<b>Tree</b>	<a href="#">domain-name</a>
<b>String Length</b>	1 to 253
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**hostname** *string*

<b>Description</b>	Host Name option of the dhcp client - option 12
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string</i> <a href="#">options hostname</a> <i>string</i>
<b>Tree</b>	<a href="#">hostname</a>

<b>String Length</b>	1 to 63
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **ntp-server *string***

<b>Description</b>	List of NTP Servers to return to the dhcp client - option 42
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string</i> <a href="#">options ntp-server</a> <i>string</i>
<b>Tree</b>	<a href="#">ntp-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	4

### **router *string***

<b>Description</b>	IPv4 address of the gateway for the dhcp client - option 3
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string</i> <a href="#">options router</a> <i>string</i>
<b>Tree</b>	<a href="#">router</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **server-id *string***

<b>Description</b>	IP address the dhcp server must match any address within the network_ instance e.g. sub-interface primary address, loopback address, anycast gateway address in case of multihoming - option 54
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string</i> <a href="#">options server-id</a> <i>string</i>
<b>Tree</b>	<a href="#">server-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **tftp-server-address *string***

<b>Description</b>	List of IP address of the TFTP servers the client will use to download bootfile/configuration script - option 150
--------------------	---

<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string</i> <a href="#">options tftp-server-address</a> <i>string</i>
<b>Tree</b>	<a href="#">tftp-server-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	2

### **tftp-server-name** *string*

<b>Description</b>	FQDN of the TFTP server the client will use to download bootfile/ configuration script - option 66
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 static-allocation host mac</a> <i>string</i> <a href="#">options tftp-server-name</a> <i>string</i>
<b>Tree</b>	<a href="#">tftp-server-name</a>
<b>String Length</b>	1 to 63
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **client-packets-discarded** *number*

<b>Description</b>	Total discarded dhcp packets from dhcp client(s)
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 statistics client-packets-discarded</a> <i>number</i>
<b>Tree</b>	<a href="#">client-packets-discarded</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**client-packets-received** *number*

<b>Description</b>	Total received dhcp packets from dhcp client(s)
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 statistics client-packets-received</a> <i>number</i>
<b>Tree</b>	<a href="#">client-packets-received</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**server-packets-sent** *number*

<b>Description</b>	Total dhcp packets sent from DHCP server towards dhcp client(s)
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 statistics server-packets-sent</a> <i>number</i>
<b>Tree</b>	<a href="#">server-packets-sent</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**trace-options**

<b>Description</b>	Container for tracing DHCP server operations instance
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 trace-options</a>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**trace** *keyword*

<b>Description</b>	List of events to trace
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>reference</i> <a href="#">dhcpv4 trace-options trace</a> <i>keyword</i>
<b>Tree</b>	<a href="#">trace</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>messages Capture all DHCP server messages sent and received</li> </ul>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## dhcpv6

**Description** Enter the dhcpv6 context

**Context** [system dhcp-server network-instance name](#) *reference* [dhcpv6](#)

**Tree** [dhcpv6](#)

**Platforms** Supported on all platforms

## admin-state *keyword*

**Description** Administratively enable or disable the dhcp server

**Context** [system dhcp-server network-instance name](#) *reference* [dhcpv6 admin-state keyword](#)

**Tree** [admin-state](#)

**Default** disable

**Options**

- enable
- disable

**Configurable** True

**Platforms** Supported on all platforms

## oper-state *keyword*

**Description** Details if the dhcp server is operationally available

**Context** [system dhcp-server network-instance name](#) *reference* [dhcpv6 oper-state keyword](#)

**Tree** [oper-state](#)

**Options**

- up  
Component or process is operational
- down  
Component or process is not operational
- empty  
Component slot is empty
- downloading  
Component is downloading image into memory

- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**oper-state** *keyword*

<b>Description</b>	Details if this event handler instance is operationally available
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <b>oper-state</b> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>• waiting Component or process is currently waiting This state can be set by event handler when the <code>reinvoke-with-delay</code> action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.</li> </ul>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## options

**Description** Options to be passed on each execution of the script

**Context** [system event-handler instance name](#) *string options*

**Tree** [options](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## object *name string*

**Description** Enter the object list instance

**Context** [system event-handler instance name](#) *string options object name string*

**Tree** [object](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## name *string*

**Description** The name of this object

**Context** [system event-handler instance name](#) *string options object name string*

**String Length** 1 to 255

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## value *string*

**Description** A single value to associate with this object

**Context** [system event-handler instance name](#) *string options object name string value string*

<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### values *string*

<b>Description</b>	List of values to associate with this object, these are serialized as a JSON array when provided as input to the script
<b>Context</b>	<a href="#">system event-handler instance name string options object name string values string</a>
<b>Tree</b>	<a href="#">values</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### paths *string*

<b>Description</b>	List of valid YANG paths in CLI notation to monitor for changes If any events are received on any of the provided paths, the configured script will be executed. This path may include keys, wildcards, ranges, and other management server supported constructs. E.g. "interface * oper-state" "acl ipv4-filter foo* description"
<b>Context</b>	<a href="#">system event-handler instance name string paths string</a>
<b>Tree</b>	<a href="#">paths</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	36

### statistics

<b>Description</b>	Top-level container for event handler statistics
<b>Context</b>	<a href="#">system event-handler instance name string statistics</a>
<b>Tree</b>	<a href="#">statistics</a>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**execution-count** *number*

<b>Description</b>	Indicates the total number of executions of this script
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">statistics execution-count</a> <i>number</i>
<b>Tree</b>	<a href="#">execution-count</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**execution-errors** *number*

<b>Description</b>	Indicates the total number of errors in executions of this script
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">statistics execution-errors</a> <i>number</i>
<b>Tree</b>	<a href="#">execution-errors</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**execution-successes** *number*

<b>Description</b>	Indicates the total number of successful executions of this script
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">statistics execution-successes</a> <i>number</i>
<b>Tree</b>	<a href="#">execution-successes</a>
<b>Default</b>	0
<b>Configurable</b>	False

<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
------------------	--

### **execution-timeouts** *number*

<b>Description</b>	Indicates the total number of timeouts in executions of this script
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">statistics execution-timeouts</a> <i>number</i>
<b>Tree</b>	<a href="#">execution-timeouts</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **upython-duration** *number*

<b>Description</b>	Total time taken for all executions of this script to return output
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">statistics upython-duration</a> <i>number</i>
<b>Tree</b>	<a href="#">upython-duration</a>
<b>Units</b>	milliseconds
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **upython-script** *string*

<b>Description</b>	File name of a MicroPython script, including .py suffix This script should exist in /etc/opt/srlinux/eventmgr or /opt/srlinux/eventmgr already. Explicit paths outside of these two directories are not permitted.
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">upython-script</a> <i>string</i>
<b>Tree</b>	<a href="#">upython-script</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**run-as-user** *reference*

<b>Description</b>	The user to run event handler instances as If no user is configured, scripts are executed as the 'admin' user.
<b>Context</b>	<a href="#">system event-handler run-as-user reference</a>
<b>Tree</b>	<a href="#">run-as-user</a>
<b>Reference</b>	<a href="#">system aaa authentication user username string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**features** *string*

<b>Description</b>	Features enabled on this platform
<b>Context</b>	<a href="#">system features string</a>
<b>Tree</b>	<a href="#">features</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**ftp-server**

<b>Description</b>	Top-level container for FTP server configuration and state
<b>Context</b>	<a href="#">system ftp-server</a>
<b>Tree</b>	<a href="#">ftp-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**network-instance** [name reference](#)

<b>Description</b>	List of network-instances to run an FTP server in
<b>Context</b>	<a href="#">system ftp-server network-instance name reference</a>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *reference*

<b>Description</b>	Reference to a configured network-instance
<b>Context</b>	<a href="#">system ftp-server network-instance name reference</a>
<b>Reference</b>	<a href="#">network-instance name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Enables or disables the FTP server in this network-instance
<b>Context</b>	<a href="#">system ftp-server network-instance name reference admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	Details the operational state of the FTP server
<b>Context</b>	<a href="#">system ftp-server network-instance name reference oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting</li> </ul>

- Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **session-limit** *number*

<b>Description</b>	Set a limit on the number of simultaneous active FTP sessions
<b>Context</b>	<a href="#">system ftp-server network-instance name</a> <i>reference</i> <a href="#">session-limit number</a>
<b>Tree</b>	<a href="#">session-limit</a>
<b>Default</b>	20
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	IPv4 or IPv6 address for the FTP server to listen on within the network-instance
--------------------	--

Default behavior is to listen on '::', which will listen on all addresses for both IPv4 and IPv6. In order to listen on IPv4 only, this field should be set to '0.0.0.0'.

<b>Context</b>	<a href="#">system ftp-server network-instance name reference source-address (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">source-address</a>
<b>Default</b>	::
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **timeout** *number*

<b>Description</b>	Set the idle timeout in seconds on FTP connections
<b>Context</b>	<a href="#">system ftp-server network-instance name reference timeout number</a>
<b>Tree</b>	<a href="#">timeout</a>
<b>Default</b>	300
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **grpc-server** *name string*

<b>Description</b>	List of configured gRPC server instances
<b>Context</b>	<a href="#">system grpc-server name string</a>
<b>Tree</b>	<a href="#">grpc-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **name** *string*

<b>Description</b>	User-provided name of this server instance
<b>Context</b>	<a href="#">system grpc-server name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### admin-state *keyword*

**Description** Globally enable or disable the gRPC server instance  
Disabling this will disable all gRPC server sockets in all network instances, and any configured unix domain sockets.

**Context** [system grpc-server name string admin-state keyword](#)

**Tree** [admin-state](#)

**Default** disable

**Options**

- enable
- disable

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### certz

**Description** Information relating to the active certificate and bundle/s as provided via Certz  
State is provided by the gNSI Certz service, and can be changed using the gNSI.Certz.Rotate RPC

**Context** [system grpc-server name string certz](#)

**Tree** [certz](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### certificate

**Description** State relating to the active certificate provided via Certz

**Context** [system grpc-server name string certz certificate](#)

**Tree** [certificate](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### created-on *string*

**Description** The created on timestamp as provided by the gNSI client at the time of uploading the policy

The maps to the created\_on field within a Entity message in the Certz protobuf.

**Context** [system grpc-server name string certz certificate created-on string](#)

**Tree** [created-on](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### version *string*

**Description** The version string as provided by the gNSI client at the time of uploading the certificate or bundle/s

The maps to the version field within a Entity message in the Certz protobuf.

**Context** [system grpc-server name string certz certificate version string](#)

**Tree** [version](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### crl

**Description** State relating to the active certificate revocation list provided via Certz

The list of certificates provided will not be used to validate mTLS or servers, even if those certificates exist within the trust anchor.

**Context** [system grpc-server name string certz crl](#)

**Tree** [crl](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **created-on string**

**Description** The created on timestamp as provided by the gNSI client at the time of uploading the policy

The maps to the created\_on field within a Entity message in the Certz protobuf.

**Context** [system grpc-server name string certz crl created-on string](#)

**Tree** [created-on](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **version string**

**Description** The version string as provided by the gNSI client at the time of uploading the certificate or bundle/s

The maps to the version field within a Entity message in the Certz protobuf.

**Context** [system grpc-server name string certz crl version string](#)

**Tree** [version](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ssl-profile-id string**

**Description** The ID of this gRPC server's SSL profile as used by the gNSI Certz service

**Context** [system grpc-server name string certz ssl-profile-id string](#)

**Tree** [ssl-profile-id](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**trust-anchor**

<b>Description</b>	State relating to the active trust anchor provided via Certz  This is equivalent to the certificate authority bundle, and is the list of certificates used to validate clients in mTLS, and to validate servers in outbound TLS.
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">certz trust-anchor</a>
<b>Tree</b>	<a href="#">trust-anchor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**created-on** *string*

<b>Description</b>	The created on timestamp as provided by the gNSI client at the time of uploading the policy  The maps to the created_on field within a Entity message in the Certz protobuf.
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">certz trust-anchor created-on</a> <i>string</i>
<b>Tree</b>	<a href="#">created-on</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**version** *string*

<b>Description</b>	The version string as provided by the gNSI client at the time of uploading the certificate or bundle/s  The maps to the version field within a Entity message in the Certz protobuf.
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">certz trust-anchor version</a> <i>string</i>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**client id number**

<b>Description</b>	List of active gRPC client sessions
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id number</a>
<b>Tree</b>	<a href="#">client</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**id number**

<b>Description</b>	System generated ID for for the client
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id number</a>
<b>Range</b>	0 to 4294967295
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**election-id string**

<b>Description</b>	Election ID of this client Provided only for services supporting an election ID
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id number</a> <a href="#">election-id string</a>
<b>Tree</b>	<a href="#">election-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**gnmi**

<b>Description</b>	Container for gNMI related session info
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id number</a> <a href="#">gnmi</a>
<b>Tree</b>	<a href="#">gnmi</a>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### paths *id number*

**Description** List of paths being subscribed to

**Context** [system grpc-server name](#) *string* [client id](#) *number* [gnmi paths id](#) *number*

**Tree** [paths](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### id *number*

**Description** System generated ID for the subscribed path (within subscription)

**Context** [system grpc-server name](#) *string* [client id](#) *number* [gnmi paths id](#) *number*

**Range** 0 to 65535

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### mode *keyword*

**Description** Subscription mode (on-change, sample, target-defined, poll, once)

**Context** [system grpc-server name](#) *string* [client id](#) *number* [gnmi paths id](#) *number* *mode keyword*

**Tree** [mode](#)

**Options**

- ON\_CHANGE
- SAMPLE
- TARGET\_DEFINED
- POLL
- ONCE

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### path *string*

**Description** Path being subscribed to

**Context** [system grpc-server name string client id number gnmi paths id number path string](#)

**Tree** [path](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### sample-interval *number*

**Description** Time in seconds to provide updates to the remote host, set to 0 for all subscription modes except SAMPLE

**Context** [system grpc-server name string client id number gnmi paths id number sample-interval number](#)

**Tree** [sample-interval](#)

**Units** seconds

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### gribi

**Description** Container for gRIBI related session info

**Context** [system grpc-server name string client id number gribi](#)

**Tree** [gribi](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**persistence-mode** *keyword*

<b>Description</b>	The defined persistence mode as signaled by the client
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id</a> <i>number</i> <a href="#">gribi persistence-mode keyword</a>
<b>Tree</b>	<a href="#">persistence-mode</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>preserve</code> Entries populated by the client will be persisted during a client disconnect, or control module switchover</li> <li>• <code>delete</code> Entries populated by the client will be purged on the client disconnecting, or a control module switchover</li> </ul> <p>If no persistence mode is signaled, the default is to delete entries.</p>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**p4rt**

<b>Description</b>	Container for P4RT related session info
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id</a> <i>number</i> <a href="#">p4rt</a>
<b>Tree</b>	<a href="#">p4rt</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**forwarding-complex**

<b>Description</b>	Enter the forwarding-complex context
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id</a> <i>number</i> <a href="#">p4rt forwarding-complex</a>
<b>Tree</b>	<a href="#">forwarding-complex</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**device number**

<b>Description</b>	The P4Runtime ID of the forwarding complex for which this client has established itself  This is the value configured at /platform/linecard/forwarding-complex/p4rt/id, or a system derived default.
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id</a> <i>number</i> <a href="#">p4rt forwarding-complex device number</a>
<b>Tree</b>	<a href="#">device</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**id string**

<b>Description</b>	The normalized ID for this forwarding-complex  This is the slot number and complex number separated by a '/', 0 indexed. For example '1/0', or '1/1' representing two forwarding complexes on slot 1.
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id</a> <i>number</i> <a href="#">p4rt forwarding-complex id string</a>
<b>Tree</b>	<a href="#">id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**slot number**

<b>Description</b>	The linecard slot for which this forwarding complex resides on
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id</a> <i>number</i> <a href="#">p4rt forwarding-complex slot number</a>
<b>Tree</b>	<a href="#">slot</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**primary** *boolean*

<b>Description</b>	Indicates if this client is the primary for the specified forwarding complex Only a single primary per forwarding complex is supported
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id</a> <i>number</i> <a href="#">p4rt</a> <a href="#">primary</a> <i>boolean</i>
<b>Tree</b>	<a href="#">primary</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**remote-host** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Remote host of the client
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id</a> <i>number</i> <a href="#">remote-host</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">remote-host</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**remote-port** *number*

<b>Description</b>	Remote port of the client
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id</a> <i>number</i> <a href="#">remote-port</a> <i>number</i>
<b>Tree</b>	<a href="#">remote-port</a>
<b>Range</b>	0 to 65535
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**rpc** *string*

<b>Description</b>	The called package, service, and RPC For example gnmi.gNMI.Subscribe
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id</a> <i>number</i> <a href="#">rpc</a> <i>string</i>

<b>Tree</b>	<a href="#">rpc</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**start-time** *string*

<b>Description</b>	Time of the subscription creation
<b>Context</b>	<a href="#">system</a> <a href="#">grpc-server</a> <a href="#">name</a> <a href="#">string</a> <a href="#">client</a> <a href="#">id</a> <a href="#">number</a> <a href="#">start-time</a> <a href="#">string</a>
<b>Tree</b>	<a href="#">start-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**type** *keyword*

<b>Description</b>	Enter the type context
<b>Context</b>	<a href="#">system</a> <a href="#">grpc-server</a> <a href="#">name</a> <a href="#">string</a> <a href="#">client</a> <a href="#">id</a> <a href="#">number</a> <a href="#">type</a> <a href="#">keyword</a>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">gnmi</a></li> <li>• <a href="#">acctz</a></li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**user** *string*

<b>Description</b>	Authenticated username for the client
<b>Context</b>	<a href="#">system</a> <a href="#">grpc-server</a> <a href="#">name</a> <a href="#">string</a> <a href="#">client</a> <a href="#">id</a> <a href="#">number</a> <a href="#">user</a> <a href="#">string</a>
<b>Tree</b>	<a href="#">user</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**user-agent** *string*

<b>Description</b>	User agent used for the client
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id</a> <i>number</i> <a href="#">user-agent</a> <i>string</i>
<b>Tree</b>	<a href="#">user-agent</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**default-tls-profile** *boolean*

<b>Description</b>	Whether to use default TLS profile (generated by the system) if none is configured via <code>tls-profile</code> field
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">default-tls-profile</a> <i>boolean</i>
<b>Tree</b>	<a href="#">default-tls-profile</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**gnmi**

<b>Description</b>	Container for gnmi configuration and state
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnmi</a>
<b>Tree</b>	<a href="#">gnmi</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**commit-confirmed-timeout** *number*

<b>Description</b>	Number of seconds to wait for confirmation A value of 0 means commit confirmed is not used
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnmi</a> <a href="#">commit-confirmed-timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">commit-confirmed-timeout</a>

<b>Range</b>	0 to 86400
<b>Default</b>	0
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **commit-save** *boolean*

<b>Description</b>	Specifies whether to save startup configuration after every successful commit
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnmi commit-save</a> <i>boolean</i>
<b>Tree</b>	<a href="#">commit-save</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **include-defaults-in-config-only-responses** *boolean*

<b>Description</b>	Specifies whether to include field default values in get/subscribe responses when using configuration only datastore (for example running/intended datastore)
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnmi include-defaults-in-config-only-responses</a> <i>boolean</i>
<b>Tree</b>	<a href="#">include-defaults-in-config-only-responses</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **metadata-authentication** *boolean*

<b>Description</b>	Enable or disable the use of username/password metadata authentication for every gRPC request
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">metadata-authentication</a> <i>boolean</i>

<b>Tree</b>	<a href="#">metadata-authentication</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **network-instance** *reference*

<b>Description</b>	Reference to a configured network instance where the gRPC will listen on for incoming connections
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **oper-state** *keyword*

<b>Description</b>	Details if the gRPC server is operationally available
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed</li> </ul>

	<ul style="list-style-type: none"> <li>Component or process has failed</li> <li>synchronizing Component is currently being synchronized</li> <li>upgrading Component is currently being upgraded</li> <li>low-power Component is offline due to insufficient system power</li> <li>degraded Component or process is in a degraded state</li> <li>warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>waiting Component or process is currently waiting This state can be set by event handler when the <code>reinvoke-with-delay</code> action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>port number</b>	
<b>Description</b>	Port the gRPC server will listen on for incoming connections
<b>Context</b>	<code>system grpc-server name string port number</code>
<b>Tree</b>	<code>port</code>
<b>Range</b>	0 to 65535
<b>Default</b>	57400
<b>Configurable</b>	True

**Reference** [system tls server-profile name](#) *string*

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### trace-options *keyword*

**Description** gRPC trace options

**Context** [system grpc-server name](#) *string* [trace-options](#) *keyword*

**Tree** [trace-options](#)

**Options**

- request
- response
- common
- grpc

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### unix-socket

**Description** Top-level container for configuration and state related to unix sockets

**Context** [system grpc-server name](#) *string* [unix-socket](#)

**Tree** [unix-socket](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### admin-state *keyword*

**Description** Administratively enable or disable the gRPC server

**Context** [system grpc-server name](#) *string* [unix-socket](#) [admin-state](#) *keyword*

**Tree** [admin-state](#)

**Default** disable

**Options**

- enable
- disable

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### socket-path *string*

**Description** Path to the unix socket used by gRPC

**Context** [system grpc-server name](#) *string* [unix-socket](#) [socket-path](#) *string*

**Tree** [socket-path](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### yang-models *keyword*

**Description** Specify yang-models to be used when origin field is not present in requests

**Context** [system grpc-server name](#) *string* [yang-models](#) *keyword*

**Tree** [yang-models](#)

**Default** native

**Options**

- native
- openconfig

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### information

**Description** Top-level container for system information configuration and state

**Context** [system information](#)

**Tree** [information](#)

**Configurable** True

**Platforms** Supported on all platforms

### contact *string*

**Description** The system contact

This field represents contact information for the person or group that maintains the system. This field is exposed via SNMP at the sysContact OID.

<b>Context</b>	<a href="#">system information contact</a> <i>string</i>
<b>Tree</b>	<a href="#">contact</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **current-datetime** *string*

<b>Description</b>	The current system date and time
<b>Context</b>	<a href="#">system information current-datetime</a> <i>string</i>
<b>Tree</b>	<a href="#">current-datetime</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **description** *string*

<b>Description</b>	The system description  This field is system generated, and is a combination of the system host name, software version, kernel version, and build date. The template for this field is: SRLinux-<version> <hostname> <kernel> <build date>. This field is exposed via SNMP at the sysDescr OID.
<b>Context</b>	<a href="#">system information description</a> <i>string</i>
<b>Tree</b>	<a href="#">description</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-booted** *string*

<b>Description</b>	The date and time the system was last booted
<b>Context</b>	<a href="#">system information last-booted</a> <i>string</i>
<b>Tree</b>	<a href="#">last-booted</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**location** *string*

<b>Description</b>	The system location  This field represents the location of the system, and is commonly used by inventory management systems to group elements together. This field is exposed via SNMP at the sysLocation OID.
<b>Context</b>	<a href="#">system information location</a> <i>string</i>
<b>Tree</b>	<a href="#">location</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**version** *string*

<b>Description</b>	The system version  This field represents the version of the management server
<b>Context</b>	<a href="#">system information version</a> <i>string</i>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**json-rpc-server**

<b>Description</b>	Configures the JSON RPC access API
<b>Context</b>	<a href="#">system json-rpc-server</a>
<b>Tree</b>	<a href="#">json-rpc-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Globally enable or disable the JSON RPC server Disabling this will disable all JSON RPC servers.
<b>Context</b>	<a href="#">system json-rpc-server admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>enable</li> </ul>

	<ul style="list-style-type: none"> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **commit-confirmed-timeout** *number*

<b>Description</b>	Number of seconds to wait for confirmation. A value of 0 means commit confirmed is not used
<b>Context</b>	<a href="#">system json-rpc-server commit-confirmed-timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">commit-confirmed-timeout</a>
<b>Range</b>	0 to 86400
<b>Default</b>	0
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **network-instance** [name](#) *reference*

<b>Description</b>	List of network instances to run the JSON RPC server in
<b>Context</b>	<a href="#">system json-rpc-server network-instance</a> <a href="#">name</a> <i>reference</i>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **name** *reference*

<b>Description</b>	Reference to a configured network-instance
<b>Context</b>	<a href="#">system json-rpc-server network-instance</a> <a href="#">name</a> <i>reference</i>
<b>Reference</b>	<a href="#">network-instance</a> <a href="#">name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **http**

<b>Description</b>	Top-level container for the JSON RPC HTTP server
<b>Context</b>	<a href="#">system json-rpc-server network-instance</a> <a href="#">name</a> <i>reference</i> <a href="#">http</a>

<b>Tree</b>	<a href="#">http</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **admin-state** *keyword*

<b>Description</b>	Administratively enable or disable the HTTP JSON RPC server This requires the JSON RPC server to be globally enabled
<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i> <a href="#">http admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **oper-state** *keyword*

<b>Description</b>	Details if the JSON RPC server is operationally available
<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i> <a href="#">http oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed</li> </ul>

- Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

Supported on all platforms

**port number****Description**

The port the HTTP JSON RPC server will listen on for incoming connections

**Context**[system json-rpc-server network-instance name reference http port number](#)**Tree**[port](#)**Range**

0 to 65535

**Default**

80

**Configurable**

True

**Platforms**

Supported on all platforms

**session-limit number****Description**

The number of concurrent requests the server will allow. If a request comes in while this limit is reached, the request will block until another request is finished.

<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i> <a href="#">http session-limit number</a>
<b>Tree</b>	<a href="#">session-limit</a>
<b>Range</b>	1 to 100
<b>Default</b>	10
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	List of IP addresses the JSON RPC server will listen on within the network instance
<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i> <a href="#">http source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Default</b>	::
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **use-authentication** *boolean*

<b>Description</b>	Enable or disable the use of username/password authentication for every JSON RPC request
<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i> <a href="#">http use-authentication</a> <i>boolean</i>
<b>Tree</b>	<a href="#">use-authentication</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **https**

<b>Description</b>	Top-level container for the JSON-RPC HTTPS server
<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i> <a href="#">https</a>
<b>Tree</b>	<a href="#">https</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable the HTTPS JSON RPC server This requires the JSON RPC server to be globally enabled
<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i> <a href="#">https admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	Details if the JSON RPC server is operationally available
<b>Context</b>	<a href="#">system json-rpc-server network-instance name</a> <i>reference</i> <a href="#">https oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading</li> </ul>

Component is currently being upgraded

- low-power

Component is offline due to insufficient system power

- degraded

Component or process is in a degraded state

- warm-reboot

Component or process is currently warm rebooting

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

Supported on all platforms

### **port number**

**Description**

Port the HTTPS JSON RPC server will listen on for incoming connections

**Context**

[system json-rpc-server network-instance name reference https port number](#)

**Tree**

[port](#)

**Range**

0 to 65535

**l2cp-transparency**

<b>Description</b>	Enclosing container for system level Layer-2 Control Protocol transparency.
<b>Context</b>	<a href="#">system l2cp-transparency</a>
<b>Tree</b>	<a href="#">l2cp-transparency</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## I2cp-statistics

<b>Description</b>	Container for Layer-2 Control Plane protocol statistics.
<b>Context</b>	<a href="#">system I2cp-transparency I2cp-statistics</a>
<b>Tree</b>	<a href="#">I2cp-statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## dot1x

<b>Description</b>	Container for 802.1x protocols.
<b>Context</b>	<a href="#">system I2cp-transparency I2cp-statistics dot1x</a>
<b>Tree</b>	<a href="#">dot1x</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## in-trap-to-cpu-packets *number*

<b>Description</b>	System level incoming 802.1x frames copied to CPU. Cumulative of all Ethernet interfaces including all the copy-to-cpu 802.1x frames. 802.1x frames are identified by a destination MAC value of 01:80:c2:00:00:03 and EtherType value of 0x888e.
<b>Context</b>	<a href="#">system I2cp-transparency I2cp-statistics dot1x in-trap-to-cpu-packets number</a>
<b>Tree</b>	<a href="#">in-trap-to-cpu-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## in-tunneled-packets *number*

<b>Description</b>	System level incoming 802.1x tunneled frames. Cumulative of all Ethernet interfaces including all the tunneled 802.1x frames. 802.1x frames are identified by a destination MAC value of 01:80:c2:00:00:03 and EtherType value of 0x888e.
<b>Context</b>	<a href="#">system I2cp-transparency I2cp-statistics dot1x in-tunneled-packets number</a>

<b>Tree</b>	<a href="#">in-tunneled-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **last-clear** *string*

<b>Description</b>	Timestamp of the last time the LACP counters were cleared.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics dot1x last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **lACP**

<b>Description</b>	Container for LACP.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics lACP</a>
<b>Tree</b>	<a href="#">lACP</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **in-trap-to-cpu-packets** *number*

<b>Description</b>	System level incoming Link Aggregation Control Protocol frames copied to CPU.  Cumulative of all Ethernet interfaces including all the copy-to-cpu LACP frames. LACP frames are identified by a destination MAC value of 01:80:c2:00:00:02, EtherType value of 0x8809 and slow protocol subtype 0x1.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics lACP in-trap-to-cpu-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-trap-to-cpu-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **in-tunneled-packets** *number*

**Description** System level incoming Link Aggregation Control Protocol tunneled frames. Cumulative of all Ethernet interfaces including all the tunneled LACP frames. LACP frames are identified by a destination MAC value of 01:80:c2:00:00:02, EtherType value of 0x8809 and slow protocol subtype 0x1.

**String Length** 20 to 32

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## Ildp

<b>Description</b>	Container for LLDP.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics lldp</a>
<b>Tree</b>	<a href="#">lldp</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### in-trap-to-cpu-packets *number*

<b>Description</b>	System level incoming Link Layer Discovery Protocol frames copied to CPU. Cumulative of all Ethernet interfaces including all the copy-to-cpu LLDP frames. LLDP frames are identified by a destination MAC value of 01:80:c2:00:00:0e and EtherType value of 0x88cc.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics lldp in-trap-to-cpu-packets number</a>
<b>Tree</b>	<a href="#">in-trap-to-cpu-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### in-tunneled-packets *number*

<b>Description</b>	System level incoming Link Layer Discovery Protocol tunneled frames. Cumulative of all Ethernet interfaces including all the tunneled LLDP frames. LLDP frames are identified by a destination MAC value of 01:80:c2:00:00:0e and EtherType value of 0x88cc.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics lldp in-tunneled-packets number</a>
<b>Tree</b>	<a href="#">in-tunneled-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### last-clear *string*

<b>Description</b>	Timestamp of the last time the LACP counters were cleared.
--------------------	--

<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics lldp last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**ptp**

<b>Description</b>	Container for Precision Time Protocol Peer-Delay protocol.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics ptp</a>
<b>Tree</b>	<a href="#">ptp</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**in-trap-to-cpu-packets** *number*

<b>Description</b>	System level incoming Precision Time Protocol Peer-Delay frames copied to CPU.  Cumulative of all Ethernet interfaces including all the copy-to-cpu PTP frames. PTP frames are identified by a destination MAC value of 01:80:c2:00:00:0e and Ethertype value of 0x88F7.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics ptp in-trap-to-cpu-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-trap-to-cpu-packets</a>

**in-tunneled-packets** *number*

<b>Description</b>	System level incoming Precision Time Protocol Peer-Delay tunneled frames.  Cumulative of all Ethernet interfaces including all the tunneled PTP frames. PTP frames are identified by a destination MAC value of 01:80:c2:00:00:0e and Ethertype value of 0x88F7.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics ptp in-tunneled-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-tunneled-packets</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **last-clear** *string*

<b>Description</b>	Timestamp of the last time the PTP counters were cleared.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics ptp last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **total-in-discarded-packets** *number*

<b>Description</b>	System level incoming L2CP discarded frames. Cumulative of all Ethernet interfaces including all the discarded L2CP frames. L2CP frames are identified by a destination MAC value of 01:80:c2:00:00:0X or 01:80:c2:00:00:2X, being X any value in the 0..F range.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics total-in-discarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">total-in-discarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **total-in-packets** *number*

<b>Description</b>	System level total incoming L2CP frames. Cumulative of all Ethernet interfaces including the tunneled, discarded and copy-to-cpu L2CP frames. L2CP frames are identified by a destination MAC value of 01:80:c2:00:00:0X or 01:80:c2:00:00:2X, being X any value in the 0..F range.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics total-in-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">total-in-packets</a>
<b>Default</b>	0

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **total-in-trap-to-cpu-packets** *number*

<b>Description</b>	System level incoming L2CP copy-to-cpu frames. Cumulative of all Ethernet interfaces including all the L2CP frames that are copied to CPU. L2CP frames are identified by a destination MAC value of 01:80:c2:00:00:0X or 01:80:c2:00:00:2X, being X any value in the 0..F range.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics total-in-trap-to-cpu-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">total-in-trap-to-cpu-packets</a>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **total-in-tunneled-packets** *number*

<b>Description</b>	System level incoming L2CP tunneled frames. Cumulative of all Ethernet interfaces including all the tunneled L2CP frames. L2CP frames are identified by a destination MAC value of 01:80:c2:00:00:0X or 01:80:c2:00:00:2X, being X any value in the 0..F range.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics total-in-tunneled-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">total-in-tunneled-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **xstp**

<b>Description</b>	Container for Spanning Tree Protocols.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics xstp</a>
<b>Tree</b>	<a href="#">xstp</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**in-trap-to-cpu-packets** *number*

<b>Description</b>	System level incoming Spanning Tree Protocol frames copied to CPU. Cumulative of all Ethernet interfaces including all the copy-to-cpu Spanning Tree frames. Spanning Tree frames are identified by a destination MAC value of 01:80:c2:00:00:00 and LLC value 0x42.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics xstp in-trap-to-cpu-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-trap-to-cpu-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**in-tunneled-packets** *number*

<b>Description</b>	System level incoming Spanning Tree tunneled frames. Cumulative of all Ethernet interfaces including all the tunneled Spanning Tree frames. xSTP frames are identified by a destination MAC value of 01:80:c2:00:00:00 and LLC value 0x42.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics xstp in-tunneled-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-tunneled-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**last-clear** *string*

<b>Description</b>	Timestamp of the last time the xSTP counters were cleared.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-statistics xstp last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## lacp

<b>Description</b>	Enter the lacp context
<b>Context</b>	<a href="#">system lacp</a>
<b>Tree</b>	<a href="#">lacp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## system-id *string*

<b>Description</b>	The MAC address portion of the node's System ID. This is combined with the system priority to construct the 8-octet system-id
<b>Context</b>	<a href="#">system lacp system-id string</a>
<b>Tree</b>	<a href="#">system-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## system-priority *number*

<b>Description</b>	System priority used by the node on this LAG interface. Lower value is higher priority for determining which node is the controlling system.
<b>Context</b>	<a href="#">system lacp system-priority number</a>
<b>Tree</b>	<a href="#">system-priority</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## license id *string*

<b>Description</b>	List of licenses configured on the system
<b>Context</b>	<a href="#">system license id string</a>
<b>Tree</b>	<a href="#">license</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**Max. Elements** 5

### **id string**

**Description** Unique identifier for this license

**Context** [system license id string](#)

**String Length** 1 to 255

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **admin-state keyword**

**Description** Enable or disable the use of this license

**Context** [system license id string admin-state keyword](#)

**Tree** [admin-state](#)

**Default** disable

**Options**

- enable
- disable

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **data string**

**Description** Content of the license

This content includes a preceding UUID, followed by a space and the license data.

For example: 00000000-0000-0000-0000-000000000000 aACUAX...r  
YzNRPT0AAAAA

**Context** [system license id string data string](#)

**Tree** [data](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **description** *string*

**Description** A user provided description for the license  
**Context** [system license id](#) *string* [description](#) *string*  
**Tree** [description](#)  
**String Length** 1 to 255  
**Configurable** True  
**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **expiration-date** *string*

**Description** Date and time the license will expire  
**Context** [system license id](#) *string* [expiration-date](#) *string*  
**Tree** [expiration-date](#)  
**String Length** 20 to 32  
**Configurable** False  
**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **expired** *boolean*

**Description** Indicates if the license has expired  
**Context** [system license id](#) *string* [expired](#) *boolean*  
**Tree** [expired](#)  
**Configurable** False  
**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**in-use** *boolean*

<b>Description</b>	Indicates if the license is actively in use
<b>Context</b>	<a href="#">system license id</a> <i>string</i> <a href="#">in-use</a> <i>boolean</i>
<b>Tree</b>	<a href="#">in-use</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**issued-date** *string*

<b>Description</b>	Date and time the license was issued
<b>Context</b>	<a href="#">system license id</a> <i>string</i> <a href="#">issued-date</a> <i>string</i>
<b>Tree</b>	<a href="#">issued-date</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**preferred** *boolean*

<b>Description</b>	Set a license as being preferred  Amongst all valid licenses, the preferred license will be chosen to become active. If no license is set as preferred or the preferred license is not valid, the valid license with the most distant expiry is chosen to become active.  Only a single license can be set as preferred.
<b>Context</b>	<a href="#">system license id</a> <i>string</i> <a href="#">preferred</a> <i>boolean</i>
<b>Tree</b>	<a href="#">preferred</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**valid** *boolean*

<b>Description</b>	Indicates if the license is valid for use
--------------------	---

<b>Context</b>	<a href="#">system license id</a> <i>string valid boolean</i>
<b>Tree</b>	<a href="#">valid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## Ildp

<b>Description</b>	Top-level container for LLDP configuration and state data
<b>Context</b>	<a href="#">system Ildp</a>
<b>Tree</b>	<a href="#">Ildp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## **admin-state** *keyword*

<b>Description</b>	Enable or disable LLDP at the system level
<b>Context</b>	<a href="#">system Ildp admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## **chassis-id** *string*

<b>Description</b>	The Chassis ID is a mandatory TLV which identifies the chassis component of the endpoint identifier associated with the transmitting LLDP agent
<b>Context</b>	<a href="#">system Ildp chassis-id</a> <i>string</i>
<b>Tree</b>	<a href="#">chassis-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**chassis-id-type** *keyword*

<b>Description</b>	The source for the chassis identifier string It is an enumerator defined by the LldpChassisIdSubtype object from IEEE 802.1AB MIB.
<b>Context</b>	<a href="#">system lldp chassis-id-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">chassis-id-type</a>
<b>Default</b>	MAC_ADDRESS
<b>Options</b>	<ul style="list-style-type: none"> <li>• CHASSIS_COMPONENT Chassis identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737</li> <li>• INTERFACE_ALIAS Chassis identifier based on the value of ifAlias object defined in IETF RFC 2863</li> <li>• PORT_COMPONENT Chassis identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737 for a port or backplane component</li> <li>• MAC_ADDRESS Chassis identifier based on the value of a unicast source address (encoded in network byte order and IEEE 802.3 canonical bit order), of a port on the containing chassis as defined in IEEE Std 802-2001</li> <li>• NETWORK_ADDRESS Chassis identifier based on a network address, associated with a particular chassis. The encoded address is composed of two fields. The first field is a single octet, representing the IANA AddressFamilyNumbers value for the specific address type, and the second field is the network address value</li> <li>• INTERFACE_NAME Chassis identifier based on the name of the interface, e.g., the value of if Name object defined in IETF RFC 2863</li> <li>• LOCAL Chassis identifier based on a locally defined value</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**hello-timer** *number*

<b>Description</b>	System level hello timer for the LLDP protocol
<b>Context</b>	<a href="#">system lldp hello-timer</a> <i>number</i>

<b>Tree</b>	<a href="#">hello-timer</a>
<b>Default</b>	30
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### hold-multiplier *number*

<b>Description</b>	System level hold multiplier, used to define neighbor aging This field defines how many hellos need to be missed before a neighbor is aged out. This field also is used along with the 'hello-timer' field to define the TTL TLV in outgoing LLDPDUs.
<b>Context</b>	<a href="#">system lldp hold-multiplier number</a>
<b>Tree</b>	<a href="#">hold-multiplier</a>
<b>Default</b>	4
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### interface [name](#) *reference*

<b>Description</b>	List of interfaces on which LLDP can be enabled
<b>Context</b>	<a href="#">system lldp interface name reference</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### name *reference*

<b>Description</b>	Reference to the LLDP Ethernet interface
<b>Context</b>	<a href="#">system lldp interface name reference</a>
<b>Reference</b>	<a href="#">interface name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Enable or disable LLDP on the interface
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**neighbor id** *string*

<b>Description</b>	List of LLDP neighbors on this interface
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**id** *string*

<b>Description</b>	System generated identifier for the remote neighbor
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**capability name** *identityref*

<b>Description</b>	List of LLDP system capabilities advertised by the neighbor
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">capability name</a> <i>identityref</i>
<b>Tree</b>	<a href="#">capability</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name** *identityref*

<b>Description</b>	Name of the system capability advertised by the neighbor Capabilities are represented in a bitmap that defines the primary functions of the system. The capabilities are defined in IEEE 802.1AB.
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id string</a> <a href="#">capability name</a> <i>identityref</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• OTHER Other capability not specified; bit position 1</li> <li>• REPEATER Repeater capability; bit position 2</li> <li>• MAC_BRIDGE MAC bridge capability; bit position 3</li> <li>• WLAN_ACCESS_POINT WLAN access point capability; bit position 4</li> <li>• ROUTER Router; bit position 5</li> <li>• TELEPHONE Telephone capability; bit position 6</li> <li>• DOCSIS_CABLE_DEVICE DOCSIS cable device; bit position 7</li> <li>• STATION_ONLY Station only capability, for devices that implement only an end station capability, and for which none of the other capabilities apply; bit position 8</li> <li>• C_VLAN C-VLAN component of a VLAN Bridge; bit position 9</li> <li>• S_VLAN S-VLAN component of a VLAN Bridge; bit position 10</li> <li>• TWO_PORT_MAC_RELAY Two-port MAC Relay (TPMR) capability; bit position 11</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**enabled** *boolean*

<b>Description</b>	Indicates whether the corresponding system capability is enabled on the neighbor
--------------------	--

<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">capability name</a> <i>identityref</i> <a href="#">enabled</a> <i>boolean</i>
<b>Tree</b>	<a href="#">enabled</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **chassis-id** *string*

<b>Description</b>	The chassis ID of the remote neighbor  The Chassis ID is a mandatory TLV which identifies the chassis component of the endpoint identifier associated with the transmitting LLDP agent
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">chassis-id</a> <i>string</i>
<b>Tree</b>	<a href="#">chassis-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **chassis-id-type** *keyword*

<b>Description</b>	The type of identifier used in the chassis-id field  This field identifies the format and source of the chassis identifier string. It is an enumerator defined by the LldpChassisIdSubtype object from IEEE 802.1AB MIB.
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">chassis-id-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">chassis-id-type</a>
<b>Default</b>	MAC_ADDRESS
<b>Options</b>	<ul style="list-style-type: none"> <li>• CHASSIS_COMPONENT Chassis identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737</li> <li>• INTERFACE_ALIAS Chassis identifier based on the value of ifAlias object defined in IETF RFC 2863</li> <li>• PORT_COMPONENT Chassis identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737 for a port or backplane component</li> <li>• MAC_ADDRESS Chassis identifier based on the value of a unicast source address (encoded in network byte order and IEEE 802.3 canonical bit order), of a port on the containing chassis as defined in IEEE Std 802-2001</li> </ul>

- **NETWORK\_ADDRESS**  
Chassis identifier based on a network address, associated with a particular chassis. The encoded address is composed of two fields. The first field is a single octet, representing the IANA AddressFamilyNumbers value for the specific address type, and the second field is the network address value
- **INTERFACE\_NAME**  
Chassis identifier based on the name of the interface, e.g., the value of if Name object defined in IETF RFC 2863
- **LOCAL**  
Chassis identifier based on a locally defined value

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **custom-tlv** *type number oui string oui-subtype string*

<b>Description</b>	List of custom LLDP TLVs from a neighbor
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id string custom-tlv type number oui string oui-subtype string</a>
<b>Tree</b>	<a href="#">custom-tlv</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **type** *number*

<b>Description</b>	The integer value identifying the type of information contained in the value field.
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id string custom-tlv type number oui string oui-subtype string</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **oui** *string*

<b>Description</b>	The organizationally unique identifier field from the custom TLV  This field shall contain the organization's OUI as defined in Clause 9 of IEEE Std 802. The high-order octet is 0 and the low-order 3 octets are the SMI Network Management Private Enterprise Code of the Vendor in network byte order, as defined in the 'Assigned Numbers' RFC [RFC3232].
--------------------	--

<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">custom-tlv type number</a> <a href="#">oui</a> <i>string</i> <a href="#">oui-subtype</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oui-subtype** *string*

<b>Description</b>	The subtype value defined by the OUI for this custom TLV The organizationally defined subtype field shall contain a unique subtype value assigned by the defining organization.
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">custom-tlv type number</a> <a href="#">oui</a> <i>string</i> <a href="#">oui-subtype</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**value** *binary*

<b>Description</b>	A variable-length octet-string containing the value for this TLV
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">custom-tlv type number</a> <a href="#">oui</a> <i>string</i> <a href="#">oui-subtype</a> <i>string</i> <a href="#">value</a> <i>binary</i>
<b>Tree</b>	<a href="#">value</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**first-message** *string*

<b>Description</b>	Date and time of the first message from neighbor
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">first-message</a> <i>string</i>
<b>Tree</b>	<a href="#">first-message</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**last-update** *string*

<b>Description</b>	Date and time of the last update from neighbor
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">last-update</a> <i>string</i>

<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### management-address [address string](#)

<b>Description</b>	List of management addresses received from the remote LLDP neighbor
<b>Context</b>	<a href="#">system lldp interface name reference neighbor id string management-address address string</a>
<b>Tree</b>	<a href="#">management-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### address *string*

<b>Description</b>	The management address received from the remote LLDP neighbor The Management Address is a mandatory TLV which identifies a network address associated with the LLDP agent, which can be used to reach the agent on the port identified in the Port ID TLV.
<b>Context</b>	<a href="#">system lldp interface name reference neighbor id string management-address address string</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### type *keyword*

<b>Description</b>	The type of management address referenced in the address field The enumerated value for the network address type identified in this TLV. This enumeration is defined in the 'Assigned Numbers' RFC [RFC3232] and the ianaAddressFamilyNumbers object.
<b>Context</b>	<a href="#">system lldp interface name reference neighbor id string management-address address string type keyword</a>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>IPv4 Use IPv4 address for management address type</li> <li>IPv6</li> </ul>

Use IPv6 address for management address type

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **port-description** *string*

<b>Description</b>	The description of the port referenced in the port-id field The binary string containing the actual port identifier for the port which this LLDP PDU was transmitted. The source and format of this field is defined by PtopoPortId from RFC2922.
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">port-description</a> <i>string</i>
<b>Tree</b>	<a href="#">port-description</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **port-id** (*string* | *binary*)

<b>Description</b>	The Port ID of the remote neighbor The Port ID is a mandatory TLV which identifies the port component of the endpoint identifier associated with the transmitting LLDP agent. If the specified port is an IEEE 802.3 Repeater port, then this TLV is optional.
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">port-id</a> ( <i>string</i>   <i>binary</i> )
<b>Tree</b>	<a href="#">port-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **port-id-type** *keyword*

<b>Description</b>	The type of identifier used in the port-id field This field identifies the format and source of the port identifier string. It is an enumerator defined by the PtopoPortIdType object from RFC2922.
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">port-id-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">port-id-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>INTERFACE_ALIAS Chassis identifier based on the value of ifAlias object defined in IETF RFC 2863</li> </ul>

- **PORT\_COMPONENT**  
Port identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737 for a port component
- **MAC\_ADDRESS**  
Port identifier based on the value of a unicast source address (encoded in network byte order and IEEE 802.3 canonical bit order) associated with a port
- **NETWORK\_ADDRESS**  
Port identifier based on a network address, associated with a particular port
- **INTERFACE\_NAME**  
Port identifier based on the name of the interface, e.g., the value of if Name object defined in IETF RFC 2863
- **AGENT\_CIRCUIT\_ID**  
Port identifier based on the circuit id in the DHCP relay agent information option as defined in IETF RFC 3046
- **LOCAL**  
Port identifier based on a locally defined alphanumeric string

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### system-description *string*

<b>Description</b>	The system description of the remote neighbor  The system description field shall contain an alpha-numeric string that is the textual description of the network entity. The system description should include the full name and version identification of the system's hardware type, software operating system, and networking software. If implementations support IETF RFC 3418, the sysDescr object should be used for this field.
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id string</a> <a href="#">system-description string</a>
<b>Tree</b>	<a href="#">system-description</a>
<b>String Length</b>	0 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**system-name** *string*

<b>Description</b>	The administratively assigned name of the remote neighbor The system name field shall contain an alpha-numeric string that indicates the system's administratively assigned name. The system name should be the system's fully qualified domain name. If implementations support IETF RFC 3418, the sysName object should be used for this field.
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">neighbor id</a> <i>string</i> <a href="#">system-name</a> <i>string</i>
<b>Tree</b>	<a href="#">system-name</a>
<b>String Length</b>	0 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**oper-state** *keyword*

<b>Description</b>	Details the operational state of LLDP on the interface
<b>Context</b>	<a href="#">system lldp interface name</a> <i>reference</i> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power</li> </ul>

Component is offline due to insufficient system power

- degraded

Component or process is in a degraded state

- warm-reboot

Component or process is currently warm rebooting

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

Supported on all platforms

## statistics

**Description**

LLDP counters on each interface

**Context**

<b>Description</b>	The number of frames received with unknown TLV
<b>Context</b>	<a href="#">system lldp statistics tlv-unknown <i>number</i></a>
<b>Tree</b>	<a href="#">tlv-unknown</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**system-description** *string*

<b>Description</b>	Field detailing system description, including name and versions  The system description field shall contain an alpha-numeric string that is the textual description of the network entity. The system description should include the full name and version identification of the system's hardware type, software operating system, and networking software.
<b>Context</b>	<a href="#">system lldp system-description</a> <i>string</i>
<b>Tree</b>	<a href="#">system-description</a>
<b>String Length</b>	0 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**system-name** *string*

<b>Description</b>	The systems administratively assigned name  The system name field shall contain an alpha-numeric string that indicates the system's administratively assigned name. The system name should be the system's fully qualified domain name.
<b>Context</b>	<a href="#">system lldp system-name</a> <i>string</i>
<b>Tree</b>	<a href="#">system-name</a>
<b>String Length</b>	0 to 255
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**trace-options** *keyword*

<b>Description</b>	LLDP trace options
<b>Context</b>	<a href="#">system lldp trace-options</a> <i>keyword</i>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• received</li> <li>• transmitted</li> <li>• common</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## load-balancing

<b>Description</b>	Adjust system-wide ECMP load balancing options.
<b>Context</b>	<a href="#">system load-balancing</a>
<b>Tree</b>	<a href="#">load-balancing</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## hash-options

<b>Description</b>	Container for packet header fields and other inputs used in hashing calculations
<b>Context</b>	<a href="#">system load-balancing hash-options</a>
<b>Tree</b>	<a href="#">hash-options</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## destination-address *boolean*

<b>Description</b>	Include the destination IP address in the hash calculation
<b>Context</b>	<a href="#">system load-balancing hash-options destination-address <i>boolean</i></a>
<b>Tree</b>	<a href="#">destination-address</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## destination-port *boolean*

<b>Description</b>	Include the destination TCP/UDP port number in the hash calculation if the packet is an unfragmented IP packet carrying a TCP/UDP payload
<b>Context</b>	<a href="#">system load-balancing hash-options destination-port <i>boolean</i></a>
<b>Tree</b>	<a href="#">destination-port</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### hash-seed *number*

<b>Description</b>	A configured hash seed to override the default value of 0  Different routers can be configured with different hash-seed values to minimize traffic polarization effects. This hash-seed is used by all hash-related CRC calculations including those that take IP header fields, those that take Ethernet header fields and those that take MPLS labels.
<b>Context</b>	<a href="#">system load-balancing hash-options hash-seed</a> <i>number</i>
<b>Tree</b>	<a href="#">hash-seed</a>
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### ipv6-flow-label *boolean*

<b>Description</b>	Include the IPv6 flow label in the hash calculation if the packet is an IPv6 packet  It is expected that the IPv6 flow label value is written by the server or other host originating the flow and not changed by any intermediate switch or router.
<b>Context</b>	<a href="#">system load-balancing hash-options ipv6-flow-label</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ipv6-flow-label</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### mpls-label-stack *boolean*

<b>Description</b>	Include the received labels (terminated and non-terminated) in the hash calculation
<b>Context</b>	<a href="#">system load-balancing hash-options mpls-label-stack</a> <i>boolean</i>
<b>Tree</b>	<a href="#">mpls-label-stack</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**protocol** *boolean*

<b>Description</b>	Include the IP protocol number in the hash calculation. For an IPv6 packet this is protocol value in the next-header field of the last extension header.
<b>Context</b>	<a href="#">system load-balancing hash-options protocol</a> <i>boolean</i>
<b>Tree</b>	<a href="#">protocol</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**source-address** *boolean*

<b>Description</b>	Include the source IP address in the hash calculation
<b>Context</b>	<a href="#">system load-balancing hash-options source-address</a> <i>boolean</i>
<b>Tree</b>	<a href="#">source-address</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**source-port** *boolean*

<b>Description</b>	Include the source TCP/UDP port number in the hash calculation if the packet is an unfragmented IP packet carrying a TCP/UDP payload
<b>Context</b>	<a href="#">system load-balancing hash-options source-port</a> <i>boolean</i>
<b>Tree</b>	<a href="#">source-port</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**vlan** *boolean*

<b>Description</b>	Include the received VLAN ID in the hash calculation
<b>Context</b>	<a href="#">system load-balancing hash-options vlan</a> <i>boolean</i>
<b>Tree</b>	<a href="#">vlan</a>
<b>Default</b>	true
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4

## logging

**Description** System logging provides the interface to syslog services to setup output entities on a selection of log sources.

**Context** [system logging](#)

**Tree** [logging](#)

**Configurable** True

**Platforms** Supported on all platforms

### buffer [buffer-name](#) *string*

**Description** Log files maintained in memory, non-persistent across system reboots. These files are stored at directory `/var/log/srlinux/buffer`. Rotation into multiple files is available.

**Context** [system logging buffer buffer-name](#) *string*

**Tree** [buffer](#)

**Configurable** True

**Platforms** Supported on all platforms

### buffer-name *string*

**Description** Base name of the file(s) to be stored in memory

**Context** [system logging buffer buffer-name](#) *string*

**Configurable** True

**Platforms** Supported on all platforms

### facility [facility-name](#) *keyword*

**Description** List of facilities to source messages from

**Context** [system logging buffer buffer-name](#) *string* [facility facility-name](#) *keyword*

**Tree** [facility](#)

**Configurable** True

**Platforms** Supported on all platforms

**facility-name** *keyword*

<b>Description</b>	Name of a Linux syslog facility
<b>Context</b>	<a href="#">system logging buffer buffer-name</a> <i>string</i> <a href="#">facility facility-name</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all</li> <li>• audit</li> <li>• auth</li> <li>• authpriv</li> <li>• console</li> <li>• cron</li> <li>• daemon</li> <li>• ftp</li> <li>• kern</li> <li>• lpr</li> <li>• mail</li> <li>• news</li> <li>• ntp</li> <li>• syslog</li> <li>• user</li> <li>• uucp</li> <li>• local0</li> <li>• local1</li> <li>• local2</li> <li>• local3</li> <li>• local4</li> <li>• local5</li> <li>• local6</li> <li>• local7</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**priority**

<b>Description</b>	Narrows the capture to a given severity, a range or a specific set of severities
<b>Context</b>	<a href="#">system logging buffer buffer-name</a> <i>string</i> <a href="#">facility facility-name</a> <i>keyword</i> <a href="#">priority</a>

<b>Tree</b>	<a href="#">priority</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**match-above** *keyword*

<b>Description</b>	At a given severity and above
<b>Context</b>	<a href="#">system logging buffer buffer-name</a> <i>string</i> <a href="#">facility facility-name</a> <i>keyword</i> <a href="#">priority match-above</a> <i>keyword</i>
<b>Tree</b>	<a href="#">match-above</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• emergency</li> <li>• alert</li> <li>• critical</li> <li>• error</li> <li>• warning</li> <li>• notice</li> <li>• informational</li> <li>• debug</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**match-exact** *keyword*

<b>Description</b>	Individually specified severities
<b>Context</b>	<a href="#">system logging buffer buffer-name</a> <i>string</i> <a href="#">facility facility-name</a> <i>keyword</i> <a href="#">priority match-exact</a> <i>keyword</i>
<b>Tree</b>	<a href="#">match-exact</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• emergency</li> <li>• alert</li> <li>• critical</li> <li>• error</li> <li>• warning</li> <li>• notice</li> <li>• informational</li> <li>• debug</li> </ul>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **filter** *reference*

**Description** A set of all-matching criteria that messages must fulfill in order to be captured

**Context** [system logging buffer buffer-name string filter reference](#)

**Tree** [filter](#)

**Reference** [system logging filter filter-name string](#)

**Configurable** True

**Platforms** Supported on all platforms

### **format** (*string | keyword*)

**Description** Text format of syslog messages to a local output (buffer, file or console), in legacy rsyslog \$template style or one of the predefined templates

The default presents a date timestamp according to rfc3339. The predefined templates are the ones supported by rsyslogd.

**Context** [system logging buffer buffer-name string format \(string | keyword\)](#)

**Tree** [format](#)

**Default** RSYSLOG\_FileFormat

**Options**

- RSYSLOG\_FileFormat
- RSYSLOG\_TraditionalFileFormat
- RSYSLOG\_DebugFormat

**Configurable** True

**Platforms** Supported on all platforms

### **persist** *number*

**Description** Time in seconds to shadow the buffer to persistent storage

Setting this field to 0 results in the buffer not being persisted. A value other than 0 will result in the log being persisted to disk based on the configured value. Logs with a non-zero persist value are persisted automatically on rollover, or at the configured value.

**Context** [system logging buffer buffer-name string persist number](#)

**Tree** [persist](#)

**Range** 0 | 60 to 604800

<b>Default</b>	0
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**rotate** *number*

<b>Description</b>	Number of files to keep in rotation when a maximum file size is reached
<b>Context</b>	<a href="#">system logging buffer buffer-name string rotate number</a>
<b>Tree</b>	<a href="#">rotate</a>
<b>Default</b>	4
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**rotations** *number*

<b>Description</b>	Number of file rotations occurred
<b>Context</b>	<a href="#">system logging buffer buffer-name string rotations number</a>
<b>Tree</b>	<a href="#">rotations</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**size** *string*

<b>Description</b>	Number of bytes an individual output file cannot exceed The field allows the 'K, M, or G' suffixes as shorthand. When reaching that size, a rotation happens and subsequent data is stored in a new file with the same base name.
<b>Context</b>	<a href="#">system logging buffer buffer-name string size string</a>
<b>Tree</b>	<a href="#">size</a>
<b>Default</b>	10M
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**subsystem** *subsystem-name* *keyword*

<b>Description</b>	Entity or entities that may produce messages to be captured
<b>Context</b>	<a href="#">system logging buffer buffer-name</a> <i>string</i> <a href="#">subsystem subsystem-name</a> <i>keyword</i>
<b>Tree</b>	<a href="#">subsystem</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**subsystem-name** *keyword*

<b>Description</b>	Reference to an available subsystem to source messages from
<b>Context</b>	<a href="#">system logging buffer buffer-name</a> <i>string</i> <a href="#">subsystem subsystem-name</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• aaa</li> <li>• accounting</li> <li>• acl</li> <li>• app</li> <li>• arpd</li> <li>• bfd</li> <li>• bgp</li> <li>• bridgetable</li> <li>• chassis</li> <li>• debug</li> <li>• dhcp</li> <li>• ethcfm</li> <li>• evpn</li> <li>• fib</li> <li>• gnmi</li> <li>• gnsi</li> <li>• gribi</li> <li>• grpc</li> <li>• igmp</li> <li>• isis</li> <li>• json</li> <li>• lag</li> <li>• ldp</li> </ul>

**filter** [filter-name](#) *string*

<b>Description</b>	Describes a set of criteria that captured messages are required to fulfill
<b>Context</b>	<a href="#">system logging filter filter-name</a> <i>string</i>
<b>Tree</b>	<a href="#">filter</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**filter-name** *string*

<b>Description</b>	Name of the filter
<b>Context</b>	<a href="#">system logging filter filter-name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**contains** *string*

<b>Description</b>	Text to find in the MSG property of messages to capture from the stream This is slower than prefix.
<b>Context</b>	<a href="#">system logging filter filter-name</a> <i>string</i> <a href="#">contains</a> <i>string</i>

<b>Tree</b>	<a href="#">contains</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **facility** [facility-name](#) *keyword*

<b>Description</b>	List of facilities to source messages from
<b>Context</b>	<a href="#">system logging filter filter-name</a> <i>string</i> <a href="#">facility</a> <a href="#">facility-name</a> <i>keyword</i>
<b>Tree</b>	<a href="#">facility</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **facility-name** *keyword*

<b>Description</b>	Name of a Linux syslog facility
<b>Context</b>	<a href="#">system logging filter filter-name</a> <i>string</i> <a href="#">facility</a> <a href="#">facility-name</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all</li> <li>• audit</li> <li>• auth</li> <li>• authpriv</li> <li>• console</li> <li>• cron</li> <li>• daemon</li> <li>• ftp</li> <li>• kern</li> <li>• lpr</li> <li>• mail</li> <li>• news</li> <li>• ntp</li> <li>• syslog</li> <li>• user</li> <li>• uucp</li> <li>• local0</li> <li>• local1</li> <li>• local2</li> <li>• local3</li> </ul>

- local4
- local5
- local6
- local7

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## priority

<b>Description</b>	Narrows the capture to a given severity, a range or a specific set of severities
<b>Context</b>	<a href="#">system logging filter filter-name string facility facility-name keyword priority</a>
<b>Tree</b>	<a href="#">priority</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## match-above *keyword*

<b>Description</b>	At a given severity and above
<b>Context</b>	<a href="#">system logging filter filter-name string facility facility-name keyword priority match-above keyword</a>
<b>Tree</b>	<a href="#">match-above</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• emergency</li> <li>• alert</li> <li>• critical</li> <li>• error</li> <li>• warning</li> <li>• notice</li> <li>• informational</li> <li>• debug</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## match-exact *keyword*

<b>Description</b>	Individually specified severities
--------------------	-----------------------------------

**Context** [system logging filter filter-name string facility facility-name keyword priority match-exact keyword](#)

**Tree** [match-exact](#)

**Options**

- emergency
- alert
- critical
- error
- warning
- notice
- informational
- debug

**Configurable** True

**Platforms** Supported on all platforms

### **prefix string**

**Description** Text to be present at the beginning of the MSG property of a message This is a fast lookup.

**Context** [system logging filter filter-name string prefix string](#)

**Tree** [prefix](#)

**Configurable** True

**Platforms** Supported on all platforms

### **regex string**

**Description** Extended regular expression to search in the MSG property of messages

**Context** [system logging filter filter-name string regex string](#)

**Tree** [regex](#)

**Configurable** True

**Platforms** Supported on all platforms

### **tag string**

**Description** Text to be searched in the SYSLOGTAG property of messages Usually a program name or part of it.

**Context** [system logging filter filter-name string tag string](#)

<b>Tree</b>	<a href="#">tag</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### network-instance *reference*

<b>Description</b>	Reference to a configured network-instance to run rsyslogd in This network-instance will be used as a source for requests to remote syslog servers.
<b>Context</b>	<a href="#">system logging network-instance reference</a>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Reference</b>	<a href="#">network-instance name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### remote-server [host](#) (*ipv4-address | ipv6-address | domain-name*)

<b>Description</b>	List of output remote syslog servers
<b>Context</b>	<a href="#">system logging remote-server host</a> ( <i>ipv4-address   ipv6-address   domain-name</i> )
<b>Tree</b>	<a href="#">remote-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### [host](#) (*ipv4-address | ipv6-address | domain-name*)

<b>Description</b>	Domain or IP address of a remote syslog server destination
<b>Context</b>	<a href="#">system logging remote-server host</a> ( <i>ipv4-address   ipv6-address   domain-name</i> )
<b>String Length</b>	1 to 253
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### facility [facility-name](#) *keyword*

<b>Description</b>	List of facilities to source messages from
--------------------	--

---

<b>Context</b>	<a href="#">system logging remote-server host</a> ( <i>ipv4-address</i>   <i>ipv6-address</i>   <i>domain-name</i> ) <a href="#">facility</a> <a href="#">facility-name</a> <a href="#">keyword</a>
<b>Tree</b>	<a href="#">facility</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **facility-name** *keyword*

<b>Description</b>	Name of a Linux syslog facility
<b>Context</b>	<a href="#">system logging remote-server host</a> ( <i>ipv4-address</i>   <i>ipv6-address</i>   <i>domain-name</i> ) <a href="#">facility</a> <a href="#">facility-name</a> <a href="#">keyword</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all</li> <li>• audit</li> <li>• auth</li> <li>• authpriv</li> <li>• console</li> <li>• cron</li> <li>• daemon</li> <li>• ftp</li> <li>• kern</li> <li>• lpr</li> <li>• mail</li> <li>• news</li> <li>• ntp</li> <li>• syslog</li> <li>• user</li> <li>• uucp</li> <li>• local0</li> <li>• local1</li> <li>• local2</li> <li>• local3</li> <li>• local4</li> <li>• local5</li> <li>• local6</li> <li>• local7</li> </ul>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## priority

**Description** Narrows the capture to a given severity, a range or a specific set of severities

**Context** [system logging remote-server host](#) (*ipv4-address* | *ipv6-address* | *domain-name*) [facility facility-name](#) *keyword* [priority](#)

**Tree** [priority](#)

**Configurable** True

**Platforms** Supported on all platforms

## match-above *keyword*

**Description** At a given severity and above

**Context** [system logging remote-server host](#) (*ipv4-address* | *ipv6-address* | *domain-name*) [facility facility-name](#) *keyword* [priority match-above](#) *keyword*

**Tree** [match-above](#)

**Options**

- emergency
- alert
- critical
- error
- warning
- notice
- informational
- debug

**Configurable** True

**Platforms** Supported on all platforms

## match-exact *keyword*

**Description** Individually specified severities

**Context** [system logging remote-server host](#) (*ipv4-address* | *ipv6-address* | *domain-name*) [facility facility-name](#) *keyword* [priority match-exact](#) *keyword*

**Tree** [match-exact](#)

**Options**

- emergency
- alert
- critical

- error
- warning
- notice
- informational
- debug

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **filter** *reference*

<b>Description</b>	A set of all-matching criteria that messages must fulfill in order to be captured
<b>Context</b>	<a href="#">system logging remote-server host</a> ( <i>ipv4-address</i>   <i>ipv6-address</i>   <i>domain-name</i> ) <a href="#">filter reference</a>
<b>Tree</b>	<a href="#">filter</a>
<b>Reference</b>	<a href="#">system logging filter filter-name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **format** (*string* | *keyword*)

<b>Description</b>	Text format of syslog messages to a remote server, in legacy rsyslog \$template style or one of the predefined templates  The default presents a date timestamp according to rfc3339. The predefined templates are the ones supported by rsyslogd.
<b>Context</b>	<a href="#">system logging remote-server host</a> ( <i>ipv4-address</i>   <i>ipv6-address</i>   <i>domain-name</i> ) <a href="#">format</a> ( <i>string</i>   <i>keyword</i> )
<b>Tree</b>	<a href="#">format</a>
<b>Default</b>	RSYSLOG_SyslogProtocol23Format
<b>Options</b>	<ul style="list-style-type: none"> <li>• RSYSLOG_ForwardFormat</li> <li>• RSYSLOG_SyslogProtocol23Format</li> <li>• RSYSLOG_TraditionalForwardFormat</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**remote-port** *number*

<b>Description</b>	Transport port for syslog to use for messages sent to a remote server
<b>Context</b>	<a href="#">system logging remote-server host</a> ( <i>ipv4-address</i>   <i>ipv6-address</i>   <i>domain-name</i> ) <a href="#">remote-port</a> <i>number</i>
<b>Tree</b>	<a href="#">remote-port</a>
<b>Default</b>	514
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Source address for syslog to use for messages sent to a remote server If no source address is provided, then packets will be sent to the remote server using the source address indicated by the routing table.
<b>Context</b>	<a href="#">system logging remote-server host</a> ( <i>ipv4-address</i>   <i>ipv6-address</i>   <i>domain-name</i> ) <a href="#">source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**subsystem** [subsystem-name](#) *keyword*

<b>Description</b>	Entity or entities that may produce messages to be captured
<b>Context</b>	<a href="#">system logging remote-server host</a> ( <i>ipv4-address</i>   <i>ipv6-address</i>   <i>domain-name</i> ) <a href="#">subsystem</a> <a href="#">subsystem-name</a> <i>keyword</i>
<b>Tree</b>	<a href="#">subsystem</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**subsystem-name** *keyword*

<b>Description</b>	Reference to an available subsystem to source messages from
<b>Context</b>	<a href="#">system logging remote-server host</a> ( <i>ipv4-address</i>   <i>ipv6-address</i>   <i>domain-name</i> ) <a href="#">subsystem</a> <a href="#">subsystem-name</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>aaa</code></li> <li>• <code>accounting</code></li> <li>• <code>acl</code></li> </ul>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **use-fqdn** *boolean*

<b>Description</b>	Use the FQDN instead of only the hostname for logging messages
<b>Context</b>	<a href="#">system logging use-fqdn boolean</a>
<b>Tree</b>	<a href="#">use-fqdn</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **maintenance**

<b>Description</b>	Top-level container for Maintenance Mode configuration
<b>Context</b>	<a href="#">system maintenance</a>
<b>Tree</b>	<a href="#">maintenance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **group name** *string*

<b>Description</b>	List of user-configured maintenance groups
<b>Context</b>	<a href="#">system maintenance group name string</a>
<b>Tree</b>	<a href="#">group</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the maintenance group.
<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**maintenance-mode**

<b>Description</b>	Container with options for activating and deactivating maintenance mode for this group
<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">maintenance-mode</a>
<b>Tree</b>	<a href="#">maintenance-mode</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	<p>Enable or disable maintenance mode for this group</p> <p>The enable setting is blocked if there is another maintenance group with at least one BGP session in its scope that overlaps with this maintenance group and that other maintenance group is currently in maintenance mode.</p> <p>While a maintenance group is in maintenance mode it is not possible to modify the BGP configuration of its members.</p>
<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">maintenance-mode</a> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**maintenance-profile** *reference*

<b>Description</b>	Leaf reference to <code>/system/maintenance/profile/name</code>
--------------------	---

<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">maintenance-profile</a> <i>reference</i>
<b>Tree</b>	<a href="#">maintenance-profile</a>
<b>Reference</b>	<a href="#">system maintenance profile name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## members

<b>Description</b>	Container for specifying the members of the maintenance group - i.e. the components that will eventually be taken out of service for repair or replacement.
<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">members</a>
<b>Tree</b>	<a href="#">members</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## bgp

<b>Description</b>	Container for specifying the BGP members of the maintenance group
<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">members</a> <a href="#">bgp</a>
<b>Tree</b>	<a href="#">bgp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## network-instance [name](#) *reference*

<b>Description</b>	List of network instances with one or more peers to be placed in maintenance mode
<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">members</a> <a href="#">bgp</a> <a href="#">network-instance name</a> <i>reference</i>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## name *reference*

<b>Description</b>	A unique name identifying the network instance
--------------------	--

<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">members bgp network-instance name</a> <i>reference</i>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **neighbor** *reference*

<b>Description</b>	<p>List of BGP neighbors that belong to the network instance and that should be part of the maintenance group</p> <p>It is not necessary to list neighbors that are members of peer-groups that are already listed.</p> <p>If this list is empty and so is the group list, then the system interprets the meaning as ALL static and dynamic sessions belonging to the specified network-instance.</p>
<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">members bgp network-instance name</a> <i>reference</i> <a href="#">neighbor</a> <i>reference</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp neighbor peer-address</a> ( <i>ipv4-address-with-zone   ipv6-address-with-zone</i> )
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **peer-group** *reference*

<b>Description</b>	<p>List of BGP peer groups that belong to the network instance and that should be part of the maintenance group</p> <p>If this list is empty and so is the neighbor list, then the system interprets the meaning as ALL static and dynamic sessions belonging to the specified network-instance.</p>
<b>Context</b>	<a href="#">system maintenance group name</a> <i>string</i> <a href="#">members bgp network-instance name</a> <i>reference</i> <a href="#">peer-group</a> <i>reference</i>
<b>Tree</b>	<a href="#">peer-group</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**profile name** *string*

<b>Description</b>	Enter the profile list instance
<b>Context</b>	<a href="#">system maintenance profile name</a> <i>string</i>
<b>Tree</b>	<a href="#">profile</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the maintenance profile
<b>Context</b>	<a href="#">system maintenance profile name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**bgp**

<b>Description</b>	Container for BGP policies used to achieve traffic draining
<b>Context</b>	<a href="#">system maintenance profile name</a> <i>string</i> <a href="#">bgp</a>
<b>Tree</b>	<a href="#">bgp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**export-policy** *reference*

<b>Description</b>	A reference to the pre-configured routing policy to apply as an additional/final export policy on BGP sessions in the maintenance group
<b>Context</b>	<a href="#">system maintenance profile name</a> <i>string</i> <a href="#">bgp export-policy</a> <i>reference</i>
<b>Tree</b>	<a href="#">export-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**import-policy** *reference*

<b>Description</b>	A reference to the pre-configured routing policy to apply as an additional/final import policy on BGP sessions in the maintenance group
<b>Context</b>	<a href="#">system maintenance profile name</a> <i>string</i> <a href="#">bgp import-policy reference</a>
<b>Tree</b>	<a href="#">import-policy</a>
<b>Reference</b>	<a href="#">routing-policy policy name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**management**

<b>Description</b>	Enclosing container for options relating to management server
<b>Context</b>	<a href="#">system management</a>
<b>Tree</b>	<a href="#">management</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**openconfig**

<b>Description</b>	Top-level container for options relating to OpenConfig
<b>Context</b>	<a href="#">system management openconfig</a>
<b>Tree</b>	<a href="#">openconfig</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**admin-state** *keyword*

<b>Description</b>	Enable or disable the OpenConfig management server This will disable OpenConfig throughout the system, and bring any gRPC servers that use it operationally down.
<b>Context</b>	<a href="#">system management openconfig admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **oper-state** *keyword*

**Description** Indicates the operational state of the OpenConfig management server

**Context** [system management openconfig oper-state](#) *keyword*

**Tree** [oper-state](#)

**Options**

- up  
Component or process is operational
- down  
Component or process is not operational
- empty  
Component slot is empty
- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## mirroring

<b>Description</b>	Top level container for configuration and operational state for mirroring
<b>Context</b>	<a href="#">system mirroring</a>
<b>Tree</b>	<a href="#">mirroring</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

## mirroring-instance *name string*

<b>Description</b>	Mirroring instances configured on the local system
<b>Context</b>	<a href="#">system mirroring mirroring-instance name string</a>
<b>Tree</b>	<a href="#">mirroring-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e
<b>Max. Elements</b>	8

## name *string*

<b>Description</b>	A unique name identifying the mirroring instance
<b>Context</b>	<a href="#">system mirroring mirroring-instance name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

## admin-state *keyword*

<b>Description</b>	This leaf contains the configured, desired state of the mirroring instance.
--------------------	---

<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

### **description** *string*

<b>Description</b>	A user-entered description of this mirroring instance.
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">description</a> <i>string</i>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

### **mirror-destination**

<b>Description</b>	Configure mirror destination
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination</a>
<b>Tree</b>	<a href="#">mirror-destination</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

### **local** *string*

<b>Description</b>	subinterface of type local-mirror-dest used as local mirror destination
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination</a> <a href="#">local</a> <i>string</i>
<b>Tree</b>	<a href="#">local</a>
<b>String Length</b>	5 to 25
<b>Configurable</b>	True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

## remote

**Description** Enable the remote context

**Context** [system mirroring mirroring-instance name](#) *string* [mirror-destination remote](#)

**Tree** [remote](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

## encap *keyword*

**Description** Enter the encap context

**Context** [system mirroring mirroring-instance name](#) *string* [mirror-destination remote](#) [encap keyword](#)

**Tree** [encap](#)

**Options**

- l2ogre
- l3ogre
- mpls-gre

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

## network-instance *reference*

**Description** network instance to initiate remote mirror tunnel

**Context** [system mirroring mirroring-instance name](#) *string* [mirror-destination remote](#) [network-instance reference](#)

**Tree** [network-instance](#)

**Reference** [network-instance name](#) *string*

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

**tunnel-end-points**

<b>Description</b>	Enter the tunnel-end-points context
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination remote tunnel-end-points</a>
<b>Tree</b>	<a href="#">tunnel-end-points</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

**admin-state** *keyword*

<b>Description</b>	This leaf contains the configured, desired state of the remote mirror tunnel
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination remote tunnel-end-points admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	enable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

**destination-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	remote mirror tunnel destination endpoint ip-address
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination remote tunnel-end-points destination-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">destination-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

**oper-state** *keyword*

<b>Description</b>	This leaf contains the operational state of the remote mirror tunnel
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination remote tunnel-end-points oper-state</a> <i>keyword</i>

<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.</li> <li>• waiting Component or process is currently waiting This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

**source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	remote mirror tunnel source endpoint ip-address
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination remote tunnel-end-points source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

**egress-mirrored-octets** *number*

<b>Description</b>	The number of egress mirrored octets
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination statistics egress-mirrored-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">egress-mirrored-octets</a>
<b>Default</b>	0
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

**egress-mirrored-packets** *number*

<b>Description</b>	The number of egress mirrored packets
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination statistics egress-mirrored-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">egress-mirrored-packets</a>
<b>Default</b>	0
<b>Units</b>	packets

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5

### **ingress-mirrored-octets** *number*

<b>Description</b>	The number of ingress mirrored octets
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination statistics ingress-mirrored-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">ingress-mirrored-octets</a>
<b>Default</b>	0
<b>Units</b>	bytes
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

### **ingress-mirrored-packets** *number*

<b>Description</b>	The number of ingress mirrored packets
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination statistics ingress-mirrored-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">ingress-mirrored-packets</a>
<b>Default</b>	0
<b>Units</b>	packets
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

### **mirror-source**

<b>Description</b>	Configure mirror source(s)
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-source</a>
<b>Tree</b>	<a href="#">mirror-source</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

### **acl**

<b>Description</b>	Enter the acl context
--------------------	-----------------------

<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-source</a> <a href="#">acl</a>
<b>Tree</b>	<a href="#">acl</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

### **acl-filter** [name](#) *reference* [type](#) *reference*

<b>Description</b>	List IPv4, IPv6 ACL filters
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-source</a> <a href="#">acl</a> <a href="#">acl-filter name</a> <i>reference</i> <a href="#">type</a> <i>reference</i>
<b>Tree</b>	<a href="#">acl-filter</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

### **name** *reference*

<b>Description</b>	Enter the name context
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-source</a> <a href="#">acl</a> <a href="#">acl-filter name</a> <i>reference</i> <a href="#">type</a> <i>reference</i>
<b>Reference</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <i>keyword</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

### **type** *reference*

<b>Description</b>	Reference to the ACL filter policy type
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-source</a> <a href="#">acl</a> <a href="#">acl-filter name</a> <i>reference</i> <a href="#">type</a> <i>reference</i>
<b>Reference</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string</i> <a href="#">type</a> <i>keyword</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

**entry** *sequence-id reference*

<b>Description</b>	Add a list entry for entry
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-source acl acl-filter name</a> <i>reference type reference entry sequence-id reference</i>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

**sequence-id** *reference*

<b>Description</b>	Enter the sequence-id context
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-source acl acl-filter name</a> <i>reference type reference entry sequence-id reference</i>
<b>Reference</b>	<a href="#">acl acl-filter name</a> <i>string type keyword entry sequence-id number</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

**interface** *name string*

<b>Description</b>	List of interfaces used as mirror source
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-source interface name</a> <i>string</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

### **oper-down-reason** *keyword*

<b>Description</b>	The reason for the mirror source being operational down. When the reason is not applicable, it is due to the mirror instance being shutdown or the mirror source is operational up.
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-source subinterface name</a> <i>string</i> <a href="#">oper-down-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• mirror-source-ingress-table-full</li> <li>• mirror-source-egress-table-full</li> <li>• not-applicable</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

### **oper-state** *keyword*

<b>Description</b>	This leaf contains the operational state of the mirror-source.
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-source subinterface name</a> <i>string</i> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty</li> </ul>

- Component slot is empty
- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

**oper-down-reason** *keyword***Description**

The reason for the mirroring instance being operational down

## dynamic `name string`

**Description**

List of dynamic label blocks

When a client application binds its operation to a dynamic label block that client application is expected to just ask for the next available label within the dynamic label block.

At this time a dynamic label block cannot be shared by multiple different clients/protocols. Each protocol needing dynamic labels must have its own label block.

**Context**

**name** *string*

<b>Description</b>	The name of the dynamic label block
<b>Context</b>	<a href="#">system mpls label-ranges dynamic name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**allocated-labels** *number*

<b>Description</b>	The number of labels that are currently used in this block
<b>Context</b>	<a href="#">system mpls label-ranges dynamic name string allocated-labels number</a>
<b>Tree</b>	<a href="#">allocated-labels</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**end-label** *number*

<b>Description</b>	The ending label value of the label block. When the status is not-ready or updating, the state value may be different from the configured value
<b>Context</b>	<a href="#">system mpls label-ranges dynamic name string end-label number</a>
<b>Tree</b>	<a href="#">end-label</a>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**free-labels** *number*

<b>Description</b>	The number of labels that are currently available and free in this block. When the status is not-ready or updating, the state value may be different from the configured value
--------------------	---

<b>Context</b>	<a href="#">system mpls label-ranges dynamic name</a> <i>string</i> <a href="#">free-labels</a> <i>number</i>
<b>Tree</b>	<a href="#">free-labels</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**start-label** *number*

<b>Description</b>	The starting label value of the label block. When the status is not-ready or updating, the state value may be different from the configured value
<b>Context</b>	<a href="#">system mpls label-ranges dynamic name</a> <i>string</i> <a href="#">start-label</a> <i>number</i>
<b>Tree</b>	<a href="#">start-label</a>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**status** *keyword*

<b>Description</b>	The status of the MPLS label block
<b>Context</b>	<a href="#">system mpls label-ranges dynamic name</a> <i>string</i> <a href="#">status</a> <i>keyword</i>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>ready</b> The label block is ready to use.</li> <li>• <b>not-ready</b> The label block is not ready to use.</li> <li>• <b>delete-pending</b> The label block is in the process of being deleted.</li> <li>• <b>updating</b> The label block is available to use but the new limits do not apply yet.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**user** [index](#) *number*

<b>Description</b>	The list of protocols that are using this label block. If the block is not shared there will only be 1 user
--------------------	---

<b>Context</b>	<a href="#">system mpls label-ranges dynamic name string user index number</a>
<b>Tree</b>	<a href="#">user</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**index number**

<b>Description</b>	Index number used to enumerate the clients
<b>Context</b>	<a href="#">system mpls label-ranges dynamic name string user index number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**owner identityref**

<b>Description</b>	The protocol or service associated with the client
<b>Context</b>	<a href="#">system mpls label-ranges dynamic name string user index number owner identityref</a>
<b>Tree</b>	<a href="#">owner</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">bgp</a> The BGP/MP-BGP protocol carrying labels.</li> <li>• <a href="#">ldp</a> The label distribution protocol (LDP).</li> <li>• <a href="#">sr-isis</a> The IS-IS protocol with segment routing extensions</li> <li>• <a href="#">sr-ospf</a> The OSPFv2 protocol with segment routing extensions</li> <li>• <a href="#">sr-ospfv3</a> The OSPFv3 protocol with segment routing extensions</li> <li>• <a href="#">sr-policy</a> A pseudo protocol representing SR policies</li> <li>• <a href="#">static-mpls</a> A pseudo protocol representing static MPLS routes</li> <li>• <a href="#">evpn</a> The BGP/EVPN protocol carrying labels.</li> <li>• <a href="#">network-instance</a> The module allocating labels for bgp based vpn/evpn services</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**static name** *string*

<b>Description</b>	List of static label blocks  When a client application binds its operation to a static label block that client application is expected to specify the exact label value it wants to use every time it requests a label within the static label block.
<b>Context</b>	<a href="#">system mpls label-ranges static name</a> <i>string</i>
<b>Tree</b>	<a href="#">static</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**name** *string*

<b>Description</b>	The name of the static label block
<b>Context</b>	<a href="#">system mpls label-ranges static name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**allocated-labels** *number*

<b>Description</b>	The number of labels that are currently used in this block
<b>Context</b>	<a href="#">system mpls label-ranges static name</a> <i>string</i> <a href="#">allocated-labels</a> <i>number</i>
<b>Tree</b>	<a href="#">allocated-labels</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**end-label** *number*

<b>Description</b>	The ending label value of the label block.  When the status is not-ready or updating, the state value may be different from the configured value
<b>Context</b>	<a href="#">system mpls label-ranges static name</a> <i>string</i> <a href="#">end-label</a> <i>number</i>
<b>Tree</b>	<a href="#">end-label</a>

<b>Range</b>	16 to 1048575
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**free-labels** *number*

<b>Description</b>	The number of labels that are currently available and free in this block. When the status is not-ready or updating, the state value may be different from the configured value
<b>Context</b>	<a href="#">system mpls label-ranges static name</a> <i>string</i> <a href="#">free-labels</a> <i>number</i>
<b>Tree</b>	<a href="#">free-labels</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**shared** *boolean*

<b>Description</b>	When set to true, the label block can be shared by multiple protocols. When set to false, the label block is dedicated to one protocol.
<b>Context</b>	<a href="#">system mpls label-ranges static name</a> <i>string</i> <a href="#">shared</a> <i>boolean</i>
<b>Tree</b>	<a href="#">shared</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**start-label** *number*

<b>Description</b>	The starting label value of the label block. When the status is not-ready or updating, the state value may be different from the configured value
<b>Context</b>	<a href="#">system mpls label-ranges static name</a> <i>string</i> <a href="#">start-label</a> <i>number</i>
<b>Tree</b>	<a href="#">start-label</a>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**status** *keyword*

<b>Description</b>	The status of the MPLS label block
<b>Context</b>	<a href="#">system mpls label-ranges static name</a> <i>string</i> <b>status</b> <i>keyword</i>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ready The label block is ready to use.</li> <li>• not-ready The label block is not ready to use.</li> <li>• delete-pending The label block is in the process of being deleted.</li> <li>• updating The label block is available to use but the new limits do not apply yet.</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**user** *index number*

<b>Description</b>	The list of protocols that are using this label block. If the block is not shared there will only be 1 user
<b>Context</b>	<a href="#">system mpls label-ranges static name</a> <i>string</i> <b>user</b> <i>index number</i>
<b>Tree</b>	<a href="#">user</a>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**index** *number*

<b>Description</b>	Index number used to enumerate the clients
<b>Context</b>	<a href="#">system mpls label-ranges static name</a> <i>string</i> <b>user</b> <i>index number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**owner** *identityref*

<b>Description</b>	The protocol or service associated with the client
<b>Context</b>	<a href="#">system mpls label-ranges static name</a> <i>string</i> <b>user</b> <i>index number</i> <b>owner</b> <i>identityref</i>

<b>Tree</b>	<a href="#">owner</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">bgp</a> The BGP/MP-BGP protocol carrying labels.</li> <li>• <a href="#">ldp</a> The label distribution protocol (LDP).</li> <li>• <a href="#">sr-isis</a> The IS-IS protocol with segment routing extensions</li> <li>• <a href="#">sr-ospf</a> The OSPFv2 protocol with segment routing extensions</li> <li>• <a href="#">sr-ospfv3</a> The OSPFv3 protocol with segment routing extensions</li> <li>• <a href="#">sr-policy</a> A pseudo protocol representing SR policies</li> <li>• <a href="#">static-mpls</a> A pseudo protocol representing static MPLS routes</li> <li>• <a href="#">evpn</a> The BGP/EVPN protocol carrying labels.</li> <li>• <a href="#">network-instance</a> The module allocating labels for bgp based vpn/evpn services</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## services

<b>Description</b>	Container for system wide Services MPLS label management
<b>Context</b>	<a href="#">system mpls services</a>
<b>Tree</b>	<a href="#">services</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## mtu

<b>Description</b>	Top-level container for configuration and state data related to the system MTU
<b>Context</b>	<a href="#">system mtu</a>
<b>Tree</b>	<a href="#">mtu</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **default-ip-mtu** *number*

<b>Description</b>	System default IP MTU in bytes including the IP header but excluding Ethernet overhead  The 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-H2, and 7220 IXR-H3 systems support a maximum IP MTU of 9398 bytes.
<b>Context</b>	<a href="#">system mtu default-ip-mtu number</a>
<b>Tree</b>	<a href="#">default-ip-mtu</a>
<b>Range</b>	1280 to 9486
<b>Default</b>	1500
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **default-l2-mtu** *number*

<b>Description</b>	System default Layer-2 MTU in bytes for bridged subinterfaces  It includes the ethernet overhead and VLAN tags but excludes 4-bytes FCS. The default-l2-mtu is also used as the oper-mac-vrf-mtu and oper-vpws-mtu value if the network-instance does not have subinterfaces.  The 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-H2, and 7220 IXR-H3 systems support a maximum L2 MTU of 9412 bytes.
<b>Context</b>	<a href="#">system mtu default-l2-mtu number</a>
<b>Tree</b>	<a href="#">default-l2-mtu</a>
<b>Range</b>	1500 to 9500
<b>Default</b>	9232
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **default-mpls-mtu** *number*

<b>Description</b>	System default MPLS MTU in bytes including the size of the transmitted label stack.
<b>Context</b>	<a href="#">system mtu default-mpls-mtu number</a>
<b>Tree</b>	<a href="#">default-mpls-mtu</a>

<b>Range</b>	1284 to 9496
<b>Default</b>	1508
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **default-port-mtu** *number*

<b>Description</b>	System default port MTU in bytes including ethernet overhead but excluding 4-bytes FCS  The 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-H2, and 7220 IXR-H3 systems support a maximum port MTU of 9412 bytes.
<b>Context</b>	<a href="#">system mtu default-port-mtu</a> <i>number</i>
<b>Tree</b>	<a href="#">default-port-mtu</a>
<b>Range</b>	1500 to 9500
<b>Default</b>	9232
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **min-path-mtu** *number*

<b>Description</b>	Sets the minimum path MTU to use when receiving an ICMP fragmentation needed message  This is controlled via the kernel min_pmtu option. In the event an ICMP fragmentation needed message is received by the kernel, the system will drop the session to this MTU to allow packets to traverse the entire path.
<b>Context</b>	<a href="#">system mtu min-path-mtu</a> <i>number</i>
<b>Tree</b>	<a href="#">min-path-mtu</a>
<b>Range</b>	552 to 9232
<b>Default</b>	552
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **multicast**

<b>Description</b>	system multicast information
<b>Context</b>	<a href="#">system multicast</a>
<b>Tree</b>	<a href="#">multicast</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **multicast-ids**

<b>Description</b>	system multicast id information
<b>Context</b>	<a href="#">system multicast multicast-ids</a>
<b>Tree</b>	<a href="#">multicast-ids</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system multicast multicast-ids statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **current-usage** *number*

<b>Description</b>	The total number of multicast ids that are in use on the system.
<b>Context</b>	<a href="#">system multicast multicast-ids statistics current-usage</a> <i>number</i>
<b>Tree</b>	<a href="#">current-usage</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **maximum-ids** *number*

<b>Description</b>	Maximum number of multicast ids available in the system.
<b>Context</b>	<a href="#">system multicast multicast-ids statistics maximum-ids</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-ids</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**multicast-id-user-type** *user keyword*

<b>Description</b>	the type of the user of multicast id in the system.
<b>Context</b>	<a href="#">system multicast multicast-ids statistics multicast-id-user-type user keyword</a>
<b>Tree</b>	<a href="#">multicast-id-user-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**user** *keyword*

<b>Description</b>	Enter the user context
<b>Context</b>	<a href="#">system multicast multicast-ids statistics multicast-id-user-type user keyword</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• mac-vrf</li> <li>• vxlan-interface</li> <li>• l2-proxy-arp-nd</li> <li>• mfib</li> <li>• mac-vrf-bgp-evpn</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**current-usage** *number*

<b>Description</b>	The total number of multicast ids that are in use on the system.
<b>Context</b>	<a href="#">system multicast multicast-ids statistics multicast-id-user-type user keyword current-usage number</a>
<b>Tree</b>	<a href="#">current-usage</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**total-pending** *number*

<b>Description</b>	The total number of multicast ids pending allocation on the system.
<b>Context</b>	<a href="#">system multicast multicast-ids statistics multicast-id-user-type user keyword total-pending number</a>
<b>Tree</b>	<a href="#">total-pending</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **total-pending** *number*

<b>Description</b>	The total number of multicast ids pending allocation on the system.
<b>Context</b>	<a href="#">system multicast multicast-ids statistics total-pending</a> <i>number</i>
<b>Tree</b>	<a href="#">total-pending</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **multicast-forwarding-information-base**

<b>Description</b>	System Multicast Forwarding Information Base table
<b>Context</b>	<a href="#">system multicast-forwarding-information-base</a>
<b>Tree</b>	<a href="#">multicast-forwarding-information-base</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **multicast-route** [network-instance reference source \(ipv4-address | ipv6-address\) group \(ipv4-address | ipv6-address\)](#)

<b>Description</b>	List of all the MFIB entries in the system
<b>Context</b>	<a href="#">system multicast-forwarding-information-base multicast-route network-instance reference source (ipv4-address   ipv6-address) group (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">multicast-route</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **network-instance** *reference*

<b>Description</b>	Indicates that the MFIB entry is associated to this network instance
--------------------	--

<b>Context</b>	<a href="#">system multicast-forwarding-information-base multicast-route network-instance reference source (ipv4-address   ipv6-address) group (ipv4-address   ipv6-address)</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **source (ipv4-address | ipv6-address)**

<b>Description</b>	Source IP address of the MFIB entry
<b>Context</b>	<a href="#">system multicast-forwarding-information-base multicast-route network-instance reference source (ipv4-address   ipv6-address) group (ipv4-address   ipv6-address)</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **group (ipv4-address | ipv6-address)**

<b>Description</b>	Multicast group address of the MFIB entry
<b>Context</b>	<a href="#">system multicast-forwarding-information-base multicast-route network-instance reference source (ipv4-address   ipv6-address) group (ipv4-address   ipv6-address)</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **last-update *string***

<b>Description</b>	Last update of this MFIB entry
<b>Context</b>	<a href="#">system multicast-forwarding-information-base multicast-route network-instance reference source (ipv4-address   ipv6-address) group (ipv4-address   ipv6-address) last-update <i>string</i></a>
<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**line-card-replication-index** *number*

<b>Description</b>	Line card Replication Index (LRID) allocated by mfib_mgr Upon programming an MFIB entry, mfib_mgr requests a Multicast Identifier (MCID) to mcid_mgr and based on the response with an allocated MCID, mfib_mgr allocates a LRID for the entry. A value 0 indicates that no MCID was received for the entry, and therefore the MFIB entry cannot forward multicast traffic.
<b>Context</b>	<a href="#">system multicast-forwarding-information-base multicast-route network-instance reference source (ipv4-address   ipv6-address) group (ipv4-address   ipv6-address) line-card-replication-index</a> <i>number</i>
<b>Tree</b>	<a href="#">line-card-replication-index</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**name**

<b>Description</b>	Contains configuration and state related to system naming
<b>Context</b>	<a href="#">system name</a>
<b>Tree</b>	<a href="#">name</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**domain-name** *string*

<b>Description</b>	The system domain name
<b>Context</b>	<a href="#">system name domain-name</a> <i>string</i>
<b>Tree</b>	<a href="#">domain-name</a>
<b>String Length</b>	1 to 253
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**host-name** *string*

<b>Description</b>	The system host name
<b>Context</b>	<a href="#">system name host-name</a> <i>string</i>
<b>Tree</b>	<a href="#">host-name</a>

<b>String Length</b>	1 to 63
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## network-instance

<b>Description</b>	Enable the network-instance context
<b>Context</b>	<a href="#">system network-instance</a>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## protocols

<b>Description</b>	The routing protocols that are enabled for this network-instance.
<b>Context</b>	<a href="#">system network-instance protocols</a>
<b>Tree</b>	<a href="#">protocols</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## bgp-vpn

<b>Description</b>	Enable the bgp-vpn context
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn</a>
<b>Tree</b>	<a href="#">bgp-vpn</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## bgp-instance *id number*

<b>Description</b>	List of bgp-vpn instances configured in the system network-instance. Only one instance allowed in the current release.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number</a>
<b>Tree</b>	<a href="#">bgp-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**Max. Elements** 1

### **id number**

**Description** The index of the bgp-vpn instance

**Context** [system network-instance protocols bgp-vpn bgp-instance id number](#)

**Range** 1 to 2

**Configurable** True

**Platforms** Supported on all platforms

### **oper-down-reason keyword**

**Description** Reason for the system bgp-instance being down

**Context** [system network-instance protocols bgp-vpn bgp-instance id number oper-down-reason keyword](#)

**Tree** [oper-down-reason](#)

**Options**

- no-loopback-address
- no-esi
- none
- network-instance-oper-down
- bad-rd-format

**Configurable** False

**Platforms** Supported on all platforms

### **route-distinguisher**

**Description** Route Distinguisher (RD) of the bgp-vpn instance.

**Context** [system network-instance protocols bgp-vpn bgp-instance id number route-distinguisher](#)

**Tree** [route-distinguisher](#)

**Configurable** True

**Platforms** Supported on all platforms

**rd** (*route-distinguisher-type-0 | route-distinguisher-type-1 | route-distinguisher-type-2 | route-distinguisher-type-2b*)

<b>Description</b>	Route Distinguisher (RD) of the system bgp-vpn instance. The RD is auto-derived as <ip-address>:0 where 'ip-address' is the ipv4 address associated to the subinterface lo0.1.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number route-distinguisher rd</a> ( <i>route-distinguisher-type-0   route-distinguisher-type-1   route-distinguisher-type-2   route-distinguisher-type-2b</i> )
<b>Tree</b>	<a href="#">rd</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-distinguisher-origin** *keyword*

<b>Description</b>	Origin of the operational Route Distinguisher (RD) of the bgp-vpn instance. 'Auto-derived-from-system-ip:0' refers to the RD for the EVPN Ethernet Segment routes that is automatically allocated with the format <ip-address>:0 where 'ip-address' is the ipv4 address associated to the subinterface lo0.1.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number route-distinguisher route-distinguisher-origin keyword</a>
<b>Tree</b>	<a href="#">route-distinguisher-origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• auto-derived-from-system-ip:0</li> <li>• none</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**route-target**

<b>Description</b>	Route Target (RT) of the system bgp-vpn instance.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number route-target</a>
<b>Tree</b>	<a href="#">route-target</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**export-route-target-origin** *keyword*

<b>Description</b>	Origin of the operational export Route Target (RT) of the bgp-vpn instance. 'Auto-derived-from-esi-bytes-1-6' refers to the ES-import RT for the EVPN Ethernet Segment routes that is derived from bytes 1 to 6 of the Ethernet Segment Identifier of the route.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number route-target export-route-target-origin keyword</a>
<b>Tree</b>	<a href="#">export-route-target-origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• auto-derived-from-esi-bytes-1-6</li> <li>• none</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**export-rt** (*string | string | string | string | string | string | string | string*)

<b>Description</b>	Export Route Target (RT) in the system bgp-vpn instance. When used for evpn ES routes as ES-import Route Target, the RT is auto-derived from the high-order 6-octet portion of the 9-octet ESI value. Note that the ESI value excludes the left-most byte, which is reserved for the ESI type. The RT is encoded into the ES-import extended community advertised along with the ES route.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number route-target export-rt (string   string   string   string   string   string   string   string)</a>
<b>Tree</b>	<a href="#">export-rt</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**import-route-target-origin** *keyword*

<b>Description</b>	Origin of the operational import Route Target (RT) of the bgp-vpn instance. 'Auto-derived-from-esi-bytes-1-6' refers to the ES-import RT for the EVPN Ethernet Segment routes that is derived from bytes 1 to 6 of the Ethernet Segment Identifier of the route.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number route-target import-route-target-origin keyword</a>
<b>Tree</b>	<a href="#">import-route-target-origin</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• auto-derived-from-esi-bytes-1-6</li> <li>• none</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **import-rt** (*string* | *string* | *string* | *string* | *string* | *string* | *string* | *string*)

<b>Description</b>	Import Route Target (RT) in the system bgp-vpn instance. When used for evpn ES routes as ES-import Route Target, the RT is auto-derived from the high-order 6-octet portion of the 9-octet ESI value. Note that the ESI value excludes the left-most byte, which is reserved for the ESI type. The RT is encoded into the ES-import extended community received along with the ES route.
<b>Context</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number route-target import-rt</a> ( <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i>   <i>string</i> )
<b>Tree</b>	<a href="#">import-rt</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **evpn**

<b>Description</b>	Enable the evpn context
<b>Context</b>	<a href="#">system network-instance protocols evpn</a>
<b>Tree</b>	<a href="#">evpn</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **ethernet-segments**

<b>Description</b>	Enable the ethernet-segments context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments</a>
<b>Tree</b>	<a href="#">ethernet-segments</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **bgp-instance id** *reference*

<b>Description</b>	bgp global instances configured in net-instance
--------------------	---

<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference</a>
<b>Tree</b>	<a href="#">bgp-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
<b>Max. Elements</b>	1

**id reference**

<b>Description</b>	Enter the id context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference</a>
<b>Reference</b>	<a href="#">system network-instance protocols bgp-vpn bgp-instance id number</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**ethernet-segment name string**

<b>Description</b>	Ethernet Segment configuration and state.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string</a>
<b>Tree</b>	<a href="#">ethernet-segment</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
<b>Max. Elements</b>	1024

**name string**

<b>Description</b>	A unique name identifying the ethernet segment.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string</a>
<b>String Length</b>	1 to 32
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**admin-state** *keyword*

<b>Description</b>	Admin state of the ethernet segment
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <i>reference</i> <a href="#">ethernet-segment</a> <a href="#">name</a> <i>string</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**association**

<b>Description</b>	Enter the association context
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <i>reference</i> <a href="#">ethernet-segment</a> <a href="#">name</a> <i>string</i> <a href="#">association</a>
<b>Tree</b>	<a href="#">association</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**network-instance** *name string*

<b>Description</b>	network instance associated to this ethernet-segment
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <i>reference</i> <a href="#">ethernet-segment</a> <a href="#">name</a> <i>string</i> <a href="#">association</a> <a href="#">network-instance</a> <a href="#">name</a> <i>string</i>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**name** *string*

<b>Description</b>	Enter the name context
--------------------	------------------------

<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string association network-instance name string</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **bgp-instance** [instance number](#)

<b>Description</b>	bgp-instance associated to this ethernet-segment
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string association network-instance name string bgp-instance instance number</a>
<b>Tree</b>	<a href="#">bgp-instance</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **instance number**

<b>Description</b>	Enter the instance context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string association network-instance name string bgp-instance instance number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **computed-designated-forwarder-candidates**

<b>Description</b>	Enter the computed-designated-forwarder-candidates context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string association network-instance name string bgp-instance instance number computed-designated-forwarder-candidates</a>
<b>Tree</b>	<a href="#">computed-designated-forwarder-candidates</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**designated-forwarder-candidate** *address* (*ipv4-address* | *ipv6-address*)

<b>Description</b>	designated forwarder candidates for this evi
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">association</a> <a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-instance</a> <a href="#">instance</a> <a href="#">number</a> <a href="#">computed-designated-forwarder-candidates</a> <a href="#">designated-forwarder-candidate</a> <a href="#">address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">designated-forwarder-candidate</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">association</a> <a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-instance</a> <a href="#">instance</a> <a href="#">number</a> <a href="#">computed-designated-forwarder-candidates</a> <a href="#">designated-forwarder-candidate</a> <a href="#">address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**add-time** *string*

<b>Description</b>	The date and time when the designated-forwarder-candidate was added to the designated forwarder candidate list for this evi
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">association</a> <a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-instance</a> <a href="#">instance</a> <a href="#">number</a> <a href="#">computed-designated-forwarder-candidates</a> <a href="#">designated-forwarder-candidate</a> <a href="#">address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">add-time</a> <a href="#">string</a>
<b>Tree</b>	<a href="#">add-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**designated-forwarder** *boolean*

<b>Description</b>	Indicates if this designated-forwarder-candidate is the designated-forwarder.
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">association</a> <a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-instance</a> <a href="#">instance</a> <a href="#">number</a> <a href="#">computed-designated-forwarder-candidates</a> <a href="#">designated-forwarder-candidate</a> <a href="#">address</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">designated-forwarder</a> <a href="#">boolean</a>
<b>Tree</b>	<a href="#">designated-forwarder</a>
<b>Default</b>	false
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**designated-forwarder-activation-start-time** *string*

<b>Description</b>	Indicates the time at which the designated-forwarder activation timer started.
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">association</a> <a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-instance</a> <a href="#">instance</a> <a href="#">number</a> <a href="#">designated-forwarder-activation-start-time</a> <a href="#">string</a>
<b>Tree</b>	<a href="#">designated-forwarder-activation-start-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**designated-forwarder-activation-time** *number*

<b>Description</b>	Indicates the number of seconds for the activation timer to run, for this node to become the designated forwarder for this bgp instance.
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">association</a> <a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-instance</a> <a href="#">instance</a> <a href="#">number</a> <a href="#">designated-forwarder-activation-time</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">designated-forwarder-activation-time</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**designated-forwarder-role-last-change** *string*

<b>Description</b>	Indicates the time at which the designated-forwarder role was changed.
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">association</a> <a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-instance</a> <a href="#">instance</a> <a href="#">number</a> <a href="#">designated-forwarder-role-last-change</a> <a href="#">string</a>
<b>Tree</b>	<a href="#">designated-forwarder-role-last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**autodiscovery-per-ethernet-segment-routes**

<b>Description</b>	Enter the autodiscovery-per-ethernet-segment-routes context
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">autodiscovery-per-ethernet-segment-routes</a>
<b>Tree</b>	<a href="#">autodiscovery-per-ethernet-segment-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**attr-id** *reference*

<b>Description</b>	Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">autodiscovery-per-ethernet-segment-routes</a> <a href="#">attr-id</a> <a href="#">reference</a>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance</a> <a href="#">name</a> <a href="#">string</a> <a href="#">bgp-rib</a> <a href="#">attr-sets</a> <a href="#">attr-set</a> <a href="#">index</a> <a href="#">number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**esi** *string*

<b>Description</b>	The Ethernet Segment Identifier encoded in the NLRI
--------------------	---

<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string autodiscovery-per-ethernet-segment-routes esi string</a>
<b>Tree</b>	<a href="#">esi</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### ethernet-tag-id *number*

<b>Description</b>	The 32-bit Ethernet Tag ID encoded in the NLRI. The Ethernet Tag ID identifies a broadcast domain.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string autodiscovery-per-ethernet-segment-routes ethernet-tag-id number</a>
<b>Tree</b>	<a href="#">ethernet-tag-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### label

<b>Description</b>	The encoded label value and type in the EVPN NLRI
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string autodiscovery-per-ethernet-segment-routes label</a>
<b>Tree</b>	<a href="#">label</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### value *number*

<b>Description</b>	<p>The value of the label field</p> <p>If the route is an EVPN MPLS route, the mpls-label is read out of the 20-bit high order value. If the route is an EVPN VXLAN route, the vni is read out of the 24-bit value. If the route is an EVPN SRv6 route, this field is set to zero if no transposition is used and set to a non-zero value if transposition is used. For all the cases, if this is an Auto-Discovery per ES route, this leaf is set to zero.</p>
--------------------	---

<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string autodiscovery-per-ethernet-segment-routes label value number</a>
<b>Tree</b>	<a href="#">value</a>
<b>Range</b>	0 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### value-type *keyword*

<b>Description</b>	Whether the encoded label value is an mpls-label, a vni or a transposed function or argument
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string autodiscovery-per-ethernet-segment-routes label value-type keyword</a>
<b>Tree</b>	<a href="#">value-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• mpls-label</li> <li>• vni</li> <li>• transposed-srv6-function</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### neighbor (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string autodiscovery-per-ethernet-segment-routes neighbor (ipv4-address-with-zone   ipv6-address-with-zone)</a>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## **route-distinguisher** (*route-distinguisher-type-0 | route-distinguisher-type-1 | route-distinguisher-type-2 | route-distinguisher-type-2b*)

<b>Description</b>	The route distinguisher encoded in the NLRI.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string autodiscovery-per-ethernet-segment-routes route-distinguisher</a> ( <i>route-distinguisher-type-0   route-distinguisher-type-1   route-distinguisher-type-2   route-distinguisher-type-2b</i> )
<b>Tree</b>	<a href="#">route-distinguisher</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## **df-election**

<b>Description</b>	Enter the df-election context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election</a>
<b>Tree</b>	<a href="#">df-election</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## **algorithm**

<b>Description</b>	Enter the algorithm context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm</a>
<b>Tree</b>	<a href="#">algorithm</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## **manual-alg**

<b>Description</b>	Enable the manual-alg context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm manual-alg</a>
<b>Tree</b>	<a href="#">manual-alg</a>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### primary-evi-range *start-evi number*

<b>Description</b>	evi range for this ethernet-segment
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm manual-alg primary-evi-range start-evi number</a>
<b>Tree</b>	<a href="#">primary-evi-range</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### start-evi *number*

<b>Description</b>	start of the evi-range for this ethernet-segment
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm manual-alg primary-evi-range start-evi number</a>
<b>Range</b>	1 to 65535
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### end-evi *number*

<b>Description</b>	end of the evi-range for this ethernet-segment
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm manual-alg primary-evi-range start-evi number end-evi number</a>
<b>Tree</b>	<a href="#">end-evi</a>
<b>Range</b>	1 to 65535
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**oper-type** *keyword*

<b>Description</b>	Operational Designated Forwarder algorithm type for this ethernet-segment.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name</a> <i>string</i> <a href="#">df-election algorithm oper-type keyword</a>
<b>Tree</b>	<a href="#">oper-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• default</li> <li>• preference</li> <li>• manual</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**preference-alg**

<b>Description</b>	Enable the preference-alg context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name</a> <i>string</i> <a href="#">df-election algorithm preference-alg</a>
<b>Tree</b>	<a href="#">preference-alg</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**capabilities**

<b>Description</b>	Enter the capabilities context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name</a> <i>string</i> <a href="#">df-election algorithm preference-alg capabilities</a>
<b>Tree</b>	<a href="#">capabilities</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**ac-df** *keyword*

<b>Description</b>	Attachment Circuit influenced DF Election.
--------------------	--

<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm preference-alg capabilities ac-df keyword</a>
<b>Tree</b>	<a href="#">ac-df</a>
<b>Default</b>	include
<b>Options</b>	<ul style="list-style-type: none"> <li>• include</li> <li>• exclude</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **non-revertive** *boolean*

<b>Description</b>	Non Revertive mode. If set to true, the 'Don't Preempt Me' capability is advertised in the ES route.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm preference-alg capabilities non-revertive boolean</a>
<b>Tree</b>	<a href="#">non-revertive</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **oper-do-not-preempt** *boolean*

<b>Description</b>	Operational do-not-preempt value
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm preference-alg oper-do-not-preempt boolean</a>
<b>Tree</b>	<a href="#">oper-do-not-preempt</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **oper-preference-value** *number*

<b>Description</b>	Operational Preference value
--------------------	------------------------------

<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm preference-alg oper-preference-value number</a>
<b>Tree</b>	<a href="#">oper-preference-value</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### preference-value *number*

<b>Description</b>	Preference that is used to elect the designated forwarder
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm preference-alg preference-value number</a>
<b>Tree</b>	<a href="#">preference-value</a>
<b>Range</b>	0 to 65535
<b>Default</b>	32767
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### type *keyword*

<b>Description</b>	Designated Forwarder algorithm type for this ethernet-segment.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election algorithm type keyword</a>
<b>Tree</b>	<a href="#">type</a>
<b>Default</b>	default
<b>Options</b>	<ul style="list-style-type: none"> <li>• default</li> <li>• preference</li> <li>• manual</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### interface-standby-signaling-on-non-df

<b>Description</b>	Enable the interface-standby-signaling-on-non-df context
--------------------	--

<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election interface-standby-signaling-on-non-df</a>
<b>Tree</b>	<a href="#">interface-standby-signaling-on-non-df</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## timers

<b>Description</b>	Enter the timers context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election timers</a>
<b>Tree</b>	<a href="#">timers</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## activation-timer number

<b>Description</b>	Remaining activation timer per Ethernet segment
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string df-election timers activation-timer number</a>
<b>Tree</b>	<a href="#">activation-timer</a>
<b>Range</b>	0 to 100
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## esi string

<b>Description</b>	The 10-byte Ethernet Segment Identifier of the ethernet segment. ESI-0 or MAX-ESI values are not allowed. ESI values with bytes 1-6 all zeros are not allowed since they would produce a null ESI-import route-target.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string esi string</a>
<b>Tree</b>	<a href="#">esi</a>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### esi-label *number*

<b>Description</b>	The esi label allocated for this ethernet-segment. The esi-label is advertised by the EVPN Auto-Discovery-Ethernet-Segment Advertisement routes and it is expected on received EVPN packets that were generated as multicast packets from this ethernet-segments peers.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string esi-label number</a>
<b>Tree</b>	<a href="#">esi-label</a>
<b>Range</b>	16 to 1048575
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### ethernet-segment-routes

<b>Description</b>	Enter the ethernet-segment-routes context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string ethernet-segment-routes</a>
<b>Tree</b>	<a href="#">ethernet-segment-routes</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### attr-id *reference*

<b>Description</b>	Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string ethernet-segment-routes attr-id reference</a>
<b>Tree</b>	<a href="#">attr-id</a>
<b>Reference</b>	<a href="#">network-instance name string bgp-rib attr-sets attr-set index number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**esi string**

<b>Description</b>	The Ethernet Segment Identifier
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">ethernet-segment-routes</a> <a href="#">esi</a> <a href="#">string</a>
<b>Tree</b>	<a href="#">esi</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**neighbor (ipv4-address-with-zone | ipv6-address-with-zone)**

<b>Description</b>	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">ethernet-segment-routes</a> <a href="#">neighbor</a> ( <a href="#">ipv4-address-with-zone</a>   <a href="#">ipv6-address-with-zone</a> )
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**originating-router (ipv4-address | ipv6-address)**

<b>Description</b>	The IPv4 or IPv6 address of the originating router
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">ethernet-segment-routes</a> <a href="#">originating-router</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> )
<b>Tree</b>	<a href="#">originating-router</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**route-distinguisher (route-distinguisher-type-0 | route-distinguisher-type-1 | route-distinguisher-type-2 | route-distinguisher-type-2b)**

<b>Description</b>	The route distinguisher encoded in the NLRI.
<b>Context</b>	<a href="#">system</a> <a href="#">network-instance</a> <a href="#">protocols</a> <a href="#">evpn</a> <a href="#">ethernet-segments</a> <a href="#">bgp-instance</a> <a href="#">id</a> <a href="#">reference</a> <a href="#">ethernet-segment</a> <a href="#">name</a> <a href="#">string</a> <a href="#">ethernet-segment-routes</a> <a href="#">route-</a>

[distinguisher](#) ([route-distinguisher-type-0](#) | [route-distinguisher-type-1](#) | [route-distinguisher-type-2](#) | [route-distinguisher-type-2b](#))

<b>Tree</b>	<a href="#">route-distinguisher</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### interface [ethernet-interface](#) *reference*

<b>Description</b>	Add a list entry for interface
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string interface ethernet-interface reference</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
<b>Max. Elements</b>	1

### [ethernet-interface](#) *reference*

<b>Description</b>	Interface associated with the ethernet segment.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string interface ethernet-interface reference</a>
<b>Reference</b>	<a href="#">interface name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### multi-homing-mode *keyword*

<b>Description</b>	Multi-homing mode of the ethernet segment.  The state of this leaf can be different than the configured value in cases where the configured value is 'all-active' and the multi-homing mode advertised by the ES peers in the AD per-ES routes is 'single-active'. In this case, the state of this leaf will show 'single-active'.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string multi-homing-mode keyword</a>

<b>Tree</b>	<a href="#">multi-homing-mode</a>
<b>Default</b>	all-active
<b>Options</b>	<ul style="list-style-type: none"> <li>• all-active</li> <li>• single-active</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### next-hop [l3-next-hop](#) (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Enter the next-hop list instance
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string next-hop l3-next-hop</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
<b>Max. Elements</b>	1

### [l3-next-hop](#) (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Layer-3 next-hop associated with the ethernet segment.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string next-hop l3-next-hop</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### evi [start number](#)

<b>Description</b>	evi range for this ethernet-segment association
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string next-hop l3-next-hop</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">evi start number</a>
<b>Tree</b>	<a href="#">evi</a>
<b>Configurable</b>	True

<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
<b>Max. Elements</b>	1

**start number**

<b>Description</b>	start of the evi-range for this ethernet-segment
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string next-hop l3-next-hop (ipv4-address   ipv6-address) evi start number</a>
<b>Range</b>	1 to 65535
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**oper-down-reason keyword**

<b>Description</b>	The reason for the ethernet-segment being down in the bgp-instance
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string oper-down-reason keyword</a>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• admin-disabled</li> <li>• no-next-hop-address</li> <li>• no-originating-address</li> <li>• no-associated-interface</li> <li>• associated-interface-oper-down</li> <li>• no-esi</li> <li>• no-esi-label</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**oper-esi string**

<b>Description</b>	The operational Ethernet Segment Identifier used in the ethernet segment.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string oper-esi string</a>
<b>Tree</b>	<a href="#">oper-esi</a>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **oper-multi-homing-mode** *keyword*

<b>Description</b>	Operational Multi-homing mode of the ethernet segment. The state of this leaf can be different than the configured value in cases where the configured value is 'all-active' and the multi-homing mode advertised by the ES peers in the AD per-ES routes is 'single-active'. In this case, the state of this leaf will show 'single-active'.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string oper-multi-homing-mode keyword</a>
<b>Tree</b>	<a href="#">oper-multi-homing-mode</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all-active</li> <li>• single-active</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **oper-state** *keyword*

<b>Description</b>	This leaf contains the operational state of ethernet segment.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> </ul>

- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **originating-ip** *keyword*

<b>Description</b>	The originating ip-address that the inclusive multicast route will be advertised with in this evpn instance
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string routes ethernet-segment originating-ip keyword</a>
<b>Tree</b>	<a href="#">originating-ip</a>
<b>Default</b>	use-system-ipv4-address
<b>Options</b>	<ul style="list-style-type: none"> <li>• use-system-ipv4-address</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **next-hop** *keyword*

<b>Description</b>	The ip-address that will be used as the bgp-next hop for all ES and AD per-ES routes advertised for this Ethernet Segment.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string routes next-hop keyword</a>
<b>Tree</b>	<a href="#">next-hop</a>
<b>Default</b>	use-system-ipv4-address
<b>Options</b>	<ul style="list-style-type: none"> <li>• use-system-ipv4-address</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **type** *keyword*

<b>Description</b>	Ethernet Segment type.
--------------------	------------------------

<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments bgp-instance id reference ethernet-segment name string type keyword</a>
<b>Tree</b>	<a href="#">type</a>
<b>Default</b>	none
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• virtual</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## timers

<b>Description</b>	Enter the timers context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments timers</a>
<b>Tree</b>	<a href="#">timers</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## activation-timer *number*

<b>Description</b>	Enter the activation-timer context
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments timers activation-timer number</a>
<b>Tree</b>	<a href="#">activation-timer</a>
<b>Range</b>	0 to 100
<b>Default</b>	3
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## boot-remaining-time *number*

<b>Description</b>	Indicates the number of seconds remaining for the boot timer to expire.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments timers boot-remaining-time number</a>

<b>Tree</b>	<a href="#">boot-remaining-time</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **boot-start-time** *string*

<b>Description</b>	Indicates the time at which the boot timer started.
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments timers boot-start-time</a> <i>string</i>
<b>Tree</b>	<a href="#">boot-start-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **boot-timer** *number*

<b>Description</b>	Remaining time before running BGP EVPN multi-homing DF election algorithm
<b>Context</b>	<a href="#">system network-instance protocols evpn ethernet-segments timers boot-timer</a> <i>number</i>
<b>Tree</b>	<a href="#">boot-timer</a>
<b>Range</b>	0 to 6000
<b>Default</b>	10
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **ntp**

<b>Description</b>	Top-level container for NTP configuration and state
<b>Context</b>	<a href="#">system ntp</a>
<b>Tree</b>	<a href="#">ntp</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **admin-state** *keyword*

**Description** Enables the system NTP client and indicates that the system should attempt to synchronize the clock

**Context** [system ntp admin-state keyword](#)

**Tree** [admin-state](#)

**Options**

- enable
- disable

**Configurable** True

**Platforms** Supported on all platforms

### **network-instance** *reference*

**Description** Reference to a configured network-instance

**Context** [system ntp network-instance reference](#)

**Tree** [network-instance](#)

**Reference** [network-instance name string](#)

**Configurable** True

**Platforms** Supported on all platforms

### **oper-state** *keyword*

**Description** Details the operational state of the NTP client

**Context** [system ntp oper-state keyword](#)

**Tree** [oper-state](#)

**Options**

- up  
Component or process is operational
- down  
Component or process is not operational
- empty  
Component slot is empty
- downloading  
Component is downloading image into memory
- booting

- Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **server address** (*ipv4 | ipv6 | domain-name*)

<b>Description</b>	List of NTP servers to use for system clock synchronization
<b>Context</b>	<a href="#">system ntp server address</a> ( <i>ipv4   ipv6   domain-name</i> )
<b>Tree</b>	<a href="#">server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **address** (*ipv4 | ipv6 | domain-name*)

<b>Description</b>	Domain or IP address of the NTP server
--------------------	--

IP address may be either IPv4 or IPv6.

Domain resolution requires working DNS configuration in the same network-instance.

<b>Context</b>	<a href="#">system ntp server address</a> ( <i>ipv4   ipv6   domain-name</i> )
<b>String Length</b>	1 to 253
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **iburst** *boolean*

<b>Description</b>	Indicates whether this server should enable burst synchronization or not. <i>iburst</i> , or initial burst, improves the time taken for initial synchronization by sending a burst of eight packets instead of the usual one, these packets are spaced by a two second delay.
<b>Context</b>	<a href="#">system ntp server address</a> ( <i>ipv4   ipv6   domain-name</i> ) <a href="#">iburst</a> <i>boolean</i>
<b>Tree</b>	<a href="#">iburst</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **jitter** *number*

<b>Description</b>	Measurement of the variance in latency on the network.
<b>Context</b>	<a href="#">system ntp server address</a> ( <i>ipv4   ipv6   domain-name</i> ) <a href="#">jitter</a> <i>number</i>
<b>Tree</b>	<a href="#">jitter</a>
<b>Units</b>	milliseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **offset** *number*

<b>Description</b>	Estimate of the current time offset from the peer. This is the time difference between the local and reference clock.
<b>Context</b>	<a href="#">system ntp server address</a> ( <i>ipv4   ipv6   domain-name</i> ) <a href="#">offset</a> <i>number</i>
<b>Tree</b>	<a href="#">offset</a>
<b>Units</b>	microseconds
<b>Configurable</b>	False

**Platforms** Supported on all platforms

### **poll-interval** *number*

**Description** Polling interval of the peer

**Context** [system ntp server address](#) (*ipv4 | ipv6 | domain-name*) [poll-interval](#) *number*

**Tree** [poll-interval](#)

**Units** seconds

**Configurable** False

**Platforms** Supported on all platforms

### **prefer** *boolean*

**Description** Indicates whether this server should be preferred or not All other things being equal, this host will be chosen for synchronization among a set of correctly operating NTP servers

**Context** [system ntp server address](#) (*ipv4 | ipv6 | domain-name*) [prefer](#) *boolean*

**Tree** [prefer](#)

**Default** false

**Configurable** True

**Platforms** Supported on all platforms

### **root-delay** *number*

**Description** The round-trip delay to the server

**Context** [system ntp server address](#) (*ipv4 | ipv6 | domain-name*) [root-delay](#) *number*

**Tree** [root-delay](#)

**Units** milliseconds

**Configurable** False

**Platforms** Supported on all platforms

### **root-dispersion** *number*

**Description** Dispersion (epsilon) represents the maximum error inherent in the measurement

**Context** [system ntp server address](#) (*ipv4 | ipv6 | domain-name*) [root-dispersion](#) *number*

<b>Tree</b>	<a href="#">root-dispersion</a>
<b>Units</b>	milliseconds
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **stratum number**

<b>Description</b>	Indicates the level of the server in the NTP hierarchy as number increases, the accuracy is degraded. Primary servers are stratum 1 while a maximum value of 16 indicates unsynchronized. The values have the following meanings: 0 unspecified or invalid 1 primary server (e.g., equipped with a GPS receiver) 2-15 secondary server (via NTP) 16 unsynchronized 17-255 reserved
<b>Context</b>	<a href="#">system ntp server address</a> ( <i>ipv4   ipv6   domain-name</i> ) <a href="#">stratum number</a>
<b>Tree</b>	<a href="#">stratum</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **source-address** (*ipv4-address | ipv6-address*)

<b>Description</b>	Source address for NTP to use for messages sent to a remote server
<b>Context</b>	<a href="#">system ntp source-address</a> ( <i>ipv4-address   ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **synchronized** (*ipv4-address | ipv6-address | domain-name | string*)

<b>Description</b>	Address of the NTP server that the local client is synchronized to This field is set to 'unsynchronized', if the local client is not synchronized
<b>Context</b>	<a href="#">system ntp synchronized</a> ( <i>ipv4-address   ipv6-address   domain-name   string</i> )
<b>Tree</b>	<a href="#">synchronized</a>
<b>String Length</b>	1 to 253
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

## packet-link-qualification

<b>Description</b>	Top-level container for gNOI Packet Link Qualification profiles
<b>Context</b>	<a href="#">system packet-link-qualification</a>
<b>Tree</b>	<a href="#">packet-link-qualification</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### profile *name string*

<b>Description</b>	List of configured Packet Link Qualification profiles
<b>Context</b>	<a href="#">system packet-link-qualification profile name string</a>
<b>Tree</b>	<a href="#">profile</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### name *string*

<b>Description</b>	Name of the Packet Link Qualification profile
<b>Context</b>	<a href="#">system packet-link-qualification profile name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## asic-loopback

<b>Description</b>	ASIC loopback Use the ASIC loopback mode
<b>Context</b>	<a href="#">system packet-link-qualification profile name string asic-loopback</a>
<b>Tree</b>	<a href="#">asic-loopback</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ntp

**Description** Enter the ntp context

**Context** [system packet-link-qualification profile name](#) *string* *ntp*

**Tree** [ntp](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## end-time *string*

**Description** End time of the test

**Context** [system packet-link-qualification profile name](#) *string* *ntp* *end-time* *string*

**Tree** [end-time](#)

**String Length** 20 to 32

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## start-time *string*

**Description** Start time of the test

**Context** [system packet-link-qualification profile name](#) *string* *ntp* *start-time* *string*

**Tree** [start-time](#)

**String Length** 20 to 32

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**teardown-time** *string*

<b>Description</b>	Time at which the test should be torn down
<b>Context</b>	<a href="#">system packet-link-qualification profile name</a> <i>string</i> <a href="#">ntp teardown-time</a> <i>string</i>
<b>Tree</b>	<a href="#">teardown-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**packet-generator**

<b>Description</b>	Packet generator endpoint
<b>Context</b>	<a href="#">system packet-link-qualification profile name</a> <i>string</i> <a href="#">packet-generator</a>
<b>Tree</b>	<a href="#">packet-generator</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**packet-rate** *number*

<b>Description</b>	Packet rate of the packet generator
<b>Context</b>	<a href="#">system packet-link-qualification profile name</a> <i>string</i> <a href="#">packet-generator</a> <a href="#">packet-rate</a> <i>number</i>
<b>Tree</b>	<a href="#">packet-rate</a>
<b>Range</b>	1 to 4294967295
<b>Units</b>	packets per second
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**packet-size** *number*

<b>Description</b>	Packet size (in bytes) of the packet generator
<b>Context</b>	<a href="#">system packet-link-qualification profile name</a> <i>string</i> <a href="#">packet-generator</a> <a href="#">packet-size</a> <i>number</i>

<b>Tree</b>	<a href="#">packet-size</a>
<b>Range</b>	64 to 8184
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## rpc

<b>Description</b>	Enter the rpc context
<b>Context</b>	<a href="#">system packet-link-qualification profile name</a> <i>string</i> <a href="#">rpc</a>
<b>Tree</b>	<a href="#">rpc</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## duration *number*

<b>Description</b>	Duration of the test
<b>Context</b>	<a href="#">system packet-link-qualification profile name</a> <i>string</i> <a href="#">rpc</a> <a href="#">duration</a> <i>number</i>
<b>Tree</b>	<a href="#">duration</a>
<b>Range</b>	1 to 4294967295
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## post-sync-duration *number*

<b>Description</b>	Duration of the post-sync phase
<b>Context</b>	<a href="#">system packet-link-qualification profile name</a> <i>string</i> <a href="#">rpc</a> <a href="#">post-sync-duration</a> <i>number</i>
<b>Tree</b>	<a href="#">post-sync-duration</a>
<b>Units</b>	seconds
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### pre-sync-duration *number*

**Description** Duration of the pre-sync phase

**Context** [system packet-link-qualification profile name](#) *string* [rpc pre-sync-duration number](#)

**Tree** [pre-sync-duration](#)

**Units** seconds

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### setup-duration *number*

**Description** Duration of the setup phase

**Context** [system packet-link-qualification profile name](#) *string* [rpc setup-duration number](#)

**Tree** [setup-duration](#)

**Range** 20 to 4294967295

**Units** seconds

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### teardown-duration *number*

**Description** Duration of the teardown phase

**Context** [system packet-link-qualification profile name](#) *string* [rpc teardown-duration number](#)

**Tree** [teardown-duration](#)

**Range** 15 to 4294967295

**Units** seconds

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## protocols

**Description** The routing protocols that are supported by the system

**Context** [system protocols](#)

**Tree** [protocols](#)

**Configurable** True

**Platforms** Supported on all platforms

## bgp

**Description** Enable the bgp context

**Context** [system protocols bgp](#)

**Tree** [bgp](#)

**Configurable** True

**Platforms** Supported on all platforms

## restart-max-wait *number*

**Description** The maximum amount of time that BGP will wait to receive End of RIB markers from all peers and for all address families that were up prior to restart.

After this time elapses BGP declares that convergence has occurred and sends its own EOR markers to its peers.

**Context** [system protocols bgp restart-max-wait \*number\*](#)

**Tree** [restart-max-wait](#)

**Range** 0 to 3600

**Default** 600

**Units** seconds

**Configurable** True

**Platforms** Supported on all platforms

**ra-guard-policy** *name string*

<b>Description</b>	List containing RA Guard Policy and parameters
<b>Context</b>	<a href="#">system ra-guard-policy name string</a>
<b>Tree</b>	<a href="#">ra-guard-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
<b>Max. Elements</b>	64

**name** *string*

<b>Description</b>	RA Guard Policy name
<b>Context</b>	<a href="#">system ra-guard-policy name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**action** *keyword*

<b>Description</b>	Describes the RA Guard Policy action for RA Messages matching the specified attributes. RA Messages not matching the specified attributes will be handled in the opposite manner.
<b>Context</b>	<a href="#">system ra-guard-policy name string action keyword</a>
<b>Tree</b>	<a href="#">action</a>
<b>Default</b>	discard
<b>Options</b>	<ul style="list-style-type: none"> <li>• accept</li> <li>• discard</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**advertise-prefix-set** *reference*

<b>Description</b>	Reference to a prefix set to match advertised address within RA message
<b>Context</b>	<a href="#">system ra-guard-policy name string advertise-prefix-set reference</a>
<b>Tree</b>	<a href="#">advertise-prefix-set</a>

<b>Reference</b>	<a href="#">routing-policy prefix-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### hop-limit *number*

<b>Description</b>	Verifies the minimum advertised hop count limit, RA message value must be equal to or greater than hop-limit. If not specified the verification is skipped.
<b>Context</b>	<a href="#">system ra-guard-policy name</a> <i>string</i> <a href="#">hop-limit</a> <i>number</i>
<b>Tree</b>	<a href="#">hop-limit</a>
<b>Range</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### managed-config-flag *boolean*

<b>Description</b>	Causes the RA Guard policy to match IPv6 RA messages with the M (Managed address) flag set. If not specified the verification is skipped.
<b>Context</b>	<a href="#">system ra-guard-policy name</a> <i>string</i> <a href="#">managed-config-flag</a> <i>boolean</i>
<b>Tree</b>	<a href="#">managed-config-flag</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### other-config-flag *boolean*

<b>Description</b>	Causes the RA Guard policy to match IPv6 RA messages with the O (Other config) flag set. If not specified the verification is skipped.
<b>Context</b>	<a href="#">system ra-guard-policy name</a> <i>string</i> <a href="#">other-config-flag</a> <i>boolean</i>
<b>Tree</b>	<a href="#">other-config-flag</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**router-preference** *keyword*

<b>Description</b>	Verifies that the advertised default router preference parameter value is equal to or less than the specified limit. If not specified the verification is skipped.
<b>Context</b>	<a href="#">system ra-guard-policy name</a> <i>string</i> <a href="#">router-preference</a> <i>keyword</i>
<b>Tree</b>	<a href="#">router-preference</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• high</li> <li>• medium</li> <li>• low</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**source-prefix-set** *reference*

<b>Description</b>	Reference to a prefix set to match RA source address. If not specified the verification is skipped.
<b>Context</b>	<a href="#">system ra-guard-policy name</a> <i>string</i> <a href="#">source-prefix-set</a> <i>reference</i>
<b>Tree</b>	<a href="#">source-prefix-set</a>
<b>Reference</b>	<a href="#">routing-policy prefix-set name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**sflow**

<b>Description</b>	Context to configure sFlow Agent parameters and report sFlow state
<b>Context</b>	<a href="#">system sflow</a>
<b>Tree</b>	<a href="#">sflow</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Administratively enable or disable sFlow for the system
<b>Context</b>	<a href="#">system sflow admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>

<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### collector [collector-id number](#)

<b>Description</b>	List of sFlow collectors to which sFlow sample data is sent
<b>Context</b>	<a href="#">system sflow collector collector-id number</a>
<b>Tree</b>	<a href="#">collector</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	8

### collector-id [number](#)

<b>Description</b>	Specify the collector ID
<b>Context</b>	<a href="#">system sflow collector collector-id number</a>
<b>Range</b>	1 to 8
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### collector-address ([ipv4-address](#) | [ipv6-address](#))

<b>Description</b>	The IP address for an sFlow collector
<b>Context</b>	<a href="#">system sflow collector collector-id number collector-address (<a href="#">ipv4-address</a>   <a href="#">ipv6-address</a>)</a>
<b>Tree</b>	<a href="#">collector-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### network-instance [reference](#)

<b>Description</b>	Reference to a configured network-instance
<b>Context</b>	<a href="#">system sflow collector collector-id number network-instance reference</a>

<b>Tree</b>	<a href="#">network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **next-hop** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Specifies the active IP next hop used to reach the associated collector
<b>Context</b>	<a href="#">system sflow collector collector-id number next-hop</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">next-hop</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **port number**

<b>Description</b>	Specifies the destination UDP port number to be used in sFlow packets
<b>Context</b>	<a href="#">system sflow collector collector-id number port number</a>
<b>Tree</b>	<a href="#">port</a>
<b>Default</b>	6343
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Specifies the IP address to be used as the source address in sFlow packets
<b>Context</b>	<a href="#">system sflow collector collector-id number source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **dscp number**

<b>Description</b>	Specify sFlow DSCP value  This value specifies the DSCP value used in IP header of samples sent to the associated collectors.
--------------------	---

<b>Context</b>	<a href="#">system sflow dscp number</a>
<b>Tree</b>	<a href="#">dscp</a>
<b>Range</b>	0 to 63
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **sample-rate** *number*

<b>Description</b>	Specify sFlow sample rate This value is the rate at which traffic will be sampled at a rate of 1:N received packets.
<b>Context</b>	<a href="#">system sflow sample-rate number</a>
<b>Tree</b>	<a href="#">sample-rate</a>
<b>Range</b>	1 to 2000000
<b>Default</b>	10000
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **sample-size** *number*

<b>Description</b>	Specify sFlow sample size This value specifies the number of bytes the sFlow agent samples from each frame.
<b>Context</b>	<a href="#">system sflow sample-size number</a>
<b>Tree</b>	<a href="#">sample-size</a>
<b>Range</b>	256   512
<b>Default</b>	256
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Specifies the IP address to be used as the source address in sFlow packets
<b>Context</b>	<a href="#">system sflow source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system sflow statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### total-offered-packets *number*

<b>Description</b>	Total number of packets subject to sFlow sampling
<b>Context</b>	<a href="#">system sflow statistics total-offered-packets <i>number</i></a>
<b>Tree</b>	<a href="#">total-offered-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### total-samples-taken *number*

<b>Description</b>	Total number of sFlow samples taken
<b>Context</b>	<a href="#">system sflow statistics total-samples-taken <i>number</i></a>
<b>Tree</b>	<a href="#">total-samples-taken</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### total-sent-packets *number*

<b>Description</b>	Total number of sFlow packets sent to collectors
<b>Context</b>	<a href="#">system sflow statistics total-sent-packets <i>number</i></a>
<b>Tree</b>	<a href="#">total-sent-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False

**Platforms** Supported on all platforms

## snmp

**Description** Top-level container for SNMP configuration and state

**Context** [system snmp](#)

**Tree** [snmp](#)

**Configurable** True

**Platforms** Supported on all platforms

## access-group *name string*

**Description** List of configured SNMP access-groups

**Context** [system snmp access-group name string](#)

**Tree** [access-group](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## name *string*

**Description** Name of the SNMP access-group

**Context** [system snmp access-group name string](#)

**String Length** 1 to 255

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## admin-state *keyword*

**Description** Enables the SNMP access-group

**Context** [system snmp access-group name string admin-state keyword](#)

**Tree** [admin-state](#)

**Default** enable

**Options**

- enable

- disable

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### community-entry *name string*

<b>Description</b>	List of configured SNMPv2 communities
<b>Context</b>	<a href="#">system snmp access-group name string community-entry name string</a>
<b>Tree</b>	<a href="#">community-entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### name *string*

<b>Description</b>	Unique name for the SNMPv2 community.
<b>Context</b>	<a href="#">system snmp access-group name string community-entry name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### community *string*

<b>Description</b>	SNMPv2 community
<b>Context</b>	<a href="#">system snmp access-group name string community-entry name string community string</a>
<b>Tree</b>	<a href="#">community</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**description string**

<b>Description</b>	Description for the SNMPv2 community
<b>Context</b>	<a href="#">system snmp access-group name string community-entry name string description string</a>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**prefix-list (*ipv4-prefix* | *ipv6-prefix*)**

<b>Description</b>	Prefixes where this community can be used, both IPv4 and IPv6 addresses. A /32 or /128 mask can be used to limit it to a single ip-address
<b>Context</b>	<a href="#">system snmp access-group name string community-entry name string prefix-list (<i>ipv4-prefix</i>   <i>ipv6-prefix</i>)</a>
<b>Tree</b>	<a href="#">prefix-list</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
<b>Max. Elements</b>	16

**description string**

<b>Description</b>	Description for this access-group
<b>Context</b>	<a href="#">system snmp access-group name string description string</a>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**security-entry name string**

<b>Description</b>	List of configured SNMPv3 users
--------------------	---------------------------------

<b>Context</b>	<a href="#">system snmp access-group name</a> <i>string</i> <a href="#">security-entry name</a> <i>string</i>
<b>Tree</b>	<a href="#">security-entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**name** *string*

<b>Description</b>	Unique name of the SNMPv3 security
<b>Context</b>	<a href="#">system snmp access-group name</a> <i>string</i> <a href="#">security-entry name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**authentication**

<b>Description</b>	Authentication parameters for this user.
<b>Context</b>	<a href="#">system snmp access-group name</a> <i>string</i> <a href="#">security-entry name</a> <i>string</i> <a href="#">authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**password** *string*

<b>Description</b>	The user authentication password, supplied either as cleartext or as a hashed value.  If provided as cleartext, the system will hash the value on input, storing only the hashed value. If provided as a hashed value, the value should include any '\$' characters, for example '\$ar2\$aOvsuj0ALIU=\$r750fMa3ZEA/Di8dIfU2fQ=='
<b>Context</b>	<a href="#">system snmp access-group name</a> <i>string</i> <a href="#">security-entry name</a> <i>string</i> <a href="#">authentication password</a> <i>string</i>
<b>Tree</b>	<a href="#">password</a>

<b>String Length</b>	8 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **protocol** *keyword*

<b>Description</b>	Authentication protocol used by this user.
<b>Context</b>	<a href="#">system snmp access-group name</a> <i>string</i> <a href="#">security-entry name</a> <i>string</i> <a href="#">authentication protocol</a> <i>keyword</i>
<b>Tree</b>	<a href="#">protocol</a>
<b>Default</b>	hmac-md5-96
<b>Options</b>	<ul style="list-style-type: none"> <li>hmac-md5-96 MD5</li> <li>hmac-sha1-96 SHA</li> <li>hmac-sha2-224 SHA-224</li> <li>hmac-sha2-256 SHA-256</li> <li>hmac-sha2-384 SHA-384</li> <li>hmac-sha2-512 SHA-512</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **description** *string*

<b>Description</b>	Description for this user
<b>Context</b>	<a href="#">system snmp access-group name</a> <i>string</i> <a href="#">security-entry name</a> <i>string</i> <a href="#">description</a> <i>string</i>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## privacy

<b>Description</b>	Privacy parameters for this user.
<b>Context</b>	<a href="#">system snmp access-group name string security-entry name string privacy</a>
<b>Tree</b>	<a href="#">privacy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## password *string*

<b>Description</b>	The user privacy password, supplied either as cleartext or as a hashed value. If not provided, authentication/password will be used.  If provided as cleartext, the system will hash the value on input, storing only the hashed value. If provided as a hashed value, the value should include any '\$' characters, for example '\$ar2\$aOvsuj0ALIU=\$r750fMa3ZEA/Di8dIfU2fQ=='
<b>Context</b>	<a href="#">system snmp access-group name string security-entry name string privacy password string</a>
<b>Tree</b>	<a href="#">password</a>
<b>String Length</b>	8 to 255
<b>Configurable</b>	True

## protocol *keyword*

<b>Description</b>	Privacy protocol used by this user.
<b>Context</b>	<a href="#">system snmp access-group name string security-entry name string privacy protocol keyword</a>
<b>Tree</b>	<a href="#">protocol</a>
<b>Default</b>	cbc-des

<b>Options</b>	<ul style="list-style-type: none"> <li>• cbc-des DES</li> <li>• cfb128-aes-128 AES</li> <li>• cfb128-aes-192 AES-192</li> <li>• cfb128-aes-256 AES-256</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**user string**

<b>Description</b>	User name used in SNMPv3 authentication and privacy
<b>Context</b>	<a href="#">system snmp access-group name string security-entry name string user string</a>
<b>Tree</b>	<a href="#">user</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**security-level keyword**

<b>Description</b>	Minimum security level required for this access-group.
<b>Context</b>	<a href="#">system snmp access-group name string security-level keyword</a>
<b>Tree</b>	<a href="#">security-level</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• no-auth-no-priv</li> <li>• auth-no-priv</li> <li>• auth-priv</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**network-instance** *name reference*

<b>Description</b>	List of network-instances to run an SNMP server in
<b>Context</b>	<a href="#">system snmp network-instance name reference</a>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	5

**name** *reference*

<b>Description</b>	Reference to a configured network-instance
<b>Context</b>	<a href="#">system snmp network-instance name reference</a>
<b>Reference</b>	<a href="#">network-instance name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Enables the SNMP server in this network-instance
<b>Context</b>	<a href="#">system snmp network-instance name reference admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**engine-id** *string*

<b>Description</b>	The local SNMP engine's administratively assigned unique identifier. If this leaf is not set, the device automatically calculates an engine ID, as described in RFC 3411.
<b>Context</b>	<a href="#">system snmp network-instance name reference engine-id string</a>
<b>Tree</b>	<a href="#">engine-id</a>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**error-msg** *string*

<b>Description</b>	Indicates a possible error message if the snmp-server was stopped at runtime
<b>Context</b>	<a href="#">system snmp network-instance name</a> <i>reference</i> <a href="#">error-msg</a> <i>string</i>
<b>Tree</b>	<a href="#">error-msg</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**listen-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	List of IP addresses for the SNMP server to listen on within the network-instance
<b>Context</b>	<a href="#">system snmp network-instance name</a> <i>reference</i> <a href="#">listen-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">listen-address</a>
<b>Default</b>	::
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	16

**oper-state** *keyword*

<b>Description</b>	Details the operational state of the SNMP server
<b>Context</b>	<a href="#">system snmp network-instance name</a> <i>reference</i> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>up Component or process is operational</li> <li>down Component or process is not operational</li> <li>empty</li> </ul>

- Component slot is empty
- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **trap-group** *name string*

<b>Description</b>	List of configured SNMP trap-groups
<b>Context</b>	<a href="#">system snmp trap-group name string</a>
<b>Tree</b>	<a href="#">trap-group</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **name** *string*

**Description** Name of the SNMP trap-group

**Context** [system snmp trap-group name](#) *string*

**String Length** 1 to 255

**description string**

<b>Description</b>	Description for this destination
<b>Context</b>	<a href="#">system snmp trap-group name string destination name string description string</a>
<b>Tree</b>	<a href="#">description</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**port number**

<b>Description</b>	Destination port for the SNMP trap
<b>Context</b>	<a href="#">system snmp trap-group name string destination name string port number</a>
<b>Tree</b>	<a href="#">port</a>
<b>Range</b>	0 to 65535
<b>Default</b>	162
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### security-entry *name string*

**Description** SNMPv3 security configured on this destination

**Context** [system snmp trap-group name string destination name string security-entry name string](#)

**Tree** [security-entry](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**Max. Elements** 1

### name *string*

**Description** Unique name of the SNMPv3 security.

**Context** [system snmp trap-group name string destination name string security-entry name string](#)

**String Length** 1 to 255

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### authentication

**Description** Authentication parameters for this user.

**Context** [system snmp trap-group name string destination name string security-entry name string authentication](#)

**Tree** [authentication](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**password** *string*

<b>Description</b>	The user authentication password, supplied either as cleartext or as a hashed value.  If provided as cleartext, the system will hash the value on input, storing only the hashed value. If provided as a hashed value, the value should include any '\$' characters, for example '\$ar2\$aOvsuj0ALIU=\$r750fMa3ZEA/Di8dIfU2fQ=='.
<b>Context</b>	<a href="#">system snmp trap-group name</a> <i>string</i> <a href="#">destination name</a> <i>string</i> <a href="#">security-entry name</a> <i>string</i> <a href="#">authentication password</a> <i>string</i>
<b>Tree</b>	<a href="#">password</a>
<b>String Length</b>	8 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**protocol** *keyword*

<b>Description</b>	Authentication protocol used by this user.
<b>Context</b>	<a href="#">system snmp trap-group name</a> <i>string</i> <a href="#">destination name</a> <i>string</i> <a href="#">security-entry name</a> <i>string</i> <a href="#">authentication protocol</a> <i>keyword</i>
<b>Tree</b>	<a href="#">protocol</a>
<b>Default</b>	hmac-md5-96
<b>Options</b>	<ul style="list-style-type: none"> <li>• hmac-md5-96 MD5</li> <li>• hmac-sha1-96 SHA</li> <li>• hmac-sha2-224 SHA-224</li> <li>• hmac-sha2-256 SHA-256</li> <li>• hmac-sha2-384 SHA-384</li> <li>• hmac-sha2-512 SHA-512</li> </ul>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**Description** Description for this user

**Context** [system snmp trap-group name](#) *string* [destination name](#) *string* [security-entry name](#) *string* *description* *string*

**Tree** [description](#)

**String Length** 1 to 255

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### engine-id *string*

**Description** The unique identifier for the SNMP engine of a trap sender.  
If this leaf is not set, the local SNMP engine will be used, this needs to be configured on the destination side too

**Context** [system snmp trap-group name](#) *string* [destination name](#) *string* [security-entry name](#) *string* *engine-id* *string*

**Tree** [engine-id](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### privacy

**Description** Privacy parameters for this user.

**Context** [system snmp trap-group name](#) *string* [destination name](#) *string* [security-entry name](#) *string* *privacy*

**Tree** [privacy](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**password** *string*

<b>Description</b>	The user privacy password, supplied either as cleartext or as a hashed value. If not provided, authentication/password will be used.  If provided as cleartext, the system will hash the value on input, storing only the hashed value. If provided as a hashed value, the value should include any '\$' characters, for example '\$ar2\$aOvsuj0ALIU=\$r750fMa3ZEA/Di8dIfU2fQ=='.
<b>Context</b>	<a href="#">system snmp trap-group name</a> <i>string</i> <a href="#">destination name</a> <i>string</i> <a href="#">security-entry name</a> <i>string</i> <a href="#">privacy password</a> <i>string</i>
<b>Tree</b>	<a href="#">password</a>
<b>String Length</b>	8 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**protocol** *keyword*

<b>Description</b>	Privacy protocol used by this user.
<b>Context</b>	<a href="#">system snmp trap-group name</a> <i>string</i> <a href="#">destination name</a> <i>string</i> <a href="#">security-entry name</a> <i>string</i> <a href="#">privacy protocol</a> <i>keyword</i>
<b>Tree</b>	<a href="#">protocol</a>
<b>Default</b>	cbc-des
<b>Options</b>	<ul style="list-style-type: none"> <li>• cbc-des DES</li> <li>• cfb128-aes-128 AES</li> <li>• cfb128-aes-192 AES-192</li> <li>• cfb128-aes-256 AES-256</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**user** *string*

<b>Description</b>	User name used in SNMPv3 authentication and privacy
<b>Context</b>	<a href="#">system snmp trap-group name</a> <i>string</i> <a href="#">destination name</a> <i>string</i> <a href="#">security-entry name</a> <i>string</i> <a href="#">user</a> <i>string</i>
<b>Tree</b>	<a href="#">user</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**security-level** *keyword*

<b>Description</b>	Security level required for this destination
<b>Context</b>	<a href="#">system snmp trap-group name</a> <i>string</i> <a href="#">destination name</a> <i>string</i> <a href="#">security-level</a> <i>keyword</i>
<b>Tree</b>	<a href="#">security-level</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• no-auth-no-priv</li> <li>• auth-no-priv</li> <li>• auth-priv</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**network-instance** *reference*

<b>Description</b>	Reference to a network-instance configured for SNMP
<b>Context</b>	<a href="#">system snmp trap-group name</a> <i>string</i> <a href="#">network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Reference</b>	<a href="#">system snmp network-instance name</a> <i>reference</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**source-address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	IP address for the SNMP server to use as source-address within the network-instance
<b>Context</b>	<a href="#">system snmp trap-group name string source-address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-address</a>
<b>Default</b>	::
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ssh-server** [name string](#)

<b>Description</b>	Enter the ssh-server list instance
<b>Context</b>	<a href="#">system ssh-server name string</a>
<b>Tree</b>	<a href="#">ssh-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	User-provided name of this server instance
<b>Context</b>	<a href="#">system ssh-server name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**admin-state** *keyword*

<b>Description</b>	Enable or disable the SSH server instance
<b>Context</b>	<a href="#">system ssh-server name string admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **allowed-authentication-types** *keyword*

<b>Description</b>	List of allowed authentication types  This sets the AuthenticationMethods option within each SSH servers configuration file. Also sets PasswordAuthentication PubkeyAuthentication KbdInteractiveAuthentication options within each SSH servers configuration file.
<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">allowed-authentication-types</a> <i>keyword</i>
<b>Tree</b>	<a href="#">allowed-authentication-types</a>
<b>Default</b>	publickey
<b>Options</b>	<ul style="list-style-type: none"> <li>• password</li> <li>• publickey</li> <li>• keyboard-interactive</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **authorized-principal-check-tool** *keyword*

<b>Description</b>	Configure the tool used to check the authorized principals  Setting the value to hiba-chk sets the AuthorizedPrincipalsCommand to hiba-chk tool. If unset, the aaamgr will do the principal checking.
<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">authorized-principal-check-tool</a> <i>keyword</i>
<b>Tree</b>	<a href="#">authorized-principal-check-tool</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• hiba-chk</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **counters**

<b>Description</b>	A collection of counters that were collected by the SSH server during the SSH authentication process.
<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">counters</a>
<b>Tree</b>	<a href="#">counters</a>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **access-accepts** *number*

<b>Description</b>	The total number of times the SSH allowed access to the server.
<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">counters</a> <a href="#">access-accepts</a> <i>number</i>
<b>Tree</b>	<a href="#">access-accepts</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **access-rejects** *number*

<b>Description</b>	The total number of times the SSH server denied access to the server.
<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">counters</a> <a href="#">access-rejects</a> <i>number</i>
<b>Tree</b>	<a href="#">access-rejects</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **last-access-accept** *string*

<b>Description</b>	A timestamp of the last time the SSH allowed access to the server.
<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">counters</a> <a href="#">last-access-accept</a> <i>string</i>
<b>Tree</b>	<a href="#">last-access-accept</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**last-access-reject string**

<b>Description</b>	A timestamp of the last time the SSH server denied access to the server.
<b>Context</b>	<a href="#">system ssh-server name string counters last-access-reject string</a>
<b>Tree</b>	<a href="#">last-access-reject</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**credentialz**

<b>Description</b>	Information relating to the active host keys and certificates as provided via Credentialz  State is provided by the gNSI Credentialz service, and can be changed using the gNSI.Credentialz.RotateHostParameters RPC
<b>Context</b>	<a href="#">system ssh-server name string credentialz</a>
<b>Tree</b>	<a href="#">credentialz</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**host-certificate**

<b>Description</b>	State relating to the Host Certificates provided via Credentialz
<b>Context</b>	<a href="#">system ssh-server name string credentialz host-certificate</a>
<b>Tree</b>	<a href="#">host-certificate</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**created-on string**

<b>Description</b>	The created on timestamp as provided by the gNSI client at the time of uploading the artifact
--------------------	---

The maps to the created\_on field within a Entity message in the Credentialz protobuf.

<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">credentialz host-certificate created-on</a> <i>string</i>
<b>Tree</b>	<a href="#">created-on</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **version string**

<b>Description</b>	The version string as provided by the gNSI client at the time of uploading the artifact  The maps to the version field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">credentialz host-certificate version</a> <i>string</i>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **host-key**

<b>Description</b>	State relating to the Host Keys provided via Credentialz
<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">credentialz host-key</a>
<b>Tree</b>	<a href="#">host-key</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **created-on string**

<b>Description</b>	The created on timestamp as provided by the gNSI client at the time of uploading the artifact  The maps to the created_on field within a Entity message in the Credentialz protobuf.
--------------------	--

<b>Context</b>	<a href="#">system ssh-server name string credentialz host-key created-on string</a>
<b>Tree</b>	<a href="#">created-on</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### version *string*

<b>Description</b>	The version string as provided by the gNSI client at the time of uploading the artifact  The maps to the version field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system ssh-server name string credentialz host-key version string</a>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### trusted-user-ca-keys

<b>Description</b>	State relating to the Certificate Authorities provided via Credentialz.
<b>Context</b>	<a href="#">system ssh-server name string credentialz trusted-user-ca-keys</a>
<b>Tree</b>	<a href="#">trusted-user-ca-keys</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### created-on *string*

<b>Description</b>	The created on timestamp as provided by the gNSI client at the time of uploading the artifact  The maps to the created_on field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system ssh-server name string credentialz trusted-user-ca-keys created-on string</a>

<b>Tree</b>	<a href="#">created-on</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **version string**

<b>Description</b>	The version string as provided by the gNSI client at the time of uploading the artifact  The maps to the version field within a Entity message in the Credentialz protobuf.
<b>Context</b>	<a href="#">system ssh-server name string credentialz trusted-user-ca-keys version string</a>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **disable-shell boolean**

<b>Description</b>	Disable the ability to spawn a shell for incoming connections
<b>Context</b>	<a href="#">system ssh-server name string disable-shell boolean</a>
<b>Tree</b>	<a href="#">disable-shell</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **host-key**

<b>Description</b>	Enter the host-key context
<b>Context</b>	<a href="#">system ssh-server name string host-key</a>
<b>Tree</b>	<a href="#">host-key</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**preserve** *boolean*

<b>Description</b>	Indicates whether the autogenerated SSH server host keys should be preserved on reboots  Setting this to true will result in host keys in /etc/ssh not being cleared on a reboot. Alternatively setting this to false will result in host keys being removed and regenerated on each reboot of the system.  This is useful only when the host keys are not statically configured and not dynamically configured using gNSI Credentialz service (and therefore are suitable to be potentially regenerated on every reboot).  Takes effect only if the value is set to false for every configured ssh server instance.
<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">host-key preserve</a> <i>boolean</i>
<b>Tree</b>	<a href="#">preserve</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type** *type* *keyword*

<b>Description</b>	List of the SSH servers host private-keys and certificates
<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">host-key type</a> <i>type</i> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	Type of generated host key
<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">host-key type</a> <i>type</i> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ssh-rsa-3076</li> <li>• ecdsa-sha2-nistp256</li> <li>• ecdsa-sha2-nistp521</li> <li>• ssh-ed25519</li> <li>• ssh-rsa-2048</li> <li>• ssh-rsa-4096</li> </ul>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **certificate string**

**Description** Each item value should be the host key certificate as read from the \*-cert.pub file generated by the CA including the certificate type, e.g. 'ssh-rsa-cert-v01@openssh.com AAAA<...> comment'.  
This certificate is returned to clients during SSH init for the client to verify the host it is communicating with.  
This sets the HostCertificate option within each SSH servers configuration file. The certificate should be generated by first extracting the systems current public key and having this signed by a CA.

**Context** [system ssh-server name string host-key type type keyword certificate string](#)

**Tree** [certificate](#)

**Configurable** True

**Platforms** Supported on all platforms

### **private-key string**

**Description** The value should be the host private key as read from the private key file.  
This sets the HostKey option within each SSH servers configuration file.

**Context** [system ssh-server name string host-key type type keyword private-key string](#)

**Tree** [private-key](#)

**Configurable** True

**Platforms** Supported on all platforms

### **public-key string**

**Description** The value is be the host public key as read from the public key file.

**Context** [system ssh-server name string host-key type type keyword public-key string](#)

**Tree** [public-key](#)

**Configurable** False

**Platforms** Supported on all platforms

### **network-instance reference**

**Description** Network instances to run the SSH server in

---

<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">network-instance</a> <i>reference</i>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Reference</b>	<a href="#">network-instance name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **oper-state** *keyword*

<b>Description</b>	Operational state of the SSH server instance
<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">oper-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down Component or process is not operational</li> <li>• empty Component slot is empty</li> <li>• downloading Component is downloading image into memory</li> <li>• booting Component is booting downloaded image</li> <li>• starting Component image operational, application processes starting</li> <li>• failed Component or process has failed</li> <li>• synchronizing Component is currently being synchronized</li> <li>• upgrading Component is currently being upgraded</li> <li>• low-power Component is offline due to insufficient system power</li> <li>• degraded Component or process is in a degraded state</li> <li>• warm-reboot Component or process is currently warm rebooting</li> </ul>

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **port** *number*

<b>Description</b>	Port the SSH server instance will listen on for incoming connections
<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">port</a> <i>number</i>
<b>Tree</b>	<a href="#">port</a>
<b>Range</b>	0 to 65535
<b>Default</b>	22
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **protocol-version** *number*

<b>Description</b>	Protocol version in use by the SSH server
<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">protocol-version</a> <i>number</i>
<b>Tree</b>	<a href="#">protocol-version</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **rate-limit** *number*

<b>Description</b>	Set a limit on the number of unauthenticated sessions to the SSH server after this number is met, the server will start dropping connection attempts
<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">rate-limit</a> <i>number</i>
<b>Tree</b>	<a href="#">rate-limit</a>
<b>Default</b>	20
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **revoked-keys** *string*

**Description** List of revoked public keys  
 Each items value should be the public key of a revoked keypair, e.g. 'ssh-rsa AAAA<...>= comment'. Any keys provided here cannot be used for public key authentication.  
 This sets the RevokedKeys option within each SSH servers configuration file.

**Context** [system ssh-server name](#) *string* [revoked-keys](#) *string*

**Tree** [revoked-keys](#)

**Configurable** True

**Platforms** Supported on all platforms

### **source-address** (*ipv4-address* | *ipv6-address*)

**Description** List of IP addresses for the SSH server to listen on within the network-instance

**Context** [system ssh-server name](#) *string* [source-address](#) (*ipv4-address* | *ipv6-address*)

**Tree** [source-address](#)

**Configurable** True

**Platforms** Supported on all platforms

### **timeout** *number*

**Description** Set the idle timeout in seconds on SSH connections

**Context** [system ssh-server name](#) *string* [timeout](#) *number*

**Tree** [timeout](#)

**Default** 0

**Units** seconds

**Configurable** True

**Platforms** Supported on all platforms

### **trust-anchors** *string*

**Description** List of public keys used to verify user certificates during authentication

Each items value should be the public key of a CA, e.g. 'ssh-rsa AAAA<...>=comment'. If no trust anchors are configured, authentication using SSH certificates will not function.

This sets the TrustedUserCAKeys option within each SSH servers configuration file.

<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">trust-anchors</a> <i>string</i>
<b>Tree</b>	<a href="#">trust-anchors</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **use-credentialz** *boolean*

<b>Description</b>	Use the gNSI Credentialz service global SSH configuration for this SSH server instance  Setting this to true will apply any gNSI Credentialz configuration for this SSH server instance. Static configuration will override any gNSI Credentialz configuration.
<b>Context</b>	<a href="#">system ssh-server name</a> <i>string</i> <a href="#">use-credentialz</a> <i>boolean</i>
<b>Tree</b>	<a href="#">use-credentialz</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **sync**

<b>Description</b>	Context to configure sync parameters and report sessions state
<b>Context</b>	<a href="#">system sync</a>
<b>Tree</b>	<a href="#">sync</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### **freq-clock**

<b>Description</b>	Enter the freq-clock context
<b>Context</b>	<a href="#">system sync freq-clock</a>
<b>Tree</b>	<a href="#">freq-clock</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**active-reference** *keyword*

<b>Description</b>	Indicates the current selected reference This will be an instance-number; or internal for the case of holdover or freerun.
<b>Context</b>	<a href="#">system sync freq-clock active-reference</a> <i>keyword</i>
<b>Tree</b>	<a href="#">active-reference</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• 1</li> <li>• 2</li> <li>• 3</li> <li>• 4</li> <li>• 5</li> <li>• internal</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**freq-clock-state** *keyword*

<b>Description</b>	Shows the frequency clock mode state
<b>Context</b>	<a href="#">system sync freq-clock freq-clock-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">freq-clock-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• not-present Frequency clock is locked to a line timing reference signal</li> <li>• master-free-run Frequency clock is master free run mode</li> <li>• master-holdover Frequency clock is master holdover mode</li> <li>• master-locked Frequency clock is master locked mode</li> <li>• slave Frequency clock is slave mode</li> <li>• acquiring Frequency clock is acquiring mode</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**freq-offset** *decimal-number*

<b>Description</b>	The frequency offset between the central frequency clock and the selected reference in ppb
<b>Context</b>	<a href="#">system sync freq-clock freq-offset</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">freq-offset</a>
<b>Units</b>	parts-per-billion
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**network-type** *keyword*

<b>Description</b>	Configures SyncE for SSM code-type as SONET or SDH mode <code>sdh</code> specifies the values corresponding to ITU-T G.781 Option 1 compliant networks. <code>sonet</code> specifies the values corresponding to ITU-T G.781 Option 2 compliant networks.
<b>Context</b>	<a href="#">system sync freq-clock network-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">network-type</a>
<b>Default</b>	sonet
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>sdh</code> sdh specifies the values corresponding to G.781 Option 1 compliant networks</li> <li>• <code>sonet</code> sonet specifies the values corresponding to G.781 Option 2 compliant networks</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**ql-input-threshold** *keyword*

<b>Description</b>	This command configures the minimum acceptable QL value Frequency references with lower QL will not be considered for selection by the system timing module. Options: <code>unused</code> , <code>prs</code> , <code>stu</code> , <code>st2</code> , <code>tnc</code> , <code>st3e</code> , <code>st3</code> , <code>prc</code> , <code>ssua</code> , <code>ssub</code> , <code>sec</code> , <code>eec1</code> , <code>eec2</code>
<b>Context</b>	<a href="#">system sync freq-clock ql-input-threshold</a> <i>keyword</i>
<b>Tree</b>	<a href="#">ql-input-threshold</a>
<b>Default</b>	unused
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>unused</code></li> </ul>

No override or minimum QL level selected

<b>Platforms</b>	7220 IXR-D5

### ql-selection *boolean*

<b>Description</b>	Configures if frequency reference selection takes the QL (Quality Level) into account. When enabled, the selection of system timing reference and BITS output timing reference takes into account quality level. Quality level is conveyed via the SSM or forced using the ql-override command..
<b>Context</b>	<a href="#">system sync freq-clock ql-selection</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ql-selection</a>
<b>Default</b>	false

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**revert** *boolean*

<b>Description</b>	This command configures if the frequency clock is in revertive mode. In revertive mode, when a failed reference becomes operational, the system will automatically switch to the recovered reference if it is of higher priority and/or QL. When the mode is non-revertive, a failed clock source is not automatically selected.
<b>Context</b>	<a href="#">system sync freq-clock revert</a> <i>boolean</i>
<b>Tree</b>	<a href="#">revert</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**system-ql-value** *keyword*

<b>Description</b>	System QL value based on the reference selected
<b>Context</b>	<a href="#">system sync freq-clock system-ql-value</a> <i>keyword</i>
<b>Tree</b>	<a href="#">system-ql-value</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• unknown Unknown</li> <li>• prs QL of PRS</li> <li>• stu QL of STU</li> <li>• st2 QL of Stratum 2</li> <li>• tnc QL of TNC</li> <li>• st3e QL of Stratum 3E</li> <li>• st3 QL of Stratum 3</li> <li>• smc QL of SMC</li> </ul>

Failed

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **wait-to-restore** *number*

<b>Description</b>	This command configures the time for the Wait to Restore timer A previously failed input reference must be valid for the time specified before it is used for the clock input reference.
<b>Context</b>	<a href="#">system sync freq-clock wait-to-restore</a> <i>number</i>
<b>Tree</b>	<a href="#">wait-to-restore</a>
<b>Range</b>	0 to 12
<b>Default</b>	5

<b>Units</b>	minutes
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### freq-references

<b>Description</b>	Enter the freq-references context
<b>Context</b>	<a href="#">system sync freq-references</a>
<b>Tree</b>	<a href="#">freq-references</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### instance [instance-number](#) *number*

<b>Description</b>	List of line references configured for frequency
<b>Context</b>	<a href="#">system sync freq-references instance instance-number</a> <i>number</i>
<b>Tree</b>	<a href="#">instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### instance-number *number*

<b>Description</b>	The instance number of the each line reference
<b>Context</b>	<a href="#">system sync freq-references instance instance-number</a> <i>number</i>
<b>Range</b>	1 to 5
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### admin-state *keyword*

<b>Description</b>	Configure the administrative state of this frequency reference instance
<b>Context</b>	<a href="#">system sync freq-references instance instance-number</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>enable</li> </ul>

	<ul style="list-style-type: none"> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### not-qualified-reason *keyword*

<b>Description</b>	If the reference is not qualified, this identifies the reason
<b>Context</b>	<a href="#">system sync freq-references instance instance-number number not-qualified-reason keyword</a>
<b>Tree</b>	<a href="#">not-qualified-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• not-applicable Reason is not applicable</li> <li>• los Reference is not-qualified because of Loss of Signal (LOS)</li> <li>• ssm-quality Reference is not-qualified because of received SSM/QL level</li> <li>• out-of-range Reference is not-qualified because the reference is out of range in frequency</li> <li>• wtr Reference is not-qualified because the wait-to-restore timer has not expired</li> <li>• admin-disabled Reference is not-qualified because the reference has not been admin enabled</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### oper-state *keyword*

<b>Description</b>	Indicates the operational state of this line reference
<b>Context</b>	<a href="#">system sync freq-references instance instance-number number oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up Component or process is operational</li> <li>• down</li> </ul>

- Component or process is not operational
- empty  
Component slot is empty
- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable**

False

**Platforms**

7220 IXR-D5

**priority number****Description**

Sets the priority of this line timing reference for the system timing selection process 1 = highest priority 5 = lowest priority Duplicate numbers are not allowed

<b>Context</b>	<a href="#">system sync freq-references instance instance-number number priority number</a>
<b>Tree</b>	<a href="#">priority</a>
<b>Range</b>	1 to 5
<b>Default</b>	3
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### **ql-override** *keyword*

<b>Description</b>	Override the incoming QL/SSM value for this line reference Quality level override of a timing reference Options are unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec, eec1, eec2
<b>Context</b>	<a href="#">system sync freq-references instance instance-number number ql-override keyword</a>
<b>Tree</b>	<a href="#">ql-override</a>
<b>Default</b>	unused
<b>Options</b>	<ul style="list-style-type: none"> <li>• unused No override or minimum QL level selected</li> <li>• prs QL of PRS</li> <li>• stu QL of STU</li> <li>• st2 QL of Stratum 2</li> <li>• tnc QL of TNC</li> <li>• st3e QL of Stratum 3E</li> <li>• st3 QL of Stratum 3</li> <li>• prc QL of PRC</li> <li>• ssua QL of SSU-A</li> <li>• ssub QL of SSU-B</li> </ul>

<b>Description</b>	Enter the ptp context
<b>Context</b>	<a href="#">system sync ptp</a>
<b>Tree</b>	<a href="#">ptp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**instance** [instance-index](#) *number*

<b>Description</b>	List of one or more PTP instances in the product (PTP Node) Each PTP instance represents a distinct instance of PTP implementation (i.e. distinct Ordinary Clock, Boundary Clock, or Transparent Clock), maintaining a distinct time.
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i>
<b>Tree</b>	<a href="#">instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**instance-index** *number*

<b>Description</b>	The instance index of the current PTP instance This instance index is used for management purposes only. This instance index does not represent the PTP domain number and is not used in PTP messages.
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i>
<b>Range</b>	1 to 2
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**current-ds**

<b>Description</b>	Provides current data from operation of the protocol
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i> <a href="#">current-ds</a>
<b>Tree</b>	<a href="#">current-ds</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**mean-delay** *number*

<b>Description</b>	The mean propagation time between this PTP instance and the master clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i> <a href="#">current-ds</a> <a href="#">mean-delay</a> <i>number</i>
<b>Tree</b>	<a href="#">mean-delay</a>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D5

### **offset-from-master *number***

**Description** The time difference between this PTP instance and the master clock

**Context** [system sync ptp instance instance-index \*number\* current-ds offset-from-master \*number\*](#)

**Tree** [offset-from-master](#)

**Configurable** False

**Platforms** 7220 IXR-D5

### **steps-removed *number***

**Description** The number of PTP clock steps in the path between the this PTP instance and the GM

**Context** [system sync ptp instance instance-index \*number\* current-ds steps-removed \*number\*](#)

**Tree** [steps-removed](#)

**Configurable** False

**Platforms** 7220 IXR-D5

### **default-ds**

**Description** The default data set of the PTP instance  
In the context of the protocol, this data set is required for an Ordinary Clock or Boundary Clock

**Context** [system sync ptp instance instance-index \*number\* default-ds](#)

**Tree** [default-ds](#)

**Configurable** True

**Platforms** 7220 IXR-D5

### **announce-receipt-timeout *number***

**Description** Sets the time limit for missed Announce packets before the master clock is deemed down  
This command configures the announceReceiptTimeout value for all peer associations. This defines the number of Announce message intervals that

must expire with no received Announce messages before declaring an ANNOUNCE\_RECEIPT\_TIMEOUT event.

<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds announce-receipt-timeout number</a>
<b>Tree</b>	<a href="#">announce-receipt-timeout</a>
<b>Range</b>	2 to 10
<b>Default</b>	3
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### clock-identity *binary*

<b>Description</b>	The clockIdentity of the local clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds clock-identity binary</a>
<b>Tree</b>	<a href="#">clock-identity</a>
<b>String Length</b>	8
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### clock-quality

<b>Description</b>	The clockQuality of the local clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds clock-quality</a>
<b>Tree</b>	<a href="#">clock-quality</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### clock-accuracy *number*

<b>Description</b>	The clockAccuracy indicates the expected accuracy of the clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds clock-quality clock-accuracy number</a>
<b>Tree</b>	<a href="#">clock-accuracy</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**clock-class** *number*

<b>Description</b>	The clockClass denotes the traceability of the time or frequency distributed by the clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds clock-quality clock-class number</a>
<b>Tree</b>	<a href="#">clock-class</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**offset-scaled-log-variance** *number*

<b>Description</b>	The offsetScaledLogVariance provides an estimate of the variations of the clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds clock-quality offset-scaled-log-variance number</a>
<b>Tree</b>	<a href="#">offset-scaled-log-variance</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**current-time**

<b>Description</b>	The current time in the current data set
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds current-time</a>
<b>Tree</b>	<a href="#">current-time</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**date-time** *string*

<b>Description</b>	PTP current time converted to UTC and presented as a date-time string
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds current-time date-time string</a>
<b>Tree</b>	<a href="#">date-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**time-nano-seconds** *number*

<b>Description</b>	Nano-seconds of time
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds current-time time-nano-seconds number</a>
<b>Tree</b>	<a href="#">time-nano-seconds</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**time-seconds** *number*

<b>Description</b>	Seconds of time
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds current-time time-seconds number</a>
<b>Tree</b>	<a href="#">time-seconds</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**domain-number** *number*

<b>Description</b>	The IEEE Std 1588 domainNumber of the PTP instance  A domain consists of one or more PTP instances communicating with each other as defined by the protocol. A domain shall define the scope of PTP message communication, state, operations, data sets, and timescale. Therefore, each domain represents a distinct time. The default domain number is defined by the profile. itug8275dot1: 24 itug8275dot2: 44
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds domain-number number</a>
<b>Tree</b>	<a href="#">domain-number</a>
<b>Range</b>	0 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**instance-enable** *boolean*

<b>Description</b>	Enable PTP clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds instance-enable boolean</a>

<b>Tree</b>	<a href="#">instance-enable</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### **instance-type** *keyword*

<b>Description</b>	The type of PTP instance as per IEEE1588 standard For G.8275.1: oc is for T-GM, bc is for T-BC; T-TSC not supported since T-BC can be used for this role For G.8275.2: oc is for T-GM, bc is for T-BC-A and T-BC-P; T-TSC-A and T-TSC-P are not supported since T-BC-A or T-BC-P can be used for this role
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds instance-type keyword</a>
<b>Tree</b>	<a href="#">instance-type</a>
<b>Default</b>	bc
<b>Options</b>	<ul style="list-style-type: none"> <li>bc boundary clock</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### **local-priority** *number*

<b>Description</b>	The IEEE Std 1588 priority2 of the PTP instance The priority2 member is compared by the Best Master Clock Algorithm (BMCA) after priority1 and clockQuality. Lower values take precedence.
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds local-priority number</a>
<b>Tree</b>	<a href="#">local-priority</a>
<b>Range</b>	1 to 255
<b>Default</b>	128
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### **log-announce-interval** *number*

<b>Description</b>	The base-2 logarithm of the mean announceInterval
--------------------	---

This is the mean time interval between successive Announce messages. The default log announce interval is defined by the profile. itug8275dot1: -3 (8 messages per second) itug8275dot2: 1 (1 message every two seconds)

<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds log-announce-interval number</a>
<b>Tree</b>	<a href="#">log-announce-interval</a>
<b>Range</b>	-3 to 4
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### **number-ports** *number*

<b>Description</b>	The number of PTP ports on the instance
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds number-ports number</a>
<b>Tree</b>	<a href="#">number-ports</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **priority1** *number*

<b>Description</b>	The IEEE Std 1588 priority1 of the PTP instance Since priority1 is one of the first comparisons performed by the Best Master Clock Algorithm (BMCA). Range is 0-255.
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds priority1 number</a>
<b>Tree</b>	<a href="#">priority1</a>
<b>Range</b>	0 to 255
<b>Default</b>	128
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### **priority2** *number*

<b>Description</b>	The IEEE Std 1588 priority2 of the PTP instance The priority2 member is compared by the Best Master Clock Algorithm (BMCA) after priority1 and clockQuality. Lower values take precedence.
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds priority2 number</a>

<b>Tree</b>	<a href="#">priority2</a>
<b>Range</b>	0 to 255
<b>Default</b>	128
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## statistics

<b>Description</b>	Aggregate statistics for the PTP clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

## anno-msg-rx *number*

<b>Description</b>	Specifies the number of announce messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics anno-msg-rx number</a>
<b>Tree</b>	<a href="#">anno-msg-rx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

## anno-msg-tx *number*

<b>Description</b>	Specifies the number of announce messages transmitted
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics anno-msg-tx number</a>
<b>Tree</b>	<a href="#">anno-msg-tx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

## del-req-msg-rx *number*

<b>Description</b>	Specifies the number of delay-req messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics del-req-msg-rx number</a>

<b>Tree</b>	<a href="#">del-req-msg-rx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**del-req-msg-tx number**

<b>Description</b>	Specifies the number of delay-req messages transmitted
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics del-req-msg-tx number</a>
<b>Tree</b>	<a href="#">del-req-msg-tx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**del-resp-msg-rx number**

<b>Description</b>	Specifies the number of delay-resp messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics del-resp-msg-rx number</a>
<b>Tree</b>	<a href="#">del-resp-msg-rx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**del-resp-msg-tx number**

<b>Description</b>	Specifies the number of delay-resp messages transmitted
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics del-resp-msg-tx number</a>
<b>Tree</b>	<a href="#">del-resp-msg-tx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**delay-high-packet-loss number**

<b>Description</b>	The number of events with high packet loss for delay req packets
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics delay-high-packet-loss number</a>
<b>Tree</b>	<a href="#">delay-high-packet-loss</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **delay-packet-loss** *number*

<b>Description</b>	The number of events with detected packet loss for the delay request/response packets
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i> <a href="#">default-ds statistics delay-packet-loss</a> <i>number</i>
<b>Tree</b>	<a href="#">delay-packet-loss</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **discards**

<b>Description</b>	Aggregate discard statistics for the PTP clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i> <a href="#">default-ds statistics discards</a>
<b>Tree</b>	<a href="#">discards</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **alternate-master** *number*

<b>Description</b>	Specifies the number of alternate master messages that were discarded
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i> <a href="#">default-ds statistics discards alternate-master</a> <i>number</i>
<b>Tree</b>	<a href="#">alternate-master</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **bad-domain** *number*

<b>Description</b>	Specifies the number of bad domain messages that were discarded
--------------------	---

<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics discards bad-domain number</a>
<b>Tree</b>	<a href="#">bad-domain</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**other number**

<b>Description</b>	Specifies the number of other messages that were discarded
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics discards other number</a>
<b>Tree</b>	<a href="#">other</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**out-of-sequence number**

<b>Description</b>	Specifies the number of out of sequence messages that were discarded
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics discards out-of-sequence number</a>
<b>Tree</b>	<a href="#">out-of-sequence</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**follow-up-msg-rx number**

<b>Description</b>	Specifies the number of follow-up messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics follow-up-msg-rx number</a>
<b>Tree</b>	<a href="#">follow-up-msg-rx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**follow-up-msg-tx number**

<b>Description</b>	Specifies the number of follow-up messages transmitted
--------------------	--

<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics follow-up-msg-tx number</a>
<b>Tree</b>	<a href="#">follow-up-msg-tx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### multicast-msg-rate

<b>Description</b>	Aggregate multicast message rates for the PTP clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics multicast-msg-rate</a>
<b>Tree</b>	<a href="#">multicast-msg-rate</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### anno-msg-rate-rx *decimal-number*

<b>Description</b>	Specifies the rate of messages of announce messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics multicast-msg-rate anno-msg-rate-rx decimal-number</a>
<b>Tree</b>	<a href="#">anno-msg-rate-rx</a>
<b>Units</b>	messages-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### anno-msg-rate-tx *decimal-number*

<b>Description</b>	Specifies the rate of messages of announce messages transmitted
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics multicast-msg-rate anno-msg-rate-tx decimal-number</a>
<b>Tree</b>	<a href="#">anno-msg-rate-tx</a>
<b>Units</b>	messages-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**del-req-msg-rate-rx** *decimal-number*

<b>Description</b>	Specifies the rate of messages of delay-req messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics multicast-msg-rate del-req-msg-rate-rx decimal-number</a>
<b>Tree</b>	<a href="#">del-req-msg-rate-rx</a>
<b>Units</b>	messages-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**del-req-msg-rate-tx** *decimal-number*

<b>Description</b>	Specifies the rate of messages of delay-req messages transmitted
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics multicast-msg-rate del-req-msg-rate-tx decimal-number</a>
<b>Tree</b>	<a href="#">del-req-msg-rate-tx</a>
<b>Units</b>	messages-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**del-resp-msg-rate-rx** *decimal-number*

<b>Description</b>	Specifies the rate of messages of delay-resp messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics multicast-msg-rate del-resp-msg-rate-rx decimal-number</a>
<b>Tree</b>	<a href="#">del-resp-msg-rate-rx</a>
<b>Units</b>	messages-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**del-resp-msg-rate-tx** *decimal-number*

<b>Description</b>	Specifies the rate of messages of delay-resp messages transmitted
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics multicast-msg-rate del-resp-msg-rate-tx decimal-number</a>
<b>Tree</b>	<a href="#">del-resp-msg-rate-tx</a>
<b>Units</b>	messages-per-second

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **follow-up-msg-rate-rx** *decimal-number*

<b>Description</b>	Specifies the rate of messages of follow-up messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics multicast-msg-rate follow-up-msg-rate-rx</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">follow-up-msg-rate-rx</a>
<b>Units</b>	messages-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **follow-up-msg-rate-tx** *decimal-number*

<b>Description</b>	Specifies the rate of messages of follow-up messages transmitted
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics multicast-msg-rate follow-up-msg-rate-tx</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">follow-up-msg-rate-tx</a>
<b>Units</b>	messages-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **other-rate-rx** *decimal-number*

<b>Description</b>	Specifies the rate of messages of other messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics multicast-msg-rate other-rate-rx</a> <i>decimal-number</i>
<b>Tree</b>	<a href="#">other-rate-rx</a>
<b>Units</b>	messages-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **sync-msg-rate-rx** *decimal-number*

<b>Description</b>	Specifies the rate of messages of sync messages received
--------------------	--

<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics multicast-msg-rate sync-msg-rate-rx decimal-number</a>
<b>Tree</b>	<a href="#">sync-msg-rate-rx</a>
<b>Units</b>	messages-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **sync-msg-rate-tx** *decimal-number*

<b>Description</b>	Specifies the rate of messages of sync messages transmitted
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics multicast-msg-rate sync-msg-rate-tx decimal-number</a>
<b>Tree</b>	<a href="#">sync-msg-rate-tx</a>
<b>Units</b>	messages-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **other-rx** *number*

<b>Description</b>	Specifies the number of other messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics other-rx number</a>
<b>Tree</b>	<a href="#">other-rx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **sync-high-packet-loss** *number*

<b>Description</b>	The number of events with high packet loss of sync packets
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics sync-high-packet-loss number</a>
<b>Tree</b>	<a href="#">sync-high-packet-loss</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**sync-msg-rx** *number*

<b>Description</b>	Specifies the number of sync messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics sync-msg-rx number</a>
<b>Tree</b>	<a href="#">sync-msg-rx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**sync-msg-tx** *number*

<b>Description</b>	Specifies the number of sync messages transmitted
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics sync-msg-tx number</a>
<b>Tree</b>	<a href="#">sync-msg-tx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**sync-packet-loss** *number*

<b>Description</b>	The number of events with detected packet loss of sync packets from the master clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics sync-packet-loss number</a>
<b>Tree</b>	<a href="#">sync-packet-loss</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**time-recovery-engine**

<b>Description</b>	Enter the time-recovery-engine context
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds time-recovery-engine</a>
<b>Tree</b>	<a href="#">time-recovery-engine</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**last-adjustment** *number*

<b>Description</b>	Specifies the last adjustment in nanoseconds to the local time of the PTP clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds time-recovery-engine last-adjustment</a> <i>number</i>
<b>Tree</b>	<a href="#">last-adjustment</a>
<b>Units</b>	nanoseconds
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**last-adjustment-timestamp** *string*

<b>Description</b>	The time when last-adjustment was last calculated
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds time-recovery-engine last-adjustment-timestamp</a> <i>string</i>
<b>Tree</b>	<a href="#">last-adjustment-timestamp</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**recovery-state** *keyword*

<b>Description</b>	Specifies the current state of the time recovery engine in the PTP clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds time-recovery-engine recovery-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">recovery-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• not-applicable Not applicable to time recovery</li> <li>• initial Initializing state</li> <li>• acquiring Acquiring state</li> <li>• holdover Holdover state</li> <li>• locked Locked state</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### state-last-changed *string*

<b>Description</b>	Specifies the last occurrence of a ptp state change for the time recovery engine
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds time-recovery-engine state-last-changed string</a>
<b>Tree</b>	<a href="#">state-last-changed</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### statistics

<b>Description</b>	Time recovery engine state statistics for the PTP clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds time-recovery-engine statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### delay-too-much-pdv *number*

<b>Description</b>	The number of events with high PDV for delay request/response packets for time recovery
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds time-recovery-engine statistics delay-too-much-pdv number</a>
<b>Tree</b>	<a href="#">delay-too-much-pdv</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### sync-too-much-pdv *number*

<b>Description</b>	The number of events with high PDV for sync packets for time recovery
--------------------	---

<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds time-recovery-engine statistics sync-too-much-pdv number</a>
<b>Tree</b>	<a href="#">sync-too-much-pdv</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **time-in-acquiring** *number*

<b>Description</b>	Specifies the number of seconds while in Acquiring state
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds time-recovery-engine statistics time-in-acquiring number</a>
<b>Tree</b>	<a href="#">time-in-acquiring</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **time-in-holdover** *number*

<b>Description</b>	Specifies the number of seconds while in Holdover state
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds time-recovery-engine statistics time-in-holdover number</a>
<b>Tree</b>	<a href="#">time-in-holdover</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **time-in-initial** *number*

<b>Description</b>	Specifies the number of seconds while in Initializing state
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds time-recovery-engine statistics time-in-initial number</a>
<b>Tree</b>	<a href="#">time-in-initial</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**time-in-locked** *number*

<b>Description</b>	Specifies the number of seconds while in Locked state
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds time-recovery-engine statistics time-in-locked number</a>
<b>Tree</b>	<a href="#">time-in-locked</a>
<b>Units</b>	seconds
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**two-step-flag** *boolean*

<b>Description</b>	Indicates if the clock is operating in two-step mode
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds two-step-flag boolean</a>
<b>Tree</b>	<a href="#">two-step-flag</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**parent-ds**

<b>Description</b>	The parent data set of the clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number parent-ds</a>
<b>Tree</b>	<a href="#">parent-ds</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**grandmaster-clock-quality**

<b>Description</b>	The clockQuality of the grandmaster clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number parent-ds grandmaster-clock-quality</a>
<b>Tree</b>	<a href="#">grandmaster-clock-quality</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**clock-accuracy** *number*

<b>Description</b>	The clockAccuracy indicates the expected accuracy of the clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number parent-ds grandmaster-clock-quality clock-accuracy number</a>
<b>Tree</b>	<a href="#">clock-accuracy</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**clock-class** *number*

<b>Description</b>	The clockClass denotes the traceability of the time or frequency distributed by the clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number parent-ds grandmaster-clock-quality clock-class number</a>
<b>Tree</b>	<a href="#">clock-class</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**offset-scaled-log-variance** *number*

<b>Description</b>	The offsetScaledLogVariance provides an estimate of the variations of the clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number parent-ds grandmaster-clock-quality offset-scaled-log-variance number</a>
<b>Tree</b>	<a href="#">offset-scaled-log-variance</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**grandmaster-identity** *binary*

<b>Description</b>	The clockIdentity of the grandmaster clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number parent-ds grandmaster-identity binary</a>
<b>Tree</b>	<a href="#">grandmaster-identity</a>
<b>String Length</b>	8
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**grandmaster-priority1** *number*

<b>Description</b>	The priority1 attribute of the grandmaster clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number parent-ds grandmaster-priority1 number</a>
<b>Tree</b>	<a href="#">grandmaster-priority1</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**grandmaster-priority2** *number*

<b>Description</b>	The priority2 attribute of the grandmaster clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number parent-ds grandmaster-priority2 number</a>
<b>Tree</b>	<a href="#">grandmaster-priority2</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**parent-port-identity**

<b>Description</b>	The portIdentity of the port on the master
<b>Context</b>	<a href="#">system sync ptp instance instance-index number parent-ds parent-port-identity</a>
<b>Tree</b>	<a href="#">parent-port-identity</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**clock-identity** *binary*

<b>Description</b>	Identity of the parent clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number parent-ds parent-port-identity clock-identity binary</a>
<b>Tree</b>	<a href="#">clock-identity</a>
<b>String Length</b>	8
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**port-number** *number*

<b>Description</b>	Port number of the parent clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number parent-ds parent-port-identity port-number number</a>
<b>Tree</b>	<a href="#">port-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**protocol-address**

<b>Description</b>	The protocol address of the PTP Port that issues the Sync messages
<b>Context</b>	<a href="#">system sync ptp instance instance-index number parent-ds protocol-address</a>
<b>Tree</b>	<a href="#">protocol-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**mac-address** *string*

<b>Description</b>	The MAC address of the PTP port This is only valid for PTP over ethernet encapsulation.
<b>Context</b>	<a href="#">system sync ptp instance instance-index number parent-ds protocol-address mac-address string</a>
<b>Tree</b>	<a href="#">mac-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**network-protocol** *identityref*

<b>Description</b>	Protocol used by a PTP instance to transport PTP messages
<b>Context</b>	<a href="#">system sync ptp instance instance-index number parent-ds protocol-address network-protocol identityref</a>
<b>Tree</b>	<a href="#">network-protocol</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• <code>udp-ipv4</code> UDP on IPv4. Numeric value is 0001 hex</li> <li>• <code>udp-ipv6</code></li> </ul>

- UDP on IPv6. Numeric value is 0002 hex
- `ieee802-3`  
IEEE Std 802.3 (Ethernet). Numeric value is 0003 hex
- `devicenet`  
DeviceNet. Numeric value is 0004 hex
- `controlnet`  
ControlNet. Numeric value is 0005 hex
- `profinet`  
PROFINET. Numeric value is 0006 hex
- `otn`  
Optical Transport Network (OTN). Numeric value is 0007 hex
- `unknown`  
Unknown. Numeric value is FFFE hex

**Configurable** False  
**Platforms** 7220 IXR-D5

### **port-ds-gnss**

**Description** List of port data sets for the GNSS special PTP port  
**Context** [system sync ptp instance instance-index number port-ds-gnss](#)  
**Tree** [port-ds-gnss](#)  
**Configurable** False  
**Platforms** 7220 IXR-D5

### **best-master** *boolean*

**Description** Indicates if this peer was selected by the BMCA to be the best master  
**Context** [system sync ptp instance instance-index number port-ds-gnss best-master boolean](#)  
**Tree** [best-master](#)  
**Configurable** False  
**Platforms** 7220 IXR-D5

### **major-version-number** *number*

**Description** The PTP major version number in use on the port

<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-gnss major-version-number number</a>
<b>Tree</b>	<a href="#">major-version-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **minor-version-number** *number*

<b>Description</b>	The PTP minor version number in use on the port
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-gnss minor-version-number number</a>
<b>Tree</b>	<a href="#">minor-version-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **parent-clock** *boolean*

<b>Description</b>	Indicates if this peer is the current parent clock of this PTP clock May differ from best-master due to use of local GNSS as time source.
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-gnss parent-clock boolean</a>
<b>Tree</b>	<a href="#">parent-clock</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **port-state** *keyword*

<b>Description</b>	Current state associated with the port
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-gnss port-state keyword</a>
<b>Tree</b>	<a href="#">port-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• initializing The port is initializing its data sets, hardware, and communication facilities</li> <li>• faulty The port is in the fault state</li> <li>• disabled</li> </ul>

- The port is disabled and is not communicating PTP messages
- listening
  - The port is listening for an Announce message
- pre-master
  - The port is in the pre-master state
- master
  - The port is behaving as a master port
- passive
  - The port is in the passive state
- uncalibrated
  - A master port has been selected, but the port is still in the uncalibrated state
- slave
  - The port is synchronizing to the selected master port

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **ptp-port-number** *number*

<b>Description</b>	IEEE Std 1588 portNumber
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-gnss ptp-port-number number</a>
<b>Tree</b>	<a href="#">ptp-port-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **port-ds-interface-list** [port-index](#) *number*

<b>Description</b>	List of port data sets for interfaces
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number</a>
<b>Tree</b>	<a href="#">port-ds-interface-list</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**port-index** *number*

<b>Description</b>	<p>Index into the port-ds list</p> <p>This is not the PTP port number. Configurable ports use port indices 1 through 999 but there is a limit on the overall number of these configured ports based on the platform and software release.</p> <p>The data sets (i.e., information model) of IEEE Std 1588-2008 specify a member portDS.portIdentity, which uses a typed struct with members clockIdentity and portNumber.</p> <p>In this YANG data model, portIdentity is not modeled in the port-ds. However, its members are provided as follows: portIdentity.portNumber is provided as this ptp-port-number leaf in port-ds, and portIdentity.clockIdentity is provided as the clock-identity leaf in default-ds of the instance (i.e., ../default-ds/clock-identity).</p>
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number</a>
<b>Range</b>	1 to 999
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**admin-state** *keyword*

<b>Description</b>	The administrative state of the ptp port
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number admin-state keyword</a>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**announce-receipt-timeout** *number*

<b>Description</b>	<p>Sets the time limit for missed Announce packets before the master clock is deemed down</p> <p>This defines the number of Announce message intervals that must expire with no received Announce messages before declaring an ANNOUNCE_RECEIPT_TIMEOUT event. To change this setting, refer to announce-receipt-timeout in the Default data set.</p>
--------------------	---

<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number announce-receipt-timeout number</a>
<b>Tree</b>	<a href="#">announce-receipt-timeout</a>
<b>Range</b>	2 to 10
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**best-master** *boolean*

<b>Description</b>	Indicates if this interface was selected by the BMCA to be the best master
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number best-master boolean</a>
<b>Tree</b>	<a href="#">best-master</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**dest-mac** *keyword*

<b>Description</b>	Configure the MAC address associated with forwardable or non-forwardable
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number dest-mac keyword</a>
<b>Tree</b>	<a href="#">dest-mac</a>
<b>Default</b>	forwardable
<b>Options</b>	<ul style="list-style-type: none"> <li>forwardable The clock uses the forwardable MAC address: 01-1B-19-00-00-00</li> <li>non-forwardable The clock uses the non-forwardable MAC address: 01-80-C2-00-00-0E</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**local-priority** *number*

<b>Description</b>	Specifies the local priority of the ptp port
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number local-priority number</a>
<b>Tree</b>	<a href="#">local-priority</a>
<b>Range</b>	1 to 255

<b>Default</b>	128
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### log-announce-interval *number*

<b>Description</b>	The base-2 logarithm of the mean announceInterval Mean time interval between successive Announce messages. To change this setting, refer to log-announce-interval in the Default data set.
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number log-announce-interval number</a>
<b>Tree</b>	<a href="#">log-announce-interval</a>
<b>Range</b>	-3 to 4
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### log-min-delay-req-interval *number*

<b>Description</b>	The base-2 logarithm of the minDelayReqInterval The minimum permitted mean time interval between successive Delay_Req messages. The default log-min-delay-req-interval is defined by the profile. itug8275dot1: -4 (16 messages per second) itug8275dot2: -6 (64 messages per second)
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number log-min-delay-req-interval number</a>
<b>Tree</b>	<a href="#">log-min-delay-req-interval</a>
<b>Range</b>	-6 to 0
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### log-sync-interval *number*

<b>Description</b>	The base-2 logarithm of the mean SyncInterval for multicast messages The default log sync interval is defined by the profile. itug8275dot1: -4 (16 messages per second) itug8275dot2: -6 (64 messages per second)
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number log-sync-interval number</a>
<b>Tree</b>	<a href="#">log-sync-interval</a>

<b>Range</b>	-6 to 0
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### major-version-number *number*

<b>Description</b>	The PTP major version number in use on the port
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number major-version-number number</a>
<b>Tree</b>	<a href="#">major-version-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### master-only *boolean*

<b>Description</b>	Specifies the masterOnly attribute of the ptp port
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number master-only boolean</a>
<b>Tree</b>	<a href="#">master-only</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### minor-version-number *number*

<b>Description</b>	The PTP minor version number in use on the port
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number minor-version-number number</a>
<b>Tree</b>	<a href="#">minor-version-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### neighbor-count *number*

<b>Description</b>	The number of neighbors for the port
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number neighbor-count number</a>

<b>Tree</b>	<a href="#">neighbor-count</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **neighbor-list** [clock-identity](#) *binary* [port-number](#) *number*

<b>Description</b>	List of MAC address of all the neighbors of this port
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i> <a href="#">port-ds-interface-list port-index</a> <i>number</i> <a href="#">neighbor-list clock-identity</a> <i>binary</i> <a href="#">port-number</a> <i>number</i>
<b>Tree</b>	<a href="#">neighbor-list</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **clock-identity** *binary*

<b>Description</b>	The clockIdentity of this neighbor clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i> <a href="#">port-ds-interface-list port-index</a> <i>number</i> <a href="#">neighbor-list clock-identity</a> <i>binary</i> <a href="#">port-number</a> <i>number</i>
<b>String Length</b>	8
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **port-number** *number*

<b>Description</b>	The port number of this neighbor clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i> <a href="#">port-ds-interface-list port-index</a> <i>number</i> <a href="#">neighbor-list clock-identity</a> <i>binary</i> <a href="#">port-number</a> <i>number</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **mac-address** *string*

<b>Description</b>	Specifies the MAC address of this neighbor
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i> <a href="#">port-ds-interface-list port-index</a> <i>number</i> <a href="#">neighbor-list clock-identity</a> <i>binary</i> <a href="#">port-number</a> <i>number</i> <a href="#">mac-address</a> <i>string</i>
<b>Tree</b>	<a href="#">mac-address</a>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **rx-message-rate** *decimal-number*

<b>Description</b>	The receive message rate from this neighbor clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number neighbor-list clock-identity binary port-number number rx-message-rate decimal-number</a>
<b>Tree</b>	<a href="#">rx-message-rate</a>
<b>Units</b>	messages-per-second
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **parent-clock** *boolean*

<b>Description</b>	Indicates if this interface is the current parent clock of this PTP clock May differ from best-master due to use of local GNSS as time source.
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number parent-clock boolean</a>
<b>Tree</b>	<a href="#">parent-clock</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **port-state** *keyword*

<b>Description</b>	Current state associated with the port
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number port-state keyword</a>
<b>Tree</b>	<a href="#">port-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• initializing The port is initializing its data sets, hardware, and communication facilities</li> <li>• faulty The port is in the fault state</li> <li>• disabled The port is disabled and is not communicating PTP messages</li> </ul>

- listening  
The port is listening for an Announce message
- pre-master  
The port is in the pre-master state
- master  
The port is behaving as a master port
- passive  
The port is in the passive state
- uncalibrated  
A master port has been selected, but the port is still in the uncalibrated state
- slave  
The port is synchronizing to the selected master port

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **ptp-port-number** *number*

<b>Description</b>	IEEE Std 1588 portNumber This is the port-number that will appear in messages sent for this port-index.
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number ptp-port-number number</a>
<b>Tree</b>	<a href="#">ptp-port-number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **source**

<b>Description</b>	Source interface used by this PTP port
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number source</a>
<b>Tree</b>	<a href="#">source</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**interface** *reference*

<b>Description</b>	Enter the interface context
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number source interface reference</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Reference</b>	<a href="#">interface name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**sync0**

<b>Description</b>	Enable the sync0 context
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number source sync0</a>
<b>Tree</b>	<a href="#">sync0</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**statistics**

<b>Description</b>	Total messages for a specific PTP port
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**anno-msg-rx** *number*

<b>Description</b>	Specifies the number of announce messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics anno-msg-rx number</a>
<b>Tree</b>	<a href="#">anno-msg-rx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**anno-msg-tx** *number*

<b>Description</b>	Specifies the number of announce messages transmitted
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics anno-msg-tx number</a>
<b>Tree</b>	<a href="#">anno-msg-tx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**del-req-msg-rx** *number*

<b>Description</b>	Specifies the number of delay-req messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics del-req-msg-rx number</a>
<b>Tree</b>	<a href="#">del-req-msg-rx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**del-req-msg-tx** *number*

<b>Description</b>	Specifies the number of delay-req messages transmitted
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics del-req-msg-tx number</a>
<b>Tree</b>	<a href="#">del-req-msg-tx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**del-resp-msg-rx** *number*

<b>Description</b>	Specifies the number of delay-resp messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics del-resp-msg-rx number</a>
<b>Tree</b>	<a href="#">del-resp-msg-rx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**del-resp-msg-tx** *number*

<b>Description</b>	Specifies the number of delay-resp messages transmitted
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics del-resp-msg-tx number</a>
<b>Tree</b>	<a href="#">del-resp-msg-tx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**discards**

<b>Description</b>	Aggregate discard statistics for the PTP clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics discards</a>
<b>Tree</b>	<a href="#">discards</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**alternate-master** *number*

<b>Description</b>	Specifies the number of alternate master messages that were discarded
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics discards alternate-master number</a>
<b>Tree</b>	<a href="#">alternate-master</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**bad-domain** *number*

<b>Description</b>	Specifies the number of bad domain messages that were discarded
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics discards bad-domain number</a>
<b>Tree</b>	<a href="#">bad-domain</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**other number**

<b>Description</b>	Specifies the number of other messages that were discarded
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics discards other number</a>
<b>Tree</b>	<a href="#">other</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**out-of-sequence number**

<b>Description</b>	Specifies the number of out of sequence messages that were discarded
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics discards out-of-sequence number</a>
<b>Tree</b>	<a href="#">out-of-sequence</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**follow-up-msg-rx number**

<b>Description</b>	Specifies the number of follow-up messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics follow-up-msg-rx number</a>
<b>Tree</b>	<a href="#">follow-up-msg-rx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**follow-up-msg-tx number**

<b>Description</b>	Specifies the number of follow-up messages transmitted
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics follow-up-msg-tx number</a>
<b>Tree</b>	<a href="#">follow-up-msg-tx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**other-rx number**

<b>Description</b>	Specifies the number of other messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics other-rx number</a>
<b>Tree</b>	<a href="#">other-rx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**sync-msg-rx number**

<b>Description</b>	Specifies the number of sync messages received
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics sync-msg-rx number</a>
<b>Tree</b>	<a href="#">sync-msg-rx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**sync-msg-tx number**

<b>Description</b>	Specifies the number of sync messages transmitted
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface-list port-index number statistics sync-msg-tx number</a>
<b>Tree</b>	<a href="#">sync-msg-tx</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**time-properties-ds**

<b>Description</b>	The timeProperties data set of the clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number time-properties-ds</a>
<b>Tree</b>	<a href="#">time-properties-ds</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**current-utc-offset number**

<b>Description</b>	The offset between TAI and UTC
--------------------	--------------------------------

Only applies when the epoch of the PTP system is the PTP epoch in units of seconds (i.e. when `ptp-timescale` is `TRUE`). Otherwise, the value has no meaning.

<b>Context</b>	<a href="#">system sync ptp instance instance-index number time-properties-ds current-utc-offset number</a>
<b>Tree</b>	<a href="#">current-utc-offset</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **current-utc-offset-valid** *boolean*

<b>Description</b>	When set to true, the current UTC offset is valid
<b>Context</b>	<a href="#">system sync ptp instance instance-index number time-properties-ds current-utc-offset-valid boolean</a>
<b>Tree</b>	<a href="#">current-utc-offset-valid</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **frequency-traceable** *boolean*

<b>Description</b>	If true, the frequency determining the timescale is traceable to a primary reference
<b>Context</b>	<a href="#">system sync ptp instance instance-index number time-properties-ds frequency-traceable boolean</a>
<b>Tree</b>	<a href="#">frequency-traceable</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

### **leap59** *boolean*

<b>Description</b>	If true, the last minute of the current UTC day contains 59 seconds
<b>Context</b>	<a href="#">system sync ptp instance instance-index number time-properties-ds leap59 boolean</a>
<b>Tree</b>	<a href="#">leap59</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**leap61** *boolean*

<b>Description</b>	If true, the last minute of the current UTC day contains 61 seconds
<b>Context</b>	<a href="#">system sync ptp instance instance-index number time-properties-ds leap61</a> <i>boolean</i>
<b>Tree</b>	<a href="#">leap61</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**ptp-timescale** *boolean*

<b>Description</b>	If true clock timescale of the grandmaster is PTP; false it is ARB (arbitrary)
<b>Context</b>	<a href="#">system sync ptp instance instance-index number time-properties-ds ptp-timescale</a> <i>boolean</i>
<b>Tree</b>	<a href="#">ptp-timescale</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**time-source** *keyword*

<b>Description</b>	The source of time used by the grandmaster clock If a value is received that does not map to one of the enumerations, then the reserved value is used
<b>Context</b>	<a href="#">system sync ptp instance instance-index number time-properties-ds time-source</a> <i>keyword</i>
<b>Tree</b>	<a href="#">time-source</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• atomic-clock</li> <li>• gps</li> <li>• terrestrial-radio</li> <li>• ptp</li> <li>• ntp</li> <li>• hand-set</li> <li>• other</li> <li>• internal-oscillator</li> <li>• reserved</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**time-traceable** *boolean*

<b>Description</b>	If true, the timescale and the currentUtcOffset are traceable to a primary reference
<b>Context</b>	<a href="#">system sync ptp instance instance-index number time-properties-ds time-traceable</a> <i>boolean</i>
<b>Tree</b>	<a href="#">time-traceable</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D5

**ptp-profile** *keyword*

<b>Description</b>	Specifies the PTP profile mode for the PTP clock
<b>Context</b>	<a href="#">system sync ptp ptp-profile</a> <i>keyword</i>
<b>Tree</b>	<a href="#">ptp-profile</a>
<b>Default</b>	itug8275dot1
<b>Options</b>	<ul style="list-style-type: none"> <li>itug8275dot1 ITU-T G.8275.1 (2014) Profile</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**tls**

<b>Description</b>	Top-level container for TLS configuration and state
<b>Context</b>	<a href="#">system tls</a>
<b>Tree</b>	<a href="#">tls</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**server-profile** *name string*

<b>Description</b>	List of configured TLS server profiles
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i>
<b>Tree</b>	<a href="#">server-profile</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the TLS server-profile
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i>
<b>String Length</b>	1 to 247
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**authenticate-client** *boolean*

<b>Description</b>	Defines if the server should authenticate the identity of connecting clients using the trust anchor
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i> <a href="#">authenticate-client</a> <i>boolean</i>
<b>Tree</b>	<a href="#">authenticate-client</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**certificate** *string*

<b>Description</b>	Base64 encoded certificate to use with the private key This includes the '-----BEGIN CERTIFICATE-----' and '-----END CERTIFICATE-----' header and footer
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i> <a href="#">certificate</a> <i>string</i>
<b>Tree</b>	<a href="#">certificate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**certificate-revocation-list** *string*

<b>Description</b>	Base64 encoded certificate revocation list This includes the '-----BEGIN X509 CRL' and '-----END X509 CRL' header and footer
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i> <a href="#">certificate-revocation-list</a> <i>string</i>
<b>Tree</b>	<a href="#">certificate-revocation-list</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## certz

**Description** Information relating to the active certificate and bundle/s as provided via Certz  
State is provided by the gNSI Certz service, and can be changed using the gNSI.Certz.Rotate RPC

**Context** [system tls server-profile name string certz](#)

**Tree** [certz](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## certificate

**Description** State relating to the active certificate provided via Certz

**Context** [system tls server-profile name string certz certificate](#)

**Tree** [certificate](#)

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## created-on *string*

**Description** The created on timestamp as provided by the gNSI client at the time of uploading the policy  
The maps to the created\_on field within a Entity message in the Certz protobuf.

**Context** [system tls server-profile name string certz certificate created-on string](#)

**Tree** [created-on](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**version string**

<b>Description</b>	The version string as provided by the gNSI client at the time of uploading the certificate or bundle/s  The maps to the version field within a Entity message in the Certz protobuf.
<b>Context</b>	<a href="#">system tls server-profile name string certz certificate version string</a>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**crl**

<b>Description</b>	State relating to the active certificate revocation list provided via Certz  The list of certificates provided will not be used to validate mTLS or servers, even if those certificates exist within the trust anchor.
<b>Context</b>	<a href="#">system tls server-profile name string certz crl</a>
<b>Tree</b>	<a href="#">crl</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**created-on string**

<b>Description</b>	The created on timestamp as provided by the gNSI client at the time of uploading the policy  The maps to the created_on field within a Entity message in the Certz protobuf.
<b>Context</b>	<a href="#">system tls server-profile name string certz crl created-on string</a>
<b>Tree</b>	<a href="#">created-on</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**version string**

<b>Description</b>	The version string as provided by the gNSI client at the time of uploading the certificate or bundle/s The maps to the version field within a Entity message in the Certz protobuf.
<b>Context</b>	<a href="#">system tls server-profile name string certz crl version string</a>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ssl-profile-id string**

<b>Description</b>	The ID of this gRPC server's SSL profile as used by the gNSI Certz service
<b>Context</b>	<a href="#">system tls server-profile name string certz ssl-profile-id string</a>
<b>Tree</b>	<a href="#">ssl-profile-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**trust-anchor**

<b>Description</b>	State relating to the active trust anchor provided via Certz This is equivalent to the certificate authority bundle, and is the list of certificates used to validate clients in mTLS, and to validate servers in outbound TLS.
<b>Context</b>	<a href="#">system tls server-profile name string certz trust-anchor</a>
<b>Tree</b>	<a href="#">trust-anchor</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**created-on string**

<b>Description</b>	The created on timestamp as provided by the gNSI client at the time of uploading the policy
--------------------	---

The maps to the `created_on` field within a Entity message in the Certz protobuf.

<b>Context</b>	<a href="#">system tls server-profile name string certz trust-anchor created-on string</a>
<b>Tree</b>	<a href="#">created-on</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **version string**

<b>Description</b>	The version string as provided by the gNSI client at the time of uploading the certificate or bundle/s The maps to the <code>version</code> field within a Entity message in the Certz protobuf.
<b>Context</b>	<a href="#">system tls server-profile name string certz trust-anchor version string</a>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **cipher-list identityref**

<b>Description</b>	List of ciphers to use when negotiating TLS 1.2 with clients TLS 1.3 cipher suites are always enabled: <code>tls_aes_256_gcm_sha384</code> , <code>tls_aes_128_gcm_sha256</code> , <code>tls_chacha20_poly1305_sha256</code>
<b>Context</b>	<a href="#">system tls server-profile name string cipher-list identityref</a>
<b>Tree</b>	<a href="#">cipher-list</a>
<b>Default</b>	<code>ecdhe-ecdsa-aes256-gcm-sha384</code>
<b>Options</b>	<ul style="list-style-type: none"> <li><code>ecdhe-rsa-aes256-gcm-sha384</code></li> <li><code>ecdhe-ecdsa-aes256-gcm-sha384</code></li> <li><code>ecdhe-rsa-aes256-sha384</code></li> <li><code>ecdhe-ecdsa-aes256-sha384</code></li> <li><code>ecdhe-rsa-aes256-sha</code></li> <li><code>ecdhe-ecdsa-aes256-sha</code></li> <li><code>dhe-dss-aes256-gcm-sha384</code></li> <li><code>dhe-rsa-aes256-gcm-sha384</code></li> </ul>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### dynamic *boolean*

<b>Description</b>	Defines if the profile was dynamically created by service (for example gNSI Authz/Certz)
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i> <a href="#">dynamic</a> <i>boolean</i>
<b>Tree</b>	<a href="#">dynamic</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### key *string*

<b>Description</b>	Base64 encoded key to use with the server certificate This includes the '-----BEGIN PRIVATE KEY-----', and '-----END PRIVATE KEY-----' header and footer The value is hashed, and only the hashed value is kept
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i> <a href="#">key</a> <i>string</i>
<b>Tree</b>	<a href="#">key</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### trust-anchor *string*

<b>Description</b>	Base64 encoded certificate to use as a trust anchor This includes the '-----BEGIN CERTIFICATE-----' and '-----END CERTIFICATE-----' header and footer
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i> <a href="#">trust-anchor</a> <i>string</i>

<b>Tree</b>	<a href="#">trust-anchor</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**trace-options** *keyword*

<b>Description</b>	Management server trace options
<b>Context</b>	<a href="#">system trace-options</a> <i>keyword</i>
<b>Tree</b>	<a href="#">trace-options</a>
<b>Options</b>	<ul style="list-style-type: none"><li>• request</li><li>• response</li><li>• common</li></ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## 12.1 acl Descriptions

### acl

<b>Description</b>	Top level enclosing container for ACL operational tools
<b>Context</b>	<a href="#">acl</a>
<b>Tree</b>	<a href="#">acl</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### acl-filter *name string type keyword*

<b>Description</b>	List MAC, IPv4, IPv6 ACL filter policies
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter</a> <i>name string type keyword</i>
<b>Tree</b>	<a href="#">acl-filter</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### name *string*

<b>Description</b>	Reference to the ACL filter policy name
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter</a> <i>name string type keyword</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### type *keyword*

<b>Description</b>	Defines the type of ACL filter: ipv4: IPv4 ACL filter ipv6: IPv6 ACL filter mac: MAC ACL filter
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter</a> <i>name string type keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ipv4</li> <li>• ipv6</li> <li>• mac</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**entry** *sequence-id number*

<b>Description</b>	List of filter rules.
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string type keyword</i> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**sequence-id** *number*

<b>Description</b>	A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string type keyword</i> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string type keyword</i> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all aggregate and per-interface statistics associated with this particular entry to zero
<b>Context</b>	<a href="#">acl</a> <a href="#">acl-filter name</a> <i>string type keyword</i> <a href="#">entry</a> <a href="#">sequence-id</a> <i>number</i> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
--------------------	------------------------------

<b>Context</b>	<a href="#">acl acl-filter name string type keyword statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Reset all statistics of all entries of the filter to zero
<b>Context</b>	<a href="#">acl acl-filter name string type keyword statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## interface [interface-id string](#)

<b>Description</b>	List of interfaces and subinterfaces referencing ACL filters
<b>Context</b>	<a href="#">acl interface interface-id string</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## interface-id [string](#)

<b>Description</b>	Identifier for the interface or subinterface
<b>Context</b>	<a href="#">acl interface interface-id string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## input

<b>Description</b>	Enter the input context
<b>Context</b>	<a href="#">acl interface interface-id string input</a>
<b>Tree</b>	<a href="#">input</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**acl-filter** *name string type keyword*

<b>Description</b>	List MAC, IPv4, IPv6 ACL filter policies
<b>Context</b>	<a href="#">acl interface interface-id string input acl-filter name string type keyword</a>
<b>Tree</b>	<a href="#">acl-filter</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Reference to the ACL filter policy name
<b>Context</b>	<a href="#">acl interface interface-id string input acl-filter name string type keyword</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	Defines the type of ACL filter: ipv4: IPv4 ACL filter ipv6: IPv6 ACL filter mac: MAC ACL filter
<b>Context</b>	<a href="#">acl interface interface-id string input acl-filter name string type keyword</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ipv4</li> <li>• ipv6</li> <li>• mac</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**entry** *sequence-id number*

<b>Description</b>	List of filter rules.
<b>Context</b>	<a href="#">acl interface interface-id string input acl-filter name string type keyword entry sequence-id number</a>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**sequence-id** *number*

<b>Description</b>	A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i> <a href="#">input acl-filter name</a> <i>string</i> <a href="#">type keyword entry sequence-id</a> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i> <a href="#">input acl-filter name</a> <i>string</i> <a href="#">type keyword entry sequence-id</a> <i>number</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all aggregate and per-interface statistics associated with this particular entry to zero
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i> <a href="#">input acl-filter name</a> <i>string</i> <a href="#">type keyword entry sequence-id</a> <i>number</i> <a href="#">statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i> <a href="#">input acl-filter name</a> <i>string</i> <a href="#">type keyword statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all statistics of all entries of the filter to zero
<b>Context</b>	<a href="#">acl interface interface-id</a> <i>string</i> <a href="#">input acl-filter name</a> <i>string</i> <a href="#">type keyword</a> <a href="#">statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>

## 13.1 bfd Descriptions

### bfd

<b>Description</b>	Top-level grouping for bfd operational commands
<b>Context</b>	<a href="#">bfd</a>
<b>Tree</b>	<a href="#">bfd</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### micro-bfd-sessions

<b>Description</b>	Enter the micro-bfd-sessions context
<b>Context</b>	<a href="#">bfd micro-bfd-sessions</a>
<b>Tree</b>	<a href="#">micro-bfd-sessions</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### lag-interface *name string*

<b>Description</b>	Lag interface against which the clear command is to be executed
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name string</a>
<b>Tree</b>	<a href="#">lag-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### name *string*

<b>Description</b>	Reference ID for associated lag interface Example: lag1 (Reference Interface lag1).
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name string</a>
<b>String Length</b>	3 to 20

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### member-interface *name string*

<b>Description</b>	List of member-interfaces to be cleared
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name string member-interface name string</a>
<b>Tree</b>	<a href="#">member-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### name *string*

<b>Description</b>	Reference ID for associated interface Example: ethernet-2/1 (Reference Interface ethernet-2/1).
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name string member-interface name string</a>
<b>String Length</b>	3 to 20
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### clear

<b>Description</b>	Clear the associated micro-BFD sessions Clearing a micro-BFD sessions causes the associated sessions to transition to a Down state
<b>Context</b>	<a href="#">bfd micro-bfd-sessions lag-interface name string member-interface name string clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">bfd micro-bfd-sessions statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## lag-interface *name string*

<b>Description</b>	Lag interface against which the clear command is to be executed
<b>Context</b>	<a href="#">bfd micro-bfd-sessions statistics lag-interface name string</a>
<b>Tree</b>	<a href="#">lag-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## name *string*

<b>Description</b>	Reference ID for associated lag interface Example: lag1 (Reference Interface lag1).
<b>Context</b>	<a href="#">bfd micro-bfd-sessions statistics lag-interface name string</a>
<b>String Length</b>	3 to 20
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## member-interface *name string*

<b>Description</b>	List of member-interfaces to be cleared
<b>Context</b>	<a href="#">bfd micro-bfd-sessions statistics lag-interface name string member-interface name string</a>
<b>Tree</b>	<a href="#">member-interface</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **name** *string*

**Description** Reference ID for associated interface Example: ethernet-2/1 (Reference Interface ethernet-2/1).

**Context** [bfd micro-bfd-sessions statistics lag-interface name](#) *string* [member-interface name](#) *string*

**String Length** 3 to 20

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **clear**

**Description** Clear the BFD statistics associated with the micro-BFD sessions

**Context** [bfd micro-bfd-sessions statistics lag-interface name](#) *string* [member-interface name](#) *string* **clear**

**Tree** [clear](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **peer local-discriminator** *number*

**Description** The list of local-discriminators associated with BFD

**Context** [bfd peer local-discriminator](#) *number*

**Tree** [peer](#)

**Configurable** True

**Platforms** Supported on all platforms

### **local-discriminator** *number*

**Description** BFD session local discriminator

**Context** [bfd peer local-discriminator](#) *number*

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear the associated BFD sessions Clearing a BFD sessions causes the associated BFD sessions ot transition to a Down state
<b>Context</b>	<a href="#">bfd peer local-discriminator</a> <i>number</i> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">bfd statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**peer [local-discriminator](#) *number***

<b>Description</b>	The list of local-discriminators associated with BFD
<b>Context</b>	<a href="#">bfd statistics peer local-discriminator</a> <i>number</i>
<b>Tree</b>	<a href="#">peer</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**local-discriminator *number***

<b>Description</b>	BFD session local discriminator
<b>Context</b>	<a href="#">bfd statistics peer local-discriminator</a> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear the BFD statistics associated with the BFD sessions
<b>Context</b>	<a href="#">bfd statistics peer local-discriminator</a> <i>number clear</i>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True

## 14.1 interface Descriptions

### interface *name string*

<b>Description</b>	The list of named interfaces on the device.
<b>Context</b>	<a href="#">interface name string</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### name *string*

<b>Description</b>	References the configured name of the interface
<b>Context</b>	<a href="#">interface name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### ethernet

<b>Description</b>	Enter the ethernet context
<b>Context</b>	<a href="#">interface name string ethernet</a>
<b>Tree</b>	<a href="#">ethernet</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">interface name string ethernet statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Clear interface ethernet statistics
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## include-members

<b>Description</b>	Causes the member link ethernet statistics to also be cleared
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">ethernet statistics clear include-members</a>
<b>Tree</b>	<a href="#">include-members</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## packet-link-qualification

<b>Description</b>	Enter the packet-link-qualification context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">packet-link-qualification</a>
<b>Tree</b>	<a href="#">packet-link-qualification</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## cancel

<b>Description</b>	Cancel the packet link qualification and delete the results
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">packet-link-qualification cancel</a>
<b>Tree</b>	<a href="#">cancel</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**id string**

<b>Description</b>	Packet link qualification test ID
<b>Context</b>	<a href="#">interface name string</a> <a href="#">packet-link-qualification cancel id string</a>
<b>Tree</b>	<a href="#">id</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**start**

<b>Description</b>	Start packet link qualification
<b>Context</b>	<a href="#">interface name string</a> <a href="#">packet-link-qualification start</a>
<b>Tree</b>	<a href="#">start</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**id string**

<b>Description</b>	Packet link qualification test ID
<b>Context</b>	<a href="#">interface name string</a> <a href="#">packet-link-qualification start id string</a>
<b>Tree</b>	<a href="#">id</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**qualification-profile string**

<b>Description</b>	Packet link qualification profile name
<b>Context</b>	<a href="#">interface name string</a> <a href="#">packet-link-qualification start qualification-profile string</a>
<b>Tree</b>	<a href="#">qualification-profile</a>
<b>String Length</b>	1 to 255

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## resource

<b>Description</b>	Enable the resource context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">resource</a>
<b>Tree</b>	<a href="#">resource</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## retry

<b>Description</b>	Causes the specified lag to be reevaluate for missing system resources
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">resource</a> <a href="#">retry</a>
<b>Tree</b>	<a href="#">retry</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Clear interface statistics
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">clear</a>

<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### include-members

<b>Description</b>	Causes the member link statistics to also be cleared
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">statistics clear</a> <a href="#">include-members</a>
<b>Tree</b>	<a href="#">include-members</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### subinterface [index number](#)

<b>Description</b>	The list of subinterfaces (logical interfaces) associated with a physical interface
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index number</a>
<b>Tree</b>	<a href="#">subinterface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### [index number](#)

<b>Description</b>	The index of the subinterface, or logical interface number
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index number</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### bridge-table

<b>Description</b>	Enter the bridge-table context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index number</a> <a href="#">bridge-table</a>
<b>Tree</b>	<a href="#">bridge-table</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## mac-duplication

<b>Description</b>	Enable the mac-duplication context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">bridge-table mac-duplication</a>
<b>Tree</b>	<a href="#">mac-duplication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## delete-all-macs

<b>Description</b>	Delete all learnt mac entries.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">bridge-table mac-duplication delete-all-macs</a>
<b>Tree</b>	<a href="#">delete-all-macs</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## duplicate-entries

<b>Description</b>	Enter the duplicate-entries context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">bridge-table mac-duplication duplicate-entries</a>
<b>Tree</b>	<a href="#">duplicate-entries</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## mac [address](#) *string*

<b>Description</b>	macs learnt on the bridging instance
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">bridge-table mac-duplication duplicate-entries mac address</a> <i>string</i>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**address string**

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">duplicate-entries</a> <a href="#">mac address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**delete-mac**

<b>Description</b>	delete the duplicate mac address.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">duplicate-entries</a> <a href="#">mac address</a> <i>string</i> <a href="#">delete-mac</a>
<b>Tree</b>	<a href="#">delete-mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mac-learning**

<b>Description</b>	Enable the mac-learning context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a>
<b>Tree</b>	<a href="#">mac-learning</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**delete-all-macs**

<b>Description</b>	Delete all learnt mac entries.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">delete-all-macs</a>
<b>Tree</b>	<a href="#">delete-all-macs</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**learnt-entries**

<b>Description</b>	Enter the learnt-entries context
--------------------	----------------------------------

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">learnt-entries</a>
<b>Tree</b>	<a href="#">learnt-entries</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mac** [address](#) *string*

<b>Description</b>	macs learnt on the bridging instance
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">learnt-entries</a> <a href="#">mac address</a> <i>string</i>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**address** *string*

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">learnt-entries</a> <a href="#">mac address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**delete-mac**

<b>Description</b>	delete the learnt mac address.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">learnt-entries</a> <a href="#">mac address</a> <i>string</i> <a href="#">delete-mac</a>
<b>Tree</b>	<a href="#">delete-mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ipv4**

<b>Description</b>	Enter the ipv4 context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv4</a>
<b>Tree</b>	<a href="#">ipv4</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### address *ip-prefix string*

<b>Description</b>	Enter the address list instance
<b>Context</b>	<a href="#">interface name string subinterface index number ipv4 address ip-prefix string</a>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### ip-prefix *string*

<b>Description</b>	Enter the ip-prefix context
<b>Context</b>	<a href="#">interface name string subinterface index number ipv4 address ip-prefix string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### arp

<b>Description</b>	Enable the arp context
<b>Context</b>	<a href="#">interface name string subinterface index number ipv4 arp</a>
<b>Tree</b>	<a href="#">arp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### delete-dynamic

<b>Description</b>	Delete all dynamic ARP entries
<b>Context</b>	<a href="#">interface name string subinterface index number ipv4 arp delete-dynamic</a>
<b>Tree</b>	<a href="#">delete-dynamic</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**neighbor** [ipv4-address](#) *string*

<b>Description</b>	Enter the neighbor list instance
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp neighbor ipv4-address</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ipv4-address** *string*

<b>Description</b>	IPv4 address resolved by the ARP entry
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp neighbor ipv4-address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**delete-dynamic**

<b>Description</b>	Delete one specific dynamic ARP entry
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp neighbor ipv4-address</a> <i>string</i> <a href="#">delete-dynamic</a>
<b>Tree</b>	<a href="#">delete-dynamic</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**virtual-ipv4-discovery**

<b>Description</b>	Enter the virtual-ipv4-discovery context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface index</a> <i>number</i> <a href="#">ipv4 arp virtual-ipv4-discovery</a>
<b>Tree</b>	<a href="#">virtual-ipv4-discovery</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**address** [ipv4-address](#) *string*

<b>Description</b>	The list of Virtual IP addresses
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <a href="#">number</a> <a href="#">ipv4</a> <a href="#">arp</a> <a href="#">virtual-ipv4-discovery</a> <a href="#">address</a> <a href="#">ipv4-address</a> <i>string</i>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ipv4-address** *string*

<b>Description</b>	The virtual IPv4 address.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <a href="#">number</a> <a href="#">ipv4</a> <a href="#">arp</a> <a href="#">virtual-ipv4-discovery</a> <a href="#">address</a> <a href="#">ipv4-address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <a href="#">number</a> <a href="#">ipv4</a> <a href="#">arp</a> <a href="#">virtual-ipv4-discovery</a> <a href="#">address</a> <a href="#">ipv4-address</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**clear**

<b>Description</b>	Clears the statistics for the Virtual IP addresses
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <a href="#">number</a> <a href="#">ipv4</a> <a href="#">arp</a> <a href="#">virtual-ipv4-discovery</a> <a href="#">address</a> <a href="#">ipv4-address</a> <i>string</i> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## statistics

**Description** Enter the statistics context

**Context** [interface name](#) *string* [subinterface](#) *index* *number* [ipv4 arp virtual-ipv4-discovery](#) [statistics](#)

**Tree** [statistics](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## clear

**Description** Clears the global statistics for all the Virtual IP addresses

**Context** [interface name](#) *string* [subinterface](#) *index* *number* [ipv4 arp virtual-ipv4-discovery](#) [statistics](#) [clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## dhcp-relay

**Description** Enable the dhcp-relay context

**Context** [interface name](#) *string* [subinterface](#) *index* *number* [ipv4 dhcp-relay](#)

**Tree** [dhcp-relay](#)

**Configurable** True

**Platforms** Supported on all platforms

## statistics

**Description** Enter the statistics context

**Context** [interface name](#) *string* [subinterface](#) *index* *number* [ipv4 dhcp-relay](#) [statistics](#)

<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Enter the clear context
<b>Context</b>	<a href="#">interface name string subinterface index number ipv4 dhcp-relay statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ipv6**

<b>Description</b>	Enter the ipv6 context
<b>Context</b>	<a href="#">interface name string subinterface index number ipv6</a>
<b>Tree</b>	<a href="#">ipv6</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**address ip-prefix string**

<b>Description</b>	Enter the address list instance
<b>Context</b>	<a href="#">interface name string subinterface index number ipv6 address ip-prefix string</a>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ip-prefix string**

<b>Description</b>	Enter the ip-prefix context
<b>Context</b>	<a href="#">interface name string subinterface index number ipv6 address ip-prefix string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## dhcp-relay

<b>Description</b>	Enable the dhcp-relay context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6</a> <a href="#">dhcp-relay</a>
<b>Tree</b>	<a href="#">dhcp-relay</a>

## neighbor-discovery

<b>Description</b>	Enable the neighbor-discovery context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6</a> <a href="#">neighbor-discovery</a>
<b>Tree</b>	<a href="#">neighbor-discovery</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## delete-dynamic

<b>Description</b>	Delete all dynamic neighbor cache entries
--------------------	---

<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery delete-dynamic</a>
<b>Tree</b>	<a href="#">delete-dynamic</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **neighbor ipv6-address** *string*

<b>Description</b>	Enter the neighbor list instance
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery neighbor ipv6-address</a> <i>string</i>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **ipv6-address** *string*

<b>Description</b>	IPv6 address resolved by the ND cache entry
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery neighbor ipv6-address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **delete-dynamic**

<b>Description</b>	Delete one specific dynamic neighbor cache entry
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery neighbor ipv6-address</a> <i>string</i> <a href="#">delete-dynamic</a>
<b>Tree</b>	<a href="#">delete-dynamic</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **virtual-ipv6-discovery**

<b>Description</b>	Enter the virtual-ipv6-discovery context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <a href="#">index</a> <i>number</i> <a href="#">ipv6 neighbor-discovery virtual-ipv6-discovery</a>

<b>Tree</b>	<a href="#">virtual-ipv6-discovery</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### address [ipv6-address](#) *string*

<b>Description</b>	The list of Virtual IP addresses
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6 neighbor-discovery</a> <a href="#">virtual-ipv6-discovery</a> <a href="#">address</a> <a href="#">ipv6-address</a> <i>string</i>
<b>Tree</b>	<a href="#">address</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ipv6-address *string*

<b>Description</b>	The virtual IPv6 address.
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6 neighbor-discovery</a> <a href="#">virtual-ipv6-discovery</a> <a href="#">address</a> <a href="#">ipv6-address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">interface name</a> <i>string</i> <a href="#">subinterface</a> <i>index</i> <i>number</i> <a href="#">ipv6 neighbor-discovery</a> <a href="#">virtual-ipv6-discovery</a> <a href="#">address</a> <a href="#">ipv6-address</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True

## 15.1 network-instance Descriptions

### network-instance *name string*

<b>Description</b>	Enter the network-instance list instance
<b>Context</b>	<a href="#">network-instance name string</a>
<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### name *string*

<b>Description</b>	A unique name identifying the network instance
<b>Context</b>	<a href="#">network-instance name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### bridge-table

<b>Description</b>	bridge-table
<b>Context</b>	<a href="#">network-instance name string bridge-table</a>
<b>Tree</b>	<a href="#">bridge-table</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### mac-duplication

<b>Description</b>	Enable the mac-duplication context
<b>Context</b>	<a href="#">network-instance name string bridge-table mac-duplication</a>
<b>Tree</b>	<a href="#">mac-duplication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**delete-macs-type** *keyword*

<b>Description</b>	Type of duplicate mac entries to delete.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">delete-macs-type keyword</a>
<b>Tree</b>	<a href="#">delete-macs-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• all</li> <li>• blackhole-only</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**duplicate-entries**

<b>Description</b>	Enter the duplicate-entries context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">duplicate-entries</a>
<b>Tree</b>	<a href="#">duplicate-entries</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mac** [address](#) *string*

<b>Description</b>	macs learnt on the bridging instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">duplicate-entries</a> <a href="#">mac address</a> <i>string</i>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**address** *string*

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">duplicate-entries</a> <a href="#">mac address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**delete-mac**

<b>Description</b>	delete the duplicate mac address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-duplication</a> <a href="#">duplicate-entries</a> <a href="#">mac address</a> <i>string</i> <a href="#">delete-mac</a>
<b>Tree</b>	<a href="#">delete-mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mac-learning**

<b>Description</b>	Enable the mac-learning context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a>
<b>Tree</b>	<a href="#">mac-learning</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**delete-all-macs**

<b>Description</b>	Delete all learnt mac entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">delete-all-macs</a>
<b>Tree</b>	<a href="#">delete-all-macs</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**learnt-entries**

<b>Description</b>	Enter the learnt-entries context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">learnt-entries</a>
<b>Tree</b>	<a href="#">learnt-entries</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mac [address](#) *string***

<b>Description</b>	macs learnt on the bridging instance
--------------------	--------------------------------------

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">learnt-entries</a> <a href="#">mac address</a> <i>string</i>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### address *string*

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">learnt-entries</a> <a href="#">mac address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### delete-mac

<b>Description</b>	delete the learnt mac address.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">mac-learning</a> <a href="#">learnt-entries</a> <a href="#">mac address</a> <i>string</i> <a href="#">delete-mac</a>
<b>Tree</b>	<a href="#">delete-mac</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### proxy-arp

<b>Description</b>	Enable the proxy-arp context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a>
<b>Tree</b>	<a href="#">proxy-arp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### duplicate

<b>Description</b>	Enable the duplicate context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">duplicate</a>
<b>Tree</b>	<a href="#">duplicate</a>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## delete-all

<b>Description</b>	Delete all entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">duplicate</a> <a href="#">delete-all</a>
<b>Tree</b>	<a href="#">delete-all</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## entry *address string*

<b>Description</b>	proxy-arp entry to delete
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">duplicate</a> <a href="#">entry</a> <a href="#">address</a> <i>string</i>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## address *string*

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">duplicate</a> <a href="#">entry</a> <a href="#">address</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## delete-ip

<b>Description</b>	delete the proxy entry.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">duplicate</a> <a href="#">entry</a> <a href="#">address</a> <i>string</i> <a href="#">delete-ip</a>
<b>Tree</b>	<a href="#">delete-ip</a>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## dynamic

<b>Description</b>	Enable the dynamic context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">dynamic</a>
<b>Tree</b>	<a href="#">dynamic</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## delete-all

<b>Description</b>	Delete all entries.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">dynamic</a> <a href="#">delete-all</a>
<b>Tree</b>	<a href="#">delete-all</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## entry [address](#) *string*

<b>Description</b>	proxy-arp entry to delete
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">dynamic</a> <a href="#">entry</a> <a href="#">address</a> <i>string</i>
<b>Tree</b>	<a href="#">entry</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## [address](#) *string*

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">bridge-table</a> <a href="#">proxy-arp</a> <a href="#">dynamic</a> <a href="#">entry</a> <a href="#">address</a> <i>string</i>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## delete-ip

**Description** delete the proxy entry.

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-arp](#) [dynamic entry](#) [address](#) *string* [delete-ip](#)

**Tree** [delete-ip](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## proxy-nd

**Description** Enable the proxy-nd context

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-nd](#)

**Tree** [proxy-nd](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## duplicate

**Description** Enable the duplicate context

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-nd](#) [duplicate](#)

**Tree** [duplicate](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## delete-all

**Description** Delete all entries.

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-nd](#) [duplicate](#) [delete-all](#)

**Tree** [delete-all](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### entry *address string*

**Description** proxy-nd entry to delete

**Context** [network-instance name string](#) [bridge-table proxy-nd duplicate entry address string](#)

**Tree** [entry](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### address *string*

**Description** Enter the address context

**Context** [network-instance name string](#) [bridge-table proxy-nd duplicate entry address string](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### delete-ip

**Description** delete the proxy entry.

**Context** [network-instance name string](#) [bridge-table proxy-nd duplicate entry address string delete-ip](#)

**Tree** [delete-ip](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### dynamic

**Description** Enable the dynamic context

**Context** [network-instance name string](#) [bridge-table proxy-nd dynamic](#)

**Tree** [dynamic](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## delete-all

**Description** Delete all entries.

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-nd](#) [dynamic](#) [delete-all](#)

**Tree** [delete-all](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## entry [address](#) *string*

**Description** proxy-nd entry to delete

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-nd](#) [dynamic](#) [entry](#) [address](#) *string*

**Tree** [entry](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## address *string*

**Description** Enter the address context

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-nd](#) [dynamic](#) [entry](#) [address](#) *string*

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## delete-ip

**Description** delete the proxy entry.

**Context** [network-instance name](#) *string* [bridge-table](#) [proxy-nd](#) [dynamic](#) [entry](#) [address](#) *string* [delete-ip](#)

**Tree** [delete-ip](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## icmp

**Description** Enter the icmp context

**Context** [network-instance name](#) *string* [icmp](#)

**Tree** [icmp](#)

**Configurable** True

**Platforms** Supported on all platforms

## statistics

**Description** ICMP version 4 statistics

**Context** [network-instance name](#) *string* [icmp](#) [statistics](#)

**Tree** [statistics](#)

**Configurable** True

**Platforms** Supported on all platforms

## clear

**Description** Resets all the YANG state counters under network-instance/icmp/statistics to zero

**Context** [network-instance name](#) *string* [icmp](#) [statistics](#) [clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** Supported on all platforms

## icmp6

**Description** Enter the icmp6 context

**Context** [network-instance name](#) *string* [icmp6](#)

**Tree** [icmp6](#)

**Configurable** True

**Platforms** Supported on all platforms

**statistics**

<b>Description</b>	ICMP version 6 statistics
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp6 statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Resets all the YANG state counters under network-instance/icmp6/statistics to zero
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">icmp6 statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**protocols**

<b>Description</b>	The routing protocols that are enabled for this network-instance.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols</a>
<b>Tree</b>	<a href="#">protocols</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**bgp**

<b>Description</b>	Enable the bgp context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp</a>
<b>Tree</b>	<a href="#">bgp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**group** [group-name](#) *string*

<b>Description</b>	Enter the group list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group</a> <a href="#">group-name</a> <i>string</i>

<b>Tree</b>	<a href="#">group</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**group-name** *string*

<b>Description</b>	The configured name of the peer group
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**reset-peer**

<b>Description</b>	Enable the reset-peer context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">reset-peer</a>
<b>Tree</b>	<a href="#">reset-peer</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**peer-as** *number*

<b>Description</b>	Hard reset only BGP peers in the peer-group that have the specified peer-AS number, whether they are configured peers or dynamic peers
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">reset-peer peer-as</a> <i>number</i>
<b>Tree</b>	<a href="#">peer-as</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**soft-clear**

<b>Description</b>	Enable the soft-clear context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">soft-clear</a>

<b>Tree</b>	<a href="#">soft-clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **peer-as** *number*

<b>Description</b>	Soft reset only BGP peers in the peer-group that have the specified peer-AS number, whether they are configured peers or dynamic peers
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">soft-clear peer-as</a> <i>number</i>
<b>Tree</b>	<a href="#">peer-as</a>
<b>Range</b>	1 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **route-refresh** *identityref*

<b>Description</b>	The address family to refresh  This is encoded in the ROUTE_REFRESH message. By default all families are refreshed.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols bgp group group-name</a> <i>string</i> <a href="#">soft-clear route-refresh</a> <i>identityref</i>
<b>Tree</b>	<a href="#">route-refresh</a>

<b>Options</b>	<ul style="list-style-type: none"> <li>• <a href="#">ipv4-unicast</a> Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1)</li> <li>• <a href="#">ipv6-unicast</a> Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1)</li> <li>• <a href="#">l3vpn-ipv4-unicast</a> VPN-IPv4 unicast address family (AFI = 1, SAFI = 128)</li> <li>• <a href="#">l3vpn-ipv6-unicast</a> VPN-IPv6 unicast address family (AFI = 2, SAFI = 128)</li> <li>• <a href="#">ipv4-labeled-unicast</a> Labeled IPv4 unicast routes (AFI 1, SAFI 4)</li> <li>• <a href="#">ipv6-labeled-unicast</a> Labeled IPv6 unicast routes (AFI 2, SAFI 4)</li> <li>• <a href="#">evpn</a> EVPN routes (AFI = 25, SAFI = 70)</li> <li>• <a href="#">route-target</a> Route target constraint routes (AFI 1, SAFI 132)</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## isis

<b>Description</b>	Enable the isis context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis</a>
<b>Tree</b>	<a href="#">isis</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## instance [name](#) *string*

<b>Description</b>	List of IS-IS protocol instances associated with this network-instance. Only a single instance is supported for now
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i>

<b>Tree</b>	<a href="#">instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	1

**name** *string*

<b>Description</b>	The name of the IS-IS instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface** [interface-name](#) *string*

<b>Description</b>	List of IS-IS interfaces
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**interface-name** *string*

<b>Description</b>	Reference to a specific subinterface of the form <interface-name>.<subinterface-index>
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**adjacencies**

<b>Description</b>	Enter the adjacencies context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols isis instance name</a> <i>string</i> <a href="#">interface interface-name</a> <i>string</i> <a href="#">adjacencies</a>

<b>Tree</b>	<a href="#">adjacencies</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Reset all of the adjacencies on this interface
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string interface interface-name string adjacencies clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## ldp-synchronization

<b>Description</b>	IS-IS LDP-IGP synchronisation
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string ldp-synchronization</a>
<b>Tree</b>	<a href="#">ldp-synchronization</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## exit

<b>Description</b>	Advertise the normal metric for all IS-IS interfaces, even if some are configured for LDP synchronization and ISIS is not in sync with LDP on these interfaces
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string ldp-synchronization exit</a>
<b>Tree</b>	<a href="#">exit</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## link-state-database

<b>Description</b>	The ISIS link state database
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string link-state-database</a>

<b>Tree</b>	<a href="#">link-state-database</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Clear the contents of the LSDB.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string link-state-database clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Reset all of the IS-IS instance statistics to zero.
<b>Context</b>	<a href="#">network-instance name string protocols isis instance name string statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## ldp

<b>Description</b>	Operational tools commands for LDP.
<b>Context</b>	<a href="#">network-instance name string protocols ldp</a>
<b>Tree</b>	<a href="#">ldp</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## discovery

**Description** Enter the discovery context

**Context** [network-instance name](#) *string* [protocols ldp discovery](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## name *string*

**Description** Reference type to a specific subinterface of the form <interface-name>.<subinterface-index>

**Context** [network-instance name](#) *string* [protocols ldp discovery interfaces interface name](#) *string*

**String Length** 5 to 25

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ipv4

<b>Description</b>	Enter the ipv4 context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4</a>
<b>Tree</b>	<a href="#">ipv4</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## clear

<b>Description</b>	Resets all the LDP instance state counters to zero
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp discovery interfaces interface name</a> <i>string</i> <a href="#">ipv4 statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## peers

<b>Description</b>	Enter the peers context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ldp peers</a>
<b>Tree</b>	<a href="#">peers</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**peer** *lsr-id (ipv4-address | ipv6-address) label-space-id number*

<b>Description</b>	List of peers.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id (ipv4-address   ipv6-address)</a> <a href="#">label-space-id</a> <a href="#">number</a>
<b>Tree</b>	<a href="#">peer</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**lsr-id** *(ipv4-address | ipv6-address)*

<b>Description</b>	The LSR ID of the peer, to identify the globally unique LSR. This leaf is used together with the leaf 'label-space-id' to form the LDP ID.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id (ipv4-address   ipv6-address)</a> <a href="#">label-space-id</a> <a href="#">number</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**label-space-id** *number*

<b>Description</b>	The Label Space ID of the peer, to identify a specific label space within the LSR. This is the last two octets of the LDP ID. This leaf is used together with the leaf 'lsr-id' to form the LDP ID.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id (ipv4-address   ipv6-address)</a> <a href="#">label-space-id</a> <a href="#">number</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**reset**

<b>Description</b>	Reset the LDP session by closing the TCP connection and establishing a new one.
<b>Context</b>	<a href="#">network-instance name</a> <a href="#">string</a> <a href="#">protocols</a> <a href="#">ldp</a> <a href="#">peers</a> <a href="#">peer</a> <a href="#">lsr-id (ipv4-address   ipv6-address)</a> <a href="#">label-space-id</a> <a href="#">number</a> <a href="#">reset</a>
<b>Tree</b>	<a href="#">reset</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear all OSPF neighbors
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">neighbors clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**neighbor** [neighbor-id](#)

<b>Description</b>	Enter the neighbor list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">neighbors neighbor neighbor-id</a>
<b>Tree</b>	<a href="#">neighbor</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**neighbor-id**

<b>Description</b>	The neighbor's ip-address in case of OSPFv2, the router-id otherwise
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">neighbors neighbor neighbor-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset this neighbor in the OSPF instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">neighbors neighbor neighbor-id clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**overload**

<b>Description</b>	Enter the overload context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload</a>
<b>Tree</b>	<a href="#">overload</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset OSPF instance overload status.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">overload</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Reset all of the OSPF instance statistics to zero.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">protocols ospf instance name</a> <i>string</i> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**traffic-engineering-policies**

<b>Description</b>	Enter the traffic-engineering-policies context
--------------------	--

<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering-policies</a>
<b>Tree</b>	<a href="#">traffic-engineering-policies</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **policy** [policy-name](#) *string*

<b>Description</b>	List of traffic engineering policies
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering-policies</a> <a href="#">policy</a> <a href="#">policy-name</a> <i>string</i>
<b>Tree</b>	<a href="#">policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **policy-name** *string*

<b>Description</b>	The name of the traffic engineering policy
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering-policies</a> <a href="#">policy</a> <a href="#">policy-name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **segment-list** [segment-list-index](#) *number*

<b>Description</b>	Enter the segment-list list instance
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering-policies</a> <a href="#">policy</a> <a href="#">policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i>
<b>Tree</b>	<a href="#">segment-list</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **segment-list-index** *number*

<b>Description</b>	Index to enumerate the different segment lists of a TE policy.
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering-policies</a> <a href="#">policy</a> <a href="#">policy-name</a> <i>string</i> <a href="#">segment-list</a> <a href="#">segment-list-index</a> <i>number</i>

<b>Range</b>	1 to 32
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Clear segment-list
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering-policies policy policy-name</a> <i>string</i> <a href="#">segment-list segment-list-index</a> <i>number</i> clear
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## resignal

<b>Description</b>	Trigger resignal for segment-list
<b>Context</b>	<a href="#">network-instance name</a> <i>string</i> <a href="#">traffic-engineering-policies policy policy-name</a> <i>string</i> <a href="#">segment-list segment-list-index</a> <i>number</i> resignal
<b>Tree</b>	<a href="#">resignal</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## 16.1 oam Descriptions

### oam

<b>Description</b>	Enclosing container for OAM management.
<b>Context</b>	<a href="#">oam</a>
<b>Tree</b>	<a href="#">oam</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### lsp-ping

<b>Description</b>	Initiate LSP ping of the remote endpoint of an MPLS or segment routing tunnel
<b>Context</b>	<a href="#">oam lsp-ping</a>
<b>Tree</b>	<a href="#">lsp-ping</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### ldp

<b>Description</b>	Parameters required to ping the endpoint of an LDP tunnel
<b>Context</b>	<a href="#">oam lsp-ping ldp</a>
<b>Tree</b>	<a href="#">ldp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### fec prefix (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	Enter the fec list instance
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Tree</b>	<a href="#">fec</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**prefix** (*ipv4-prefix* | *ipv6-prefix*)

<b>Description</b>	The IPv4 or IPv6 prefix associated with the FEC This is the destination that is being pinged.
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> )
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**destination-ip** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The destination IP address of the UDP/IP MPLS echo request message This should be a non-forwardable address in the 127/8 address block (or the 0:0:0:0:FFFF:7F00:0/104 IPv6 address block). Varying this address can help to exercise different ECMP paths towards the destination. By default, the destination address is selected randomly from these address blocks.
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">destination-ip</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">destination-ip</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ecmp-interface-select** *string*

<b>Description</b>	Send the LSP ping messages out the specified subinterface If this router has multiple ECMP next-hops to the endpoint of the MPLS tunnel this can select one of those subinterfaces specifically
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">ecmp-interface-select</a> <i>string</i>
<b>Tree</b>	<a href="#">ecmp-interface-select</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**ecmp-next-hop-select** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	Send the LSP ping messages to the specified next-hop If this router has multiple ECMP next-hops to the endpoint of the MPLS tunnel this can select one of those next-hops specifically
--------------------	---

<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) ecmp-next-hop-select (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">ecmp-next-hop-select</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **interval number**

<b>Description</b>	The time interval between successive MPLS echo-request messages in case of send-count > 1
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) interval number</a>
<b>Tree</b>	<a href="#">interval</a>
<b>Range</b>	1 to 10
<b>Default</b>	1
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **mpls-ttl number**

<b>Description</b>	The TTL value written into the topmost label stack entry of the MPLS echo-request message  This TTL is expected to be decremented at each hop along the path to the destination. If TTL reaches 1 the segment routing packet will be discarded due to TTL expiry and the ping will fail if the destination has not been reached yet.
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) mpls-ttl number</a>
<b>Tree</b>	<a href="#">mpls-ttl</a>
<b>Range</b>	1 to 255
<b>Default</b>	255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **probe-size number**

<b>Description</b>	The size of the IP packet MPLS echo-request message. Probe size does not include MPLS headers, if any
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) probe-size number</a>

<b>Tree</b>	<a href="#">probe-size</a>
<b>Range</b>	1 to 9500
<b>Default</b>	1
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **send-count** *number*

<b>Description</b>	The number of MPLS echo-request messages to be sent in sequence
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) send-count</a> <i>number</i>
<b>Tree</b>	<a href="#">send-count</a>
<b>Range</b>	1 to 100
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **source-ip** (*ipv4-address | ipv6-address*)

<b>Description</b>	The source IP address of the UDP/IP MPLS echo request message  This should be a routable address of the router. This will be destination of the MPLS echo reply message sent back to the sender. By default this is the system address of the default network-instance; if the default network-instance does not have system interface then it will be primary address of the lowest numbered loopback subinterface of the default network-instance.
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) source-ip (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">source-ip</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **timeout** *number*

<b>Description</b>	The maximum time the sender waits to receive an MPLS echo-reply message before considering that the ping failed
<b>Context</b>	<a href="#">oam lsp-ping ldp fec prefix (ipv4-prefix   ipv6-prefix) timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">timeout</a>

<b>Range</b>	1 to 60
<b>Default</b>	3
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### sr-isis

<b>Description</b>	Parameters required to ping the endpoint of an SR-ISIS tunnel
<b>Context</b>	<a href="#">oam lsp-ping sr-isis</a>
<b>Tree</b>	<a href="#">sr-isis</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### prefix-sid [prefix \(ipv4-prefix | ipv6-prefix\)](#)

<b>Description</b>	Enter the prefix-sid list instance
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a>
<b>Tree</b>	<a href="#">prefix-sid</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### prefix [\(ipv4-prefix | ipv6-prefix\)](#)

<b>Description</b>	The IPv4 or IPv6 prefix associated with the SID This is the destination that is being pinged.
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### destination-ip [\(ipv4-address | ipv6-address\)](#)

<b>Description</b>	The destination IP address of the UDP/IP MPLS echo request message This should be a non-forwardable address in the 127/8 address block (or the 0:0:0:0:FFFF:7F00:0/104 IPv6 address block). Varying this address can help to exercise different ECMP paths towards the destination. By default, the destination address is selected randomly from these address blocks.
--------------------	--

<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) destination-ip (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">destination-ip</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ecmp-interface-select** *string*

<b>Description</b>	Send the LSP ping messages out the specified subinterface If this router has multiple ECMP next-hops to the endpoint of the MPLS tunnel this can select one of those subinterfaces specifically
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) ecmp-interface-select string</a>
<b>Tree</b>	<a href="#">ecmp-interface-select</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ecmp-next-hop-select** (*ipv4-address | ipv6-address*)

<b>Description</b>	Send the LSP ping messages to the specified next-hop If this router has multiple ECMP next-hops to the endpoint of the MPLS tunnel this can select one of those next-hops specifically
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) ecmp-next-hop-select (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">ecmp-next-hop-select</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **interval** *number*

<b>Description</b>	The time interval between successive MPLS echo-request messages in case of send-count > 1
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) interval number</a>
<b>Tree</b>	<a href="#">interval</a>
<b>Range</b>	1 to 10
<b>Default</b>	1
<b>Units</b>	seconds

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **mpls-ttl *number***

<b>Description</b>	The TTL value written into the topmost label stack entry of the MPLS echo-request message  This TTL is expected to be decremented at each hop along the path to the destination. If TTL reaches 1 the segment routing packet will be discarded due to TTL expiry and the ping will fail if the destination has not been reached yet.
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) mpls-ttl number</a>
<b>Tree</b>	<a href="#">mpls-ttl</a>
<b>Range</b>	1 to 255
<b>Default</b>	255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **probe-size *number***

<b>Description</b>	The size of the IP packet MPLS echo-request message. Probe size does not include MPLS headers, if any
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) probe-size number</a>
<b>Tree</b>	<a href="#">probe-size</a>
<b>Range</b>	1 to 9500
<b>Default</b>	1
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **send-count *number***

<b>Description</b>	The number of MPLS echo-request messages to be sent in sequence
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) send-count number</a>
<b>Tree</b>	<a href="#">send-count</a>
<b>Range</b>	1 to 100

<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **source-ip** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The source IP address of the UDP/IP MPLS echo request message  This should be a routable address of the router. This will be destination of the MPLS echo reply message sent back to the sender. By default this is the system address of the default network-instance; if the default network-instance does not have system interface then it will be primary address of the lowest numbered loopback subinterface of the default network-instate.
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">source-ip</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">source-ip</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **timeout** *number*

<b>Description</b>	The maximum time the sender waits to receive an MPLS echo-reply message before considering that the ping failed
<b>Context</b>	<a href="#">oam lsp-ping sr-isis prefix-sid prefix</a> ( <i>ipv4-prefix</i>   <i>ipv6-prefix</i> ) <a href="#">timeout</a> <i>number</i>
<b>Tree</b>	<a href="#">timeout</a>
<b>Range</b>	1 to 60
<b>Default</b>	3
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **lsp-trace**

<b>Description</b>	Perform LSP trace of the path towards the remote endpoint of an MPLS or segment routing tunnel
<b>Context</b>	<a href="#">oam lsp-trace</a>
<b>Tree</b>	<a href="#">lsp-trace</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## ldp

**Description** Parameters required to trace a path towards the endpoint of an LDP tunnel

**Context** [oam lsp-trace ldp](#)

**Tree** [ldp](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## fec prefix (*ipv4-prefix* | *ipv6-prefix*)

**Description** Enter the fec list instance

**Context** [oam lsp-trace ldp fec prefix \(\*ipv4-prefix\* | \*ipv6-prefix\*\)](#)

**Tree** [fec](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## prefix (*ipv4-prefix* | *ipv6-prefix*)

**Description** The IPv4 or IPv6 prefix associated with the FEC  
This is the destination that is being traced.

**Context** [oam lsp-trace ldp fec prefix \(\*ipv4-prefix\* | \*ipv6-prefix\*\)](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## destination-ip (*ipv4-address* | *ipv6-address*)

**Description** The destination IP address of the UDP/IP MPLS trace message  
This should be a non-forwardable address in the 127/8 address block (or the 0:0:0:0:FFFF:7F00:0/104 IPv6 address block). Varying this address can help to exercise different ECMP paths towards the destination. By default, the destination address is selected randomly from these address blocks.

**Context** [oam lsp-trace ldp fec prefix \(\*ipv4-prefix\* | \*ipv6-prefix\*\) destination-ip \(\*ipv4-address\* | \*ipv6-address\*\)](#)

**Tree** [destination-ip](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ecmp-interface-select** *string*

**Description** Send the LSP trace messages out the specified subinterface  
If this router has multiple ECMP next-hops to the endpoint of the MPLS tunnel this can select one of those subinterfaces specifically

**Context** [oam lsp-trace ldp fec prefix \(ipv4-prefix | ipv6-prefix\) ecmp-interface-select string](#)

**Tree** [ecmp-interface-select](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ecmp-next-hop-select** (*ipv4-address | ipv6-address*)

**Description** Send the LSP trace messages to the specified next-hop  
If this router has multiple ECMP next-hops to the endpoint of the MPLS tunnel this can select one of those next-hops specifically

**Context** [oam lsp-trace ldp fec prefix \(ipv4-prefix | ipv6-prefix\) ecmp-next-hop-select \(ipv4-address | ipv6-address\)](#)

**Tree** [ecmp-next-hop-select](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **interval** *number*

**Description** The time interval between successive MPLS trace messages while incrementing the TTL

**Context** [oam lsp-trace ldp fec prefix \(ipv4-prefix | ipv6-prefix\) interval number](#)

**Tree** [interval](#)

**Range** 1 to 10

**Default** 1

**Units** seconds

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**maximum-failures** *number*

<b>Description</b>	The maximum number of consecutive MPLS trace requests that do not receive a reply before the trace operation fails for a given TTL
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) maximum-failures number</a>
<b>Tree</b>	<a href="#">maximum-failures</a>
<b>Range</b>	1 to 255
<b>Default</b>	5
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**maximum-mpls-ttl** *number*

<b>Description</b>	The maximum or final TTL value of the MPLS trace messages
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) maximum-mpls-ttl number</a>
<b>Tree</b>	<a href="#">maximum-mpls-ttl</a>
<b>Range</b>	1 to 255
<b>Default</b>	30
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**minimum-mpls-ttl** *number*

<b>Description</b>	The minimum or starting TTL value of the MPLS trace messages
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) minimum-mpls-ttl number</a>
<b>Tree</b>	<a href="#">minimum-mpls-ttl</a>
<b>Range</b>	1 to 255
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**probe-count** *number*

<b>Description</b>	The maximum number of MPLS trace messages sent per hop
--------------------	--

<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) probe-count number</a>
<b>Tree</b>	<a href="#">probe-count</a>
<b>Range</b>	1 to 10
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### probe-size *number*

<b>Description</b>	The size of the IP packet MPLS trace message. Probe size does not include MPLS headers, if any
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) probe-size number</a>
<b>Tree</b>	<a href="#">probe-size</a>
<b>Range</b>	1 to 9500
<b>Default</b>	1
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### source-ip (*ipv4-address | ipv6-address*)

<b>Description</b>	The source IP address of the UDP/IP MPLS trace message  This should be a routable address of the router. This will be destination of the MPLS echo reply message sent back to the sender. By default this is the system address of the default network-instance; if the default network-instance does not have system interface then it will be primary address of the lowest numbered loopback subinterface of the default network-instance.
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) source-ip (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">source-ip</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### timeout *number*

<b>Description</b>	The maximum time the sender waits to receive an MPLS trace message before considering that the ping failed
<b>Context</b>	<a href="#">oam lsp-trace ldp fec prefix (ipv4-prefix   ipv6-prefix) timeout number</a>

<b>Tree</b>	<a href="#">timeout</a>
<b>Range</b>	1 to 60
<b>Default</b>	3
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### sr-isis

<b>Description</b>	Parameters required to trace a path towards the endpoint of an SR-ISIS tunnel
<b>Context</b>	<a href="#">oam lsp-trace sr-isis</a>
<b>Tree</b>	<a href="#">sr-isis</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### prefix-sid [prefix \(ipv4-prefix | ipv6-prefix\)](#)

<b>Description</b>	Enter the prefix-sid list instance
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a>
<b>Tree</b>	<a href="#">prefix-sid</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### prefix [\(ipv4-prefix | ipv6-prefix\)](#)

<b>Description</b>	The IPv4 or IPv6 prefix associated with the SID This is the destination that is being traced.
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### destination-ip [\(ipv4-address | ipv6-address\)](#)

<b>Description</b>	The destination IP address of the UDP/IP MPLS trace message
--------------------	---

This should be a non-forwardable address in the 127/8 address block (or the 0:0:0:0:FFFF:7F00:0/104 IPv6 address block). Varying this address can help to exercise different ECMP paths towards the destination. By default, the destination address is selected randomly from these address blocks.

<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) destination-ip (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">destination-ip</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ecmp-interface-select** *string*

<b>Description</b>	Send the LSP trace messages out the specified subinterface If this router has multiple ECMP next-hops to the endpoint of the MPLS tunnel this can select one of those subinterfaces specifically
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) ecmp-interface-select string</a>
<b>Tree</b>	<a href="#">ecmp-interface-select</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **ecmp-next-hop-select** (*ipv4-address | ipv6-address*)

<b>Description</b>	Send the LSP trace messages to the specified next-hop If this router has multiple ECMP next-hops to the endpoint of the MPLS tunnel this can select one of those next-hops specifically
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) ecmp-next-hop-select (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">ecmp-next-hop-select</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **interval** *number*

<b>Description</b>	The time interval between successive MPLS trace messages while incrementing the TTL
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) interval number</a>
<b>Tree</b>	<a href="#">interval</a>

<b>Range</b>	1 to 10
<b>Default</b>	1
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **maximum-failures** *number*

<b>Description</b>	The maximum number of consecutive MPLS trace requests that do not receive a reply before the trace operation fails for a given TTL
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">maximum-failures number</a>
<b>Tree</b>	<a href="#">maximum-failures</a>
<b>Range</b>	1 to 255
<b>Default</b>	5
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **maximum-mpls-ttl** *number*

<b>Description</b>	The maximum or final TTL value of the MPLS trace messages
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">maximum-mpls-ttl number</a>
<b>Tree</b>	<a href="#">maximum-mpls-ttl</a>
<b>Range</b>	1 to 255
<b>Default</b>	30
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **minimum-mpls-ttl** *number*

<b>Description</b>	The minimum or starting TTL value of the MPLS trace messages
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix)</a> <a href="#">minimum-mpls-ttl number</a>
<b>Tree</b>	<a href="#">minimum-mpls-ttl</a>
<b>Range</b>	1 to 255
<b>Default</b>	1

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **probe-count** *number*

<b>Description</b>	The maximum number of MPLS trace messages sent per hop
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) probe-count number</a>
<b>Tree</b>	<a href="#">probe-count</a>
<b>Range</b>	1 to 10
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **probe-size** *number*

<b>Description</b>	The size of the IP packet MPLS trace message. Probe size does not include MPLS headers, if any
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) probe-size number</a>
<b>Tree</b>	<a href="#">probe-size</a>
<b>Range</b>	1 to 9500
<b>Default</b>	1
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **source-ip** (*ipv4-address | ipv6-address*)

<b>Description</b>	The source IP address of the UDP/IP MPLS trace message  This should be a routable address of the router. This will be destination of the MPLS echo reply message sent back to the sender. By default this is the system address of the default network-instance; if the default network-instance does not have system interface then it will be primary address of the lowest numbered loopback subinterface of the default network-instance.
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) source-ip (ipv4-address   ipv6-address)</a>
<b>Tree</b>	<a href="#">source-ip</a>

---

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**timeout** *number*

<b>Description</b>	The maximum time the sender waits to receive an MPLS trace message before considering that the ping failed
<b>Context</b>	<a href="#">oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix   ipv6-prefix) timeout number</a>
<b>Tree</b>	<a href="#">timeout</a>
<b>Range</b>	1 to 60
<b>Default</b>	3
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## 17.1 platform Descriptions

### platform

<b>Description</b>	Top-level container for platform operational commands
<b>Context</b>	<a href="#">platform</a>
<b>Tree</b>	<a href="#">platform</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### chassis

<b>Description</b>	Operational commands related to the chassis
<b>Context</b>	<a href="#">platform chassis</a>
<b>Tree</b>	<a href="#">chassis</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### reboot

<b>Description</b>	Trigger a reboot of the chassis
<b>Context</b>	<a href="#">platform chassis reboot</a>
<b>Tree</b>	<a href="#">reboot</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### cancel

<b>Description</b>	Cancels a pending reboot on this component
<b>Context</b>	<a href="#">platform chassis reboot cancel</a>
<b>Tree</b>	<a href="#">cancel</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**delay number**

<b>Description</b>	The amount of time to delay the reboot During this period, the reboot can be cancelled.
<b>Context</b>	<a href="#">platform chassis reboot delay number</a>
<b>Tree</b>	<a href="#">delay</a>
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**force**

<b>Description</b>	Force a reboot of this component, overriding any synchronizations or other activities in progress This option can be dangerous, and may result in a module booting on an older image if used after an image change
<b>Context</b>	<a href="#">platform chassis reboot force</a>
<b>Tree</b>	<a href="#">force</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**message string**

<b>Description</b>	A user-defined message to broadcast to other users of the system
<b>Context</b>	<a href="#">platform chassis reboot message string</a>
<b>Tree</b>	<a href="#">message</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**warm**

<b>Description</b>	Perform a warm reboot of the system This option will perform checks against the current configuration, before prompting to confirm the reboot, and then rebooting the system without impacting the datapath - if a new image has been configured, this will upgrade the system.
<b>Context</b>	<a href="#">platform chassis reboot warm</a>
<b>Tree</b>	<a href="#">warm</a>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

## force

<b>Description</b>	Force a warm reboot of the system, overriding any validation, synchronizations or other activities in progress  This option can be dangerous, and may result in an outage - but can be used to support a fast reboot of the system.
<b>Context</b>	<a href="#">platform chassis reboot warm force</a>
<b>Tree</b>	<a href="#">force</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

## validate

<b>Description</b>	Validate that the system's current configuration and state supports a warm reboot operation
<b>Context</b>	<a href="#">platform chassis reboot warm validate</a>
<b>Tree</b>	<a href="#">validate</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

## control *slot string*

<b>Description</b>	Operational commands related to control modules
<b>Context</b>	<a href="#">platform control slot string</a>
<b>Tree</b>	<a href="#">control</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## slot *string*

<b>Description</b>	Slot identifier for the control module
<b>Context</b>	<a href="#">platform control slot string</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## locator

**Description** Operational commands for the locator LED

**Context** [platform control slot](#) *string* [locator](#)

**Tree** [locator](#)

**Configurable** True

**Platforms** Supported on all platforms

## disable

**Description** Deactivates the locator LED for this component

**Context** [platform control slot](#) *string* [locator](#) [disable](#)

**Tree** [disable](#)

**Configurable** True

**Platforms** Supported on all platforms

## enable

**Description** Activate the locator LED for this component

**Context** [platform control slot](#) *string* [locator](#) [enable](#)

**Tree** [enable](#)

**Configurable** True

**Platforms** Supported on all platforms

## duration *number*

**Description** Sets the duration to activate the locator LED, after which it will disable automatically

**Context** [platform control slot](#) *string* [locator](#) [enable](#) [duration](#) *number*

**Tree** [duration](#)

**Range** 10 to 3600

**Units** seconds

**Configurable** True

**Platforms** Supported on all platforms

**reboot**

<b>Description</b>	Trigger or a reboot of this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">reboot</a>
<b>Tree</b>	<a href="#">reboot</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**cancel**

<b>Description</b>	Cancels a pending reboot on this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">reboot</a> <a href="#">cancel</a>
<b>Tree</b>	<a href="#">cancel</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**delay** *number*

<b>Description</b>	The amount of time to delay the reboot During this period, the reboot can be cancelled.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">reboot</a> <a href="#">delay</a> <i>number</i>
<b>Tree</b>	<a href="#">delay</a>
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**force**

<b>Description</b>	Force a reboot of this component, overriding any synchronizations or other activities in progress  This option can be dangerous, and may result in a module booting on an older image if used after an image change
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">reboot</a> <a href="#">force</a>
<b>Tree</b>	<a href="#">force</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**message string**

<b>Description</b>	A user-defined message to broadcast to other users of the system
<b>Context</b>	<a href="#">platform control slot string reboot message string</a>
<b>Tree</b>	<a href="#">message</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**fabric slot number**

<b>Description</b>	Operational commands related to fabric modules
<b>Context</b>	<a href="#">platform fabric slot number</a>
<b>Tree</b>	<a href="#">fabric</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**slot number**

<b>Description</b>	Numeric identifier for the fabric module
<b>Context</b>	<a href="#">platform fabric slot number</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**locator**

<b>Description</b>	Operational commands for the locator LED
<b>Context</b>	<a href="#">platform fabric slot number locator</a>
<b>Tree</b>	<a href="#">locator</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**disable**

<b>Description</b>	Deactivates the locator LED for this component
<b>Context</b>	<a href="#">platform fabric slot number locator disable</a>
<b>Tree</b>	<a href="#">disable</a>

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## enable

<b>Description</b>	Activate the locator LED for this component
<b>Context</b>	<a href="#">platform fabric slot number locator enable</a>
<b>Tree</b>	<a href="#">enable</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## duration *number*

<b>Description</b>	Sets the duration to activate the locator LED, after which it will disable automatically
<b>Context</b>	<a href="#">platform fabric slot number locator enable duration number</a>
<b>Tree</b>	<a href="#">duration</a>
<b>Range</b>	10 to 3600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## reboot

<b>Description</b>	Trigger or a reboot of this component
<b>Context</b>	<a href="#">platform fabric slot number reboot</a>
<b>Tree</b>	<a href="#">reboot</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## cancel

<b>Description</b>	Cancels a pending reboot on this component
<b>Context</b>	<a href="#">platform fabric slot number reboot cancel</a>
<b>Tree</b>	<a href="#">cancel</a>
<b>Configurable</b>	True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **delay** *number*

**Description** The amount of time to delay the reboot  
During this period, the reboot can be cancelled.

**Context** [platform fabric slot number reboot delay number](#)

**Tree** [delay](#)

**Units** seconds

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **message** *string*

**Description** A user-defined message to broadcast to other users of the system

**Context** [platform fabric slot number reboot message string](#)

**Tree** [message](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **fan-tray id** *number*

**Description** Operational commands related to fan modules

**Context** [platform fan-tray id number](#)

**Tree** [fan-tray](#)

**Configurable** True

**Platforms** Supported on all platforms

### **id** *number*

**Description** Numeric identifier for the fan module

**Context** [platform fan-tray id number](#)

**Configurable** True

**Platforms** Supported on all platforms

## locator

<b>Description</b>	Operational commands for the locator LED
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">locator</a>
<b>Tree</b>	<a href="#">locator</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## disable

<b>Description</b>	Deactivates the locator LED for this component
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">locator</a> <a href="#">disable</a>
<b>Tree</b>	<a href="#">disable</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## enable

<b>Description</b>	Activate the locator LED for this component
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">locator</a> <a href="#">enable</a>
<b>Tree</b>	<a href="#">enable</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## duration *number*

<b>Description</b>	Sets the duration to activate the locator LED, after which it will disable automatically
<b>Context</b>	<a href="#">platform fan-tray id</a> <i>number</i> <a href="#">locator</a> <a href="#">enable</a> <a href="#">duration</a> <i>number</i>
<b>Tree</b>	<a href="#">duration</a>
<b>Range</b>	10 to 3600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## linecard slot number

<b>Description</b>	Operational commands related to line cards
<b>Context</b>	<a href="#">platform linecard slot number</a>
<b>Tree</b>	<a href="#">linecard</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## slot number

<b>Description</b>	Numeric identifier for the line card
<b>Context</b>	<a href="#">platform linecard slot number</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## locator

<b>Description</b>	Operational commands for the locator LED
<b>Context</b>	<a href="#">platform linecard slot number locator</a>
<b>Tree</b>	<a href="#">locator</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## disable

<b>Description</b>	Deactivates the locator LED for this component
<b>Context</b>	<a href="#">platform linecard slot number locator disable</a>
<b>Tree</b>	<a href="#">disable</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## enable

<b>Description</b>	Activate the locator LED for this component
<b>Context</b>	<a href="#">platform linecard slot number locator enable</a>
<b>Tree</b>	<a href="#">enable</a>

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **duration** *number*

<b>Description</b>	Sets the duration to activate the locator LED, after which it will disable automatically
<b>Context</b>	<a href="#">platform linecard slot number locator enable duration number</a>
<b>Tree</b>	<a href="#">duration</a>
<b>Range</b>	10 to 3600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **reboot**

<b>Description</b>	Trigger or a reboot of this component
<b>Context</b>	<a href="#">platform linecard slot number reboot</a>
<b>Tree</b>	<a href="#">reboot</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **cancel**

<b>Description</b>	Cancels a pending reboot on this component
<b>Context</b>	<a href="#">platform linecard slot number reboot cancel</a>
<b>Tree</b>	<a href="#">cancel</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **delay** *number*

<b>Description</b>	The amount of time to delay the reboot During this period, the reboot can be cancelled.
<b>Context</b>	<a href="#">platform linecard slot number reboot delay number</a>
<b>Tree</b>	<a href="#">delay</a>

<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### message *string*

<b>Description</b>	A user-defined message to broadcast to other users of the system
<b>Context</b>	<a href="#">platform linecard slot number reboot message string</a>
<b>Tree</b>	<a href="#">message</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### redundancy

<b>Description</b>	Top-level container for redundancy operational commands
<b>Context</b>	<a href="#">platform redundancy</a>
<b>Tree</b>	<a href="#">redundancy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### switchover

<b>Description</b>	Trigger a redundancy switchover to the other control module
<b>Context</b>	<a href="#">platform redundancy switchover</a>
<b>Tree</b>	<a href="#">switchover</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### synchronize

<b>Description</b>	Top-level container for manual synchronization activities
<b>Context</b>	<a href="#">platform redundancy synchronize</a>
<b>Tree</b>	<a href="#">synchronize</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## overlay

<b>Description</b>	Force a synchronization of the overlay filesystem between the active control module and the standby  This synchronizes all non-excluded directories in the overlay filesystem
<b>Context</b>	<a href="#">platform redundancy synchronize overlay</a>
<b>Tree</b>	<a href="#">overlay</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## system

<b>Description</b>	Force a synchronization of the system-required data between the active control module and the standby  This synchronizes images, configuration, checkpoints, and other system-required data
<b>Context</b>	<a href="#">platform redundancy synchronize system</a>
<b>Tree</b>	<a href="#">system</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## show-fabric-bandwidth

<b>Description</b>	Show fabric bandwidth
<b>Context</b>	<a href="#">platform show-fabric-bandwidth</a>
<b>Tree</b>	<a href="#">show-fabric-bandwidth</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## trust

<b>Description</b>	Operational commands related to Platform Trust
<b>Context</b>	<a href="#">platform trust</a>
<b>Tree</b>	<a href="#">trust</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## attestation

<b>Description</b>	Tools commands input parameter for attestation to retrieve TCG BIOS Logs, IMA Logs
<b>Context</b>	<a href="#">platform trust attestation</a>
<b>Tree</b>	<a href="#">attestation</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## control [slot string](#)

<b>Description</b>	Operational commands related to log retrieval for control modules
<b>Context</b>	<a href="#">platform trust attestation control slot string</a>
<b>Tree</b>	<a href="#">control</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## slot [string](#)

<b>Description</b>	Slot identifier for the control module
<b>Context</b>	<a href="#">platform trust attestation control slot string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## log-retrieval

<b>Description</b>	Tools commands to retrieve BIOS and IMA Log
<b>Context</b>	<a href="#">platform trust attestation control slot string log-retrieval</a>
<b>Tree</b>	<a href="#">log-retrieval</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## bios

<b>Description</b>	TCG BIOS log retrieval commands
<b>Context</b>	<a href="#">platform trust attestation control slot string log-retrieval bios</a>

<b>Tree</b>	<a href="#">bios</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## display

<b>Description</b>	Enter the display context
<b>Context</b>	<a href="#">platform trust attestation control slot</a> <i>string</i> <a href="#">log-retrieval bios display</a>
<b>Tree</b>	<a href="#">display</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## from *number*

<b>Description</b>	1-based log display starting index.
<b>Context</b>	<a href="#">platform trust attestation control slot</a> <i>string</i> <a href="#">log-retrieval bios display</a> <a href="#">from number</a>
<b>Tree</b>	<a href="#">from</a>
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## pcr *number*

<b>Description</b>	limit display to entries associated with a specific PCR. A value of -1 shows all PCRs
<b>Context</b>	<a href="#">platform trust attestation control slot</a> <i>string</i> <a href="#">log-retrieval bios display</a> <a href="#">pcr number</a>
<b>Tree</b>	<a href="#">pcr</a>
<b>Default</b>	-1
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## to *number*

<b>Description</b>	1-based log display terminal index. 0 indicates use maximum index in log.
--------------------	---

<b>Context</b>	<a href="#">platform trust attestation control slot</a> <i>string</i> <a href="#">log-retrieval bios display to number</a>
<b>Tree</b>	<a href="#">to</a>
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## summary

<b>Description</b>	retrieve a summary of the log
<b>Context</b>	<a href="#">platform trust attestation control slot</a> <i>string</i> <a href="#">log-retrieval bios summary</a>
<b>Tree</b>	<a href="#">summary</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## ima

<b>Description</b>	IMA log retrieval commands
<b>Context</b>	<a href="#">platform trust attestation control slot</a> <i>string</i> <a href="#">log-retrieval ima</a>
<b>Tree</b>	<a href="#">ima</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## display

<b>Description</b>	Enter the display context
<b>Context</b>	<a href="#">platform trust attestation control slot</a> <i>string</i> <a href="#">log-retrieval ima display</a>
<b>Tree</b>	<a href="#">display</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## from *number*

<b>Description</b>	1-based log display starting index.
<b>Context</b>	<a href="#">platform trust attestation control slot</a> <i>string</i> <a href="#">log-retrieval ima display from number</a>

<b>Tree</b>	<a href="#">from</a>
<b>Default</b>	1
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

### **pcr number**

<b>Description</b>	limit display to entries associated with a specific PCR. A value of -1 shows all PCRs
<b>Context</b>	<a href="#">platform trust attestation control slot</a> <i>string</i> <a href="#">log-retrieval ima display pcr number</a>
<b>Tree</b>	<a href="#">pcr</a>
<b>Default</b>	-1
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

### **to number**

<b>Description</b>	1-based log display terminal index. 0 indicates use maximum index in log.
<b>Context</b>	<a href="#">platform trust attestation control slot</a> <i>string</i> <a href="#">log-retrieval ima display to number</a>
<b>Tree</b>	<a href="#">to</a>
<b>Default</b>	0
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

### **summary**

<b>Description</b>	retrieve a summary of the log
<b>Context</b>	<a href="#">platform trust attestation control slot</a> <i>string</i> <a href="#">log-retrieval ima summary summary</a>
<b>Tree</b>	<a href="#">summary</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

**pcr-quote**

<b>Description</b>	Tools commands input parameter to retrieve TPM PCR Quote. This container includes every information element defined in the reference challenge-response interaction model for remote attestation. Corresponding values are based on TPM 2.0 structure definitions
<b>Context</b>	<a href="#">platform trust attestation control slot</a> <i>string</i> <a href="#">pcr-quote</a>
<b>Tree</b>	<a href="#">pcr-quote</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

**nonce** *binary*

<b>Description</b>	A random number intended to guarantee freshness and for use as part of a replay-detection mechanism Note that a nonce sent into a TPM will typically be 160 or 256 binary digits long (20 or 32 bytes). If fewer binary digits are sent, this nonce object will be padded with leading zeros within Quotes returned from the TPM. Additionally if more bytes are sent, the nonce will be trimmed to the most significant binary digits
<b>Context</b>	<a href="#">platform trust attestation control slot</a> <i>string</i> <a href="#">pcr-quote</a> <i>nonce</i> <i>binary</i>
<b>Tree</b>	<a href="#">nonce</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

**pcr-selection** *string*

<b>Description</b>	A tpm2-tools compliant pcr selection string
<b>Context</b>	<a href="#">platform trust attestation control slot</a> <i>string</i> <a href="#">pcr-quote</a> <a href="#">pcr-selection</a> <i>string</i>
<b>Tree</b>	<a href="#">pcr-selection</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

**secure-boot**

<b>Description</b>	Secure Boot operational commands
<b>Context</b>	<a href="#">platform trust secure-boot</a>
<b>Tree</b>	<a href="#">secure-boot</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

**control slot string**

<b>Description</b>	Operational commands related Secure Boot for control modules
<b>Context</b>	<a href="#">platform trust secure-boot control slot string</a>
<b>Tree</b>	<a href="#">control</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

**slot string**

<b>Description</b>	Slot identifier for the control module
<b>Context</b>	<a href="#">platform trust secure-boot control slot string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

**activate**

<b>Description</b>	Activate Secure Boot
<b>Context</b>	<a href="#">platform trust secure-boot control slot string activate</a>
<b>Tree</b>	<a href="#">activate</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

**confirmation-code string**

<b>Description</b>	Indicates the secure-boot command confirmation-code
<b>Context</b>	<a href="#">platform trust secure-boot control slot string activate confirmation-code string</a>
<b>Tree</b>	<a href="#">confirmation-code</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

**serial-number string**

<b>Description</b>	Indicates the serial-number of the control module
<b>Context</b>	<a href="#">platform trust secure-boot control slot string activate serial-number string</a>
<b>Tree</b>	<a href="#">serial-number</a>

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## revoke

<b>Description</b>	Update UEFI Secure Boot forbidden database (dbx), Key Exchange Key (KEK), Platform Key (PK)
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">revoke</a>
<b>Tree</b>	<a href="#">revoke</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## confirmation-code *string*

<b>Description</b>	Indicates the secure-boot command confirmation-code
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">revoke</a> <a href="#">confirmation-code</a> <i>string</i>
<b>Tree</b>	<a href="#">confirmation-code</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## serial-number *string*

<b>Description</b>	Indicates the serial-number of the control module
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">revoke</a> <a href="#">serial-number</a> <i>string</i>
<b>Tree</b>	<a href="#">serial-number</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## update

<b>Description</b>	Update UEFI Secure Boot authorized database (db), Key Exchange Key (KEK), Platform Key (PK)
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">update</a>
<b>Tree</b>	<a href="#">update</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

**confirmation-code** *string*

<b>Description</b>	Indicates the secure-boot command confirmation-code
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">update confirmation-code</a> <i>string</i>
<b>Tree</b>	<a href="#">confirmation-code</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

**serial-number** *string*

<b>Description</b>	Indicates the serial-number of the control module
<b>Context</b>	<a href="#">platform trust secure-boot control slot</a> <i>string</i> <a href="#">update serial-number</a> <i>string</i>
<b>Tree</b>	<a href="#">serial-number</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e

## 18 tools qos

```
qos
+ classifiers
+   multifield-classifier name string
+ interfaces
+   interface interface-id string
+   output
+     queues
+       clear-statistics
+       queue queue-name string

```

## 18.1 qos Descriptions

### qos

<b>Description</b>	Enter the qos context
<b>Context</b>	<a href="#">qos</a>
<b>Tree</b>	<a href="#">qos</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### classifiers

<b>Description</b>	Top level enclosing container for qos classifiers operational tools
<b>Context</b>	<a href="#">qos classifiers</a>
<b>Tree</b>	<a href="#">classifiers</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### multifield-classifier [name string](#)

<b>Description</b>	List of multifield-classifier QoS policies
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name string</a>
<b>Tree</b>	<a href="#">multifield-classifier</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### [name string](#)

<b>Description</b>	The name of multifield-classifier QoS policy
<b>Context</b>	<a href="#">qos classifiers multifield-classifier name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## interfaces

<b>Description</b>	Interfaces and subinterfaces with QoS configuration and state
<b>Context</b>	<a href="#">qos interfaces</a>
<b>Tree</b>	<a href="#">interfaces</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### interface [interface-id string](#)

<b>Description</b>	List of interfaces and subinterfaces referenced by QoS policies
<b>Context</b>	<a href="#">qos interfaces interface interface-id string</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### interface-id [string](#)

<b>Description</b>	Identifier for the interface or subinterface
<b>Context</b>	<a href="#">qos interfaces interface interface-id string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## output

<b>Description</b>	Enter the output context
<b>Context</b>	<a href="#">qos interfaces interface interface-id string output</a>
<b>Tree</b>	<a href="#">output</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## queues

<b>Description</b>	Enter the queues context
<b>Context</b>	<a href="#">qos interfaces interface interface-id string output queues</a>
<b>Tree</b>	<a href="#">queues</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### clear-statistics

<b>Description</b>	Enter the clear-statistics context
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues clear-statistics</a>
<b>Tree</b>	<a href="#">clear-statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### queue [queue-name](#) *string*

<b>Description</b>	Enter the queue list instance
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>string</i>
<b>Tree</b>	<a href="#">queue</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### queue-name *string*

<b>Description</b>	The queue name
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

### queue-statistics

<b>Description</b>	Enter the queue-statistics context
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>string</i> <a href="#">queue-statistics</a>
<b>Tree</b>	<a href="#">queue-statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

**clear**

<b>Description</b>	Enter the clear context
<b>Context</b>	<a href="#">qos</a> <a href="#">interfaces</a> <a href="#">interface</a> <a href="#">interface-id</a> <i>string</i> <a href="#">output</a> <a href="#">queues</a> <a href="#">queue</a> <a href="#">queue-name</a> <i>string</i> <a href="#">queue-statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms except 7220 IXR-D1

## 19.1 system Descriptions

### system

<b>Description</b>	Enclosing container for system management.
<b>Context</b>	<a href="#">system</a>
<b>Tree</b>	<a href="#">system</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### aaa

<b>Description</b>	Top-level container for operational commands related to AAA
<b>Context</b>	<a href="#">system aaa</a>
<b>Tree</b>	<a href="#">aaa</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### authentication

<b>Description</b>	Operational commands related to authentication
<b>Context</b>	<a href="#">system aaa authentication</a>
<b>Tree</b>	<a href="#">authentication</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### force-all-user-password-change

<b>Description</b>	Set change-on-first-login to true for all users This command will only take effect if the feature change-on-first-login is currently set to true.
<b>Context</b>	<a href="#">system aaa authentication force-all-user-password-change</a>
<b>Tree</b>	<a href="#">force-all-user-password-change</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **session id** *number*

**Description** List of active sessions in the system  
**Context** [system aaa authentication session id number](#)  
**Tree** [session](#)  
**Configurable** True  
**Platforms** Supported on all platforms

### **id** *number*

**Description** System generated session ID  
**Context** [system aaa authentication session id number](#)  
**Configurable** True  
**Platforms** Supported on all platforms

### **disconnect**

**Description** Disconnect the cli session, requesting the cli to terminate  
**Context** [system aaa authentication session id number disconnect](#)  
**Tree** [disconnect](#)  
**Configurable** True  
**Platforms** Supported on all platforms

### **user** [username](#) *string*

**Description** List of local users including admin and linuxadmin  
**Context** [system aaa authentication user username string](#)  
**Tree** [user](#)  
**Configurable** True  
**Platforms** Supported on all platforms

**username** *string*

<b>Description</b>	Enter the username context
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**force-password-change**

<b>Description</b>	Set change-on-first-login to true for this user This command will only take effect if the feature change-on-first-login is currently set to true.
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">force-password-change</a>
<b>Tree</b>	<a href="#">force-password-change</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**unlock**

<b>Description</b>	Unlock the user, This will change its lockout state into false
<b>Context</b>	<a href="#">system aaa authentication user username</a> <i>string</i> <a href="#">unlock</a>
<b>Tree</b>	<a href="#">unlock</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**authorization**

<b>Description</b>	Operational commands relating to authorization
<b>Context</b>	<a href="#">system aaa authorization</a>
<b>Tree</b>	<a href="#">authorization</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**authz-policy**

<b>Description</b>	Top-level container for operational commands relating to Authz gRPC policies
<b>Context</b>	<a href="#">system aaa authorization authz-policy</a>
<b>Tree</b>	<a href="#">authz-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**clear**

<b>Description</b>	Clear Authz authorization policy counters
<b>Context</b>	<a href="#">system aaa authorization authz-policy clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**probe**

<b>Description</b>	Perform a test against the current policy Both a user and rpc must be provided.
<b>Context</b>	<a href="#">system aaa authorization authz-policy probe</a>
<b>Tree</b>	<a href="#">probe</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**rpc string**

<b>Description</b>	The RPC to test access to as the provided user This follows the gNSI gRPC path format, in that it is /<pkg>.<service>/<rpc>, for example /gnmi.gNMI/Get.
<b>Context</b>	<a href="#">system aaa authorization authz-policy probe rpc string</a>
<b>Tree</b>	<a href="#">rpc</a>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**user string**

<b>Description</b>	The user to test the current policy with This can be either a SPIFFE URI or username.
<b>Context</b>	<a href="#">system aaa authorization authz-policy probe user string</a>
<b>Tree</b>	<a href="#">user</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**remove**

<b>Description</b>	Remove Authz authorization policy from the system Since there is only a single system-wide gRPC authorization policy, it will revert its contents to the factory default authorization policy which authorizes any gRPC calls for every user.
<b>Context</b>	<a href="#">system aaa authorization authz-policy remove</a>
<b>Tree</b>	<a href="#">remove</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**rotate**

<b>Description</b>	Perform a rotation of the Authz gRPC policy
<b>Context</b>	<a href="#">system aaa authorization authz-policy rotate</a>
<b>Tree</b>	<a href="#">rotate</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**created-on** *number*

<b>Description</b>	Sets the created on value for the new policy  Value is the number of seconds since the epoch. For reference the current time from the epoch in most Linux distributions can be retrieved via 'date +%s'. You can also select a specific date via 'date -d "2023-03-31" +%s'.  If no value is provided the systems current date and time is used.
<b>Context</b>	<a href="#">system aaa authorization authz-policy rotate created-on</a> <i>number</i>
<b>Tree</b>	<a href="#">created-on</a>
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**policy** *string*

<b>Description</b>	Contains the gRPC authorization policy as a JSON-formatted string  For example: { "name": "Default policy", "allow_rules": [ { "name": "admin-access", "source": { "principals": [ "admin" ] }, "request": { "paths": [ "/" ] } } ] }
<b>Context</b>	<a href="#">system aaa authorization authz-policy rotate policy</a> <i>string</i>
<b>Tree</b>	<a href="#">policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**version** *string*

<b>Description</b>	A version string to store with the policy  No constraints are applied other than the value must be a string.  If no value is provided no default is used.
<b>Context</b>	<a href="#">system aaa authorization authz-policy rotate version</a> <i>string</i>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## app-management

<b>Description</b>	Operational commands related to app-management
<b>Context</b>	<a href="#">system app-management</a>
<b>Tree</b>	<a href="#">app-management</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## application *name string*

<b>Description</b>	List of all applications managed by the application manager
<b>Context</b>	<a href="#">system app-management application name string</a>
<b>Tree</b>	<a href="#">application</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## name *string*

<b>Description</b>	Unique name of this application instance
<b>Context</b>	<a href="#">system app-management application name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## kill

<b>Description</b>	Terminate the application instance ungracefully
<b>Context</b>	<a href="#">system app-management application name string kill</a>
<b>Tree</b>	<a href="#">kill</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## quit

<b>Description</b>	Terminate the application instance, requesting it to core dump
<b>Context</b>	<a href="#">system app-management application name string quit</a>
<b>Tree</b>	<a href="#">quit</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## reload

<b>Description</b>	Reload the configuration of the application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">reload</a>
<b>Tree</b>	<a href="#">reload</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## restart

<b>Description</b>	<p>Restart the application instance</p> <p>The best restart that is supported by the application is used if neither 'warm' or 'cold' is specified. If 'warm' restart is supported that will be used, or 'cold' if 'warm' is unavailable.</p> <p>A 'warm' restart will result in the application leaving its state in IDB during the restart, and recovering it post restart. This restart type results in less disruption to surrounding applications that would depend on the restarting applications state.</p> <p>A 'cold' restart will result in a normal stop/start of the application, including the purging of its state in IDB.</p>
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">restart</a>
<b>Tree</b>	<a href="#">restart</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## cold

<b>Description</b>	Perform a cold restart of the application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">restart cold</a>
<b>Tree</b>	<a href="#">cold</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## warm

<b>Description</b>	Perform a warm restart of the application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> restart warm
<b>Tree</b>	<a href="#">warm</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## start

<b>Description</b>	Start the application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> start
<b>Tree</b>	<a href="#">start</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Top-level grouping of operational commands related to application statistics
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> statistics
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Clear statistics for this application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> statistics clear
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## stop

<b>Description</b>	Terminate the application instance gracefully
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> stop
<b>Tree</b>	<a href="#">stop</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## boot

<b>Description</b>	Top-level container for operational commands related to booting the system
<b>Context</b>	<a href="#">system boot</a>
<b>Tree</b>	<a href="#">boot</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## golden-image

<b>Description</b>	Container for operational commands related to golden image
<b>Context</b>	<a href="#">system boot golden-image</a>
<b>Tree</b>	<a href="#">golden-image</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## clear

<b>Description</b>	Unset the golden-image
<b>Context</b>	<a href="#">system boot golden-image clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## image *string*

<b>Description</b>	Sets the golden image the system uses  This command selects an image to act as a golden-image to which the system reverts when a factory reset operation is requested.
<b>Context</b>	<a href="#">system boot golden-image image <i>string</i></a>

<b>Tree</b>	<a href="#">image</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## cgroup

<b>Description</b>	Top-level container for query commands related to cgroup in the system
<b>Context</b>	<a href="#">system cgroup</a>
<b>Tree</b>	<a href="#">cgroup</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## configuration

<b>Description</b>	Top-level container for operational commands related to the system configuration
<b>Context</b>	<a href="#">system configuration</a>
<b>Tree</b>	<a href="#">configuration</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## candidate *name string*

<b>Description</b>	List of configuration candidates currently active
<b>Context</b>	<a href="#">system configuration candidate name <i>string</i></a>
<b>Tree</b>	<a href="#">candidate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## name *string*

<b>Description</b>	The name of the candidate
<b>Context</b>	<a href="#">system configuration candidate name <i>string</i></a>

<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear the candidate from the system, discarding any changes This results in any users currently in the candidate being dropped back to running mode.
<b>Context</b>	<a href="#">system configuration candidate name</a> <i>string</i> <b>clear</b>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**checkpoint id** (*number | checkpoint-name*)

<b>Description</b>	List of current checkpoints present in the system
<b>Context</b>	<a href="#">system configuration checkpoint id</a> ( <i>number   checkpoint-name</i> )
<b>Tree</b>	<a href="#">checkpoint</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**id** (*number | checkpoint-name*)

<b>Description</b>	System generated ID, or operator defined name for the checkpoint
<b>Context</b>	<a href="#">system configuration checkpoint id</a> ( <i>number   checkpoint-name</i> )
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear the checkpoint from the system
<b>Context</b>	<a href="#">system configuration checkpoint id</a> ( <i>number   checkpoint-name</i> ) <b>clear</b>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**load**

<b>Description</b>	Load candidate from saved checkpoint configuration
<b>Context</b>	<a href="#">system configuration checkpoint id (number   checkpoint-name) load</a>
<b>Tree</b>	<a href="#">load</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**revert**

<b>Description</b>	Revert running system configuration to the saved checkpoint configuration This functions as a load and commit action.
<b>Context</b>	<a href="#">system configuration checkpoint id (number   checkpoint-name) revert</a>
<b>Tree</b>	<a href="#">revert</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**confirmed-accept**

<b>Description</b>	Accepts an in progress commit and stops the confirmation timer
<b>Context</b>	<a href="#">system configuration confirmed-accept</a>
<b>Tree</b>	<a href="#">confirmed-accept</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**persist-id *string***

<b>Description</b>	Specifies the persist-id to which the commit confirmed accept applies
<b>Context</b>	<a href="#">system configuration confirmed-accept persist-id <i>string</i></a>
<b>Tree</b>	<a href="#">persist-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**confirmed-reject**

<b>Description</b>	Rejects an in progress commit and stops the confirmation timer
--------------------	--

<b>Context</b>	<a href="#">system configuration confirmed-reject</a>
<b>Tree</b>	<a href="#">confirmed-reject</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **persist-id** *string*

<b>Description</b>	Specifies the persist-id to which the commit confirmed reject applies
<b>Context</b>	<a href="#">system configuration confirmed-reject persist-id</a> <i>string</i>
<b>Tree</b>	<a href="#">persist-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **generate-checkpoint**

<b>Description</b>	Generate a checkpoint point based on the current running configuration
<b>Context</b>	<a href="#">system configuration generate-checkpoint</a>
<b>Tree</b>	<a href="#">generate-checkpoint</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **comment** *string*

<b>Description</b>	User provided comment to associate with the checkpoint
<b>Context</b>	<a href="#">system configuration generate-checkpoint comment</a> <i>string</i>
<b>Tree</b>	<a href="#">comment</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **name** *string*

<b>Description</b>	User provided name of the checkpoint
<b>Context</b>	<a href="#">system configuration generate-checkpoint name</a> <i>string</i>
<b>Tree</b>	<a href="#">name</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## rescue-clear

<b>Description</b>	Remove rescue configuration
<b>Context</b>	<a href="#">system configuration rescue-clear</a>
<b>Tree</b>	<a href="#">rescue-clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## rescue-save

<b>Description</b>	Save current running configuration as rescue configuration - rescue-config.json
<b>Context</b>	<a href="#">system configuration rescue-save</a>
<b>Tree</b>	<a href="#">rescue-save</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## save

<b>Description</b>	Save current running configuration as initial (startup) configuration - config.json
<b>Context</b>	<a href="#">system configuration save</a>
<b>Tree</b>	<a href="#">save</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## session id *number*

<b>Description</b>	List of configuration sessions currently active
<b>Context</b>	<a href="#">system configuration session id <i>number</i></a>
<b>Tree</b>	<a href="#">session</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**id number**

<b>Description</b>	System generated ID for the configuration session
<b>Context</b>	<a href="#">system configuration session id number</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear the session from the system, discarding any changes
<b>Context</b>	<a href="#">system configuration session id number clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**upgrade**

<b>Description</b>	Operational commands related to configuration upgrade
<b>Context</b>	<a href="#">system configuration upgrade</a>
<b>Tree</b>	<a href="#">upgrade</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**checkpoint id** (*number | checkpoint-name*)

<b>Description</b>	List of configuration checkpoints
<b>Context</b>	<a href="#">system configuration upgrade checkpoint id (number   checkpoint-name)</a>
<b>Tree</b>	<a href="#">checkpoint</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**id** (*number | checkpoint-name*)

<b>Description</b>	System generated ID, or operator defined name for the checkpoint
<b>Context</b>	<a href="#">system configuration upgrade checkpoint id (number   checkpoint-name)</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**file string**

<b>Description</b>	System file path to a json configuration file
<b>Context</b>	<a href="#">system configuration upgrade file string</a>
<b>Tree</b>	<a href="#">file</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**rescue**

<b>Description</b>	Rescue configuration
<b>Context</b>	<a href="#">system configuration upgrade rescue</a>
<b>Tree</b>	<a href="#">rescue</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**startup**

<b>Description</b>	Startup (initial) configuration
<b>Context</b>	<a href="#">system configuration upgrade startup</a>
<b>Tree</b>	<a href="#">startup</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**validation-check keyword**

<b>Description</b>	Specifies the kind of validation that will be executed after the content is upgraded If the validation fails the upgraded content will not be persisted.
<b>Context</b>	<a href="#">system configuration upgrade validation-check keyword</a>
<b>Tree</b>	<a href="#">validation-check</a>
<b>Default</b>	replace
<b>Options</b>	<ul style="list-style-type: none"> <li>• skip Skip validation of the upgraded content</li> <li>• merge Validation is done as if the content was used in a load merge operation</li> </ul>

- replace
- Validation is done as if the content was used in a full config replace operation

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## dhcp-relay

<b>Description</b>	Enable the dhcp-relay context
<b>Context</b>	<a href="#">system dhcp-relay</a>
<b>Tree</b>	<a href="#">dhcp-relay</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## update-dns-entries

<b>Description</b>	Update all dhcp-relay server domain name resolutions A server host entry that cannot be resolved will be unavailable until it can be successfully resolved.
<b>Context</b>	<a href="#">system dhcp-relay update-dns-entries</a>
<b>Tree</b>	<a href="#">update-dns-entries</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## dhcp-server

<b>Description</b>	Enable the dhcp-server context
<b>Context</b>	<a href="#">system dhcp-server</a>
<b>Tree</b>	<a href="#">dhcp-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## network-instance [name](#) *string*

<b>Description</b>	List of network instances to run a dhcp server in
<b>Context</b>	<a href="#">system dhcp-server network-instance <a href="#">name</a> <i>string</i></a>

<b>Tree</b>	<a href="#">network-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Network Instance
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**dhcpv4**

<b>Description</b>	Enter the dhcpv4 context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>string</i> <a href="#">dhcpv4</a>
<b>Tree</b>	<a href="#">dhcpv4</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>string</i> <a href="#">dhcpv4</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Enter the clear context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>string</i> <a href="#">dhcpv4</a> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## dhcpv6

<b>Description</b>	Enter the dhcpv6 context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>string</i> <a href="#">dhcpv6</a>
<b>Tree</b>	<a href="#">dhcpv6</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>string</i> <a href="#">dhcpv6</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Enter the clear context
<b>Context</b>	<a href="#">system dhcp-server network-instance name</a> <i>string</i> <a href="#">dhcpv6</a> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## event-handler

<b>Description</b>	Top-level container for operational commands on event handler and event handling instances
<b>Context</b>	<a href="#">system event-handler</a>
<b>Tree</b>	<a href="#">event-handler</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## instance *name string*

<b>Description</b>	List of all event handler instances
--------------------	-------------------------------------

<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i>
<b>Tree</b>	<a href="#">instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	20

**name** *string*

<b>Description</b>	A user-defined name for this event handler instance
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**reload**

<b>Description</b>	Reload the Python script for this event handler instance
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">reload</a>
<b>Tree</b>	<a href="#">reload</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	Top-level container for operational commands on event handler statistics
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear statistics for this event handler instance
<b>Context</b>	<a href="#">system event-handler instance name</a> <i>string</i> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## gnoi

**Description** Top-level container for operational commands related to gNOI

**Context** [system gnoi](#)

**Tree** [gnoi](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## healthz

**Description** gNOI Healthz tools commands

**Context** [system gnoi healthz](#)

**Tree** [healthz](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## chassis

**Description** Chassis component

**Context** [system gnoi healthz chassis](#)

**Tree** [chassis](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## clear

**Description** Clear healthz events for this component

**Context** [system gnoi healthz chassis clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## clear

**Description** Clear all healthz events

**Context** [system gnoi healthz clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## control

**Description** Control module component

**Context** [system gnoi healthz control](#)

**Tree** [control](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## clear

**Description** Clear healthz events for this component

**Context** [system gnoi healthz control clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## slot string

**Description** Slot identifier for the control module

**Context** [system gnoi healthz control slot string](#)

<b>Tree</b>	<a href="#">slot</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## **fabric**

<b>Description</b>	Fabric module component
<b>Context</b>	<a href="#">system gnoi healthz fabric</a>
<b>Tree</b>	<a href="#">fabric</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## **clear**

<b>Description</b>	Clear healthz events for this component
<b>Context</b>	<a href="#">system gnoi healthz fabric clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## **slot number**

<b>Description</b>	Numeric identifier for the fabric module
<b>Context</b>	<a href="#">system gnoi healthz fabric slot number</a>
<b>Tree</b>	<a href="#">slot</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## fan-tray

<b>Description</b>	Fan component
<b>Context</b>	<a href="#">system gnoi healthz fan-tray</a>
<b>Tree</b>	<a href="#">fan-tray</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## clear

<b>Description</b>	Clear healthz events for this component
<b>Context</b>	<a href="#">system gnoi healthz fan-tray clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## id number

<b>Description</b>	Numeric identifier for the fan module
<b>Context</b>	<a href="#">system gnoi healthz fan-tray id number</a>
<b>Tree</b>	<a href="#">id</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## linecard

<b>Description</b>	Line card component
<b>Context</b>	<a href="#">system gnoi healthz linecard</a>
<b>Tree</b>	<a href="#">linecard</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## clear

<b>Description</b>	Clear healthz events for this component
<b>Context</b>	<a href="#">system gnoi healthz linecard clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## slot number

<b>Description</b>	Numeric identifier for the line card
<b>Context</b>	<a href="#">system gnoi healthz linecard slot number</a>
<b>Tree</b>	<a href="#">slot</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## power-supply

<b>Description</b>	Power supply component
<b>Context</b>	<a href="#">system gnoi healthz power-supply</a>
<b>Tree</b>	<a href="#">power-supply</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## clear

<b>Description</b>	Clear healthz events for this component
<b>Context</b>	<a href="#">system gnoi healthz power-supply clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **id number**

**Description** Numeric identifier for the power supply module

**Context** [system gnoi healthz power-supply id number](#)

**Tree** [id](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **transceiver**

**Description** Transceiver component

**Context** [system gnoi healthz transceiver](#)

**Tree** [transceiver](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **clear**

**Description** Clear healthz events for this component

**Context** [system gnoi healthz transceiver clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **interface string**

**Description** Interface name for the transceiver module

**Context** [system gnoi healthz transceiver interface string](#)

<b>Tree</b>	<a href="#">interface</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **grpc-server** *name string*

<b>Description</b>	List of configured gRPC server instances
<b>Context</b>	<a href="#">system grpc-server name string</a>
<b>Tree</b>	<a href="#">grpc-server</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **name** *string*

<b>Description</b>	User-provided name of this server instance
<b>Context</b>	<a href="#">system grpc-server name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **client id** *number*

<b>Description</b>	List of active gRIBI client sessions
<b>Context</b>	<a href="#">system grpc-server name string client id number</a>
<b>Tree</b>	<a href="#">client</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**id number**

<b>Description</b>	System generated ID for for the client
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id number</a>
<b>Range</b>	0 to 4294967295
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**disconnect**

<b>Description</b>	Disconnect this client from the server
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">client id number</a> <a href="#">disconnect</a>
<b>Tree</b>	<a href="#">disconnect</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**gnoi**

<b>Description</b>	Top-level container for operational commands related to gNOI
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi</a>
<b>Tree</b>	<a href="#">gnoi</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**healthz**

<b>Description</b>	gNOI Healthz tools commands
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi healthz</a>
<b>Tree</b>	<a href="#">healthz</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## chassis

<b>Description</b>	Chassis component
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi healthz chassis</a>
<b>Tree</b>	<a href="#">chassis</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## clear

<b>Description</b>	Clear healthz events for this component
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi healthz chassis clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## clear

<b>Description</b>	Clear all healthz events
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi healthz clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## control

<b>Description</b>	Control module component
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi healthz control</a>
<b>Tree</b>	<a href="#">control</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## clear

**Description** Clear healthz events for this component

**Context** [system grpc-server name](#) *string* [gnoi healthz control clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## slot *string*

**Description** Slot identifier for the control module

**Context** [system grpc-server name](#) *string* [gnoi healthz control slot string](#)

**Tree** [slot](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## fabric

**Description** Fabric module component

**Context** [system grpc-server name](#) *string* [gnoi healthz fabric](#)

**Tree** [fabric](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## clear

**Description** Clear healthz events for this component

**Context** [system grpc-server name](#) *string* [gnoi healthz fabric clear](#)

<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### slot number

<b>Description</b>	Numeric identifier for the fabric module
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi healthz fabric slot number</a>
<b>Tree</b>	<a href="#">slot</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### fan-tray

<b>Description</b>	Fan component
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi healthz fan-tray</a>
<b>Tree</b>	<a href="#">fan-tray</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### clear

<b>Description</b>	Clear healthz events for this component
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi healthz fan-tray clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**id number**

<b>Description</b>	Numeric identifier for the fan module
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi healthz fan-tray id number</a>
<b>Tree</b>	<a href="#">id</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**linecard**

<b>Description</b>	Line card component
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi healthz linecard</a>
<b>Tree</b>	<a href="#">linecard</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**clear**

<b>Description</b>	Clear healthz events for this component
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi healthz linecard clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**slot number**

<b>Description</b>	Numeric identifier for the line card
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi healthz linecard slot number</a>
<b>Tree</b>	<a href="#">slot</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**power-supply**

<b>Description</b>	Power supply component
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi healthz power-supply</a>
<b>Tree</b>	<a href="#">power-supply</a>
<b>Configurable</b>	True

**clear**

<b>Description</b>	Clear healthz events for this component
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi healthz power-supply clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**id number**

<b>Description</b>	Numeric identifier for the power supply module
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi healthz power-supply id</a> <i>number</i>
<b>Tree</b>	<a href="#">id</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**transceiver**

<b>Description</b>	Transceiver component
<b>Context</b>	<a href="#">system grpc-server name</a> <i>string</i> <a href="#">gnoi healthz transceiver</a>
<b>Tree</b>	<a href="#">transceiver</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## clear

**Description** Clear healthz events for this component

**Context** [system grpc-server name](#) *string* [gnoi healthz transceiver clear](#)

**Tree** [clear](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## interface *string*

**Description** Interface name for the transceiver module

**Context** [system grpc-server name](#) *string* [gnoi healthz transceiver interface](#) *string*

**Tree** [interface](#)

**String Length** 1 to 255

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## statistics

**Description** A collection of counters that were collected by the gRPC during the authentication process.

**Context** [system grpc-server name](#) *string* [statistics](#)

**Tree** [statistics](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## clear

**Description** Clear gNMI network instance authentication counters

<b>Context</b>	<a href="#">system grpc-server name <i>string</i> statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## I2cp-transparency

<b>Description</b>	Enable the I2cp-transparency context
<b>Context</b>	<a href="#">system I2cp-transparency</a>
<b>Tree</b>	<a href="#">I2cp-transparency</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## dot1x

<b>Description</b>	Enter the dot1x context
<b>Context</b>	<a href="#">system I2cp-transparency dot1x</a>
<b>Tree</b>	<a href="#">dot1x</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## clear

<b>Description</b>	Clears the statistics for the 802.1x Port based Network Access Control protocol.
<b>Context</b>	<a href="#">system I2cp-transparency dot1x clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## I2cp-total-statistics

<b>Description</b>	Enter the I2cp-total-statistics context
--------------------	---

<b>Context</b>	<a href="#">system l2cp-transparency l2cp-total-statistics</a>
<b>Tree</b>	<a href="#">l2cp-total-statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## clear

<b>Description</b>	Clears the global statistics for the L2CP protocols.
<b>Context</b>	<a href="#">system l2cp-transparency l2cp-total-statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## lACP

<b>Description</b>	Enter the lACP context
<b>Context</b>	<a href="#">system l2cp-transparency lACP</a>
<b>Tree</b>	<a href="#">lACP</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## clear

<b>Description</b>	Clears the statistics for Link Aggregation Control Protocol.
<b>Context</b>	<a href="#">system l2cp-transparency lACP clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## lldp

<b>Description</b>	Enter the lldp context
<b>Context</b>	<a href="#">system l2cp-transparency lldp</a>

<b>Tree</b>	<a href="#">lldp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## clear

<b>Description</b>	Clears the statistics for Link Layer Discovery Protocol.
<b>Context</b>	<a href="#">system l2cp-transparency lldp clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## ptp

<b>Description</b>	Enter the ptp context
<b>Context</b>	<a href="#">system l2cp-transparency ptp</a>
<b>Tree</b>	<a href="#">ptp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## clear

<b>Description</b>	Clears the statistics for the Precision Time Protocol .
<b>Context</b>	<a href="#">system l2cp-transparency ptp clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## xstp

<b>Description</b>	Enter the xstp context
<b>Context</b>	<a href="#">system l2cp-transparency xstp</a>
<b>Tree</b>	<a href="#">xstp</a>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## clear

<b>Description</b>	Clears the statistics for all the Spanning Tree Protocols.
<b>Context</b>	<a href="#">system l2cp-transparency xstp clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## lldp

<b>Description</b>	Top-level container for LLDP tools
<b>Context</b>	<a href="#">system lldp</a>
<b>Tree</b>	<a href="#">lldp</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## interface [name string](#)

<b>Description</b>	List of interfaces on which LLDP is enabled
<b>Context</b>	<a href="#">system lldp interface name string</a>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## name [string](#)

<b>Description</b>	Reference to a LLDP Ethernet interface
<b>Context</b>	<a href="#">system lldp interface name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	LLDP interface statistics tools commands
<b>Context</b>	<a href="#">system lldp interface name</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear interface LLDP statistics
<b>Context</b>	<a href="#">system lldp interface name</a> <i>string</i> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**statistics**

<b>Description</b>	LLDP global statistics tools commands
<b>Context</b>	<a href="#">system lldp statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear global LLDP statistics
<b>Context</b>	<a href="#">system lldp statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**mirroring**

<b>Description</b>	Enable the mirroring context
<b>Context</b>	<a href="#">system mirroring</a>

<b>Tree</b>	<a href="#">mirroring</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

### mirroring-instance [name](#) *string*

<b>Description</b>	Enter the mirroring-instance list instance
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i>
<b>Tree</b>	<a href="#">mirroring-instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

### [name](#) *string*

<b>Description</b>	A unique name identifying the mirroring instance
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

### mirror-destination

<b>Description</b>	Configure mirror destination
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination</a>
<b>Tree</b>	<a href="#">mirror-destination</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

### statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

**clear**

<b>Description</b>	Enter the clear context
<b>Context</b>	<a href="#">system mirroring mirroring-instance name</a> <i>string</i> <a href="#">mirror-destination</a> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10e, 7250 IXR-6e

**packet-trace-base64**

<b>Description</b>	Tools command to report the forwarding behavior for a specified test packet (packet specified in base64 format)
<b>Context</b>	<a href="#">system packet-trace-base64</a>
<b>Tree</b>	<a href="#">packet-trace-base64</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**interface** *string*

<b>Description</b>	References the configured name of the interface in which to inject the probe packet
<b>Context</b>	<a href="#">system packet-trace-base64 interface</a> <i>string</i>
<b>Tree</b>	<a href="#">interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**packet** *binary*

<b>Description</b>	Packet content encoded in base64 string format
<b>Context</b>	<a href="#">system packet-trace-base64 packet</a> <i>binary</i>
<b>Tree</b>	<a href="#">packet</a>
<b>Configurable</b>	True

<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e
------------------	--

## sync

<b>Description</b>	Top-level grouping for sync operational commands
<b>Context</b>	<a href="#">system sync</a>
<b>Tree</b>	<a href="#">sync</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## ptp

<b>Description</b>	Grouping for ptp operational commands
<b>Context</b>	<a href="#">system sync ptp</a>
<b>Tree</b>	<a href="#">ptp</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## instance [instance-index](#) *number*

<b>Description</b>	Grouping for PTP instance operational commands
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i>
<b>Tree</b>	<a href="#">instance</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## instance-index *number*

<b>Description</b>	Enter the instance-index context
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i>
<b>Range</b>	1 to 10
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## clear-statistics

<b>Description</b>	Clears all PTP statistics for PTP
<b>Context</b>	<a href="#">system sync ptp instance instance-index number clear-statistics</a>
<b>Tree</b>	<a href="#">clear-statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## default-ds

<b>Description</b>	The default data set of the PTP Instance In the context of the protocol, this data set is required for an Ordinary Clock or Boundary Clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds</a>
<b>Tree</b>	<a href="#">default-ds</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## clear

<b>Description</b>	Clears PTP statistics and event counters in the default-ds
<b>Context</b>	<a href="#">system sync ptp instance instance-index number default-ds statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## time-recovery-engine

<b>Description</b>	Enter the time-recovery-engine context
--------------------	--

<b>Context</b>	<a href="#">system sync ptp instance instance-index <i>number</i> default-ds time-recovery-engine</a>
<b>Tree</b>	<a href="#">time-recovery-engine</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system sync ptp instance instance-index <i>number</i> default-ds time-recovery-engine statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## clear

<b>Description</b>	Clears all PTP statistics for PTP time recovery engine
<b>Context</b>	<a href="#">system sync ptp instance instance-index <i>number</i> default-ds time-recovery-engine statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## inactive-peers

<b>Description</b>	Enter the inactive-peers context
<b>Context</b>	<a href="#">system sync ptp instance instance-index <i>number</i> inactive-peers</a>
<b>Tree</b>	<a href="#">inactive-peers</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

## clear

<b>Description</b>	Clears information related to inactive PTP peers
<b>Context</b>	<a href="#">system sync ptp instance instance-index <i>number</i> inactive-peers clear</a>
<b>Tree</b>	<a href="#">clear</a>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### **port-ds-configured-peer** [port-index](#) *number*

<b>Description</b>	Grouping for PTP Port DS for configured IP peers operational commands
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i> <a href="#">port-ds-configured-peer</a> <a href="#">port-index</a> <i>number</i>
<b>Tree</b>	<a href="#">port-ds-configured-peer</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### **port-index** *number*

<b>Description</b>	Enter the port-index context
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i> <a href="#">port-ds-configured-peer</a> <a href="#">port-index</a> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### **statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i> <a href="#">port-ds-configured-peer</a> <a href="#">port-index</a> <i>number</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

### **clear**

<b>Description</b>	Clears all PTP statistics for this PTP Port DS
<b>Context</b>	<a href="#">system sync ptp instance instance-index</a> <i>number</i> <a href="#">port-ds-configured-peer</a> <a href="#">port-index</a> <i>number</i> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**port-ds-discovered-peer** *port-index number*

<b>Description</b>	Grouping for PTP Port DS for discovered IP peers operational commands
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-discovered-peer port-index number</a>
<b>Tree</b>	<a href="#">port-ds-discovered-peer</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**port-index** *number*

<b>Description</b>	Enter the port-index context
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-discovered-peer port-index number</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-discovered-peer port-index number statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**clear**

<b>Description</b>	Clears all PTP statistics for this PTP Port DS
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-discovered-peer port-index number statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**port-ds-interface** *port-index number*

<b>Description</b>	Grouping for PTP Port DS for interfaces operational commands
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface port-index number</a>
<b>Tree</b>	<a href="#">port-ds-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**port-index** *number*

<b>Description</b>	Enter the port-index context
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface port-index number</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**statistics**

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface port-index number statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**clear**

<b>Description</b>	Clears all PTP statistics for this PTP Port DS
<b>Context</b>	<a href="#">system sync ptp instance instance-index number port-ds-interface port-index number statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D5

**tls**

<b>Description</b>	Top-level container for operational commands related to TLS
--------------------	---

<b>Context</b>	<a href="#">system tls</a>
<b>Tree</b>	<a href="#">tls</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## generate-csr

<b>Description</b>	Generates a certificate signing request and key pair  Fields for the certificate are taken from OpenSSL defaults, with the exception of the common name, which is taken from the system host name and domain name combination.
<b>Context</b>	<a href="#">system tls generate-csr</a>
<b>Tree</b>	<a href="#">generate-csr</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## common-name *string*

<b>Description</b>	The common name to use for the certificate signing request  By default the common name is set to the system host name and domain name combination.
<b>Context</b>	<a href="#">system tls generate-csr common-name <i>string</i></a>
<b>Tree</b>	<a href="#">common-name</a>
<b>String Length</b>	1 to 64
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## country *string*

<b>Description</b>	The country name to use for the certificate signing request  The expected format is two characters long, e.g. 'US'.
<b>Context</b>	<a href="#">system tls generate-csr country <i>string</i></a>
<b>Tree</b>	<a href="#">country</a>
<b>String Length</b>	2
<b>Default</b>	US
<b>Configurable</b>	True

---

**Platforms** Supported on all platforms

### **domain-names** *string*

**Description** Domain names to add to the SubjectAlternativeName field within the certificate signing request  
These names are encoded as DNS:<name> within the certificate SAN.

**Context** [system tls generate-csr domain-names](#) *string*

**Tree** [domain-names](#)

**String Length** 1 to 253

**Configurable** True

**Platforms** Supported on all platforms

**Max. Elements** 32

### **email** *string*

**Description** The email address to use for the certificate signing request

**Context** [system tls generate-csr email](#) *string*

**Tree** [email](#)

**String Length** 1 to 255

**Configurable** True

**Platforms** Supported on all platforms

### **ip-addresses** (*ipv4-address* | *ipv6-address*)

**Description** IP addresses to add to the SubjectAlternativeName field within the certificate signing request  
These addresses are encoded as IP:<ip> within the certificate SAN.

**Context** [system tls generate-csr ip-addresses](#) (*ipv4-address* | *ipv6-address*)

**Tree** [ip-addresses](#)

**Configurable** True

**Platforms** Supported on all platforms

**Max. Elements** 32

**key-size** *number*

<b>Description</b>	The size of the private key to generate for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-csr key-size number</a>
<b>Tree</b>	<a href="#">key-size</a>
<b>Range</b>	1024 to 16384
<b>Default</b>	4096
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**key-type** *keyword*

<b>Description</b>	The type of private key to generate for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-csr key-type keyword</a>
<b>Tree</b>	<a href="#">key-type</a>
<b>Default</b>	rsa
<b>Options</b>	<ul style="list-style-type: none"><li>• rsa</li></ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**locality** *string*

<b>Description</b>	The city or locality to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-csr locality string</a>
<b>Tree</b>	<a href="#">locality</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**organization** *string*

<b>Description</b>	The organization to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-csr organization string</a>
<b>Tree</b>	<a href="#">organization</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **organization-unit** *string*

**Description** The organization unit to use for the certificate signing request

**Context** [system tls generate-csr organization-unit string](#)

**Tree** [organization-unit](#)

**String Length** 1 to 255

**Configurable** True

**Platforms** Supported on all platforms

### **spiffe-id** *string*

**Description** A SPIFFE ID to use for the certificate signing request  
This ID is in URI form, including the leading 'spiffe://', for example 'spiffe://srlinux.dev/sa/user'.

**Context** [system tls generate-csr spiffe-id string](#)

**Tree** [spiffe-id](#)

**Configurable** True

**Platforms** Supported on all platforms

### **state** *string*

**Description** The state or province to use for the certificate signing request

**Context** [system tls generate-csr state string](#)

**Tree** [state](#)

**String Length** 1 to 255

**Configurable** True

**Platforms** Supported on all platforms

### **type** *keyword*

**Description** The type of certificate to use for the certificate signing request

**Context** [system tls generate-csr type keyword](#)

**Tree** [type](#)

**Default** x509

---

<b>Options</b>	• x509
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## generate-self-signed

<b>Description</b>	Generates a self signed certificate and key pair Fields for the self signed certificate are taken from OpenSSL defaults, with the exception of the common name, which is taken from the system host name and domain name combination.
<b>Context</b>	<a href="#">system tls generate-self-signed</a>
<b>Tree</b>	<a href="#">generate-self-signed</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## common-name *string*

<b>Description</b>	The common name to use for the certificate signing request By default the common name is set to the system host name and domain name combination.
<b>Context</b>	<a href="#">system tls generate-self-signed common-name <i>string</i></a>
<b>Tree</b>	<a href="#">common-name</a>
<b>String Length</b>	1 to 64
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## country *string*

<b>Description</b>	The country name to use for the certificate signing request The expected format is two characters long, e.g. 'US'.
<b>Context</b>	<a href="#">system tls generate-self-signed country <i>string</i></a>
<b>Tree</b>	<a href="#">country</a>
<b>String Length</b>	2
<b>Default</b>	US
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**domain-names** *string*

<b>Description</b>	Domain names to add to the SubjectAlternativeName field within the certificate signing request These names are encoded as DNS:<name> within the certificate SAN.
<b>Context</b>	<a href="#">system tls generate-self-signed domain-names</a> <i>string</i>
<b>Tree</b>	<a href="#">domain-names</a>
<b>String Length</b>	1 to 253
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

**duration** *number*

<b>Description</b>	The time in which the certificate is valid
<b>Context</b>	<a href="#">system tls generate-self-signed duration</a> <i>number</i>
<b>Tree</b>	<a href="#">duration</a>
<b>Range</b>	1 to 3650
<b>Default</b>	365
<b>Units</b>	days
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**email** *string*

<b>Description</b>	The email address to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-self-signed email</a> <i>string</i>
<b>Tree</b>	<a href="#">email</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**ip-addresses** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	IP addresses to add to the SubjectAlternativeName field within the certificate signing request
--------------------	--

These addresses are encoded as IP:<ip> within the certificate SAN.

<b>Context</b>	<a href="#">system tls generate-self-signed ip-addresses</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">ip-addresses</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

### **key-size** *number*

<b>Description</b>	The size of the private key to generate for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-self-signed key-size</a> <i>number</i>
<b>Tree</b>	<a href="#">key-size</a>
<b>Range</b>	1024 to 16384
<b>Default</b>	4096
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **key-type** *keyword*

<b>Description</b>	The type of private key to generate for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-self-signed key-type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">key-type</a>
<b>Default</b>	rsa
<b>Options</b>	<ul style="list-style-type: none"> <li>• rsa</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **locality** *string*

<b>Description</b>	The city or locality to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-self-signed locality</a> <i>string</i>
<b>Tree</b>	<a href="#">locality</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**organization *string***

<b>Description</b>	The organization to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-self-signed organization <i>string</i></a>
<b>Tree</b>	<a href="#">organization</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**organization-unit *string***

<b>Description</b>	The organization unit to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-self-signed organization-unit <i>string</i></a>
<b>Tree</b>	<a href="#">organization-unit</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**spiffe-id *string***

<b>Description</b>	A SPIFFE ID to use for the certificate signing request This ID is in URI form, including the leading 'spiffe://', for example 'spiffe://srlinux.dev/sa/user'.
<b>Context</b>	<a href="#">system tls generate-self-signed spiffe-id <i>string</i></a>
<b>Tree</b>	<a href="#">spiffe-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**state *string***

<b>Description</b>	The state or province to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-self-signed state <i>string</i></a>
<b>Tree</b>	<a href="#">state</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**type** *keyword*

<b>Description</b>	The type of certificate to use for the certificate signing request
<b>Context</b>	<a href="#">system tls generate-self-signed type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Default</b>	x509
<b>Options</b>	<ul style="list-style-type: none"> <li>• x509</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**server-profile** *name string*

<b>Description</b>	Enter the server-profile list instance
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i>
<b>Tree</b>	<a href="#">server-profile</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**name** *string*

<b>Description</b>	Name of the TLS server-profile
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i>
<b>String Length</b>	1 to 247
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**certz**

<b>Description</b>	<p>Information relating to the active certificates and bundles as provided via Certz</p> <p>State is provided by the gNSI Certz service, and can be changed using the gNSI.Certz.Rotate RPC</p>
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i> <a href="#">certz</a>
<b>Tree</b>	<a href="#">certz</a>
<b>Configurable</b>	True

---

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## remove

**Description** Remove Certz SSL profile from the system.

**Context** [system tls server-profile name string certz remove](#)

**Tree** [remove](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## rotate

**Description** Perform a rotation of a certificate, trust anchor, or certificate revocation list within Certz SSL profile.

**Context** [system tls server-profile name string certz rotate](#)

**Tree** [rotate](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## certificate *string*

**Description** Base64 encoded certificate to use with the provided or existing private key  
This includes the '-----BEGIN CERTIFICATE-----' and '-----END CERTIFICATE-----' header and footer

**Context** [system tls server-profile name string certz rotate certificate string](#)

**Tree** [certificate](#)

**Configurable** True

**Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**created-on** *number*

<b>Description</b>	Sets the created on value for the new policy  Value is the number of seconds since the epoch. For reference the current time from the epoch in most Linux distributions can be retrieved via 'date +%s'. You can also select a specific date via 'date -d "2023-03-31" +%s'.  If no value is provided the systems current date and time is used.
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i> <a href="#">certz rotate</a> <a href="#">created-on</a> <i>number</i>
<b>Tree</b>	<a href="#">created-on</a>
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**crl** *string*

<b>Description</b>	Base64 encoded bundle of certificates to add to the certificate revocation list
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i> <a href="#">certz rotate</a> <a href="#">crl</a> <i>string</i>
<b>Tree</b>	<a href="#">crl</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**key** *string*

<b>Description</b>	Base64 encoded key to use with the server certificate  This includes the '-----BEGIN PRIVATE KEY-----', and '-----END PRIVATE KEY-----' header and footer  The value is hashed, and only the hashed value is kept
<b>Context</b>	<a href="#">system tls server-profile name</a> <i>string</i> <a href="#">certz rotate</a> <a href="#">key</a> <i>string</i>
<b>Tree</b>	<a href="#">key</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**trust-anchor string**

<b>Description</b>	Base64 encoded certificate chain to use as a trust anchor
<b>Context</b>	<a href="#">system tls server-profile name string certz rotate trust-anchor string</a>
<b>Tree</b>	<a href="#">trust-anchor</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**version string**

<b>Description</b>	A version string to store with the policy No constraints are applied other than the value must be a string. If no value is provided no default is used.
<b>Context</b>	<a href="#">system tls server-profile name string certz rotate version string</a>
<b>Tree</b>	<a href="#">version</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## 20.1 tunnel Descriptions

### tunnel

<b>Description</b>	This model collects all config and state aspects of the tools-tunnel table in SRLinux.
<b>Context</b>	<a href="#">tunnel</a>
<b>Tree</b>	<a href="#">tunnel</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### vxlan-tunnel

<b>Description</b>	Enter the vxlan-tunnel context
<b>Context</b>	<a href="#">tunnel vxlan-tunnel</a>
<b>Tree</b>	<a href="#">vxlan-tunnel</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### clear

<b>Description</b>	Enter the clear context
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **vtep address** (*ipv4-address* | *ipv6-address*)

**Description** The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).

**Context** [tunnel vxlan-tunnel vtep address](#) (*ipv4-address* | *ipv6-address*)

**Tree** [vtep](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **address** (*ipv4-address* | *ipv6-address*)

**Description** The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).

**Context** [tunnel vxlan-tunnel vtep address](#) (*ipv4-address* | *ipv6-address*)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **statistics**

**Description** Enter the statistics context

**Context** [tunnel vxlan-tunnel vtep address](#) (*ipv4-address* | *ipv6-address*) [statistics](#)

## 21.1 tunnel-interface Descriptions

### tunnel-interface *name string*

<b>Description</b>	In the case that the interface is logical tunnel interface, the parameters for the tunnel are specified within this subtree. Tunnel interfaces have only a single logical subinterface associated with them.
<b>Context</b>	<a href="#">tunnel-interface name string</a>
<b>Tree</b>	<a href="#">tunnel-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### *name string*

<b>Description</b>	The name of the tunnel-interface. Valid options are: vxlan<N>, N=0..255
<b>Context</b>	<a href="#">tunnel-interface name string</a>
<b>String Length</b>	6 to 8
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### vxlan-interface *index number*

<b>Description</b>	The list of vxlan-interfaces.
<b>Context</b>	<a href="#">tunnel-interface name string vxlan-interface index number</a>
<b>Tree</b>	<a href="#">vxlan-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
<b>Max. Elements</b>	16384

### *index number*

<b>Description</b>	The index of the vxlan-tunnel.
--------------------	--------------------------------

<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i>
<b>Range</b>	0 to 999999999
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## bridge-table

<b>Description</b>	Enable the bridge-table context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table</a>
<b>Tree</b>	<a href="#">bridge-table</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## multicast-destinations

<b>Description</b>	Enter the multicast-destinations context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table</a> <a href="#">multicast-destinations</a>
<b>Tree</b>	<a href="#">multicast-destinations</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## destination [vtep](#) ([ipv4-address](#) | [ipv6-address](#)) [vni](#) *number*

<b>Description</b>	Enter the destination list instance
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table</a> <a href="#">multicast-destinations</a> <a href="#">destination vtep</a> ( <a href="#">ipv4-address</a>   <a href="#">ipv6-address</a> ) <a href="#">vni</a> <i>number</i>
<b>Tree</b>	<a href="#">destination</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**vtep** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table multicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni number</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**vni** *number*

<b>Description</b>	VXLAN Network Identifier of the destination.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table multicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni number</a>
<b>Range</b>	1 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**destination-index** *number*

<b>Description</b>	A system-wide unique identifier of this vxlan destination object (system allocated).
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table multicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni number</a> <a href="#">destination-index</a> <i>number</i>
<b>Tree</b>	<a href="#">destination-index</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**multicast-forwarding** *keyword*

<b>Description</b>	The type of multicast data forwarded by this vxlan destination.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table multicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni number</a> <a href="#">multicast-forwarding</a> <i>keyword</i>

<b>Tree</b>	<a href="#">multicast-forwarding</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• none</li> <li>• BUM</li> <li>• unknown-unicast</li> <li>• broadcast-mcast</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **not-programmed-reason** *keyword*

<b>Description</b>	The reason why the destination is not programmed in the floodlist
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table multicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni number</a> <a href="#">not-programmed-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">not-programmed-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• no-destination-index</li> <li>• multicast-limit</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **multicast-limit**

<b>Description</b>	Multicast limits per vxlan interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table multicast-destinations multicast-limit</a>
<b>Tree</b>	<a href="#">multicast-limit</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **current-usage** *number*

<b>Description</b>	Maximum number of multicast vxlan-destinations in use on this vxlan-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table multicast-destinations multicast-limit current-usage</a> <i>number</i>

<b>Tree</b>	<a href="#">current-usage</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### maximum-entries *number*

<b>Description</b>	Maximum number of multicast vxlan-destinations allowed on a vxlan-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table multicast-destinations</a> <a href="#">multicast-limit</a> <a href="#">maximum-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">maximum-entries</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### active-entries *number*

<b>Description</b>	The total number of entries that are active on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table statistics active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**failed-entries** *number*

<b>Description</b>	The total number of macs, which have not been programmed on at least one slot
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table statistics failed-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">failed-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**mac-type** *type keyword*

<b>Description</b>	The type of the mac on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table statistics mac-type</a> <i>type keyword</i>
<b>Tree</b>	<a href="#">mac-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**type** *keyword*

<b>Description</b>	Enter the type context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table statistics mac-type</a> <i>type keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• duplicate</li> <li>• learnt</li> <li>• irb-interface</li> <li>• evpn</li> <li>• evpn-static</li> <li>• irb-interface-anycast</li> <li>• proxy-anti-spoof</li> <li>• reserved</li> <li>• eth-cfm</li> </ul>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### active-entries *number*

**Description** The total number of entries of this type on the sub-interface

**Context** [tunnel-interface name](#) *string* [vxlan-interface index number](#) [bridge-table statistics mac-type type](#) *keyword* [active-entries number](#)

**Tree** [active-entries](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### failed-entries *number*

**Description** The total number of macs of this type, which have not been programmed on at least one slot

**Context** [tunnel-interface name](#) *string* [vxlan-interface index number](#) [bridge-table statistics mac-type type](#) *keyword* [failed-entries number](#)

**Tree** [failed-entries](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### total-entries *number*

**Description** The total number of macs of this type, active and inactive, on the sub-interface.

**Context** [tunnel-interface name](#) *string* [vxlan-interface index number](#) [bridge-table statistics mac-type type](#) *keyword* [total-entries number](#)

**Tree** [total-entries](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**total-entries** *number*

<b>Description</b>	The total number of macs, active and inactive, on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table statistics total-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**unicast-destinations**

<b>Description</b>	Enter the unicast-destinations context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations</a>
<b>Tree</b>	<a href="#">unicast-destinations</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**destination** [vtep](#) (*ipv4-address* | *ipv6-address*) *vni number*

<b>Description</b>	Enter the destination list instance
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <i>vni number</i>
<b>Tree</b>	<a href="#">destination</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**vtep** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <i>vni number</i>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### vni number

<b>Description</b>	VXLAN Network Identifier of the destination.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table unicast-destinations destination vtep (ipv4-address   ipv6-address)</a> <a href="#">vni number</a>
<b>Range</b>	1 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### destination-index number

<b>Description</b>	A system-wide unique identifier of this vxlan destination object (system allocated).
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table unicast-destinations destination vtep (ipv4-address   ipv6-address)</a> <a href="#">vni number</a> <a href="#">destination-index number</a>
<b>Tree</b>	<a href="#">destination-index</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### mac-table

<b>Description</b>	Enter the mac-table context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table unicast-destinations destination vtep (ipv4-address   ipv6-address)</a> <a href="#">vni number</a> <a href="#">mac-table</a>
<b>Tree</b>	<a href="#">mac-table</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**mac address string**

<b>Description</b>	macs learnt on the bridging instance
<b>Context</b>	<a href="#">tunnel-interface name string vxlan-interface index number bridge-table unicast-destinations destination vtep (ipv4-address   ipv6-address) vni number mac-table mac address string</a>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**address string**

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">tunnel-interface name string vxlan-interface index number bridge-table unicast-destinations destination vtep (ipv4-address   ipv6-address) vni number mac-table mac address string</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**failed-slots number**

<b>Description</b>	The list of slot IDs corresponding to the linecards that did not successfully program the mac
<b>Context</b>	<a href="#">tunnel-interface name string vxlan-interface index number bridge-table unicast-destinations destination vtep (ipv4-address   ipv6-address) vni number mac-table mac address string failed-slots number</a>
<b>Tree</b>	<a href="#">failed-slots</a>
<b>Range</b>	1 to 8
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**last-update string**

<b>Description</b>	The date and time of the last update of this mac
<b>Context</b>	<a href="#">tunnel-interface name string vxlan-interface index number bridge-table unicast-destinations destination vtep (ipv4-address   ipv6-address) vni number mac-table mac address string last-update string</a>

<b>Tree</b>	<a href="#">last-update</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **not-programmed-reason** *keyword*

<b>Description</b>	The reason why the mac is not programmed
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni number</a> <a href="#">mac-table mac address</a> <i>string</i> <a href="#">not-programmed-reason</a> <i>keyword</i>
<b>Tree</b>	<a href="#">not-programmed-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• mac-limit</li> <li>• failed-on-slots</li> <li>• no-destination-index</li> <li>• reserved</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **type** *keyword*

<b>Description</b>	the type of the mac installed in the fib.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni number</a> <a href="#">mac-table mac address</a> <i>string</i> <a href="#">type</a> <i>keyword</i>
<b>Tree</b>	<a href="#">type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• duplicate</li> <li>• learnt</li> <li>• irb-interface</li> <li>• evpn</li> <li>• evpn-static</li> <li>• irb-interface-anycast</li> <li>• proxy-anti-spoof</li> <li>• reserved</li> </ul>

- eth-cfm

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## statistics

<b>Description</b>	Enter the statistics context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni number</a> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## active-entries *number*

<b>Description</b>	The total number of entries that are active on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni number</a> <a href="#">statistics active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## failed-entries *number*

<b>Description</b>	The total number of macs, which have not been programmed on atleast one slot
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni number</a> <a href="#">statistics failed-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">failed-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### mac-type *type* keyword

**Description** the type of the mac on the sub-interface.

**Context** [tunnel-interface name](#) *string* [vxlan-interface index](#) *number* [bridge-table unicast-destinations destination vtep](#) (*ipv4-address* | *ipv6-address*) [vni number](#) [statistics mac-type type](#) *keyword*

**Tree** [mac-type](#)

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### type *keyword*

**Description** Enter the type context

**Context** [tunnel-interface name](#) *string* [vxlan-interface index](#) *number* [bridge-table unicast-destinations destination vtep](#) (*ipv4-address* | *ipv6-address*) [vni number](#) [statistics mac-type type](#) *keyword*

**Options**

- static
- duplicate
- learnt
- irb-interface
- evpn
- evpn-static
- irb-interface-anycast
- proxy-anti-spoof
- reserved
- eth-cfm

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### active-entries *number*

**Description** The total number of entries of this type on the sub-interface

<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination</a> <a href="#">vtep (ipv4-address   ipv6-address)</a> <a href="#">vni number</a> <a href="#">statistics mac-type type</a> <i>keyword</i> <a href="#">active-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**failed-entries** *number*

<b>Description</b>	The total number of macs of this type, which have not been programmed on atleast one slot
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination</a> <a href="#">vtep (ipv4-address   ipv6-address)</a> <a href="#">vni number</a> <a href="#">statistics mac-type type</a> <i>keyword</i> <a href="#">failed-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">failed-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**total-entries** *number*

<b>Description</b>	The total number of macs of this type , active and inactive, on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination</a> <a href="#">vtep (ipv4-address   ipv6-address)</a> <a href="#">vni number</a> <a href="#">statistics mac-type type</a> <i>keyword</i> <a href="#">total-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**total-entries** *number*

<b>Description</b>	The total number of macs, active and inactive, on the sub-interface.
--------------------	--

<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations destination vtep</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> ) <a href="#">vni number</a> <a href="#">statistics total-entries</a> <i>number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **es-destination** *esi string*

<b>Description</b>	Enter the es-destination list instance
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i>
<b>Tree</b>	<a href="#">es-destination</a>
<b>Configurable</b>	False

### **esi** *string*

<b>Description</b>	The 10-byte Ethernet Segment Identifier of the ethernet segment. ESI-0 or MAX-ESI values are not allowed.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **destination-index** *number*

<b>Description</b>	A system-wide unique identifier of this vxlan destination object (system allocated).
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">destination-index</a> <i>number</i>
<b>Tree</b>	<a href="#">destination-index</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**mac-table**

<b>Description</b>	Enter the mac-table context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">mac-table</a>
<b>Tree</b>	<a href="#">mac-table</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**mac address string**

<b>Description</b>	macs learnt on the bridging instance
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">mac-table mac address</a> <i>string</i>
<b>Tree</b>	<a href="#">mac</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**address string**

<b>Description</b>	Enter the address context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">mac-table mac address</a> <i>string</i>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**failed-slots number**

<b>Description</b>	The list of slot IDs corresponding to the linecards that did not successfully program the mac
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">mac-table mac address</a> <i>string</i> <a href="#">failed-slots</a> <i>number</i>
<b>Tree</b>	<a href="#">failed-slots</a>
<b>Range</b>	1 to 8

<b>Tree</b>	<a href="#">mac-type</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**type** *keyword*

<b>Description</b>	Enter the type context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">statistics mac-type type</a> <i>keyword</i>
<b>Options</b>	<ul style="list-style-type: none"> <li>• static</li> <li>• duplicate</li> <li>• learnt</li> <li>• irb-interface</li> <li>• evpn</li> <li>• evpn-static</li> <li>• irb-interface-anycast</li> <li>• proxy-anti-spoof</li> <li>• reserved</li> <li>• eth-cfm</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **active-entries** *number*

<b>Description</b>	The total number of entries of this type on the sub-interface
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">statistics mac-type type</a> <i>keyword active-entries number</i>
<b>Tree</b>	<a href="#">active-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **failed-entries** *number*

<b>Description</b>	The total number of macs of this type, which have not been programmed on atleast one slot
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">statistics mac-type type</a> <i>keyword failed-entries number</i>
<b>Tree</b>	<a href="#">failed-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **total-entries** *number*

<b>Description</b>	The total number of macs of this type , active and inactive, on the sub-interface.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">statistics mac-type type</a> <i>keyword total-entries number</i>
<b>Tree</b>	<a href="#">total-entries</a>
<b>Default</b>	0
<b>Configurable</b>	False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **total-entries** *number*

**Description** The total number of macs, active and inactive, on the sub-interface.

**Context** [tunnel-interface name](#) *string* [vxlan-interface index](#) *number* [bridge-table unicast-destinations es-destination esi](#) *string* [statistics total-entries](#) *number*

**Tree** [total-entries](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **vtep** [address](#) (*ipv4-address* | *ipv6-address*) *vni number*

**Description** Add a list entry for vtep

**Context** [tunnel-interface name](#) *string* [vxlan-interface index](#) *number* [bridge-table unicast-destinations es-destination esi](#) *string* [vtep address](#) (*ipv4-address* | *ipv6-address*) *vni number*

**Tree** [vtep](#)

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **address** (*ipv4-address* | *ipv6-address*)

**Description** The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).

**Context** [tunnel-interface name](#) *string* [vxlan-interface index](#) *number* [bridge-table unicast-destinations es-destination esi](#) *string* [vtep address](#) (*ipv4-address* | *ipv6-address*) *vni number*

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **vni** *number*

**Description** VXLAN Network Identifier of the destination.

<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">bridge-table unicast-destinations es-destination esi</a> <i>string</i> <a href="#">vtep address</a> ( <i>ipv4-address   ipv6-address</i> ) <a href="#">vni</a> <i>number</i>
<b>Range</b>	1 to 16777215
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## egress

<b>Description</b>	Enter the egress context
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">egress</a>
<b>Tree</b>	<a href="#">egress</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## inner-ethernet-header

<b>Description</b>	Parameters of the inner VXLAN ethernet payload when the VXLAN tunnel is used in an ip-vrf.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">egress inner-ethernet-header</a>
<b>Tree</b>	<a href="#">inner-ethernet-header</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## source-mac *keyword*

<b>Description</b>	VXLAN inner ethernet source mac-address. Present when the VXLAN tunnel is associated with a ip-vrf network-instance.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i> <a href="#">egress inner-ethernet-header source-mac</a> <i>keyword</i>
<b>Tree</b>	<a href="#">source-mac</a>
<b>Default</b>	use-system-mac
<b>Options</b>	<ul style="list-style-type: none"> <li>• use-system-mac</li> </ul>
<b>Configurable</b>	True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### used-source-mac *string*

**Description** VXLAN inner ethernet source mac-address in use. Present when the VXLAN tunnel is associated with a ip-vrf network-instance.

**Context** [tunnel-interface name](#) *string* [vxlan-interface index](#) *number* [egress inner-ethernet-header used-source-mac](#) *string*

**Tree** [used-source-mac](#)

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### source-ip *keyword*

**Description** The ip-address that will be used as the source-ip for all vxlan traffic egressing this vxlan-interface.

**Context** [tunnel-interface name](#) *string* [vxlan-interface index](#) *number* [egress source-ip](#) *keyword*

**Tree** [source-ip](#)

**Default** use-system-ipv4-address

**Options**

- use-system-ipv4-address

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### ingress

**Description** Enter the ingress context

**Context** [tunnel-interface name](#) *string* [vxlan-interface index](#) *number* [ingress](#)

**Tree** [ingress](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**vni number**

<b>Description</b>	Ingress VXLAN Network Identifier of the VXLAN subinterface. The egress VNI is determined by the static egress-vni configured in the associated destination or by the dynamic egress-vni learned from the control plane.
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <i>number</i> <a href="#">ingress vni number</a>
<b>Tree</b>	<a href="#">vni</a>
<b>Range</b>	1 to 16777215
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**oper-down-reason keyword**

<b>Description</b>	The reason why the vxlan-interface is oper-down
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">oper-down-reason keyword</a>
<b>Tree</b>	<a href="#">oper-down-reason</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• mac-failed</li> <li>• ingress-hash-failed</li> <li>• egress-hash-failed</li> <li>• other</li> </ul>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**oper-state keyword**

<b>Description</b>	The operational state of the vxlan-interface
<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index number</a> <a href="#">oper-state keyword</a>
<b>Tree</b>	<a href="#">oper-state</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• up</li> <li>• down</li> </ul>
<b>Configurable</b>	False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **type** *identityref*

**Description** The value of this leaf indicates the context in which the vxlan-interface will be used in.

**Context** [tunnel-interface name](#) *string* [vxlan-interface index](#) *number* *type identityref*

**Tree** [type](#)

**Options**

- **routed**  
Indicates subinterface is used in a routed context
- **bridged**  
Indicates subinterface is used in a bridged context
- **local-mirror-dest**  
Indicates subinterface is used in a mirroring destination SPAN context

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

## 22.1 tunnel Descriptions

### tunnel

<b>Description</b>	This model collects all config and state aspects of the tunnel table in SRLinux.
<b>Context</b>	<a href="#">tunnel</a>
<b>Tree</b>	<a href="#">tunnel</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### pseudowire-tunnel

<b>Description</b>	Enter the pseudowire-tunnel context
<b>Context</b>	<a href="#">tunnel pseudowire-tunnel</a>
<b>Tree</b>	<a href="#">pseudowire-tunnel</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### tunnel *name string*

<b>Description</b>	The name that identifies the remote system of the tunnel
<b>Context</b>	<a href="#">tunnel pseudowire-tunnel tunnel name string</a>
<b>Tree</b>	<a href="#">tunnel</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
<b>Max. Elements</b>	4084

### *name string*

<b>Description</b>	The name that identifies the remote system
<b>Context</b>	<a href="#">tunnel pseudowire-tunnel tunnel name string</a>
<b>String Length</b>	1 to 255

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **allowed-tunnel-types** *identityref*

<b>Description</b>	List of allowed transport tunnel types for the pseudowire If multiple tunnel types are allowed and there are multiple tunnel types available to the remote system, the router selects the lowest preference tunnel in the tunnel-table.
<b>Context</b>	<a href="#">tunnel pseudowire-tunnel tunnel name</a> <i>string</i> <a href="#">allowed-tunnel-types</a> <i>identityref</i>
<b>Tree</b>	<a href="#">allowed-tunnel-types</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ip-in-ip Tunnels with IP-in-IP encapsulation</li> <li>• gre Tunnels with GRE encapsulation</li> <li>• sr-isis Segment routing using MPLS dataplane, programmed by IS-IS</li> <li>• sr-ospfv2 Segment routing using MPLS dataplane, programmed by OSPFv2</li> <li>• sr-ospfv3 Segment routing using MPLS dataplane, programmed by OSPFv3</li> <li>• sr-policy-mpls-colored Tunnel setup using TE-POLICY.</li> <li>• sr-policy-mpls-uncolored Tunnel setup using TE-POLICY.</li> <li>• vxlan Tunnels based on VXLAN encapsulation</li> </ul>

<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **index number**

<b>Description</b>	The system allocated ID of the pw tunnel
<b>Context</b>	<a href="#">tunnel pseudowire-tunnel tunnel name</a> <i>string</i> <a href="#">index number</a>
<b>Tree</b>	<a href="#">index</a>

<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **last-change** *string*

<b>Description</b>	The date and time of the most recent change to the tunnel state
<b>Context</b>	<a href="#">tunnel pseudowire-tunnel tunnel name</a> <i>string last-change string</i>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **operational-tunnel-id** *number*

<b>Description</b>	The owner-assigned tunnel table index value that identifies the tunnel used by the pseudowire .
<b>Context</b>	<a href="#">tunnel pseudowire-tunnel tunnel name</a> <i>string operational-tunnel-id number</i>
<b>Tree</b>	<a href="#">operational-tunnel-id</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **operational-tunnel-type** *identityref*

<b>Description</b>	Enter the operational-tunnel-type context
<b>Context</b>	<a href="#">tunnel pseudowire-tunnel tunnel name</a> <i>string operational-tunnel-type identityref</i>
<b>Tree</b>	<a href="#">operational-tunnel-type</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>• ip-in-ip Tunnels with IP-in-IP encapsulation</li> <li>• gre Tunnels with GRE encapsulation</li> <li>• sr-isis Segment routing using MPLS dataplane, programmed by IS-IS</li> <li>• sr-ospfv2</li> </ul>

Segment routing using MPLS dataplane, programmed by OSPFv2

- sr-ospfv3

Segment routing using MPLS dataplane, programmed by OSPFv3

- sr-policy-mpls-colored

Tunnel setup using TE-POLICY.

- sr-policy-mpls-uncolored

Tunnel setup using TE-POLICY.

- vxlan

Tunnels based on VXLAN encapsulation

**Configurable**

False

**Platforms**

7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**remote-system** (*ipv4-address* | *ipv6-address*)

**Description**

The ip-address of the remote system that hosts the remote pseudowire-tunnel

**Context**

[tunnel pseudowire-tunnel tunnel name string remote-system](#) (*ipv4-address* | *ipv6-address*)

**Tree**

[remote-system](#)

**Configurable**

True

**Platforms**

7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**statistics**

**Description**

Container for pw-tunnel statistics

**Context**

[tunnel pseudowire-tunnel tunnel name string statistics](#)

**Tree**

[statistics](#)

**Configurable**

False

**Platforms**

7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**in-discarded-packets** *number*

**Description**

The number of discarded ingress packets

Ingress packets can be discarded due to one of the following reasons:

<b>Context</b>	<a href="#">tunnel pseudowire-tunnel tunnel name string statistics in-discarded-packets number</a>
<b>Tree</b>	<a href="#">in-discarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**in-octets** *number*

<b>Description</b>	The number of octets encapsulated in ingress pw-tunnels
<b>Context</b>	<a href="#">tunnel pseudowire-tunnel tunnel name string statistics in-octets number</a>
<b>Tree</b>	<a href="#">in-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**in-packets** *number*

<b>Description</b>	The number of packets encapsulated in ingress pw-tunnels A packet in this context is an inner frame.
<b>Context</b>	<a href="#">tunnel pseudowire-tunnel tunnel name string statistics in-packets number</a>
<b>Tree</b>	<a href="#">in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**last-clear** *string*

<b>Description</b>	Timestamp of the last time the pw-tunnel counters were cleared
<b>Context</b>	<a href="#">tunnel pseudowire-tunnel tunnel name string statistics last-clear string</a>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **out-discarded-packets** *number*

**Description** The number of discarded egress packets  
Egress packets can be discarded due to one of the following reasons:

**Context** [tunnel pseudowire-tunnel tunnel name string statistics out-discarded-packets number](#)

**Tree** [out-discarded-packets](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **out-octets** *number*

**Description** The number of octets encapsulated in egress pw-tunnels

**Context** [tunnel pseudowire-tunnel tunnel name string statistics out-octets number](#)

**Tree** [out-octets](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### **out-packets** *number*

**Description** The number of packets encapsulated in egress pw-tunnels  
A packet in this context is an inner frame.

**Context** [tunnel pseudowire-tunnel tunnel name string statistics out-packets number](#)

**Tree** [out-packets](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**vxlan-tunnel**

<b>Description</b>	Enter the vxlan-tunnel context
<b>Context</b>	<a href="#">tunnel vxlan-tunnel</a>
<b>Tree</b>	<a href="#">vxlan-tunnel</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**statistics**

<b>Description</b>	Container for vxlan-tunnel global statistics.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

**admin-state** *keyword*

<b>Description</b>	<p>The configured state of the VXLAN statistics on the router</p> <p>The default value is disable. No statistics are collected on VXLAN when the admin-state is disable. When enabled, the router starts collecting VXLAN statistics at both, global and VTEP level, however, the total number of layer-2 subinterfaces is decreased. A change in the configuration of this command also resets the statistic counters on layer-2 subinterfaces as a side effect, before resuming the collection of statistics (on these layer-2 subinterfaces).</p>
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>
<b>Default</b>	disable
<b>Options</b>	<ul style="list-style-type: none"> <li>• enable</li> <li>• disable</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

**in-discarded-packets** *number*

<b>Description</b>	The total number of discarded ingress VXLAN packets.
--------------------	--

Ingress VXLAN packets can be discarded due to one of the following reasons:

<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics in-discarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-discarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

### **in-octets** *number*

<b>Description</b>	The total sum of ingress VXLAN octets.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics in-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

### **in-packets** *number*

<b>Description</b>	The total sum of ingress VXLAN packets. A packet in this context is an inner frame.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics in-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

### **last-clear** *string*

<b>Description</b>	Timestamp of the last time the vxlan tunnel counters were cleared.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics last-clear</a> <i>string</i>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

**out-octets** *number*

<b>Description</b>	The total sum of egress VXLAN octets
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics out-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

**out-packets** *number*

<b>Description</b>	The total sum of egress VXLAN packets. . A packet in this context is an inner frame.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel statistics out-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

**vtep address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Tree</b>	<a href="#">vtep</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**address** (*ipv4-address* | *ipv6-address*)

<b>Description</b>	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address</a> ( <i>ipv4-address</i>   <i>ipv6-address</i> )
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**index number**

<b>Description</b>	the next-hop-group-id (system allocated) for resolving the VXLAN termination endpoint
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) index number</a>
<b>Tree</b>	<a href="#">index</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**last-change string**

<b>Description</b>	The date and time of the most recent change to the tunnel state
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) last-change string</a>
<b>Tree</b>	<a href="#">last-change</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

**statistics**

<b>Description</b>	Container for vxlan-tunnel per VTEP (Vxlan Termination EndPoint) statistics.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

**in-discarded-packets number**

<b>Description</b>	The number of discarded ingress VXLAN packets. Ingress VXLAN packets can be discarded due to one of the following reasons:
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) statistics in-discarded-packets number</a>
<b>Tree</b>	<a href="#">in-discarded-packets</a>

<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

### **in-octets** *number*

<b>Description</b>	The number of octets encapsulated in ingress VXLAN packets.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) statistics in-octets number</a>
<b>Tree</b>	<a href="#">in-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

### **in-packets** *number*

<b>Description</b>	The number of packets encapsulated in ingress VXLAN packets. A packet in this context is an inner frame.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) statistics in-packets number</a>
<b>Tree</b>	<a href="#">in-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

### **last-clear** *string*

<b>Description</b>	Timestamp of the last time the vxlan tunnel counters were cleared.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) statistics last-clear string</a>
<b>Tree</b>	<a href="#">last-clear</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

**out-discarded-packets** *number*

<b>Description</b>	The number of discarded egress VXLAN packets. Egress VXLAN packets can be discarded due to one of the following reasons:
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) statistics out-discarded-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-discarded-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

**out-octets** *number*

<b>Description</b>	The number of octets encapsulated in egress VXLAN packets.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) statistics out-octets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-octets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

**out-packets** *number*

<b>Description</b>	The number of packets encapsulated in egress VXLAN packets. A packet in this context is an inner frame.
<b>Context</b>	<a href="#">tunnel vxlan-tunnel vtep address (ipv4-address   ipv6-address) statistics out-packets</a> <i>number</i>
<b>Tree</b>	<a href="#">out-packets</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L
