

Nokia Service Router Linux

Release 24.7

Data Model Reference

3HE 20660 AAAA TQZZA
Edition: 01
July 2024

Nokia is committed to diversity and inclusion. We are continuously reviewing our customer documentation and consulting with standards bodies to ensure that terminology is inclusive and aligned with the industry. Our future customer documentation will be updated accordingly.

This document includes Nokia proprietary and confidential information, which may not be distributed or disclosed to any third parties without the prior written consent of Nokia.

This document is intended for use by Nokia's customers ("You"/"Your") in connection with a product purchased or licensed from any company within Nokia Group of Companies. Use this document as agreed. You agree to notify Nokia of any errors you may find in this document; however, should you elect to use this document for any purpose(s) for which it is not intended, You understand and warrant that any determinations You may make or actions You may take will be based upon Your independent judgment and analysis of the content of this document.

Nokia reserves the right to make changes to this document without notice. At all times, the controlling version is the one available on Nokia's site.

No part of this document may be modified.

NO WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTY OF AVAILABILITY, ACCURACY, RELIABILITY, TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, IS MADE IN RELATION TO THE CONTENT OF THIS DOCUMENT. IN NO EVENT WILL NOKIA BE LIABLE FOR ANY DAMAGES, INCLUDING BUT NOT LIMITED TO SPECIAL, DIRECT, INDIRECT, INCIDENTAL OR CONSEQUENTIAL OR ANY LOSSES, SUCH AS BUT NOT LIMITED TO LOSS OF PROFIT, REVENUE, BUSINESS INTERRUPTION, BUSINESS OPPORTUNITY OR DATA THAT MAY ARISE FROM THE USE OF THIS DOCUMENT OR THE INFORMATION IN IT, EVEN IN THE CASE OF ERRORS IN OR OMISSIONS FROM THIS DOCUMENT OR ITS CONTENT.

Copyright and trademark: Nokia is a registered trademark of Nokia Corporation. Other product names mentioned in this document may be trademarks of their respective owners.

The registered trademark Linux® is used pursuant to a sublicense from the Linux Foundation, the exclusive licensee of Linus Torvalds, owner of the mark on a worldwide basis.

1 About this guide

This document describes the configuration and state data models available for the Nokia Service Router Linux (SR Linux).

**Note:**

This guide generically covers the current release and may contain some content that will be released in later maintenance loads. See the *SR Linux Release Notes*, for information about features supported in each load.

Configuration and command outputs shown in this guide are examples only; actual displays may differ depending on supported functionality and user configuration.

For more information about accessing and using the interfaces that support these data models, see the *SR Linux System Management Guide*.

2 Overview

This overview describes the structure of the configuration and state data models available for the Nokia Service Router Linux (SR Linux). It includes an introduction to the tree hierarchy and details how to interpret field descriptions.

2.1 Tree hierarchy

The tree hierarchy consists of branches that show the fields and parameters that are available. [Figure 1: Tree hierarchy example](#) shows a tree hierarchy example.

Figure 1: Tree hierarchy example

```

bfd
- network-instance string
- peer number
  - active-receive-interval
  - active-transmit-interval
  - async
    - last-packet-received
    - last-packet-transmitted
    - received-errored-packets
    - received-packets
    - transmitted-packets
    - up-transitions
  - failure-transitions
  - last-failure-time
  - local-address
  - local-diagnostic-code
  - oper-state
  - remote-address
  - remote-control-plane-independent
  - remote-diagnostic-code
  - remote-discriminator
  - remote-minimum-receive-interval
  - remote-multiplier
  - remote-session-state
  - session-state
  - subscribed-protocols
+ peers number
+ clear
+ statistics
  + peers number
    + clear
  + subinterface string
    + admin-state
    + desired-minimum-transmit-interval
    + detection-multiplier
    + minimum-echo-receive-interval
    + required-minimum-receive
+ total_bfd_sessions
+ total_unmatched_bfd_packets

```

Each chapter of this guide describes a branch in the tree with field names linked to their corresponding descriptions. These descriptions indicate the required syntax for each field. See [Field descriptions](#) for more information.

Italic names after a field indicate the parameter type. Parameter types include (but are not limited to):

- Boolean (true and false values)
- keyword (enumerated values)

- string
- number
- IPv4 prefix
- IPv6 prefix
- IPv4 address
- IPv6 address
- MAC address

For more information about the input values, click the field or parameter name in the tree. The link will take you to the description where these values are defined.

A parameter type may also be a combination of different base types. These parameters are displayed in the tree with the individual parameter types enclosed in round brackets and separated by a pipe. For example: *(keyword | number)*

2.2 Transaction and report types

The following transaction and report types are used with the SR Linux:

- configuration transactions
- state transactions
- show reports

Configuration transactions allow you to modify a configuration while state transactions allow you to view the configuration and operational state.

In the tree hierarchy, configuration transactions are denoted with a plus sign (+). State transactions are denoted with a minus sign (-). See [Figure 2: Configuration/state in tree hierarchy](#).

Figure 2: Configuration/state in tree hierarchy

Each field description has a field called "Configurable". The field is set to either:

- true (for configuration transactions)
- false (for state transactions)

Show reports are Python plug-ins used to create custom output. A set of pre-defined show reports are provided and described in the *SR Linux System Management Guide*. These pre-defined reports can be used as examples for how to create additional custom reports.

2.3 Hardware platform designation

The platforms field is used to define the hardware platforms that are valid for a transaction. If a transaction is only valid on specific platforms, the designation is similar to the following:

Figure 3: Platforms: applies to designated platforms only

name string	
Description	Enter the name context
Context	system mirroring mirroring-instance name string mirror-source interface name string
String Length	3 to 20
Configurable	True
Platforms	7220 IXR-D3L, 7220 IXR-D3, 7220 IXR-D5, 7220 IXR-D2, 7220 IXR-D2L

If a transaction is valid on all platforms, the designation is the following:

Figure 4: Platforms: applies to all platforms

acl	
Description	Top level enclosing container for ACL operational tools
Context	acl
Tree	acl
Configurable	True
Platforms	Supported on all platforms

2.4 Field descriptions

Syntax for each field is displayed in bold, followed by supported parameters and their type. In the example that follows, the **bfd network-instance** field shows that the parameter type is a string:

```
- bfd
  - network-instance string
```

[Table 1: Field descriptions](#) describes valid fields for commands. Not all fields are applicable for all commands.

Table 1: Field descriptions

Field	Description
Context	Configuration path to the command
Tree	Defines the commands location in the tree hierarchy
Description	Describes the command
Configurable	Indicates if the command can be configured (true) or if it is a view-only state command (false)
String Length	For a string, indicates a range (number of characters allowed)

Field	Description
Range	For a number, indicates the range of allowed values
Default	Default value
Units	Base unit type
Options	Enumerated values allowed
Reference	Reference to an instance in the configuration needed before the configuration is considered valid
Max Element	For lists and leaf-lists, the maximum number of elements
Platform	Defines the supported hardware platforms

2.4.1 References

A description of each parameter is also available from the online CLI help function. See the *SR Linux System Management Guide* for information on using the CLI help.

3 acl

```

acl
+ acl-filter name string type keyword

  - exceeding-octets number
  - exceeding-packets number
  - last-clear string
+ tcam-profile keyword

```

3.1 acl Descriptions

acl

Description	Top level container for configuration and operational state related to access control lists (ACLs)
Context	acl
Tree	acl
Configurable	True
Platforms	Supported on all platforms

acl-filter *name string type keyword*

Description	List of filter types such as IPv4, IPv6 and MAC depending on the platform's capabilities.
Context	acl acl-filter <i>name string type keyword</i>
Tree	acl-filter
Configurable	True
Platforms	Supported on all platforms

name *string*

Description	ACL Filter policy name
Context	acl acl-filter <i>name string type keyword</i>
Configurable	True
Platforms	Supported on all platforms

type *keyword*

Description	Defines the type of ACL filter: ipv4: IPv4 ACL filter ipv6: IPv6 ACL filter mac: MAC ACL filter
Context	acl acl-filter <i>name string type keyword</i>
Options	<ul style="list-style-type: none"> • ipv4 • ipv6 • mac

Configurable	True
Platforms	Supported on all platforms

description *string*

Description	Description string for the filter policy
Context	acl acl-filter name <i>string</i> type keyword description <i>string</i>
Tree	description
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

entry [sequence-id](#) *number*

Description	List of ACL entries comprising an ACL Filter
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id <i>number</i>
Tree	entry
Configurable	True
Platforms	Supported on all platforms

sequence-id *number*

Description	A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id <i>number</i>
Range	0 to 65535
Configurable	True
Platforms	Supported on all platforms

action

Description	Container for the actions to be applied to packets matching the filter entry.
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id <i>number</i> action
Tree	action
Configurable	True
Platforms	Supported on all platforms

accept

Description	Accept matching packets and forward them towards their normal destination
Context	acl acl-filter name <i>string type keyword</i> entry sequence-id number action accept
Tree	accept
Configurable	True
Platforms	Supported on all platforms

rate-limit

Description	Rate-limit accepted packets
Context	acl acl-filter name <i>string type keyword</i> entry sequence-id number action accept rate-limit
Tree	rate-limit
Configurable	True
Platforms	Supported on all platforms

policer *reference*

Description	Reference to a policer
Context	acl acl-filter name <i>string type keyword</i> entry sequence-id number action accept rate-limit policer <i>reference</i>
Tree	policer
Reference	acl policers policer name
Configurable	True
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

system-cpu-policer *reference*

Description	Reference to a system-cpu-policer.
Context	acl acl-filter name <i>string type keyword</i> entry sequence-id number action accept rate-limit system-cpu-policer <i>reference</i>
Tree	system-cpu-policer
Reference	acl policers system-cpu-policer name
Configurable	True

Platforms Supported on all platforms

copy

Description Create a copy of matching packets extract them to the CPM and deliver them to the designated veth interface

Context [acl](#) [acl-filter name](#) [string type](#) [keyword](#) [entry](#) [sequence-id](#) [number](#) [action](#) [copy](#)

Tree [copy](#)

Configurable True

Platforms Supported on all platforms

drop

Description Drop matching packets.
Dropped IP packets do not result in sending ICMP messages back to the source

Context [acl](#) [acl-filter name](#) [string type](#) [keyword](#) [entry](#) [sequence-id](#) [number](#) [action](#) [drop](#)

Tree [drop](#)

Configurable True

Platforms Supported on all platforms

log *boolean*

Description When this is true, a log is created for each packet matching the entry
For IP packets matched by an IP filter entry the log entry contains the following information:

Context [acl](#) [acl-filter name](#) [string type](#) [keyword](#) [entry](#) [sequence-id](#) [number](#) [action](#) [log](#) [boolean](#)

Tree [log](#)

Default false

Configurable True

Platforms Supported on all platforms

description *string*

Description Description string for the filter entry

Context	acl acl-filter name string type keyword entry sequence-id number description string
Tree	description
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

last-clear string

Description	Time of the last clear command performed by the user at this level
Context	acl acl-filter name string type keyword entry sequence-id number last-clear string
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

match

Description	Container for the conditions that determine whether a packet matches this entry
Context	acl acl-filter name string type keyword entry sequence-id number match
Tree	match
Configurable	True
Platforms	Supported on all platforms

ipv4

Description	Container for the common layer-3 IPv4 match criteria
Context	acl acl-filter name string type keyword entry sequence-id number match ipv4
Tree	ipv4
Configurable	True
Platforms	Supported on all platforms

destination-ip

Description	Packet matching criteria based on destination IPv4 address
--------------------	--

Context	acl acl-filter name string type keyword entry sequence-id number match ipv4 destination-ip
Tree	destination-ip
Configurable	True
Platforms	Supported on all platforms

address *string*

Description	Match a packet if its destination IP address logically anded with the inverse of the mask equals this IP address.
Context	acl acl-filter name string type keyword entry sequence-id number match ipv4 destination-ip address string
Tree	address
Configurable	True
Platforms	Supported on all platforms

mask *string*

Description	Match a packet if its destination IP address logically anded with the inverse of this mask equals the configured IP address.
Context	acl acl-filter name string type keyword entry sequence-id number match ipv4 destination-ip mask string
Tree	mask
Configurable	True
Platforms	Supported on all platforms

prefix *string*

Description	Match a packet if its destination IP address is within the specified IPv4 prefix.
Context	acl acl-filter name string type keyword entry sequence-id number match ipv4 destination-ip prefix string
Tree	prefix
Configurable	True
Platforms	Supported on all platforms

dscp-set (*number* | *keyword*)

Description	A list of DSCP values to be matched for incoming packets. An OR match should be performed, such that a packet must match one of the values defined in this list. If the field is left empty then any DSCP value matches.
Context	acl acl-filter name string type keyword entry sequence-id number match ipv4 dscp-set (<i>number</i> <i>keyword</i>)
Tree	dscp-set
Range	0 to 63
Options	<ul style="list-style-type: none"> • CS0 • LE • CS1 • AF11 • AF12 • AF13 • CS2 • AF21 • AF22 • AF23 • CS3 • AF31 • AF32 • AF33 • CS4 • AF41 • AF42 • AF43 • CS5 • EF • CS6 • CS7
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

first-fragment *boolean*

Description	Match the first fragment of an IPv4 datagram A packet matches the true condition if the IPv4 header indicates that the fragment-offset is zero and and the more-fragments bit is 1. It is not valid to configure this leaf without configuring a match value for the fragment leaf.
Context	acl acl-filter name string type keyword entry sequence-id number match ipv4 first-fragment boolean
Tree	first-fragment
Configurable	True
Platforms	Supported on all platforms

fragment *boolean*

Description	Match an IPv4 fragment A packet matches the true condition if the IPv4 header indicates that the fragment-offset is zero and and the more-fragments bit is 1 or if the IPv4 header indicates that the fragment-offset is greater than 0. A packet matches the false condition if it is unfragmented.
Context	acl acl-filter name string type keyword entry sequence-id number match ipv4 fragment boolean
Tree	fragment
Configurable	True
Platforms	Supported on all platforms

icmp

Description	A packet matches this condition if its ICMP type and code matches one of the specified combinations The rule should also have a condition that the IP protocol equals 1 (ICMP) in order for this to be interpreted correctly.
Context	acl acl-filter name string type keyword entry sequence-id number match ipv4 icmp
Tree	icmp
Configurable	True
Platforms	Supported on all platforms

code number

Description	Match if the ICMP code value is any value in the list Requires ICMP type to be specified because codes are type dependent.
Context	acl acl-filter name string type keyword entry sequence-id number match ipv4 icmp code number
Tree	code
Configurable	True
Platforms	Supported on all platforms

type (number | keyword)

Description	Match a single ICMP type value.
Context	acl acl-filter name string type keyword entry sequence-id number match ipv4 icmp type (number keyword)
Tree	type
Range	0 to 255
Options	<ul style="list-style-type: none"> • echo-reply ICMP Echo Reply • dest-unreachable ICMP Destination Unreachable • source-quench ICMP Source Quench • redirect ICMP Redirect • echo ICMP Echo • router-advertise ICMP Router Advertisement • router-solicit ICMP Router Solicitation • time-exceeded ICMP Time Exceeded • param-problem ICMP Parameter Problem • timestamp

	ICMP Timestamp
	• timestamp-reply
	ICMP Timestamp Reply
Configurable	True
Platforms	Supported on all platforms

protocol (*number* | *keyword*)

Description	An IPv4 packet matches this condition if its IP protocol type field matches the specified value
Context	acl acl-filter name string type keyword entry sequence-id number match ipv4 protocol (<i>number</i> <i>keyword</i>)
Tree	protocol
Range	0 to 255
Options	<ul style="list-style-type: none"> • ipv6-hop IPv6 hop-by-hop option • icmp Internet Control Message Protocol • igmp Internet Group Management Protocol • ggp Gateway-to-Gateway Protocol • ipv4 IPv4 encapsulation • st Stream Protocol • tcp Transmission Control Protocol • egp Exterior Gateway Protocol • igp Interior Gateway Protocol • udp User Datagram Protocol • ipv6 IPv6 encapsulation

Configurable
Platforms

True
Supported on all platforms

source-ip

Description	Packet matching criteria based on source IPv4 address
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match ipv4 source-ip
Tree	source-ip
Configurable	True
Platforms	Supported on all platforms

address *string*

Description	Match a packet if its source IP address logically anded with the inverse of the mask equals this IP address.
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match ipv4 source-ip address <i>string</i>
Tree	address
Configurable	True
Platforms	Supported on all platforms

mask *string*

Description	Match a packet if its source IP address logically anded with the inverse of this mask equals the configured IP address.
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match ipv4 source-ip mask <i>string</i>
Tree	mask
Configurable	True
Platforms	Supported on all platforms

prefix *string*

Description	Match a packet if its source IP address is within the specified IPv4 prefix.
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match ipv4 source-ip prefix <i>string</i>
Tree	prefix
Configurable	True
Platforms	Supported on all platforms

ipv6

Description	Container for the common layer-3 IPv6 match criteria
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match ipv6
Tree	ipv6
Configurable	True
Platforms	Supported on all platforms

destination-ip

Description	Packet matching criteria based on destination IPv6 address
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match ipv6 destination-ip
Tree	destination-ip
Configurable	True
Platforms	Supported on all platforms

address *string*

Description	Match a packet if its destination IP address logically anded with the inverse of the mask equals this IP address.
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match ipv6 destination-ip address <i>string</i>
Tree	address
Configurable	True
Platforms	Supported on all platforms

mask *string*

Description	Match a packet if its destination IP address logically anded with the inverse of this mask equals the configured IP address.
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match ipv6 destination-ip mask <i>string</i>
Tree	mask
Configurable	True
Platforms	Supported on all platforms

prefix string

Description	Match a packet if its destination IP address is within the specified IPv6 prefix.
Context	acl acl-filter name string type keyword entry sequence-id number match ipv6 destination-ip prefix string
Tree	prefix
Configurable	True
Platforms	Supported on all platforms

dscp-set (number | keyword)

Description	A list of DSCP values to be matched for incoming packets. An OR match should be performed, such that a packet must match one of the values defined in this list. If the field is left empty then any DSCP value matches.
Context	acl acl-filter name string type keyword entry sequence-id number match ipv6 dscp-set (number keyword)
Tree	dscp-set
Range	0 to 63
Options	<ul style="list-style-type: none"> • CS0 • LE • CS1 • AF11 • AF12 • AF13 • CS2 • AF21 • AF22 • AF23 • CS3 • AF31 • AF32 • AF33 • CS4 • AF41 • AF42 • AF43 • CS5

Platforms

Supported on all platforms

source-ip

Description	Packet matching criteria based on source IPv6 address
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match ipv6 source-ip
Tree	source-ip
Configurable	True
Platforms	Supported on all platforms

address *string*

Description	Match a packet if its source IP address logically anded with the inverse of the mask equals this IP address.
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match ipv6 source-ip address <i>string</i>
Tree	address
Configurable	True
Platforms	Supported on all platforms

mask *string*

Description	Match a packet if its source IP address logically anded with the inverse of this mask equals the configured IP address.
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match ipv6 source-ip mask <i>string</i>
Tree	mask
Configurable	True
Platforms	Supported on all platforms

prefix *string*

Description	Match a packet if its source IP address is within the specified IPv6 prefix.
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match ipv6 source-ip prefix <i>string</i>
Tree	prefix
Configurable	True
Platforms	Supported on all platforms

I2

Description	Container for the common layer-2 match criteria
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match I2
Tree	I2
Configurable	True
Platforms	Supported on all platforms

destination-mac

Description	Ethernet frame matching criteria based on destination MAC address
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match I2 destination-mac
Tree	destination-mac
Configurable	True
Platforms	Supported on all platforms

address *string*

Description	Match an Ethernet frame if its destination MAC address logically anded with the mask equals this MAC address.
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match I2 destination-mac address <i>string</i>
Tree	address
Configurable	True
Platforms	Supported on all platforms

mask *string*

Description	Match an Ethernet frame if its destination MAC address logically anded with the mask equals the configured MAC address.
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match I2 destination-mac mask <i>string</i>
Tree	mask
Configurable	True
Platforms	Supported on all platforms

ethertype (*string* | *keyword*)

Description	An Ethernet frame matches this condition if its ethertype value (after 802.1Q VLAN tags) matches the specified value
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match l2 ethertype (<i>string</i> <i>keyword</i>)
Tree	ethertype
Options	<ul style="list-style-type: none">• ipv4 Internet Protocol version 4. Ethertype 0x0800.• arp Address Resolution Protocol. Ethertype 0x0806.• ipv6 Internet Protocol version 6. Ethertype 0x86DD.• flow-control Ethernet flow control PAUSE frames. Ethertype 0x8808• lacp LACP. Ethertype 0x8809.• mpls-unicast MPLS unicast. Ethertype 0x8847.• mpls-multicast MPLS multicast. Configurable

True

Platforms

Supported on all platforms

source-port**Description**

A packet matches this condition if its source TCP or UDP port number matches the value or range that is specified

The rule should also have a condition that the IP protocol equals 6 (TCP) or 17 (UDP) in order for this to be interpreted correctly.

Context

[acl](#) [acl-filter name](#) *string* [type](#) [keyword](#) [entry](#) [sequence-id](#) [number](#) [match](#)
[transport](#) [source-port](#)

Tree

Configurable	True
Platforms	Supported on all platforms

tcp-flags *string*

Description	A logical expression using the &, and ! logical operators and the TCP flag names: rst, syn and ack.
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number match transport tcp-flags <i>string</i>
Tree	tcp-flags
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Container for per-entry statistics
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number statistics
Tree	statistics
Configurable	False
Platforms	Supported on all platforms

incomplete *boolean*

Description	Returns true when at least one linecard had insufficient stats resources to ensure an accurate set of values for the number of matched packets.
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number statistics incomplete <i>boolean</i>
Tree	incomplete
Configurable	False
Platforms	Supported on all platforms

last-clear *string*

Description	Time of the last clear command performed by the user at this level or a higher level
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number statistics last-clear <i>string</i>
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-match *string*

Description	The elapsed time since a packet last matched the entry, considering the mgmt0 subinterface and all subinterfaces of all linecard ports that use the ACL as an input ACL
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number statistics last-match <i>string</i>
Tree	last-match
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

matched-packets *number*

Description	The number of packets matching the entry since it was programmed or since the last clear, considering the mgmt0 subinterface and all subinterfaces of all linecard ports that use the ACL as an input ACL
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number statistics matched-packets <i>number</i>
Tree	matched-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

policer

Description	Policer stats for traffic matching the entry:
--------------------	---

Statistics for policer configured with scope=global and entry-specific=true, and acl configured with subinterface-specific=false.

Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number statistics policer
Tree	policer
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

conforming-octets *number*

Description	The number of bytes that were considered conforming by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number statistics policer conforming-octets <i>number</i>
Tree	conforming-octets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

conforming-packets *number*

Description	The number of packets (actually Ethernet frames) that were considered conforming by the policer
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id number statistics policer conforming-packets <i>number</i>
Tree	conforming-packets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

exceeding-octets *number*

Description	The number of bytes that were considered exceeding by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
--------------------	---

Context	acl acl-filter name string type keyword entry sequence-id number statistics policer exceeding-octets number
Tree	exceeding-octets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

exceeding-packets *number*

Description	The number of packets (actually Ethernet frames) that were considered exceeding by the policer
Context	acl acl-filter name string type keyword entry sequence-id number statistics policer exceeding-packets number
Tree	exceeding-packets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

system-cpu-policer

Description	System CPU policer stats for traffic matching the entry: Statistics for system cpu policer configured with scope=global and entry-specific=true, and acl configured with subinterface-specific=false.
Context	acl acl-filter name string type keyword entry sequence-id number statistics system-cpu-policer
Tree	system-cpu-policer
Configurable	False
Platforms	Supported on all platforms

conforming-octets *number*

Description	The number of bytes that were considered conforming by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
Context	acl acl-filter name string type keyword entry sequence-id number statistics system-cpu-policer conforming-octets number

Tree	conforming-octets
Default	0
Configurable	False
Platforms	Supported on all platforms

conforming-packets *number*

Description	The number of packets (actually Ethernet frames) that were considered conforming by the policer
Context	acl acl-filter name <i>string type keyword</i> entry sequence-id <i>number</i> statistics system-cpu-policer conforming-packets <i>number</i>
Tree	conforming-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

exceeding-octets *number*

Description	The number of bytes that were considered exceeding by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
Context	acl acl-filter name <i>string type keyword</i> entry sequence-id <i>number</i> statistics system-cpu-policer exceeding-octets <i>number</i>
Tree	exceeding-octets
Default	0
Configurable	False
Platforms	Supported on all platforms

exceeding-packets *number*

Description	The number of packets (actually Ethernet frames) that were considered exceeding by the policer
Context	acl acl-filter name <i>string type keyword</i> entry sequence-id <i>number</i> statistics system-cpu-policer exceeding-packets <i>number</i>
Tree	exceeding-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

tcam-entries

Description	Information about the TCAM entries used to implement the ACL entry
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id <i>number</i> tcam-entries
Tree	tcam-entries
Configurable	False
Platforms	Supported on all platforms

forwarding-complex [complex-identifier](#) *string*

Description	List of forwarding complexes in the system
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id <i>number</i> tcam-entries forwarding-complex complex-identifier <i>string</i>
Tree	forwarding-complex
Configurable	False
Platforms	Supported on all platforms

complex-identifier *string*

Description	A forwarding complex in the format (slot-number,complex-number).
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id <i>number</i> tcam-entries forwarding-complex complex-identifier <i>string</i>
Configurable	False
Platforms	Supported on all platforms

input-total *number*

Description	The number of TCAM entries required to implement this entry on all subinterfaces of this complex where the filter is applied to ingress traffic. For example, if a single-instance of the entry takes 2 TCAM entries and the filter is an output-only subinterface-specific filter and the filter is applied to 5 subinterfaces on output and to 5 subinterfaces on input then input-total=2. If the entry is not applied to ingress traffic on any subinterfaces of this complex then input-total=0.
Context	acl acl-filter name <i>string</i> type keyword entry sequence-id <i>number</i> tcam-entries forwarding-complex complex-identifier <i>string</i> input-total <i>number</i>
Tree	input-total

Configurable	False
Platforms	Supported on all platforms

output-total *number*

Description	The number of TCAM entries required to implement this entry on all subinterfaces of this complex where the filter is applied to egress traffic. For example, if a single-instance of the entry takes 2 TCAM entries and the filter is an output-only subinterface-specific filter and the filter is applied to 5 subinterfaces on output and to 5 subinterfaces on input then output-total=10. If the entry is not applied to egress traffic on any subinterfaces of this complex then output-total=0.
Context	acl acl-filter name string type keyword entry sequence-id number tcam-entries forwarding-complex complex-identifier string output-total number
Tree	output-total
Configurable	False
Platforms	Supported on all platforms

single-instance *number*

Description	The number of TCAM entries required to implement this entry if it is applied to only one subinterface and one traffic direction specific to this slot. This is non-zero even if the filter is not applied to any subinterfaces of this complex. It captures the effect of TCAM entry expansion to deal with L4 port or VLAN ranges, for example.
Context	acl acl-filter name string type keyword entry sequence-id number tcam-entries forwarding-complex complex-identifier string single-instance number
Tree	single-instance
Configurable	False
Platforms	Supported on all platforms

last-clear *string*

Description	Time of the last clear command performed by the user at this level
Context	acl acl-filter name string type keyword last-clear string
Tree	last-clear
String Length	20 to 32
Configurable	False

Platforms Supported on all platforms

statistics-per-entry *boolean*

Description Collect statistics for each entry of the ACL. If this is set to false no hardware resources are allocated to collecting statistics for this ACL policy.
The exact set of statistics depend on the subinterface-specific mode

Context [acl](#) [acl-filter name](#) *string type keyword* [statistics-per-entry boolean](#)

Tree [statistics-per-entry](#)

Configurable True

Platforms Supported on all platforms

subinterface-specific *keyword*

Description Controls the instantiation of the filter when it is applied as an input or output ACL
disabled: all subinterfaces on a single linecard that reference the ACL as an input ACL use a shared filter instance, and all subinterfaces on a single linecard that reference the ACL as an output ACL use a shared filter instance
input-only: all subinterfaces on a single linecard that reference the ACL as an output ACL use a shared filter instance, but each subinterface that references the ACL as an input ACL uses its own separate instance of the filter
output-only: all subinterfaces on a single linecard that reference the ACL as an input ACL use a shared filter instance, but each subinterface that references the ACL as an output ACL uses its own separate instance of the filter
input-and-output: each subinterface that references the ACL as either an input ACL or an output ACL uses its own separate instance of the filter

Context [acl](#) [acl-filter name](#) *string type keyword* [subinterface-specific keyword](#)

Tree [subinterface-specific](#)

Default disabled

Options

- disabled
- input-only
- output-only
- input-and-output

Configurable True

Platforms Supported on all platforms

datapath-programming

Description	Container to represent the progress of ACL datapath programming
Context	acl datapath-programming
Tree	datapath-programming
Configurable	False
Platforms	Supported on all platforms

forwarding-complex *slot-id number complex-id number*

Description	List of forwarding complexes that are currently installed and online
Context	acl datapath-programming forwarding-complex slot-id number complex-id number
Tree	forwarding-complex
Configurable	False
Platforms	Supported on all platforms

slot-id *number*

Description	The slot id
Context	acl datapath-programming forwarding-complex slot-id number complex-id number
Configurable	False
Platforms	Supported on all platforms

complex-id *number*

Description	The complex id
Context	acl datapath-programming forwarding-complex slot-id number complex-id number
Range	0 to 1
Configurable	False
Platforms	Supported on all platforms

last-completed-timestamp *string*

Description	The date and time when the forwarding complex last completed all datapath programming related to prior ACL configuration changes.
Context	acl datapath-programming forwarding-complex slot-id number complex-id number last-completed-timestamp string
Tree	last-completed-timestamp
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

programming-complete *boolean*

Description	<p>Reads false when there are still pending entries to program from prior configuration transactions</p> <p>Reads true when all datapath programming related to all prior ACL configuration changes is complete</p>
Context	acl datapath-programming forwarding-complex slot-id number complex-id number programming-complete boolean
Tree	programming-complete
Configurable	False
Platforms	Supported on all platforms

egress-mac-filtering *boolean*

Description	<p>Must be set to true in order to apply any MAC ACLs to any subinterface in the egress traffic direction.</p> <p>Internally this sets the following limits:</p> <p>Remember that the number of ACL instances per ACL policy is greater than one if subinterface-specific is set to input-and-output or output-only.</p> <p>A setting of true is blocked if the number of IPv4 ACL instances applied to egress traffic is already greater than 32, or if the number of IPv6 ACL instances applied to egress traffic is already greater than 32.</p>
Context	acl egress-mac-filtering boolean
Tree	egress-mac-filtering
Default	false
Configurable	True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

interface [interface-id](#) *string*

Description List of interfaces and subinterfaces referencing ACL filters.

Context [acl interface interface-id](#) *string*

Tree [interface](#)

Configurable True

Platforms Supported on all platforms

Max. Elements 16383

interface-id *string*

Description Identifier for the interface or subinterface.

Context [acl interface interface-id](#) *string*

Configurable True

Platforms Supported on all platforms

input

Description Container for ACL filters that apply to ingress traffic on the subinterface

Context [acl interface interface-id](#) *string* [input](#)

Tree [input](#)

Configurable True

Platforms Supported on all platforms

acl-filter [name](#) *reference* [type](#) *reference*

Description MAC, IPv4, IPv6 ACL filter(s) to be applied on this subinterface direction
On 7220 and 7250 IXR platforms only a single MAC, IPv4 or IPv6 filter is supported.

Context [acl interface interface-id](#) *string* [input](#) [acl-filter](#) [name](#) *reference* [type](#) *reference*

last-clear *string*

Description	Time of the last clear command performed by the user at this level
Context	acl interface interface-id string input statistics last-clear string
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

policer

Description	Policer stats for traffic matching one or multiple entries: List of ACL policer statistics of scope=subinterface and per-entry-statistics=false, and acl configured with subinterface-specific=false.
Context	acl interface interface-id string input statistics policer
Tree	policer
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

conforming-octets *number*

Description	The number of bytes that were considered conforming by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
--------------------	--

Context	acl interface interface-id <i>string</i> input statistics policer conforming-octets number
Tree	conforming-octets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

conforming-packets *number*

Description	The number of packets (actually Ethernet frames) that were considered conforming by the policer
Context	acl interface interface-id <i>string</i> input statistics policer conforming-packets number
Tree	conforming-packets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

exceeding-octets *number*

Description	The number of bytes that were considered exceeding by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
Context	acl interface interface-id <i>string</i> input statistics policer exceeding-octets number
Tree	exceeding-octets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

exceeding-packets *number*

Description	The number of packets (actually Ethernet frames) that were considered exceeding by the policer
Context	acl interface interface-id <i>string</i> input statistics policer exceeding-packets number
Tree	exceeding-packets

Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

interface-ref

Description	Reference to an interface or subinterface
Context	acl interface interface-id <i>string</i> interface-ref
Tree	interface-ref
Configurable	True
Platforms	Supported on all platforms

interface *reference*

Description	Reference to a base interface, for example a port or LAG
Context	acl interface interface-id <i>string</i> interface-ref interface reference
Tree	interface
Reference	interface name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

subinterface *reference*

Description	Reference to a subinterface This requires the base interface to be specified using the interface leaf in this container.
Context	acl interface interface-id <i>string</i> interface-ref subinterface reference
Tree	subinterface
Reference	interface name <i>string</i> subinterface index <i>number</i>
Configurable	True
Platforms	Supported on all platforms

output

Description	Container for ACL filters that apply to ingress traffic on the subinterface
--------------------	---

Context	acl interface interface-id <i>string</i> output
Tree	output
Configurable	True
Platforms	Supported on all platforms except 7215

acl-filter [name](#) *reference* [type](#) *reference*

Description	MAC, IPv4, IPv6 ACL filter(s) to be applied on this subinterface direction On 7220 and 7250 IXR platforms only a single MAC, IPv4 or IPv6 filter is supported.
Context	acl interface interface-id <i>string</i> output acl-filter name <i>reference</i> type <i>reference</i>
Tree	acl-filter
Configurable	True
Platforms	Supported on all platforms except 7215
Max. Elements	4

name *reference*

Description	Enter the name context
Context	acl interface interface-id <i>string</i> output acl-filter name <i>reference</i> type <i>reference</i>
Reference	acl acl-filter name
Configurable	True
Platforms	Supported on all platforms except 7215

type *reference*

Description	Enter the type context
Context	acl interface interface-id <i>string</i> output acl-filter name <i>reference</i> type <i>reference</i>
Reference	acl acl-filter type
Configurable	True
Platforms	Supported on all platforms except 7215

entry [sequence-id](#) *reference*

Description	ACL Filter statistics per entry and per subinterface
Context	acl interface interface-id <i>string</i> output acl-filter name <i>reference</i> type reference entry sequence-id <i>reference</i>
Tree	entry
Configurable	False
Platforms	Supported on all platforms except 7215

sequence-id *reference*

Description	Reference to type entry ID key
Context	acl interface interface-id <i>string</i> output acl-filter name <i>reference</i> type reference entry sequence-id <i>reference</i>
Reference	acl acl-filter entry sequence-id
Configurable	False
Platforms	Supported on all platforms except 7215

policer

Description	Policer stats for traffic matching the entry: Statistics under /acl/interfaces for policer configured with scope=subinterface and entry-specific=true, and acl configured with subinterface-specific=input-and-output.
Context	acl interface interface-id <i>string</i> output acl-filter name <i>reference</i> type reference entry sequence-id <i>reference</i> policer
Tree	policer
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

conforming-octets *number*

Description	The number of bytes that were considered conforming by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
Context	acl interface interface-id <i>string</i> output acl-filter name <i>reference</i> type reference entry sequence-id <i>reference</i> policer conforming-octets <i>number</i>
Tree	conforming-octets

Default	0
Configurable	False

conforming-packets *number*

Description	The number of packets (actually Ethernet frames) that were considered conforming by the policer
Context	acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference policer conforming-packets number
Tree	conforming-packets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

exceeding-octets *number*

Description	The number of bytes that were considered exceeding by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
Context	acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference policer exceeding-octets number
Tree	exceeding-octets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

exceeding-packets *number*

Description	The number of packets (actually Ethernet frames) that were considered exceeding by the policer
Context	acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference policer exceeding-packets number
Tree	exceeding-packets
Default	0
Configurable	False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

statistics

Description Container for per-entry statistics

Context [acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference statistics](#)

Tree [statistics](#)

Configurable False

Platforms Supported on all platforms except 7215

incomplete *boolean*

Description Returns true when at least one linecard had insufficient stats resources to ensure an accurate set of values for the number of matched packets.

Context [acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference statistics incomplete boolean](#)

Tree [incomplete](#)

Configurable False

Platforms Supported on all platforms

last-clear *string*

Description Time of the last clear command performed by the user at this level or a higher level

Context [acl interface interface-id string output acl-filter name reference type reference entry sequence-id reference statistics last-clear string](#)

Tree [last-clear](#)

String Length 20 to 32

Configurable False

Platforms Supported on all platforms except 7215

last-match *string*

Description The elapsed time since a packet last matched the entry, considering the mgmt0 subinterface and all subinterfaces of all linecard ports that use the ACL as an input ACL

Context	acl interface interface-id <i>string</i> output acl-filter name <i>reference</i> type reference entry sequence-id <i>reference</i> statistics last-match <i>string</i>
Tree	last-match
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms except 7215

matched-packets *number*

Description	The number of packets matching the entry since it was programmed or since the last clear, considering the mgmt0 subinterface and all subinterfaces of all linecard ports that use the ACL as an input ACL
Context	acl interface interface-id <i>string</i> output acl-filter name <i>reference</i> type reference entry sequence-id <i>reference</i> statistics matched-packets <i>number</i>
Tree	matched-packets
Default	0
Configurable	False
Platforms	Supported on all platforms except 7215

statistics

Description	Container for policer scope=subinterface and per-entry-statistics=false statistics
Context	acl interface interface-id <i>string</i> output statistics
Tree	statistics
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

last-clear *string*

Description	Time of the last clear command performed by the user at this level
Context	acl interface interface-id <i>string</i> output statistics last-clear <i>string</i>
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

policer

Description	Policer stats for traffic matching one or multiple entries: List of ACL policer statistics of scope=subinterface and per-entry-statistics=false, and acl configured with subinterface-specific=false.
Context	acl interface interface-id string output statistics policer
Tree	policer
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

conforming-octets *number*

Description	The number of bytes that were considered conforming by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
Context	acl interface interface-id string output statistics policer conforming-octets number
Tree	conforming-octets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

conforming-packets *number*

Description	The number of packets (actually Ethernet frames) that were considered conforming by the policer
Context	acl interface interface-id string output statistics policer conforming-packets number
Tree	conforming-packets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

exceeding-octets *number*

Description	The number of bytes that were considered exceeding by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
Context	acl interface interface-id <i>string</i> output statistics policer exceeding-octets number
Tree	exceeding-octets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

exceeding-packets *number*

Description	The number of packets (actually Ethernet frames) that were considered exceeding by the policer
Context	acl interface interface-id <i>string</i> output statistics policer exceeding-packets number
Tree	exceeding-packets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

policers

Description	Container for policer definitions used by ACL entries
Context	acl policers
Tree	policers
Configurable	True
Platforms	Supported on all platforms

policer *name string*

Description	List of policer templates used in subinterface and CPM Filter ACL.
Context	acl policers policer name <i>string</i>
Tree	policer

Configurable	True
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *string*

Description	User-defined name of the policer
Context	acl policers policer name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

entry-specific *boolean*

Description	Controls the instantiation of the policer between filter entries false: one policer instance is created from this template and it is shared by all entries of in the same ACL filter that refer to this policer true: multiple policer instances are created from this template, one for each ACL filter entry that refers to this policer
Context	acl policers policer name <i>string</i> entry-specific <i>boolean</i>
Tree	entry-specific
Default	false
Configurable	True
Platforms	Supported on all platforms

max-burst *number*

Description	The MBS bucket depth in bytes
Context	acl policers policer name <i>string</i> max-burst <i>number</i>
Tree	max-burst
Range	1 to 125000000
Units	bytes
Configurable	True
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

peak-rate *number*

Description	The PIR rate in kbps (bucket empty/fill rate).
Context	acl policers policer name <i>string</i> peak-rate <i>number</i>
Tree	peak-rate
Range	1 to 800000000
Units	kbps
Configurable	True
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

scope *keyword*

Description	Controls the instantiation of the policer between subinterfaces global: policer is instantiated per direction and shared between ACL, requires filter subinterface-specific disabled subinterface: policer is instantiated per subinterface and per direction, requires filter subinterface-specific input-and-ouput
Context	acl policers policer name <i>string</i> scope <i>keyword</i>
Tree	scope
Default	global
Options	<ul style="list-style-type: none"> • global • subinterface
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

statistics

Description	Container for linecard policer statistics.
Context	acl policers policer name <i>string</i> statistics
Tree	statistics
Configurable	False
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

aggregate

Description	None of these statistics are populated if the policer is configured as entry-specific=true. If entry-specific=false and subinterface-specific=true, this is sum of all the entries and all the policer templates instantiated for all subintrefaces. If entry-specific=false and subinterface-specific=false, this is sum of all the entries using this policer template.
Context	acl policers policer name <i>string</i> statistics aggregate
Tree	aggregate
Configurable	False
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

conforming-octets *number*

Description	The number of bytes that were considered conforming by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
Context	acl policers policer name <i>string</i> statistics aggregate conforming-octets <i>number</i>
Tree	conforming-octets
Default	0
Configurable	False
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

conforming-packets *number*

Description	The number of packets (actually Ethernet frames) that were considered conforming by the policer
Context	acl policers policer name <i>string</i> statistics aggregate conforming-packets <i>number</i>
Tree	conforming-packets
Default	0
Configurable	False
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

exceeding-octets *number*

Description	The number of bytes that were considered exceeding by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
Context	acl policers policer name <i>string</i> statistics aggregate exceeding-octets number
Tree	exceeding-octets
Default	0
Configurable	False
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

exceeding-packets *number*

Description	The number of packets (actually Ethernet frames) that were considered exceeding by the policer
Context	acl policers policer name <i>string</i> statistics aggregate exceeding-packets number
Tree	exceeding-packets
Default	0
Configurable	False
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-clear *string*

Description	Time of the last clear command that applied to these statistics
Context	acl policers policer name <i>string</i> statistics aggregate last-clear <i>string</i>
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

system-cpu-policer *name string*

Description	List of system CPU policer templates. For each policer in this list one or more policer instances are implemented in the XDP-CPM software and these
--------------------	---

policer instances process the aggregate of terminating traffic received from all linecards.

Context	acl policers system-cpu-policer name <i>string</i>
Tree	system-cpu-policer
Configurable	True
Platforms	Supported on all platforms

name *string*

Description	User-defined name of the policer
Context	acl policers system-cpu-policer name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

entry-specific *boolean*

Description	<p>If set to false, only one policer instance is created from this template and it is shared by all entries of all cpm-filter ACLs that refer to this policer.</p> <p>If set to true, multiple policer instances are created from this template, one for each cpm-filter entry that refers to the policer template.</p>
Context	acl policers system-cpu-policer name <i>string</i> entry-specific <i>boolean</i>
Tree	entry-specific
Default	false
Configurable	True
Platforms	Supported on all platforms

max-packet-burst *number*

Description	The maximum depth of the policer bucket in number of packets
Context	acl policers system-cpu-policer name <i>string</i> max-packet-burst <i>number</i>
Tree	max-packet-burst
Range	16 to 4000000
Default	16
Configurable	True
Platforms	Supported on all platforms

peak-packet-rate *number*

Description	The maximum number of packets per second (bucket empty/fill rate)
Context	acl policers system-cpu-policer name <i>string</i> peak-packet-rate <i>number</i>
Tree	peak-packet-rate
Range	1 to 4000000
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Container for system CPU policer statistics None of these statistics are populated if the policer is configured as entry-specific=true.
Context	acl policers system-cpu-policer name <i>string</i> statistics
Tree	statistics
Configurable	False
Platforms	Supported on all platforms

conforming-octets *number*

Description	The number of bytes that were considered conforming by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
Context	acl policers system-cpu-policer name <i>string</i> statistics conforming-octets <i>number</i>
Tree	conforming-octets
Default	0
Configurable	False
Platforms	Supported on all platforms

conforming-packets *number*

Description	The number of packets (actually Ethernet frames) that were considered conforming by the policer
Context	acl policers system-cpu-policer name <i>string</i> statistics conforming-packets <i>number</i>
Tree	conforming-packets

Default	0
Configurable	False
Platforms	Supported on all platforms

exceeding-octets *number*

Description	The number of bytes that were considered exceeding by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
Context	acl policers system-cpu-policer name <i>string</i> statistics exceeding-octets number
Tree	exceeding-octets
Default	0
Configurable	False
Platforms	Supported on all platforms

exceeding-packets *number*

Description	The number of packets (actually Ethernet frames) that were considered exceeding by the policer
Context	acl policers system-cpu-policer name <i>string</i> statistics exceeding-packets number
Tree	exceeding-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

last-clear *string*

Description	Time of the last clear command that applied to these statistics
Context	acl policers system-cpu-policer name <i>string</i> statistics last-clear <i>string</i>
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

tcam-profile *keyword*

Description	Specify the TCAM resource management profile
Context	acl tcam-profile <i>keyword</i>
Tree	tcam-profile
Options	<ul style="list-style-type: none">• default Default allocation that provides twice as many resources to ingress ACLs as egress ACLs• ipv4-egress-scaled Alternate allocation that provides more resources to IPv4 egress ACLs than any other application• acl-mfc-ipv4-only Alternate allocation that provides maximum entries for IPv4 ACLs and IPv4 MFC policies and provides no space for MAC ACLs, IPv6 ACLs or IPv6 MFC policies
Configurable	True
Platforms	7220 IXR-D4, 7220 IXR-D5

local-diagnostic-code *keyword*

Description The local BFD diagnostic code indicating the most recent reason for failure of this BFD session

Context [bfd micro-bfd-sessions lag-interface name](#) *reference* [member-interface name](#) *string* [local-diagnostic-code](#) *keyword*

Tree [local-diagnostic-code](#)

Options

- NO_DIAGNOSTIC
No diagnostic code was specified, or the session has not changed state
- DETECTION_TIMEOUT
The control detection time expired: no BFD packet was received within the required period
- ECHO_FAILED
The BFD echo function failed - echo packets have not been received for the required period of time
- NEIGHBOR_SIGNED_DOWN
The neighbor signaled session down
- FORWARDING_RESET
The forwarding plane in the local system was reset
The remote system cannot rely on the forwarding state of the device specifying this error code.
- PATH_DOWN

Signalling outside of BFD specified that the path underlying this session has failed

- **CONCATENATED_PATH_DOWN**

A segment on the path between source and destination has failed

When a BFD session runs over a series of path segments, this error code indicates that a subsequent path segment (i.e., one in the transmit path between the source and destination of the session) has failed.

- **ADMIN_DOWN**

The BFD session has been administratively disabled by the peer

- **REVERSE_CONCATENATED_PATH_DOWN**

A segment on the reverse path between destination and source has failed

In the case that a BFD session is running over a series of path segments, this error code indicates that a path segment on the reverse path (i.e., in the transmit direction from the destination to the source of the session) has failed.

The BFD session is perceived to be up by the system

Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

remote-address (*ipv4-address* | *ipv6-address*)

Description	The remote IP address for the far-end of the BFD session This must be the same IP version as the local-address.
Context	bfd micro-bfd-sessions lag-interface name <i>reference</i> remote-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	remote-address
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

required-minimum-receive *number*

Description	The minimum interval between received BFD control packets that this system should support This value is advertised to the remote peer to indicate the maximum frequency (i.e., minimum inter-packet interval) between BFD control packets that is acceptable to the local system. This value is specified as an integer number of microseconds.
Context	bfd micro-bfd-sessions lag-interface name <i>reference</i> required-minimum-receive number
Tree	required-minimum-receive
Range	10000 to 100000000
Default	1000000
Units	microseconds
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

network-instance *name string*

Description	network-instance context for BFD session.
Context	bfd network-instance name string
Tree	network-instance
Configurable	False
Platforms	Supported on all platforms

name *string*

Description	A unique name identifying the network instance
Context	bfd network-instance name string
Configurable	False
Platforms	Supported on all platforms

peer local-discriminator *number*

Description	BFD session state related to this peer
Context	bfd network-instance name string peer local-discriminator number
Tree	peer
Configurable	False
Platforms	Supported on all platforms

local-discriminator *number*

Description	BFD session local discriminator
Context	bfd network-instance name string peer local-discriminator number
Configurable	False
Platforms	Supported on all platforms

active-receive-interval *number*

Description	The receive interval currently being used by this BFD session This is the amount of time the BFD state machine expects between receiving BFD messages from the remote peer.
--------------------	--

Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> active-receive-interval <i>number</i>
Tree	active-receive-interval
Configurable	False
Platforms	Supported on all platforms

active-transmit-interval *number*

Description	The transmit interval currently being used by this BFD session This is the amount of time the local BFD agent will wait between the sending of BFD messages to the remote peer
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> active-transmit-interval <i>number</i>
Tree	active-transmit-interval
Configurable	False
Platforms	Supported on all platforms

async

Description	Container for async BFD operational state parameters
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> async
Tree	async
Configurable	False
Platforms	Supported on all platforms

last-clear *string*

Description	Timestamp of the last time the session counters were cleared.
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> async last-clear <i>string</i>
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-packet-received *string*

Description	Timestamp for when the last BFD packet was received for this session
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> async last-packet-received <i>string</i>
Tree	last-packet-received
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-packet-transmitted *string*

Description	Timestamp for when the last BFD packet was transmitted for this session
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> async last-packet-transmitted <i>string</i>
Tree	last-packet-transmitted
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

received-errored-packets *number*

Description	Counter for the number of BFD packets received with BFD level errors
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> async received-errored-packets <i>number</i>
Tree	received-errored-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

received-packets *number*

Description	Counter for the number of BFD packets received for this session
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> async received-packets <i>number</i>
Tree	received-packets
Default	0

Configurable	False
Platforms	Supported on all platforms

transmitted-packets *number*

Description	Counter for the number of BFD packets transmitted for this session
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> async transmitted-packets <i>number</i>
Tree	transmitted-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

up-transitions *number*

Description	Counter for the number of UP transitions for this BFD session
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> async up-transitions <i>number</i>
Tree	up-transitions
Default	0
Configurable	False
Platforms	Supported on all platforms

failure-transitions *number*

Description	The number of times that the BFD session has transitioned out of the up state
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> failure-transitions <i>number</i>
Tree	failure-transitions
Configurable	False
Platforms	Supported on all platforms

ipv4-unnumbered-interface *string*

Description	For IPv4 unnumbered sessions only, indicates the local interface with which the session is associated.
--------------------	--

Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> ipv4-unnumbered-interface <i>string</i>
Tree	ipv4-unnumbered-interface
Configurable	False
Platforms	Supported on all platforms

ipv6-link-local-interface *string*

Description	For IPv6 link local sessions only, indicates the local interface with which the session is associated.
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> ipv6-link-local-interface <i>string</i>
Tree	ipv6-link-local-interface
Configurable	False
Platforms	Supported on all platforms

last-failure-time *string*

Description	Timestamp of the last BFD session transition out of the up state to down state
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> last-failure-time <i>string</i>
Tree	last-failure-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-state-transition *string*

Description	Timestamp of the last BFD session transition from any state to any state Time of the session in the current state can be calculated from this value.
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> last-state-transition <i>string</i>
Tree	last-state-transition
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

local-address (*ipv4-address* | *ipv6-address*)

Description	IP address to be used as source address in BFD packets
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> local-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	local-address
Configurable	False
Platforms	Supported on all platforms

local-diagnostic-code *keyword*

Description	The local BFD diagnostic code indicating the most recent reason for failure of this BFD session
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> local-diagnostic-code <i>keyword</i>
Tree	local-diagnostic-code
Options	<ul style="list-style-type: none"> • NO_DIAGNOSTIC No diagnostic code was specified, or the session has not changed state • DETECTION_TIMEOUT The control detection time expired: no BFD packet was received within the required period • ECHO_FAILED The BFD echo function failed - echo packets have not been received for the required period of time • NEIGHBOR_SIGNED_DOWN The neighbor signaled session down • FORWARDING_RESET The forwarding plane in the local system was reset The remote system cannot rely on the forwarding state of the device specifying this error code. • PATH_DOWN Signalling outside of BFD specified that the path underlying this session has failed • CONCATENATED_PATH_DOWN A segment on the path between source and destination has failed When a BFD session runs over a series of path segments, this error code indicates that a subsequent path segment (i.e., one in the transmit path between the source and destination of the session) has failed.

- ADMIN_DOWN
The BFD session has been administratively disabled by the peer
- REVERSE_CONCATENATED_PATH_DOWN
A segment on the reverse path between destination and source has failed
In the case that a BFD session is running over a series of path segments, this error code indicates that a path segment on the reverse path (i.e., in the transmit direction from the destination to the source of the session) has failed.

Configurable

False

Platforms

Supported on all platforms

oper-state keyword**Description**

Details the operational state of the session

Context[bfd network-instance name](#) *string* [peer local-discriminator](#) *number* [oper-state keyword](#)**Tree**[oper-state](#)**Options**

- up
Component or process is operational
- down
Component or process is not operational
- empty
Component slot is empty
- downloading
Component is downloading image into memory
- booting
Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power

- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False
Platforms	Supported on all platforms

remote-address (*ipv4-address* | *ipv6-address*)

Description	The remote IP address for the far-end of the BFD session This must be the same IP version as the local-address.
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> remote-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	remote-address
Configurable	False
Platforms	Supported on all platforms

remote-control-plane-independent *boolean*

Description	Indicates if the remote neighbor has set the control independent flag
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> remote-control-plane-independent <i>boolean</i>
Tree	remote-control-plane-independent
Configurable	False
Platforms	Supported on all platforms

remote-diagnostic-code *keyword*

Description	The remote BFD diagnostic code indicating the remote system's reason for failure of the BFD session
--------------------	---

Context	<code>bfd network-instance name string peer local-discriminator number remote-diagnostic-code keyword</code>
Tree	<code>remote-diagnostic-code</code>
Options	<ul style="list-style-type: none"> • NO_DIAGNOSTIC No diagnostic code was specified, or the session has not changed state • DETECTION_TIMEOUT The control detection time expired: no BFD packet was received within the required period • ECHO_FAILED The BFD echo function failed - echo packets have not been received for the required period of time • NEIGHBOR_SIGNED_DOWN The neighbor signaled session down • FORWARDING_RESET The forwarding plane in the local system was reset The remote system cannot rely on the forwarding state of the device specifying this error code. • PATH_DOWN Signalling outside of BFD specified that the path underlying this session has failed • CONCATENATED_PATH_DOWN A segment on the path between source and destination has failed When a BFD session runs over a series of path segments, this error code indicates that a subsequent path segment (i.e., one in the transmit path between the source and destination of the session) has failed. • ADMIN_DOWN The BFD session has been administratively disabled by the peer • REVERSE_CONCATENATED_PATH_DOWN A segment on the reverse path between destination and source has failed In the case that a BFD session is running over a series of path segments, this error code indicates that a path segment on the reverse path (i.e., in the transmit direction from the destination to the source of the session) has failed.
Configurable	False
Platforms	Supported on all platforms

remote-discriminator *number*

Description	A unique identifier used by the remote system to identify this BFD session
--------------------	--

Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> remote-discriminator <i>number</i>
Tree	remote-discriminator
Configurable	False
Platforms	Supported on all platforms

remote-minimum-receive-interval *number*

Description	The value of the minimum receive interval that was specified by the peer This value references the value in the most recent BFD control packet received from the peer.
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> remote-minimum-receive-interval <i>number</i>
Tree	remote-minimum-receive-interval
Configurable	False
Platforms	Supported on all platforms

remote-multiplier *number*

Description	The current number of packets that must be missed to declare the session as down The detection interval for the BFD session is calculated by multiplying the value of the negotiated transmission interval by this value.
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> remote-multiplier <i>number</i>
Tree	remote-multiplier
Configurable	False
Platforms	Supported on all platforms

remote-session-state *keyword*

Description	The reported state of the BFD session according to the remote system This state reflects the last state reported in a BFD control packet.
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> remote-session-state <i>keyword</i>
Tree	remote-session-state
Options	<ul style="list-style-type: none"> ADMIN_DOWN The BFD session is administratively disabled

- DOWN
The BFD session is perceived to be down by the system
- INIT
The BFD session is perceived to be initialising by the system
- UP
The BFD session is perceived to be up by the system

Configurable	False
Platforms	Supported on all platforms

session-state *keyword*

Description	The state of the BFD session perceived by the local system
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> session-state <i>keyword</i>
Tree	session-state
Options	<ul style="list-style-type: none"> • ADMIN_DOWN The BFD session is administratively disabled • DOWN The BFD session is perceived to be down by the system • INIT The BFD session is perceived to be initialising by the system • UP The BFD session is perceived to be up by the system
Configurable	False
Platforms	Supported on all platforms

sr-policy-endpoint (*ipv4-address* | *ipv6-address*)

Description	SR-Policy endpoint IP address associated with this seamless BFD session
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> sr-policy-endpoint (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	sr-policy-endpoint
Configurable	False
Platforms	Supported on all platforms

subscribed-protocols *string*

Description	Indicates the set of protocols that currently use this BFD session for liveliness detection
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> subscribed-protocols <i>string</i>
Tree	subscribed-protocols
Configurable	False
Platforms	Supported on all platforms

te-policy-name *string*

Description	Name of the TE-Policy associated with this seamless BFD session
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> te-policy-name <i>string</i>
Tree	te-policy-name
Configurable	False
Platforms	Supported on all platforms

te-policy-protocol-origin *keyword*

Description	Indicates the protocol type used to originate the TE-Policy associated with this seamless BFD session
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> te-policy-protocol-origin <i>keyword</i>
Tree	te-policy-protocol-origin
Options	<ul style="list-style-type: none"> • LOCAL The associated TE-Policy originated from local configuration • PCEP The associated TE-Policy from a PCEP controller
Configurable	False
Platforms	Supported on all platforms

te-policy-segment-list-index *number*

Description	Indicates the segment list index of the TE-Policy associated with this seamless BFD session
--------------------	---

Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> te-policy-segment-list-index <i>number</i>
Tree	te-policy-segment-list-index
Configurable	False
Platforms	Supported on all platforms

te-policy-segment-list-lsp-index *number*

Description	Indicates the lsp index for the segment list of the TE-Policy associated with this seamless BFD session
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> te-policy-segment-list-lsp-index <i>number</i>
Tree	te-policy-segment-list-lsp-index
Configurable	False
Platforms	Supported on all platforms

te-policy-type *keyword*

Description	Type of TE-Policy associated with this seamless BFD session
Context	bfd network-instance name <i>string</i> peer local-discriminator <i>number</i> te-policy-type <i>keyword</i>
Tree	te-policy-type
Options	<ul style="list-style-type: none"> • sr-mpls-colored • sr-mpls-uncolored
Configurable	False
Platforms	Supported on all platforms

subinterface [id](#) *string*

Description	List of subinterface references to associating BFD config and state
Context	bfd subinterface id <i>string</i>
Tree	subinterface
Configurable	True
Platforms	Supported on all platforms

id string

Description	Reference ID for associated subinterface Example: ethernet-2/1.100 (Reference Interface ethernet-2/1, subinterface 100).
Context	bfd subinterface id string
String Length	5 to 25
Configurable	True
Platforms	Supported on all platforms

admin-state keyword

Description	Administratively enable or disable BFD for this subinterface
Context	bfd subinterface id string admin-state keyword
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

desired-minimum-transmit-interval number

Description	<p>The minimum interval between transmission of BFD control packets</p> <p>This value is advertised to the peer, however the actual interval used is specified by taking the maximum of desired-minimum-transmit-interval and the value of the remote required-minimum-receive interval value. This value is specified as an integer number of microseconds.</p>
Context	bfd subinterface id string desired-minimum-transmit-interval number
Tree	desired-minimum-transmit-interval
Range	10000 to 100000000
Default	1000000
Units	microseconds
Configurable	True
Platforms	Supported on all platforms

detection-multiplier *number*

Description	The number of packets that must be missed to declare this session as down The detection interval for the BFD session is calculated by multiplying the value of the negotiated transmission interval by this value.
Context	bfd subinterface id <i>string</i> detection-multiplier <i>number</i>
Tree	detection-multiplier
Range	3 to 20
Default	3
Configurable	True
Platforms	Supported on all platforms

max-hop-count *number*

Description	TTL to be used in the BFD IP header for multihop BFD.
Context	bfd subinterface id <i>string</i> max-hop-count <i>number</i>
Tree	max-hop-count
Range	2 to 255
Default	255
Configurable	True
Platforms	Supported on all platforms

minimum-echo-receive-interval *number*

Description	The minimum interval between echo packets the local node can receive Implicitly enabled echo mode on the associated interface.
Context	bfd subinterface id <i>string</i> minimum-echo-receive-interval <i>number</i>
Tree	minimum-echo-receive-interval
Range	0 250000 to 100000000
Default	0
Configurable	True
Platforms	Supported on all platforms

required-minimum-receive *number*

Description	The minimum interval between received BFD control packets that this system should support This value is advertised to the remote peer to indicate the maximum frequency (i.e., minimum inter-packet interval) between BFD control packets that is acceptable to the local system. This value is specified as an integer number of microseconds.
Context	bfd subinterface id <i>string</i> required-minimum-receive <i>number</i>
Tree	required-minimum-receive
Range	10000 to 100000000
Default	1000000
Units	microseconds
Configurable	True
Platforms	Supported on all platforms

total-bfd-sessions *number*

Description	Counter for the total number of BFD sessions
Context	bfd total-bfd-sessions <i>number</i>
Tree	total-bfd-sessions
Default	0
Configurable	False
Platforms	Supported on all platforms

total-unmatched-bfd-packets *number*

Description	Counter for the total number of BFD packets received not matching a BFD session
Context	bfd total-unmatched-bfd-packets <i>number</i>
Tree	total-unmatched-bfd-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

5.1 interface Descriptions

interface `name string`

Description	The list of named interfaces on the device
Context	interface name string
Tree	interface
Configurable	True
Platforms	Supported on all platforms

name `string`

Description	<p>The name of the interface</p> <p>Valid options are: irb<N>, N=0..255 lif-<lif_name> enp<bus>s<dev>f<fn>, bus=0..255, dev=0..31, fn=0..7 vhn-<vhn_name> lag<N>, N=1..1000 [note1] lo<N>, N=0..255 mgmt0 mgmt0-standby ethernet-<slot>/<port> ethernet-<slot>/<mda>/<port> system0 sync0</p> <p><lif_name>=Linux interface name <vhn_name>=vhost interface name <slot>=slot number {1,2,3,..} <mda>=mda id {a,b,c,d} <port>=port id {1,2,3,..}</p> <p>[note1] The maximum number of LAGs per platform is as follows: D1: 32 D2-D3: 128 D4-D5: 64 H2-H3: 127 H4-32D: 127 H4: 255 IXR: 128</p>
Context	interface name string
String Length	3 to 20
Configurable	True
Platforms	Supported on all platforms

adapter

Description	State for adapters
Context	interface name string adapter
Tree	adapter
Configurable	False
Platforms	Supported on all platforms

model-number *string*

Description	Model information for the adapter This is the information as read from the EEPROM of the part. The string is expected to contain printable ASCII characters, but unprintable ASCII characters read from the EEPROM are not filtered out.
Context	interface name <i>string</i> adapter model-number <i>string</i>
Tree	model-number
Configurable	False
Platforms	Supported on all platforms

type *keyword*

Description	Type of adapter for the port
Context	interface name <i>string</i> adapter type <i>keyword</i>
Tree	type
Options	<ul style="list-style-type: none"> • unknown • qsfp28-to-sfp+/sfp28 • cfp-to-qsfp28
Configurable	False
Platforms	Supported on all platforms

vendor-manufacture-date *string*

Description	Vendor's date code. This is the information as read from the EEPROM of the part.
Context	interface name <i>string</i> adapter vendor-manufacture-date <i>string</i>
Tree	vendor-manufacture-date
Configurable	False
Platforms	Supported on all platforms

vendor-oui *string*

Description	Vendor's OUI which contains the IEEE company identifier for the vendor This is the information as read from the EEPROM of the part. A value of all zero indicates that the vendor OUI is unspecified.
--------------------	--

Context	interface name <i>string</i> adapter vendor-oui <i>string</i>
Tree	vendor-oui
Configurable	False
Platforms	Supported on all platforms

vendor-part-number *string*

Description	Vendor's part number or product name of the adapter This is the information as read from the EEPROM of the part. An empty string indicates the vendor part number is unspecified. The string is expected to contain printable ASCII characters, but unprintable ASCII characters read from the EEPROM are not filtered out.
Context	interface name <i>string</i> adapter vendor-part-number <i>string</i>
Tree	vendor-part-number
Configurable	False
Platforms	Supported on all platforms

vendor-serial-number *string*

Description	Vendor's serial number of the adapter This is the information as read from the EEPROM of the part. An empty string indicates the vendor serial number is unspecified. The string is expected to contain printable ASCII characters, but unprintable ASCII characters read from the EEPROM are not filtered out.
Context	interface name <i>string</i> adapter vendor-serial-number <i>string</i>
Tree	vendor-serial-number
Configurable	False
Platforms	Supported on all platforms

admin-state *keyword*

Description	The configured, desired state of the interface
Context	interface name <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable

Configurable	True
Platforms	Supported on all platforms

breakout-mode

Description

Configuration of breakout options.

7220 D3 ports 3-33: 4x10G and 4x25G 7220 D3L ports 1-31: 4x10G and 4x25G 7220 H3 ports 3-34: 4x10G, 2x100G/4x100G, and 2x200G 7220 H4 ports 1-64: 4x100G and 2x200G 7220 H4-32D ports 1-32: 4x100G and 2x200G 7220 D4 ports 29-32: 4x100G, 4x25G, and 4x10G 7220 D4 ports 9, 23-27: 4x25G and 4x10G 7220 D5 ports 1-32: 4x10G, 4x25G, 2x100G/4x100G, and 2x200G 7250 IXR-6e/10e 60p QSFP28 IMM all ports: 4x25G and 4x10G supported but with port group dependencies (Note 2) 7250 IXR-6e/10e 36p QSFP28 ports 1-24: 4x25G, and 4x10G (Note 4) 7250 IXR-X3b QSFPDD all ports: 4x100G, 3x100G (Note 1), 2x100G, 4x25G, and 4x10G
Note 1: 3x100G is only supported for Digital Coherent Optic transceivers

Note 2: For the following port groupings only the higher numbered port can be configured and enabled for breakout-mode. If the higher numbered port is configured and enabled for breakout-mode, then the lower numbered port cannot be enabled. Groupings are (25,28),(31,34),(37,40) and (n,n+3) and (n+1,n+2) and (n+4,n+5) for n=1,7,13,19,43,49,55.

Note 3: Breakout and 40G is only supported on odd numbered ports. For the QSFP28 four port groupings [1-4], [5-8], [9-12], [13-16], [21-24], [25-28], and [29-32] if either of the odd numbered ports within a group is enabled and configured for 40G, 4x10G, or 4x25G, then the other odd numbered port in the same group may only be enabled if it is configured for one of 40G, 4x10G, or 4x25G (can differ between the odd ports) and neither of the two even numbered ports within the same group can be enabled.

Note 4: For the QSFP28 ports, the following port groups exist [n, n+1, n+2, n+3] for n = 1, 5, 9, 13, 17, 21. Breakout for 4x25G or 4x10G is only supported on ports n+1 and n+3. If port n+1 within the group is configured for breakout and enabled, then port n cannot be enabled. In addition if port n+1 is configured for breakout and enabled and port n+3 is configured without breakout and enabled, then port n+2 may only be configured and enabled with the same speed as port n+3. If port n+3 within the group is configured for breakout and enabled, then port n+2 cannot be enabled. In addition if port n+3 is configured for breakout and enabled and port n+1 is configured without breakout and enabled, then port n may only be configured and enabled with the same speed as port n+1.

Port Groups and auto-configuration of port speed: Manually configured breakout-mode takes precedence over the auto-configured port-speed. This means that configuring a port within a port-group can have a side effect to take down an operational port that had its speed set based on the auto configuration feature. If there is risk of mixing transceiver types within a port group, then it is recommended to always manually configure the ports

Context

[interface name](#) *string* `breakout-mode`

Tree	breakout-mode
Configurable	True
Platforms	7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

breakout-port-speed *keyword*

Description	The speed of each breakout port
Context	interface name <i>string</i> breakout-mode breakout-port-speed <i>keyword</i>
Tree	breakout-port-speed
Options	<ul style="list-style-type: none"> • 10G • 25G • 50G • 100G • 200G
Configurable	True
Platforms	7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

num-breakout-ports *keyword*

Description	The number of breakout ports supported by this connector
Context	interface name <i>string</i> breakout-mode num-breakout-ports <i>keyword</i>
Tree	num-breakout-ports
Options	<ul style="list-style-type: none"> • 1 • 2 • 3 • 4 • 8
Configurable	True
Platforms	7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

description *string*

Description	A user-configured description of the interface
--------------------	--

Context	interface name <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

ethernet

Description	Enter the ethernet context
Context	interface name <i>string</i> ethernet
Tree	ethernet
Configurable	True
Platforms	Supported on all platforms

aggregate-id *reference*

Description	lag interface with which this interface is associated
Context	interface name <i>string</i> ethernet aggregate-id <i>reference</i>
Tree	aggregate-id
Reference	interface name <i>string</i>
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

auto-negotiate *boolean*

Description	When set to true the interface uses auto-negotiation for speed, duplex and flow-control settings. When set to false, the transmission parameters are specified manually.
Context	interface name <i>string</i> ethernet auto-negotiate <i>boolean</i>
Tree	auto-negotiate
Configurable	True
Platforms	7220 IXR-D1

dac-link-training *boolean*

Description	If the system detects that the transceiver is connected to a DAC cable then a true setting enables link training for better link stability. The link training setting must be the same at both ends of the DAC cable or else the link may not come up.
Context	interface name <i>string</i> ethernet dac-link-training <i>boolean</i>
Tree	dac-link-training
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H3, 7220 IXR-H4

duplex-mode *keyword*

Description	When auto-negotiate is true, this sets the duplex mode that will be advertised to the peer. When auto-negotiate is false, this directly sets the duplex mode of the interface.
Context	interface name <i>string</i> ethernet duplex-mode <i>keyword</i>
Tree	duplex-mode
Options	<ul style="list-style-type: none"> • full • half
Configurable	True
Platforms	7220 IXR-D1

flow-control

Description	Enter the flow-control context
Context	interface name <i>string</i> ethernet flow-control
Tree	flow-control
Configurable	True
Platforms	Supported on all platforms

receive *boolean*

Description	When this is true PAUSE frames received on this interface are accepted and processed, and, if auto-negotiation is enabled it also causes the capability to receive PAUSE frames to be signaled to the peer (applicable only to ports 1-48 of the 7220 IXR-D1 and to mgmt0 and mgmt0-standby ports).
--------------------	---

When this is false PAUSE frames received on this interface are ignored, and, if auto-negotiation is enabled it causes the capability to receive PAUSE frames to be signaled to the peer as non-support (applicable only to ports 1-48 of the 7220 IXR-D1 and to mgmt0 and mgmt0-standby ports)

Context	interface name <i>string</i> ethernet flow-control receive <i>boolean</i>
Tree	receive
Configurable	True
Platforms	Supported on all platforms

forwarding-viable *boolean*

Description	<p>If true: this LAG member link should be used for the transmission of traffic if all other LAG/port attributes allow it.</p> <p>If false: this LAG member link should not be used for the transmission of traffic.</p> <p>In all cases: This LAG member link should process any received frames when it is an active member link. L2 protocols such as LLDP, LACP and micro-BFD should continue to be sent and processed.</p>
Context	interface name <i>string</i> ethernet forwarding-viable <i>boolean</i>
Tree	forwarding-viable
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hold-time

Description	Configure interface hold timers for Ethernet interfaces
Context	interface name <i>string</i> ethernet hold-time
Tree	hold-time
Configurable	True
Platforms	Supported on all platforms

down *number*

Description	<p>Holds link down events for the configured time</p> <p>The hold-time down behavior is triggered with events that try to bring the ethernet interface down and can change quickly. It is not triggered with an admin-state disable event or interface disable due to other internal reasons (such as fabric unavailability). When running, the interface will not be brought</p>
--------------------	---

down till the timer expires. The typical use of the hold-time down is to provide stability and avoid the protocols to advertise/withdraw messages if there are flapping optics. The hold-time down is aborted if the user does admin-state disable or if the interface is disabled due to other internal reasons that prevent the traffic to be forwarded on the interface.

Context	interface name <i>string</i> ethernet hold-time down <i>number</i>
Tree	down
Range	0 100 to 86400000
Default	0
Units	milliseconds
Configurable	True
Platforms	Supported on all platforms

down-expires *string*

Description	The remaining time until the hold-time down expires and the interface goes operationally down.
Context	interface name <i>string</i> ethernet hold-time down-expires <i>string</i>
Tree	down-expires
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

up *number*

Description	Holds link up events for the configured time The hold-time up behavior is triggered with any event that tries to bring up the ethernet interface (interface admin-state enable, a reboot, etc). While the hold-time up is running, the transceiver laser will be enabled, however the higher layers will not be notified that the interface is operationally up until the timer expires.
Context	interface name <i>string</i> ethernet hold-time up <i>number</i>
Tree	up
Range	0 100 to 86400000
Default	0
Units	milliseconds
Configurable	True
Platforms	Supported on all platforms

up-expires *string*

Description	The remaining time until the hold-time up expires and the interface comes up.
Context	interface name <i>string</i> ethernet hold-time up-expires <i>string</i>
Tree	up-expires
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

hw-mac-address *string*

Description	The MAC address associated with the port
Context	interface name <i>string</i> ethernet hw-mac-address <i>string</i>
Tree	hw-mac-address
Configurable	False
Platforms	Supported on all platforms

l2cp-transparency

Description	Configuration and state of the Layer-2 Control Protocol transparency
Context	interface name <i>string</i> ethernet l2cp-transparency
Tree	l2cp-transparency
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dot1x

Description	Container for the configuration of 802.1x Port based Network Access Control.
Context	interface name <i>string</i> ethernet l2cp-transparency dot1x
Tree	dot1x
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-rule *keyword*

Description The operational state of the TCAM rule applied to ingress dot1x frames.

Context [interface name](#) *string* [ethernet l2cp-transparency dot1x oper-rule](#) *keyword*

Tree [oper-rule](#)

Options

- trap-to-cpu-untagged

tunnel-all-l2cp *boolean*

Description Configures the tunneling of all the L2CP protocols.
When set to true this command triggers the installation of an ingress TCAM rule with the highest priority (above all the individual L2CP tunnel rules) which allows the forwarding of any Layer-2 Control Protocol coming into the interface. All the L2CP frames identified by MAC DA = 01:80:c2:00:00:0x or MAC DA = 01:80:c2:00:00:2x, with 'x' being any hex value, are tunneled.

When set to false, all L2CP frames without a specific L2CP tunnel rule are discarded.

--------------------	--

ports 1-128: 100G 7220-H3 ports 1-2: 10G 7220-H3 ports 3-34: 40G, 100G, 200G, 400G 7220-H4 ports 1-64: 40G, 100G, 400G 7220-H4 ports 65-66: 10G 7220-H4-32D ports 1-32: 40G, 100G, 400G 7220-H4-32D ports 33: 10G 7250 IXR-6e/10e 60p QSFP28 IMM all ports: 100G 7250 IXR-6e/10e 36p QSFPDD-400 IMM all ports: 40G, 100G, 400G 7250 IXR-X3b QSFPDD all ports: 40G, 50G, 100G, 400G

Note 1: Ports 9-12 cannot operate at different port speeds (some at 40G and others at 100G). The required speed of ports 9-12 is based on the port-speed of the first configured port in this block; if any subsequent port in the block is configured with a different port speed that port will not come up.

Note 2: On 7220-D2: if one port in each consecutive group of 4 ports (1-4, 5-8, .. , 45-48) is enabled and has a configured speed of 25G then the other 3 ports may only be enabled if they also have a configured speed of 25G or no speed configured; if one port in each consecutive group of 4 ports (1-4, 5-8, .. , 45-48) is enabled and has a configured speed of 1G or 10G the other 3 ports may only be enabled if they also have a configured speed of 1G or 10G or no speed configured. On 7220-D2L: if one port in each port group of 4 ports ({1, 2, 3, 6}, {4, 5, 7, 9}, {8, 10, 11, 12}, {13, 14, 15, 18}, {16, 17, 19, 21}, {20, 22, 23, 24}, {25, 26, 27, 30}, {28, 29, 31, 33}, {32, 34, 35, 36}, {37, 38, 39, 42}, {40, 41, 43, 45}, {44, 46, 47, 48}) is enabled and has a configured speed of 25G the other 3 ports may only be enabled if they also have a configured speed of 25G or no speed configured; if one port in each port group of 4 ports is enabled and has a configured speed of 1G or 10G the other 3 ports may only be enabled if they also have a configured speed of 1G or 10G or no speed configured.

Note 3: Breakout and 40G is only supported on odd numbered ports. For the QSFP28 four port groupings [1-4], [5-8], [9-12], [13-16], [21-24], [25-28], and [29-32] if either of the odd numbered ports within a group is enabled and configured for 40G, 4x10G, or 4x25G, then the other odd numbered port in the same group may only be enabled if it is configured for one of 40G, 4x10G, or 4x25G (can differ between the odd ports) and neither of the two even numbered ports within the same group can be enabled.

Note 4: For the QSFP28 ports, the following port groups exist [n, n+1, n+2, n+3] for n = 1, 5, 9, 13, 17, 21. Breakout for 4x25G or 4x10G is only supported on ports n+1 and n+3. If port n+1 within the group is configured for breakout and enabled, then port n cannot be enabled. In addition if port n+1 is configured for breakout and enabled and port n+3 is configured without breakout and enabled, then port n+2 may only be configured and enabled with the same speed as port n+3. If port n+3 within the group is configured for breakout and enabled, then port n+2 cannot be enabled. In addition if port n+3 is configured for breakout and enabled and port n+1 is configured without breakout and enabled, then port n may only be configured and enabled with the same speed as port n+1.

7250 IXR details: If the interface corresponds to a connector that has no installed transceiver then the value is accepted without any checking or restriction, and info from state will display the configured value. Otherwise if the configured port-speed is NOT supported by the installed transceiver the port is forced operationally down.

Port Groups and auto-configuration: Manually configured and enabled port-speed (and breakout-modes) take precedence over the auto-configured port-speed. This means that configuring and enabling a port within a port-group can have a side effect to take down an operational port that had its speed set based on the auto-configuration feature. If there is risk of mixing transceiver types within a port group, then it is recommended to always manually configure the speed for enabled ports

Range	1 to 86400
Units	seconds
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reload-delay-expires string

Description	The remaining time until the reload-delay expires and the interface can go operationally up.
Context	interface name string ethernet reload-delay-expires string
Tree	reload-delay-expires
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

standby-signaling keyword

Description	Indicates the standby-signaling used in the interface. An application using a port-based redundancy mechanism will trigger the standby signaling on the ethernet interface if the interface is selected as standby.
Context	interface name string ethernet standby-signaling keyword
Tree	standby-signaling

Options	<ul style="list-style-type: none"> • power-off • lacp
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	interface name <i>string</i> ethernet statistics
Tree	statistics
Configurable	False
Platforms	Supported on all platforms

in-1024b-to-1518b-frames *number*

Description	Number of received Ethernet frames that are 1024-1518 bytes in length
Context	interface name <i>string</i> ethernet statistics in-1024b-to-1518b-frames <i>number</i>
Tree	in-1024b-to-1518b-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

in-128b-to-255b-frames *number*

Description	Number of received Ethernet frames that are 128-255 bytes in length
Context	interface name <i>string</i> ethernet statistics in-128b-to-255b-frames <i>number</i>
Tree	in-128b-to-255b-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

in-1519b-or-longer-frames *number*

Description	Number of received Ethernet frames that are 1519 bytes or longer
Context	interface name <i>string</i> ethernet statistics in-1519b-or-longer-frames <i>number</i>

Tree	in-1519b-or-longer-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

in-256b-to-511b-frames *number*

Description	Number of received Ethernet frames that are 256-511 bytes in length
Context	interface name <i>string</i> ethernet statistics in-256b-to-511b-frames <i>number</i>
Tree	in-256b-to-511b-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

in-512b-to-1023b-frames *number*

Description	Number of received Ethernet frames that are 512-1023 bytes in length
Context	interface name <i>string</i> ethernet statistics in-512b-to-1023b-frames <i>number</i>
Tree	in-512b-to-1023b-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

in-64b-frames *number*

Description	Number of received Ethernet frames that are exactly 64 bytes in length
Context	interface name <i>string</i> ethernet statistics in-64b-frames <i>number</i>
Tree	in-64b-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

in-65b-to-127b-frames *number*

Description	Number of received Ethernet frames that are 65-127 bytes in length
Context	interface name <i>string</i> ethernet statistics in-65b-to-127b-frames <i>number</i>

Tree	in-65b-to-127b-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

in-crc-error-frames *number*

Description	Number of receive error events due to FCS/CRC check failure
Context	interface name <i>string</i> ethernet statistics in-crc-error-frames <i>number</i>
Tree	in-crc-error-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

in-fragment-frames *number*

Description	Number of fragment frames received on the interface
Context	interface name <i>string</i> ethernet statistics in-fragment-frames <i>number</i>
Tree	in-fragment-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

in-jabber-frames *number*

Description	Number of jabber frames received on the interface. Jabber frames are typically defined as oversize frames which also have a bad CRC
Context	interface name <i>string</i> ethernet statistics in-jabber-frames <i>number</i>
Tree	in-jabber-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

in-mac-pause-frames *number*

Description	Number of MAC layer PAUSE frames received on the interface.
--------------------	---

Context	interface name <i>string</i> ethernet statistics in-mac-pause-frames <i>number</i>
Tree	in-mac-pause-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

in-oversize-frames *number*

Description	Number of oversize frames received on the interface (i.e. frames that exceed the operational port MTU)
Context	interface name <i>string</i> ethernet statistics in-oversize-frames <i>number</i>
Tree	in-oversize-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

last-clear *string*

Description	Timestamp of the last time the MAC counters were cleared
Context	interface name <i>string</i> ethernet statistics last-clear <i>string</i>
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

out-1024b-to-1518b-frames *number*

Description	Number of transmitted Ethernet frames that are 1024-1518 bytes in length
Context	interface name <i>string</i> ethernet statistics out-1024b-to-1518b-frames <i>number</i>
Tree	out-1024b-to-1518b-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

out-128b-to-255b-frames *number*

Description	Number of transmitted Ethernet frames that are 128-255 bytes in length
Context	interface name <i>string</i> ethernet statistics out-128b-to-255b-frames <i>number</i>
Tree	out-128b-to-255b-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

out-1519b-or-longer-frames *number*

Description	Number of transmitted Ethernet frames that are 1519 bytes or longer
Context	interface name <i>string</i> ethernet statistics out-1519b-or-longer-frames <i>number</i>
Tree	out-1519b-or-longer-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

out-256b-to-511b-frames *number*

Description	Number of transmitted Ethernet frames that are 256-511 bytes in length
Context	interface name <i>string</i> ethernet statistics out-256b-to-511b-frames <i>number</i>
Tree	out-256b-to-511b-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

out-512b-to-1023b-frames *number*

Description	Number of transmitted Ethernet frames that are 512-1023 bytes in length
Context	interface name <i>string</i> ethernet statistics out-512b-to-1023b-frames <i>number</i>
Tree	out-512b-to-1023b-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

out-64b-frames *number*

Description	Number of transmitted Ethernet frames that are exactly 64 bytes in length
Context	interface name <i>string</i> ethernet statistics out-64b-frames <i>number</i>
Tree	out-64b-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

out-65b-to-127b-frames *number*

Description	Number of transmitted Ethernet frames that are 65-127 bytes in length
Context	interface name <i>string</i> ethernet statistics out-65b-to-127b-frames <i>number</i>
Tree	out-65b-to-127b-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

out-mac-pause-frames *number*

Description	Number of MAC layer PAUSE frames sent on the interface
Context	interface name <i>string</i> ethernet statistics out-mac-pause-frames <i>number</i>
Tree	out-mac-pause-frames
Default	0
Configurable	False
Platforms	Supported on all platforms

storm-control

Description	Enable the storm-control context
Context	interface name <i>string</i> ethernet storm-control
Tree	storm-control
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

broadcast-rate *number*

Description	<p>The maximum rate allowed for ingress broadcast frames on the interface</p> <p>The rate can be set in multiple of 64kbps. If the rate is configured to any value in the 1-127 kbps range, the effective rate will be 64kbps and shown in the operational rate. If any value in the 128-191 range, the effective rate will be 128kbps and shown in the operational rate, and so on for higher rates. When the rate is set to zero, all the broadcast traffic in the interface is discarded.</p> <p>The maximum rate that can be effectively configured in 7220 D4/D5 platforms is 132000000. When a configured percentage exceeds that value, the maximum supported rate is set and shown in the operational-broadcast-rate.</p>
Context	interface name <i>string</i> ethernet storm-control broadcast-rate <i>number</i>
Tree	broadcast-rate
Range	0 to 132000000
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

multicast-rate *number*

Description	<p>The maximum rate allowed for ingress multicast frames on the interface</p> <p>The rate can be set in multiple of 64kbps. If the rate is configured to any value in the 1-127 kbps range, the effective rate will be 64kbps and shown in the operational rate. If any value in the 128-191 range, the effective rate will be 128kbps and shown in the operational rate, and so on for higher rates. When the rate is set to zero, all the multicast traffic in the interface is discarded.</p> <p>The maximum rate that can be effectively configured in 7220 D4/D5 platforms is 132000000. When a configured percentage exceeds that value, the maximum supported rate is set and shown in the operational-multicast-rate.</p>
Context	interface name <i>string</i> ethernet storm-control multicast-rate <i>number</i>
Tree	multicast-rate
Range	0 to 132000000
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

operational-broadcast-rate *number*

Description	The operational maximum rate for ingress broadcast frames programmed on the interface
Context	interface name <i>string</i> ethernet storm-control operational-broadcast-rate <i>number</i>
Tree	operational-broadcast-rate
Units	kbps
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

operational-multicast-rate *number*

Description	The operational maximum rate for ingress multicast frames programmed on the interface
Context	interface name <i>string</i> ethernet storm-control operational-multicast-rate <i>number</i>
Tree	operational-multicast-rate
Units	kbps
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

operational-unknown-unicast-rate *number*

Description	The operational maximum rate for ingress unknown unicast frames programmed on the interface
Context	interface name <i>string</i> ethernet storm-control operational-unknown-unicast-rate <i>number</i>
Tree	operational-unknown-unicast-rate
Units	kbps
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

units *keyword*

Description	Units of storm-control policer in kbps or percentage of the interface bandwidth
Context	interface name <i>string</i> ethernet storm-control units <i>keyword</i>
Tree	units
Default	percentage
Options	<ul style="list-style-type: none"> • kbps • percentage
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

unknown-unicast-rate *number*

Description	<p>The maximum rate allowed for ingress unknown unicast frames on the interface</p> <p>The rate can be set in multiple of 64kbps. If the rate is configured to any value in the 1-127 kbps range, the effective rate will be 64kbps and shown in the operational rate. If any value in the 128-191 range, the effective rate will be 128kbps and shown in the operational rate, and so on for higher rates. When the rate is set to zero, all the unknown unicast traffic in the interface is discarded.</p> <p>The maximum rate that can be effectively configured in 7220 D4/D5 platforms is 132000000. When a configured percentage exceeds that value, the maximum supported rate is set and shown in the operational-multicast-rate.</p>
Context	interface name <i>string</i> ethernet storm-control unknown-unicast-rate <i>number</i>
Tree	unknown-unicast-rate
Range	0 to 132000000
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

sync

Description	This struct containing all attributes for SyncE in line/client ports.
Context	interface name <i>string</i> ethernet sync
Tree	sync

Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

ssm

Description	This struct containing all attributes for QL/SSM with SyncE in these ports.
Context	interface name <i>string</i> ethernet sync e ssm
Tree	ssm
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

admin-state *keyword*

Description	Configure the administrative state for SyncE in line/client ports. When enabled, the associated transmit and receiver ports are set to synchronous mode and ESMC/SSM processing is enabled. Otherwise, all syncE functions are disabled in the port.
Context	interface name <i>string</i> ethernet sync e ssm admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

forwarding-complex *reference*

Description	The forwarding-complex on which this interface resides This field is not populated for non-forwarding-complex-attached interfaces, for example mgmt0.
Context	interface name <i>string</i> forwarding-complex <i>reference</i>
Tree	forwarding-complex
Reference	platform linecard slot <i>number</i> forwarding-complex <i>name</i> <i>keyword</i>
Configurable	False
Platforms	Supported on all platforms

ifindex number

Description	System-wide persistent unique ifIndex assigned to the interface
Context	interface name <i>string</i> ifindex number
Tree	ifindex
Configurable	False
Platforms	Supported on all platforms

lag

Description	Container for options related to LAG
Context	interface name <i>string</i> lag
Tree	lag
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lacp

Description	LACP parameters for the associated LAG
Context	interface name <i>string</i> lag lacp
Tree	lacp
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-key number

Description	Configure the LACP admin-key to be advertised by the local system. If this value is not specified a value starting from 32768 is automatically assigned by the system.
Context	interface name <i>string</i> lag lacp admin-key number
Tree	admin-key
Range	1 to 65535
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interval *keyword*

Description Set the period between LACP messages -- uses the lacp-period-type enumeration.

Context [interface name](#) *string lag lacp interval keyword*

Tree [interval](#)

Default SLOW

- Options**
- FAST
Send LACP packets every second
 - SLOW
Send LACP packets every 30 seconds

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lacp-mode *keyword*

Description ACTIVE is to initiate the transmission of LACP packets. PASSIVE is to wait for peer to initiate the transmission of LACP packets.

Context [interface name](#) *string lag lacp lacp-mode keyword*

Tree [lacp-mode](#)

Default ACTIVE

- Options**
- ACTIVE
Interface is an active member, i.e., will detect and maintain aggregates
 - PASSIVE
Interface is a passive member, i.e., it participates with an active partner

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

system-id-mac *string*

Description	The MAC address portion of the node's System ID. This is combined with the system priority to construct the 8-octet system-id. If not configured, the system-ID configured at the system/ level is used.
Context	interface name <i>string</i> lag lACP system-id-mac <i>string</i>
Tree	system-id-mac
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

system-priority *number*

Description	System priority used by the node on this LAG interface. Lower value is higher priority for determining which node is the controlling system. If not configured, the system-priority configured at the system/ level is used.
Context	interface name <i>string</i> lag lACP system-priority <i>number</i>
Tree	system-priority
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lACP-fallback-mode *keyword*

Description	Specifies lACP-fallback mode if enabled
Context	interface name <i>string</i> lag lACP-fallback-mode <i>keyword</i>
Tree	lACP-fallback-mode
Options	<ul style="list-style-type: none"> static Set the LACP-fallback mode as static
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lacp-fallback-timeout *number*

Description	Specifies the LACP-fallback timeout interval in seconds
Context	interface name <i>string</i> lag lacp-fallback-timeout <i>number</i>
Tree	lacp-fallback-timeout
Range	4 to 3600
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lag-speed *number*

Description	reports current aggregate bandwidth speed of the associated LAG
Context	interface name <i>string</i> lag lag-speed <i>number</i>
Tree	lag-speed
Units	Mbps
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lag-type *keyword*

Description	Sets the type of LAG, i.e., how it is configured / maintained
Context	interface name <i>string</i> lag lag-type <i>keyword</i>
Tree	lag-type
Default	static
Options	<ul style="list-style-type: none"> • lacp LAG managed by LACP • static Statically configured bundle / LAG
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

member name *reference*

Description	Reports the list of interfaces associated with the LAG instance
Context	interface name <i>string</i> lag member name <i>reference</i>
Tree	member
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *reference*

Description	Enter the name context
Context	interface name <i>string</i> lag member name <i>reference</i>
Reference	interface name <i>string</i>
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lACP

Description	Operational status data for the member interfaces
Context	interface name <i>string</i> lag member name <i>reference</i> lACP
Tree	lACP
Configurable	False

oper-state keyword**Description**

Operational state for the associated LAG

Context[interface name](#) *string* [lag member name](#) *reference* [oper-state keyword](#)**Tree**[oper-state](#)**Options**

- up
Component or process is operational
- down
Component or process is not operational
- empty
Component slot is empty
- downloading
Component is downloading image into memory
- booting
Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable

linecard *reference*

Description The linecard on which this interface resides
This field is not populated for non-forwarding-complex-attached interfaces, for example mgmt0.

Context [interface name](#) *string linecard reference*

Tree [linecard](#)

Reference [platform linecard slot](#) *number*

Configurable False

Platforms Supported on all platforms

loopback-mode *keyword*

Description	Loopback mode of the port
Context	interface name <i>string</i> loopback-mode <i>keyword</i>
Tree	loopback-mode
Options	<ul style="list-style-type: none"> • none No loopback is applied • facility A loopback which directs traffic normally transmitted on the port back into the switch as if received on the same port from an external source On some systems this is also called local loopback. • terminal A loopback which directs traffic received from an external source on the port back out the transmit side of the same port.
Configurable	True
Platforms	Supported on all platforms

mtu *number*

Description	<p>Port MTU in bytes including ethernet overhead but excluding 4-bytes FCS</p> <p>If a transmitted packet exceeds this size it is dropped. The default value for ethernet-x interfaces is taken from /system/mtu/default-port-mtu. For the mgmt0 and mgmt0-standby interfaces the default is 1514 bytes, but the value can be changed for each interface individually. Port MTU is not configurable for loopback interfaces or irb interfaces. For irb interfaces, if the size of the ip packets to be routed to a mac-vrf has to be restricted, the subinterface.ip-mtu should be configured instead. The max mtu for the mgmt0 and mgmt0-standby interfaces is 9216. The 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-H2, and 7220 IXR-H3 systems support a maximum port MTU of 9412 bytes and minimum of 1500 bytes. All other systems support a maximum port MTU of 9500 and minimum of 1500 bytes. Each 7250 IXR IMM supports a maximum of 8 different port MTU values. 7220 IXR systems do not have any limit on the maximum number of different port MTU values.</p>

Platforms	Supported on all platforms

p4rt

Description	Top-level container for P4Runtime interface configuration and state
Context	interface name <i>string p4rt</i>
Tree	p4rt
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

id number

Description	<p>The numeric identifier used by the controller to address the interface</p> <p>This ID is the interface ifIndex by default, or is assigned by an external-to-the-device entity (e.g., an SDN management system) to establish an externally deterministic numeric reference for the interface.</p> <p>The programming entity must ensure that the ID is unique within the required context.</p> <p>Note that this identifier is used only when a numeric reference to the interface is required, it does not replace the unique name assigned to the interface.</p>
Context	interface name <i>string p4rt id number</i>
Tree	id
Range	1 to 4294967295
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

parent-id *number*

Description	The numeric ID used by the controller to address the ASIC this interface resides on This is the ID configured at /platform/linecard/forwarding-complex/p4rt/id. This ID may be referred to as a 'device', 'node' or 'target' by the P4RT specification. Each switching ASIC (i.e., node) is addressed by the external entity based on its numeric identifier.
Context	interface name <i>string</i> p4rt parent-id <i>number</i>
Tree	parent-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

packet-link-qualification

Description	gNOI Packet Link Qualification results
Context	interface name <i>string</i> packet-link-qualification
Tree	packet-link-qualification
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

result id *string*

Description	Enter the result list instance
Context	interface name <i>string</i> packet-link-qualification result id <i>string</i>
Tree	result
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

id *string*

Description	Packet link qualification test ID
Context	interface name <i>string</i> packet-link-qualification result id <i>string</i>

String Length	1 to 255
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

end-time string

Description	End time of the test
Context	interface name <i>string</i> packet-link-qualification result id <i>string</i> end-time <i>string</i>
Tree	end-time
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

expected-rate number

Description	Expected rate of the test This is the computed or observed rate that the service expected to be maintained throughout the qualification duration.
Context	interface name <i>string</i> packet-link-qualification result id <i>string</i> expected-rate number
Tree	expected-rate
Units	bytes per second
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state keyword

Description	State of the qualification test
Context	interface name <i>string</i> packet-link-qualification result id <i>string</i> oper-state keyword
Tree	oper-state
Options	<ul style="list-style-type: none"> unspecified

- Unspecified state of the qualification
- error
 - The qualification has errored
- idle
 - Initial state for the qualification
- setup
 - Interface is being configured
- running
 - Qualification underway
- teardown
 - Interface is being reset
- completed
 - Qualification is complete

Configurable

False

Platforms

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

packets-dropped *number***Description**

Number of packets dropped

Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

packets-received *number*

Description	Number of packets received
Context	interface name <i>string</i> packet-link-qualification result id <i>string</i> packets-received number
Tree	packets-received
Units	packets
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

packets-sent *number*

Description	Number of packets sent
Context	interface name <i>string</i> packet-link-qualification result id <i>string</i> packets-sent number
Tree	packets-sent
Units	packets
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

qualification-rate *number*

Description	Observed rate of the test This is the computed or observed rate that the service expected to be maintained throughout the qualification duration.
Context	interface name <i>string</i> packet-link-qualification result id <i>string</i> qualification-rate number
Tree	qualification-rate
Units	bytes per second
Configurable	False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

start-time *string*

Description Start time of the test

Context [interface name](#) *string* [packet-link-qualification result id](#) *string* [start-time](#) *string*

Tree [start-time](#)

String Length 20 to 32

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

status *keyword*

Description Status of the test
Only set when the test is in the error state.

Context [interface name](#) *string* [packet-link-qualification result id](#) *string* [status](#) *keyword*

Tree [status](#)

Options

- not-found
Request ID not found
- invalid-argument
Unsupported configuration parameter
- canceled
Test was canceled
- deadline-exceeded
A test stage took too long to complete
- failed-precondition
A test stage was not setup properly
- internal
A test stage had unexpected serious errors

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

status-message *string*

Description	Status message of the test Only set when the test is in the error state.
Context	interface name <i>string</i> packet-link-qualification result id <i>string</i> status-message <i>string</i>
Tree	status-message
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

phy-group-members *string*

Description	The group of interfaces sharing a phy with this interface On the 7220 IXR-D2 and 7220 IXR-D2L platforms this group of interfaces must be set to the same speed, either 1/10G or 25G.
Context	interface name <i>string</i> phy-group-members <i>string</i>
Tree	phy-group-members
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L

physical-channel *reference*

Description	The list of transceiver channels associated with this port
Context	interface name <i>string</i> physical-channel <i>reference</i>
Tree	physical-channel
Reference	interface name <i>string</i> transceiver channel index <i>number</i>
Configurable	False
Platforms	Supported on all platforms

sflow

Description	Context to configure sFlow parameters
Context	interface name <i>string</i> sflow
Tree	sflow

Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	Administratively enable or disable sFlow on this interface
Context	interface name <i>string</i> sflow admin-state <i>keyword</i>
Tree	admin-state
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	interface name <i>string</i> statistics
Tree	statistics
Configurable	False
Platforms	Supported on all platforms

carrier-transitions *number*

Description	Number of times the interface state has transitioned from down to up. This is reset to zero when the device is started or reset or the counters are cleared.
Context	interface name <i>string</i> statistics carrier-transitions <i>number</i>
Tree	carrier-transitions
Default	0
Configurable	False
Platforms	Supported on all platforms

in-broadcast-packets *number*

Description	Corresponds to ifHCInBroadcastPkts from the IF-MIB
Context	interface name <i>string</i> statistics in-broadcast-packets <i>number</i>

Tree	in-broadcast-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

in-discarded-packets *number*

Description	Corresponds to ifInDiscards from the IFMIB. This counts the number of IP packets discarded due to VLAN mismatch, unknown dest MAC or drop by system-filter drop action. On 7250 IXR/IXRe systems this counter is not expected to increment above zero.
Context	interface name <i>string</i> statistics in-discarded-packets <i>number</i>
Tree	in-discarded-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

in-error-packets *number*

Description	Corresponds to ifInErrors from the IF-MIB
Context	interface name <i>string</i> statistics in-error-packets <i>number</i>
Tree	in-error-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

in-fcs-error-packets *number*

Description	Ingress FCS errors
Context	interface name <i>string</i> statistics in-fcs-error-packets <i>number</i>
Tree	in-fcs-error-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

in-multicast-packets *number*

Description	Corresponds to ifHCInMulticastPkts from the IF-MIB
Context	interface name <i>string</i> statistics in-multicast-packets <i>number</i>
Tree	in-multicast-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

in-octets *number*

Description	Corresponds to ifHCInOctets from the IFMIB
Context	interface name <i>string</i> statistics in-octets <i>number</i>
Tree	in-octets
Default	0
Configurable	False
Platforms	Supported on all platforms

in-packets *number*

Description	Sum of all received packets, independent of protocol and forwarding type and before discards and errors
Context	interface name <i>string</i> statistics in-packets <i>number</i>
Tree	in-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

in-unicast-packets *number*

Description	Corresponds to ifHCInUcastPkts from the IF-MIB
Context	interface name <i>string</i> statistics in-unicast-packets <i>number</i>
Tree	in-unicast-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

last-clear *string*

Description	Timestamp of the last time the interface counters were cleared
Context	interface name <i>string</i> statistics last-clear <i>string</i>
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

out-broadcast-packets *number*

Description	Corresponds to ifHCOutBroadcastPkts from the IF-MIB
Context	interface name <i>string</i> statistics out-broadcast-packets <i>number</i>
Tree	out-broadcast-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

out-discarded-packets *number*

Description	Corresponds to ifOutDiscards from the IF-MIB. On 7250 IXR-6/10 systems this counts packets dropped by an egress IP ACL of any of the port's subinterfaces.
Context	interface name <i>string</i> statistics out-discarded-packets <i>number</i>
Tree	out-discarded-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

out-error-packets *number*

Description	Corresponds to ifOutErrors from the IF-MIB
Context	interface name <i>string</i> statistics out-error-packets <i>number</i>
Tree	out-error-packets
Default	0
Configurable	False

Platforms Supported on all platforms

out-mirror-octets *number*

Description This counts the number of outgoing mirrored octets

Context [interface name](#) *string* [statistics](#) [out-mirror-octets](#) *number*

Tree [out-mirror-octets](#)

Default 0

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

out-mirror-packets *number*

Description This counts the number of outgoing mirrored packets

Context [interface name](#) *string* [statistics](#) [out-mirror-packets](#) *number*

Tree [out-mirror-packets](#)

Default 0

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

out-multicast-packets *number*

Description Corresponds to ifHCOutMulticastPkts from the IF-MIB

Context [interface name](#) *string* [statistics](#) [out-multicast-packets](#) *number*

Tree [out-multicast-packets](#)

Default 0

Configurable False

Platforms Supported on all platforms

out-octets *number*

Description Corresponds to ifHCOutOctets from the IF-MIB

Context [interface name](#) *string* [statistics](#) [out-octets](#) *number*

Tree [out-octets](#)

Default 0

Configurable False

Platforms Supported on all platforms

out-packets *number*

Description Sum of all transmitted packets, independent of protocol and forwarding type and before discards and errors

Context [interface name](#) *string* [statistics](#) [out-packets](#) *number*

Tree [out-packets](#)

Default 0

Configurable False

Platforms Supported on all platforms

out-unicast-packets *number*

Description Corresponds to ifHCOUcastPkts from the IF-MIB

Context [interface name](#) *string* [statistics](#) [out-unicast-packets](#) *number*

Tree [out-unicast-packets](#)

Default 0

Configurable False

Platforms Supported on all platforms

subinterface [index](#) *number*

Description The list of subinterfaces (logical interfaces) associated with a physical interface

Context [interface name](#) *string* [subinterface](#) [index](#) *number*

Tree [subinterface](#)

Configurable True

Platforms Supported on all platforms

Max. Elements 4095

index *number*

Description The index of the subinterface, or logical interface number

Context [interface name](#) *string* [subinterface](#) [index](#) *number*

Range 0 to 9999

Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	The configured, desired state of the subinterface
Context	interface name <i>string</i> subinterface index number admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

anycast-gw

Description	Enable the anycast-gw context
Context	interface name <i>string</i> subinterface index number anycast-gw
Tree	anycast-gw
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

anycast-gw-mac *string*

Description	<p>The MAC address of associated to the anycast-gw IP address.</p> <p>If the anycast-gw MAC address is not configured, it will be auto-derived from the virtual-router-id value as per draft-ietf-bess-evpn-inter-subnet-forwarding following the format 00:00:5E:00:01:VRID.</p>
Context	interface name <i>string</i> subinterface index number anycast-gw anycast-gw-mac <i>string</i>
Tree	anycast-gw-mac
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

anycast-gw-mac-origin *keyword*

Description	Origin of the active anycast-gateway MAC address. If not configured, the anycast-gateway-mac will be auto-derived out of 00:00:5E:00:01:VRID, where VRID is the Virtual Router Identifier of the subinterface anycast-gw.
Context	interface name <i>string</i> subinterface index <i>number</i> anycast-gw anycast-gw-mac-origin <i>keyword</i>
Tree	anycast-gw-mac-origin
Options	<ul style="list-style-type: none"> • configured • vrid-auto-derived
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

virtual-router-id *number*

Description	The Virtual Router Identifier (VRID) value used to auto-derive the anycast-gw-mac in the format 00:00:5E:00:01:VRID.
Context	interface name <i>string</i> subinterface index <i>number</i> anycast-gw virtual-router-id <i>number</i>
Tree	virtual-router-id
Range	1 to 255
Default	1
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bridge-table

Description	Enable the Bridge Table on the subinterface and configure associated parameters
Context	interface name <i>string</i> subinterface index <i>number</i> bridge-table
Tree	bridge-table
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

discard-unknown-src-mac *boolean*

Description Discard frames with unknown source mac addresses. The source mac address of the discarded frame is never learned when this command is enabled.

Context [interface name](#) *string* [subinterface index](#) *number* [bridge-table discard-unknown-src-mac](#) *boolean*

Tree [discard-unknown-src-mac](#)

Default false

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mac-duplication

Description Enter the mac-duplication context

Context [interface name](#) *string* [subinterface index](#) *number* [bridge-table mac-duplication](#)

Tree [mac-duplication](#)

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

action *keyword*

Description Action to take on the subinterface upon detecting at least one mac addresses as duplicate on the subinterface. In particular:

Context [interface name](#) *string* [subinterface index](#) *number* [bridge-table mac-duplication action](#) *keyword*

Tree [action](#)

aging (*number* | *keyword*)

Description	remaining age time for learnt macs
Context	interface name <i>string</i> subinterface index <i>number</i> bridge-table mac-learning learnt-entries mac address <i>string</i> aging (<i>number</i> <i>keyword</i>)
Tree	aging
Units	seconds
Options	<ul style="list-style-type: none"> disabled
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-update *string*

Description	The date and time of the last update of this learnt mac
Context	interface name <i>string</i> subinterface index <i>number</i> bridge-table mac-learning learnt-entries mac address <i>string</i> last-update <i>string</i>
Tree	last-update
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mac-limit

Description	Bridge Table size and thresholds.
Context	interface name <i>string</i> subinterface index <i>number</i> bridge-table mac-limit
Tree	mac-limit
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum-entries *number*

Description	Maximum number of mac addresses allowed in the bridge-table.
--------------------	--

Context	interface name <i>string</i> subinterface index <i>number</i> bridge-table mac-limit maximum-entries <i>number</i>
Tree	maximum-entries
Range	1 to 8192
Default	250
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

warning-threshold-pct *number*

Description	Percentage of the configured max-number-macs over which a warning is triggered. The warning message is cleared when the percentage drops below the configured percentage minus 5%
Context	interface name <i>string</i> subinterface index <i>number</i> bridge-table mac-limit warning-threshold-pct <i>number</i>
Tree	warning-threshold-pct
Range	6 to 100
Default	95
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mac-table

Description	Enter the mac-table context
Context	interface name <i>string</i> subinterface index <i>number</i> bridge-table mac-table
Tree	mac-table
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mac address *string*

Description	macs learnt on the bridging instance
--------------------	--------------------------------------

Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> bridge-table mac-table mac address <i>string</i>
Tree	mac
Configurable	False

description *string*

Description	A user-configured description of the interface
Context	interface name <i>string</i> subinterface index <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

ethernet-segment-association

Description	ethernet-segment association information.
Context	interface name <i>string</i> subinterface index <i>number</i> ethernet-segment-association
Tree	ethernet-segment-association
Configurable	False
Platforms	Supported on all platforms

designated-forwarder *boolean*

Description	The value of this leaf indicates if the interface is the designated forwarder for the ethernet-segment on the network-instance.
Context	interface name <i>string</i> subinterface index <i>number</i> ethernet-segment-association designated-forwarder <i>boolean</i>
Tree	designated-forwarder
Default	false
Configurable	False
Platforms	Supported on all platforms

es-managed *boolean*

Description	The value of this leaf indicates if the interface is managed by the ethernet-segment on the network-instance.
--------------------	---

Context	interface name <i>string</i> subinterface index <i>number</i> ethernet-segment-association es-managed <i>boolean</i>
Tree	es-managed
Default	false
Configurable	False
Platforms	Supported on all platforms

ethernet-segment *string*

Description	The value of this leaf indicates the ethernet-segment, the sub-interface is associated to.
Context	interface name <i>string</i> subinterface index <i>number</i> ethernet-segment-association ethernet-segment <i>string</i>
Tree	ethernet-segment
String Length	1 to 255
Configurable	False
Platforms	Supported on all platforms

ifindex *number*

Description	System-wide persistent unique ifIndex assigned to the subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> ifindex <i>number</i>
Tree	ifindex
Configurable	False
Platforms	Supported on all platforms

ip-mtu *number*

Description	<p>IP MTU of the subinterface in bytes.</p> <p>Includes the IP header but excludes Ethernet encapsulation.</p> <p>IP MTU specifies the maximum sized IPv4 or IPv6 packet that can be transmitted on the subinterface. If an IPv4 or IPv6 packet exceeds this size it is dropped and this may result in the generation of an ICMP error message back to the source.</p> <p>The default IP MTU for a subinterface is taken from /system/mtu/default-ip-mtu. For the mgmt0 and mgmt0-standby subinterfaces the default is the associated interface MTU minus the Ethernet encapsulation overhead.</p> <p>The IP MTU is not configurable for subinterfaces of loopback interfaces.</p>
--------------------	--

The 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-H2, and 7220 IXR-H3 systems support a maximum IP MTU of 9398 bytes.

Each 7250 IXR IMM supports a maximum of 4 different IP MTU values. 7220 IXR systems do not have any limit on the maximum number of different IP MTU values.

Context	interface name <i>string</i> subinterface index <i>number</i> ip-mtu <i>number</i>
Tree	ip-mtu
Range	1280 to 9486
Units	bytes
Configurable	True
Platforms	Supported on all platforms

ipv4

Description	IPv4 configuration and state for the subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4
Tree	ipv4
Configurable	True
Platforms	Supported on all platforms

address [ip-prefix](#) *string*

Description	The list of IPv4 addresses assigned to the subinterface.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string</i>
Tree	address
Configurable	True
Platforms	Supported on all platforms
Max. Elements	64

[ip-prefix](#) *string*

Description	The IPv4 address and prefix length in CIDR notation Subnets on the same subinterface are allowed to overlap as long as the host bits are different. When a locally originated unicast packet is destined to a host covered by multiple subnets associated with a subinterface, the source address is chosen to be the numerically lowest IP address among all these subnets. For example, if the addresses 172.16.1.1/12, 172.16.1.2/12, and
--------------------	---

172.16.1.3/12 are configured on the same interface, 172.16.1.1 would be used as a local address when you issue a ping 172.16.1.5 command

Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string</i>
Configurable	True
Platforms	Supported on all platforms

anycast-gw *boolean*

Description	This designates the associated IPv4 address as an anycast-gateway IPv4 address of the subinterface. When this parameter is set to true:
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string</i> anycast-gw <i>boolean</i>
Tree	anycast-gw
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

origin *keyword*

Description	The origin of the IPv4 address.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string</i> origin <i>keyword</i>
Tree	origin
Options	<ul style="list-style-type: none"> • other • static • dhcp • link-layer • random
Configurable	False
Platforms	Supported on all platforms

primary

Description	One of the IPv4 prefixes assigned to the subinterface can be explicitly configured as primary by setting this leaf to true. This designates the associated IPv4 address as a primary IPv4 address of the subinterface. By
--------------------	---

default, the numerically lowest value IPv4 address is selected as the primary address.

The primary address is used as the source address for locally originated broadcast and multicast packets sent out the subinterface.

Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string primary</i>
Tree	primary
Configurable	True
Platforms	Supported on all platforms

status *keyword*

Description	The status of an IPv4 address
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string status keyword</i>
Tree	status
Options	<ul style="list-style-type: none"> • preferred • inaccessible • tentative • duplicate
Configurable	False
Platforms	Supported on all platforms

vrrp

Description	VRRP Configuration and State under a IPv4 context of a sub-interface
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string vrrp</i>
Tree	vrrp
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

vrrp-group [virtual-router-id](#) *number*

Description	VRRP Group Specific Configuration under IPv4 context
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string vrrp vrrp-group virtual-router-id number</i>

Tree	vrrp-group
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

virtual-router-id *number*

Description	VRRP Group Index
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 address <i>ip-prefix</i> <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i>
Range	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

accept-mode *boolean*

Description	Allows ssh,ping,traceroute to be accepted on the virtual IP address
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 address <i>ip-prefix</i> <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> accept-mode <i>boolean</i>
Tree	accept-mode
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Administrative state for the associated VRRP group instance
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 address <i>ip-prefix</i> <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

advertise-interval *number*

Description	The interval between VRRP messages in milliseconds
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> advertise-interval <i>number</i>
Tree	advertise-interval
Range	1000 to 40950
Default	1000
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

authentication

Description	Context to configure authentication keychain
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> authentication
Tree	authentication
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

keychain *reference*

Description	Reference to a keychain. The keychain type must be md5 or clear-text
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> authentication keychain <i>reference</i>
Tree	keychain
Reference	system authentication keychain name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

current-master (*ipv4-address* | *ipv6-address*)

Description	IP address of node currently acting as VRRP master
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> current-master (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	current-master

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

init-delay *number*

Description	Initialization delay in seconds before a router that just rebooted will preempt an existing master router. Only applicable if preempt is enabled
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 address <i>ip-prefix</i> <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> init-delay <i>number</i>
Tree	init-delay
Range	1 to 65535
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface-tracking

Description	Interface reference for interface tracking
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 address <i>ip-prefix</i> <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> interface-tracking
Tree	interface-tracking
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

track-interface [interface](#) *reference*

Description	Interface reference for interface tracking. VRRP Group can track multiple interfaces.
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 address <i>ip-prefix</i> <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> interface-tracking track-interface interface <i>reference</i>
Tree	track-interface
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface *reference*

Description	Interface to track
--------------------	--------------------

Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> interface-tracking track-interface interface <i>reference</i>
Reference	interface name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

priority-decrement *number*

Description	For each tracked interface that is down then the priority is decremented by the specific amount to a minimum value of 0
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> interface-tracking track-interface interface <i>reference</i> priority-decrement <i>number</i>
Tree	priority-decrement
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-transition *string*

Description	timestamp for last master router transition
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> last-transition <i>string</i>
Tree	last-transition
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

master-inherit-interval *boolean*

Description	Learn VRRP advertisement interval from master
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> master-inherit-interval <i>boolean</i>
Tree	master-inherit-interval
Default	false
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-down-reason *keyword*

Description	The first (and possibly only) reason for the vrrp-group being operationally down
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> oper-down-reason <i>keyword</i>
Tree	oper-down-reason
Options	<ul style="list-style-type: none"> • admin-down • sub-intf-down • virtual-ip-mismatch • authentication-config • other
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-interval *number*

Description	The operational advertisement interval between VRRP messages
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> oper-interval <i>number</i>
Tree	oper-interval
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state *keyword*

Description	VRRP Operational state
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading

- Component is downloading image into memory
- booting
Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

operational-priority *number*

Description	Reports the current VRRP operational priority.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 address ip-prefix <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> operational-priority <i>number</i>
Tree	operational-priority
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

owner *boolean*

Description	VRRP instance is owner or not
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 address <i>ip-prefix</i> <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> owner <i>boolean</i>
Tree	owner
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

preempt *boolean*

Description	Enable VRRP master pre-emption. If enabled, router with higher priority can assume master role. If disabled, router can only become master if no other master is present
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 address <i>ip-prefix</i> <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> preempt <i>boolean</i>
Tree	preempt
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

preempt-delay *number*

Description	Delay in seconds before a router preempts an existing master router, only applicable if preempt is enabled
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 address <i>ip-prefix</i> <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> preempt-delay <i>number</i>
Tree	preempt-delay
Range	1 to 65535

admin-state *keyword*

Description	Enable/disable IPv4 on the subinterface When set to enable, and even before an IPv4 address is configured, the subinterface starts to accept incoming packets with dest-ip 255.255.255.255, which is necessary to support dhcp-client functionality.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True

Platforms Supported on all platforms

allow-directed-broadcast *boolean*

Description When this is set to true the software is allowed to re-broadcast targeted broadcast IPv4 packets on this subinterface

Detailed handling of subnet broadcast is as follows:

If a targeted broadcast packet is received on subinterface X that has the matching subnet then it is delivered to the CPM and CPM will reply to an ICMP echo.

If a targeted broadcast packet is received on subinterface X but the matching subnet is associated with subinterface Y, and subinterface Y is configured with `allow-directed-broadcasts=false` then it is delivered to the CPM and CPM replies to an ICMP echo per above, but it does not re-broadcast the packet on subinterface Y.

If a targeted broadcast packet is received on subinterface X but the matching subnet is associated with subinterface Y, and subinterface Y is configured with `allow-directed-broadcasts=true` then it is delivered to the CPM and CPM replies to an ICMP echo per above, and CPM also re-broadcasts the packet on subinterface Y.

Configurable True

Platforms Supported on all platforms

neighbor ipv4-address *string*

Description	List of static and dynamic ARP cache entries that map an IPv4 address to a MAC address To configure a static ARP entry a value must be written into this leaf and the link-layer-address leaf.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 arp neighbor ipv4-address <i>string</i>
Tree	neighbor
Configurable	True
Platforms	Supported on all platforms

ipv4-address *string*

Description	IPv4 address resolved by the ARP entry To configure a static neighbor entry a value must be written into this leaf and the link-layer-address leaf.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 arp neighbor ipv4-address <i>string</i>
Configurable	True
Platforms	Supported on all platforms

datapath-programming

Description	Container for state related to the datapath programming of the ARP or neighbor entry
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 arp neighbor ipv4-address <i>string</i> datapath-programming
Tree	datapath-programming
Configurable	False
Platforms	Supported on all platforms

last-failed-complexes *string*

Description	List of forwarding complexes that reported a failure for the last operation. They appear in the format (slot-number,complex-number).
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 arp neighbor ipv4-address <i>string</i> datapath-programming last-failed-complexes <i>string</i>

Tree	last-failed-complexes
Configurable	False
Platforms	Supported on all platforms

status *keyword*

Description	The status of the ARP or neighbor entry with respect to datapath programming
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 arp neighbor ipv4-address <i>string</i> datapath-programming status <i>keyword</i>
Tree	status
Options	<ul style="list-style-type: none"> • success All linecard complexes have reported that the entry was programmed successfully • failed At least one linecard complex reported that the entry was not programmed successfully or else this entry was not even provided to the datapath for programming because the system limit on the number of IPv4 ARP and IPv6 neighbor entries was exceeded • pending The ARP or neighbor entry was provided to the datapath for programming but at least one linecard complex has not provided a status yet.
Configurable	False
Platforms	Supported on all platforms

expiration-time *string*

Description	The date and time when the dynamic ARP entry is set to expire
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 arp neighbor ipv4-address <i>string</i> expiration-time <i>string</i>
Tree	expiration-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

link-layer-address *string*

Description	The resolving MAC address of the ARP entry
--------------------	--

To configure a static ARP entry a value must be written into this leaf and the ipv4-address leaf.

Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 arp neighbor ipv4-address <i>string</i> link-layer-address <i>string</i>
Tree	link-layer-address
Configurable	True
Platforms	Supported on all platforms

origin *keyword*

Description	The origin of the ARP entry
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 arp neighbor ipv4-address <i>string</i> origin <i>keyword</i>
Tree	origin
Options	<ul style="list-style-type: none"> • other • static • dynamic • evpn
Configurable	False
Platforms	Supported on all platforms

proxy-arp *boolean*

Description	When set to true, the router replies with its own MAC to ARP Request destined to any host.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 arp proxy-arp <i>boolean</i>
Tree	proxy-arp
Default	false
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

timeout *number*

Description	Duration of time that dynamic ARP entries remain in the ARP cache before they expire
--------------------	--

A change to this value does not affect existing entries until they are refreshed.

Context	interface name <i>string</i> subinterface index number <i>number</i> ipv4 arp timeout <i>number</i>
Tree	timeout
Range	60 to 65535
Default	14400
Units	seconds
Configurable	True
Platforms	Supported on all platforms

virtual-ipv4-discovery

Description	Enable Virtual IPv4 discovery on the subinterface and configure associated parameters When enabled, the system will attempt to discover the configured virtual IPv4 addresses on the listed bridged subinterfaces.
Context	interface name <i>string</i> subinterface index number <i>number</i> ipv4 arp virtual-ipv4-discovery
Tree	virtual-ipv4-discovery
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

address [ipv4-address](#) *string*

Context	interface name <i>string</i> subinterface index number <i>number</i> ipv4 arp virtual-ipv4-discovery address ipv4-address <i>string</i>
Tree	address
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	640

ipv4-address *string*

Description	The virtual IPv4 address.
Context	interface name <i>string</i> subinterface index number <i>number</i> ipv4 arp virtual-ipv4-discovery address ipv4-address <i>string</i>
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

allowed-macs *string*

Description	List of allowed mac addresses for a discovered virtual IP address.
Context	interface name <i>string</i> subinterface index number <i>number</i> ipv4 arp virtual-ipv4-discovery address ipv4-address <i>string</i> allowed-macs <i>string</i>
Tree	allowed-macs
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	10

probe-bridged-subinterfaces *string*

Description	Configure the list of bridged sub-interfaces on the associated MAC-VRF to which the ARP probes are sent.
Context	interface name <i>string</i> subinterface index number <i>number</i> ipv4 arp virtual-ipv4-discovery address ipv4-address <i>string</i> probe-bridged-subinterfaces <i>string</i>
Tree	probe-bridged-subinterfaces
String Length	5 to 25
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	10

probe-interval *number*

Description	Configure the ARP probe interval at which the system sends an ARP request for the virtual IPv4 address. The default value of zero determines that the system sends an ARP Request for the virtual IPv4 only when the address is configured. The creation of the ARP entry for the virtual IPv4 address will in this case rely on the server sending a Gratuitous ARP for the virtual IPv4 address. When the value is set to a non-zero interval, the system sends a periodic ARP Request at the configured interval and irrespective of the ARP entry being already created.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 arp virtual-ipv4-discovery address <i>string</i> probe-interval <i>number</i>
Tree	probe-interval
Range	0 5 to 86400
Default	0
Units	seconds
Configurable	True

Tree	network-instance
Reference	network-instance name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

oper-down-reason *keyword*

Description	The reason causing the dhcp relay agent to go into operational down state
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 dhcp-relay oper-down-reason <i>keyword</i>
Tree	oper-down-reason
Options	<ul style="list-style-type: none"> • dhcp-relay-admin-down • sub-interface-oper-down • all-dhcp-servers-unreachable-within-net-instance • gi-address-not-matching-relay-sub-interface-ipv4-addresses • no-valid-ipv4-address-on-sub-interface
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	The operational state of the dhcp relay agent
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 dhcp-relay oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed • synchronizing Component is currently being synchronized

- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable

client-packets-discarded *number*

Description	Total discarded dhcp packets from dhcp client(s) towards DHCP server(s)
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 dhcp-relay statistics client-packets-discarded <i>number</i>
Tree	client-packets-discarded
Default	0
Configurable	False
Platforms	Supported on all platforms

client-packets-received *number*

Description	Total received dhcp packets from dhcp client(s) for DHCP Relay
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 dhcp-relay statistics client-packets-received <i>number</i>
Tree	client-packets-received

Default	0
Configurable	False
Platforms	Supported on all platforms

client-packets-relayed *number*

Description	Total relayed dhcp packets from dhcp client(s) towards DHCP server(s)
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 dhcp-relay statistics client-packets-relayed <i>number</i>
Tree	client-packets-relayed
Default	0
Configurable	False
Platforms	Supported on all platforms

server-packets-discarded *number*

Description	Total discarded dhcp packets from DHCP server(s) towards dhcp client(s)
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 dhcp-relay statistics server-packets-discarded <i>number</i>
Tree	server-packets-discarded
Default	0
Configurable	False
Platforms	Supported on all platforms

server-packets-received *number*

Description	Total received dhcp packets from DHCP server(s) for DHCP Relay
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 dhcp-relay statistics server-packets-received <i>number</i>
Tree	server-packets-received
Default	0
Configurable	False
Platforms	Supported on all platforms

server-packets-relayed *number*

Description	Total relayed dhcp packets from DHCP server(s) towards dhcp client(s)
--------------------	---

Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 dhcp-relay statistics server-packets-relayed <i>number</i>
Tree	server-packets-relayed
Default	0
Configurable	False
Platforms	Supported on all platforms

trace-options

Description	Container for tracing DHCPv4 relay operations on the subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 dhcp-relay trace-options
Tree	trace-options
Configurable	True
Platforms	Supported on all platforms

trace *keyword*

Description	List of events to trace
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 dhcp-relay trace-options trace <i>keyword</i>
Tree	trace
Options	<ul style="list-style-type: none"> • <code>messages</code> Capture all DHCPv4 messages sent and received by the subinterface
Configurable	True
Platforms	Supported on all platforms

use-gi-addr-as-src-ip-addr *boolean*

Description	When this is set, the configured giaddress will be used as source ip address.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 dhcp-relay use-gi-addr-as-src-ip-addr <i>boolean</i>
Tree	use-gi-addr-as-src-ip-addr
Default	false
Configurable	True
Platforms	Supported on all platforms

dhcp-server

Description	Enable the dhcp-server context
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 dhcp-server
Tree	dhcp-server
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	Enables/Disables DHCP server function on subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 dhcp-server admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

oper-state *keyword*

Description	Details if the dhcp server is operationally available
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 dhcp-server oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image

- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable

False

Platforms

Supported on all platforms

statistics**Description**

Container for subinterface statistics, including all IPv4, IPv6 and MPLS packets belonging to a routed subinterface, or including just one of these protocols on a routed subinterface, or for all frames on a bridged subinterface

Context

[interface name](#) *string* [subinterface index](#) *number* [ipv4 statistics](#)

Tree

[statistics](#)

Configurable

False

Platforms

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-discarded-packets *number*

Description	The total number of input packets that were dropped due to explicit programming The discards can be due to any of the following reasons In an MPLS context, this includes the total number of MPLS packets that were dropped because they were received with forwarded top label having an MPLS TTL value of 1
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics in-discarded-packets <i>number</i>
Tree	in-discarded-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-error-packets *number*

Description	The total number of input packets discarded due to errors, counting transit and terminating traffic In an IP context, the sum of the following RFC 4293 counters: ipIfStatsInHdrErrors ipIfStatsInNoRoutes ipIfStatsInAddrErrors ipIfStatsInUnknownProtos ipIfStatsInTruncatedPkts In an MPLS context, the total number of MPLS packets that were dropped because:
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics in-error-packets <i>number</i>
Tree	in-error-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-forwarded-octets *number*

Description	The number of octets in packets received on this subinterface counted in in-forwarded-packets
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics in-forwarded-octets <i>number</i>
Tree	in-forwarded-octets
Default	0

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-forwarded-packets *number*

Description	The number of packets received on this subinterface for which the router was not the final destination and for which the router attempted to find a route to forward them to that final destination. Note that non-terminating IPv4 packets with options and non-terminating IPv6 packets with extension headers are included in this count as are packets that trigger ICMP/ICMPv6 redirect messages.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics in-forwarded-packets <i>number</i>
Tree	in-forwarded-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-matched-ra-packets *number*

Description	The total number of IPv6 packets matched with applied RA-Guard policy
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics in-matched-ra-packets <i>number</i>
Tree	in-matched-ra-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-octets *number*

Description	The total number of octets received in input packets, counting transit and terminating traffic
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics in-octets <i>number</i>
Tree	in-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-packets *number*

Description	The total number of input packets received, counting transit and terminating traffic This equals the sum of: in-error-packets in-discarded-packets in-terminated-packets in-forwarded-packets
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics in-packets <i>number</i>
Tree	in-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-terminated-octets *number*

Description	The total number of octets in packets that were received on this subinterface and counted in in-terminated-packets
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics in-terminated-octets <i>number</i>
Tree	in-terminated-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-terminated-packets *number*

Description	The total number of input packets that were received on this subinterface that were extracted to the control plane The count includes packets eventually discarded by the CPM. Such discards include:
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics in-terminated-packets <i>number</i>
Tree	in-terminated-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-clear *string*

Description	Timestamp of the last time the subinterface counters were cleared
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics last-clear <i>string</i>
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-discarded-packets *number*

Description	The total number of packets, originating and transit, that should have been sent out this subinterface but were dropped This includes IP packets dropped by egress interface ACL drop action.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics out-discarded-packets <i>number</i>
Tree	out-discarded-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-error-packets *number*

Description	The number of packets, originating and transit, for which this router was successful in finding a path to their final destination through this subinterface but an error prevented their transmission On 7250 IXR systems this is incremented when the IPv4 packet size exceeds the IP MTU and fragmentation was not allowed or not supported. It is also incremented when the MPLS packet size exceeds the MPLS MTU of the subinterface.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics out-error-packets <i>number</i>
Tree	out-error-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-forwarded-octets *number*

Description	The number of octets in transit packets which the router attempted to forward out this subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics out-forwarded-octets <i>number</i>
Tree	out-forwarded-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-forwarded-packets *number*

Description	The number of transit packets which the router attempted to forward out this subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics out-forwarded-packets <i>number</i>
Tree	out-forwarded-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-octets *number*

Description	The total number of octets in packets delivered to the lower layers for transmission
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics out-octets <i>number</i>
Tree	out-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-originated-octets *number*

Description	The number of octets in packets which originated on the CPM and which the router attempted to forward out this subinterface
--------------------	---

Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics out-originated-octets <i>number</i>
Tree	out-originated-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-originated-packets *number*

Description	The number of packets which originated on the CPM and which the router attempted to forward out this subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics out-originated-packets <i>number</i>
Tree	out-originated-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-packets *number*

Description	The total number of packets that this router supplied to the lower layers for transmission This equals the sum of: out-error-packets out-discarded-packets out-originated-packets out-forwarded-packets
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 statistics out-packets <i>number</i>
Tree	out-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6

Description	IPv6 configuration and state for the subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6
Tree	ipv6
Configurable	True

Platforms Supported on all platforms

address ip-prefix string

Description The list of IPv6 addresses assigned to the subinterface.

Context [interface name string subinterface index number ipv6 address ip-prefix string](#)

Tree [address](#)

Configurable True

Platforms Supported on all platforms

Max. Elements 18

ip-prefix string

Description The IPv6 address and prefix-length in CIDR notation

Up to 16 global unicast IPv6 addresses can be assigned to each subinterface. Global unicast IPv6 address subnets on the same subinterface are allowed to overlap as long as the host bits are different. When a locally originated unicast packet is destined to a host covered by multiple subnets associated with a subinterface, the source address is chosen to be the numerically lowest IP address among all these subnets.

Context [interface name string subinterface index number ipv6 address ip-prefix string](#)

Configurable True

Platforms Supported on all platforms

anycast-gw boolean

Description This designates the associated IPv6 address as an anycast-gateway IPv6 address of the subinterface.

When this parameter is set to true:

Context [interface name string subinterface index number ipv6 address ip-prefix string anycast-gw boolean](#)

Tree [anycast-gw](#)

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

origin keyword

Description	The origin of the IPv6 address
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 address ip-prefix <i>string</i> origin keyword
Tree	origin
Options	<ul style="list-style-type: none"> • other • static • dhcp • link-layer • random
Configurable	False
Platforms	Supported on all platforms

primary

Description	<p>One of the IPv6 prefixes assigned to the subinterface can be explicitly configured as primary by setting this leaf to true. This designates the associated IPv6 address as a primary IPv6 address of the subinterface. By default, the numerically lowest value IPv6 address is selected as the primary address.</p> <p>The primary address is used as the source address for locally originated broadcast and multicast packets sent out the subinterface.</p>
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 address ip-prefix <i>string</i> primary
Tree	primary
Configurable	True
Platforms	Supported on all platforms

status keyword

Description	The status of an IPv6 address
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 address ip-prefix <i>string</i> status keyword
Tree	status
Options	<ul style="list-style-type: none"> • preferred • deprecated • invalid

- inaccessible
- unknown
- tentative
- duplicate
- optimistic

Configurable

False

Platforms

Supported on all platforms

type keyword**Description**

Specifies the explicit type of the IPv6 address being assigned to the subinterface

By default, addresses are assumed to be global unicast. Where a link-local address is to be explicitly configured, this leaf should be set to link-local.

Context

[interface name](#) *string* [subinterface index](#) *number* [ipv6 address ip-prefix](#) *string* [type keyword](#)

Tree[type](#)**Default**

global-unicast

Options

- global-unicast

The IPv6 address is a global unicast address type and must be in the format defined in RFC 4291 section 2.4.

- link-local-unicast

The IPv6 address is a Link-Local unicast address type and must be in the format defined in RFC 4291 section 2.4.

Configurable

oper-state *keyword*

Description	VRRP Operational state
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 address ip-prefix <i>string</i> vrrp vrrp-group virtual-router-id <i>number</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational

- empty
Component slot is empty
- downloading
Component is downloading image into memory
- booting
Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable

False

Max. Elements	1

learn-unsolicited *keyword*

Description	Sets if neighbors should be learned from unsolicited neighbor advertisements for global or link local addresses or both.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery learn-unsolicited keyword
Tree	learn-unsolicited
Default	none
Options	<ul style="list-style-type: none"> • none • global • link-local • both
Configurable	True
Platforms	Supported on all platforms

limit

Description	Container for the configuration of Neighbor-Discovery limit
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery limit

Tree	limit
Configurable	True
Platforms	Supported on all platforms

log-only *boolean*

Description	Generate only a log message when limit is reached When set to true, neighbor entries are still being learned after exceeding the max-entries limit.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery limit log-only <i>boolean</i>
Tree	log-only
Default	false
Configurable	True
Platforms	Supported on all platforms

max-entries *number*

Description	The maximum number of neighbor entries allowed on the subinterface If not configured, the amount of neighbor entries on the subinterface is only limited by the total amount of entries supported by the router.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery limit max-entries <i>number</i>
Tree	max-entries
Configurable	True
Platforms	Supported on all platforms

warning-threshold-pct *number*

Description	Threshold percentage of the configured maximum number of entries When exceeded, an event is triggered.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery limit warning-threshold-pct <i>number</i>
Tree	warning-threshold-pct
Range	1 to 100
Default	90
Units	percent

Configurable	True
Platforms	Supported on all platforms

neighbor ipv6-address *string*

Description	List of static and dynamic ND cache entries that map an IPv6 address to a MAC address
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery neighbor ipv6-address <i>string</i>
Tree	neighbor
Configurable	True
Platforms	Supported on all platforms

ipv6-address *string*

Description	IPv6 address resolved by the ND cache entry To configure a static neighbor entry a value must be written into this leaf and the link-layer-address leaf.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery neighbor ipv6-address <i>string</i>
Configurable	True
Platforms	Supported on all platforms

current-state *keyword*

Description	The Neighbor Unreachability Detection state
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery neighbor ipv6-address <i>string</i> current-state <i>keyword</i>
Tree	current-state
Options	<ul style="list-style-type: none"> • incomplete • reachable • stale • delay • probe
Configurable	False
Platforms	Supported on all platforms

datapath-programming

Description	Container for state related to the datapath programming of the ARP or neighbor entry
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery neighbor ipv6-address <i>string</i> datapath-programming
Tree	datapath-programming
Configurable	False
Platforms	Supported on all platforms

last-failed-complexes *string*

Description	List of forwarding complexes that reported a failure for the last operation. They appear in the format (slot-number,complex-number).
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery neighbor ipv6-address <i>string</i> datapath-programming last-failed-complexes <i>string</i>
Tree	last-failed-complexes
Configurable	False
Platforms	Supported on all platforms

status *keyword*

Description	The status of the ARP or neighbor entry with respect to datapath programming
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery neighbor ipv6-address <i>string</i> datapath-programming status <i>keyword</i>
Tree	status
Options	<ul style="list-style-type: none"> • success All linecard complexes have reported that the entry was programmed successfully • failed At least one linecard complex reported that the entry was not programmed successfully or else this entry was not even provided to the datapath for programming because the system limit on the number of IPv4 ARP and IPv6 neighbor entries was exceeded • pending The ARP or neighbor entry was provided to the datapath for programming but at least one linecard complex has not provided a status yet.

Configurable	False
Platforms	Supported on all platforms

is-router *boolean*

Description	Indicates that the neighbor node claims to be a router (R bit in the Neighbor Advertisement message)
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery neighbor ipv6-address <i>string</i> is-router <i>boolean</i>
Tree	is-router
Configurable	False
Platforms	Supported on all platforms

link-layer-address *string*

Description	The resolving MAC address of the ND cache entry To configure a static neighbor entry a value must be written into this leaf and the ipv6-address leaf.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery neighbor ipv6-address <i>string</i> link-layer-address <i>string</i>
Tree	link-layer-address
Configurable	True
Platforms	Supported on all platforms

next-state-time *string*

Description	The date and time when the neighbor state is expected to transition to the next state
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery neighbor ipv6-address <i>string</i> next-state-time <i>string</i>
Tree	next-state-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

origin *keyword*

Description	The origin of the neighbor cache entry.
--------------------	---

Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery neighbor ipv6-address <i>string</i> origin <i>keyword</i>
Tree	origin
Options	<ul style="list-style-type: none"> • other • static • dynamic • evpn
Configurable	False
Platforms	Supported on all platforms

proxy-nd *boolean*

Description	When set to true, the router replies with its own MAC to Neighbor Solicitations destined to any host.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery proxy-nd <i>boolean</i>
Tree	proxy-nd
Default	false
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reachable-time *number*

Description	The period of time that a dynamic IPv6 neighbor cache entry is considered reachable after a reachability confirmation event After this time expires the neighbor state moves to STALE.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery reachable-time <i>number</i>
Tree	reachable-time
Range	30 to 3600
Default	30
Units	seconds
Configurable	True
Platforms	Supported on all platforms

stale-time *number*

Description	The maximum time that a dynamic IPv6 neighbor cache entry can remain in the STALE state before it is removed This limit is reached only if no traffic is sent/queued towards the neighbor during the entire duration of the timer.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery stale-time <i>number</i>
Tree	stale-time
Range	60 to 65535
Default	14400
Units	seconds
Configurable	True
Platforms	Supported on all platforms

virtual-ipv6-discovery

Description	Enable Virtual IPv6 discovery on the subinterface and configure associated parameters When enabled, the system will attempt to discover the configured virtual IPv6 addresses on the listed bridged subinterfaces.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery virtual-ipv6-discovery
Tree	virtual-ipv6-discovery
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

address [ipv6-address](#) *string*

Description	The list of virtual IPv6 addresses to be discovered on the subinterface.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery virtual-ipv6-discovery address ipv6-address <i>string</i>
Tree	address
Configurable	True

Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	640

ipv6-address *string*

Description	The virtual IPv6 address.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery virtual-ipv6-discovery address ipv6-address <i>string</i>
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

allowed-macs *string*

Description	List of allowed mac addresses for a discovered virtual IP address.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery virtual-ipv6-discovery address ipv6-address <i>string</i> allowed-macs <i>string</i>
Tree	allowed-macs
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	10

probe-bridged-subinterfaces *string*

Description	Configure the list of bridged sub-interfaces on the associated MAC-VRF to which the NS probes are sent.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery virtual-ipv6-discovery address ipv6-address <i>string</i> probe-bridged-subinterfaces <i>string</i>
Tree	probe-bridged-subinterfaces
String Length	5 to 25
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

Max. Elements 10

probe-interval *number*

Description	Configure the probe interval at which the system sends a Neighbor Solicitation (NS) for the virtual IPv6 address. The default value of zero determines that the system sends a NS for the virtual IPv6 only when the address is configured. The creation of the Neighbor entry for the virtual IPv6 address will in this case rely on the server sending an unsolicited Neighbor Advertisement for the virtual IPv6 address. When the value is set to a non-zero interval, the system sends a periodic NS at the configured interval and irrespective of the Neighbor entry being already created.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery virtual-ipv6-discovery address ipv6-address <i>string</i> probe-interval <i>number</i>
Tree	probe-interval
Range	0 5 to 86400
Default	0
Units	seconds
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Statistics for the Virtual IP address
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery virtual-ipv6-discovery address ipv6-address <i>string</i> statistics
Tree	statistics
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-probe-packets *number*

Description	The number of probe packets transmitted for the Virtual IP discovery.
--------------------	---

Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery virtual-ipv6-discovery address ipv6-address <i>string</i> statistics out-probe-packets <i>number</i>
Tree	out-probe-packets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Global statistics for Virtual IP discovery
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery virtual-ipv6-discovery statistics
Tree	statistics
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-total-probe-packets *number*

Description	The number of total probe packets transmitted for Virtual discovery.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 neighbor-discovery virtual-ipv6-discovery statistics out-total-probe-packets <i>number</i>
Tree	out-total-probe-packets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

router-advertisement

Description	Container for configuring IPv6 router discovery options
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 router-advertisement
Tree	router-advertisement
Configurable	True

Platforms Supported on all platforms

debug *keyword*

Description List of events to debug

Context [interface name](#) *string* [subinterface index](#) *number* [ipv6 router-advertisement debug](#) *keyword*

Tree [debug](#)

Options

- messages

Capture all router-solicitation and router-advertisement messages sent and received by the subinterface

Configurable True

Platforms Supported on all platforms

router-role

Description IPv6 router advertisement options that apply when the role of the interface is a router interface.

Context [interface name](#) *string* [subinterface index](#) *number* [ipv6 router-advertisement router-role](#)

Tree [router-role](#)

Configurable True

Platforms Supported on all platforms

admin-state *keyword*

Description Administratively enable or disable the sending of router advertisements on the subinterface.

Context [interface name](#) *string* [subinterface index](#) *number* [ipv6 router-advertisement router-role admin-state](#) *keyword*

Tree [admin-state](#)

Default disable

Options

- enable
- disable

Configurable True

Platforms Supported on all platforms

current-hop-limit *number*

Description	The current hop limit to advertise in the router advertisement messages.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 router-advertisement router-role current-hop-limit <i>number</i>
Tree	current-hop-limit
Default	64
Configurable	True
Platforms	Supported on all platforms

ip-mtu *number*

Description	The IP MTU to advertise in the router advertisement messages and that hosts should associate with the link on which these messages are received. If no value is specified the option is not included.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 router-advertisement router-role ip-mtu <i>number</i>
Tree	ip-mtu
Range	1280 to 9486
Configurable	True
Platforms	Supported on all platforms

managed-configuration-flag *boolean*

Description	When this is set the M-bit is set in the router advertisement messages, indicating that hosts should use DHCPv6 to obtain IPv6 addresses.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 router-advertisement router-role managed-configuration-flag <i>boolean</i>
Tree	managed-configuration-flag
Default	false
Configurable	True
Platforms	Supported on all platforms

max-advertisement-interval *number*

Description	The maximum time between sending router advertisement messages to the all-nodes multicast address.
--------------------	--

Each subinterface has its own timer. Whenever the timer fires the message is sent and then the timer is reset to a uniformly distributed random value between min-advertisement-interval and max-advertisement-interval. The RA message can be sent before timer expiry in response to a RS message.

Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 router-advertisement router-role max-advertisement-interval <i>number</i>
Tree	max-advertisement-interval
Range	4 to 1800
Default	600
Units	seconds
Configurable	True
Platforms	Supported on all platforms

min-advertisement-interval *number*

Description	The minimum time between sending router advertisement messages to the all-nodes multicast address. Each subinterface has its own timer. Whenever the timer fires the message is sent and then the timer is reset to a uniformly distributed random value between min-advertisement-interval and max-advertisement-interval. The RA message can be sent before timer expiry in response to a RS message.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 router-advertisement router-role min-advertisement-interval <i>number</i>
Tree	min-advertisement-interval
Range	3 to 1350
Default	200
Units	seconds
Configurable	True
Platforms	Supported on all platforms

other-configuration-flag *boolean*

Description	When this is set the O-bit is set in the router advertisement messages, indicating that hosts should use DHCPv6 to obtain other configuration information (besides addresses).
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 router-advertisement router-role other-configuration-flag <i>boolean</i>
Tree	other-configuration-flag
Default	false

Configurable	True
Platforms	Supported on all platforms

prefix ipv6-prefix *string*

Description	The list of IPv6 prefixes to advertise in the router advertisement messages.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 router-advertisement router-role prefix ipv6-prefix <i>string</i>
Tree	prefix
Configurable	True
Platforms	Supported on all platforms
Max. Elements	16

ipv6-prefix *string*

Description	An IPv6 global unicast address prefix.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 router-advertisement router-role prefix ipv6-prefix <i>string</i>
Configurable	True
Platforms	Supported on all platforms

autonomous-flag *boolean*

Description	When this is set in the prefix information option hosts can use the prefix for stateless address autoconfiguration (SLAAC).
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 router-advertisement router-role prefix ipv6-prefix <i>string</i> autonomous-flag <i>boolean</i>
Tree	autonomous-flag
Default	true
Configurable	True
Platforms	Supported on all platforms

on-link-flag *boolean*

Description	When this is set in the prefix information option hosts can use the prefix for on-link determination.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 router-advertisement router-role prefix ipv6-prefix <i>string</i> on-link-flag <i>boolean</i>

Tree	on-link-flag
Default	true
Configurable	True
Platforms	Supported on all platforms

preferred-lifetime (*keyword* | *number*)

Description	The length of time in seconds (relative to the time the packet is sent) that addresses generated from the prefix via stateless address autoconfiguration remain preferred.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 router-advertisement router-role prefix ipv6-prefix <i>string</i> preferred-lifetime (<i>keyword</i> <i>number</i>)
Tree	preferred-lifetime
Default	604800
Units	seconds
Options	<ul style="list-style-type: none"> infinite
Configurable	True
Platforms	Supported on all platforms

valid-lifetime (*keyword* | *number*)

Description	The length of time in seconds (relative to the time the packet is sent) that the prefix is valid for the purpose of on-link determination.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 router-advertisement router-role prefix ipv6-prefix <i>string</i> valid-lifetime (<i>keyword</i> <i>number</i>)
Tree	valid-lifetime
Default	2592000
Units	seconds
Options	<ul style="list-style-type: none"> infinite
Configurable	True
Platforms	Supported on all platforms

reachable-time *number*

Description	The time, in milliseconds, that is advertised as the reachable time in RA messages and that hosts use for the ICMPv6 Neighbor Unreachability Detection algorithm. A value of zero means unspecified by this router.
--------------------	---

Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv6 router-advertisement router-role reachable-time <i>number</i>
Tree	reachable-time
Range	0 to 3600000
Default	0
Configurable	True
Platforms	Supported on all platforms

retransmit-time *number*

Description	The time, in milliseconds, that is advertised as the retrans-timer in RA messages and that hosts use for address resolution and the Neighbor Unreachability Detection algorithm. It represents the time between retransmitted NS messages. A value of zero means unspecified by this router.
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv6 router-advertisement router-role retransmit-time <i>number</i>
Tree	retransmit-time
Range	0 to 1800000
Default	0
Configurable	True
Platforms	Supported on all platforms

router-lifetime *number*

Description	The lifetime in seconds that is advertised as the router lifetime in RA messages. This indicates the time period for which the advertising router can be used as a default router/gateway. A value of 0 means the router should not be used as a default gateway.
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv6 router-advertisement router-role router-lifetime <i>number</i>
Tree	router-lifetime
Range	0 to 9000
Default	1800
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Container for subinterface statistics, including all IPv4, IPv6 and MPLS packets belonging to a routed subinterface, or including just one of these protocols on a routed subinterface, or for all frames on a bridged subinterface
Context	interface name <i>string</i> subinterface <i>index number</i> ipv6 statistics
Tree	statistics
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-discarded-packets *number*

Description	The total number of input packets that were dropped due to explicit programming The discards can be due to any of the following reasons In an MPLS context, this includes the total number of MPLS packets that were dropped because they were received with forwarded top label having an MPLS TTL value of 1
Context	interface name <i>string</i> subinterface <i>index number</i> ipv6 statistics in-discarded-packets <i>number</i>
Tree	in-discarded-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-error-packets *number*

Description	The total number of input packets discarded due to errors, counting transit and terminating traffic In an IP context, the sum of the following RFC 4293 counters: ipIfStatsInHdrErrors ipIfStatsInNoRoutes ipIfStatsInAddrErrors ipIfStatsInUnknownProtos ipIfStatsInTruncatedPkts In an MPLS context, the total number of MPLS packets that were dropped because:
Context	interface name <i>string</i> subinterface <i>index number</i> ipv6 statistics in-error-packets <i>number</i>
Tree	in-error-packets
Default	0

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-forwarded-octets *number*

Description	The number of octets in packets received on this subinterface counted in in-forwarded-packets
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 statistics in-forwarded-octets <i>number</i>
Tree	in-forwarded-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-forwarded-packets *number*

Description	The number of packets received on this subinterface for which the router was not the final destination and for which the router attempted to find a route to forward them to that final destination. Note that non-terminating IPv4 packets with options and non-terminating IPv6 packets with extension headers are included in this count as are packets that trigger ICMP/ICMPv6 redirect messages.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 statistics in-forwarded-packets <i>number</i>
Tree	in-forwarded-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-matched-ra-packets *number*

Description	The total number of IPv6 packets matched with applied RA-Guard policy
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 statistics in-matched-ra-packets <i>number</i>
Tree	in-matched-ra-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-octets *number*

Description	The total number of octets received in input packets, counting transit and terminating traffic
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 statistics in-octets number
Tree	in-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-packets *number*

Description	The total number of input packets received, counting transit and terminating traffic This equals the sum of: in-error-packets in-discarded-packets in-terminated-packets in-forwarded-packets
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 statistics in-packets number
Tree	in-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-terminated-octets *number*

Description	The total number of octets in packets that were received on this subinterface and counted in in-terminated-packets
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 statistics in-terminated-octets number
Tree	in-terminated-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-terminated-packets *number*

Description	The total number of input packets that were received on this subinterface that were extracted to the control plane The count includes packets eventually discarded by the CPM. Such discards include:
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 statistics in-terminated-packets <i>number</i>
Tree	in-terminated-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-clear *string*

Description	Timestamp of the last time the subinterface counters were cleared
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 statistics last-clear <i>string</i>
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-discarded-packets *number*

Description	The total number of packets, originating and transit, that should have been sent out this subinterface but were dropped This includes IP packets dropped by egress interface ACL drop action.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 statistics out-discarded-packets <i>number</i>
Tree	out-discarded-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-error-packets *number*

Description	The number of packets, originating and transit, for which this router was successful in finding a path to their final destination through this subinterface but an error prevented their transmission On 7250 IXR systems this is incremented when the IPv4 packet size exceeds the IP MTU and fragmentation was not allowed or not supported. It is also incremented when the MPLS packet size exceeds the MPLS MTU of the subinterface.
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 statistics out-error-packets <i>number</i>
Tree	out-error-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-forwarded-octets *number*

Description	The number of octets in transit packets which the router attempted to forward out this subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 statistics out-forwarded-octets <i>number</i>
Tree	out-forwarded-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-forwarded-packets *number*

Description	The number of transit packets which the router attempted to forward out this subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 statistics out-forwarded-packets <i>number</i>
Tree	out-forwarded-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-octets *number*

Description	The total number of octets in packets delivered to the lower layers for transmission
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 statistics out-octets <i>number</i>
Tree	out-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-originated-octets *number*

Description	The number of octets in packets which originated on the CPM and which the router attempted to forward out this subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 statistics out-originated-octets <i>number</i>
Tree	out-originated-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-originated-packets *number*

Description	The number of packets which originated on the CPM and which the router attempted to forward out this subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 statistics out-originated-packets <i>number</i>
Tree	out-originated-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-packets *number*

Description	The total number of packets that this router supplied to the lower layers for transmission
--------------------	--

This equals the sum of: out-error-packets out-discarded-packets out-originated-packets out-forwarded-packets

Context	interface name <i>string</i> subinterface index number ipv6 statistics out-packets number
Tree	out-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

I2-mtu *number*

Description	<p>Layer-2 MTU of the subinterface in bytes.</p> <p>Includes the Ethernet header and VLAN tags, and excludes 4-bytes FCS.</p> <p>L2 MTU specifies the maximum sized Ethernet frame that can be transmitted on the subinterface. If a frame exceeds this size it is discarded. If the I2-mtu of the subinterface exceeds the port-mtu of the associated interface, the subinterface will remain operationally down.</p> <p>The default value for a subinterface is taken from /system/mtu/default-I2-mtu. The L2 MTU is only configurable for bridged subinterfaces.</p> <p>The 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-H2, and 7220 IXR-H3 systems support a maximum L2 MTU of 9412 bytes and minimum of 1500 bytes.</p> <p>All other systems support a maximum L2 MTU of 9500 and minimum of 1500 bytes.</p>
Context	interface name <i>string</i> subinterface index number I2-mtu number
Tree	I2-mtu
Range	1450 to 9500
Units	bytes
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-change *string*

Description	The date and time of the most recent change to the subinterface state
Context	interface name <i>string</i> subinterface index number last-change string
Tree	last-change
String Length	20 to 32

Configurable	False
Platforms	Supported on all platforms

local-mirror-destination

Description	Container for options related to local mirror destination
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> local-mirror-destination
Tree	local-mirror-destination
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	The configurable state of the local mirror destination
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> local-mirror-destination admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state *keyword*

Description	The operational state of the local mirror destination
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> local-mirror-destination oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational

- empty
Component slot is empty
- downloading
Component is downloading image into memory
- booting
Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable

False

Platforms	Supported on all platforms

oper-down-reason *keyword*

Description	The first (and possibly only) reason for the subinterface being operationally down
Context	interface name <i>string</i> subinterface index number oper-down-reason <i>keyword</i>
Tree	oper-down-reason
Options	<ul style="list-style-type: none"> • admin-disabled • port-down • ip-mtu-resource-exceeded • mpls-mtu-resource-exceeded • ip-mtu-too-large • mpls-mtu-too-large • l2-mtu-too-large • no-ip-config • ip-mtu-larger-than-oper-mac-vrf-mtu • irb-mac-address-not-programmed • missing-xdp-state • no-underlay-egress-next-hop-resources • cfm-ccm-defect • no-irb-hardware-resources • other
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	The operational state of the subinterface
Context	interface name <i>string</i> subinterface index number oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up • down
Configurable	False
Platforms	Supported on all platforms

ra-guard

Description	Enable the ra-guard context
Context	interface name <i>string</i> subinterface index <i>number</i> ra-guard
Tree	ra-guard
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

policy reference

Description	Reference to RA Guard Policy to apply to the associated subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> ra-guard policy reference
Tree	policy
Reference	system ra-guard-policy name <i>string</i>
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

vlan-list [vlan-id](#) *number*

Description	List of VLAN IDs that the RA policy should be matched against
Context	interface name <i>string</i> subinterface index <i>number</i> ra-guard vlan-list vlan-id <i>number</i>
Tree	vlan-list
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

vlan-id *number*

Description	Enter the vlan-id context
Context	interface name <i>string</i> subinterface index <i>number</i> ra-guard vlan-list vlan-id <i>number</i>
Range	0 to 4095
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

statistics

Description Container for subinterface statistics, including all IPv4, IPv6 and MPLS packets belonging to a routed subinterface, or including just one of these protocols on a routed subinterface, or for all frames on a bridged subinterface

Context [interface name](#) *string* [subinterface](#) *index* *number* [statistics](#)

Tree [statistics](#)

Configurable False

Platforms Supported on all platforms

in-discarded-packets *number*

Description The total number of input packets that were dropped due to explicit programming

The discards can be due to any of the following reasons

In an MPLS context, this includes the total number of MPLS packets that were dropped because they were received with forwarded top label having an MPLS TTL value of 1

Context [interface name](#) *string* [subinterface](#) *index* *number* [statistics](#) [in-discarded-packets](#) *number*

Tree [in-discarded-packets](#)

Default 0

Configurable False

Platforms Supported on all platforms

in-error-packets *number*

Description The total number of input packets discarded due to errors, counting transit and terminating traffic

In an IP context, the sum of the following RFC 4293 counters: ipIfStatsInHdrErrors ipIfStatsInNoRoutes ipIfStatsInAddrErrors ipIfStatsInUnknownProtos ipIfStatsInTruncatedPkts

In an MPLS context, the total number of MPLS packets that were dropped because:

Context [interface name](#) *string* [subinterface](#) *index* *number* [statistics](#) [in-error-packets](#) *number*

Tree	in-error-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-forwarded-octets *number*

Description	The number of octets in packets received on this subinterface counted in in-forwarded-packets
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> statistics in-forwarded-octets <i>number</i>
Tree	in-forwarded-octets
Default	0
Configurable	False
Platforms	Supported on all platforms

in-forwarded-packets *number*

Description	The number of packets received on this subinterface for which the router was not the final destination and for which the router attempted to find a route to forward them to that final destination. Note that non-terminating IPv4 packets with options and non-terminating IPv6 packets with extension headers are included in this count as are packets that trigger ICMP/ICMPv6 redirect messages.
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> statistics in-forwarded-packets <i>number</i>
Tree	in-forwarded-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

in-matched-ra-packets *number*

Description	The total number of IPv6 packets matched with applied RA-Guard policy
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> statistics in-matched-ra-packets <i>number</i>
Tree	in-matched-ra-packets
Default	0

Configurable	False
Platforms	Supported on all platforms

in-octets *number*

Description	The total number of octets received in input packets, counting transit and terminating traffic
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> statistics in-octets <i>number</i>
Tree	in-octets
Default	0
Configurable	False
Platforms	Supported on all platforms

in-packets *number*

Description	The total number of input packets received, counting transit and terminating traffic This equals the sum of: in-error-packets in-discarded-packets in-terminated-packets in-forwarded-packets
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> statistics in-packets <i>number</i>
Tree	in-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

in-terminated-octets *number*

Description	The total number of octets in packets that were received on this subinterface and counted in in-terminated-packets
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> statistics in-terminated-octets <i>number</i>
Tree	in-terminated-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-terminated-packets *number*

Description	The total number of input packets that were received on this subinterface that were extracted to the control plane The count includes packets eventually discarded by the CPM. Such discards include:
Context	interface name <i>string</i> subinterface index <i>number</i> statistics in-terminated-packets <i>number</i>
Tree	in-terminated-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-clear *string*

Description	Timestamp of the last time the subinterface counters were cleared
Context	interface name <i>string</i> subinterface index <i>number</i> statistics last-clear <i>string</i>
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

out-discarded-packets *number*

Description	The total number of packets, originating and transit, that should have been sent out this subinterface but were dropped This includes IP packets dropped by egress interface ACL drop action.
Context	interface name <i>string</i> subinterface index <i>number</i> statistics out-discarded-packets <i>number</i>
Tree	out-discarded-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

out-error-packets *number*

Description	The number of packets, originating and transit, for which this router was successful in finding a path to their final destination through this subinterface but an error prevented their transmission On 7250 IXR systems this is incremented when the IPv4 packet size exceeds the IP MTU and fragmentation was not allowed or not supported. It is also incremented when the MPLS packet size exceeds the MPLS MTU of the subinterface.
Context	interface name <i>string</i> subinterface index <i>number</i> statistics out-error-packets <i>number</i>
Tree	out-error-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-forwarded-octets *number*

Description	The number of octets in transit packets which the router attempted to forward out this subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> statistics out-forwarded-octets <i>number</i>
Tree	out-forwarded-octets
Default	0
Configurable	False
Platforms	Supported on all platforms

out-forwarded-packets *number*

Description	The number of transit packets which the router attempted to forward out this subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> statistics out-forwarded-packets <i>number</i>
Tree	out-forwarded-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

out-octets *number*

Description	The total number of octets in packets delivered to the lower layers for transmission
Context	interface name <i>string</i> subinterface index <i>number</i> statistics out-octets <i>number</i>
Tree	out-octets
Default	0
Configurable	False
Platforms	Supported on all platforms

out-originated-octets *number*

Description	The number of octets in packets which originated on the CPM and which the router attempted to forward out this subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> statistics out-originated-octets <i>number</i>
Tree	out-originated-octets
Default	0
Configurable	False
Platforms	Supported on all platforms

out-originated-packets *number*

Description	The number of packets which originated on the CPM and which the router attempted to forward out this subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> statistics out-originated-packets <i>number</i>
Tree	out-originated-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

out-packets *number*

Description	The total number of packets that this router supplied to the lower layers for transmission This equals the sum of: out-error-packets out-discarded-packets out-originated-packets out-forwarded-packets
--------------------	--

Context	interface name <i>string</i> subinterface index <i>number</i> statistics out-packets number
Tree	out-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

type *identityref*

Description	Indicates the context in which the ethernet subinterface will be used
Context	interface name <i>string</i> subinterface index <i>number</i> type <i>identityref</i>
Tree	type
Options	<ul style="list-style-type: none"> • routed Indicates subinterface is used in a routed context • bridged Indicates subinterface is used in a bridged context • local-mirror-dest Indicates subinterface is used in a mirroring destination SPAN context
Configurable	True
Platforms	Supported on all platforms

unidirectional-link-delay

Description	Unidirectional link delay configuration and state related to subinterface
Context	interface name <i>string</i> subinterface index <i>number</i> unidirectional-link-delay
Tree	unidirectional-link-delay
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-reported-dynamic-delay (*number* | *keyword*)

Description	Indicates the last delay measurement reported to the routing engine
Context	interface name <i>string</i> subinterface index <i>number</i> unidirectional-link-delay last-reported-dynamic-delay (<i>number</i> <i>keyword</i>)
Tree	last-reported-dynamic-delay
Range	0 to 2147483647

Units	microseconds
Options	• none
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

static-delay (*number* | *keyword*)

Description	A statically configured unidirectional delay value that can be advertised as an interface attribute by an IGP
Context	interface name <i>string</i> subinterface index <i>number</i> unidirectional-link-delay static-delay (<i>number</i> <i>keyword</i>)
Tree	static-delay
Range	1 to 16777215
Default	none
Units	microseconds
Options	• none
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

vlan

Description	Parameters for VLAN definition under SRL interfaces.
Context	interface name <i>string</i> subinterface index <i>number</i> vlan
Tree	vlan
Configurable	True
Platforms	Supported on all platforms

encap

Description	VLAN match parameters for the associated subinterface.
Context	interface name <i>string</i> subinterface index <i>number</i> vlan encap
Tree	encap
Configurable	True
Platforms	Supported on all platforms

double-tagged

Description	When present, double-tagged frames with a specific, non-zero, outer and inner VLAN ID values are associated to the subinterface By default, the specific configured vlan-id tags are stripped at ingress and pushed on egress.
Context	interface name <i>string</i> subinterface index <i>number</i> vlan encap double-tagged
Tree	double-tagged
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

inner-vlan-id (*number* | *keyword*)

Description	Inner VLAN tag identifier for double-tagged packets
Context	interface name <i>string</i> subinterface index <i>number</i> vlan encap double-tagged inner-vlan-id (<i>number</i> <i>keyword</i>)
Tree	inner-vlan-id
Range	1 to 4094
Options	<ul style="list-style-type: none"> • any • optional
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

outer-vlan-id (*number* | *keyword*)

Description	Outer VLAN tag identifier for double-tagged packets
Context	interface name <i>string</i> subinterface index <i>number</i> vlan encap double-tagged outer-vlan-id (<i>number</i> <i>keyword</i>)
Tree	outer-vlan-id
Range	1 to 4094
Options	<ul style="list-style-type: none"> • any • optional
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

single-tagged

Description	When present, tagged frames with a specific, non-zero, outer VLAN ID are associated to the subinterface The outer VLAN-ID tag is considered service delimiting and it is by default stripped at ingress and restored/added on egress.
Context	interface name <i>string</i> subinterface index <i>number</i> vlan encap single-tagged
Tree	single-tagged
Configurable	True
Platforms	Supported on all platforms

vlan-id (*number* | *keyword*)

Description	VLAN identifier for single-tagged packets.
Context	interface name <i>string</i> subinterface index <i>number</i> vlan encap single-tagged vlan-id (<i>number</i> <i>keyword</i>)
Tree	vlan-id
Range	1 to 4094
Options	<ul style="list-style-type: none"> • optional • any
Configurable	True
Platforms	Supported on all platforms

single-tagged-range

Description	When present, tagged frames with a specific, non-zero, outer VLAN ID contained in a specified set of range are associated to the subinterface. The outer VLAN ID tag of the frame is not stripped off on ingress, and no tag is pushed on egress.
Context	interface name <i>string</i> subinterface index <i>number</i> vlan encap single-tagged-range
Tree	single-tagged-range
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

low-vlan-id *range-low-vlan-id number*

Description	Enter the low-vlan-id list instance
Context	interface name <i>string</i> subinterface <i>index number</i> vlan encap single-tagged-range low-vlan-id range-low-vlan-id <i>number</i>
Tree	low-vlan-id
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	8
Min. Elements	1

range-low-vlan-id *number*

Description	The low-value VLAN identifier in a range for single-tagged packets. The range is matched inclusively.
Context	interface name <i>string</i> subinterface <i>index number</i> vlan encap single-tagged-range low-vlan-id range-low-vlan-id <i>number</i>
Range	1 to 4094
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

high-vlan-id *number*

Description	The high-value VLAN identifier in a range for single-tagged packets. The range is matched inclusively.
Context	interface name <i>string</i> subinterface <i>index number</i> vlan encap single-tagged-range low-vlan-id range-low-vlan-id <i>number</i> high-vlan-id <i>number</i>
Tree	high-vlan-id
Range	1 to 4094
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

untagged

Description	When present, untagged frames and VLAN ID 0 priority tagged frames are associated to the subinterface when it belongs to an interface with vlan-tagging enabled.
Context	interface name <i>string</i> subinterface index <i>number</i> vlan encap untagged
Tree	untagged
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

tpid *identityref*

Description	Optionally set the tag protocol identifier field (TPID) that is accepted on the VLAN
Context	interface name <i>string</i> tpid identityref
Tree	tpid
Options	<ul style="list-style-type: none"> • TPID_0X8100 Default TPID value for 802.1q single-tagged VLANs. • TPID_0X88A8 TPID value for 802.1ad provider bridging, QinQ or stacked VLANs. • TPID_0X9100 Alternate TPID value. • TPID_0X9200 Alternate TPID value. • TPID_ANY A wildcard that matches any of the generally used TPID values for singly- or multiply-tagged VLANs. Equivalent to matching any of TPID_0X8100, TPID_0X88A8, TPID_0X9100 and TPID_0x9200. This value is only applicable where the TPID of a packet is being matched.
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-X3b

traffic-rate

Description	Container for traffic rate statistics
Context	interface name <i>string</i> traffic-rate
Tree	traffic-rate
Configurable	False
Platforms	Supported on all platforms

in-bps *number*

Description	The ingress bandwidth utilization of the port
Context	interface name <i>string</i> traffic-rate in-bps <i>number</i>
Tree	in-bps
Configurable	False
Platforms	Supported on all platforms

out-bps *number*

Description	The egress bandwidth utilization of the port
Context	interface name <i>string</i> traffic-rate out-bps <i>number</i>
Tree	out-bps
Configurable	False
Platforms	Supported on all platforms

transceiver

Description	Enter the transceiver context
Context	interface name <i>string</i> transceiver
Tree	transceiver
Configurable	True
Platforms	Supported on all platforms

channel [index](#) *number*

Description	List of physical channels supported by the transceiver associated with this port
--------------------	--

Context	interface name <i>string</i> transceiver channel index number
Tree	channel
Configurable	False
Platforms	Supported on all platforms

index number

Description	Index of the physical channel or lane
Context	interface name <i>string</i> transceiver channel index number
Range	1 to 10
Configurable	False
Platforms	Supported on all platforms

input-power

Description	Enter the input-power context
Context	interface name <i>string</i> transceiver channel index number input-power
Tree	input-power
Configurable	False
Platforms	Supported on all platforms

high-alarm-condition *boolean*

Description	High alarm threshold condition. Set to true whenever the Rx power is above the high-alarm-threshold and set to false whenever the Rx power is below the high-alarm-threshold
Context	interface name <i>string</i> transceiver channel index number input-power high-alarm-condition <i>boolean</i>
Tree	high-alarm-condition
Configurable	False
Platforms	Supported on all platforms

high-alarm-threshold *decimal-number*

Description	High alarm threshold. Read from the installed transceiver
--------------------	--

Context	interface name <i>string</i> transceiver channel index <i>number</i> input-power high-alarm-threshold <i>decimal-number</i>
Tree	high-alarm-threshold
Configurable	False
Platforms	Supported on all platforms

high-warning-condition *boolean*

Description	High warning threshold condition. Set to true whenever the Rx power is above the high-warning-threshold and set to false whenever the Rx power is below the high-warning-threshold
Context	interface name <i>string</i> transceiver channel index <i>number</i> input-power high-warning-condition <i>boolean</i>
Tree	high-warning-condition
Configurable	False
Platforms	Supported on all platforms

high-warning-threshold *decimal-number*

Description	High warning threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver channel index <i>number</i> input-power high-warning-threshold <i>decimal-number</i>
Tree	high-warning-threshold
Configurable	False
Platforms	Supported on all platforms

latest-value *decimal-number*

Description	The current value of the optical Rx power in dBm
Context	interface name <i>string</i> transceiver channel index <i>number</i> input-power latest-value <i>decimal-number</i>
Tree	latest-value
Configurable	False
Platforms	Supported on all platforms

low-alarm-condition *boolean*

Description	Low alarm threshold condition. Set to true whenever the Rx power is below the low-alarm-threshold and set to false whenever the Rx power is above the low-alarm-threshold
Context	interface name <i>string</i> transceiver channel index <i>number</i> input-power low-alarm-condition <i>boolean</i>
Tree	low-alarm-condition
Configurable	False
Platforms	Supported on all platforms

low-alarm-threshold *decimal-number*

Description	Low alarm threshold condition. Read from the installed transceiver
Context	interface name <i>string</i> transceiver channel index <i>number</i> input-power low-alarm-threshold <i>decimal-number</i>
Tree	low-alarm-threshold
Configurable	False
Platforms	Supported on all platforms

low-warning-condition *boolean*

Description	Low warning threshold condition. Set to true whenever the Rx power is below the low-warning-threshold and set to false whenever the Rx power is above the low-warning-threshold
Context	interface name <i>string</i> transceiver channel index <i>number</i> input-power low-warning-condition <i>boolean</i>
Tree	low-warning-condition
Configurable	False
Platforms	Supported on all platforms

low-warning-threshold *decimal-number*

Description	Low warning threshold. Read from the installed transceiver
--------------------	---

Context	interface name <i>string</i> transceiver channel index <i>number</i> input-power low-warning-threshold <i>decimal-number</i>
Tree	low-warning-threshold
Configurable	False
Platforms	Supported on all platforms

laser-bias-current

Description	Enter the laser-bias-current context
Context	interface name <i>string</i> transceiver channel index <i>number</i> laser-bias-current
Tree	laser-bias-current
Configurable	False
Platforms	Supported on all platforms

high-alarm-condition *boolean*

Description	High alarm threshold condition. Set to true whenever the laser bias current is above the high-alarm-threshold and set to false whenever the laser bias current is below the high-alarm-threshold
Context	interface name <i>string</i> transceiver channel index <i>number</i> laser-bias-current high-alarm-condition <i>boolean</i>
Tree	high-alarm-condition
Configurable	False
Platforms	Supported on all platforms

high-alarm-threshold *decimal-number*

Description	High alarm threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver channel index <i>number</i> laser-bias-current high-alarm-threshold <i>decimal-number</i>
Tree	high-alarm-threshold
Configurable	False
Platforms	Supported on all platforms

high-warning-condition *boolean*

Description	High warning threshold condition. Set to true whenever the laser bias current is above the high-warning-threshold and set to false whenever the laser bias current is below the high-warning-threshold
Context	interface name <i>string</i> transceiver channel index <i>number</i> laser-bias-current high-warning-condition <i>boolean</i>
Tree	high-warning-condition
Configurable	False
Platforms	Supported on all platforms

high-warning-threshold *decimal-number*

Description	High warning threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver channel index <i>number</i> laser-bias-current high-warning-threshold <i>decimal-number</i>
Tree	high-warning-threshold
Configurable	False
Platforms	Supported on all platforms

latest-value *decimal-number*

Description	The current value of the laser bias current in mA
Context	interface name <i>string</i> transceiver channel index <i>number</i> laser-bias-current latest-value <i>decimal-number</i>
Tree	latest-value
Configurable	False
Platforms	Supported on all platforms

low-alarm-condition *boolean*

Description	Low alarm threshold condition. Set to true whenever the laser bias current is below the low-alarm-threshold and set to false whenever the laser bias current is above the low-alarm-threshold
--------------------	--

Context	interface name <i>string</i> transceiver channel index <i>number</i> laser-bias-current low-alarm-condition <i>boolean</i>
Tree	low-alarm-condition
Configurable	False
Platforms	Supported on all platforms

low-alarm-threshold *decimal-number*

Description	Low alarm threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver channel index <i>number</i> laser-bias-current low-alarm-threshold <i>decimal-number</i>
Tree	low-alarm-threshold
Configurable	False
Platforms	Supported on all platforms

low-warning-condition *boolean*

Description	Low warning threshold condition. Set to true whenever the laser bias current is below the low-warning-threshold and set to false whenever the laser bias current is above the low-warning-threshold
Context	interface name <i>string</i> transceiver channel index <i>number</i> laser-bias-current low-warning-condition <i>boolean</i>
Tree	low-warning-condition
Configurable	False
Platforms	Supported on all platforms

low-warning-threshold *decimal-number*

Description	Low warning threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver channel index <i>number</i> laser-bias-current low-warning-threshold <i>decimal-number</i>
Tree	low-warning-threshold
Configurable	False
Platforms	Supported on all platforms

output-power

Description	Enter the output-power context
Context	interface name <i>string</i> transceiver channel index <i>number</i> output-power
Tree	output-power
Configurable	False
Platforms	Supported on all platforms

high-alarm-condition *boolean*

Description	High alarm threshold condition. Set to true whenever the Tx power is above the high-alarm-threshold and set to false whenever the Tx power is below the high-alarm-threshold
Context	interface name <i>string</i> transceiver channel index <i>number</i> output-power high-alarm-condition <i>boolean</i>
Tree	high-alarm-condition
Configurable	False
Platforms	Supported on all platforms

high-alarm-threshold *decimal-number*

Description	High alarm threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver channel index <i>number</i> output-power high-alarm-threshold <i>decimal-number</i>
Tree	high-alarm-threshold
Configurable	False
Platforms	Supported on all platforms

high-warning-condition *boolean*

Description	High warning threshold condition. Set to true whenever the Tx power is above the high-warning-threshold and set to false whenever the Tx power is below the high-warning-threshold
Context	interface name <i>string</i> transceiver channel index <i>number</i> output-power high-warning-condition <i>boolean</i>
Tree	high-warning-condition

Configurable	False
Platforms	Supported on all platforms

high-warning-threshold *decimal-number*

Description	High warning threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver channel index <i>number</i> output-power high-warning-threshold <i>decimal-number</i>
Tree	high-warning-threshold
Configurable	False
Platforms	Supported on all platforms

latest-value *decimal-number*

Description	The current value of the optical Tx power in dBm
Context	interface name <i>string</i> transceiver channel index <i>number</i> output-power latest-value <i>decimal-number</i>
Tree	latest-value
Configurable	False
Platforms	Supported on all platforms

low-alarm-condition *boolean*

Description	Low alarm threshold condition. Set to true whenever the Tx power is below the low-alarm-threshold and set to false whenever the Tx power is above the low-alarm-threshold
Context	interface name <i>string</i> transceiver channel index <i>number</i> output-power low-alarm-condition <i>boolean</i>
Tree	low-alarm-condition
Configurable	False
Platforms	Supported on all platforms

low-alarm-threshold *decimal-number*

Description	Low alarm threshold. Read from the installed transceiver
--------------------	---

Context	interface name <i>string</i> transceiver channel index <i>number</i> output-power low-alarm-threshold <i>decimal-number</i>
Tree	low-alarm-threshold
Configurable	False
Platforms	Supported on all platforms

low-warning-condition *boolean*

Description	Low warning threshold condition. Set to true whenever the Tx power is below the low-warning-threshold and set to false whenever the Tx power is above the low-warning-threshold
Context	interface name <i>string</i> transceiver channel index <i>number</i> output-power low-warning-condition <i>boolean</i>
Tree	low-warning-condition
Configurable	False
Platforms	Supported on all platforms

low-warning-threshold *decimal-number*

Description	Low warning threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver channel index <i>number</i> output-power low-warning-threshold <i>decimal-number</i>
Tree	low-warning-threshold
Configurable	False
Platforms	Supported on all platforms

wavelength *decimal-number*

Description	Wavelength of the transmitting laser in nanometers
Context	interface name <i>string</i> transceiver channel index <i>number</i> wavelength <i>decimal-number</i>
Tree	wavelength
Configurable	False
Platforms	Supported on all platforms

connector-type *keyword*

Description	Specifies the fiber connector type of the transceiver associated with the port
Context	interface name <i>string</i> transceiver connector-type <i>keyword</i>
Tree	connector-type
Options	<ul style="list-style-type: none"> • SC • FC-STYLE1-COPPER • FC-STYLE2-COPPER • BNC-OR-TNC • FC-COAX • FIBER-JACK • LC • MT-RJ • MU • SG • OPTICAL-PIGTAIL • MPO-1x12 • MPO-2x16 • HSSDC • COPPER-PIGTAIL • RJ45 • no-separable-connector • MXC-2x16 • CS-OPTICAL-CONNECTOR • SN-OPTICAL-CONNECTOR • MPO-2x12 • MPO-1x16 • unknown
Configurable	False
Platforms	Supported on all platforms

date-code *string*

Description	Transceiver date code.
Context	interface name <i>string</i> transceiver date-code <i>string</i>
Tree	date-code

String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

ddm-events *boolean*

Description	Controls the reporting of DDM events When set to true, log events related to the Digital Diagnostic Monitoring (DDM) capabilities of the transceiver are generated. When set to false, no DDM-related log events are generated for this port/transceiver. When read from state this leaf always returns false (even if the configured value is true) when the Ethernet port is a copper/RJ45 port.
Context	interface name <i>string</i> transceiver ddm-events <i>boolean</i>
Tree	ddm-events
Configurable	True
Platforms	Supported on all platforms

ethernet-pmd *string*

Description	Specifies the Ethernet compliance code of the transceiver associated with the port
Context	interface name <i>string</i> transceiver ethernet-pmd <i>string</i>
Tree	ethernet-pmd
Configurable	False
Platforms	Supported on all platforms

fault-condition *boolean*

Description	Indicates if a fault condition exists in the transceiver.
Context	interface name <i>string</i> transceiver fault-condition <i>boolean</i>
Tree	fault-condition
Configurable	False
Platforms	Supported on all platforms

form-factor *keyword*

Description	Specifies the transceiver form factor associated with the port
Context	interface name <i>string</i> transceiver form-factor <i>keyword</i>
Tree	form-factor
Options	<ul style="list-style-type: none"> • CFP2 • CFP2-ACO • CFP4 • QSFP • QSFPplus • QSFP28 • QSFPDD • SFP • SFPplus • Non-pluggable • Other • SFP28 • SFPDD • QSFP56 • SFP56
Configurable	False
Platforms	Supported on all platforms

forward-error-correction *keyword*

Description	<p>The forward error correction algorithm to use on the optical channel</p> <p>The same FEC algorithm must be used at both ends of a link.</p> <p>25G interfaces support disabled, base-r, rs-108 and rs-528; configuring other (incompatible) options will bring the port down. The FEC requirement for a 25G interface depends on the cable type. A CA-N DAC cable has a loss specification that requires no FEC. A CA-S DAC cable requires base-r FEC at a minimum. A CA-L DAC cable requires the stronger rs-108 Reed Solomon FEC.</p> <p>100G interfaces support disabled and rs-528; configuring other (incompatible) options will bring the port down.</p> <p>400G interfaces require rs-544; configuring other (unsupported) options will bring the port down.</p>
Context	interface name <i>string</i> transceiver forward-error-correction <i>keyword</i>

Tree	forward-error-correction
Options	<ul style="list-style-type: none"> • disabled • rs-528 • rs-544 • base-r BASE-R FEC algorithm for 25GbE interfaces (also known as fire-code) • rs-108 Reed Solomon FEC algorithm for 25GbE interfaces
Configurable	True
Platforms	Supported on all platforms

healthz

Description	<p>The health of the component</p> <p>The paramaters within this container indicate the status of the component beyond whether it is operationally up or down. When a signal is received that a component is in an unhealthy state the gNOI.Healthz service can be used to retrieve further diagnostic information relating to the component. The contents of this directory relate only to the specific component that it is associated with.</p>
Context	interface name <i>string</i> transceiver healthz
Tree	healthz
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-unhealthy *string*

Description	<p>Last unhealthy time</p> <p>The time at which the component was last observed to transition from the healthy state to any other state, represented as nanoseconds since the Unix epoch.</p>
Context	interface name <i>string</i> transceiver healthz last-unhealthy <i>string</i>
Tree	last-unhealthy
String Length	20 to 32
Configurable	False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

status *keyword*

Description Health status
The status of the component, indicating its current health.

Context [interface name](#) *string* [transceiver healthz status](#) *keyword*

Tree [status](#)

Options

- unspecified
Unspecified status
The component's health status has not yet been checked by the system.
- healthy
Healthy status
The component is in a healthy state, and is operating within the expected parameters.
- unhealthy
Unhealthy status
The component is in a unhealthy state, it is not performing the function expected of it.

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

unhealthy-count *number*

Description Unhealthy count
The number of times the component has transitioned from the healthy state to any other state.

Context [interface name](#) *string* [transceiver healthz unhealthy-count](#) *number*

Tree [unhealthy-count](#)

Default 0

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

input-power

Description	Enter the input-power context
Context	interface name <i>string</i> transceiver input-power
Tree	input-power
Configurable	False
Platforms	Supported on all platforms

high-alarm-condition *boolean*

Description	High alarm threshold condition. Set to true whenever the Rx power is above the high-alarm-threshold and set to false whenever the Rx power is below the high-alarm-threshold
Context	interface name <i>string</i> transceiver input-power high-alarm-condition <i>boolean</i>
Tree	high-alarm-condition
Configurable	False
Platforms	Supported on all platforms

high-alarm-threshold *decimal-number*

Description	High alarm threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver input-power high-alarm-threshold <i>decimal-number</i>
Tree	high-alarm-threshold
Configurable	False
Platforms	Supported on all platforms

high-warning-condition *boolean*

Description	High warning threshold condition. Set to true whenever the Rx power is above the high-warning-threshold and set to false whenever the Rx power is below the high-warning-threshold
Context	interface name <i>string</i> transceiver input-power high-warning-condition <i>boolean</i>
Tree	high-warning-condition

Configurable	False
Platforms	Supported on all platforms

high-warning-threshold *decimal-number*

Description	High warning threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver input-power high-warning-threshold <i>decimal-number</i>
Tree	high-warning-threshold
Configurable	False
Platforms	Supported on all platforms

latest-value *decimal-number*

Description	The current value of the optical Rx power in dBm
Context	interface name <i>string</i> transceiver input-power latest-value <i>decimal-number</i>
Tree	latest-value
Configurable	False
Platforms	Supported on all platforms

low-alarm-condition *boolean*

Description	Low alarm threshold condition. Set to true whenever the Rx power is below the low-alarm-threshold and set to false whenever the Rx power is above the low-alarm-threshold
Context	interface name <i>string</i> transceiver input-power low-alarm-condition <i>boolean</i>
Tree	low-alarm-condition
Configurable	False
Platforms	Supported on all platforms

low-alarm-threshold *decimal-number*

Description	Low alarm threshold condition. Read from the installed transceiver
--------------------	---

Context	interface name <i>string</i> transceiver input-power low-alarm-threshold <i>decimal-number</i>
Tree	low-alarm-threshold
Configurable	False
Platforms	Supported on all platforms

low-warning-condition *boolean*

Description	Low warning threshold condition. Set to true whenever the Rx power is below the low-warning-threshold and set to false whenever the Rx power is above the low-warning-threshold
Context	interface name <i>string</i> transceiver input-power low-warning-condition <i>boolean</i>
Tree	low-warning-condition
Configurable	False
Platforms	Supported on all platforms

low-warning-threshold *decimal-number*

Description	Low warning threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver input-power low-warning-threshold <i>decimal-number</i>
Tree	low-warning-threshold
Configurable	False
Platforms	Supported on all platforms

laser-bias-current

Description	Enter the laser-bias-current context
Context	interface name <i>string</i> transceiver laser-bias-current
Tree	laser-bias-current
Configurable	False
Platforms	Supported on all platforms

high-alarm-condition *boolean*

Description	High alarm threshold condition.
--------------------	---------------------------------

Set to true whenever the laser bias current is above the high-alarm-threshold and set to false whenever the laser bias current is below the high-alarm-threshold

Context	interface name <i>string</i> transceiver laser-bias-current high-alarm-condition <i>boolean</i>
Tree	high-alarm-condition
Configurable	False
Platforms	Supported on all platforms

high-alarm-threshold *decimal-number*

Description	High alarm threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver laser-bias-current high-alarm-threshold <i>decimal-number</i>
Tree	high-alarm-threshold
Configurable	False
Platforms	Supported on all platforms

high-warning-condition *boolean*

Description	High warning threshold condition. Set to true whenever the laser bias current is above the high-warning-threshold and set to false whenever the laser bias current is below the high-warning-threshold
Context	interface name <i>string</i> transceiver laser-bias-current high-warning-condition <i>boolean</i>
Tree	high-warning-condition
Configurable	False
Platforms	Supported on all platforms

high-warning-threshold *decimal-number*

Description	High warning threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver laser-bias-current high-warning-threshold <i>decimal-number</i>
Tree	high-warning-threshold

Configurable	False
Platforms	Supported on all platforms

latest-value *decimal-number*

Description	The current value of the laser bias current in mA
Context	interface name <i>string</i> transceiver laser-bias-current latest-value <i>decimal-number</i>
Tree	latest-value
Configurable	False
Platforms	Supported on all platforms

low-alarm-condition *boolean*

Description	Low alarm threshold condition. Set to true whenever the laser bias current is below the low-alarm-threshold and set to false whenever the laser bias current is above the low-alarm-threshold
Context	interface name <i>string</i> transceiver laser-bias-current low-alarm-condition <i>boolean</i>
Tree	low-alarm-condition
Configurable	False
Platforms	Supported on all platforms

low-alarm-threshold *decimal-number*

Description	Low alarm threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver laser-bias-current low-alarm-threshold <i>decimal-number</i>
Tree	low-alarm-threshold
Configurable	False
Platforms	Supported on all platforms

low-warning-condition *boolean*

Description	Low warning threshold condition.
--------------------	----------------------------------

Set to true whenever the laser bias current is below the low-warning-threshold and set to false whenever the laser bias current is above the low-warning-threshold

Context	interface name <i>string</i> transceiver laser-bias-current low-warning-condition <i>boolean</i>
Tree	low-warning-condition
Configurable	False
Platforms	Supported on all platforms

low-warning-threshold *decimal-number*

Description	Low warning threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver laser-bias-current low-warning-threshold <i>decimal-number</i>
Tree	low-warning-threshold
Configurable	False
Platforms	Supported on all platforms

oper-down-reason *keyword*

Description	The reason for the transceiver being operationally down
Context	interface name <i>string</i> transceiver oper-down-reason <i>keyword</i>
Tree	oper-down-reason
Options	<ul style="list-style-type: none"> • not-present • read-failure • checksum-failure • unknown-transceiver • tx-laser-disabled • unsupported-breakout • port-disabled • connector-transceiver-down • unsupported-operational-mode • no-tunable-config
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	The operational state of the transceiver The oper-state is always down when the Ethernet port is a copper/RJ45 port.
Context	interface name <i>string</i> transceiver oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up • down
Configurable	False
Platforms	Supported on all platforms

output-power

Description	Enter the output-power context
Context	interface name <i>string</i> transceiver output-power
Tree	output-power
Configurable	False
Platforms	Supported on all platforms

high-alarm-condition *boolean*

Description	High alarm threshold condition. Set to true whenever the Tx power is above the high-alarm-threshold and set to false whenever the Tx power is below the high-alarm-threshold
Context	interface name <i>string</i> transceiver output-power high-alarm-condition <i>boolean</i>
Tree	high-alarm-condition
Configurable	False
Platforms	Supported on all platforms

high-alarm-threshold *decimal-number*

Description	High alarm threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver output-power high-alarm-threshold <i>decimal-number</i>
Tree	high-alarm-threshold

Configurable	False
Platforms	Supported on all platforms

high-warning-condition *boolean*

Description	High warning threshold condition. Set to true whenever the Tx power is above the high-warning-threshold and set to false whenever the Tx power is below the high-warning-threshold
Context	interface name <i>string</i> transceiver output-power high-warning-condition <i>boolean</i>
Tree	high-warning-condition
Configurable	False
Platforms	Supported on all platforms

high-warning-threshold *decimal-number*

Description	High warning threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver output-power high-warning-threshold <i>decimal-number</i>
Tree	high-warning-threshold
Configurable	False
Platforms	Supported on all platforms

latest-value *decimal-number*

Description	The current value of the optical Tx power in dBm
Context	interface name <i>string</i> transceiver output-power latest-value <i>decimal-number</i>
Tree	latest-value
Configurable	False
Platforms	Supported on all platforms

low-alarm-condition *boolean*

Description	Low alarm threshold condition. Set to true whenever the Tx power is below the low-alarm-threshold and set to false whenever the Tx power is above the low-alarm-threshold
--------------------	--

Context	interface name <i>string</i> transceiver output-power low-alarm-condition <i>boolean</i>
Tree	low-alarm-condition
Configurable	False
Platforms	Supported on all platforms

low-alarm-threshold *decimal-number*

Description	Low alarm threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver output-power low-alarm-threshold <i>decimal-number</i>
Tree	low-alarm-threshold
Configurable	False
Platforms	Supported on all platforms

low-warning-condition *boolean*

Description	Low warning threshold condition. Set to true whenever the Tx power is below the low-warning-threshold and set to false whenever the Tx power is above the low-warning-threshold
Context	interface name <i>string</i> transceiver output-power low-warning-condition <i>boolean</i>
Tree	low-warning-condition
Configurable	False
Platforms	Supported on all platforms

low-warning-threshold *decimal-number*

Description	Low warning threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver output-power low-warning-threshold <i>decimal-number</i>
Tree	low-warning-threshold
Configurable	False
Platforms	Supported on all platforms

serial-number *string*

Description	Transceiver serial number This is the information as read from the EEPROM of the part.
Context	interface name <i>string</i> transceiver serial-number <i>string</i>
Tree	serial-number
Configurable	False
Platforms	Supported on all platforms

temperature

Description	Enter the temperature context
Context	interface name <i>string</i> transceiver temperature
Tree	temperature
Configurable	False
Platforms	Supported on all platforms

high-alarm-condition *boolean*

Description	High alarm threshold condition Set to true whenever the temperature is above the high-alarm-threshold and set to false whenever the temperature is below the high-alarm-threshold
Context	interface name <i>string</i> transceiver temperature high-alarm-condition <i>boolean</i>
Tree	high-alarm-condition
Configurable	False
Platforms	Supported on all platforms

high-alarm-threshold *number*

Description	High alarm threshold Read from the installed transceiver
Context	interface name <i>string</i> transceiver temperature high-alarm-threshold <i>number</i>
Tree	high-alarm-threshold
Configurable	False
Platforms	Supported on all platforms

high-warning-condition *boolean*

Description	High warning threshold condition. Set to true whenever the temperature is above the high-warning-threshold and set to false whenever the temperature is below the high-warning-threshold
Context	interface name <i>string</i> transceiver temperature high-warning-condition <i>boolean</i>
Tree	high-warning-condition
Configurable	False
Platforms	Supported on all platforms

high-warning-threshold *number*

Description	High warning threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver temperature high-warning-threshold <i>number</i>
Tree	high-warning-threshold
Configurable	False
Platforms	Supported on all platforms

latest-value *number*

Description	The current temperature of the transceiver module in degrees Celsius
Context	interface name <i>string</i> transceiver temperature latest-value <i>number</i>
Tree	latest-value
Configurable	False
Platforms	Supported on all platforms

low-alarm-condition *boolean*

Description	Low alarm threshold condition. Set to true whenever the temperature is below the low-alarm-threshold and set to false whenever the temperature is above the low-alarm-threshold
Context	interface name <i>string</i> transceiver temperature low-alarm-condition <i>boolean</i>
Tree	low-alarm-condition

Configurable	False
Platforms	Supported on all platforms

low-alarm-threshold *number*

Description	Low alarm threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver temperature low-alarm-threshold <i>number</i>
Tree	low-alarm-threshold
Configurable	False
Platforms	Supported on all platforms

low-warning-condition *boolean*

Description	Low warning threshold condition. Set to true whenever the temperature is below the low-warning-threshold and set to false whenever the temperature is above the low-warning-threshold
Context	interface name <i>string</i> transceiver temperature low-warning-condition <i>boolean</i>
Tree	low-warning-condition
Configurable	False
Platforms	Supported on all platforms

low-warning-threshold *number*

Description	Low warning threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver temperature low-warning-threshold <i>number</i>
Tree	low-warning-threshold
Configurable	False
Platforms	Supported on all platforms

maximum *number*

Description	Represents the highest temperature the transceiver has reached since it booted
--------------------	--

Context	interface name <i>string</i> transceiver temperature maximum <i>number</i>
Tree	maximum
Configurable	False
Platforms	Supported on all platforms

maximum-time *string*

Description	Indicates the time this transceiver reached the temperature referenced in maximum
Context	interface name <i>string</i> transceiver temperature maximum-time <i>string</i>
Tree	maximum-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

tx-laser *boolean*

Description	Enable (true) or disable (false) the transmit laser of the transceiver When read from state this leaf always returns false (even if the configured value is true) when the Ethernet port is a copper/RJ45 port. Default is true (for interfaces that support transceivers).
Context	interface name <i>string</i> transceiver tx-laser <i>boolean</i>
Tree	tx-laser
Configurable	True
Platforms	Supported on all platforms

vendor *string*

Description	Name of the transceiver vendor This is the information as read from the EEPROM of the part.
Context	interface name <i>string</i> transceiver vendor <i>string</i>
Tree	vendor
Configurable	False
Platforms	Supported on all platforms

vendor-lot-number *string*

Description	Vendor's lot number for the transceiver This is the information as read from the EEPROM of the part.
Context	interface name <i>string</i> transceiver vendor-lot-number <i>string</i>
Tree	vendor-lot-number
Configurable	False
Platforms	Supported on all platforms

vendor-part-number *string*

Description	Vendor's part number for the transceiver This is the information as read from the EEPROM of the part.
Context	interface name <i>string</i> transceiver vendor-part-number <i>string</i>
Tree	vendor-part-number
Configurable	False
Platforms	Supported on all platforms

vendor-revision *string*

Description	Vendor's revision number for the transceiver This is the information as read from the EEPROM of the part.
Context	interface name <i>string</i> transceiver vendor-revision <i>string</i>
Tree	vendor-revision
Configurable	False
Platforms	Supported on all platforms

voltage

Description	Enter the voltage context
Context	interface name <i>string</i> transceiver voltage
Tree	voltage
Configurable	False
Platforms	Supported on all platforms

high-alarm-condition *boolean*

Description	High alarm threshold condition. Set to true whenever the module voltage is above the high-alarm-threshold and set to false whenever the module voltage is below the high-alarm-threshold
Context	interface name <i>string</i> transceiver voltage high-alarm-condition <i>boolean</i>
Tree	high-alarm-condition
Configurable	False
Platforms	Supported on all platforms

high-alarm-threshold *decimal-number*

Description	High alarm threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver voltage high-alarm-threshold <i>decimal-number</i>
Tree	high-alarm-threshold
Configurable	False
Platforms	Supported on all platforms

high-warning-condition *boolean*

Description	High warning threshold condition. Set to true whenever the module voltage is above the high-warning-threshold and set to false whenever the module voltage is below the high-warning-threshold
Context	interface name <i>string</i> transceiver voltage high-warning-condition <i>boolean</i>
Tree	high-warning-condition
Configurable	False
Platforms	Supported on all platforms

high-warning-threshold *decimal-number*

Description	High warning threshold. Read from the installed transceiver
--------------------	--

Context	interface name <i>string</i> transceiver voltage high-warning-threshold <i>decimal-number</i>
Tree	high-warning-threshold
Configurable	False
Platforms	Supported on all platforms

latest-value *decimal-number*

Description	The current voltage reading of the transceiver module (in Volts)
Context	interface name <i>string</i> transceiver voltage latest-value <i>decimal-number</i>
Tree	latest-value
Configurable	False
Platforms	Supported on all platforms

low-alarm-condition *boolean*

Description	Low alarm threshold condition. Set to true whenever the module voltage is below the low-alarm-threshold and set to false whenever the module voltage is above the low-alarm-threshold
Context	interface name <i>string</i> transceiver voltage low-alarm-condition <i>boolean</i>
Tree	low-alarm-condition
Configurable	False
Platforms	Supported on all platforms

low-alarm-threshold *decimal-number*

Description	Low alarm threshold. Read from the installed transceiver
Context	interface name <i>string</i> transceiver voltage low-alarm-threshold <i>decimal-number</i>
Tree	low-alarm-threshold
Configurable	False
Platforms	Supported on all platforms

low-warning-condition *boolean*

Description	Low warning threshold condition. Set to true whenever the module voltage is below the low-warning-threshold and set to false whenever the module voltage is above the low-warning-threshold
Context	interface name <i>string</i> transceiver voltage low-warning-condition <i>boolean</i>
Tree	low-warning-condition
Configurable	False
Platforms	Supported on all platforms

low-warning-threshold *decimal-number*

Description	Low warning threshold . Read from the installed transceiver
Context	interface name <i>string</i> transceiver voltage low-warning-threshold <i>decimal-number</i>
Tree	low-warning-threshold
Configurable	False
Platforms	Supported on all platforms

wavelength *decimal-number*

Description	Wavelength of the transmitting laser in nanometers
Context	interface name <i>string</i> transceiver wavelength <i>decimal-number</i>
Tree	wavelength
Configurable	False
Platforms	Supported on all platforms

vlan-tagging *boolean*

Description	When set to true the interface is allowed to accept frames with one or more VLAN tags
Context	interface name <i>string</i> vlan-tagging <i>boolean</i>
Tree	vlan-tagging
Configurable	True

Platforms

Supported on all platforms

6.1 network-instance Descriptions

network-instance *name string*

Description	Network instances configured on the local system
Context	network-instance name string
Tree	network-instance
Configurable	True
Platforms	Supported on all platforms

name *string*

Description	A unique name identifying the network instance
Context	network-instance name string
String Length	1 to 247
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	This leaf contains the configured, desired state of the network instance.
Context	network-instance name string admin-state keyword
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

afts

Description	The abstract forwarding tables (AFTs) that are associated with the network instance
Context	network-instance name string afts
Tree	afts

Configurable	False
Platforms	Supported on all platforms

ipv4-unicast

Description	The abstract forwarding table for IPv4 unicast Entries within this table are uniquely keyed on the IPv4 unicast destination prefix which is matched by ingress packets. The data set represented by the IPv4 Unicast AFT is the set of entries from the IPv4 unicast RIB that have been selected for installation into the FIB of the device exporting the data structure.
Context	network-instance name <i>string</i> afts ipv4-unicast
Tree	ipv4-unicast
Configurable	False
Platforms	Supported on all platforms

ipv4-entry [prefix](#) *string*

Description	List of the IPv4 unicast entries within the abstract forwarding table
Context	network-instance name <i>string</i> afts ipv4-unicast ipv4-entry prefix <i>string</i>
Tree	ipv4-entry
Configurable	False
Platforms	Supported on all platforms

[prefix](#) *string*

Description	The IPv4 destination prefix that should be matched to utilise the AFT entry
Context	network-instance name <i>string</i> afts ipv4-unicast ipv4-entry prefix <i>string</i>
Configurable	False
Platforms	Supported on all platforms

entry-metadata *binary*

Description	Metadata persistently stored with the entry
Context	network-instance name <i>string</i> afts ipv4-unicast ipv4-entry prefix <i>string</i> entry-metadata <i>binary</i>
Tree	entry-metadata

String Length	0 to 8
Configurable	False
Platforms	Supported on all platforms

next-hop-group *reference*

Description	A reference to the next-hop-group that is used for the entry
Context	network-instance name <i>string</i> afts ipv4-unicast ipv4-entry prefix <i>string</i> next-hop-group <i>reference</i>
Tree	next-hop-group
Reference	network-instance name <i>string</i> route-table next-hop-group index <i>number</i>
Configurable	False
Platforms	Supported on all platforms

next-hop-group-network-instance *reference*

Description	The network instance associated with the next-hop-group If unspecified, the next hop group is in the local network instance.
Context	network-instance name <i>string</i> afts ipv4-unicast ipv4-entry prefix <i>string</i> next-hop-group-network-instance <i>reference</i>
Tree	next-hop-group-network-instance
Reference	network-instance name <i>string</i>
Configurable	False
Platforms	Supported on all platforms

origin-network-instance *reference*

Description	The network-instance from which the IPv4 entry was learned if it was leaked from another network-instance If unspecified, the IPv4 entry was not leaked
Context	network-instance name <i>string</i> afts ipv4-unicast ipv4-entry prefix <i>string</i> origin-network-instance <i>reference</i>
Tree	origin-network-instance
Reference	network-instance name <i>string</i>
Configurable	False
Platforms	Supported on all platforms

origin-protocol *identityref*

Description	The protocol that submitted the route for the IPv4 prefix
Context	network-instance name <i>string</i> afts ipv4-unicast ipv4-entry prefix <i>string</i> origin-protocol <i>identityref</i>
Tree	origin-protocol
Options	<ul style="list-style-type: none"> • aggregate Locally configured aggregate route • arp-nd IP route added by ARP ND. • bgp Border Gateway Protocol version 4 • bgp-label Border Gateway Protocol labeled routes • bgp-evpn BGP Ethernet VPN (EVPN) • bgp-ipvpn BGP IP VPN • dhcp IP (default) route added by DHCP. • gribi A gRIBI route • host A host route • isis IS-IS • local A directly connected route • linux IP route added by the linux kernel. • ndk1 Route added by an agent application using the NDK • ndk2 Route added by an agent application using the NDK • ospfv2 OSPFv2

Locally configured static route

Configurable	False
Platforms	Supported on all platforms

ipv6-unicast

Description	The abstract forwarding table for IPv6 unicast Entries within this table are uniquely keyed on the IPv6 unicast destination prefix which is matched by ingress packets. The data set represented by the IPv6 Unicast AFT is the set of entries from the IPv6 unicast RIB that have been selected for installation into the FIB of the device exporting the data structure.
Context	network-instance name <i>string</i> afts ipv6-unicast
Tree	ipv6-unicast
Configurable	False
Platforms	Supported on all platforms

ipv6-entry [prefix string](#)

Description	List of the IPv6 unicast entries within the abstract forwarding table
Context	network-instance name <i>string</i> afts ipv6-unicast ipv6-entry prefix string
Tree	ipv6-entry
Configurable	False
Platforms	Supported on all platforms

[prefix string](#)

Description	The IPv6 destination prefix that should be matched to utilise the AFT entry
Context	network-instance name <i>string</i> afts ipv6-unicast ipv6-entry prefix string
Configurable	False
Platforms	Supported on all platforms

entry-metadata *binary*

Description	Metadata persistently stored with the entry
Context	network-instance name <i>string</i> afts ipv6-unicast ipv6-entry prefix <i>string</i> entry-metadata <i>binary</i>
Tree	entry-metadata
String Length	0 to 8
Configurable	False
Platforms	Supported on all platforms

next-hop-group *reference*

Description	A reference to the next-hop-group that is used for the entry
Context	network-instance name <i>string</i> afts ipv6-unicast ipv6-entry prefix <i>string</i> next-hop-group <i>reference</i>
Tree	next-hop-group
Reference	network-instance name <i>string</i> route-table next-hop-group index <i>number</i>
Configurable	False
Platforms	Supported on all platforms

next-hop-group-network-instance *reference*

Description	The network instance associated with the next-hop-group If unspecified, the next hop group is in the local network instance.
Context	network-instance name <i>string</i> afts ipv6-unicast ipv6-entry prefix <i>string</i> next-hop-group-network-instance <i>reference</i>
Tree	next-hop-group-network-instance
Reference	network-instance name <i>string</i>
Configurable	False
Platforms	Supported on all platforms

origin-network-instance *reference*

Description	The network-instance from which the IPv6 entry was learned if it was leaked from another network-instance If unspecified, the IPv6 entry was not leaked
--------------------	--

Context	network-instance name <i>string</i> afts ipv6-unicast ipv6-entry prefix <i>string</i> origin-network-instance <i>reference</i>
Tree	origin-network-instance
Reference	network-instance name <i>string</i>
Configurable	False
Platforms	Supported on all platforms

origin-protocol *identityref*

Description	The protocol that submitted the route for the IPv6 prefix
Context	network-instance name <i>string</i> afts ipv6-unicast ipv6-entry prefix <i>string</i> origin-protocol <i>identityref</i>
Tree	origin-protocol
Options	<ul style="list-style-type: none"> • aggregate Locally configured aggregate route • arp-nd IP route added by ARP ND. • bgp Border Gateway Protocol version 4 • bgp-label Border Gateway Protocol labeled routes • bgp-evpn BGP Ethernet VPN (EVPN) • bgp-ipvpn BGP IP VPN • dhcp IP (default) route added by DHCP. • gribi A gRIBI route • host A host route • isis IS-IS • local A directly connected route • linux

IP route added by the linux kernel.

Description

Enter the prefix context

Context	network-instance name <i>string</i> aggregate-routes route prefix (<i>ipv4-prefix ipv6-prefix</i>)
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	Administratively enable or disable this aggregate route.
Context	network-instance name <i>string</i> aggregate-routes route prefix (<i>ipv4-prefix ipv6-prefix</i>) admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

aggregator

Description	Enter the aggregator context
Context	network-instance name <i>string</i> aggregate-routes route prefix (<i>ipv4-prefix ipv6-prefix</i>) aggregator
Tree	aggregator
Configurable	True
Platforms	Supported on all platforms

address *string*

Description	Specifies the aggregator's IP address.
Context	network-instance name <i>string</i> aggregate-routes route prefix (<i>ipv4-prefix ipv6-prefix</i>) aggregator address <i>string</i>
Tree	address
Configurable	True
Platforms	Supported on all platforms

as-number *number*

Description	Specifies the aggregator's ASN
Context	network-instance name <i>string</i> aggregate-routes route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) aggregator as-number <i>number</i>
Tree	as-number
Range	1 to 4294967295
Configurable	True
Platforms	Supported on all platforms

communities

Description	Enter the communities context
Context	network-instance name <i>string</i> aggregate-routes route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) communities
Tree	communities
Configurable	True
Platforms	Supported on all platforms

add (*bgp-std-community-type* | *identityref* | *bgp-large-community-type*)

Description	Enter the add context
Context	network-instance name <i>string</i> aggregate-routes route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) communities add (<i>bgp-std-community-type</i> <i>identityref</i> <i>bgp-large-community-type</i>)
Tree	add
Options	<ul style="list-style-type: none"> no-export Do not export NLRI received carrying this community outside the bounds of this autonomous system, or this confederation if the local autonomous system is a confederation member AS. This community has a value of 0xFFFFFFFF01. no-advertise All NLRI received carrying this community must not be advertised to other BGP peers. This community has a value of 0xFFFFFFFF02. no-export-subconfed All NLRI received carrying this community must not be advertised to external BGP peers - including over confederation sub-AS boundaries. This community has a value of 0xFFFFFFFF03.

Configurable	True
Platforms	Supported on all platforms
Max. Elements	12

generate-icmp *boolean*

Description	When set to true the router generates ICMP unreachable messages for packets matching the aggregate route (and not a more specific route).
Context	network-instance name <i>string</i> aggregate-routes route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) generate-icmp <i>boolean</i>
Tree	generate-icmp
Configurable	True
Platforms	Supported on all platforms

installed *boolean*

Description	If set to true, this indicates that the aggregate route was installed into the datapath. If this is false then there are 2 possible reasons: (a) the admin-state is disable (b) there is another IP route for the same prefix that has a superior preference
Context	network-instance name <i>string</i> aggregate-routes route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) installed <i>boolean</i>
Tree	installed
Configurable	False
Platforms	Supported on all platforms

summary-only *boolean*

Description	When set to true the router blocks the advertisement of all contributing routes of this aggregate route in dynamic protocols such as BGP.
Context	network-instance name <i>string</i> aggregate-routes route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) summary-only <i>boolean</i>
Tree	summary-only
Default	false
Configurable	True
Platforms	Supported on all platforms

bfd

Description	Container for BFD related network-instance related configuration
Context	network-instance name <i>string</i> bfd
Tree	bfd
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

seamless-bfd

Description	Container for BFD related network-instance related configuration
Context	network-instance name <i>string</i> bfd seamless-bfd
Tree	seamless-bfd
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

peer [address](#) (*ipv4-address* | *ipv6-address*)

Description	Enter the peer list instance
Context	network-instance name <i>string</i> bfd seamless-bfd peer address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	peer
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

address (*ipv4-address* | *ipv6-address*)

Description	An IPv4 or IPv6 address of the farend seamless-bfd discriminator binding
Context	network-instance name <i>string</i> bfd seamless-bfd peer address (<i>ipv4-address</i> <i>ipv6-address</i>)
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

discriminator *number*

Description	Static seamless-BFD discriminator for the farend binding
--------------------	--

Context	network-instance name <i>string</i> bfd seamless-bfd peer address (<i>ipv4-address</i> <i>ipv6-address</i>) discriminator <i>number</i>
Tree	discriminator
Range	524288 to 526335
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reflector name *string*

Description	List of seamless BFD reflector instances
Context	network-instance name <i>string</i> bfd seamless-bfd reflector name <i>string</i>
Tree	reflector
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	1

name *string*

Description	A name for the local seamless-bfd reflector agent
Context	network-instance name <i>string</i> bfd seamless-bfd reflector name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Used to administratively enable or disable seamless-bfd reflector
Context	network-instance name <i>string</i> bfd seamless-bfd reflector name <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

description *string*

Description	Description of the seamless-bfd reflector
Context	network-instance name <i>string</i> bfd seamless-bfd reflector name <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-discriminator *number*

Description	Seamless-BFD discriminator for the local reflector agent
Context	network-instance name <i>string</i> bfd seamless-bfd reflector name <i>string</i> local-discriminator <i>number</i>
Tree	local-discriminator
Range	524288 to 526335
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bgp-rib

Description	Container for BGP RIB state
Context	network-instance name <i>string</i> bgp-rib
Tree	bgp-rib
Configurable	False
Platforms	Supported on all platforms

afi-safi [afi-safi-name](#) *identityref*

Description	List of address families with routes in the BGP RIB

neighbor (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Description	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

path-id *number*

Description	Path identifier of the BGP route
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

attr-id *reference*

Description	Leaf reference to networkinstance/protocols/bgp/rib/ attr-sets/attr-set/index
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> attr-id <i>reference</i>
Tree	attr-id
Reference	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

best-route *boolean*

Description	Set to true if the route is the BGP best path for the prefix.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> best-route <i>boolean</i>
Tree	best-route

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

group-best *boolean*

Description	Set to true if the route is the best BGP route amongst all routes received from one particular neighbor AS
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number group-best <i>boolean</i>
Tree	group-best
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

internal-tags *string*

Description	Internal route tag written in the route/tunnel tables or BGP rib The internal-tag value is shown with the format 'type-string = hex-value-string'. For example:
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number internal-tags <i>string</i>
Tree	internal-tags
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	2

invalid-reason

Description	Enter the invalid-reason context
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number invalid-reason
Tree	invalid-reason
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

as-loop *boolean*

Description Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#) [as-loop](#) *boolean*

Tree [as-loop](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

cluster-loop *boolean*

Description Indicates true if the BGP route has a cluster-list loop.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#) [cluster-loop](#) *boolean*

Tree [cluster-loop](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

fib-programming-failed *boolean*

Description Indicates true if FIB programming failed

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#) [fib-programming-failed](#) *boolean*

Tree [fib-programming-failed](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-allocation-failed *boolean*

Description Indicates true if dynamic-label-block has no more free labels

Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number invalid-reason label-allocation-failed <i>boolean</i>
Tree	label-allocation-failed
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

next-hop-unresolved *boolean*

Description	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number invalid-reason next-hop-unresolved <i>boolean</i>
Tree	next-hop-unresolved
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rejected-route *boolean*

Description	Indicates true if the route was rejected by an import policy.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number invalid-reason rejected-route <i>boolean</i>
Tree	rejected-route
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-modified *string*

Description	Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-updatereceived. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number last-modified <i>string</i>

Tree	last-modified
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

neighbor-as *number*

Description	The last external AS to advertise the route into the local AS
Context	network-instance name string bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number neighbor-as <i>number</i>
Tree	neighbor-as
Range	1 to 4294967295
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

pending-delete *boolean*

Description	Set to true if the route is marked for deletion.
Context	network-instance name string bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number pending-delete <i>boolean</i>

received-mpls-label (*number* | *keyword*)

Description	Received MPLS label value
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-in-pre route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> received-mpls-label (<i>number</i> <i>keyword</i>)
Tree	received-mpls-label

Range	16 to 1048575
Options	<ul style="list-style-type: none"> • IPV4_EXPLICIT_NULL • IPV6_EXPLICIT_NULL • IMPLICIT_NULL
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	1

rib-out-post

Description	Container for the post-export-policy version of BGP routes advertised to BGP neighbors.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-out-post
Tree	rib-out-post
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

route prefix (*ipv4-prefix* | *ipv6-prefix*) neighbor (*ipv4-address-with-zone* | *ipv6-address-with-zone*) path-id number

Description	List of IPv4 routes.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-out-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id number
Tree	route
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	Enter the prefix context
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-out-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

neighbor (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Description	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-out-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

path-id *number*

Description	Path identifier of the BGP route
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-out-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

advertised-mpls-label (*number* | *keyword*)

Description	Advertised MPLS label value
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-out-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> advertised-mpls-label (<i>number</i> <i>keyword</i>)
Tree	advertised-mpls-label
Range	16 to 1048575
Options	<ul style="list-style-type: none"> • IPV4_EXPLICIT_NULL • IPV6_EXPLICIT_NULL • IMPLICIT_NULL
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	1

attr-id *reference*

Description	Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index .
--------------------	--

Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-labeled-unicast rib-in-out rib-out-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> attr-id <i>reference</i>
Tree	attr-id
Reference	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4-unicast

Description	Container for RIB state of IPv4-unicast routes
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast
Tree	ipv4-unicast
Configurable	False
Platforms	Supported on all platforms

local-rib

Description	Container for local RIB, containing all imported routes from other protocols plus the post-import-policy version of all IPv4 routes learned from all BGP neighbors
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast local-rib
Tree	local-rib
Configurable	False
Platforms	Supported on all platforms

[route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) *number*

Description	List of IPv4 routes in the local RIB
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id <i>number</i>
Tree	route
Configurable	False

Platforms Supported on all platforms

prefix (*ipv4-prefix* | *ipv6-prefix*)

Description Enter the prefix context

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [local-rib](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [origin-protocol](#) [identityref](#) [path-id](#) *number*

Configurable False

Platforms Supported on all platforms

neighbor (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Description If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [local-rib](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [origin-protocol](#) [identityref](#) [path-id](#) *number*

Configurable False

Platforms Supported on all platforms

origin-protocol *identityref*

Description If the route was imported from another protocol, this is the protocol name.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [local-rib](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [origin-protocol](#) [identityref](#) [path-id](#) *number*

Options

- **aggregate**
Locally configured aggregate route
- **arp-nd**
IP route added by ARP ND.
- **bgp**
Border Gateway Protocol version 4
- **bgp-label**
Border Gateway Protocol labeled routes
- **bgp-evpn**
BGP Ethernet VPN (EVPN)
- **bgp-ipvpn**

BGP IP VPN

- dhcp
IP (default) route added by DHCP.
- gribi
A gRIBI route
- host
A host route
- isis
IS-IS
- local
A directly connected route
- linux
IP route added by the linux kernel.
- ndk1
Route added by an agent application using the NDK
- ndk2
Route added by an agent application using the NDK
- ospfv2
OSPFv2
- ospfv3
OSPFv3
- static
Locally configured static route

Configurable

False

Platforms

Supported on all platforms

path-id number**Description**

Path identifier of the BGP route

Context

[network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [local-rib](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) *number*

Configurable

False

Platforms

Supported on all platforms

attr-id reference

Description	Leaf reference to networkinstance/bgp-rib/attr-sets/attr-set/index
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number attr-id reference
Tree	attr-id
Reference	network-instance name <i>string</i> bgp-rib attr-sets attr-set index number
Configurable	False
Platforms	Supported on all platforms

best-route boolean

Description	Set to true if the route is the BGP best path for the prefix.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number best-route boolean
Tree	best-route
Configurable	False
Platforms	Supported on all platforms

group-best boolean

Description	Set to true if the route is the best BGP route amongst all routes received from one particular neighbor AS
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number group-best boolean
Tree	group-best
Configurable	False
Platforms	Supported on all platforms

invalid-reason

Description	Enter the invalid-reason context
--------------------	----------------------------------

Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number invalid-reason
Tree	invalid-reason
Configurable	False
Platforms	Supported on all platforms

as-loop *boolean*

Description	Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number invalid-reason as-loop <i>boolean</i>
Tree	as-loop
Configurable	False
Platforms	Supported on all platforms

cluster-loop *boolean*

Description	Indicates true if the BGP route has a cluster-list loop.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number invalid-reason cluster-loop <i>boolean</i>
Tree	cluster-loop
Configurable	False
Platforms	Supported on all platforms

fib-programming-failed *boolean*

Description	Indicates true if FIB programming failed
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number invalid-reason fib-programming-failed <i>boolean</i>
Tree	fib-programming-failed
Configurable	False

Platforms Supported on all platforms

label-allocation-failed *boolean*

Description Indicates true if dynamic-label-block has no more free labels

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) *identityref* [ipv4-unicast](#) [local-rib](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [origin-protocol](#) *identityref* [path-id](#) *number* [invalid-reason](#) [label-allocation-failed](#) *boolean*

Tree [label-allocation-failed](#)

Configurable False

Platforms Supported on all platforms

next-hop-unresolved *boolean*

Description Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) *identityref* [ipv4-unicast](#) [local-rib](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [origin-protocol](#) *identityref* [path-id](#) *number* [invalid-reason](#) [next-hop-unresolved](#) *boolean*

Tree [next-hop-unresolved](#)

Configurable False

Platforms Supported on all platforms

rejected-route *boolean*

Description Indicates true if the route was rejected by an import policy.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) *identityref* [ipv4-unicast](#) [local-rib](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [origin-protocol](#) *identityref* [path-id](#) *number* [invalid-reason](#) [rejected-route](#) *boolean*

Tree [rejected-route](#)

Configurable False

Platforms Supported on all platforms

last-modified *string*

Description	Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-updatereceived. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number last-modified <i>string</i>
Tree	last-modified
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

neighbor-as *number*

Description	The last external AS to advertise the route into the local AS
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number neighbor-as <i>number</i>
Tree	neighbor-as
Range	1 to 4294967295
Configurable	False
Platforms	Supported on all platforms

pending-delete *boolean*

Description	Set to true if the route is marked for deletion.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number pending-delete <i>boolean</i>
Tree	pending-delete
Configurable	False
Platforms	Supported on all platforms

stale-route *boolean*

Description	Set to true if the route is stale due to BGP graceful restart.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number stale-route <i>boolean</i>
Tree	stale-route
Configurable	False
Platforms	Supported on all platforms

tie-break-reason *keyword*

Description	Indicates the reason why a BGP route is sorted behind the next best route. The BGP best path displays a value of 'none'.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number tie-break-reason <i>keyword</i>
Tree	tie-break-reason
Options	<ul style="list-style-type: none"> • unknown • none • origin • as-path-length • next-hop-cost • med • local-pref • aggregate • originator-id • cluster-list • extended-community • aigp • missing-attribute • rtm-pref • owner • eigrp-labeled • vpn-route • ebgp-route

- fib-install-disabled
- peer-router-id
- path-identifier

Configurable	False
Platforms	Supported on all platforms

used-route *boolean*

Description	Indicates true if the route is being used for forwarding.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number used-route <i>boolean</i>
Tree	used-route
Configurable	False
Platforms	Supported on all platforms

valid-route *boolean*

Description	Indicates true if the route is valid.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number valid-route <i>boolean</i>
Tree	valid-route
Configurable	False
Platforms	Supported on all platforms

rib-in-out

Description	Container for BGP routes learned and advertised to BGP neighbors
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name <i>identityref</i> ipv4-unicast rib-in-out
Tree	rib-in-out
Configurable	False
Platforms	Supported on all platforms

rib-in-post

Description	Container for the post-import-policy version of BGP routes learned from BGP neighbors
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name <i>identityref</i> ipv4-unicast rib-in-out rib-in-post
Tree	rib-in-post
Configurable	False
Platforms	Supported on all platforms

route prefix (*ipv4-prefix* | *ipv6-prefix*) **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **path-id** *number*

Description	List of IPv4 routes
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name <i>identityref</i> ipv4-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Tree	route
Configurable	False
Platforms	Supported on all platforms

prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	Enter the prefix context
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name <i>identityref</i> ipv4-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	Supported on all platforms

neighbor (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Description	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	Supported on all platforms

path-id *number*

Description	Path identifier of the BGP route
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	Supported on all platforms

attr-id *reference*

Description	Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> attr-id <i>reference</i>
Tree	attr-id
Reference	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i>
Configurable	False
Platforms	Supported on all platforms

best-route *boolean*

Description	Set to true if the route is the BGP best path for the prefix.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> best-route <i>boolean</i>
Tree	best-route

Configurable	False
Platforms	Supported on all platforms

group-best *boolean*

Description	Set to true if the route is the best BGP route amongst all routes received from one particular neighbor AS
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number group-best <i>boolean</i>
Tree	group-best
Configurable	False
Platforms	Supported on all platforms

internal-tags *string*

Description	Internal route tag written in the route/tunnel tables or BGP rib The internal-tag value is shown with the format 'type-string = hex-value-string'. For example:
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number internal-tags <i>string</i>
Tree	internal-tags
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	2

invalid-reason

Description	Enter the invalid-reason context
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number invalid-reason
Tree	invalid-reason
Configurable	False

Platforms Supported on all platforms

as-loop *boolean*

Description Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) *number* [invalid-reason](#) [as-loop](#) *boolean*

Tree [as-loop](#)

Configurable False

Platforms Supported on all platforms

cluster-loop *boolean*

Description Indicates true if the BGP route has a cluster-list loop.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv4-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) *number* [invalid-reason](#) [cluster-loop](#) *boolean*

Tree [cluster-loop](#)

Configurable False

Platforms Supported on all platforms

fib-programming-failed *boolean*

Description Indicates true if FIB programming failed

Tree [fib-programming-failed](#)

Configurable False

Platforms Supported on all platforms

label-allocation-failed *boolean*

Description Indicates true if dynamic-label-block has no more free labels

Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number invalid-reason label-allocation-failed <i>boolean</i>
Tree	label-allocation-failed
Configurable	False
Platforms	Supported on all platforms

next-hop-unresolved *boolean*

Description	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number invalid-reason next-hop-unresolved <i>boolean</i>
Tree	next-hop-unresolved
Configurable	False
Platforms	Supported on all platforms

rejected-route *boolean*

Description	Indicates true if the route was rejected by an import policy.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number invalid-reason rejected-route <i>boolean</i>
Tree	rejected-route
Configurable	False
Platforms	Supported on all platforms

last-modified *string*

Description	Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-updatereceived. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number last-modified <i>string</i>

Tree	last-modified
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

neighbor-as *number*

Description	The last external AS to advertise the route into the local AS
Context	network-instance name string bgp-rib afi-safi afi-safi-name identityref ipv4-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number neighbor-as number
Tree	neighbor-as
Range	1 to 4294967295
Configurable	False
Platforms	Supported on all platforms

pending-delete *boolean*

Description	Set to true if the route is marked for deletion.
Context	network-instance name string bgp-rib afi-safi afi-safi-name identityref ipv4-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number pending-delete boolean
Tree	pending-delete
Configurable	False
Platforms	Supported on all platforms

stale-route *boolean*

Description	Set to true if the route is stale due to BGP graceful restart.
Context	network-instance name string bgp-rib afi-safi afi-safi-name identityref ipv4-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number stale-route boolean
Tree	stale-route
Configurable	False
Platforms	Supported on all platforms

tie-break-reason *keyword*

Description	Indicates the reason why a BGP route is sorted behind the next best route. The BGP best path displays a value of 'none'.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv4-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> tie-break-reason <i>keyword</i>
Tree	tie-break-reason
Options	<ul style="list-style-type: none"> • unknown • none • origin • as-path-length • next-hop-cost • med • local-pref • aggregate • originator-id • cluster-list • extended-community • aigp • missing-attribute • rtm-pref • owner • eigrp-labeled • vpn-route • ebgp-route • peer-ip • local-peer • multi-path • vpn-rd • next-hop-type • invalid-route • origin-validation • long-live-gr-stale • default-originate • fib-install-disabled

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

used-route *boolean***Description**

Indicates true if the route is being used for forwarding.

Context

[network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [local-rib](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) [number](#) [used-route](#) *boolean*

Tree[used-route](#)**Configurable**

False

Platforms

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

valid-route *boolean***Description**

Indicates true if the route is valid.

Context

[network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [local-rib](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) [number](#) [valid-route](#) *boolean*

Tree[valid-route](#)**Configurable**

False

Platforms

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rib-in-out

Description	Container for BGP routes learned and advertised to BGP neighbors.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out
Tree	rib-in-out
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rib-in-post

Description	Container for the post-import-policy version of BGP routes learned from BGP neighbors.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post
Tree	rib-in-post
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

route prefix (*ipv4-prefix* | *ipv6-prefix*) **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **path-id** *number*

Description	List of label-IPv6 routes
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Tree	route
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	Enter the prefix context
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

neighbor (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Description	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

path-id *number*

Description	Path identifier of the BGP route
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

attr-id *reference*

Description	Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> attr-id <i>reference</i>
Tree	attr-id
Reference	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

best-route *boolean*

Description	Set to true if the route is the BGP best path for the prefix.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> best-route <i>boolean</i>
Tree	best-route

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

group-best *boolean*

Description	Set to true if the route is the best BGP route amongst all routes received from one particular neighbor AS
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number group-best <i>boolean</i>
Tree	group-best
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

internal-tags *string*

Description	Internal route tag written in the route/tunnel tables or BGP rib The internal-tag value is shown with the format 'type-string = hex-value-string'. For example:
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number internal-tags <i>string</i>
Tree	internal-tags
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	2

invalid-reason

Description	Enter the invalid-reason context
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number invalid-reason
Tree	invalid-reason
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

as-loop *boolean*

Description Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#) [as-loop](#) *boolean*

Tree [as-loop](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

cluster-loop *boolean*

Description Indicates true if the BGP route has a cluster-list loop.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#) [cluster-loop](#) *boolean*

Tree [cluster-loop](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

fib-programming-failed *boolean*

Description Indicates true if FIB programming failed

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-labeled-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#) [fib-programming-failed](#) *boolean*

Tree [fib-programming-failed](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-allocation-failed *boolean*

Description Indicates true if dynamic-label-block has no more free labels

Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> invalid-reason label-allocation-failed <i>boolean</i>
Tree	label-allocation-failed
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

next-hop-unresolved *boolean*

Description	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> invalid-reason next-hop-unresolved <i>boolean</i>
Tree	next-hop-unresolved
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rejected-route *boolean*

Description	Indicates true if the route was rejected by an import policy.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> invalid-reason rejected-route <i>boolean</i>
Tree	rejected-route
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-modified *string*

Description	Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-updatereceived. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> last-modified <i>string</i>

Tree	last-modified
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

neighbor-as *number*

Description	The last external AS to advertise the route into the local AS
Context	network-instance name string bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number neighbor-as <i>number</i>
Tree	neighbor-as
Range	1 to 4294967295
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

pending-delete *boolean*

Description	Set to true if the route is marked for deletion.
Context	network-instance name string bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number pending-delete <i>boolean</i>
Tree	pending-delete
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

received-mpls-label (*number* | *keyword*)

Description	Received MPLS label value
Context	network-instance name string bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number received-mpls-label (<i>number</i> <i>keyword</i>)
Tree	received-mpls-label
Range	16 to 1048575
Options	<ul style="list-style-type: none"> • IPV4_EXPLICIT_NULL

	<ul style="list-style-type: none"> IPV6_EXPLICIT_NULL IMPLICIT_NULL
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	1

stale-route *boolean*

Description	Set to true if the route is stale due to BGP graceful restart.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number stale-route <i>boolean</i>
Tree	stale-route
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

tie-break-reason *keyword*

Description	Indicates the reason why a BGP route is sorted behind the next best route. The BGP best path displays a value of 'none'.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number tie-break-reason <i>keyword</i>
Tree	tie-break-reason

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

path-id *number*

Description	Path identifier of the BGP route
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-out-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

advertised-mpls-label (*number* | *keyword*)

Description	Advertised MPLS label value
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-out-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> advertised-mpls-label (<i>number</i> <i>keyword</i>)
Tree	advertised-mpls-label
Range	16 to 1048575
Options	<ul style="list-style-type: none"> • IPV4_EXPLICIT_NULL • IPV6_EXPLICIT_NULL • IMPLICIT_NULL
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	1

attr-id *reference*

Description	Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index .
--------------------	--

Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-labeled-unicast rib-in-out rib-out-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> attr-id <i>reference</i>
Tree	attr-id
Reference	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-unicast

Description	Container for RIB state of IPv6-unicast routes.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast
Tree	ipv6-unicast
Configurable	False
Platforms	Supported on all platforms

local-rib

Description	Container for local RIB, containing all imported routes from other protocols plus the post-import-policy version of all IPv4 routes learned from all BGP neighbors.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast local-rib
Tree	local-rib
Configurable	False
Platforms	Supported on all platforms

route [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [origin-protocol](#) [identityref](#) [path-id](#) *number*

Description	List of IPv6 routes in the local RIB.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id <i>number</i>
Tree	route
Configurable	False

Platforms Supported on all platforms

prefix (*ipv4-prefix* | *ipv6-prefix*)

Description Enter the prefix context

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast](#) [local-rib](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [origin-protocol](#) [identityref](#) [path-id](#) *number*

Configurable False

Platforms Supported on all platforms

neighbor (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Description If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast](#) [local-rib](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [origin-protocol](#) [identityref](#) [path-id](#) *number*

Configurable False

Platforms Supported on all platforms

origin-protocol *identityref*

Description If the route was imported from another protocol, this is the protocol name.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast](#) [local-rib](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [origin-protocol](#) [identityref](#) [path-id](#) *number*

Options

- **aggregate**
Locally configured aggregate route
- **arp-nd**
IP route added by ARP ND.
- **bgp**
Border Gateway Protocol version 4
- **bgp-label**
Border Gateway Protocol labeled routes
- **bgp-evpn**
BGP Ethernet VPN (EVPN)
- **bgp-ipvpn**

BGP IP VPN

- dhcp
IP (default) route added by DHCP.
- gribi
A gRIBI route
- host
A host route
- isis
IS-IS
- local
A directly connected route
- linux
IP route added by the linux kernel.
- ndk1
Route added by an agent application using the NDK
- ndk2
Route added by an agent application using the NDK
- ospfv2
OSPFv2
- ospfv3
OSPFv3
- static
Locally configured static route

Configurable

False

Platforms

Supported on all platforms

path-id number**Description**

Path identifier of the BGP route

Configurable

False

Platforms

Supported on all platforms

attr-id reference

Description	Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number attr-id reference
Tree	attr-id
Reference	network-instance name <i>string</i> bgp-rib attr-sets attr-set index number
Configurable	False
Platforms	Supported on all platforms

best-route boolean

Description	Set to true if the route is the BGP best path for the prefix.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number best-route boolean
Tree	best-route
Configurable	False
Platforms	Supported on all platforms

group-best boolean

Description	Set to true if the route is the best BGP route amongst all routes received from one particular neighbor AS
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number group-best boolean
Tree	group-best
Configurable	False
Platforms	Supported on all platforms

invalid-reason

Description	Enter the invalid-reason context
--------------------	----------------------------------

Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number invalid-reason
Tree	invalid-reason
Configurable	False
Platforms	Supported on all platforms

as-loop *boolean*

Description	Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number invalid-reason as-loop <i>boolean</i>
Tree	as-loop
Configurable	False
Platforms	Supported on all platforms

cluster-loop *boolean*

Description	Indicates true if the BGP route has a cluster-list loop.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number invalid-reason cluster-loop <i>boolean</i>
Tree	cluster-loop
Configurable	False
Platforms	Supported on all platforms

fib-programming-failed *boolean*

Description	Indicates true if FIB programming failed
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number invalid-reason fib-programming-failed <i>boolean</i>
Tree	fib-programming-failed
Configurable	False

Platforms Supported on all platforms

label-allocation-failed *boolean*

Description Indicates true if dynamic-label-block has no more free labels

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) *identityref* [ipv6-unicast](#) [local-rib](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [origin-protocol](#) *identityref* [path-id](#) *number* [invalid-reason](#) [label-allocation-failed](#) *boolean*

Tree [label-allocation-failed](#)

Configurable False

Platforms Supported on all platforms

next-hop-unresolved *boolean*

Description Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) *identityref* [ipv6-unicast](#) [local-rib](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [origin-protocol](#) *identityref* [path-id](#) *number* [invalid-reason](#) [next-hop-unresolved](#) *boolean*

Tree [next-hop-unresolved](#)

Configurable False

Platforms Supported on all platforms

rejected-route *boolean*

Description Indicates true if the route was rejected by an import policy.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) *identityref* [ipv6-unicast](#) [local-rib](#) [route](#) [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [origin-protocol](#) *identityref* [path-id](#) *number* [invalid-reason](#) [rejected-route](#) *boolean*

Tree [rejected-route](#)

Configurable False

Platforms Supported on all platforms

last-modified *string*

Description	Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-updatereceived. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name <i>identityref</i> ipv6-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol <i>identityref</i> path-id <i>number</i> last-modified <i>string</i>
Tree	last-modified
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

neighbor-as *number*

Description	The last external AS to advertise the route into the local AS
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name <i>identityref</i> ipv6-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol <i>identityref</i> path-id <i>number</i> neighbor-as <i>number</i>
Tree	neighbor-as
Range	1 to 4294967295
Configurable	False
Platforms	Supported on all platforms

pending-delete *boolean*

Description	Set to true if the route is marked for deletion.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name <i>identityref</i> ipv6-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol <i>identityref</i> path-id <i>number</i> pending-delete <i>boolean</i>
Tree	pending-delete
Configurable	False
Platforms	Supported on all platforms

stale-route *boolean*

Description	Set to true if the route is stale due to BGP graceful restart.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id <i>number</i> stale-route <i>boolean</i>
Tree	stale-route
Configurable	False
Platforms	Supported on all platforms

tie-break-reason *keyword*

Description	Indicates the reason why a BGP route is sorted behind the next best route. The BGP best path displays a value of 'none'.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id <i>number</i> tie-break-reason <i>keyword</i>
Tree	tie-break-reason
Options	<ul style="list-style-type: none"> • unknown • none • origin • as-path-length • next-hop-cost • med • local-pref • aggregate • originator-id • cluster-list • extended-community • aigp • missing-attribute • rtm-pref • owner • eigrp-labeled • vpn-route • ebgp-route

- peer-ip

- path-identifier

Configurable	False
Platforms	Supported on all platforms

used-route *boolean*

Description	Indicates true if the route is being used for forwarding.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number used-route <i>boolean</i>
Tree	used-route
Configurable	False
Platforms	Supported on all platforms

valid-route *boolean*

Description	Indicates true if the route is valid.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast local-rib route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) origin-protocol identityref path-id number valid-route <i>boolean</i>
Tree	valid-route
Configurable	False
Platforms	Supported on all platforms

rib-in-out

Description	Container for BGP routes learned and advertised to BGP neighbors.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out
Tree	rib-in-out
Configurable	False
Platforms	Supported on all platforms

rib-in-post

Description	Container for the post-import-policy version of BGP routes learned from BGP neighbors.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post
Tree	rib-in-post
Configurable	False
Platforms	Supported on all platforms

route prefix (*ipv4-prefix* | *ipv6-prefix*) **neighbor** (*ipv4-address-with-zone* | *ipv6-address-with-zone*) **path-id** *number*

Description	List of IPv6 routes
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Tree	route
Configurable	False
Platforms	Supported on all platforms

prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	Enter the prefix context
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	Supported on all platforms

neighbor (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Description	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	Supported on all platforms

path-id *number*

Description	Path identifier of the BGP route
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	Supported on all platforms

attr-id *reference*

Description	Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> attr-id <i>reference</i>
Tree	attr-id
Reference	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i>
Configurable	False
Platforms	Supported on all platforms

best-route *boolean*

Description	Set to true if the route is the BGP best path for the prefix.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> best-route <i>boolean</i>
Tree	best-route

Configurable	False
Platforms	Supported on all platforms

group-best *boolean*

Description	Set to true if the route is the best BGP route amongst all routes received from one particular neighbor AS
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number group-best <i>boolean</i>
Tree	group-best
Configurable	False
Platforms	Supported on all platforms

internal-tags *string*

Description	Internal route tag written in the route/tunnel tables or BGP rib The internal-tag value is shown with the format 'type-string = hex-value-string'. For example:
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number internal-tags <i>string</i>
Tree	internal-tags
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	2

invalid-reason

Description	Enter the invalid-reason context
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number invalid-reason
Tree	invalid-reason
Configurable	False

Platforms Supported on all platforms

as-loop *boolean*

Description Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#) [as-loop](#) *boolean*

Tree [as-loop](#)

Configurable False

Platforms Supported on all platforms

cluster-loop *boolean*

Description Indicates true if the BGP route has a cluster-list loop.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#) [cluster-loop](#) *boolean*

Tree [cluster-loop](#)

Configurable False

Platforms Supported on all platforms

fib-programming-failed *boolean*

Description Indicates true if FIB programming failed

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [ipv6-unicast](#) [rib-in-out](#) [rib-in-post](#) [route](#) [prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#)) [neighbor](#) ([ipv4-address-with-zone](#) | [ipv6-address-with-zone](#)) [path-id](#) [number](#) [invalid-reason](#) [fib-programming-failed](#) *boolean*

Tree [fib-programming-failed](#)

Configurable False

Platforms Supported on all platforms

label-allocation-failed *boolean*

Description Indicates true if dynamic-label-block has no more free labels

Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number invalid-reason label-allocation-failed <i>boolean</i>
Tree	label-allocation-failed
Configurable	False
Platforms	Supported on all platforms

next-hop-unresolved *boolean*

Description	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number invalid-reason next-hop-unresolved <i>boolean</i>
Tree	next-hop-unresolved
Configurable	False
Platforms	Supported on all platforms

rejected-route *boolean*

Description	Indicates true if the route was rejected by an import policy.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number invalid-reason rejected-route <i>boolean</i>
Tree	rejected-route
Configurable	False
Platforms	Supported on all platforms

last-modified *string*

Description	Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as <code>last-updatereceived</code> . If an import policy later changed some attribute of the route <code>last-modified</code> would be updated to reflect the time of this change.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number last-modified <i>string</i>

Tree	last-modified
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

neighbor-as *number*

Description	The last external AS to advertise the route into the local AS
Context	network-instance name string bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number neighbor-as number
Tree	neighbor-as
Range	1 to 4294967295
Configurable	False
Platforms	Supported on all platforms

pending-delete *boolean*

Description	Set to true if the route is marked for deletion.
Context	network-instance name string bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number pending-delete boolean
Tree	pending-delete
Configurable	False
Platforms	Supported on all platforms

stale-route *boolean*

Description	Set to true if the route is stale due to BGP graceful restart.
Context	network-instance name string bgp-rib afi-safi afi-safi-name identityref ipv6-unicast rib-in-out rib-in-post route prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number stale-route boolean
Tree	stale-route
Configurable	False
Platforms	Supported on all platforms

tie-break-reason keyword

Description	Indicates the reason why a BGP route is sorted behind the next best route. The BGP best path displays a value of 'none'.

group-best *boolean*

Description	Set to true if the route is the best BGP route amongst all routes received from one particular neighbor AS
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref l3vpn-ipv4-unicast rib-in-out rib-in-post route route-distinguisher (<i>route-distinguisher-type-0</i> <i>route-distinguisher-type-1</i> <i>route-distinguisher-type-2</i> <i>route-distinguisher-type-2b</i>) prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> group-best <i>boolean</i>

Tree	group-best
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

imported-ip-vrf-network-instances *reference*

Description	List of IP-VRF network instances that imported the route
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref l3vpn-ipv4-unicast rib-in-out rib-in-post route route-distinguisher (route-distinguisher-type-0 route-distinguisher-type-1 route-distinguisher-type-2 route-distinguisher-type-2b) prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> imported-ip-vrf-network-instances <i>reference</i>
Tree	imported-ip-vrf-network-instances
Reference	network-instance name <i>string</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

internal-tags *string*

Description	Internal route tag written in the route/tunnel tables or BGP rib The internal-tag value is shown with the format 'type-string = hex-value-string'. For example:
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref l3vpn-ipv4-unicast rib-in-out rib-in-post route route-distinguisher (route-distinguisher-type-0 route-distinguisher-type-1 route-distinguisher-type-2 route-distinguisher-type-2b) prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> internal-tags <i>string</i>
Tree	internal-tags
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	2

invalid-reason

Description	Enter the invalid-reason context
--------------------	----------------------------------

Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref l3vpn-ipv4-unicast rib-in-out rib-in-post route route-distinguisher (route-distinguisher-type-0 route-distinguisher-type-1 route-distinguisher-type-2 route-distinguisher-type-2b) prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number invalid-reason
Tree	invalid-reason
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

as-loop *boolean*

Description	Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref l3vpn-ipv4-unicast rib-in-out rib-in-post route route-distinguisher (route-distinguisher-type-0 route-distinguisher-type-1 route-distinguisher-type-2 route-distinguisher-type-2b) prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number invalid-reason as-loop <i>boolean</i>
Tree	as-loop
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

cluster-loop *boolean*

Description	Indicates true if the BGP route has a cluster-list loop.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref l3vpn-ipv4-unicast rib-in-out rib-in-post route route-distinguisher (route-distinguisher-type-0 route-distinguisher-type-1 route-distinguisher-type-2 route-distinguisher-type-2b) prefix (ipv4-prefix ipv6-prefix) neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number invalid-reason cluster-loop <i>boolean</i>
Tree	cluster-loop
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

fib-programming-failed *boolean*

Description	Indicates true if FIB programming failed
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref l3vpn-ipv4-unicast rib-in-out rib-in-post route route-distinguisher (route-

distinguisher-type-0 | *route-distinguisher-type-1* | *route-distinguisher-type-2* | *route-distinguisher-type-2b*) *prefix* (*ipv4-prefix* | *ipv6-prefix*) *neighbor* (*ipv4-address-with-zone* | *ipv6-address-with-zone*) *path-id* *number* *invalid-reason* *fib-programming-failed* *boolean*

Tree	fib-programming-failed
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-allocation-failed *boolean*

Description	Indicates true if dynamic-label-block has no more free labels
Context	network-instance <i>name</i> <i>string</i> bgp-rib afi-safi afi-safi-name <i>identityref</i> l3vpn-ipv4-unicast rib-in-out rib-in-post route route-distinguisher (<i>route-distinguisher-type-0</i> <i>route-distinguisher-type-1</i> <i>route-distinguisher-type-2</i> <i>route-distinguisher-type-2b</i>) <i>prefix</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) <i>neighbor</i> (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) <i>path-id</i> <i>number</i> <i>invalid-reason</i> label-allocation-failed <i>boolean</i>
Tree	label-allocation-failed
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

next-hop-unresolved *boolean*

Description	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
Context	network-instance <i>name</i> <i>string</i> bgp-rib afi-safi afi-safi-name <i>identityref</i> l3vpn-ipv4-unicast rib-in-out rib-in-post route route-distinguisher (<i>route-distinguisher-type-0</i> <i>route-distinguisher-type-1</i> <i>route-distinguisher-type-2</i> <i>route-distinguisher-type-2b</i>) <i>prefix</i> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) <i>neighbor</i> (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) <i>path-id</i> <i>number</i> <i>invalid-reason</i> next-hop-unresolved <i>boolean</i>
Tree	next-hop-unresolved
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rejected-route *boolean*

Description	Indicates true if the route was rejected by an import policy.
Context	network-instance <i>name</i> <i>string</i> bgp-rib afi-safi afi-safi-name <i>identityref</i> l3vpn-ipv4-unicast rib-in-out rib-in-post route route-distinguisher (<i>route-distinguisher-type-0</i> <i>route-distinguisher-type-1</i> <i>route-distinguisher-type-2</i>

| *route-distinguisher-type-2b* [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number* [invalid-reason](#) [rejected-route](#) *boolean*

Tree	rejected-route
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-modified *string*

Description	Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-updatereceived. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.
Context	network-instance <i>name</i> <i>string</i> bgp-rib afi-safi afi-safi-name identityref l3vpn-ipv4-unicast rib-in-out rib-in-post route route-distinguisher (<i>route-distinguisher-type-0</i> <i>route-distinguisher-type-1</i> <i>route-distinguisher-type-2</i> <i>route-distinguisher-type-2b</i>) prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> last-modified <i>string</i>
Tree	last-modified
String Length	20 to 32

internal-tags *string*

Description	Internal route tag written in the route/tunnel tables or BGP rib The internal-tag value is shown with the format 'type-string = hex-value-string'. For example:
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-post route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> internal-tags <i>string</i>
Tree	internal-tags
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	2

invalid-reason

Description	Enter the invalid-reason context
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-post route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> invalid-reason
Tree	invalid-reason
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

as-loop *boolean*

Description	Indicates true if the BGP route has an AS path loop that exceeds the configured threshold.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-post route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> invalid-reason as-loop <i>boolean</i>
Tree	as-loop
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

cluster-loop *boolean*

Description	Indicates true if the BGP route has a cluster-list loop.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-post route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> invalid-reason cluster-loop <i>boolean</i>
Tree	cluster-loop
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

fib-programming-failed *boolean*

Description	Indicates true if FIB programming failed
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-post route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> invalid-reason fib-programming-failed <i>boolean</i>
Tree	fib-programming-failed
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-allocation-failed *boolean*

Description	Indicates true if dynamic-label-block has no more free labels
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-post route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> invalid-reason label-allocation-failed <i>boolean</i>
Tree	label-allocation-failed
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

next-hop-unresolved *boolean*

Description	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-post route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> invalid-reason next-hop-unresolved <i>boolean</i>
Tree	next-hop-unresolved
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rejected-route *boolean*

Description	Indicates true if the route was rejected by an import policy.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-post route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> invalid-reason rejected-route <i>boolean</i>
Tree	rejected-route
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-modified *string*

Description	Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-updatereceived. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-post route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> last-modified <i>string</i>
Tree	last-modified
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

neighbor-as *number*

Description	The last external AS to advertise the route into the local AS
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-post route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id <i>number</i> neighbor-as <i>number</i>
Tree	neighbor-as
Range	1 to 4294967295
Configurable	False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

pending-delete *boolean*

Description Set to true if the route is marked for deletion.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [route-target](#) [rib-in-out](#) [rib-in-post](#) [route](#) [origin-as](#) *number* [route-target-prefix](#) *string* [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number* [pending-delete](#) *boolean*

Tree [pending-delete](#)

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

stale-route *boolean*

Description Set to true if the route is stale due to BGP graceful restart.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [route-target](#) [rib-in-out](#) [rib-in-post](#) [route](#) [origin-as](#) *number* [route-target-prefix](#) *string* [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number* [stale-route](#) *boolean*

Tree [stale-route](#)

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

tie-break-reason *keyword*

Description Indicates the reason why a BGP route is sorted behind the next best route. The BGP best path displays a value of 'none'.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [route-target](#) [rib-in-out](#) [rib-in-post](#) [route](#) [origin-as](#) *number* [route-target-prefix](#) *string* [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number* [tie-break-reason](#) *keyword*

Tree [tie-break-reason](#)

used-route *boolean***Description**

Indicates true if the route is being used for forwarding.

Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-post route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> used-route <i>boolean</i>
Tree	used-route
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

valid-route *boolean*

Description	Indicates true if the route is valid.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-post route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> valid-route <i>boolean</i>
Tree	valid-route
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rib-in-pre

Description	Container for the pre-import-policy version of BGP routes learned from BGP neighbors.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-pre
Tree	rib-in-pre
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

route [origin-as](#) *number* [route-target-prefix](#) *string* [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

Description	List of RTC routes in the RIB-IN, before import-policy modification.
--------------------	--

Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-pre route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Tree	route
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

origin-as *number*

Description	The origin AS of the RTC route
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-pre route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Range	1 to 4294967295
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

route-target-prefix *string*

Description	The RTC prefix in the format number1:number2/length, where number1 is an IPv4 address or a 2-byte ASN or a 4-byte ASN, number2 is a 2-byte or 4-byte administrative value and length is a number of bits between 0 and 96 The default RTC prefix is represented by 0:0/0
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-pre route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

neighbor (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Description	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.
--------------------	--

Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-pre route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

path-id *number*

Description	Path identifier of the BGP route
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-pre route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i>
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

attr-id *reference*

Description	Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-in-pre route origin-as <i>number</i> route-target-prefix <i>string</i> neighbor (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) path-id <i>number</i> attr-id <i>reference</i>
Tree	attr-id
Reference	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i>
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rib-out-post

Description	Container for the post-export-policy version of BGP routes advertised to BGP neighbors.
Context	network-instance name <i>string</i> bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-out-post
Tree	rib-out-post

Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

route origin-as number route-target-prefix string neighbor (ipv4-address-with-zone | ipv6-address-with-zone) path-id number

Description	List of RTC routes in the RIB-OUT, after export-policy modification.
Context	network-instance name string bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-out-post route origin-as number route-target-prefix string neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number
Tree	route
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

origin-as number

Description	The origin AS of the RTC route
Context	network-instance name string bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-out-post route origin-as number route-target-prefix string neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number
Range	1 to 4294967295
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

route-target-prefix string

Description	The RTC prefix in the format number1:number2/length, where number1 is an IPv4 address or a 2-byte ASN or a 4-byte ASN, number2 is a 2-byte or 4-byte administrative value and length is a number of bits between 0 and 96 The default RTC prefix is represented by 0:0/0
Context	network-instance name string bgp-rib afi-safi afi-safi-name identityref route-target rib-in-out rib-out-post route origin-as number route-target-prefix string neighbor (ipv4-address-with-zone ipv6-address-with-zone) path-id number
Configurable	False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

neighbor (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Description If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [route-target](#) [rib-in-out](#) [rib-out-post](#) [route](#) [origin-as](#) *number* [route-target-prefix](#) *string* [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

path-id *number*

Description Path identifier of the BGP route

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [route-target](#) [rib-in-out](#) [rib-out-post](#) [route](#) [origin-as](#) *number* [route-target-prefix](#) *string* [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number*

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

attr-id *reference*

Description Leaf reference to networkinstance/protocols/bgp/rib/attr-sets/attr-set/index.

Context [network-instance name](#) *string* [bgp-rib](#) [afi-safi](#) [afi-safi-name](#) [identityref](#) [route-target](#) [rib-in-out](#) [rib-out-post](#) [route](#) [origin-as](#) *number* [route-target-prefix](#) *string* [neighbor](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [path-id](#) *number* [attr-id](#) *reference*

Tree [attr-id](#)

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

attr-sets

Description	Container for BGP RIB path attribute sets that can be shared by one or more BGP routes.
Context	network-instance name <i>string</i> bgp-rib attr-sets
Tree	attr-sets
Configurable	False
Platforms	Supported on all platforms

attr-set *index number*

Description	List of attribute sets.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index number
Tree	attr-set
Configurable	False
Platforms	Supported on all platforms

index number

Description	A unique internal identifier of the attribute set.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index number
Configurable	False
Platforms	Supported on all platforms

aggregator

Description	Enter the aggregator context
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index number aggregator
Tree	aggregator
Configurable	False
Platforms	Supported on all platforms

address (*ipv4-address* | *ipv6-address*)

Description	The router ID of the BGP router that formed the aggregate route.
--------------------	--

Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> aggregator address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	address
Configurable	False
Platforms	Supported on all platforms

as-number *number*

Description	The 2byte or 4byte AS number of the router that formed the aggregate route.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> aggregator as-number <i>number</i>
Tree	as-number
Range	1 to 4294967295
Configurable	False
Platforms	Supported on all platforms

aigp *number*

Description	The value in the AIGP path attribute.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> aigp <i>number</i>
Tree	aigp
Configurable	False
Platforms	Supported on all platforms

as-path

Description	A container for the AS path attribute of the attribute set.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> as-path
Tree	as-path
Configurable	False
Platforms	Supported on all platforms

segment [as-path-index](#) *number*

Description	A list of segments. Each segment has a type and a list of one or more AS numbers.
--------------------	---

Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> as-path segment as-path-index <i>number</i>
Tree	segment
Configurable	False
Platforms	Supported on all platforms

as-path-index *number*

Description	RIB attribute AS Path index
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> as-path segment as-path-index <i>number</i>
Configurable	False
Platforms	Supported on all platforms

member *number*

Description	A list of AS numbers (each of which is a 2byte-ASN or a 4byte-ASN) that belong to the AS path segment.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> as-path segment as-path-index <i>number</i> member <i>number</i>
Tree	member
Configurable	False
Platforms	Supported on all platforms

type *keyword*

Description	The type of the AS path segment.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> as-path segment as-path-index <i>number</i> type <i>keyword</i>
Tree	type
Options	<ul style="list-style-type: none"> • as-set • as-sequence • as-confed-sequence • as-confed-set
Configurable	False
Platforms	Supported on all platforms

atomic-aggregate *boolean*

Description	Set to true to indicate the presence of the ATOMIC_AGGREGATE path attribute.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> atomic-aggregate <i>boolean</i>
Tree	atomic-aggregate
Configurable	False
Platforms	Supported on all platforms

cluster-list (*ipv4-address* | *ipv6-address*)

Description	The list of IPv4 addresses in the CLUSTER_LIST path attribute.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> cluster-list (ipv4-address ipv6-address)
Tree	cluster-list
Configurable	False
Platforms	Supported on all platforms

communities

Description	Container for different types of BGP communities
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> communities
Tree	communities
Configurable	False
Platforms	Supported on all platforms

community *string*

Description	List of standard 4-byte community values in the COMMUNITY path attribute. Each should be displayed in the format <0..65355>:<0..65355>
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> communities community <i>string</i>
Tree	community
Configurable	False
Platforms	Supported on all platforms

ext-community *string*

Description	List of extended 8-byte community values in the COMMUNITY path attribute.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index number communities ext-community <i>string</i>
Tree	ext-community
Configurable	False
Platforms	Supported on all platforms

large-community *string*

Description	List of large 12-byte community values in the LARGE_COMMUNITY path attribute. Each should be displayed in the format: <0..4294967295>:<0..4294967295>:< 0..4294967295>
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index number communities large-community <i>string</i>
Tree	large-community
String Length	1 to 72
Configurable	False
Platforms	Supported on all platforms

local-pref *number*

Description	The value of the LOCAL_PREF path attribute.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index number local-pref <i>number</i>
Tree	local-pref
Configurable	False
Platforms	Supported on all platforms

med *number*

Description	The value of the MULTI_EXIT_DISC path attribute.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index number med <i>number</i>
Tree	med
Configurable	False

Platforms Supported on all platforms

next-hop (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Description The IPv4 or IPv6 address of the BGP next-hop (extracted from the NEXT_HOP field of the UPDATE or the MP_REACH_NLRI next-hop).

Context [network-instance name](#) *string* [bgp-rib attr-sets attr-set index](#) *number* [next-hop](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Tree [next-hop](#)

Configurable False

Platforms Supported on all platforms

origin *keyword*

Description The value of the ORIGIN path attribute

Context [network-instance name](#) *string* [bgp-rib attr-sets attr-set index](#) *number* [origin](#) *keyword*

Tree [origin](#)

Options

- [igp](#)
- [egp](#)
- [incomplete](#)

Configurable False

Platforms Supported on all platforms

originator-id (*ipv4-address* | *ipv6-address*)

Description The address in the ORIGINATOR_ID attribute added by a route reflector.

Context [network-instance name](#) *string* [bgp-rib attr-sets attr-set index](#) *number* [originator-id](#) (*ipv4-address* | *ipv6-address*)

Tree [originator-id](#)

Configurable False

Platforms Supported on all platforms

pmsi-tunnel

Description A container for the Provider Multicast Service Interface Tunnel Attribute (PTA) of the attribute set.

Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> pmsi-tunnel
Tree	pmsi-tunnel
Configurable	False
Platforms	Supported on all platforms

flags

Description	A container for the PTA Flags
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> pmsi-tunnel flags
Tree	flags
Configurable	False
Platforms	Supported on all platforms

assisted-replication-type *keyword*

Description	The value of the assisted-replication role type.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> pmsi-tunnel flags assisted-replication-type <i>keyword</i>
Tree	assisted-replication-type
Options	<ul style="list-style-type: none"> • none • ar-replicator • ar-leaf • reserved
Configurable	False
Platforms	Supported on all platforms

leaf-information-required *boolean*

Description	The value of the Leaf Information Required (LIR) flag.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> pmsi-tunnel flags leaf-information-required <i>boolean</i>
Tree	leaf-information-required
Configurable	False
Platforms	Supported on all platforms

pruned-flood-list

Description	A container for the optimized ingress replication pruned flood list flags.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> pmsi-tunnel flags pruned-flood-list
Tree	pruned-flood-list
Configurable	False
Platforms	Supported on all platforms

broadcast-multicast *keyword*

Description	The value of the broadcast-multicast flag.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> pmsi-tunnel flags pruned-flood-list broadcast-multicast <i>keyword</i>
Tree	broadcast-multicast
Options	<ul style="list-style-type: none"> • 0 • 1
Configurable	False
Platforms	Supported on all platforms

unknown-unicast *keyword*

Description	The value of the unknown-unicast flag.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> pmsi-tunnel flags pruned-flood-list unknown-unicast <i>keyword</i>
Tree	unknown-unicast
Options	<ul style="list-style-type: none"> • 0 • 1
Configurable	False
Platforms	Supported on all platforms

label

Description	The encoded label value and type in the PMSI Tunnel Attribute
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> pmsi-tunnel label

Tree	label
Configurable	False
Platforms	Supported on all platforms

value number

Description	The value of the label field If the route is an EVPN MPLS route, the mpls-label is read out of the 20-bit high order value. If the route is an EVPN VXLAN route, the vni is read out of the 24-bit value. If the route is an EVPN SRv6 route, this field is set to zero if no transposition is used and set to a non-zero value if transposition is used.
Context	network-instance name string bgp-rib attr-sets attr-set index number pmsi-tunnel label value number
Tree	value
Range	0 to 16777215
Configurable	False
Platforms	Supported on all platforms

value-type keyword

Description	Whether the encoded label value is an mpls-label, a vni or a transposed function or argument
Context	network-instance name string bgp-rib attr-sets attr-set index number pmsi-tunnel label value-type keyword
Tree	value-type
Options	<ul style="list-style-type: none"> • mpls-label • vni • transposed-srv6-function
Configurable	False
Platforms	Supported on all platforms

tunnel-endpoint (*ipv4-address* | *ipv6-address*)

Description	The value of the tunnel-endpoint in the PMSI Tunnel Attribute.
Context	network-instance name string bgp-rib attr-sets attr-set index number pmsi-tunnel tunnel-endpoint (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	tunnel-endpoint

Configurable	False
Platforms	Supported on all platforms

tunnel-type *keyword*

Description	The value of the tunnel-type in the PMSI Tunnel Attribute
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> pmsi-tunnel tunnel-type <i>keyword</i>
Tree	tunnel-type
Options	<ul style="list-style-type: none"> • no-tunnel • rsvp-te-p2mp • mldp-p2mp • pim-ssm • pim-sm • bidir-pim • ingress-replication • mldp-mp2mp • assisted-replication • bier
Configurable	False
Platforms	Supported on all platforms

prefix-sid

Description	This container defines Prefix SID TLVs
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> prefix-sid
Tree	prefix-sid
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

tlv *type identityref*

Description	List of TLV types in the LSDB for the specified LSP.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> prefix-sid tlv type <i>identityref</i>
Tree	tlv

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

type *identityref*

Description	The type of TLV being described. The type of TLV is expressed as a canonical name.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index number prefix-sid tlv type <i>identityref</i>
Options	<ul style="list-style-type: none"> label-index Label index TLV srgb-originator SRGB originator TLV srv6-l3-service SRv6 L3 service TLV srv6-l2-service SRv6 L2 service TLV
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-index

Description	This container defines TLV 1.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index number prefix-sid tlv type <i>identityref</i> label-index
Tree	label-index
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-index *number*

Description	32-bit value representing the index value in the SRGB space
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index number prefix-sid tlv type <i>identityref</i> label-index label-index number
Tree	label-index
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

srgb-originator

Description	This container defines TLV 3.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> prefix-sid tlv type <i>identityref</i> srgb-originator
Tree	srgb-originator
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

srgb *string*

Description	List of SRGB ranges, each in the format <first-label>:<number-of-labels>
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> prefix-sid tlv type <i>identityref</i> srgb-originator srgb <i>string</i>
Tree	srgb
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

unknown-attributes

Description	Container for unknown path attributes
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> unknown-attributes
Tree	unknown-attributes
Configurable	False
Platforms	Supported on all platforms

unknown-attribute [unknown-attr-index](#) *number*

Description	List of unknown BGP path attributes
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> unknown-attributes unknown-attribute unknown-attr-index <i>number</i>
Tree	unknown-attribute
Configurable	False
Platforms	Supported on all platforms

unknown-attr-index *number*

Description	RIB attribute unknown attribute index
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> unknown-attributes unknown-attribute unknown-attr-index <i>number</i>
Configurable	False
Platforms	Supported on all platforms

attr-len *number*

Description	The length of the unknown path attribute
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> unknown-attributes unknown-attribute unknown-attr-index <i>number</i> attr-len <i>number</i>
Tree	attr-len
Configurable	False
Platforms	Supported on all platforms

attr-type *number*

Description	The type code of the unknown path attribute
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> unknown-attributes unknown-attribute unknown-attr-index <i>number</i> attr-type <i>number</i>
Tree	attr-type
Configurable	False
Platforms	Supported on all platforms

extended *boolean*

Description	Set to true if the unknown path attribute has the extended length flag is set to 1.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> unknown-attributes unknown-attribute unknown-attr-index <i>number</i> extended <i>boolean</i>
Tree	extended
Configurable	False
Platforms	Supported on all platforms

optional *boolean*

Description	Set to true if the unknown path attribute has the optional flag is set to 1.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> unknown-attributes unknown-attribute unknown-attr-index <i>number</i> optional <i>boolean</i>
Tree	optional
Configurable	False
Platforms	Supported on all platforms

partial *boolean*

Description	Set to true if the unknown path attribute has the partial flag is set to 1.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> unknown-attributes unknown-attribute unknown-attr-index <i>number</i> partial <i>boolean</i>
Tree	partial
Configurable	False
Platforms	Supported on all platforms

transitive *boolean*

Description	Set to true if the unknown path attribute has the transitive flag is set to 1.
Context	network-instance name <i>string</i> bgp-rib attr-sets attr-set index <i>number</i> unknown-attributes unknown-attribute unknown-attr-index <i>number</i> transitive <i>boolean</i>
Tree	transitive
Configurable	False
Platforms	Supported on all platforms

bridge-table

Description	Enable the bridge-table context
Context	network-instance name <i>string</i> bridge-table
Tree	bridge-table
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

discard-unknown-dest-mac *boolean*

Description Discard frames with unknown destination mac addresses. The source mac address of the discarded frame is learned as long as the mac is valid, mac-learning is enabled, and the number of entries has not reached the maximum-entries threshold.

Context [network-instance name](#) *string* [bridge-table discard-unknown-dest-mac](#) *boolean*

Tree [discard-unknown-dest-mac](#)

Default false

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mac-duplication

Description Configuration of the MAC duplication procedures.

Context [network-instance name](#) *string* [bridge-table mac-duplication](#)

Tree [mac-duplication](#)

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

action *keyword*

Description Action to take on the subinterface (if action is use-net-instance-action) upon detecting at least one mac addresses as duplicate on the subinterface. In particular:

Context [network-instance name](#) *string* [bridge-table mac-duplication action](#) *keyword*

Tree [action](#)

Default stop-learning

Options

- stop-learning
- blackhole

- oper-down

Configurable

True

Platforms

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword***Description**

Configurable state of the mac-duplication procedures. Mac-duplication detects duplicate macs that move between different subinterfaces or a subinterface and an evpn destination.

Context[network-instance name](#) *string* [bridge-table](#) [mac-duplication](#) [admin-state](#) *keyword***Tree**[admin-state](#)**Default**

enable

Options

- enable
- disable

Configurable

num-moves *number*

Description	Number of moves a mac is allowed within the monitoring-window, before it is declared duplicate.
Context	network-instance name <i>string</i> bridge-table mac-duplication num-moves <i>number</i>
Tree	num-moves
Range	3 to 10
Default	5
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mac-learning

Description	Enter the mac-learning context
Context	network-instance name <i>string</i> bridge-table mac-learning
Tree	mac-learning
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Configurable state of the learning procedures for dynamic mac addresses. If disabled, the existing macs in the bridge-table will be kept (and refreshed if new frames arrive for them) but no new mac addresses will be learned. Frames with unknown mac addresses are not dropped, unless discard-unknown-src-mac is configured.
Context	network-instance name <i>string</i> bridge-table mac-learning admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True

Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
------------------	---

aging

Description	Enter the aging context
Context	network-instance name <i>string</i> bridge-table mac-learning aging
Tree	aging
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Configurable state of the aging for the dynamic mac entries in the bridge table. If disabled, dynamically learned mac entries will be programmed in the bridge table until the network instance is disabled.
Context	network-instance name <i>string</i> bridge-table mac-learning aging admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

age-time *number*

Description	Configurable aging time for dynamically learned mac addresses
Context	network-instance name <i>string</i> bridge-table mac-learning aging age-time <i>number</i>
Tree	age-time
Range	60 to 86400
Default	300

Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

learnt-entries

Description	Enter the learnt-entries context
Context	network-instance name <i>string</i> bridge-table mac-learning learnt-entries
Tree	learnt-entries
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mac [address](#) *string*

destination *string*

Description	the name of the subinterface where the mac is learnt against.
Context	network-instance name <i>string</i> bridge-table mac-learning learnt-entries mac address <i>string</i> destination <i>string</i>
Tree	destination
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-update *string*

Description	The date and time of the last update of this learnt mac
Context	network-instance name <i>string</i> bridge-table mac-learning learnt-entries mac address <i>string</i> last-update <i>string</i>
Tree	last-update
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mac-relearn-only *boolean*

Description	The value of this leaf indicates that network-instance will not learn any new mac addresses, but will relearn any that are already programmed
Context	network-instance name <i>string</i> bridge-table mac-learning mac-relearn-only <i>boolean</i>

Tree	mac-relearn-only
Default	true
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-mac-learning *keyword*

Description	The operational state of mac-learning on this network instance.
Context	network-instance name <i>string</i> bridge-table mac-learning oper-mac-learning <i>keyword</i>
Tree	oper-mac-learning
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed • synchronizing Component is currently being synchronized • upgrading Component is currently being upgraded • low-power Component is offline due to insufficient system power • degraded Component or process is in a degraded state • warm-reboot Component or process is currently warm rebooting

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable

False

Platforms

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-mac-learning-disabled-reason *keyword*

Description

The reason for the mac-learning being disabled on this network instance

Context

state *keyword*

Description	The state of the proxy entry
Context	network-instance name <i>string</i> bridge-table proxy-arp dynamic-entries neighbor ipv4-address <i>string</i> state <i>keyword</i>
Tree	state
Options	<ul style="list-style-type: none"> • active • in-active • pending
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

dynamic-learning

Description	Enter the dynamic-learning context
--------------------	------------------------------------

Context	network-instance name <i>string</i> bridge-table proxy-arp dynamic-learning
Tree	dynamic-learning
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

admin-state *keyword*

Description	Configurable state of the learning procedures for dynamic ARP/ND entries The dynamic ARP/ND entries are learned out of snooped GARP/ARP/ND messages on bridged sub-interfaces. These entries will be shown as dynamic, as opposed to EVPN entries or static entries. If the admin-state is disabled, the existing ARP/ND entries in the proxy table will be kept (and refreshed).
Context	network-instance name <i>string</i> bridge-table proxy-arp dynamic-learning admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

age-time (*keyword* | *number*)

Description	Aging timer value for the proxy entries When the aging expires, the entry is flushed.
Context	network-instance name <i>string</i> bridge-table proxy-arp dynamic-learning age-time (<i>keyword</i> <i>number</i>)
Tree	age-time
Range	60 to 86400
Default	never
Units	seconds
Options	<ul style="list-style-type: none"> • never
Configurable	True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

send-refresh (*number* | *keyword*)

Description Configures the proxy refresh interval
The interval determines the frequency at which the system generates three ARP Requests or Neighbor Solicitations with the intend to refresh the proxy entry. The refresh is sent within the age-time window.

Context [network-instance name](#) *string* [bridge-table proxy-arp dynamic-learning send-refresh](#) (*number* | *keyword*)

Tree [send-refresh](#)

Range 120 to 86400

Default never

Options

- never

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

evpn

Description How proxy arp interacts with evpn

Context [network-instance name](#) *string* [bridge-table proxy-arp evpn](#)

Tree [evpn](#)

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

flood

Description How ARP frames received on a proxy service are flooded into the EVPN network

Context [network-instance name](#) *string* [bridge-table proxy-arp evpn flood](#)

Tree [flood](#)

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

gratuitous-arp *boolean*

Description	Whether to flood GARP requests or replies into EVPN
Context	network-instance name <i>string</i> bridge-table proxy-arp evpn flood gratuitous-arp <i>boolean</i>
Tree	gratuitous-arp
Default	true
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

unknown-arp-req *boolean*

Description	Whether to flood ARP requests (with source squelching) when there is no hit in the bridge-table-proxy-arp table
Context	network-instance name <i>string</i> bridge-table proxy-arp evpn flood unknown-arp-req <i>boolean</i>
Tree	unknown-arp-req
Default	true
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

internal-tags

Description	Configuration and state of internal tags
Context	network-instance name <i>string</i> bridge-table proxy-arp evpn internal-tags
Tree	internal-tags
Configurable	True
Platforms	Supported on all platforms

set-tag-set *reference*

Description	Reference to a tag-set defined under routing-policy
Context	network-instance name <i>string</i> bridge-table proxy-arp evpn internal-tags set-tag-set <i>reference</i>
Tree	set-tag-set
Reference	routing-policy tag-set name <i>string</i>
Configurable	True

Platforms	Supported on all platforms
Max. Elements	1

evpn-entries

Description	Enter the evpn-entries context
Context	network-instance name <i>string</i> bridge-table proxy-arp evpn-entries
Tree	evpn-entries
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

neighbor [ipv4-address](#) *string*

Description	List of EVPN proxy ARP entries.
Context	network-instance name <i>string</i> bridge-table proxy-arp evpn-entries neighbor ipv4-address <i>string</i>
Tree	neighbor
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

ipv4-address *string*

Description	IPv4 address of the proxy ARP entry
Context	network-instance name <i>string</i> bridge-table proxy-arp evpn-entries neighbor ipv4-address <i>string</i>
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

is-immutable *boolean*

Description	The immutable property of the proxy entry
Context	network-instance name <i>string</i> bridge-table proxy-arp evpn-entries neighbor ipv4-address <i>string</i> is-immutable <i>boolean</i>
Tree	is-immutable
Default	false

Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

last-update *string*

Description	The date and time of the last update of this proxy entry
Context	network-instance name <i>string</i> bridge-table proxy-arp evpn-entries neighbor ipv4-address <i>string</i> last-update <i>string</i>
Tree	last-update
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

link-layer-address *string*

Description	The resolving MAC address of the proxy entry
Context	network-instance name <i>string</i> bridge-table proxy-arp evpn-entries neighbor ipv4-address <i>string</i> link-layer-address <i>string</i>
Tree	link-layer-address
Configurable	False

state *keyword*

Description	The state of the proxy entry
Context	network-instance name <i>string</i> bridge-table proxy-arp evpn-entries neighbor ipv4-address <i>string</i> state <i>keyword</i>
Tree	state
Options	<ul style="list-style-type: none"> • active • in-active • pending
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

ip-duplication

Description	Configuration of the proxy ARP/ND IP duplication procedures
Context	network-instance name <i>string</i> bridge-table proxy-arp ip-duplication
Tree	ip-duplication
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

anti-spoof-mac *string*

Description	MAC address associated with the optional anti-spoofing mechanism
Context	network-instance name <i>string</i> bridge-table proxy-arp ip-duplication anti-spoof-mac <i>string</i>
Tree	anti-spoof-mac
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

hold-down-time (*keyword* | *number*)

Description	Time to wait from the moment an IP is declared duplicate to the time the IP is removed from the proxy ARP/ND table When the duplicate IP is removed, the monitoring process for the IP address is restarted.
Context	network-instance name <i>string</i> bridge-table proxy-arp ip-duplication hold-down-time (<i>keyword</i> <i>number</i>)
Tree	hold-down-time
Range	2 to 60
Default	9
Units	minutes
Options	<ul style="list-style-type: none"> indefinite
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

monitoring-window *number*

Description	Monitoring window for detecting duplication on a given ip address in the proxy ARP/ND table An IP is declared duplicate if it exceeds the num-moves within the monitoring-window.
Context	network-instance name <i>string</i> bridge-table proxy-arp ip-duplication monitoring-window <i>number</i>
Tree	monitoring-window
Range	1 to 15
Default	3
Units	minutes
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

num-moves *number*

Description	Number of moves in the proxy ARP/ND table that an IP is allowed within the monitoring-window When the number of moves exceeds this value, the IP address is declared duplicate.
Context	network-instance name <i>string</i> bridge-table proxy-arp ip-duplication num-moves <i>number</i>
Tree	num-moves
Range	3 to 10
Default	5
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

static-blackhole *boolean*

Description	Whether the anti-spoof MAC is programmed as a black hole static-mac in the mac-table
Context	network-instance name <i>string</i> bridge-table proxy-arp ip-duplication static-blackhole <i>boolean</i>
Tree	static-blackhole

Default	false
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

oper-down-reason *keyword*

Description	The reason the proxy-type is down on the network-instance
Context	network-instance name <i>string</i> bridge-table proxy-arp oper-down-reason <i>keyword</i>
Tree	oper-down-reason
Options	<ul style="list-style-type: none"> • admin-down • no-mcid • tag-set-not-resolved
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

process-arp-probes *boolean*

Description	<p>Determines whether the router processes ARP probe messages.</p> <p>When set to true, ARP probe messages used by the hosts for Duplicate Address Detection are processed, replied if a proxy-arp entry is hit or reinjected into the data path. When set to false, ARP probe messages are flooded to the remote nodes if unknown-arp-requests are configured to be flooded. ARP probe messages are identified as ARP Requests that use IP address 0.0.0.0 as sender's address.</p>
Context	network-instance name <i>string</i> bridge-table proxy-arp process-arp-probes <i>boolean</i>
Tree	process-arp-probes
Default	true
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

static-entries

Description	Enter the static-entries context
--------------------	----------------------------------

Context	network-instance name <i>string</i> bridge-table proxy-arp static-entries
Tree	static-entries
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

neighbor [ipv4-address](#) *string*

Description	List of static proxy ARP entries that map an IPv4 address to a MAC address To configure a static proxy ARP entry a value must be written into this leaf, as well as the link-layer-address leaf.
Context	network-instance name <i>string</i> bridge-table proxy-arp static-entries neighbor ipv4-address <i>string</i>
Tree	neighbor
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

ipv4-address *string*

Description	IPv4 address resolved by the proxy ARP entry To configure a static neighbor entry a value must be written into this leaf, as well as the link-layer-address leaf.
Context	network-instance name <i>string</i> bridge-table proxy-arp static-entries neighbor ipv4-address <i>string</i>
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

is-immutable *boolean*

Description	The immutable property of the proxy entry
Context	network-instance name <i>string</i> bridge-table proxy-arp static-entries neighbor ipv4-address <i>string</i> is-immutable <i>boolean</i>
Tree	is-immutable
Default	false
Configurable	False

Tree	anti-spoof-mac
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

hold-down-time (*keyword* | *number*)

Description	Time to wait from the moment an IP is declared duplicate to the time the IP is removed from the proxy ARP/ND table When the duplicate IP is removed, the monitoring process for the IP address is restarted.
Context	network-instance name <i>string</i> bridge-table proxy-nd ip-duplication hold-down-time (<i>keyword</i> <i>number</i>)
Tree	hold-down-time
Range	2 to 60
Default	9
Units	minutes
Options	<ul style="list-style-type: none"> indefinite
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

monitoring-window *number*

Description	Monitoring window for detecting duplication on a given ip address in the proxy ARP/ND table An IP is declared duplicate if it exceeds the num-moves within the monitoring-window.
Context	network-instance name <i>string</i> bridge-table proxy-nd ip-duplication monitoring-window <i>number</i>
Tree	monitoring-window
Range	1 to 15
Default	3
Units	minutes
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

num-moves *number*

Description	Number of moves in the proxy ARP/ND table that an IP is allowed within the monitoring-window When the number of moves exceeds this value, the IP address is declared duplicate.
Context	network-instance name <i>string</i> bridge-table proxy-nd ip-duplication num-moves <i>number</i>
Tree	num-moves
Range	3 to 10
Default	5
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

static-blackhole *boolean*

Description	Whether the anti-spoof MAC is programmed as a black hole static-mac in the mac-table
Context	network-instance name <i>string</i> bridge-table proxy-nd ip-duplication static-blackhole <i>boolean</i>
Tree	static-blackhole

Default	false
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

oper-down-reason *keyword*

Description	The reason the proxy-type is down on the network-instance
Context	network-instance name <i>string</i> bridge-table proxy-nd oper-down-reason <i>keyword</i>
Tree	oper-down-reason
Options	<ul style="list-style-type: none"> • admin-down • no-mcid • tag-set-not-resolved
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

process-dad-neighbor-solicitations *boolean*

Description	<p>Determines whether the router processes Neighbor Solicitation DAD messages</p> <p>When set to true, Neighbor Solicitation DAD messages used by the hosts for Duplicate Address Detection are processed, replied if a proxy ND entry is hit, or reinjected into the data path. When set to false, Neighbor Solicitation DAD messages are flooded to the remote nodes if unknown-neighbor-solicitation is configured so that unknown Neighbor Solicitation messages are flooded.</p>
Context	network-instance name <i>string</i> bridge-table proxy-nd process-dad-neighbor-solicitations <i>boolean</i>
Tree	process-dad-neighbor-solicitations
Default	true
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

static-entries

Description	Enter the static-entries context
--------------------	----------------------------------

Context	network-instance name <i>string</i> bridge-table proxy-nd static-entries
Tree	static-entries
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

neighbor [ipv6-address](#) *string*

Description	List of static proxy ND entries that map an IPv6 address to a MAC address To configure a static proxy ND entry a value must be written into this leaf, as well as the link-layer-address leaf.
Context	network-instance name <i>string</i> bridge-table proxy-nd static-entries neighbor ipv6-address <i>string</i>
Tree	neighbor
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

ipv6-address *string*

Description	IPv6 address resolved by the proxy ND entry To configure a static neighbor entry a value must be written into this leaf, as well as the link-layer-address leaf.
Context	network-instance name <i>string</i> bridge-table proxy-nd static-entries neighbor ipv6-address <i>string</i>
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

evpn-override *boolean*

Description	The evpn-override property of the proxy entry
Context	network-instance name <i>string</i> bridge-table proxy-nd static-entries neighbor ipv6-address <i>string</i> evpn-override <i>boolean</i>
Tree	evpn-override
Default	false
Configurable	False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

is-immutable *boolean*

Description The immutable property of the proxy entry

Context [network-instance name](#) *string* [bridge-table](#) [proxy-nd](#) [static-entries](#) [neighbor](#) [ipv6-address](#) *string* **is-immutable** *boolean*

Tree [is-immutable](#)

oper-mac-learning *keyword*

Description The operational state of mac-learning on this subinterface.

Context [network-instance name](#) *string* [interface name](#) *string* [bridge-table](#) [oper-mac-learning](#) *keyword*

Tree [oper-mac-learning](#)

Options

- up
Component or process is operational
- down
Component or process is not operational
- empty
Component slot is empty
- downloading
Component is downloading image into memory
- booting
Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed

- Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Platforms	Supported on all platforms

receive-ipv6-check *boolean*

Description	If set to true then the following check is done on every subinterface of the network-instance: if an IPv6 packet is received on a subinterface and the IPv6 oper-status of this subinterface is down the packet is discarded. If this leaf is set to false then received IPv6 packets are accepted on all
--------------------	---

	subinterfaces of the network-instance that are up, even if they do not have any IPv6 addresses.
Context	network-instance name <i>string</i> ip-forwarding receive-ipv6-check <i>boolean</i>
Tree	receive-ipv6-check
Configurable	True
Platforms	Supported on all platforms

ip-load-balancing

Description	Container for IP load-balancing options that are specific to the network-instance
Context	network-instance name <i>string</i> ip-load-balancing
Tree	ip-load-balancing
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

resilient-hash-prefix [ip-prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#))

Description	List of IPv4 and IPv6 prefixes which should be programmed for resilient ECMP hashing.
Context	network-instance name <i>string</i> ip-load-balancing resilient-hash-prefix ip-prefix (ipv4-prefix ipv6-prefix)
Tree	resilient-hash-prefix
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

[ip-prefix](#) ([ipv4-prefix](#) | [ipv6-prefix](#))

Description	IPv4 or IPv6 prefix. Active routes in the FIB that exactly match this prefix or that are longer matches of this prefix are provided with resilient-hash programming.
Context	network-instance name <i>string</i> ip-load-balancing resilient-hash-prefix ip-prefix (ipv4-prefix ipv6-prefix)
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hash-buckets-per-path *number*

Description The number of times each next-hop is repeated in the fill pattern if there are max-paths ECMP next-hops
A larger number consumes more resources but provides more granularity when flows need to be moved. There is a platform-specific limit to the product of this hash-buckets-per-path value and the max-paths value.

Context [network-instance name](#) *string* [ip-load-balancing resilient-hash-prefix ip-prefix \(ipv4-prefix | ipv6-prefix\)](#) [hash-buckets-per-path number](#)

Tree [hash-buckets-per-path](#)

Range 1 to 32

Default 1

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-paths *number*

Description The maximum number of ECMP next-hops per route associated with the resilient-hash prefix
If a matching route has more than this number of ECMP next-hops only the first N are used, where N is the value of this parameter. There is a platform-specific limit to the product of this max-paths value and the hash-buckets-per-path value.

Context [network-instance name](#) *string* [ip-load-balancing resilient-hash-prefix ip-prefix \(ipv4-prefix | ipv6-prefix\)](#) [max-paths number](#)

Tree [max-paths](#)

Range 1 to 64

Max. Elements	1

ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	IP prefix to match for decapsulation
Context	network-instance name <i>string</i> ip-tunnel-decapsulation group name <i>string</i> termination-subnet ip-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maintenance-policies

Description	Container with maintenance policies
Context	network-instance name <i>string</i> maintenance-policies
Tree	maintenance-policies
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy [maintenance-policy-name](#) *string*

Description	Enter the policy list instance
--------------------	--------------------------------

Context	network-instance name <i>string</i> maintenance-policies policy maintenance-policy-name <i>string</i>
Tree	policy
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maintenance-policy-name *string*

Description	A unique identifying name for the maintenance policy
Context	network-instance name <i>string</i> maintenance-policies policy maintenance-policy-name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

revert-timer (*number* | *keyword*)

Description	<p>Revert timer for the segment-list.</p> <p>Timer till a revert to primary/best path after it is recovered from a failure. In case of uncolored te-policy, applies to primary segment-list and in case of colored te-policy applies to best candidate path.</p> <p>The default is 0 seconds.</p>
Context	network-instance name <i>string</i> maintenance-policies policy maintenance-policy-name <i>string</i> revert-timer (<i>number</i> <i>keyword</i>)
Tree	revert-timer
Range	1 to 4320
Default	disable
Units	seconds
Options	<ul style="list-style-type: none"> • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

seamless-bfd

Description	When present, this node attempts to setup a seamless BFD session on every segment-list of every SR policy that uses maintenance-policy, but only if that SR policy is a primary or standby (secondary) candidate path. The
--------------------	--

transition of an Sbfd session from up to down is a trigger for rerouting traffic around a failed primary path.

Context	network-instance name <i>string</i> maintenance-policies policy maintenance-policy-name <i>string</i> seamless-bfd
Tree	seamless-bfd
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

desired-minimum-transmit-interval *number*

Description	The minimum interval between transmission of BFD control packets This value is advertised to the peer, however the actual interval used is specified by taking the maximum of desired-minimum-transmit-interval and the value of the remote required-minimum-receive interval value. This value is specified as an integer number of microseconds.
Context	network-instance name <i>string</i> maintenance-policies policy maintenance-policy-name <i>string</i> seamless-bfd desired-minimum-transmit-interval <i>number</i>
Tree	desired-minimum-transmit-interval
Range	10000 to 100000000
Default	1000000
Units	microseconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

detection-multiplier *number*

Description	The number of packets that must be missed to declare this session as down The detection interval for the BFD session is calculated by multiplying the value of the negotiated transmission interval by this value.
Context	network-instance name <i>string</i> maintenance-policies policy maintenance-policy-name <i>string</i> seamless-bfd detection-multiplier <i>number</i>
Tree	detection-multiplier
Range	3 to 20
Default	3
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hold-down-timer (*number* | *keyword*)

Description	Specifies a hold-down timer value when seamless-bfd is enabled The timer is started when the number of S-BFD sessions that are up drops below the threshold. The TE-policy path is not considered to be up again until the hold-down timer has expired and the number of S-BFD sessions that are up equals or exceeds the threshold. A grace period after session down such that sBFD session flaps does not impact active path. The default is 4 seconds.
Context	network-instance name <i>string</i> maintenance-policies policy maintenance-policy-name <i>string</i> seamless-bfd hold-down-timer (<i>number</i> <i>keyword</i>)
Tree	hold-down-timer
Range	1 to 500
Default	4
Units	seconds
Options	<ul style="list-style-type: none"> • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mode *keyword*

Description	Specifies requested protection method ecmp-protected is valid for colored te-policies and programs all the valid segment lists and manages their availability using seamless-BFD for each segment list. Switchover between candidate paths is triggered by the node if number of segment-lists up is less than the threshold on the active policy.ecmp-protected is not valid for uncolored sr-policies. linear is valid for uncolored te-policies and triggers fail-over among active segment-lists, primary to standby / secondary.
Context	network-instance name <i>string</i> maintenance-policies policy maintenance-policy-name <i>string</i> seamless-bfd mode <i>keyword</i>
Tree	mode
Default	none
Options	<ul style="list-style-type: none"> • none • ecmp-protected • linear
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

return-path-label *number*

Description	The MPLS label to be used to by the far-end device to return the BFD message This label is added as the bottom value in the segment routing label stack and will be used by the far-end device to return BFD message to the originator. This value could either be a MPLS label or a binding SID that will be used at the far-end to match an appropriate polciy to return the traffic.
Context	network-instance name <i>string</i> maintenance-policies policy maintenance-policy-name <i>string</i> seamless-bfd return-path-label <i>number</i>
Tree	return-path-label
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

threshold *number*

Description	Minimum number of up seamless-BFD sessions for up te-policy
Context	network-instance name <i>string</i> maintenance-policies policy maintenance-policy-name <i>string</i> seamless-bfd threshold <i>number</i>
Tree	threshold
Range	1 to 32
Default	1
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

wait-for-up-timer *number*

Description	Specifies a wait-for-up timer value when seamless-bfd is enabled This timer takes effect if BFD does not come up, or BFD goes from up to down. The timer is started when BFD is first enabled on a segment-list or BFD transitions from up to down. When the timer expires if BFD is not yet come up, then the path is torn down by removing it from the TTM and the PI and the retry timer is started. The default is 4 seconds.
Context	network-instance name <i>string</i> maintenance-policies policy maintenance-policy-name <i>string</i> seamless-bfd wait-for-up-timer <i>number</i>
Tree	wait-for-up-timer
Range	1 to 1800
Default	4

forward *boolean*

Description	Whether the outgoing next-hop-group is in forwarding state
Context	network-instance name <i>string</i> multicast-forwarding-information-base multicast-route source (<i>ipv4-address</i> <i>ipv6-address</i>) group (<i>ipv4-address</i> <i>ipv6-address</i>) outgoing-next-hop-group index <i>number</i> forward <i>boolean</i>
Tree	forward
Configurable	False
Platforms	Supported on all platforms

next-hop-groups

Description	Enable the next-hop-groups context
Context	network-instance name <i>string</i> next-hop-groups
Tree	next-hop-groups
Configurable	True
Platforms	Supported on all platforms

group name *string*

Description	Specifies the next hop group.
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i>
Tree	group
Configurable	True
Platforms	Supported on all platforms

name *string*

Description	Specifies the next hop group name
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	Administratively enable or disable this next-hop-group.
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

blackhole

Description	Enable the blackhole context
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i> blackhole
Tree	blackhole
Configurable	True
Platforms	Supported on all platforms

generate-icmp *boolean*

Description	When set to true the router generates ICMP unreachable messages for the dropped packets
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i> blackhole generate-icmp <i>boolean</i>
Tree	generate-icmp
Default	false
Configurable	True
Platforms	Supported on all platforms

nexthop [index](#) *number*

Description	Enter the nexthop list instance
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i> nexthop index <i>number</i>
Tree	nexthop
Configurable	True
Platforms	Supported on all platforms
Max. Elements	128

index *number*

Description	Numerical index of the next-hop member
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i> nexthop index <i>number</i>
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	Administratively enable or disable this next-hop.
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i> nexthop index <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

encapsulate-header *keyword*

Description	When forwarding a packet to the specified next-hop the local system performs an encapsulation of the packet, adding the specified header type
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i> nexthop index <i>number</i> encapsulate-header <i>keyword</i>
Tree	encapsulate-header
Options	<ul style="list-style-type: none"> • gre <p>The encapsulation header is a Generic Routing Encapsulation header</p>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

failure-detection

Description	Enter the failure-detection context
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i> nexthop index <i>number</i> failure-detection
Tree	failure-detection
Configurable	True
Platforms	Supported on all platforms

enable-bfd

Description	Enable the enable-bfd context
--------------------	-------------------------------

Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i> nexthop index <i>number</i> failure-detection enable-bfd
Tree	enable-bfd
Configurable	True
Platforms	Supported on all platforms

local-address (*ipv4-address* | *ipv6-address*)

Description	The local address to be used for the associated BFD session
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i> nexthop index <i>number</i> failure-detection enable-bfd local-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	local-address
Configurable	True
Platforms	Supported on all platforms

local-discriminator *number*

Description	The local discriminator to be used for the associated BFD session
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i> nexthop index <i>number</i> failure-detection enable-bfd local-discriminator <i>number</i>
Tree	local-discriminator
Range	1 to 16384
Configurable	True
Platforms	Supported on all platforms

remote-discriminator *number*

Description	The remote discriminator to be used for the associated BFD session
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i> nexthop index <i>number</i> failure-detection enable-bfd remote-discriminator <i>number</i>
Tree	remote-discriminator
Range	1 to 16384
Configurable	True
Platforms	Supported on all platforms

gre

Description	Parameters relating to GRE encapsulation
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i> nexthop index <i>number</i> gre
Tree	gre
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

destination-ip (*ipv4-address-unicast* | *ipv6-address-unicast*)

Description	Destination IP address to use for the encapsulated packet.
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i> nexthop index <i>number</i> gre destination-ip (<i>ipv4-address-unicast</i> <i>ipv6-address-unicast</i>)
Tree	destination-ip
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

source-ip (*ipv4-address-unicast* | *ipv6-address-unicast*)

Description	Source IP address to use for the encapsulated packet.
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i> nexthop index <i>number</i> gre source-ip (<i>ipv4-address-unicast</i> <i>ipv6-address-unicast</i>)
Tree	source-ip
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ip-address (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Description	The next-hop IPv4 or IPv6 address If the IPv6 address is a link-local address then the zoned format must be used
Context	network-instance name <i>string</i> next-hop-groups group name <i>string</i> nexthop index <i>number</i> ip-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>)
Tree	ip-address
Configurable	True

Platforms Supported on all platforms

pushed-mpls-label-stack (*number* | *keyword*)

Description A list of MPLS labels to push onto the packet when forwarding to this particular next-hop
Default is none/empty. Pushing an MPLS label stack is not supported unless the resolve flag is set to false.

Context [network-instance name](#) *string* [next-hop-groups group name](#) *string* [nexthop index](#) *number* [pushed-mpls-label-stack](#) (*number* | *keyword*)

Tree [pushed-mpls-label-stack](#)

Range 16 to 1048575

Options

- IPV4_EXPLICIT_NULL
- IPV6_EXPLICIT_NULL
- IMPLICIT_NULL

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

Max. Elements 1

resolve *boolean*

Description When set to true, the router is allowed to use any route to resolve the nexthop address to an outgoing interface
When set to false the router is only allowed to use a local route to resolve the next-hop address.

Context [network-instance name](#) *string* [next-hop-groups group name](#) *string* [nexthop index](#) *number* [resolve](#) *boolean*

Tree [resolve](#)

Default true

Configurable True

Platforms Supported on all platforms

oper-down-reason *keyword*

Description The reason the network-instance is down

Context [network-instance name](#) *string* [oper-down-reason](#) *keyword*

Tree [oper-down-reason](#)

Options	<ul style="list-style-type: none"> • admin-down • no-mcid
Configurable	False
Platforms	Supported on all platforms

oper-mac-vrf-mtu *number*

Description	<p>Operational I2-mtu of the mac-vrf network-instance. Calculated as the lowest I2-mtu of the bridged subinterfaces associated to the mac-vrf, minus the vlan tags associated to that subinterface (lowest mtu subinterface).</p> <p>When the mac-vrf has an associated irb subinterface, if the configured irb ip-mtu exceeds the oper-mac-vrf-mtu minus 14 bytes (Ethernet header), then the irb subinterface will remain operationally down.</p> <p>The oper-mac-vrf-mtu is only available in mac-vrf network-instances.</p>
Context	network-instance name <i>string</i> oper-mac-vrf-mtu <i>number</i>
Tree	oper-mac-vrf-mtu
Range	1492 to 9500
Units	bytes
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	This leaf contains the operational state of the network instance.
Context	network-instance name <i>string</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image

- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable

False

Platforms

Supported on all platforms

policy-forwarding

Description

Configuration and operational state relating to policy-forwarding within a network instance.

Context[network-instance name](#) *string* [policy-forwarding](#)**Tree**[policy-forwarding](#)**Configurable**

True

Platforms

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface [subinterface](#) *string*

Description

List of subinterfaces that use the policy forwarding policy.

Context	network-instance name <i>string</i> policy-forwarding interface subinterface <i>string</i>
Tree	interface
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subinterface *string*

Description	Name of the subinterface.
Context	network-instance name <i>string</i> policy-forwarding interface subinterface <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

apply-forwarding-policy *reference*

Description	The policy to be applied on the interface. Packets ingress on the referenced interface should be compared to the match criteria within the specified policy, and in the case that these criteria are met, the forwarding actions specified applied.
Context	network-instance name <i>string</i> policy-forwarding interface subinterface <i>string</i> apply-forwarding-policy <i>reference</i>

policy [policy-id](#) *string*

Description	A forwarding policy is defined to have a set of match criteria, allowing particular fields of a packet's header to be matched, and a set of forwarding actions which determines how the local system should forward the packet.
Context	network-instance name <i>string</i> policy-forwarding policy policy-id <i>string</i>
Tree	policy
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	4

policy-id *string*

Description	A unique name identifying the forwarding policy. This name is used when applying the policy to a particular interface.
Context	network-instance name <i>string</i> policy-forwarding policy policy-id <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

description *string*

Description	Description string for the policy
Context	network-instance name <i>string</i> policy-forwarding policy policy-id <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rule [sequence-id](#) *number*

Description	List of policy forwarding rules.
Context	network-instance name <i>string</i> policy-forwarding policy policy-id <i>string</i> rule sequence-id <i>number</i>
Tree	rule
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sequence-id *number*

Description	A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries
Context	network-instance name <i>string</i> policy-forwarding policy policy-id <i>string</i> rule sequence-id <i>number</i>
Range	0 to 128
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

action

Description	Container for the actions to be applied to packets matching the policy forwarding rule.
Context	network-instance name <i>string</i> policy-forwarding policy policy-id <i>string</i> rule sequence-id <i>number</i> action
Tree	action
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

encapsulate-gre

Description	Container for the GRE encapsulation actions to be applied to packets matching the policy forwarding rule.
Context	network-instance name <i>string</i> policy-forwarding policy policy-id <i>string</i> rule sequence-id <i>number</i> action encapsulate-gre
Tree	encapsulate-gre
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

target id *string*

Description	Identifier for the GRE target group. Each target specified within this list should be treated as a endpoint to which packets should be GRE encapsulated. Where the set of destinations described within a single entry expands to more than one destination IP address, packets should be load shared across the destination using the local system's ECMP hashing mechanisms.
Context	network-instance name <i>string</i> policy-forwarding policy policy-id <i>string</i> rule sequence-id <i>number</i> action encapsulate-gre target id <i>string</i>
Tree	target
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	4

id *string*

Description	A unique identifier for the target.
--------------------	-------------------------------------

Context	network-instance name <i>string</i> policy-forwarding policy policy-id <i>string</i> rule sequence-id <i>number</i> action encapsulate-gre target id <i>string</i>
Configurable	True

destination (*ipv4-prefix* | *ipv6-prefix*)

Description	The set of destination addresses that should be encapsulated towards. Where a subnet is specified, each address within the subnet should be treated as an independent destination for encapsulated traffic. Packets should be distributed with ECMP across the set of tunnel destination addresses.
Context	network-instance name <i>string</i> policy-forwarding policy policy-id <i>string</i> rule sequence-id <i>number</i> action encapsulate-gre target id <i>string</i> destination (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	destination
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ip-ttl *number*

Description	The TTL that should be specified in the IP header of the GRE packet encapsulating the packet matching the rule.
Context	network-instance name <i>string</i> policy-forwarding policy policy-id <i>string</i> rule sequence-id <i>number</i> action encapsulate-gre target id <i>string</i> ip-ttl <i>number</i>
Tree	ip-ttl
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

source (*ipv4-address* | *ipv6-address*)

Description	The source IP address that should be used when encapsulating packets from the local system.
Context	network-instance name <i>string</i> policy-forwarding policy policy-id <i>string</i> rule sequence-id <i>number</i> action encapsulate-gre target id <i>string</i> source (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	source
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

network-instance *reference*

Description	When this leaf is set, packets matching the match criteria for the forwarding rule should be looked up in the network-instance that is referenced rather than the network-instance with which the interface is associated.
Context	network-instance name <i>string</i> policy-forwarding policy policy-id <i>string</i> rule sequence-id <i>number</i> action network-instance <i>reference</i>
Tree	network-instance
Reference	network-instance name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

description *string*

Description	Description string for the rule
Context	network-instance name <i>string</i> policy-forwarding policy policy-id <i>string</i> rule sequence-id <i>number</i> description <i>string</i>
Tree	description
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

match

Description	Container for the conditions that determine whether a packet matches this entry
Context	network-instance name <i>string</i> policy-forwarding policy policy-id <i>string</i> rule sequence-id <i>number</i> match
Tree	match
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4

Description	Container for match conditions associated with IPv4 header fields If no match conditions are provided then no IPv4 packets are matched.
Context	network-instance name <i>string</i> policy-forwarding policy policy-id <i>string</i> rule sequence-id <i>number</i> match ipv4

Tree	ipv4

Platforms	Supported on all platforms

evpn

Description	Options related to the EVPN address family
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name identityref evpn
Tree	evpn
Configurable	True

Platforms Supported on all platforms

advertise-ipv6-next-hops *boolean*

Description Enables advertisement of EVPN routes with IPv6 next-hops to peers
If this is set to true and the local-address used towards the peer is an IPv6 address and BGP is supposed to apply next-hop-self then the route is advertised with the IPv6 local-address as the BGP next-hop. If this is set to false, then the EVPN route is advertised with an IPv4 next-hop.

Context [network-instance name](#) *string* [protocols bgp afi-safi](#) [afi-safi-name](#) [identityref evpn advertise-ipv6-next-hops](#) *boolean*

Tree [advertise-ipv6-next-hops](#)

Default false

Configurable True

Platforms Supported on all platforms

default-received-encapsulation *keyword*

Description Indicates the encapsulation considered when the routes are received without BGP encapsulation extended community
Most EVPN routes are usually received with a BGP encapsulation extended community that indicates the encapsulation and therefore how to interpret the value in the received Label fields of the routes. If no encapsulation is received, BGP will validate the route as MPLS or VXLAN or SRv6 depending on how this command is configured.

Context [network-instance name](#) *string* [protocols bgp afi-safi](#) [afi-safi-name](#) [identityref evpn default-received-encapsulation](#) *keyword*

Tree [default-received-encapsulation](#)

Default vxlan

Options

- vxlan
- mpls

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

inter-as-vpn *boolean*

Description	When set to true, received EVPN routes that are not imported by any network-instance are retained in the BGP RIB and considered 'used' so that they can be propagated to any EBGP or IBGP peer. This command supersedes the effect of keep-all-routes.
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name identityref evpn inter-as-vpn <i>boolean</i>
Tree	inter-as-vpn
Default	false
Configurable	True
Platforms	Supported on all platforms

keep-all-routes *boolean*

Description	When this is set to true all received EVPN routes are retained in the RIB-IN, even those not imported by any network-instance; these routes display as 'rejected' and cannot be propagated to other peers. When this is false, EVPN routes that are not imported by any network-instance are dropped and not retained in the BGP RIB-IN; policy changes affecting received EVPN routes will trigger the sending of ROUTE_REFRESH messages towards all EVPN family peers.
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name identityref evpn keep-all-routes <i>boolean</i>
Tree	keep-all-routes
Default	false
Configurable	True
Platforms	Supported on all platforms

Max. Elements	14

ipv4-labeled-unicast

Description	Options related to the labeled IPv4-unicast address family
--------------------	--

Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name <i>identityref</i> ipv4-labeled-unicast
Tree	ipv4-labeled-unicast
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

advertise-ipv6-next-hops *boolean*

Description	Enables advertisement of IPv4 routes with IPv6 next-hops
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name <i>identityref</i> ipv4-labeled-unicast advertise-ipv6-next-hops <i>boolean</i>
Tree	advertise-ipv6-next-hops
Default	false
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

backup-paths

Description	Configure backup paths support for the AFI/SAFI
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name <i>identityref</i> ipv4-labeled-unicast backup-paths
Tree	backup-paths
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

install *boolean*

Description	Install a backup path for every NLRI in the address family, when a suitable one exists
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name <i>identityref</i> ipv4-labeled-unicast backup-paths install <i>boolean</i>
Tree	install
Default	false
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

convergence

Description	Options for controlling and monitoring routing convergence of the relevant address family
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name identityref ipv4-labeled-unicast convergence
Tree	convergence
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

converged-peers *number*

Description	The number of peers that have sent an EOR marker for the address family since the last BGP restart
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name identityref ipv4-labeled-unicast convergence converged-peers <i>number</i>
Tree	converged-peers
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

convergence-state *keyword*

Description	Enter the convergence-state context
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name identityref ipv4-labeled-unicast convergence convergence-state <i>keyword</i>
Tree	convergence-state
Options	<ul style="list-style-type: none"> • waiting BGP has recently restarted and no sessions have re-established yet • started BGP has recently restarted and at least one session has re-established with support of the address family • partial BGP has recently restarted and at least one session has advertised an End-of-RIB marker for the address family. • timeout BGP has recently restarted and not all non-slow peers advertised an End-of-RIB marker for the address family before the max-wait-to-advertise timer expired

- converged
All non-slow peers that support the address family have advertised the End-of-RIB marker for the address family

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

convergence-time *number*

Description	The elapsed time in seconds, starting from the last BGP restart, to reach the converged state for the address family
Context	network-instance name string protocols bgp afi-safi afi-safi-name identityref ipv4-labeled-unicast convergence convergence-time number
Tree	convergence-time
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

first-up-peer-time *number*

Description	The time when the first session supporting the address family came up, measured from the time that the BGP instance restarted
Context	network-instance name string protocols bgp afi-safi afi-safi-name identityref ipv4-labeled-unicast convergence first-up-peer-time number
Tree	first-up-peer-time
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-up-peer-time *number*

Description	The time when the last session supporting the address family came up, measured from the time that the BGP instance restarted
Context	network-instance name string protocols bgp afi-safi afi-safi-name identityref ipv4-labeled-unicast convergence last-up-peer-time number
Tree	last-up-peer-time
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-wait-to-advertise *number*

Description	The maximum amount of time, in seconds, measured from the time when the first session (configured or dynamic) that supports the address family comes up after a BGP restart, until BGP is allowed to advertise any routes in that address family to any peer The value of this leaf must always be greater than or equal to the operational value of min-wait-to-advertise. The default value is 3x the value of min-wait-to-advertise. A value of 0 means the feature is disabled and there is no additional delay before advertising routes of the address family.
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name identityref ipv4-labeled-unicast convergence max-wait-to-advertise <i>number</i>
Tree	max-wait-to-advertise
Range	0 to 3600
Default	0
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-max-wait-to-advertise *number*

Description	The operational value of the max-wait-to-advertise timer for the address family
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name identityref ipv4-labeled-unicast convergence oper-max-wait-to-advertise <i>number</i>
Tree	oper-max-wait-to-advertise
Range	0 to 10800
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

up-peers *number*

Description	The number of BGP sessions (configured and dynamic) that support the address family and that are currently in the established state
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name identityref ipv4-labeled-unicast convergence up-peers <i>number</i>
Tree	up-peers
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

up-peers-when-min-expired *number*

Description	The number of BGP sessions (configured and dynamic) that support the address family and that were in established state when the win-wait-to-advertise timer expired
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name <i>identityref</i> ipv4-labeled-unicast convergence up-peers-when-min-expired <i>number</i>
Tree	up-peers-when-min-expired
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

next-hop-resolution

Description	Options for controlling next-hop resolution procedures
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name <i>identityref</i> ipv4-labeled-unicast next-hop-resolution
Tree	next-hop-resolution
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4-next-hops

Description	Options related to the resolution of BGP next-hops that are IPv4 addresses
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name <i>identityref</i> ipv4-labeled-unicast next-hop-resolution ipv4-next-hops
Tree	ipv4-next-hops
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

route-resolution

Description	Options related to resolution using IP routes in the FIB
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name <i>identityref</i> ipv4-labeled-unicast next-hop-resolution ipv4-next-hops route-resolution
Tree	route-resolution

max-wait-to-advertise *number*

Description The maximum amount of time, in seconds, measured from the time when the first session (configured or dynamic) that supports the address family comes up after a BGP restart, until BGP is allowed to advertise any routes in that address family to any peer

The value of this leaf must always be greater than or equal to the operational value of min-wait-to-advertise. The default value is 3x the value of min-wait-to-advertise. A value of 0 means the feature is disabled and there is no additional delay before advertising routes of the address family.

Context [network-instance name](#) *string* [protocols bgp afi-safi afi-safi-name](#) *identityref* [ipv6-labeled-unicast convergence max-wait-to-advertise](#) *number*

Tree [max-wait-to-advertise](#)

Configurable False

Platforms Supported on all platforms

max-wait-to-advertise *number*

Description The maximum amount of time, in seconds, measured from the time when the first session (configured or dynamic) that supports the address family comes up after a BGP restart, until BGP is allowed to advertise any routes in that address family to any peer

The value of this leaf must always be greater than or equal to the operational value of min-wait-to-advertise. The default value is 3x the value of min-wait-to-advertise. A value of 0 means the feature is disabled and there is no additional delay before advertising routes of the address family.

receive-ipv6-next-hops *boolean*

Description Enables the advertisement of the RFC 8950 capability to receive IPv4 routes with IPv6 next-hops

When set to true, BGP advertises an extended NH encoding (RFC 8950) capability to its peers. This capability indicates that local router is prepared to accept BGP routes for the AFI/SAFI with IPv6 next-hops from peers in the scope of the command. When set to false, BGP handles received AFI/SAFI routes with IPv6 next-hops as an error and applies treat-as-withdraw.

max-wait-to-advertise *number*

Description	The maximum amount of time, in seconds, measured from the time when the first session (configured or dynamic) that supports the address family comes up after a BGP restart, until BGP is allowed to advertise any routes in that address family to any peer The value of this leaf must always be greater than or equal to the operational value of min-wait-to-advertise. The default value is 3x the value of min-wait-to-advertise. A value of 0 means the feature is disabled and there is no additional delay before advertising routes of the address family.
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name <i>identityref</i> l3vpn-ipv6-unicast convergence max-wait-to-advertise <i>number</i>

inter-as-vpn *boolean*

Description	When set to true, received VPN-IPv6 routes that are not imported by any network-instance are retained in the BGP RIB and considered 'used' so that they can be propagated to any EBGP or IBGP peer. This command supersedes the effect of keep-all-routes. This command triggers the programming of a VPN label swap operation for each received VPN-IPv6 route.
Context	network-instance name <i>string</i> protocols bgp afi-safi afi-safi-name identityref l3vpn-ipv6-unicast inter-as-vpn <i>boolean</i>
Tree	inter-as-vpn
Default	false

keep-all-routes *boolean*

Description	When this is set to true all received VPN-IPv6 routes are retained in the RIB-IN, even those not imported by any network-instance; these routes display as 'rejected' and cannot be propagated to other peers
--------------------	---

When this is false, VPN-IPv6 routes that are not imported by any network-instance are dropped and not retained in the BGP RIB-IN; policy changes affecting received VPN-IPv6 routes will trigger the sending of ROUTE_REFRESH messages towards all VPN-IPv6 family peers.

bgp-vpn

Description	Enter the bgp-vpn context
Context	network-instance name <i>string</i> protocols bgp bgp-label bgp-vpn
Tree	bgp-vpn
Configurable	True
Platforms	label-management and (inter-as-nhsrr-ipvpn, nhsrr-evpn)

dynamic-label-block *reference*

Description	Reference to a dynamic label block used for non-local BGP VPN routes advertised with next-hop-self
--------------------	--

Context	network-instance name <i>string</i> protocols bgp bgp-label bgp-vpn dynamic-label-block <i>reference</i>
Tree	dynamic-label-block
Reference	system mpls label-ranges dynamic name <i>string</i>
Configurable	True
Platforms	label-management and (inter-as-nhsrr-ipvpn, nhsrr-evpn)

dynamic-label-block-status *keyword*

Description	Status of the label block. The label block may show as unavailable if there is pending cleanup.
Context	network-instance name <i>string</i> protocols bgp bgp-label bgp-vpn dynamic-label-block-status <i>keyword</i>
Tree	dynamic-label-block-status
Options	<ul style="list-style-type: none"> • available • unavailable
Configurable	False
Platforms	label-management and (inter-as-nhsrr-ipvpn, nhsrr-evpn)

convergence

Description	Options for configuring address family independent BGP convergence parameters
Context	network-instance name <i>string</i> protocols bgp convergence
Tree	convergence
Configurable	True
Platforms	Supported on all platforms

min-wait-to-advertise *number*

Description	<p>The minimum amount of time, in seconds, measured from the moment when the first session (configured or dynamic) comes up after a BGP restart, until BGP is allowed to advertise any routes to any peer</p> <p>The sessions that are established when this timer expires determines the set of peers from which EOR is expected in order to declare convergence for an address family. A value of 0 means the feature is disabled and all routes are advertised immediately.</p>
--------------------	--

This timer and associated state machine are only restarted by one of the following triggers:

Context	network-instance name <i>string</i> protocols bgp convergence min-wait-to-advertise <i>number</i>
Tree	min-wait-to-advertise
Range	0 to 3600
Default	0
Configurable	True
Platforms	Supported on all platforms

dynamic-neighbors

Description	Options related to the acceptance and initiation of dynamic BGP sessions
Context	network-instance name <i>string</i> protocols bgp dynamic-neighbors
Tree	dynamic-neighbors
Configurable	True
Platforms	Supported on all platforms

accept

Description	Options related to the acceptance of dynamic BGP sessions from remote peers
Context	network-instance name <i>string</i> protocols bgp dynamic-neighbors accept
Tree	accept
Configurable	True
Platforms	Supported on all platforms

match [prefix](#) (*ipv4-prefix* | *ipv6-prefix*)

Description	<p>List of prefix and group-id combinations from which incoming TCP connections to port 179 will be accepted</p> <p>An incoming TCP connection to port 179 is matched to a list entry if: (a) the source IP does not match a configured BGP neighbor address (b) the list entry prefix is the longest prefix match of the source IP. (c) the source IP is not an IPv6 link-local address associated with an (unnumbered) interface configured for dynamic-neighbor sessions.</p>
Context	network-instance name <i>string</i> protocols bgp dynamic-neighbors accept match prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)

Tree	match
Configurable	True
Platforms	Supported on all platforms

prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	The IP prefix used to match an incoming dynamic BGP session to a group.
Context	network-instance name <i>string</i> protocols bgp dynamic-neighbors accept match prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Configurable	True
Platforms	Supported on all platforms

allowed-peer-as *string*

Description	<p>The allowed AS numbers that can establish incoming BGP sessions from this prefix and group-id-range combination</p> <p>If the OPEN message from a peer matched to this prefix contains a MyAS number that is not in this allowed list then a NOTIFICATION is sent to the peer with the indication Bad Peer AS. Each entry in this list can be a single AS number or a range of AS numbers in the format as1..as2</p>
Context	network-instance name <i>string</i> protocols bgp dynamic-neighbors accept match prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) allowed-peer-as <i>string</i>
Tree	allowed-peer-as
Configurable	True
Platforms	Supported on all platforms
Max. Elements	32

peer-group *reference*

Description	<p>Reference to a peer-group</p> <p>When an incoming session is matched to this list entry it is associated with the peer-group referenced by this leaf. The peer-group provides all the parameters needed to complete the establishment of the dynamic session. If the referenced peer-group has a configured peer-as this is ignored by dynamic BGP sessions using the group as a template.</p>
Context	network-instance name <i>string</i> protocols bgp dynamic-neighbors accept match prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) peer-group <i>reference</i>
Tree	peer-group
Reference	network-instance name <i>string</i> protocols bgp group group-name <i>string</i>

Configurable	True
Platforms	Supported on all platforms

max-sessions *number*

Description	The maximum number of incoming BGP sessions that will be accepted by the router A value of 0 means no limit.
Context	network-instance name <i>string</i> protocols bgp dynamic-neighbors accept max-sessions <i>number</i>
Tree	max-sessions
Default	0
Configurable	True
Platforms	Supported on all platforms

interface [interface-name](#) *string*

Description	List of interfaces on which dynamic sessions based on IPv6 link-local address discovery are accepted and initiated.
Context	network-instance name <i>string</i> protocols bgp dynamic-neighbors interface interface-name <i>string</i>
Tree	interface
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface-name *string*

Description	Reference to a specific subinterface of the form <interface-name>.<subinterface-index> The referenced subinterface should be enabled for IPv6 and should be configured to accept and send IPv6 router advertisement messages. The referenced subinterface does not need any IPv4 addresses or global-unicast IPv6 addresses (i.e. it can be an unnumbered interface). When a subinterface is present in this list, incoming TCP connections to the BGP well-known port that are received on this subinterface and sourced from an IPv6 link local address and destined for the IPv6 link local address of the subinterface are automatically accepted.
--------------------	--

When a subinterface is present in this list, received IPv6 router advertisement messages on this subinterface automatically trigger BGP session setup towards the sender of these messages, if there is not already an established session.

Context	network-instance name <i>string</i> protocols bgp dynamic-neighbors interface interface-name <i>string</i>
String Length	5 to 25
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

allowed-peer-as *string*

Description	Specifies the allowed AS numbers of dynamic BGP neighbors on this interface. If the OPEN message from a peer on this interface contains a MyAS number that is not in this allowed list then a NOTIFICATION is sent to the peer with the indication Bad Peer AS. Each entry in this list can be a single AS number or a range of AS numbers in the string format as1..as2.
Context	network-instance name <i>string</i> protocols bgp dynamic-neighbors interface interface-name <i>string</i> allowed-peer-as <i>string</i>
Tree	allowed-peer-as
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	32

max-sessions *number*

Description	The maximum number of dynamic sessions that are allowed to be setup on the interface as a result of accepting sessions from link-local addresses or initiating sessions by means of receiving IPv6 router advertisements.
Context	network-instance name <i>string</i> protocols bgp dynamic-neighbors interface interface-name <i>string</i> max-sessions <i>number</i>
Tree	max-sessions
Default	1
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

peer-group *reference*

Description	Reference to a peer-group Specifies the peer-group to associate with dynamic BGP neighbors on this interface. The peer-group provides all the parameters needed to complete the establishment of the dynamic session.
Context	network-instance name <i>string</i> protocols bgp dynamic-neighbors interface interface-name <i>string</i> peer-group reference
Tree	peer-group
Reference	network-instance name <i>string</i> protocols bgp group group-name <i>string</i>
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ebgp-default-policy

Description	Options for controlling the default policies that apply to EBGp sessions
Context	network-instance name <i>string</i> protocols bgp ebgp-default-policy
Tree	ebgp-default-policy
Configurable	True
Platforms	Supported on all platforms

export-reject-all *boolean*

Description	When set to true, all outbound routes towards any EBGp peer to which no explicit export policy is applied are treated as though they were rejected by policy
Context	network-instance name <i>string</i> protocols bgp ebgp-default-policy export-reject-all <i>boolean</i>
Tree	export-reject-all
Default	true
Configurable	True
Platforms	Supported on all platforms

import-reject-all *boolean*

Description	When set to true, all inbound routes from any EBGp peer to which no explicit import policy is applied are treated as though they were rejected by policy
--------------------	--

Context	network-instance name <i>string</i> protocols bgp ebgp-default-policy import-reject-all <i>boolean</i>
Tree	import-reject-all
Default	true
Configurable	True
Platforms	Supported on all platforms

export-policy *reference*

Description	Apply an export policy to advertised BGP routes
Context	network-instance name <i>string</i> protocols bgp export-policy <i>reference</i>
Tree	export-policy
Reference	routing-policy policy name <i>string</i>
Configurable	True
Platforms	Supported on all platforms
Max. Elements	14

failure-detection

Description	Options related to methods of detecting BGP session failure
Context	network-instance name <i>string</i> protocols bgp failure-detection
Tree	failure-detection
Configurable	True
Platforms	Supported on all platforms

enable-bfd *boolean*

Description	The true setting enables Bi-directional Forwarding Detection on BGP sessions belonging to the peer group
Context	network-instance name <i>string</i> protocols bgp failure-detection enable-bfd <i>boolean</i>
Tree	enable-bfd
Default	false
Configurable	True
Platforms	Supported on all platforms

fast-failover *boolean*

Description	The true setting causes EBGP and IBGP sessions to drop immediately (and not wait for hold timer expiry) when the local interface that they depend upon for neighbor reachability goes down
Context	network-instance name <i>string</i> protocols bgp failure-detection fast-failover <i>boolean</i>
Tree	fast-failover
Default	true
Configurable	True
Platforms	Supported on all platforms

graceful-restart

Description	Options for controlling the behavior of the router as a graceful restart helper
Context	network-instance name <i>string</i> protocols bgp graceful-restart
Tree	graceful-restart
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	Administratively enable or disable graceful restart helper for all address families
Context	network-instance name <i>string</i> protocols bgp graceful-restart admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

requested-restart-time *number*

Description	The restart time encoded in this router's GR capability.
--------------------	--

If the neighbor honors this request then this is the maximum time allowed for this router to re-establish its TCP connection after a restart. If this time is exceeded, the neighbor is expected to flush stale routes that it was maintaining on behalf of this router.

Context	network-instance name <i>string</i> protocols bgp graceful-restart requested-restart-time <i>number</i>
Tree	requested-restart-time
Range	1 to 3600
Default	300
Units	seconds
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

stale-routes-time *number*

Description	The maximum number of seconds that routes received from a helped peer remain stale until they are deleted Routes of AFI/SAFI X received from peer Y are marked stale when peer Y goes down and its previous GR capability included AFI/SAFI X.
Context	network-instance name <i>string</i> protocols bgp graceful-restart stale-routes-time <i>number</i>
Tree	stale-routes-time
Range	1 to 3600
Default	360
Units	seconds
Configurable	True
Platforms	Supported on all platforms

group [group-name](#) *string*

Description	Peer group templates
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i>
Tree	group
Configurable	True
Platforms	Supported on all platforms

group-name *string*

Description	The configured name of the peer group
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i>
String Length	1 to 64
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	Administratively enable or disable the peer group Disable will tear down all the BGP sessions in the group, even if they are administratively enabled at the neighbor level.
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

afi-safi [afi-safi-name](#) *identityref*

Description	List of address families supported by the BGP peer group
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> afi-safi afi-safi-name <i>identityref</i>
Tree	afi-safi
Configurable	True
Platforms	Supported on all platforms

afi-safi-name *identityref*

Description	The name of a BGP address family, which translates to a specific AFI value and a specific SAFI value
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> afi-safi afi-safi-name <i>identityref</i>

Options

- ipv4-unicast
Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1)
- ipv6-unicast
Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1)
- l3vpn-ipv4-unicast
VPN-IPv4 unicast address family (AFI = 1, SAFI = 128)
- l3vpn-ipv6-unicast
VPN-IPv6 unicast address family (AFI = 2, SAFI = 128)
- ipv4-labeled-unicast
Labeled IPv4 unicast routes (AFI 1, SAFI 4)
- ipv6-labeled-unicast
Labeled IPv6 unicast routes (AFI 2, SAFI 4)
- evpn
EVPN routes (AFI = 25, SAFI = 70)
- route-target
Route target constraint routes (AFI 1, SAFI 132)
- sr-policy-ipv4
SR-TE Policy (AFI 1, SAFI 73)
- sr-policy-ipv6
SR-TE Policy (AFI 2, SAFI 73)

Configurable

True

Platforms

Supported on all platforms

add-paths**Description**

Configure support for the advertisement and receipt of multiple paths for the AFI/SAFI

Context

[network-instance name](#) *string* [protocols bgp group group-name](#) *string* [afi-safi afi-safi-name](#) *identityref* [add-paths](#)

Tree

advertise-ipv6-next-hops *boolean*

Description Enables advertisement of IPv4 routes with IPv6 next-hops

Context [network-instance name](#) *string* [protocols bgp group group-name](#) *string* [afi-safi afi-safi-name](#) *identityref* [ipv4-labeled-unicast advertise-ipv6-next-hops](#) *boolean*

Tree [advertise-ipv6-next-hops](#)

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

receive-ipv6-next-hops *boolean*

Description Enables the advertisement of the RFC 8950 capability to receive IPv4 routes with IPv6 next-hops

When set to true, BGP advertises an extended NH encoding (RFC 8950) capability to its peers. This capability indicates that local router is prepared to accept BGP routes for the AFI/SAFI with IPv6 next-hops from peers in the scope of the command. When set to false, BGP handles received AFI/SAFI routes with IPv6 next-hops as an error and applies treat-as-withdraw.

Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> afi-safi afi-safi-name <i>identityref</i> ipv4-labeled-unicast receive-ipv6-next-hops <i>boolean</i>

receive-ipv6-next-hops *boolean*

Description Enables the advertisement of the RFC 8950 capability to receive IPv4 routes with IPv6 next-hops

When set to true, BGP advertises an extended NH encoding (RFC 8950) capability to its peers. This capability indicates that local router is prepared to accept BGP routes for the AFI/SAFI with IPv6 next-hops from peers in the

scope of the command. When set to false, BGP handles received AFI/SAFI routes with IPv6 next-hops as an error and applies treat-as-withdraw.

Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> local-as
Tree	local-as
Configurable	True
Platforms	Supported on all platforms

as-number *number*

Description	The local autonomous system number used to override the global ASN on this group of BGP sessions Sets the ASN value that this router sends in its OPEN message towards its peer in the group.
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> local-as as-number <i>number</i>
Tree	as-number
Range	1 to 4294967295
Configurable	True
Platforms	Supported on all platforms

prepend-global-as *boolean*

Description	When set to true, the global ASN value is prepended to the AS path in outbound routes towards each BGP peer in the group
--------------------	--

If a session is EBGP (peer-as is not equal to the local-as) then the local-as is prepended as the final step, so that the local-as is the first element in the AS_PATH received by the peer.

Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> local-as prepend-global-as <i>boolean</i>
Tree	prepend-global-as
Configurable	True
Platforms	Supported on all platforms

prepend-local-as *boolean*

Description	When set to true, the local AS value is prepended to the AS path of inbound routes from each EBGP peer belonging to the group
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> local-as prepend-local-as <i>boolean</i>
Tree	prepend-local-as
Configurable	True
Platforms	Supported on all platforms

local-preference *number*

Description	The value of the local-preference attribute that is added to received routes from EBGP peers in the group It is also used to encode the local preference attribute for locally generated BGP routes.
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> local-preference <i>number</i>
Tree	local-preference
Configurable	True
Platforms	Supported on all platforms

maintenance-group *string*

Description	State field to display the maintenance group to which this group belongs to.
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> maintenance-group <i>string</i>
Tree	maintenance-group
Configurable	False

Platforms Supported on all platforms

multihop

Description Configuration parameters specifying the multihop behaviour for IBGP and EBGP peers in the peer group.

Context [network-instance name](#) *string* [protocols bgp group group-name](#) *string* [multihop](#)

Tree [multihop](#)

Configurable True

Platforms Supported on all platforms

admin-state *keyword*

Description When enabled, IBGP and EBGP peers in the group are allowed to be indirectly connected by up to N hops, where N is controlled by the maximum-hops parameter. When disabled, only IBGP peers within the peer group support multihop.

This can be overridden on a per neighbor basis. It is inherited by neighbors in the peer-group only if maximum-hops is also specified.

By default this is disabled.

Context [network-instance name](#) *string* [protocols bgp group group-name](#) *string* [multihop admin-state](#) *keyword*

Tree [admin-state](#)

Options

- enable
- disable

Configurable True

Platforms Supported on all platforms

maximum-hops *number*

Description This sets the maximum number of routing hops towards each peer. It determines the IP TTL value in originated BGP TCP/IP packets. By default the TTL is set to 1 towards EBGP peers and 64 towards IBGP peers. This leaf sets a new IP TTL to use towards both EBGP and IBGP peers in the peer group.

This can be overridden on a per neighbor basis. It is inherited by neighbors in the peer-group only if admin-state is also specified.

Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> multihop maximum-hops <i>number</i>
Tree	maximum-hops
Range	1 to 255
Configurable	True
Platforms	Supported on all platforms

next-hop-self *boolean*

Description	When set to true, the next-hop in all IPv4-unicast, IPv6-unicast, EVPN, VPN-IPv4 and VPN-IPv6 BGP routes advertised to all IBGP peers in the peer-group is set equal to the local-address used on each session (or to the router ID if the NLRI is IPv6 and there is no IPv6 local address to use). This is independent of the route origin (EBGP, IBGP-client, IBGP-non-client or redistributed direct/static/aggregate route). When set to false, normal BGP rules from RFC 4271 apply.
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> next-hop-self <i>boolean</i>

Description	The autonomous system number expected from each peer in the group A configured session with a peer does not come up if this value does not match the AS value reported by the peer in its OPEN message.
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> peer-as number
Tree	peer-as
Range	1 to 4294967295
Configurable	True
Platforms	Supported on all platforms

route-reflector

Description	Container with route reflection configuration options.
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> route-reflector
Tree	route-reflector
Configurable	True
Platforms	Supported on all platforms

client *boolean*

Description	When this is set to true all configured and dynamic BGP sessions that belong to the peer-group are considered RR clients.
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> route-reflector client <i>boolean</i>
Tree	client
Configurable	True
Platforms	Supported on all platforms

cluster-id (*number* | *dotted-quad*)

Description	The cluster-id to insert into the CLUSTER_LIST attribute when reflecting routes received by or sent to each client in the peer-group. The default is inherited from instance level configuration.
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> route-reflector cluster-id (<i>number</i> <i>dotted-quad</i>)
Tree	cluster-id
Range	1 to 4294967295
Configurable	True
Platforms	Supported on all platforms

send-community

Description	Options for controlling the sending of BGP communities to peers in the group
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> send-community
Tree	send-community
Configurable	True
Platforms	Supported on all platforms

large *boolean*

Description	The false setting causes BGP to strip all large (12 byte) BGP communities from all outbound routes advertised to each peer in the group
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> send-community large <i>boolean</i>
Tree	large
Configurable	True
Platforms	Supported on all platforms

standard *boolean*

Description	The false setting causes BGP to strip all standard (4 byte) communities from all outbound routes advertised to each peer in the group
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> send-community standard <i>boolean</i>
Tree	standard

Configurable	True
Platforms	Supported on all platforms

send-default-route

Description	Options for controlling the generation of default routes towards group peers
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> send-default-route
Tree	send-default-route
Configurable	True
Platforms	Supported on all platforms

export-policy *reference*

Description	The name of a policy that should be applied to the advertised default routes, in order to set their attributes to non-default values Only the default-action of this policy is parsed and applied.
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> send-default-route export-policy <i>reference</i>
Tree	export-policy
Reference	routing-policy policy name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

ipv4-unicast *boolean*

Description	Enables the sending of a synthetically generated default IPv4 route [0/0] to each peer in the group
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> send-default-route ipv4-unicast <i>boolean</i>
Tree	ipv4-unicast
Default	false
Configurable	True
Platforms	Supported on all platforms

ipv6-unicast *boolean*

Description	Enables the sending of a synthetically generated default IPv6 route [::/0] to each peer in the group
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> send-default-route ipv6-unicast <i>boolean</i>
Tree	ipv6-unicast
Default	false
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Container for BGP statistics.
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> statistics
Tree	statistics
Configurable	False
Platforms	Supported on all platforms

disabled-peers *number*

Description	The number of configured BGP peers associated with the peer-group that are administratively disabled
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> statistics disabled-peers <i>number</i>
Tree	disabled-peers
Configurable	False
Platforms	Supported on all platforms

dynamic-peers *number*

Description	The number of dynamic BGP peers associated with the peer-group that are currently in the established state, counting sessions resulting from accepted incoming TCP connections and outgoing TCP connections triggered by LLDP auto-discovery
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> statistics dynamic-peers <i>number</i>

Tree	dynamic-peers
Configurable	False
Platforms	Supported on all platforms

path-memory *number*

Description	The total number of bytes required to store the path attribute objects used by received BGP routes associated with the peer-group
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> statistics path-memory <i>number</i>
Tree	path-memory
Default	0
Configurable	False
Platforms	Supported on all platforms

total-active-routes *number*

Description	The total number of received BGP routes that are active (installed for forwarding) and associated with the peer-group, summed across all address families
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> statistics total-active-routes <i>number</i>
Tree	total-active-routes
Default	0
Configurable	False
Platforms	Supported on all platforms

total-paths *number*

Description	The total number of path attribute objects used by received BGP routes associated with the peer-group
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> statistics total-paths <i>number</i>
Tree	total-paths
Default	0
Configurable	False
Platforms	Supported on all platforms

total-peers *number*

Description	The total number of configured BGP peers associated with the peer-group
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> statistics total-peers <i>number</i>
Tree	total-peers
Configurable	False
Platforms	Supported on all platforms

total-prefixes *number*

Description	The total number of unique NLRI contained in all received BGP routes associated with the BGP instance or the peer-group.
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> statistics total-prefixes <i>number</i>
Tree	total-prefixes
Configurable	False
Platforms	Supported on all platforms

total-received-routes *number*

Description	The total number of received BGP routes associated with the peer-group, summed across all address families
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> statistics total-received-routes <i>number</i>
Tree	total-received-routes
Default	0
Configurable	False
Platforms	Supported on all platforms

up-peers *number*

Description	The number of configured BGP peers associated with the peer-group that are currently in the established state
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> statistics up-peers <i>number</i>
Tree	up-peers
Configurable	False

Platforms Supported on all platforms

timers

Description Enter the timers context

Context [network-instance name string protocols bgp group group-name string timers](#)

Tree [timers](#)

Configurable True

Platforms Supported on all platforms

connect-retry *number*

Description The time interval in seconds between successive attempts to establish a session with a peer

Context [network-instance name string protocols bgp group group-name string timers connect-retry number](#)

Tree [connect-retry](#)

Range 1 to 65535

Default 120

Units seconds

Configurable True

Platforms Supported on all platforms

hold-time *number*

Description The hold-time interval in seconds that the router proposes to the peer in its OPEN message

The actual in-use hold-time is negotiated to the lowest value proposed by the two peers. A negotiated value of 0 suppresses the sending of keepalives by both peers.

Context [network-instance name string protocols bgp group group-name string timers hold-time number](#)

Tree [hold-time](#)

Range 0 | 3 to 65535

Default 90

Units seconds

Configurable True

Platforms Supported on all platforms

keepalive-interval *number*

Description The interval in seconds between successive keepalive messages sent to the peer
The period between one keepalive message and the next is the minimum of this configured value and 1/3 of the negotiated hold-time duration. A value of 0 suppresses the sending of keepalives to the peer.

Context [network-instance name](#) *string* [protocols bgp group group-name](#) *string* [timers keepalive-interval](#) *number*

Tree [keepalive-interval](#)

Range 0 to 21845

Units seconds

Configurable True

Platforms Supported on all platforms

minimum-advertisement-interval *number*

Description The value assigned to the MinRouteAdvertisementIntervalTimer of RFC 4271, for both EBGp and IBGP sessions
Each session runs its own independent timer and the timer affects both route advertisements and route withdrawals, regardless of address family. For route withdrawals only, this timer is bypassed if rapid-withdrawal is set to true.

Context [network-instance name](#) *string* [protocols bgp group group-name](#) *string* [timers minimum-advertisement-interval](#) *number*

Tree [minimum-advertisement-interval](#)

Range 1 to 255

Default 5

Units seconds

Configurable True

Platforms Supported on all platforms

prefix-limit-restart-timer *number*

Description Time interval in seconds after which the BGP session is re-established after being torn down due to exceeding any prefix limit (of any address family)

This only applies if prevent-teardown is false.

Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> timers prefix-limit-restart-timer <i>number</i>
Tree	prefix-limit-restart-timer
Default	0
Units	seconds
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

trace-options

Description	Debug traceoptions for BGP
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> trace-options
Tree	trace-options
Configurable	True
Platforms	Supported on all platforms

flag *name keyword*

Description	Tracing parameters
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> trace-options flag name <i>keyword</i>
Tree	flag
Configurable	True
Platforms	Supported on all platforms

name *keyword*

Description	Enter the name context
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> trace-options flag name <i>keyword</i>
Options	<ul style="list-style-type: none"> events Trace all BGP events. packets Trace all BGP protocol packets.

- open
Trace BGP open packets.
- keepalive
Trace BGP keepalive packets.
- graceful-restart
Trace Graceful Restart events.
- timers
Trace routing protocol timer processing.
- route
Trace BGP route table manager.
- notification
Trace Bgp notification.
- socket
Trace socket info.
- update
Trace update info.

Configurable

True

Platforms

Supported on all platforms

transport

Description	Enter the transport context
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> transport
Tree	transport
Configurable	True
Platforms	Supported on all platforms

local-address (*ipv4-address | ipv6-address | subinterface-all*)

Description	The local TCP endpoint of used for all BGP sessions in the group This also the source address for next-hop-self, if it applies. The local-address can be specified as an IP address that is resolvable to a local interface. This address must be the primary address of an interface, otherwise the session will not come up.
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> transport local-address (<i>ipv4-address ipv6-address subinterface-all</i>)
Tree	local-address
String Length	5 to 25
Configurable	True
Platforms	Supported on all platforms

mtu-discovery *boolean*

Description	Turns path mtu discovery for BGP TCP sessions on (true) or off (false)
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> transport mtu-discovery <i>boolean</i>
Tree	mtu-discovery
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

passive-mode *boolean*

Description	The true setting causes BGP to wait for the peer to initiate the TCP connection
--------------------	---

The false setting causes BGP to initiate a TCP connection whenever the BGP session is started or restarted.

Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> transport passive-mode <i>boolean</i>
Tree	passive-mode
Default	false
Configurable	True
Platforms	Supported on all platforms

tcp-mss *number*

Description	The maximum segment size of BGP TCP packets The actual value used in the transmit direction towards a particular peer should be checked at the neighbor level.
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> transport tcp-mss <i>number</i>
Tree	tcp-mss
Range	536 to 9446
Units	bytes
Configurable	True
Platforms	Supported on all platforms

under-maintenance *boolean*

Description	Indicates if this BGP group is in maintenance mode
Context	network-instance name <i>string</i> protocols bgp group group-name <i>string</i> under-maintenance <i>boolean</i>
Tree	under-maintenance
Configurable	False
Platforms	Supported on all platforms

import-policy *reference*

Description	Apply an import policy to received BGP routes
Context	network-instance name <i>string</i> protocols bgp import-policy <i>reference</i>
Tree	import-policy
Reference	routing-policy policy name <i>string</i>

Configurable	True
Platforms	Supported on all platforms
Max. Elements	14

local-preference *number*

Description	The value of the local-preference attribute that is added to received routes from EBGPeers It is also used to encode the local preference attribute for locally generated BGP routes.
Context	network-instance name <i>string</i> protocols bgp local-preference <i>number</i>
Tree	local-preference
Default	100
Configurable	True
Platforms	Supported on all platforms

maintenance-group *string*

Description	State field to display the maintenance group to which this bgp instance belongs to.
Context	network-instance name <i>string</i> protocols bgp maintenance-group <i>string</i>
Tree	maintenance-group
Configurable	False
Platforms	Supported on all platforms

max-ecmp-hash-buckets-per-next-hop-group *number*

Description	Specifies the maximum number of ECMP hash buckets per next-hop-group Weighted ECMP weights are normalized based on this number of hash buckets.
Context	network-instance name <i>string</i> protocols bgp max-ecmp-hash-buckets-per-next-hop-group <i>number</i>
Tree	max-ecmp-hash-buckets-per-next-hop-group
Range	1 to 256
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

neighbor peer-address (*ipv4-address-with-zone | ipv6-address-with-zone*)

Description	Create a configured BGP session
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone ipv6-address-with-zone</i>)
Tree	neighbor
Configurable	True
Platforms	Supported on all platforms

peer-address (*ipv4-address-with-zone | ipv6-address-with-zone*)

Description	The transport address of the BGP peer The peer-address must be a valid IPv4 unicast address, IPv6 global unicast address or IPv6 link-local address. An IPv6 link-local address requires the interface scope to be identified, using a format such as fe80::1234%ethernet-1/1.1
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone ipv6-address-with-zone</i>)
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	Administratively enable or disable the peer Disable will tear down the BGP session (return it to IDLE state).
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

advertised-capabilities *keyword*

Description	List of BGP capabilities advertised by the local routing device to the peer
--------------------	---

Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) advertised-capabilities <i>keyword</i>
Tree	advertised-capabilities
Options	<ul style="list-style-type: none"> • MP_BGP • ROUTE_REFRESH • EXT_NH_ENCODING • GRACEFUL_RESTART • 4-OCTET_ASN • ORF_SEND_EXCOMM • ORF_RECEIVE_EXCOMM
Configurable	False
Platforms	Supported on all platforms

afi-safi [afi-safi-name](#) *identityref*

Description	List of address families supported by the BGP neighbor

receive-ipv6-next-hops *boolean*

Description Enables the advertisement of the RFC 8950 capability to receive IPv4 routes with IPv6 next-hops

When set to true, BGP advertises an extended NH encoding (RFC 8950) capability to its peers. This capability indicates that local router is prepared to accept BGP routes for the AFI/SAFI with IPv6 next-hops from peers in the scope of the command. When set to false, BGP handles received AFI/SAFI routes with IPv6 next-hops as an error and applies treat-as-withdraw.

Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix-limit-received

Description	Options for configuring the maximum number of VPN-IPv6 unicast routes allowed to be received from the peer
--------------------	--

Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) afi-safi afi-safi-name identityref l3vpn-ipv6-unicast prefix-limit-received
Tree	prefix-limit-received
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-received-routes *number*

Description	Maximum number of VPN-IPv6 routes that will be accepted from the neighbor, counting routes accepted and rejected by import policies
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) afi-safi afi-safi-name identityref l3vpn-ipv6-unicast prefix-limit-received max-received-routes <i>number</i>
Tree	max-received-routes
Range	1 to 4294967295
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix-limit-exceeded *boolean*

Description	Changes from false to true when the number of received VPN-IPv6 routes increases to max-received-routes + 1 and remains true until the number of received VPN-IPv6 routes decreases back to max-received-routes (applicable if prevent-teardown = true) or until the session is re-established (applicable if prevent-teardown = false)
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) afi-safi afi-safi-name identityref l3vpn-ipv6-unicast prefix-limit-received prefix-limit-exceeded <i>boolean</i>
Tree	prefix-limit-exceeded
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prevent-teardown *boolean*

Description	When false the session is immediately torn down when the number of received VPN-IPv6 routes exceeds the configured limit.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) afi-safi afi-safi-name identityref l3vpn-ipv6-unicast prefix-limit-received prevent-teardown <i>boolean</i>
Tree	prevent-teardown
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

warning-threshold-pct *number*

Description	When the number of VPN-IPv6 routes received from the peer (counting routes accepted and rejected by import policy) reaches this percentage of the max-received-routes limit, BGP raises a warning log event
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) afi-safi afi-safi-name identityref l3vpn-ipv6-unicast prefix-limit-received warning-threshold-pct <i>number</i>
Tree	warning-threshold-pct
Range	0 to 100
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state *keyword*

Description	Enter the oper-state context
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) afi-safi afi-safi-name identityref oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Negotiated operational state of the address family is up • down Negotiated operational state of the address family is down

Configurable	False
Platforms	Supported on all platforms

received-routes *number*

Description	The number of routes belonging to this AFI/SAFI received from the peer, including routes rejected by import policy
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) afi-safi afi-safi-name identityref received-routes <i>number</i>
Tree	received-routes
Configurable	False
Platforms	Supported on all platforms

received-routes-withdrawn-due-to-error *number*

Description	The number of routes belonging to this AFI/SAFI received from the peer that were withdrawn due to an update packet error
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) afi-safi afi-safi-name identityref received-routes-withdrawn-due-to-error <i>number</i>
Tree	received-routes-withdrawn-due-to-error
Configurable	False
Platforms	Supported on all platforms

rejected-routes *number*

Description	The number of routes belonging to this AFI/SAFI received from the peer that were rejected by import policy
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) afi-safi afi-safi-name identityref rejected-routes <i>number</i>
Tree	rejected-routes
Configurable	False
Platforms	Supported on all platforms

route-target

Description	Options related to the RT constraint address family
--------------------	---

Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) afi-safi afi-safi-name identityref route-target
Tree	route-target
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix-limit-received

Description	Options for configuring the maximum number of RTC routes allowed to be received from the peer
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) afi-safi afi-safi-name identityref route-target prefix-limit-received
Tree	prefix-limit-received
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-received-routes *number*

Description	Maximum number of RTC routes that will be accepted from the neighbor, counting routes accepted and rejected by import policies
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) afi-safi afi-safi-name identityref route-target prefix-limit-received max-received-routes <i>number</i>
Tree	max-received-routes
Range	1 to 4294967295
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix-limit-exceeded *boolean*

Description	Changes from false to true when the number of received routes increases to max-received-routes + 1 and remains true until the number of received routes decreases back to max-received-routes (applicable if prevent-
--------------------	---

	teardown = true) or until the session is re-established (applicable if prevent-teardown = false)
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) afi-safi afi-safi-name identityref route-target prefix-limit-received prefix-limit-exceeded <i>boolean</i>
Tree	prefix-limit-exceeded
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prevent-teardown *boolean*

Description	When false the session is immediately torn down when the number of received RTC routes exceeds the configured limit.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) afi-safi afi-safi-name identityref route-target prefix-limit-received prevent-teardown <i>boolean</i>
Tree	prevent-teardown
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

warning-threshold-pct *number*

Description	When the number of RTC routes received from the peer (counting routes accepted and rejected by import policy) reaches this percentage of the max-received-routes limit, BGP raises a warning log event
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) afi-safi afi-safi-name identityref route-target prefix-limit-received warning-threshold-pct <i>number</i>
Tree	warning-threshold-pct
Range	0 to 100
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

send-default-route *boolean*

Description	When true the router advertises a synthetically generated default RTC route to the neighbor
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) afi-safi afi-safi-name identityref route-target send-default-route <i>boolean</i>
Tree	send-default-route
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sent-routes *number*

Description	The number of routes belonging to this AFI/SAFI advertised as reachable to the peer
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) afi-safi afi-safi-name identityref sent-routes <i>number</i>
Tree	sent-routes
Configurable	False
Platforms	Supported on all platforms

as-path-options

Description	Options for handling the AS_PATH in received BGP routes
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) as-path-options
Tree	as-path-options
Configurable	True
Platforms	Supported on all platforms

allow-own-as *number*

Description	The maximum number of times the global AS number or a local AS number of the BGP instance can appear in any received AS_PATH before it is considered a loop and considered invalid
--------------------	--

Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) as-path-options allow-own-as number
Tree	allow-own-as
Configurable	True
Platforms	Supported on all platforms

remove-private-as

Description	Container with options for removing private AS numbers (2-byte and 4-byte) from the advertised AS path towards all peers
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) as-path-options remove-private-as
Tree	remove-private-as
Configurable	True
Platforms	Supported on all platforms

ignore-peer-as *boolean*

Description	If set to true then do not delete or replace a private AS number that is the same as the peer AS number
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) as-path-options remove-private-as ignore-peer-as boolean
Tree	ignore-peer-as
Default	false
Configurable	True
Platforms	Supported on all platforms

leading-only *boolean*

Description	If set to true then only delete or replace private AS numbers that appear before the first occurrence of a non-private ASN in the sequence of most recent ASNs in the AS path
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) as-path-options remove-private-as leading-only boolean
Tree	leading-only

Default	false
Configurable	True
Platforms	Supported on all platforms

mode *keyword*

Description	The method by which private AS numbers are removed from the advertised AS_PATH attribute
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) as-path-options remove-private-as mode <i>keyword</i>
Tree	mode
Options	<ul style="list-style-type: none"> disabled Do not strip or replace any private AS numbers delete Delete private AS numbers, shortening the AS path replace Replace private AS numbers with the local AS number used towards the peer, maintaining the AS path length
Configurable	True
Platforms	Supported on all platforms

replace-peer-as *boolean*

Description	If set to true then replace every occurrence of the peer AS number that is present in the advertised AS path with the local AS number used towards the peer
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) as-path-options replace-peer-as <i>boolean</i>
Tree	replace-peer-as
Configurable	True
Platforms	Supported on all platforms

authentication

Description	Container with authentication options that apply to this specific peer
--------------------	--

Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) authentication
Tree	authentication
Configurable	True
Platforms	Supported on all platforms

keychain *reference*

Description	Reference to a keychain. The keychain type must be tcp-md5.
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) authentication keychain reference
Tree	keychain
Reference	system authentication keychain name string
Configurable	True
Platforms	Supported on all platforms

password *string*

Description	Configures an MD5 authentication password for use with neighboring devices.
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) authentication password string
Tree	password
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transmit-active *boolean*

Description	Reads true when the TCP segments being sent to the peer have authentication data.
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) authentication transmit-active boolean
Tree	transmit-active
Configurable	False
Platforms	Supported on all platforms

description *string*

Description	A user provided description string for the peer
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) description <i>string</i>
Tree	description
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

discovered-by-lldp *boolean*

Description	Set to true if the peer IP address is known through LLDP (irrespective of whether the final TCP connection was originated by this router or not)
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) discovered-by-lldp <i>boolean</i>
Tree	discovered-by-lldp
Configurable	False
Platforms	Supported on all platforms

dynamic-neighbor *boolean*

Description	Indicates true if the neighbor is a dynamic peer that resulted from an accepted incoming TCP connection or an outgoing TCP connection triggered by LLDP auto-discovery
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) dynamic-neighbor <i>boolean</i>
Tree	dynamic-neighbor
Configurable	False
Platforms	Supported on all platforms

established-transitions *number*

Description	The total number of times the BGP FSM transitioned into the established state for this peer
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) established-transitions <i>number</i>
Tree	established-transitions

Default	0
Configurable	False
Platforms	Supported on all platforms

export-policy *reference*

Description	Apply an export policy to advertised BGP routes
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) export-policy reference
Tree	export-policy
Reference	routing-policy policy name <i>string</i>
Configurable	True
Platforms	Supported on all platforms
Max. Elements	14

failure-detection

Description	Options related to methods of detecting BGP session failure
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) failure-detection
Tree	failure-detection
Configurable	True
Platforms	Supported on all platforms

enable-bfd *boolean*

Description	The true setting enables Bi-directional Forwarding Detection on BGP sessions belonging to the peer group
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) failure-detection enable-bfd <i>boolean</i>
Tree	enable-bfd
Configurable	True
Platforms	Supported on all platforms

fast-failover *boolean*

Description	The true setting the EBGP or IBGP session to drop immediately (and not wait for hold timer expiry) when the local interface that it depends upon for neighbor reachability goes down
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) failure-detection fast-failover <i>boolean</i>
Tree	fast-failover
Configurable	True
Platforms	Supported on all platforms

graceful-restart

Description	Options related to router behavior as a graceful restart helper
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart
Tree	graceful-restart
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	Administratively enable or disable graceful restart helper for all address families
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart admin-state <i>keyword</i>
Tree	admin-state
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

helper-active *boolean*

Description	Set to true when the router is actively helping the neighbor for at least one address family - i.e. for that address family the peer restarted with F=1 in its capability and the stale-routes-time has not expired yet
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart helper-active <i>boolean</i>
Tree	helper-active
Configurable	False
Platforms	Supported on all platforms

last-restart-time *string*

Description	The last time the peer restarted
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart last-restart-time <i>string</i>
Tree	last-restart-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

neighbor-capability

Description	Container for information about the last GR capability received from the neighbor
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart neighbor-capability
Tree	neighbor-capability
Configurable	False
Platforms	Supported on all platforms

afi-safi *name identityref*

Description	List of AFI/SAFI TLVs that were contained in the neighbor's last GR capability
--------------------	--

Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart neighbor-capability afi-safi name <i>identityref</i>
Tree	afi-safi
Configurable	False
Platforms	Supported on all platforms

name *identityref*

Description	Enter the name context
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart neighbor-capability afi-safi name <i>identityref</i>
Options	<ul style="list-style-type: none"> • ipv4-unicast Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1) • ipv6-unicast Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1) • l3vpn-ipv4-unicast VPN-IPv4 unicast address family (AFI = 1, SAFI = 128) • l3vpn-ipv6-unicast VPN-IPv6 unicast address family (AFI = 2, SAFI = 128) • ipv4-labeled-unicast Labeled IPv4 unicast routes (AFI 1, SAFI 4) • ipv6-labeled-unicast Labeled IPv6 unicast routes (AFI 2, SAFI 4) • evpn EVPN routes (AFI = 25, SAFI = 70) • route-target Route target constraint routes (AFI 1, SAFI 132) • sr-policy-ipv4 SR-TE Policy (AFI 1, SAFI 73) • sr-policy-ipv6 SR-TE Policy (AFI 2, SAFI 73)
Configurable	False
Platforms	Supported on all platforms

forwarding-preserved *boolean*

Description	The F-bit setting in the AFI/SAFI TLV
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) graceful-restart neighbor-capability afi-safi name identityref forwarding-preserved <i>boolean</i>
Tree	forwarding-preserved
Configurable	False
Platforms	Supported on all platforms

restart-time *number*

Description	The value of the Restart Time in the neighbor's last GR capability
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) graceful-restart neighbor-capability restart-time <i>number</i>
Tree	restart-time
Configurable	False
Platforms	Supported on all platforms

number-of-restarts *number*

Description	The number of times the peer has restarted
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) graceful-restart number-of-restarts <i>number</i>
Tree	number-of-restarts
Configurable	False
Platforms	Supported on all platforms

requested-restart-time *number*

Description	The restart time encoded in this router's GR capability. If the neighbor honors this request then this is the maximum time allowed for this router to re-establish its TCP connection after a restart. If this time is exceeded, the neighbor is expected to flush stale routes that it was maintaining on behalf of this router.
--------------------	--

Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart requested-restart-time <i>number</i>
Tree	requested-restart-time
Range	1 to 3600
Default	300
Units	seconds
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

stale-routes-time *number*

Description	The maximum number of seconds that routes received from a helped peer remain stale until they are deleted Routes of AFI/SAFI X received from peer Y are marked stale when peer Y goes down and its previous GR capability included AFI/SAFI X.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) graceful-restart stale-routes-time <i>number</i>
Tree	stale-routes-time
Range	1 to 3600
Units	seconds
Configurable	True
Platforms	Supported on all platforms

import-policy *reference*

Description	Apply an import policy to received BGP routes
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) import-policy <i>reference</i>
Tree	import-policy
Reference	routing-policy policy name <i>string</i>
Configurable	True
Platforms	Supported on all platforms
Max. Elements	14

last-established *string*

Description	The time when the session last transitioned into or out of the established state Uptime or downtime of the session can be calculated from this state.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) last-established <i>string</i>
Tree	last-established
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-event *keyword*

Description	Enter the last-event context
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) last-event <i>keyword</i>
Tree	last-event

local-as**Description**

Options related to the local autonomous-system number advertised by this router to the peer

Context[network-instance name](#) *string* [protocols](#) [bgp neighbor peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [local-as](#)

Tree	local-as
Configurable	True
Platforms	Supported on all platforms

as-number *number*

Description	The local autonomous system number used to override the global ASN on this session Sets the ASN value that this router sends in its OPEN message towards its peer.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-as as-number <i>number</i>
Tree	as-number
Range	1 to 4294967295
Configurable	True
Platforms	Supported on all platforms

prepend-global-as *boolean*

Description	When set to true, the global ASN value is prepended to the AS path in outbound routes towards the peer If a session is EBGP (peer-as is not equal to the local-as) then the local-as is prepended as the final step, so that the local-as is the first element in the AS_PATH received by the peer.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-as prepend-global-as <i>boolean</i>
Tree	prepend-global-as
Configurable	True
Platforms	Supported on all platforms

prepend-local-as *boolean*

Description	When set to true, the local AS value is prepended to the AS path of inbound routes from the peer
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) local-as prepend-local-as <i>boolean</i>
Tree	prepend-local-as

Configurable	True
Platforms	Supported on all platforms

local-preference *number*

Description	The value of the local-preference attribute that is added to received routes from the peer, if it is EBGP It is also used to encode the local preference attribute for locally generated BGP routes.
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) local-preference number
Tree	local-preference
Configurable	True
Platforms	Supported on all platforms

maintenance-group *string*

Description	State field to display the maintenance group to which this neighbor belongs to.
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) maintenance-group string
Tree	maintenance-group
Configurable	False
Platforms	Supported on all platforms

multihop

Description	Configuration parameters specifying the multihop behaviour for an EBGP peer. This is not applicable to an IBGP peer.
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) multihop
Tree	multihop
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	When enabled, the peer is allowed to be indirectly connected by up to N hops, where N is controlled by the maximum-hops parameter. When disabled, multihop is allowed only if the peer type is IBGP. This overrides the group setting for admin-state.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) multihop admin-state <i>keyword</i>
Tree	admin-state
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

maximum-hops *number*

Description	This sets the maximum number of routing hops towards the peer. It determines the IP TTL value in originated BGP TCP/IP packets. By default the TTL is set to 1 towards an EBGP peer and 64 towards an IBGP peer. This overrides the group setting for maximum-hops.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) multihop maximum-hops <i>number</i>
Tree	maximum-hops
Range	1 to 255
Configurable	True
Platforms	Supported on all platforms

next-hop-self *boolean*

Description	When set to true, the next-hop in all IPv4-unicast, IPv6-unicast and EVPN BGP routes advertised to the peer, if IBGP, is set equal to the local-address used on this session (or to the router ID if the NLRI is IPv6 and there is no IPv6 local address to use). This is independent of the route origin (EBGP, IBGP-client, IBGP-non-client or redistributed direct/static/aggregate route). When set to false, normal BGP rules from RFC 4271 apply.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) next-hop-self <i>boolean</i>
Tree	next-hop-self

Configurable	True
Platforms	Supported on all platforms

optional-attributes

Description	Enter the optional-attributes context
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) optional-attributes
Tree	optional-attributes
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

block-prefix-sid *boolean*

Description	Remove the prefix SID optional transitive attribute in all received and sent routes to this peer, or group of peers
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) optional-attributes block-prefix-sid <i>boolean</i>
Tree	block-prefix-sid
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

peer-as *number*

Description	The autonomous system number expected from the peer A configured session with a peer does not come up if this value does not match the AS value reported by the peer in its OPEN message.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) peer-as <i>number</i>
Tree	peer-as
Range	1 to 4294967295
Configurable	True
Platforms	Supported on all platforms

peer-group *reference*

Description	A reference to the peer-group template to use for this BGP session
--------------------	--

This is not immutable.

Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-group <i>reference</i>
Tree	peer-group
Reference	network-instance name <i>string</i> protocols bgp group group-name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

peer-router-id *string*

Description	The BGP identifier advertised by the peer in its OPEN message
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-router-id <i>string</i>
Tree	peer-router-id
Configurable	False
Platforms	Supported on all platforms

peer-type *keyword*

Description	The session type. The type is EBGP when the local AS and peer AS are different, and the type is IBGP when the local AS and peer AS have the same value.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) peer-type <i>keyword</i>
Tree	peer-type
Options	<ul style="list-style-type: none"> • <code>ibgp</code> Indicates that the peer is IBGP (<code>local-as == peer-as</code>). • <code>ebgp</code> Indicates that the peer is EBGP (<code>local-as != peer-as</code>).
Configurable	False
Platforms	Supported on all platforms

received-afi-safi *identityref*

Description	List of multiprotocol BGP address families supported by the peer, derived from the AFI/SAFI list in the MP-BGP capability received by the local routing device from the peer
--------------------	--

Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) received-afi-safi identityref
Tree	received-afi-safi
Options	<ul style="list-style-type: none"> • ipv4-unicast Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1) • ipv6-unicast Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1) • l3vpn-ipv4-unicast VPN-IPv4 unicast address family (AFI = 1, SAFI = 128) • l3vpn-ipv6-unicast VPN-IPv6 unicast address family (AFI = 2, SAFI = 128) • ipv4-labeled-unicast Labeled IPv4 unicast routes (AFI 1, SAFI 4) • ipv6-labeled-unicast Labeled IPv6 unicast routes (AFI 2, SAFI 4) • evpn EVPN routes (AFI = 25, SAFI = 70) • route-target Route target constraint routes (AFI 1, SAFI 132) • sr-policy-ipv4 SR-TE Policy (AFI 1, SAFI 73) • sr-policy-ipv6 SR-TE Policy (AFI 2, SAFI 73)
Configurable	False
Platforms	Supported on all platforms

received-capabilities *keyword*

Description	List of BGP capabilities received by the local routing device from the peer
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) received-capabilities keyword
Tree	received-capabilities
Options	<ul style="list-style-type: none"> • MP_BGP • ROUTE_REFRESH • EXT_NH_ENCODING • GRACEFUL_RESTART

last-notification-time *string***Description**

Timestamp representing the time of the last Notification message received from the peer.

Context

[network-instance name](#) *string* [protocols bgp neighbor peer-address](#) (*ipv4-address-with-zone | ipv6-address-with-zone*) [received-messages last-notification-time](#) *string*

Tree	last-notification-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-update-time *string*

Description	The timestamp when the last UPDATE was received from this peer.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) received-messages last-update-time <i>string</i>
Tree	last-update-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

malformed-updates *number*

Description	Number of BGP UPDATE messages received from the peer that were malformed but recoverable through treat-as-withdraw or attribute-discard (i.e. without session reset)
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) received-messages malformed-updates <i>number</i>
Tree	malformed-updates
Default	0
Configurable	False
Platforms	Supported on all platforms

queue-depth *number*

Description	The number of messages received from the peer currently queued.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) received-messages queue-depth <i>number</i>
Tree	queue-depth
Configurable	False
Platforms	Supported on all platforms

route-refresh *number*

Description	Number of BGP ROUTE_REFRESH messages received from the peer over the lifetime of its configuration or since the last clear.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) received-messages route-refresh <i>number</i>
Tree	route-refresh
Default	0
Configurable	False
Platforms	Supported on all platforms

total-messages *number*

Description	Total number of BGP messages received from the peer over the lifetime of its configuration or since the last clear.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) received-messages total-messages <i>number</i>
Tree	total-messages
Default	0
Configurable	False
Platforms	Supported on all platforms

total-non-updates *number*

Description	Number of BGP NON UPDATE messages received from the peer over the lifetime of its configuration or since the last clear.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) received-messages total-non-updates <i>number</i>
Tree	total-non-updates
Configurable	False
Platforms	Supported on all platforms

total-notifications *number*

Description	Number of BGP Notification messages received from the peer over the lifetime of its configuration or since the last clear.
--------------------	--

Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) received-messages total-notifications <i>number</i>
Tree	total-notifications
Configurable	False
Platforms	Supported on all platforms

total-updates *number*

Description	Number of BGP UPDATE messages received from the peer over the lifetime of its configuration or since the last clear.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) received-messages total-updates <i>number</i>
Tree	total-updates
Default	0
Configurable	False
Platforms	Supported on all platforms

route-reflector

Description	Container with route reflection configuration options.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) route-reflector
Tree	route-reflector
Configurable	True
Platforms	Supported on all platforms

client *boolean*

Description	When this is set to true this BGP session is considered an RR client.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) route-reflector client <i>boolean</i>
Tree	client
Configurable	True
Platforms	Supported on all platforms

cluster-id (*number* | *dotted-quad*)

Description	The cluster-id to insert into the CLUSTER_LIST attribute when reflecting routes received by or sent to this client. The default is inherited from group or instance level configuration.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) route-reflector cluster-id (<i>number</i> <i>dotted-quad</i>)
Tree	cluster-id
Range	1 to 4294967295
Configurable	True
Platforms	Supported on all platforms

send-community

Description	Options for controlling the sending of BGP communities to the peer
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-community
Tree	send-community
Configurable	True
Platforms	Supported on all platforms

large *boolean*

Description	The false setting causes BGP to strip all large (12 byte) BGP communities from all outbound routes advertised to the peer
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-community large <i>boolean</i>
Tree	large
Configurable	True
Platforms	Supported on all platforms

standard *boolean*

Description	The false setting causes BGP to strip all standard (4 byte) communities from all outbound routes advertised to the peer
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-community standard <i>boolean</i>

Tree	standard
Configurable	True
Platforms	Supported on all platforms

send-default-route

Description	Options for controlling the generation of default routes towards the peer
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) send-default-route
Tree	send-default-route
Configurable	True
Platforms	Supported on all platforms

export-policy *reference*

Description	The name of a policy that should be applied to the advertised default routes, in order to set their attributes to non-default values Only the default-action of this policy is parsed and applied.
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) send-default-route export-policy reference
Tree	export-policy
Reference	routing-policy policy name string
Configurable	True
Platforms	Supported on all platforms

ipv4-unicast *boolean*

Description	Enables the sending of a synthetically generated default IPv4 route [0/0] to the peer
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) send-default-route ipv4-unicast boolean
Tree	ipv4-unicast
Configurable	True
Platforms	Supported on all platforms

ipv6-unicast *boolean*

Description	Enables the sending of a synthetically generated default IPv6 route [::/0] to the peer
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) send-default-route ipv6-unicast boolean
Tree	ipv6-unicast
Configurable	True
Platforms	Supported on all platforms

sent-end-of-rib *identityref*

Description	List of address families for which this router sent the peer an End of RIB marker
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) sent-end-of-rib identityref
Tree	sent-end-of-rib
Options	<ul style="list-style-type: none"> • ipv4-unicast Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1) • ipv6-unicast Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1) • l3vpn-ipv4-unicast VPN-IPv4 unicast address family (AFI = 1, SAFI = 128) • l3vpn-ipv6-unicast VPN-IPv6 unicast address family (AFI = 2, SAFI = 128) • ipv4-labeled-unicast Labeled IPv4 unicast routes (AFI 1, SAFI 4) • ipv6-labeled-unicast Labeled IPv6 unicast routes (AFI 2, SAFI 4) • evpn EVPN routes (AFI = 25, SAFI = 70) • route-target Route target constraint routes (AFI 1, SAFI 132) • sr-policy-ipv4 SR-TE Policy (AFI 1, SAFI 73) • sr-policy-ipv6

SR-TE Policy (AFI 2, SAFI 73)

Configurable	False
Platforms	Supported on all platforms

sent-messages

Description	Container for state information about BGP messages sent to the peer.
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) sent-messages
Tree	sent-messages
Configurable	False
Platforms	Supported on all platforms

last-notification-error-code *keyword*

Description	The error code in the last NOTIFICATION sent to this peer.
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) sent-messages last-notification-error-code <i>keyword</i>
Tree	last-notification-error-code
Options	<ul style="list-style-type: none"> • Message Header Error • Open Message Error • Update Message Error • Hold Timer Error • Finite State Machine Error • Cease
Configurable	False
Platforms	Supported on all platforms

last-notification-error-subcode *keyword*

Description	The error subcode in the last NOTIFICATION sent to this peer.
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) sent-messages last-notification-error-subcode <i>keyword</i>
Tree	last-notification-error-subcode
Options	<ul style="list-style-type: none"> • Connection Not Synchronized

Platforms	Supported on all platforms

slow-peer *keyword*

Description	Set to 'yes' if, after the last BGP restart, the session was in a lesser state than established when the min-wait-to-advertise timer expired Set to unknown if the min-wait-to-advertise time has not yet elapsed.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) slow-peer <i>keyword</i>
Tree	slow-peer
Options	<ul style="list-style-type: none"> • yes • no • unknown
Configurable	False
Platforms	Supported on all platforms

timers

Description	Enter the timers context
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) timers
Tree	timers
Configurable	True

Platforms Supported on all platforms

connect-retry *number*

Description The time interval in seconds between successive attempts to establish a session with a peer

Context [network-instance name](#) *string* [protocols](#) [bgp](#) [neighbor](#) [peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [timers](#) [connect-retry](#) *number*

Tree [connect-retry](#)

Range 1 to 65535

Units seconds

Configurable True

Platforms Supported on all platforms

hold-time *number*

Description The hold-time interval in seconds that the router proposes to the peer in its OPEN message

The actual in-use hold-time is negotiated to the lowest value proposed by the two peers. A negotiated value of 0 suppresses the sending of keepalives by both peers.

Context [network-instance name](#) *string* [protocols](#) [bgp](#) [neighbor](#) [peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [timers](#) [hold-time](#) *number*

Tree [hold-time](#)

Range 0 | 3 to 65535

Units seconds

Configurable True

Platforms Supported on all platforms

keepalive-interval *number*

Description The interval in seconds between successive keepalive messages sent to the peer

The period between one keepalive message and the next is the minimum of this configured (or inherited) value and 1/3 of the negotiated hold-time duration. A value of 0 suppresses the sending of keepalives to the peer.

Context [network-instance name](#) *string* [protocols](#) [bgp](#) [neighbor](#) [peer-address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*) [timers](#) [keepalive-interval](#) *number*

Tree	keepalive-interval
Range	0 to 21845
Units	seconds
Configurable	True
Platforms	Supported on all platforms

minimum-advertisement-interval *number*

Description	<p>The value assigned to the MinRouteAdvertisementIntervalTimer of RFC 4271, for both EBGp and IBGP sessions</p> <p>Each session runs its own independent timer and the timer affects both route advertisements and route withdrawals, regardless of address family. For route withdrawals only, this timer is bypassed if rapid-withdrawal is set to true.</p>
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) timers minimum-advertisement-interval <i>number</i>
Tree	minimum-advertisement-interval
Range	1 to 255
Units	seconds
Configurable	True
Platforms	Supported on all platforms

negotiated-hold-time *number*

Description	<p>The operational hold-time</p> <p>It is negotiated to the lowest value proposed by the two peers. A negotiated value of 0 suppresses the sending of keepalives by both peers.</p>
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) timers negotiated-hold-time <i>number</i>
Tree	negotiated-hold-time
Configurable	False
Platforms	Supported on all platforms

negotiated-keepalive-interval *number*

Description	The operational keepalive interval
--------------------	------------------------------------

It is the minimum of the configured value and 1/3 of the negotiated-hold-time. A value of 0 suppresses the sending of keepalives to the peer.

Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) timers negotiated-keepalive-interval <i>number</i>
Tree	negotiated-keepalive-interval
Configurable	False
Platforms	Supported on all platforms

next-connect-retry-time *string*

Description	The time when the next connect retry attempt will occur
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) timers next-connect-retry-time <i>string</i>
Tree	next-connect-retry-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

prefix-limit-restart-timer *number*

Description	Time interval in seconds after which the BGP session is re-established after being torn down due to exceeding any prefix limit (of any address family) This only applies if prevent-teardown is false.
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) timers prefix-limit-restart-timer <i>number</i>
Tree	prefix-limit-restart-timer
Units	seconds
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

trace-options

Description	Debug traceoptions for BGP
--------------------	----------------------------

Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) trace-options
Tree	trace-options
Configurable	True
Platforms	Supported on all platforms

flag *name keyword*

Description	Tracing parameters
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) trace-options flag name <i>keyword</i>
Tree	flag
Configurable	True
Platforms	Supported on all platforms

name *keyword*

Description	Enter the name context
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone ipv6-address-with-zone</i>) trace-options flag name <i>keyword</i>
Options	<ul style="list-style-type: none"> • events Trace all BGP events. • packets Trace all BGP protocol packets. • open Trace BGP open packets. • keepalive Trace BGP keepalive packets. • graceful-restart Trace Graceful Restart events. • timers Trace routing protocol timer processing. • route Trace BGP route table manager. • notification

- Trace Bgp notification.
- socket
 - Trace socket info.
- update
 - Trace update info.

Configurable	True
Platforms	Supported on all platforms

modifier *keyword*

Description	Enter the modifier context
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) trace-options flag name keyword modifier keyword
Tree	modifier
Options	<ul style="list-style-type: none"> • detail <ul style="list-style-type: none"> To enable detailed tracing. Includes both received and sent packets. • receive <ul style="list-style-type: none"> To enable tracing for the packets which are received. • send <ul style="list-style-type: none"> To enable tracing for the sent packets.
Configurable	True
Platforms	Supported on all platforms

transport

Description	Enter the transport context
Context	network-instance name <i>string</i> protocols bgp neighbor peer-address (<i>ipv4-address-with-zone</i> <i>ipv6-address-with-zone</i>) transport
Tree	transport
Configurable	True
Platforms	Supported on all platforms

local-address (*ipv4-address* | *ipv6-address* | *subinterface-all*)

Description	The local TCP endpoint of used for the BGP session
--------------------	--

This also the source address for next-hop-self, if it applies. The local-address can be specified as an IP address that is resolvable to a local interface.

This address must be the primary address of an interface, otherwise the session will not come up.

Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) transport local-address (ipv4-address ipv6-address subinterface-all)
Tree	local-address
String Length	5 to 25
Configurable	True
Platforms	Supported on all platforms

local-port *number*

Description	Local TCP port used for the TCP connection to the peer
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) transport local-port number
Tree	local-port
Configurable	False
Platforms	Supported on all platforms

mtu-discovery *boolean*

Description	Turns path mtu discovery on (true) or off (false)
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) transport mtu-discovery boolean
Tree	mtu-discovery
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

passive-mode *boolean*

Description	The true setting causes BGP to wait for the peer to initiate the TCP connection The false setting causes BGP to initiate a TCP connection whenever the BGP session is started or restarted.
--------------------	--

Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) transport passive-mode boolean
Tree	passive-mode
Configurable	True
Platforms	Supported on all platforms

remote-port *number*

Description	Remote TCP port used by the peer for its TCP connection to the local router
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) transport remote-port number
Tree	remote-port
Configurable	False
Platforms	Supported on all platforms

tcp-mss *number*

Description	The maximum segment size of BGP TCP packets The configured value of this leaf is the TCP MSS value advertised to the peer during TCP connection setup (in the TCP MSS option), reduced if necessary to accommodate the outgoing interface IP MTU. The state value of this leaf is the operational TCP MSS used in the data transmit direction towards the peer. It may be less than the received TCP MSS option value due to adjustment for TCP options used in the transit direction and/or the path MTU discovery process (if enabled).
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) transport tcp-mss number
Tree	tcp-mss
Range	536 to 9446
Units	bytes
Configurable	True
Platforms	Supported on all platforms

under-maintenance *boolean*

Description	State field to determine if this bgp neighbor is in maintenance mode.
Context	network-instance name string protocols bgp neighbor peer-address (ipv4-address-with-zone ipv6-address-with-zone) under-maintenance boolean

Tree	under-maintenance
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	Enter the oper-state context
Context	network-instance name <i>string</i> protocols bgp oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Operational state of BGP is up. • down Operational state of BGP is down.
Configurable	False
Platforms	Supported on all platforms

preference

Description	Options for controlling the route table preference of BGP routes
Context	network-instance name <i>string</i> protocols bgp preference
Tree	preference
Configurable	True
Platforms	Supported on all platforms

ebgp *number*

Description	The default route table preference for all EBGp learned routes BGP import policies can override this preference value on a route by route basis.
Context	network-instance name <i>string</i> protocols bgp preference ebgp <i>number</i>
Tree	ebgp
Range	1 to 255
Default	170
Configurable	True
Platforms	Supported on all platforms

ibgp number

Description	The default route table preference for all IBGP learned routes BGP import policies can override this preference value on a route by route basis.
Context	network-instance name <i>string</i> protocols bgp preference ibgp number
Tree	ibgp
Range	1 to 255
Default	170
Configurable	True
Platforms	Supported on all platforms

rib-management

Description	Enter the rib-management context
Context	network-instance name <i>string</i> protocols bgp rib-management
Tree	rib-management
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

table [address-family identityref](#)

Description	List of RIB tables maintained by BGP running in this network-instance
Context	network-instance name <i>string</i> protocols bgp rib-management table address-family identityref
Tree	table
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

address-family [identityref](#)

Description	BGP address family
Context	network-instance name <i>string</i> protocols bgp rib-management table address-family identityref
Options	<ul style="list-style-type: none"> ipv4-unicast Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1)

- ipv6-unicast
Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1)
- l3vpn-ipv4-unicast
VPN-IPv4 unicast address family (AFI = 1, SAFI = 128)
- l3vpn-ipv6-unicast
VPN-IPv6 unicast address family (AFI = 2, SAFI = 128)
- ipv4-labeled-unicast
Labeled IPv4 unicast routes (AFI 1, SAFI 4)
- ipv6-labeled-unicast
Labeled IPv6 unicast routes (AFI 2, SAFI 4)
- evpn
EVPN routes (AFI = 25, SAFI = 70)
- route-target
Route target constraint routes (AFI 1, SAFI 132)
- sr-policy-ipv4
SR-TE Policy (AFI 1, SAFI 73)
- sr-policy-ipv6
SR-TE Policy (AFI 2, SAFI 73)

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

route-table-import *reference*

Description	Apply a route policy to accept routes that should be installed in the BGP RIB table
Context	network-instance name <i>string</i> protocols bgp rib-management table address-family <i>identityref</i> route-table-import <i>reference</i>
Tree	route-table-import
Reference	routing-policy policy name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

route-advertisement

Description	Options for controlling route advertisement behavior
Context	network-instance name <i>string</i> protocols bgp route-advertisement
Tree	route-advertisement

Configurable	True
Platforms	Supported on all platforms

rapid-withdrawal *boolean*

Description	The true setting enables rapid-withdraw towards BGP peers If there is only one BGP route for an NLRI in BGP RIB, and this route is withdrawn or becomes invalid, rapid-withdraw causes BGP to immediately send a withdrawal of the BGP route even if the min-route-advertisement timer has not expired.
Context	network-instance name <i>string</i> protocols bgp route-advertisement rapid-withdrawal <i>boolean</i>
Tree	rapid-withdrawal
Default	false
Configurable	True
Platforms	Supported on all platforms

wait-for-fib-install *boolean*

Description	The true setting causes BGP to NOT advertise initial reachability to a prefix, or a change of reachability to a prefix, until it receives acknowledgment from FIB manager that the route change has been applied Does not apply to route withdrawals.
Context	network-instance name <i>string</i> protocols bgp route-advertisement wait-for-fib-install <i>boolean</i>
Tree	wait-for-fib-install
Default	true
Configurable	True
Platforms	Supported on all platforms

route-reflector

Description	Container with route reflection configuration options.
Context	network-instance name <i>string</i> protocols bgp route-reflector
Tree	route-reflector
Configurable	True
Platforms	Supported on all platforms

client *boolean*

Description	When this is set to true all configured and dynamic sessions of the BGP instance are considered RR clients, subject to overrides at more specific levels of configuration.
Context	network-instance name <i>string</i> protocols bgp route-reflector client <i>boolean</i>
Tree	client
Default	false
Configurable	True
Platforms	Supported on all platforms

cluster-id (*number* | *dotted-quad*)

Description	The cluster-id to insert into the CLUSTER_LIST attribute when reflecting routes received by or sent to clients in this scope of this container. The default is the router-id.
Context	network-instance name <i>string</i> protocols bgp route-reflector cluster-id (<i>number</i> <i>dotted-quad</i>)
Tree	cluster-id
Range	1 to 4294967295
Configurable	True
Platforms	Supported on all platforms

router-id (*ipv4-address* | *ipv6-address*)

Description	The BGP identifier used by this BGP instance in all of its OPEN messages. Any non-zero value is supported.
Context	network-instance name <i>string</i> protocols bgp router-id (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	router-id
Configurable	True
Platforms	Supported on all platforms

segment-routing-mpls

Description	BGP support for segment routing using MPLS dataplane
Context	network-instance name <i>string</i> protocols bgp segment-routing-mpls

Tree	segment-routing-mpls
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Enable SR-MPLS support within BGP
Context	network-instance name <i>string</i> protocols bgp segment-routing-mpls admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

send-community

Description	Options for controlling the sending of BGP communities to all peers
Context	network-instance name <i>string</i> protocols bgp send-community
Tree	send-community
Configurable	True
Platforms	Supported on all platforms

large *boolean*

Description	The false setting causes BGP to strip all large (12 byte) BGP communities from all outbound routes advertised to peers
Context	network-instance name <i>string</i> protocols bgp send-community large <i>boolean</i>
Tree	large
Default	true
Configurable	True
Platforms	Supported on all platforms

standard *boolean*

Description	The false setting causes BGP to strip all standard (4 byte) communities from all outbound routes advertised to peers
Context	network-instance name <i>string</i> protocols bgp send-community standard <i>boolean</i>
Tree	standard
Default	true
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Container for BGP statistics.
Context	network-instance name <i>string</i> protocols bgp statistics
Tree	statistics
Configurable	False
Platforms	Supported on all platforms

disabled-peers *number*

Description	The number of configured BGP peers that are administratively disabled
Context	network-instance name <i>string</i> protocols bgp statistics disabled-peers <i>number</i>
Tree	disabled-peers
Configurable	False
Platforms	Supported on all platforms

dynamic-peers *number*

Description	The number of dynamic BGP peers that are currently in the established state, counting sessions resulting from accepted incoming TCP connections and outgoing TCP connections triggered by LLDP auto-discovery
Context	network-instance name <i>string</i> protocols bgp statistics dynamic-peers <i>number</i>
Tree	dynamic-peers
Configurable	False
Platforms	Supported on all platforms

path-memory *number*

Description	The total number of bytes required to store the path attribute objects used by all received BGP routes
Context	network-instance name <i>string</i> protocols bgp statistics path-memory <i>number</i>
Tree	path-memory
Default	0
Configurable	False
Platforms	Supported on all platforms

total-active-routes *number*

Description	The total number of received BGP routes that are active (installed for forwarding), summed across all address families
Context	network-instance name <i>string</i> protocols bgp statistics total-active-routes <i>number</i>
Tree	total-active-routes
Default	0
Configurable	False
Platforms	Supported on all platforms

total-paths *number*

Description	The total number of path attribute objects used by all received BGP routes
Context	network-instance name <i>string</i> protocols bgp statistics total-paths <i>number</i>
Tree	total-paths
Default	0
Configurable	False
Platforms	Supported on all platforms

total-peers *number*

Description	The total number of configured BGP peers
Context	network-instance name <i>string</i> protocols bgp statistics total-peers <i>number</i>
Tree	total-peers
Configurable	False

Platforms Supported on all platforms

total-prefixes *number*

Description The total number of unique NLRI contained in all received BGP routes associated with the BGP instance or the peer-group.

Context [network-instance name](#) *string* [protocols bgp statistics total-prefixes](#) *number*

Tree [total-prefixes](#)

Configurable False

Platforms Supported on all platforms

total-received-routes *number*

Description The total number of received BGP routes, summed across all address families

Context [network-instance name](#) *string* [protocols bgp statistics total-received-routes](#) *number*

Tree [total-received-routes](#)

Default 0

Configurable False

Platforms Supported on all platforms

up-peers *number*

Description The number of configured BGP peers that are currently in the established state

Context [network-instance name](#) *string* [protocols bgp statistics up-peers](#) *number*

Tree [up-peers](#)

Configurable False

Platforms Supported on all platforms

trace-options

Description Debug traceoptions for BGP

Context [network-instance name](#) *string* [protocols bgp trace-options](#)

Tree [trace-options](#)

Configurable True

Platforms Supported on all platforms

flag *name keyword*

Description Tracing parameters

Context [network-instance name](#) *string* [protocols bgp trace-options flag name](#) *keyword*

Tree [flag](#)

Configurable True

Platforms Supported on all platforms

name *keyword*

Description Enter the name context

Context [network-instance name](#) *string* [protocols bgp trace-options flag name](#) *keyword*

Options

- events
Trace all BGP events.
- packets
Trace all BGP protocol packets.
- open
Trace BGP open packets.
- keepalive
Trace BGP keepalive packets.
- graceful-restart
Trace Graceful Restart events.
- timers
Trace routing protocol timer processing.
- route
Trace BGP route table manager.
- notification
Trace Bgp notification.
- socket
Trace socket info.
- update
Trace update info.

Configurable True

Platforms Supported on all platforms

modifier *keyword*

Description	Enter the modifier context
Context	network-instance name <i>string</i> protocols bgp trace-options flag name <i>keyword</i> modifier <i>keyword</i>
Tree	modifier
Options	<ul style="list-style-type: none"> • detail To enable detailed tracing. Includes both received and sent packets. • receive To enable tracing for the packets which are received. • send To enable tracing for the sent packets.
Configurable	True
Platforms	Supported on all platforms

transport

Description	Options related to the TCP transport of BGP sessions
Context	network-instance name <i>string</i> protocols bgp transport
Tree	transport
Configurable	True
Platforms	Supported on all platforms

mtu-discovery *boolean*

Description	Turns path mtu discovery for BGP TCP sessions on (true) or off (false) If this is unconfigured then the setting comes from <code>network-instance/mtu/path-mtu-discovery</code> . Changing the value of <code>network-instance/mtu/path-mtu-discovery</code> takes effect only for new connections established after the change
Context	network-instance name <i>string</i> protocols bgp transport mtu-discovery <i>boolean</i>
Tree	mtu-discovery
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

single-hop-connected-check *boolean*

Description	<p>Control whether a single-hop BGP session should be allowed to setup if its 'related interface' is down.</p> <p>If single-hop-connected-check is false, a single-hop BGP session (EBGP or IBGP) to any IPv4 or IPv6 neighbor address is permitted to establish if there is ANY valid (IPv6 global unicast, IPv4 link-local, or IPv4 global) route to that neighbor address, regardless of whether the 'related interface' is up or down.</p> <p>If single-hop-connected-check is true (default value), a single-hop BGP session (EBGP or IBGP) to any IPv4 or IPv6 neighbor address is only permitted to transition from idle to a higher state if the 'related interface' is up.</p> <p>The 'related interface' of a single hop peer is the subinterface associated with the IPv6 link local neighbor address or else the subinterface with a primary or secondary IP address and prefix-length that covers the neighbor address.</p>
Context	network-instance name <i>string</i> protocols bgp transport single-hop-connected-check <i>boolean</i>
Tree	single-hop-connected-check
Default	true
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

tcp-mss *number*

Description	<p>The maximum segment size of BGP TCP packets</p> <p>The actual value used in the transmit direction towards a particular peer should be checked at the neighbor level.</p>
Context	network-instance name <i>string</i> protocols bgp transport tcp-mss <i>number</i>
Tree	tcp-mss
Range	536 to 9446
Default	1024
Configurable	True
Platforms	Supported on all platforms

under-maintenance *boolean*

Description	State field to determine if the bgp instance is in maintenance mode.
--------------------	--

Context	network-instance name <i>string</i> protocols bgp under-maintenance <i>boolean</i>
Tree	under-maintenance
Configurable	False
Platforms	Supported on all platforms

bgp-evpn

Description	Enable the bgp-evpn context
Context	network-instance name <i>string</i> protocols bgp-evpn
Tree	bgp-evpn
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bgp-instance [id reference](#)

Description	bgp evpn instances configured in net-instance
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id reference

Reference	network-instance name <i>string</i> protocols bgp-vpn bgp-instance id number
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Configurable state of the bgp evpn instance.
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ecmp *number*

Description	The supported range of ECMP values for layer-2 aliasing (in mac-vrf or vpws instances) or layer-3 ecmp (in routed instances)
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> ecmp <i>number</i>
Tree	ecmp
Range	1 to 64
Default	1
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

encapsulation-type *keyword*

Description	encap type of the bgp evpn instance.
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> encapsulation-type <i>keyword</i>
Tree	encapsulation-type
Default	vxlan
Options	<ul style="list-style-type: none"> • vxlan • mpls

Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

evi number

Description	EVPN Instance identifier associated to the bgp-evpn instance. Used for auto-derivation of: In addition, the evi value is used for the EVPN Multi-Homing Designated Forwarder (DF) Election.
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> evi number
Tree	evi
Range	1 to 65535
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

internal-tags

Description	Configuration and state of internal tags
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> internal-tags
Tree	internal-tags
Configurable	True
Platforms	Supported on all platforms

set-tag-set *reference*

Description	Reference to a tag-set defined under routing-policy
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> internal-tags set-tag-set <i>reference</i>
Tree	set-tag-set
Reference	routing-policy tag-set name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

Max. Elements 1

mpls

Description Enable the mpls context

Context [network-instance name](#) *string* [protocols bgp-evpn bgp-instance id](#) *reference*
[mpls](#)

Tree [mpls](#)

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bridge-table

Description Enable the bridge-table context

Context [network-instance name](#) *string* [protocols bgp-evpn bgp-instance id](#) *reference*
[mpls bridge-table](#)

Tree [bridge-table](#)

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ingress-multicast-mpls-label *number*

Description The ingress label allocated for Broadcast, Unknown unicast and Multicast traffic

The ingress multicast mpls label is advertised by the EVPN Inclusive Multicast Ethernet Tag (IMET) route and it is expected on received EVPN packets that were generated as BUM packets.

Context [network-instance name](#) *string* [protocols bgp-evpn bgp-instance id](#) *reference*
[mpls bridge-table ingress-multicast-mpls-label](#) *number*

Tree [ingress-multicast-mpls-label](#)

Range 16 to 1048575

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ingress-unicast-mpls-label *number*

Description The ingress label allocated for unicast traffic

The ingress unicast mpls label is advertised by the EVPN MAC/IP Advertisement routes and it is expected on received EVPN packets that were generated as unicast packets.

Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> mpls bridge-table ingress-unicast-mpls-label <i>number</i>
Tree	ingress-unicast-mpls-label
Range	16 to 1048575
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

multicast-destinations

Description	Enter the multicast-destinations context
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> mpls bridge-table multicast-destinations
Tree	multicast-destinations
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

destination [tep](#) ([ipv4-address](#) | [ipv6-address](#)) [evi-label](#) *number* [tunnel-id](#) *number*

Description	Enter the destination list instance
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> mpls bridge-table multicast-destinations destination tep (ipv4-address ipv6-address) evi-label <i>number</i> tunnel-id <i>number</i>
Tree	destination
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

[tep](#) ([ipv4-address](#) | [ipv6-address](#))

Description	The IP address that identifies the remote EVPN Termination Endpoint (TEP).
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> mpls bridge-table multicast-destinations destination tep (ipv4-address ipv6-address) evi-label <i>number</i> tunnel-id <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

evi-label number

Description	EVI label of the destination.
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id reference mpls bridge-table multicast-destinations destination tep (ipv4-address ipv6-address) evi-label number tunnel-id number
Range	16 to 1048575
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

tunnel-id number

Description	tunnel identifier of the destination.
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id reference mpls bridge-table multicast-destinations destination tep (ipv4-address ipv6-address) evi-label number tunnel-id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

destination-index number

Description	A system-wide unique identifier of this evpn-mpls destination object (system allocated).
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id reference mpls bridge-table multicast-destinations destination tep (ipv4-address ipv6-address) evi-label number tunnel-id number destination-index number
Tree	destination-index
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

multicast-forwarding keyword

Description	The type of multicast data forwarded by this evpn-mpls destination.
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id reference mpls bridge-table multicast-destinations destination tep (ipv4-address ipv6-address) evi-label number tunnel-id number multicast-forwarding keyword
Tree	multicast-forwarding
Options	<ul style="list-style-type: none"> • none

- BUM
- unknown-unicast
- broadcast-mcast

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

not-programmed-reason *keyword*

Description	The reason why the destination is not programmed in the floodlist
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> mpls bridge-table multicast-destinations destination tep (<i>ipv4-address</i> <i>ipv6-address</i>) evi-label number tunnel-id number not-programmed-reason <i>keyword</i>
Tree	not-programmed-reason
Options	<ul style="list-style-type: none"> • no-destination-index • multicast-limit
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

multicast-limit

Description	Multicast limits per vxlan interface.
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> mpls bridge-table multicast-destinations multicast-limit
Tree	multicast-limit
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

current-usage *number*

Description	Maximum number of multicast vxlan-destinations in use on this bgp-evpn mpls instance.
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> mpls bridge-table multicast-destinations multicast-limit current-usage <i>number</i>
Tree	current-usage
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum-entries *number*

Description	Maximum number of multicast vxlan-destinations allowed on a bgp-evpn mpls instance.
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> mpls bridge-table multicast-destinations multicast-limit maximum-entries <i>number</i>
Tree	maximum-entries
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

split-horizon-group *reference*

Description	The split-horizon-group associated to the evpn-mpls instance
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> mpls bridge-table split-horizon-group <i>reference</i>
Tree	split-horizon-group
Reference	network-instance name <i>string</i> bridge-table <i>string</i>
Configurable	True
Platforms	bridged and bt-split-horizon-groups and evpn-mpls-shg

statistics

Description	Enter the statistics context
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> mpls bridge-table statistics
Tree	statistics
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

active-entries *number*

Description	The total number of entries that are active on the evpn-mpls instance.
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> mpls bridge-table statistics active-entries <i>number</i>
Tree	active-entries
Default	0

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

failed-entries *number*

Description	The total number of macs, which have not been programmed on at least one slot.
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> mpls bridge-table statistics failed-entries <i>number</i>
Tree	failed-entries
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mac-type *type keyword*

Description	The type of the mac on the evpn-mpls instance.
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> mpls bridge-table statistics mac-type type <i>keyword</i>
Tree	mac-type
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

type *keyword*

Description	Enter the type context
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> mpls bridge-table statistics mac-type type <i>keyword</i>
Options	<ul style="list-style-type: none"> • static • duplicate • learnt • irb-interface • evpn • evpn-static • irb-interface-anycast • proxy-anti-spoof • reserved

control-word *boolean*

Description	Configures the use of control-word for EVPN MPLS packets When set to true, the router pushes the control-word below the bottom of the stack label. This prevents the Provider routers from mistakenly decode the payload of EVPN packets as an IP header and disorder packets of the same flow.
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> mpls control-word <i>boolean</i>
Tree	control-word
Default	false
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

flow-label *boolean*

Description	Configures the use of flow-label for EVPN MPLS packets When set to true, the router signals the use of the Flow Aware Transport (FAT) label in the F flag of the Layer 2 attributes extended community sent along with the EVPN routes (AD per EVI for VPWS or Inclusive Multicast Ethernet Tag route for MAC-VRF). For EVPN VPWS network instances, if the local and remote flags are set to 1 and match, the flow label is pushed at the bottom of the stack. On reception, the flow label is also expected and packets without it are dropped. If there is a mismatch between the local and remote F flags, the EVPN destination is removed.
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> mpls flow-label <i>boolean</i>
Tree	flow-label

Default	false
Configurable	True
Platforms	flow-aware-transport-label-evpn-mpls-vpws

next-hop-resolution

Description	This leaf contains the operational state of bgp-instance.
Context	network-instance name <i>string</i> protocols bgp-evpn bgp-instance id <i>reference</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed • synchronizing Component is currently being synchronized • upgrading Component is currently being upgraded • low-power Component is offline due to insufficient system power • degraded Component or process is in a degraded state • warm-reboot

Component or process is currently warm rebooting

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

admin-state *keyword*

Description Setting enable triggers weighted ECMP programming for all eligible multipath EVPN IFL routes

When set to enable, the router processes the evpn-link-bandwidth extended community when installing an ECMP set for an EVPN IP-Prefix route in the ip-vrf route table. Flows to an IP Prefix received with a weight and a zero-ESI are sprayed based on the weight. If the EVPN IP Prefix route received with the weight has a non-zero ESI, the weight is divided into the number of PEs attached to the Ethernet Segment (and rounded up if the result is not an integer). The command also enables the weighted ECMP functionality for BGP CEs that are configured with the parameter evpn-link-bandwidth add-weight-to-received-bgp-routes <weight>.

import-rt (*string* | *string* | *string* | *string* | *string* | *string* | *string* | *string*)

Description	Import Route Target (RT) in the bgp-vpn instance. When used for evpn and if not configured, the RT is auto-derived with the format <asn>:<evi> where 'asn' is the autonomous-system configured in the network-instance default.
Context	network-instance name <i>string</i> protocols bgp-vpn bgp-instance id <i>number</i> route-target import-rt (<i>string</i> <i>string</i> <i>string</i> <i>string</i> <i>string</i> <i>string</i> <i>string</i> <i>string</i> <i>string</i>)
Tree	import-rt
Configurable	True
Platforms	Supported on all platforms

combined-ecmp

Description	Combine BGP owners into the same ECMP set When enabled, candidate BGP PE-CE routes and BGP VPN routes (EVPN IFL or VPN-IP) to the same prefix are combined into a single ECMP set. A single route with a combined next hop group is installed in the route table. If different BGP owners are combined and have different configured ecmp maximum values, the minimum of the maximum configured values is considered for the combined ECMP set.
Context	network-instance name <i>string</i> protocols bgp-vpn combined-ecmp
Tree	combined-ecmp
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

gribi

Description	Container for gRIBI configuration and state.
Context	network-instance name <i>string</i> protocols gribi
Tree	gribi
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Administratively enable or disable gRIBI support. The enable setting only has an effect when the network-instance type is ip-vrf or default. When this is set to disable all IP entries and next-hop-groups associated with the network-instance are deleted from the gRIBI server database and the recovery of this state depends on the gRIBI clients to re-signal all of the deleted entries. While in a disabled state, no entries are accepted for this network-instance. (This is the same behavior when the network-instance does not exist at all.)
Context	network-instance name <i>string</i> protocols gribi admin-state <i>keyword</i>
Tree	admin-state

oper-state *keyword*

Description The operational state of gRIBI with respect to programming of entries in this network network-instance
By default, even with no configuration, the state is up in all network-instances of type ip-vrf and default

Context [network-instance name](#) *string* [protocols gribi oper-state](#) *keyword*

Tree [oper-state](#)

Options

- up
Component or process is operational
- down
Component or process is not operational
- empty
Component slot is empty
- downloading
Component is downloading image into memory
- booting
Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized

- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

query-last-member-interval *number*

Description Interval at which Group-Specific-Query packets are transmitted

When used along with EVPN multi-homing, the result of this value multiplied by the interface robust-count must be a value equal to or less than 25.5 seconds. This is due to the fact that the maximum response time field in the EVPN Multicast Leave Synch route has a limit of 255 units of 1/10 second, and this field encodes the result of $[(\text{query-last-member-interval} * 10) * \text{robust-count}]$.

If the result of that operation is greater than 255, the maximum response time in the EVPN Multicast Leave Synch route is still 255.

Context [network-instance name](#) *string* [protocols igmp-snooping interface interface-name](#) *string* **query-last-member-interval** *number*

static-membership-groups

Description	Container to configure static <S,G>s for this interface.
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> static-membership-groups
Tree	static-membership-groups
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

group *group string*

Description	Enter the group list instance
Context	network-instance name string protocols igmp-snooping interface interface-name string static-membership-groups group group string
Tree	group
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

group *string*

Description	group address.
Context	network-instance name string protocols igmp-snooping interface interface-name string static-membership-groups group group string
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

source *source string*

Description	Multicast source address list
Context	network-instance name string protocols igmp-snooping interface interface-name string static-membership-groups group group string source source string
Tree	source
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

source *string*

Description	Multicast source address.
Context	network-instance name string protocols igmp-snooping interface interface-name string static-membership-groups group group string source source string
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

starg

Description	any source address (*,G)
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> static-membership-groups group group <i>string</i> starg
Tree	starg
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

statistics

Description	IGMP sub-interface statistics
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics
Tree	statistics
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

error

Description	Error message statistics
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics error
Tree	error
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

bad-encoding *number*

Description	Badly encoded packets
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics error bad-encoding <i>number</i>
Tree	bad-encoding
Default	0
Configurable	False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

bad-igmp-checksum *number*

Description Number of times a packet is discarded because of a bad IGMP header checksum

Context [network-instance name](#) *string* [protocols igmp-snooping interface interface-name](#) *string* [statistics error bad-igmp-checksum](#) *number*

Tree [bad-igmp-checksum](#)

Default 0

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

bad-length *number*

Description Bad length

Context [network-instance name](#) *string* [protocols igmp-snooping interface interface-name](#) *string* [statistics error bad-length](#) *number*

Tree [bad-length](#)

Default 0

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

discarded-bgp-join-sync *number*

Description Bgp join sync routes

Context [network-instance name](#) *string* [protocols igmp-snooping interface interface-name](#) *string* [statistics error discarded-bgp-join-sync](#) *number*

Tree [discarded-bgp-join-sync](#)

Default 0

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

discarded-bgp-leave-sync *number*

Description	Bgp leave sync routes
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics error discarded-bgp-leave-sync <i>number</i>
Tree	discarded-bgp-leave-sync
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

import-policy-drops *number*

Description	Number of times the host IP address or group or source IP addresses specified in the import policy are matched
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics error import-policy-drops <i>number</i>
Tree	import-policy-drops
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-scope *number*

Description	Link-local scope multicast group address
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics error local-scope <i>number</i>
Tree	local-scope
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

missing-router-alert *number*

Description	Router alert flag is not set
--------------------	------------------------------

Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics error missing-router-alert <i>number</i>
Tree	missing-router-alert
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

out-of-memory-discarded-packets *number*

Description	Number of times a join is discarded because the router ran out of memory
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics error out-of-memory-discarded-packets <i>number</i>
Tree	out-of-memory-discarded-packets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

reached-maximum-number-group-sources *number*

Description	Number of times a join is discarded because the maximum number of group-source combinations is reached
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics error reached-maximum-number-group-sources <i>number</i>
Tree	reached-maximum-number-group-sources
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

reached-maximum-number-groups *number*

Description	Number of times a join is discarded because the maximum number of groups is reached
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics error reached-maximum-number-groups <i>number</i>
Tree	reached-maximum-number-groups

Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

reached-maximum-number-sources *number*

Description	Number of times a join is discarded because the maximum number of sources per group is reached
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics error reached-maximum-number-sources <i>number</i>
Tree	reached-maximum-number-sources
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

send-query-configured-discarded-packets *number*

Description	Number of times a query is discarded because send-queries is configured in the sub-interface
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics error send-query-configured-discarded-packets <i>number</i>
Tree	send-query-configured-discarded-packets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

unknown-type *number*

Description	Unknown type
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics error unknown-type <i>number</i>
Tree	unknown-type
Default	0
Configurable	False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

wrong-version *number*

Description Wrong version

Context [network-instance name](#) *string* [protocols igmp-snooping interface interface-name](#) *string* [statistics error wrong-version](#) *number*

Tree [wrong-version](#)

Default 0

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

zero-source-ip-address *number*

Description Number of times a packet is discarded because it has a zero source IP address

Context [network-instance name](#) *string* [protocols igmp-snooping interface interface-name](#) *string* [statistics error zero-source-ip-address](#) *number*

Tree [zero-source-ip-address](#)

Default 0

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

forwarded

Description Forward message statistics

Context [network-instance name](#) *string* [protocols igmp-snooping interface interface-name](#) *string* [statistics forwarded](#)

Tree [forwarded](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

error-packets *number*

Description	Forwarding Errors
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics forwarded error-packets <i>number</i>
Tree	error-packets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

general-queries *number*

Description	General Queries
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics forwarded general-queries <i>number</i>
Tree	general-queries
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

group-queries *number*

Description	Group Specific Queries
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics forwarded group-queries <i>number</i>
Tree	group-queries
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

group-source-queries *number*

Description	Group and Source Specific Queries
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics forwarded group-source-queries <i>number</i>

Tree	group-source-queries
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

leave-messages *number*

Description	Leave messages
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics forwarded leave-messages <i>number</i>
Tree	leave-messages
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

unknown-type *number*

Description	Unknown IGMP types
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics forwarded unknown-type <i>number</i>
Tree	unknown-type
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

v1-reports *number*

Description	V1 Reports
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics forwarded v1-reports <i>number</i>
Tree	v1-reports
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

v2-reports *number*

Description	V2 Reports
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics forwarded v2-reports <i>number</i>
Tree	v2-reports
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

v3-reports *number*

Description	V3 Reports
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics forwarded v3-reports <i>number</i>
Tree	v3-reports
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

multicast-states

Description	Multicast state count for this network instance
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics multicast-states
Tree	multicast-states
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

source-group-entries *number*

Description	The number of (S,G)s
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics multicast-states source-group-entries <i>number</i>
Tree	source-group-entries

Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

star-group-entries *number*

Description	The number of (*,G)s
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics multicast-states star-group-entries <i>number</i>
Tree	star-group-entries
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

received

Description	Received message statistics
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics received
Tree	received
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

bgp-join-sync *number*

Description	Bgp join sync routes
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics received bgp-join-sync <i>number</i>
Tree	bgp-join-sync
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

bgp-leave-sync *number*

Description	Bgp leave sync routes
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics received bgp-leave-sync <i>number</i>
Tree	bgp-leave-sync
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

discarded-packets *number*

Description	Total number of discarded IGMP packets
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics received discarded-packets <i>number</i>
Tree	discarded-packets
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

general-queries *number*

Description	General Queries
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics received general-queries <i>number</i>
Tree	general-queries
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

group-queries *number*

Description	Group Specific Queries
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics received group-queries <i>number</i>

Tree	group-queries
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

group-source-queries *number*

Description	Group and Source Specific Queries
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> statistics received group-source-queries <i>number</i>
Tree	group-source-queries
Default	0
Configurable	False

Platforms	Supported on all platforms

key

Description	Container to specify the secret key and crypto algorithm to use for the authentication of PDUs when the behavior is controlled at this level of the configuration hierarchy
Context	network-instance name string protocols isis instance name string authentication key
Tree	key
Configurable	True
Platforms	Supported on all platforms

auth-password *string*

Description	The secret key to use for authentication of PDUs
Context	network-instance name string protocols isis instance name string authentication key auth-password string
Tree	auth-password
Configurable	True
Platforms	Supported on all platforms

crypto-algorithm *keyword*

Description	The cryptographic algorithm used with the keying material to secure the messages.
Context	network-instance name string protocols isis instance name string authentication key crypto-algorithm keyword
Tree	crypto-algorithm
Options	<ul style="list-style-type: none"> • <code>cleartext</code> The authentication-key is encoded in plaintext. • <code>hmac-md5</code> The authentication-key is used to generate a 16-byte (128 bit) MD5 digest using the HMAC algorithm (RFC 2104). • <code>hmac-sha-256</code>

The authentication-key is used to generate a SHA2 digest using the HMAC algorithm (RFC 2104). The SHA-256 variant of SHA2 produces an output of 32 bytes (256 bits).

Configurable	True
Platforms	Supported on all platforms

keychain *reference*

Description	Specifies a keychain to use for the authentication of PDUs when the behavior is controlled at this level of the configuration hierarchy.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> authentication keychain reference
Tree	keychain
Reference	system authentication keychain name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

Isp-authentication

Description	Container with options to control the authentication of Link State PDUs
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> authentication Isp-authentication
Tree	Isp-authentication
Configurable	True
Platforms	Supported on all platforms

check-received *keyword*

Description	Specifies the type of authentication checks done for received PDUs of the specified type.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> authentication Isp-authentication check-received <i>keyword</i>
Tree	check-received
Options	<ul style="list-style-type: none"> strict <p>Strict authentication option. Reject all packets that do not have an authentication TLV or that do have an authentication TLV that cannot be validated.</p> <ul style="list-style-type: none"> loose

Loose authentication option. Accept packets received without an authentication TLV; validate packets received with an authentication TLV and reject those packets that cannot be validated.

- disable

This enum disables authentication checks. Do not check authentication TLV (if any) of received PDUs; authentication TLV may still be added self-generated PDUs

Configurable	True
Platforms	Supported on all platforms

generate *boolean*

Description	When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> authentication lsp-authentication generate <i>boolean</i>
Tree	generate
Configurable	True
Platforms	Supported on all platforms

psnp-authentication

Description	Container with options to control the authentication of PSNP PDUs
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> authentication psnp-authentication
Tree	psnp-authentication
Configurable	True
Platforms	Supported on all platforms

check-received *keyword*

Description	Specifies the type of authentication checks done for received PDUs of the specified type.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> authentication psnp-authentication check-received <i>keyword</i>
Tree	check-received
Options	<ul style="list-style-type: none"> • strict

Strict authentication option. Reject all packets that do not have an authentication TLV or that do have an authentication TLV that cannot be validated.

- loose

Loose authentication option. Accept packets received without an authentication TLV; validate packets received with an authentication TLV and reject those packets that cannot be validated.

- disable

This enum disables authentication checks. Do not check authentication TLV (if any) of received PDUs; authentication TLV may still be added self-generated PDUs

Configurable	True
Platforms	Supported on all platforms

generate *boolean*

Description	When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> authentication psnp-authentication generate <i>boolean</i>
Tree	generate
Configurable	True
Platforms	Supported on all platforms

auto-cost

Description	Enter the auto-cost context
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> auto-cost
Tree	auto-cost
Configurable	True
Platforms	Supported on all platforms

reference-bandwidth *number*

Description	Configures the reference bandwidth that provides the basis for interface metrics based on link bandwidth. If the reference bandwidth is defined, then the cost is calculated using the following formula: $\text{cost} = \text{reference-bandwidth} / \text{bandwidth}$
--------------------	--

When a large reference-bandwidth value is configured, a metric calculation may result in a value higher than the supported protocol cost value. If this occurs, IS-IS automatically reverts to the maximum configurable cost metric.

If the reference bandwidth is not configured then all interfaces have a default metric of 10.

Note: To use metrics in excess of 63, wide metrics must be deployed

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> auto-cost reference-bandwidth <i>number</i>
Tree	reference-bandwidth
Range	1 to 8000000000
Units	kbps
Configurable	True
Platforms	Supported on all platforms

enable-csnp-on-p2p-links *boolean*

Description	Enable/disable the transmission of periodic CSNP PDUs on point-to-point interfaces When this is set to false, CSNP PDUs will only be sent on a P2P interface when the adjacency is initialized. This setting has no effect on broadcast interfaces.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> enable-csnp-on-p2p-links <i>boolean</i>
Tree	enable-csnp-on-p2p-links
Default	true
Configurable	True
Platforms	Supported on all platforms

export-policy *reference*

Description	Apply an export policy to redistribute non-ISIS routes into ISIS
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> export-policy <i>reference</i>
Tree	export-policy
Reference	routing-policy policy name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

graceful-restart

Description	Container for options related to IS-IS graceful restart
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> graceful-restart
Tree	graceful-restart
Configurable	True
Platforms	Supported on all platforms

acceptable-duration *number*

Description	Initial value of the Remaining Time that is advertised in the Restart TLV with Restart Acknowledgement flag set when this router starts to help another router that has just (re)entered Restart mode.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> graceful-restart acceptable-duration <i>number</i>
Tree	acceptable-duration
Range	1 to 20000
Default	60
Units	seconds
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

helper-mode *boolean*

Description	Enable or disable the IS-IS graceful restart helper function When this leaf is set, the local system supports retaining forwarding information during a neighbor router's restart.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> graceful-restart helper-mode <i>boolean</i>
Tree	helper-mode
Default	false
Configurable	True
Platforms	Supported on all platforms

hello-padding *keyword*

Description	Specifies the use of IS-IS Hello PDU padding all interfaces This can be overridden by interface configuration.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> hello-padding <i>keyword</i>
Tree	hello-padding
Default	disable
Options	<ul style="list-style-type: none"> strict Strict padding option. Hello padding is done continuously, regardless of adjacency state or interface type. loose Loose padding option. On p2p interfaces hello PDUs are padded from the initial detection of a new neighbor until the adjacency transitions to the INIT state. On broadcast interfaces hello padding is done until there is at least one UP adjacency on the interface. adaptive Adaptive padding option. On p2p interfaces hello PDUs are padded until the sender declares the adjacency to be UP (based on 3-way handshake or the classic algorithm described in ISO 10589. If the p2p neighbor does not support the adjacency state TLV, then padding continues. On broadcast interfaces hello padding is done until there is at least one UP adjacency on the interface. disable This enum disables hello PDU padding
Configurable	True
Platforms	Supported on all platforms

hostnames

Description	Enter the hostnames context
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> hostnames
Tree	hostnames
Configurable	False
Platforms	Supported on all platforms

system-id *host-system-id* *string*

Description	List of system IDs that have discovered hostnames.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> hostnames system-id <i>host-system-id</i> <i>string</i>
Tree	system-id
Configurable	False
Platforms	Supported on all platforms

host-system-id *string*

Description	The system ID
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> hostnames system-id <i>host-system-id</i> <i>string</i>
String Length	14
Configurable	False
Platforms	Supported on all platforms

hostname *string*

Description	The hostname of the system.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> hostnames system-id <i>host-system-id</i> <i>string</i> hostname <i>string</i>
Tree	hostname
Configurable	False
Platforms	Supported on all platforms

iid-tlv *boolean*

Description	ISIS Instance Identifier TLV. When set to true, IID-TLV identifies the unique instance as well as the topology/topologies to which the PDU applies.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> iid-tlv <i>boolean</i>
Tree	iid-tlv
Default	false
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

instance-id *number*

Description ISIS instance number

Context [network-instance name string protocols isis instance name string instance-id number](#)

Tree [instance-id](#)

Range 0 to 127

Default 0

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

inter-level-propagation-policies

Description Container with options to control the propagation of prefixes between levels

Context [network-instance name string protocols isis instance name string inter-level-propagation-policies](#)

Tree [inter-level-propagation-policies](#)

Configurable True

Platforms Supported on all platforms

level1-to-level2

Description Container with options to control the propagation of prefixes from level 1 to level 2.
By default all L1 prefixes are propagated without summarization into L2.

Context [network-instance name string protocols isis instance name string inter-level-propagation-policies level1-to-level2](#)

Tree [level1-to-level2](#)

Configurable True

Platforms Supported on all platforms

summary-address [ip-prefix](#) (*ipv4-prefix* | *ipv6-prefix*)

Description	List of summarization prefixes
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> inter-level-propagation-policies level1-to-level2 summary-address ip-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	summary-address
Configurable	True
Platforms	Supported on all platforms

ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	An IP prefix advertised into L2 that summarizes one or more L1 prefixes and causes them to be suppressed
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> inter-level-propagation-policies level1-to-level2 summary-address ip-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Configurable	True
Platforms	Supported on all platforms

route-tag *number*

Description	Specifies route tag value to assign to the summary route
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> inter-level-propagation-policies level1-to-level2 summary-address ip-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) route-tag <i>number</i>
Tree	route-tag
Range	1 to 4294967295
Configurable	True
Platforms	Supported on all platforms

interface [interface-name](#) *string*

Description	List of IS-IS interfaces
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i>
Tree	interface
Configurable	True

Platforms Supported on all platforms

interface-name *string*

Description Name of the IS-IS interface

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string*

String Length 1 to 255

Configurable True

Platforms Supported on all platforms

adjacency [neighbor-system-id](#) *string* [adjacency-level](#) *string*

Description List of adjacencies formed through this interface.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string* [adjacency neighbor-system-id](#) *string* [adjacency-level](#) *string*

Tree [adjacency](#)

Configurable False

Platforms Supported on all platforms

neighbor-system-id *string*

Description The neighbor router's system ID.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string* [adjacency neighbor-system-id](#) *string* [adjacency-level](#) *string*

String Length 14

Configurable False

Platforms Supported on all platforms

adjacency-level *string*

Description The level of the adjacency that is formed.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string* [adjacency neighbor-system-id](#) *string* [adjacency-level](#) *string*

Configurable False

Platforms Supported on all platforms

area-address *string*

Description Area address of the neighbor.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string* [adjacency neighbor-system-id](#) *string* [adjacency-level](#) *string* [area-address](#) *string*

Tree [area-address](#)

String Length 2 to 38

Configurable False

Platforms Supported on all platforms

designated-is-system-id *string*

Description System id of the designated IS router.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string* [adjacency neighbor-system-id](#) *string* [adjacency-level](#) *string* [designated-is-system-id](#) *string*

Tree [designated-is-system-id](#)

String Length 14

Configurable False

Platforms Supported on all platforms

down-reason *keyword*

Description The reason why the adjacency is down.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string* [adjacency neighbor-system-id](#) *string* [adjacency-level](#) *string* [down-reason](#) *keyword*

Tree [down-reason](#)

Options

- 3-way-handshake-failed
- address-mismatch
- hold-timer-expired
- area-mismatch
- bad-hello
- bfd-session-down
- interface-down

- interface-level-disabled
- level-changed

- mt-topology-changed
- mt-topology-mismatch
- remote-system-id-changed
- isis-protocol-disabled
- unknown

Configurable	False
Platforms	Supported on all platforms

last-up-down-transition *string*

Description	The last time when the adjacency entered the up or down state.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> last-up-down-transition <i>string</i>
Tree	last-up-down-transition
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

local-extended-circuit-id *number*

Description	Local extended circuit ID.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> local-extended-circuit-id <i>number</i>
Tree	local-extended-circuit-id
Configurable	False
Platforms	Supported on all platforms

neighbor-circuit-type *keyword*

Description	The circuit type signalled by the neighbor.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> neighbor-circuit-type <i>keyword</i>

Tree	neighbor-circuit-type
Default	L1L2
Options	<ul style="list-style-type: none"> • L1 This enum describes ISIS level 1 • L2 This enum describes ISIS level 2 • L1L2 This enum describes ISIS level 1-2
Configurable	False
Platforms	Supported on all platforms

neighbor-extended-circuit-id *number*

Description	Extended circuit ID assigned by the neighbor.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> neighbor-extended-circuit-id <i>number</i>
Tree	neighbor-extended-circuit-id
Configurable	False
Platforms	Supported on all platforms

neighbor-hostname *string*

Description	The hostname of the neighbor, as learned by TLV 137.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> neighbor-hostname <i>string</i>
Tree	neighbor-hostname
Configurable	False
Platforms	Supported on all platforms

neighbor-ipv4 *string*

Description	The IPv4 address of the neighbor.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> neighbor-ipv4 <i>string</i>

Tree	neighbor-ipv4
Configurable	False
Platforms	Supported on all platforms

neighbor-ipv6 *string*

Description	The IPv6 address of the neighbor.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> neighbor-ipv6 <i>string</i>
Tree	neighbor-ipv6
Configurable	False
Platforms	Supported on all platforms

neighbor-last-restart (*keyword | date-and-time-delta*)

Description	The last time the neighbor restarted under protection of graceful restart.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> neighbor-last-restart (<i>keyword date-and-time-delta</i>)
Tree	neighbor-last-restart
String Length	20 to 32
Options	<ul style="list-style-type: none"> • never
Configurable	False
Platforms	Supported on all platforms

neighbor-priority *number*

Description	The priority signalled by the neighbor to become the DIS on a LAN
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> neighbor-priority <i>number</i>
Tree	neighbor-priority
Range	0 to 127
Configurable	False
Platforms	Supported on all platforms

neighbor-restart-capable *boolean*

Description	Reads true when the neighbor has signalled that it is restart capable.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> neighbor-restart-capable <i>boolean</i>
Tree	neighbor-restart-capable
Configurable	False
Platforms	Supported on all platforms

neighbor-restart-status *keyword*

Description	The status of the neighbor with respect to graceful restart
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> neighbor-restart-status <i>keyword</i>
Tree	neighbor-restart-status
Options	<ul style="list-style-type: none"> • not-helping • helping
Configurable	False
Platforms	Supported on all platforms

neighbor-restarts *number*

Description	The number of times the neighbor has restarted under protection of graceful restart.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> neighbor-restarts <i>number</i>
Tree	neighbor-restarts
Configurable	False
Platforms	Supported on all platforms

neighbor-snpa *string*

Description	The SNPA of the neighbor.
--------------------	---------------------------

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> neighbor-snpa <i>string</i>
Tree	neighbor-snpa
String Length	0 to 20
Configurable	False
Platforms	Supported on all platforms

nlpid *keyword*

Description	List of protocols supported by the adjacency.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> nlpid <i>keyword</i>
Tree	nlpid
Options	<ul style="list-style-type: none"> • IPv4 NLPID 0xCC corresponding to IPv4 • IPv6 NLPID 0x8E corresponding to IPv6 • CLNS NLPID 0x81 corresponding to CLNS
Configurable	False
Platforms	Supported on all platforms

remaining-holdtime *number*

Description	The time remaining until the hold timer will expire.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> remaining-holdtime <i>number</i>
Tree	remaining-holdtime
Units	seconds
Configurable	False
Platforms	Supported on all platforms

state *keyword*

Description	The current state of the adjacency.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> state <i>keyword</i>
Tree	state
Options	<ul style="list-style-type: none"> • up This state describes that adjacency is established. • down This state describes that adjacency is NOT established. • init This state describes that adjacency is establishing. • failed This state describes that adjacency is failed.
Configurable	False
Platforms	Supported on all platforms

up-down-transitions *number*

Description	The total number of transitions from Up state to a lower state, since the last clear.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacency neighbor-system-id <i>string</i> adjacency-level <i>string</i> up-down-transitions <i>number</i>
Tree	up-down-transitions
Default	0
Configurable	False
Platforms	Supported on all platforms

admin-state *keyword*

Description	Used to administratively enable or disable the IS-IS protocol on a routed subinterface
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> admin-state <i>keyword</i>
Tree	admin-state

Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

authentication

Description	Container for specifying authentication options that apply to the IS-IS instance.
Context	network-instance name string protocols isis instance name string interface interface-name string authentication
Tree	authentication
Configurable	True
Platforms	Supported on all platforms

hello-authentication

Description	Container with options to control the authentication of Hello PDUs
Context	network-instance name string protocols isis instance name string interface interface-name string authentication hello-authentication
Tree	hello-authentication
Configurable	True
Platforms	Supported on all platforms

check-received *keyword*

Description	Specifies the type of authentication checks done for received PDUs of the specified type.
Context	network-instance name string protocols isis instance name string interface interface-name string authentication hello-authentication check-received keyword
Tree	check-received
Options	<ul style="list-style-type: none"> • strict Strict authentication option. Reject all packets that do not have an authentication TLV or that do have an authentication TLV that cannot be validated. • loose

Loose authentication option. Accept packets received without an authentication TLV; validate packets received with an authentication TLV and reject those packets that cannot be validated.

- disable

This enum disables authentication checks. Do not check authentication TLV (if any) of received PDUs; authentication TLV may still be added self-generated PDUs

Configurable	True
Platforms	Supported on all platforms

generate *boolean*

Description	When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> authentication hello-authentication generate <i>boolean</i>
Tree	generate
Configurable	True
Platforms	Supported on all platforms

key

Description	Container to specify the secret key and crypto algorithm to use for the authentication of Hello PDUs on this interface
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> authentication key
Tree	key
Configurable	True
Platforms	Supported on all platforms

auth-password *string*

Description	The secret key to use for authentication of Hello PDUs
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> authentication key auth-password <i>string</i>
Tree	auth-password
Configurable	True
Platforms	Supported on all platforms

crypto-algorithm *keyword*

Description	The cryptographic algorithm used with the keying material to secure the messages.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> authentication key crypto-algorithm <i>keyword</i>
Tree	crypto-algorithm
Options	<ul style="list-style-type: none"> • cleartext The authentication-key is encoded in plaintext. • hmac-md5 The authentication-key is used to generate a 16-byte (128 bit) MD5 digest using the HMAC algorithm (RFC 2104). • hmac-sha-256 The authentication-key is used to generate a SHA2 digest using the HMAC algorithm (RFC 2104).The SHA-256 variant of SHA2 produces an output of 32 bytes (256 bits).
Configurable	True
Platforms	Supported on all platforms

keychain *reference*

Description	Specifies a keychain to use for the authentication of Hello PDUs on this interface.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> authentication keychain <i>reference</i>
Tree	keychain
Reference	system authentication keychain name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

circuit-id *number*

Description	The circuit ID assigned by this IS-IS router to its interface.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> circuit-id <i>number</i>
Tree	circuit-id
Configurable	False
Platforms	Supported on all platforms

circuit-type *keyword*

Description	Specifies the circuit type as either point-to-point or broadcast
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> circuit-type <i>keyword</i>
Tree	circuit-type
Options	<ul style="list-style-type: none"> point-to-point This enum describes a point-to-point interface broadcast This enum describes a broadcast interface
Configurable	True
Platforms	Supported on all platforms

delay

Description	Enter the delay context
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> delay
Tree	delay
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

delay-selection *keyword*

Description	Delay source advertised by IGP for the interface
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> delay delay-selection <i>keyword</i>
Tree	delay-selection
Default	static-preferred
Options	<ul style="list-style-type: none"> static dynamic static-preferred dynamic-preferred
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

unidirectional-minimum-link-delay *number*

Description	Operational Unidirectional link delay advertised by ISIS
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> delay unidirectional-minimum-link-delay <i>number</i>
Tree	unidirectional-minimum-link-delay
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-padding *keyword*

Description	Specifies the use of IS-IS Hello PDU padding on the interface
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> hello-padding <i>keyword</i>
Tree	hello-padding
Options	<ul style="list-style-type: none"> strict Strict padding option. Hello padding is done continuously, regardless of adjacency state or interface type. loose Loose padding option. On p2p interfaces hello PDUs are padded from the initial detection of a new neighbor until the adjacency transitions to the INIT state. On broadcast interfaces hello padding is done until there is at least one UP adjacency on the interface. adaptive Adaptive padding option. On p2p interfaces hello PDUs are padded until the sender declares the adjacency to be UP (based on 3-way handshake or the classic algorithm described in ISO 10589. If the p2p neighbor does not support the adjacency state TLV, then padding continues. On broadcast interfaces hello padding is done until there is at least one UP adjacency on the interface. disable This enum disables hello PDU padding
Configurable	True
Platforms	Supported on all platforms

interface-ref

Description	Reference to a subinterface
--------------------	-----------------------------

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> interface-ref
Tree	interface-ref
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface reference

Description	Reference to a base interface, for example a port or LAG
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> interface-ref interface reference
Tree	interface
Reference	interface name <i>string</i>
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subinterface reference

Description	Reference to a subinterface This requires the base interface to be specified using the interface leaf in this container.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> interface-ref subinterface reference
Tree	subinterface
Reference	interface name <i>string</i> subinterface index <i>number</i>
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4-unicast

Description	Enter the ipv4-unicast context
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> ipv4-unicast
Tree	ipv4-unicast

Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	When set to true, the interface and level supports IPv4 unicast routing
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> ipv4-unicast admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

enable-bfd *boolean*

Description	Enable BFD for IPv4
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> ipv4-unicast enable-bfd <i>boolean</i>
Tree	enable-bfd
Default	false
Configurable	True
Platforms	Supported on all platforms

include-bfd-tlv *boolean*

Description	Specifies whether a BFD-enabled TLV is included for IPv4 on this IS-IS interface.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> ipv4-unicast include-bfd-tlv <i>boolean</i>
Tree	include-bfd-tlv
Default	false
Configurable	True
Platforms	Supported on all platforms

ipv6-unicast

Description	Enter the ipv6-unicast context
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> ipv6-unicast
Tree	ipv6-unicast
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	When set to true, the interface and level supports IPv6 unicast routing
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> ipv6-unicast admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

enable-bfd *boolean*

Description	Enable BFD for IPv6
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> ipv6-unicast enable-bfd <i>boolean</i>
Tree	enable-bfd
Default	false
Configurable	True
Platforms	Supported on all platforms

include-bfd-tlv *boolean*

Description	Specifies whether a BFD-enabled TLV is included for IPv6 on this IS-IS interface.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> ipv6-unicast include-bfd-tlv <i>boolean</i>

Tree	include-bfd-tlv
Default	false
Configurable	True
Platforms	Supported on all platforms

ldp-synchronization

Description	Container with configuration options and state that pertains to the operation of LDP-IGP synchronization on this interface
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> ldp-synchronization
Tree	ldp-synchronization
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

disable

Description	Disable LDP-IGP synchronization procedures on this interface, even if synchronization is enabled globally
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> ldp-synchronization disable
Tree	disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

duration *number*

Description	The length of time that the IGP interface has been in sync or out of sync
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> ldp-synchronization duration <i>number</i>
Tree	duration
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

end-of-lib *boolean*

Description	<p>When set to true, the IGP restores the normal metric for the IGP adjacency when learning from LDP that all label-FEC mappings have been received from the LDP peer, even if there is remaining time on the hold-down-timer.</p> <p>When set to false, the IGP always waits for the full duration of the hold-down-timer to restore the normal metric for the IGP adjacency.</p> <p>This overrides the global/instance level setting</p>
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> ldp-synchronization end-of-lib <i>boolean</i>
Tree	end-of-lib
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hold-down-timer *number*

Description	<p>The maximum amount of time that the IGP advertises a maximum metric for an interface, measured from the time that the LDP adjacency is re-established after going down.</p> <p>This overrides the global/instance level setting</p>
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> ldp-synchronization hold-down-timer <i>number</i>
Tree	hold-down-timer
Range	1 to 1800
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sync-state *keyword*

Description	The current state of the interface with respect to LDP-IGP sync
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> ldp-synchronization sync-state <i>keyword</i>
Tree	sync-state
Options	<ul style="list-style-type: none"> wait-for-LDP-adjacency <p>The IGP is waiting for the LDP adjacency to come up. The interface is being advertised with max-metric</p> hold-down-timer-active

The LDP adjacency has come up and the IGP has started the hold-down-timer, waiting for either end-of-lib or hold-down-timer expiry. The interface is being advertised with max-metric

- end-of-lib-received

The IGP received end-of-lib and has switched to normal operation. The interface is being advertised with a normal metric

- hold-down-timer-expired

The IGP did not receive end-of-lib (or was configured to ignore it) but hold-down-timer has expired and normal metric is restored

- manual-exit

A tools command was performed to exit ldp-sync. Normal operation is resumed, max-metric is removed

- disabled

ldp-sync is not applicable on this interface

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

level *level-number number*

Description	List of IS-IS levels supported by this interface
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i>
Tree	level
Configurable	True
Platforms	Supported on all platforms
Max. Elements	2

level-number *number*

Description	Specifies the IS-IS protocol level to which these attributes are applied.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i>
Range	1 to 2
Configurable	True
Platforms	Supported on all platforms

authentication

Description	Container for specifying authentication options that apply to the IS-IS instance.
Context	network-instance name string protocols isis instance name string interface interface-name string level level-number number authentication
Tree	authentication
Configurable	True
Platforms	Supported on all platforms

hello-authentication

Description	Container with options to control the authentication of Hello PDUs
Context	network-instance name string protocols isis instance name string interface interface-name string level level-number number authentication hello-authentication
Tree	hello-authentication
Configurable	True
Platforms	Supported on all platforms

check-received *keyword*

Description	Specifies the type of authentication checks done for received PDUs of the specified type.
Context	network-instance name string protocols isis instance name string interface interface-name string level level-number number authentication hello-authentication check-received keyword
Tree	check-received
Options	<ul style="list-style-type: none"> strict Strict authentication option. Reject all packets that do not have an authentication TLV or that do have an authentication TLV that cannot be validated. loose Loose authentication option. Accept packets received without an authentication TLV; validate packets received with an authentication TLV and reject those packets that cannot be validated. disable

This enum disables authentication checks. Do not check authentication TLV (if any) of received PDUs; authentication TLV may still be added self-generated PDUs

Configurable	True
Platforms	Supported on all platforms

generate *boolean*

Description	When set to true, IS-IS is instructed to add an authentication TLV to every transmitted PDU of the specified type
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i> authentication hello-authentication generate <i>boolean</i>
Tree	generate
Configurable	True
Platforms	Supported on all platforms

key

Description	Container to specify the secret key and crypto algorithm to use for the authentication of Hello PDUs on this interface
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i> authentication key
Tree	key
Configurable	True
Platforms	Supported on all platforms

auth-password *string*

Description	The secret key to use for authentication of Hello PDUs
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i> authentication key auth-password <i>string</i>
Tree	auth-password
Configurable	True
Platforms	Supported on all platforms

crypto-algorithm *keyword*

Description	The cryptographic algorithm used with the keying material to secure the messages.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i> authentication key crypto-algorithm <i>keyword</i>
Tree	crypto-algorithm
Options	<ul style="list-style-type: none"> • cleartext The authentication-key is encoded in plaintext. • hmac-md5 The authentication-key is used to generate a 16-byte (128 bit) MD5 digest using the HMAC algorithm (RFC 2104). • hmac-sha-256 The authentication-key is used to generate a SHA2 digest using the HMAC algorithm (RFC 2104).The SHA-256 variant of SHA2 produces an output of 32 bytes (256 bits).
Configurable	True
Platforms	Supported on all platforms

keychain *reference*

Description	Specifies a keychain to use for the authentication of Hello PDUs on this interface.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i> authentication keychain reference
Tree	keychain
Reference	system authentication keychain name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

disable *boolean*

Description	Disable the Level for the interface.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i> disable <i>boolean</i>
Tree	disable

Default	false
Configurable	True
Platforms	Supported on all platforms

ipv6-unicast-metric *number*

Description	Specifies the interface metric associated with the IPv6-unicast multi-topology. The default is based on reference-bandwidth, or else if this is not configured the default is 10.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i> ipv6-unicast-metric <i>number</i>
Tree	ipv6-unicast-metric
Range	0 to 16777215
Configurable	True
Platforms	Supported on all platforms

metric *number*

Description	Specifies the interface metric associated with the native routing topology. The default is based on reference-bandwidth, or else if this is not configured the default is 10.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i> metric <i>number</i>
Tree	metric
Range	0 to 16777215
Configurable	True
Platforms	Supported on all platforms

passive *boolean*

Description	When set to true the interface is configured as a passive interface for this level and does not send IIH PDUs or try to form an adjacency with other routers.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i> passive <i>boolean</i>
Tree	passive
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

priority *number*

Description ISIS neighbor priority for becoming Designated IS (LAN hello PDU only).

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string* [level level-number](#) *number* [priority number](#)

Tree [priority](#)

Range 0 to 127

Default 64

Configurable True

Platforms Supported on all platforms

statistics

Description Interface per level statistics

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string* [level level-number](#) *number* [statistics](#)

Tree [statistics](#)

Configurable False

Platforms Supported on all platforms

pdu [pdu-name](#) *keyword*

Description List of PDUs processed by the IS-IS instance since the IS-IS manager restarted

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string* [level level-number](#) *number* [statistics pdu pdu-name](#) *keyword*

Tree [pdu](#)

Configurable False

Platforms Supported on all platforms

pdu-name *keyword*

Description The PDU type that was processed

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i> statistics pdu pdu-name <i>keyword</i>
Options	<ul style="list-style-type: none"> • LSP Link State PDU • IIH IS-to-IS Hello PDU • CSNP Complete Sequence Number PDU • PSNP Partial Sequence Number PDU • Unknown Unknown PDU type
Configurable	False
Platforms	Supported on all platforms

dropped *number*

Description	The number of PDUs that were received and dropped
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i> statistics pdu pdu-name <i>keyword</i> dropped <i>number</i>
Tree	dropped
Default	0
Configurable	False
Platforms	Supported on all platforms

processed *number*

Description	The number of PDUs that were received and processed
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i> statistics pdu pdu-name <i>keyword</i> processed <i>number</i>
Tree	processed
Default	0
Configurable	False
Platforms	Supported on all platforms

received *number*

Description	The number of PDUs that were received
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i> statistics pdu pdu-name keyword received <i>number</i>
Tree	received
Default	0
Configurable	False
Platforms	Supported on all platforms

sent *number*

Description	The number of PDUs that were transmitted
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i> statistics pdu pdu-name keyword sent <i>number</i>
Tree	sent
Default	0
Configurable	False
Platforms	Supported on all platforms

timers

Description	Enter the timers context
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i> timers
Tree	timers
Configurable	True
Platforms	Supported on all platforms

hello-interval *number*

Description	ISIS hello-interval value. The default is 3 seconds on Designated IS interfaces and 9 seconds for non-DIS and p2p interfaces
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> level level-number <i>number</i> timers hello-interval <i>number</i>
Tree	hello-interval

Range	1 to 20000
Default	9
Units	seconds
Configurable	True
Platforms	Supported on all platforms

hello-multiplier *number*

Description	<p>ISIS hello-multiplier value.</p> <p>The neighbor hold time is (hello multiplier x hello interval) on non-designated intermediate system broadcast interfaces and point-to-point interfaces and (hello multiplier x hello interval / 3) on designated intermediate system broadcast interfaces.</p> <p>The hold time is the time in which the neighbor expects to receive the next Hello PDU. If the neighbor receives a Hello within this time, the hold time is reset. If the neighbor does not receive a Hello within the hold time, it brings the adjacency down.</p>
Context	network-instance name string protocols isis instance name string interface interface-name string level level-number number timers hello-multiplier number
Tree	hello-multiplier
Range	2 to 100
Default	3
Configurable	True
Platforms	Supported on all platforms

loopfree-alternate-exclude *boolean*

Description	Enable/disable Loopfree Alternative at interface level.
Context	network-instance name string protocols isis instance name string interface interface-name string loopfree-alternate-exclude boolean
Tree	loopfree-alternate-exclude
Default	false
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state *keyword*

Description	The operational state of the IS-IS interface. This simply tracks the operational state of the subinterface.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed • synchronizing Component is currently being synchronized • upgrading Component is currently being upgraded • low-power Component is offline due to insufficient system power • degraded Component or process is in a degraded state • warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes. • waiting Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False
Platforms	Supported on all platforms

passive *boolean*

Description	When set to true the interface is configured as a passive interface and does not send IIH PDUs or try to form an adjacency with other routers.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> <i>passive</i> <i>boolean</i>
Tree	passive
Default	false
Configurable	True
Platforms	Supported on all platforms

segment-routing

Description	Container with interface-specific segment routing options
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> segment-routing
Tree	segment-routing
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mpls

Description	SR-MPLS interface options
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> segment-routing mpls
Tree	mpls
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4-adjacency-sid

Description	The IPv4 adjacency SID associated with the interface
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> segment-routing mpls ipv4-adjacency-sid
Tree	ipv4-adjacency-sid
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

assignment *keyword*

Description	<p>The method that should be used to allocate an adjacency SID or multiple adjacency SIDs for this interface.</p> <p>This overrides the top level configuration to assign dynamic adjacency SIDs to all interfaces.</p>
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> segment-routing mpls ipv4-adjacency-sid assignment keyword
Tree	assignment
Options	<ul style="list-style-type: none"> • static <p>The user will statically configure an adjacency SID for the interface. This option is not available if the interface type is not point-to-point.</p> • dynamic <p>IS-IS should dynamically allocate one or more dynamic adjacency SIDs for this interface.</p> • none <p>No adjacency SIDs should be allocated for this interface.</p>
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

programmed-sids [label-value](#) *number*

Description	The list of IPv4 adjacency SIDs that have been programmed in association with this interface
--------------------	--

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> segment-routing mpls ipv4-adjacency-sid programmed-sids label-value <i>number</i>
Tree	programmed-sids
Configurable	False

assignment keyword

Description The method that should be used to allocate an adjacency SID or multiple adjacency SIDs for this interface.
This overrides the top level configuration to assign dynamic adjacency SIDs to all interfaces.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [interface interface-name](#) *string* [segment-routing mpls ipv6-adjacency-sid assignment keyword](#)

Tree [assignment](#)

Options

- static
The user will statically configure an adjacency SID for the interface. This option is not available if the interface type is not point-to-point.
- dynamic

IS-IS should dynamically allocate one or more dynamic adjacency SIDs for this interface.

- none

No adjacency SIDs should be allocated for this interface.

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

programmed-sids *label-value number*

type *identityref*

Description	The type of TLV being described. The type of TLV is expressed as a canonical name.
--------------------	--

Context	<code>network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref</code>
Options	<ul style="list-style-type: none"> • area-addresses ISIS TLV 1 • iis-neighbors ISIS TLV 2 • instance-id ISIS TLV 7 An Instance Identifier (IID) to uniquely identify an IS-IS instance. When the IID = 0, the list of supported ITIDs MUST NOT be present. An IID-TLV with IID = 0 MUST NOT appear in an SNP or LSP. When the TLV appears (with a non-zero IID) in an SNP or LSP, exactly one ITID. MUST be present indicating the topology with which the PDU is associated. If no ITIDs or multiple ITIDs are present or the IID is zero, then the PDU MUST be ignored • authentication ISIS TLV 10 • purge-oi ISIS TLV 13 If an IS generates a purge, it SHOULD include this TLV in the purge with its own system ID. If an IS receives a purge that does not include this TLV, then it SHOULD add this TLV with both its own system ID and the system ID of the IS from which it received the purge. This allows ISs receiving purges to log the system ID of the originator, or the upstream source of the purge. • lsp-buffer-size ISIS TLV 14. The maximum MTU that the advertising system can receive, expressed in bytes. • extended-is-reachability ISIS TLV 22. An extended IS reachability TLV that has a different data structure to TLV 2 that introduces the use of sub-TLV object-group. • is-neighbor-attribute ISIS TLV 23. Identical in format to TLV 22 and included in Original LSPs or Extended LSPs. Regardless of the type of LSP in which the TLVs appear, the information pertains to the neighbor relationship between the Originating System and the IS identified in the TLV • isis-alias-id ISIS TLV 24. IS-Alias TLV which extension-capable ISs to recognize the Originating System of an Extended LSP set. It identifies the Normal system-id of the Originating System • ipv4-internal-reachability

ISIS TLV 128. TLV defines IP addresses within the routing domain reachable directly via one or more interfaces on this Intermediate system

- nlpid

ISIS TLV 129. TLV defines the set Network Layer Protocol Identifiers for Network Layer protocols that this Intermediate System is capable of relaying

- ipv4-external-reachability

ISIS TLV 130. TLV defines IP addresses outside the routing domain reachable via interfaces on this Intermediate system. This is permitted to appear multiple times, and in an LSP with any LSP number. However, this field must not appear in pseudonode LSPs

- ipv4-interface-addresses

ISIS TLV 132. The IP address of one or more interfaces corresponding to the SNPAs enabled on this Intermediate system (i.e., one or more IP addresses of this router). This is permitted to appear multiple times, and in an LSP with any LSP number.

- ipv4-te-router-id

ISIS TLV 134. Traffic Engineering router ID TLV that contains the 4-octet router ID of the router originating the LSP

- extended-ipv4-reachability

ISIS TLV 135. Extended IP reachability TLV that provides for a 32-bit metric and adds one bit to indicate that a prefix has been redistributed _down_ in the hierarchy

- dynamic-name

ISIS TLV 137. The Dynamic hostname TLV is optional. This TLV may be present in any fragment of a non-pseudonode LSP. The value field identifies the symbolic name of the router originating the LSP. This symbolic name can be the FQDN for the router, it can be a subset of the FQDN, or it can be any string operators want to use for the router.

- ipv4-srlg

ISIS TLV 138. IPv4 Shared Risk Link Group TLV

- ipv6-srlg

ISIS TLV 139. IPv6 Shared Risk Link Group

- ipv6-te-router-id

ISIS TLV 140. The IPv6 TE Router ID TLV contains a 16-octet IPv6 address. A stable global IPv6 address **MUST** be used, so that the router ID provides a routable address, regardless of the state of a node's interfaces. If a router does not implement traffic engineering, it **MAY** include or omit the IPv6 TE Router ID TLV. If a router implements traffic engineering for IPv6, it **MUST** include this TLV in its LSP. This TLV **MUST NOT** be included more than once in an LSP.

- mt-isn

ISIS TLV 222. TLV is aligned with extended IS reachability TLV type 22 beside an additional two bytes in front at the beginning of the TLV that indicate MT membership.

- mt-is-neighbor-attribute

ISIS TLV 223. It is identical in format to TLV 222. In the event that there is a need to advertise in Extended LSPs such information associated with neighbors of the Originating System, it is necessary to define new TLVs to carry the sub-TLV information.

- multi-topology

ISIS TLV 229. This MT TLV can advertise up to 127 MTs. It is announced in IiHs and LSP fragment 0, and can occur multiple times. The resulting MT set SHOULD be the union of all the MT TLV occurrences in the packet. Any other IS-IS PDU occurrence of this TLV MUST be ignored. Lack of MT TLV in hellos and fragment zero LSPs MUST be interpreted as participation of the advertising interface or router in MT ID #0 only. If a router advertises MT TLV, it has to advertise all the MTs it participates in, specifically including topology ID #0 also.

- ipv6-interface-addresses

ISIS TLV 232. IPv6 Interface Address TLV that maps directly to the IP Interface Address TLV in [RFC1195]. We necessarily modify the contents to be 0-15 16-octet IPv6 interface addresses instead of 0-63 4-octet IPv4 interface addresses

- mt-ipv4-reachability

ISIS TLV 235. TLV is aligned with extended IP reachability TLV type 135 beside an additional two bytes in front to indicate MT membership

- ipv6-reachability

ISIS TLV 236. The IPv6 Reachability TLV describes network reachability through the specification of a routing prefix, metric information, a bit to indicate if the prefix is being advertised down from a higher level, a bit to indicate if the prefix is being distributed from another routing protocol, and OPTIONALLY the existence of Sub-TLVs to allow for later extension.

- mt-ipv6-reachability

ISIS TLV 237. TLV is aligned with IPv6 Reachability TLV type 236 beside an additional two bytes in front to indicate MT membership.

- router-capability

ISIS TLV 242. IS-IS TLV named CAPABILITY, formed of multiple sub-TLVs, which allows a router to announce its capabilities within an IS-IS level or the entire routing domain.

router-id *string***Description**

IPv4 Source router ID address. In cases where the advertisement is an identifier for the advertising router (e.g., with the N-flag set in the Prefix Attribute Flags sub-TLV), it may be useful for other routers to know the source of the advertisement. When reachability advertisement is leaked from one level to another, Router ID advertised is always the Router ID of the IS-IS instance that originated the advertisement. This would be true even if the prefix had been learned from another protocol.

Tree	flags
Options	<ul style="list-style-type: none"> • readvertisement Readvertisement flag. When set, the prefix to which this Prefix-SID is attached, has been propagated by the router either from another level or from redistribution. • node Node flag. When set, the Prefix-SID refers to the router identified by the prefix. Typically, the N-Flag is set on Prefix-SIDs attached to a router loopback address. • no-php Penultimate-Hop-Popping flag. When set, then the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID. • explicit-null Explicit-Null flag. When set, any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID having an Explicit-NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet. • value Value flag. When set, the Prefix-SID carries a value (instead of an index). By default the flag is UNSET. • local Local flag. When set, the value/index carried by the Prefix-SID has local significance. By default the flag is UNSET.

up-down *boolean*

Description	The up/down bit. Set if a prefix is advertised from a higher level to a lower level (e.g., level 2 to level 1), indicating that the prefix has traveled down the hierarchy. Prefixes that have the up/down bit set may only be advertised down the hierarchy, i.e., to lower levels. When a prefix is first injected into IS-IS, the bit is UNSET.

Units	bytes-per-second
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

min-max-unidirectional-link-delay

Description	The minimum and maximum delay between two directly connected IS-IS neighbors.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type <i>identityref</i> extended-is-reachability neighbors neighbor system-id <i>string</i> instances instance id <i>number</i> subtlvs subtlv type <i>identityref</i> application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay
Tree	min-max-unidirectional-link-delay
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

anomolous *boolean*

Description	If the A bit is cleared, the values represent steady-state link performance.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type <i>identityref</i> extended-is-reachability neighbors neighbor system-id <i>string</i> instances instance id <i>number</i> subtlvs subtlv type <i>identityref</i> application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay anomolous <i>boolean</i>
Tree	anomolous
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-delay *number*

Description	Maximum forward-path delay (from the advertising router to the remote neighbor)
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type <i>identityref</i> extended-is-reachability neighbors neighbor system-id <i>string</i> instances instance id <i>number</i> subtlvs subtlv type <i>identityref</i> application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay max-delay <i>number</i>
Tree	max-delay
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

min-delay *number*

Description	Minimum forward-path delay (from the advertising router to the remote neighbor)
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type <i>identityref</i> extended-is-reachability neighbors neighbor system-id <i>string</i> instances instance id <i>number</i> subtlvs subtlv type <i>identityref</i> application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay min-delay <i>number</i>
Tree	min-delay
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

te-default-metric *number*

Description	An administratively assigned metric used as an alternative to the normal SPF metric based (typically) on link bandwidth.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type <i>identityref</i> extended-is-reachability neighbors neighbor system-id <i>string</i> instances instance id <i>number</i> subtlvs subtlv type <i>identityref</i> application-specific-link-attributes sub-sub-tlvs te-default-metric <i>number</i>
Tree	te-default-metric
Range	0 to 16777215
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

available-bandwidth

Description	This container defines unidirectional lavailable bandwidth.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type <i>identityref</i> extended-is-reachability neighbors neighbor system-id <i>string</i> instances instance id <i>number</i> subtlvs subtlv type <i>identityref</i> available-bandwidth
Tree	available-bandwidth
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bandwidth *binary*

Description	The available bandwidth on a link, forwarding adjacency, or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, available bandwidth is defined to be residual bandwidth minus the measured bandwidth used for the actual forwarding of non-RSVP-TE label switched path packets. For a bundled link, available bandwidth is defined to be the sum of the component link available bandwidths minus the measured bandwidth used for the actual forwarding of non-RSVP-TE label switched path packets. For a bundled link, available bandwidth is defined to be the sum of the component link available bandwidths.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type <i>identityref</i> extended-is-reachability neighbors neighbor system-id <i>string</i> instances instance id <i>number</i> subtlvs subtlv type <i>identityref</i> available-bandwidth bandwidth <i>binary</i>
Tree	bandwidth

link-loss *number*

Description Link packet loss as a percentage of the total traffic sent over a configurable interval. The basic unit is 0.000003%, where $(2^{24} - 2)$ is 50.331642%. This value is the highest packet-loss percentage that can be expressed (the assumption being that precision is more important on high-speed links than the ability to advertise loss rates greater than this, and that high-speed links with over 50% loss are unusable). Therefore, measured values that are larger than the field maximum SHOULD be encoded as the maximum value.

Tree	type
Options	<ul style="list-style-type: none"> • extra-traffic If set the link has extra traffic protection. If the link is of type Extra Traffic, it means that the link is protecting another link or links. The LSPs on a link of this type will be lost if any of the links it is protecting fail. • unprotected If set, the link is unprotected. If the link is of type Unprotected, it means that there is no other link protecting this link. The LSPs on a link of this type will be lost if the link fails. • shared If set, the link has shared protection. If the link is of type Shared, it means that there are one or more disjoint links of type Extra Traffic that are protecting this link. These Extra Traffic links are shared between one or more links of type Shared. • one-one If set, the link has dedicated 1:1 protection. If the link is of type Dedicated 1:1, it means that there is one dedicated disjoint link of type Extra Traffic that is protecting this link. • plus-one If set, the link has dedicated 1+1 protection. If the link is of type Dedicated 1+1, it means that a dedicated disjoint link is protecting this link. However, the protecting link is not advertised in the link state database and is therefore not available for the routing of LSPs. • enhanced

If set the link has enhanced protection. If the link is of type Enhanced, it means that a protection scheme that is more reliable than Dedicated 1+1, e.g., 4 fiber BLSR/MS-SPRING, is being used to protect this link.

bandwidth <i>binary</i>	
Description	Residual bandwidth on a link, forwarding adjacency [RFC4206], or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, residual bandwidth is defined to be the Maximum Bandwidth [RFC5305] minus the bandwidth currently allocated to RSVP-TE label switched paths. For a bundled link, residual bandwidth is defined to be the sum of the component link residual bandwidths.

metric number

Description ISIS default metric value

This is a metric understood by every Intermediate system in the domain. Each circuit shall have a positive integral value assigned for this metric. The value may be associated with any objective function of the circuit, but by convention is intended to measure the capacity of the circuit for handling traffic, for example, its throughput in bits-per-second. Higher values indicate a lower capacity.

metric number

Description ISIS default metric value

This is a metric understood by every Intermediate system in the domain. Each circuit shall have a positive integral value assigned for this metric. The value may be associated with any objective function of the circuit, but by convention is intended to measure the capacity of the circuit for handling traffic, for example, its throughput in bits-per-second. Higher values indicate a lower capacity.

Tree	flags
Options	<ul style="list-style-type: none"> • readvertisement Readvertisement flag. When set, the prefix to which this Prefix-SID is attached, has been propagated by the router either from another level or from redistribution. • node Node flag. When set, the Prefix-SID refers to the router identified by the prefix. Typically, the N-Flag is set on Prefix-SIDs attached to a router loopback address. • no-php Penultimate-Hop-Popping flag. When set, then the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID. • explicit-null Explicit-Null flag. When set, any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID having an Explicit-NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet. • value Value flag. When set, the Prefix-SID carries a value (instead of an index). By default the flag is UNSET. • local Local flag. When set, the value/index carried by the Prefix-SID has local significance. By default the flag is UNSET.

up-down <i>boolean</i>	
Description	The up/down bit. Set if a prefix is advertised from a higher level to a lower level (e.g., level 2 to level 1), indicating that the prefix has traveled down the hierarchy. Prefixes that have the up/down bit set may only be advertised down the hierarchy, i.e., to lower levels. When a prefix is first injected into IS-IS, the bit is UNSET.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type identityref ipv6-reachability prefixes prefix prefix <i>string</i> up-down <i>boolean</i>

metric *number*

Description	<p>ISIS default metric value</p> <p>This is a metric understood by every Intermediate system in the domain. Each circuit shall have a positive integral value assigned for this metric. The value may be associated with any objective function of the circuit, but by convention is intended to measure the capacity of the circuit for handling traffic, for example, its throughput in bits-per-second. Higher values indicate a lower capacity.</p>

admin-group *number*

Description	The administrative group sub-TLV contains a 4-octet bit mask assigned by the network administrator Each set bit corresponds to one administrative group assigned to the interface. By convention, the least significant bit is referred to as group 0, and the most significant bit is referred to as group 31.

bandwidth *binary*

Description The available bandwidth on a link, forwarding adjacency, or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, available bandwidth is defined to be residual bandwidth minus the measured bandwidth used for the actual forwarding of non-RSVP-TE label switched path packets. For a bundled link, available bandwidth is defined to be the sum of the component link available bandwidths minus the measured bandwidth used for the actual forwarding of non-RSVP-TE label switched path packets. For a bundled link, available bandwidth is defined to be the sum of the component link available bandwidths.

Context [network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref isis-neighbor-attribute neighbors neighbor system-id string instances instance id number subtlvs subtlv type identityref available-bandwidth bandwidth binary](#)

Tree	flags
Options	<ul style="list-style-type: none"> • address-family Address-family flag. When unset, the Adj-SID refers to an adjacency with outgoing IPv4 encapsulation. If set then the Adj-SID refers to an adjacency with outgoing IPv6 encapsulation. • backup Backup flag. When set, the Adj-SID refers to an adjacency being protected (e.g.: using IPFRR or MPLS-FRR). • value Value flag. When set, the SID carries a value (instead of an index). By default the flag is SET. • local Local flag. When set, the value/index carried by the SID has local significance. By default the flag is SET. • set Set flag. When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.

link-loss *number*

Description Link packet loss as a percentage of the total traffic sent over a configurable interval. The basic unit is 0.000003%, where $(2^{24} - 2)$ is 50.331642%. This value is the highest packet-loss percentage that can be expressed (the

assumption being that precision is more important on high-speed links than the ability to advertise loss rates greater than this, and that high-speed links with over 50% loss are unusable). Therefore, measured values that are larger than the field maximum SHOULD be encoded as the maximum value.

type *keyword*

Description	Link protection capabilities.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type identityref isis-neighbor-attribute neighbors neighbor system-id <i>string</i> instances instance id <i>number</i> subtlvs subtlv type identityref link-protection-type type <i>keyword</i>
Tree	type
Options	<ul style="list-style-type: none"> extra-traffic If set the link has extra traffic protection. If the link is of type Extra Traffic, it means that the link is protecting another link or links. The LSPs on a link of this type will be lost if any of the links it is protecting fail. unprotected

If set, the link is unprotected. If the link is of type Unprotected, it means that there is no other link protecting this link. The LSPs on a link of this type will be lost if the link fails.

- shared

If set, the link has shared protection. If the link is of type Shared, it means that there are one or more disjoint links of type Extra Traffic that are protecting this link. These Extra Traffic links are shared between one or more links of type Shared.

- one-one

If set, the link has dedicated 1:1 protection. If the link is of type Dedicated 1:1, it means that there is one dedicated disjoint link of type Extra Traffic that is protecting this link.

- plus-one

If set, the link has dedicated 1+1 protection. If the link is of type Dedicated 1+1, it means that a dedicated disjoint link is protecting this link. However, the protecting link is not advertised in the link state database and is therefore not available for the routing of LSPs.

- enhanced

If set the link has enhanced protection. If the link is of type Enhanced, it means that a protection scheme that is more reliable than Dedicated 1+1, e.g., 4 fiber BLSR/MS-SPRING, is being used to protect this link.

bandwidth *binary*

Description	Residual bandwidth on a link, forwarding adjacency [RFC4206], or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, residual bandwidth is defined to be the Maximum Bandwidth [RFC5305] minus the bandwidth currently allocated to RSVP-TE label switched paths. For a bundled link, residual bandwidth is defined to be the sum of the component link residual bandwidths.

bandwidth *binary*

Description	The amount of bandwidth reservable in this direction on this link. Note that for oversubscription purposes, this can be greater than the bandwidth of the link. It contains eight 32-bit IEEE floating point numbers(one for each priority). The units are bytes (not bits!) per second. The values correspond to the bandwidth that can be reserved with a setup priority of 0 through 7, arranged in increasing order with priority 0 occurring at the start of the sub-TLV, and priority 7 at the end of the sub-TLV.

bandwidth <i>binary</i>	
Description	The bandwidth utilization on a link, forwarding adjacency, or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, bandwidth utilization represents the actual utilization of the link (i.e., as measured by the advertising node). For a bundled link, bandwidth utilization is defined to be the sum of the component link bandwidth utilizations.

router-id string	
Description	IPv4 Source router ID address. In cases where the advertisement is an identifier for the advertising router (e.g., with the N-flag set in the Prefix Attribute Flags sub-TLV), it may be useful for other routers to know the source of the advertisement. When reachability advertisement is leaked from one level to another, Router ID advertised is always the Router ID of the ISIS instance that originated the advertisement. This would be true even if the prefix had been learned from another protocol.

Tree	flags
Options	<ul style="list-style-type: none"> • readvertisement Readvertisement flag. When set, the prefix to which this Prefix-SID is attached, has been propagated by the router either from another level or from redistribution. • node Node flag. When set, the Prefix-SID refers to the router identified by the prefix. Typically, the N-Flag is set on Prefix-SIDs attached to a router loopback address. • no-php Penultimate-Hop-Popping flag. When set, then the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID. • explicit-null Explicit-Null flag. When set, any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID having an Explicit-NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet. • value Value flag. When set, the Prefix-SID carries a value (instead of an index). By default the flag is UNSET. • local Local flag. When set, the value/index carried by the Prefix-SID has local significance. By default the flag is UNSET.

up-down boolean	
Description	The up/down bit. Set if a prefix is advertised from a higher level to a lower level (e.g., level 2 to level 1), indicating that the prefix has traveled down the hierarchy. Prefixes that have the up/down bit set may only be advertised down the hierarchy, i.e., to lower levels. When a prefix is first injected into IS-IS, the bit is UNSET.

Tree	flags
Options	<ul style="list-style-type: none"> • readvertisement

Readvertisement flag. When set, the prefix to which this Prefix-SID is attached, has been propagated by the router either from another level or from redistribution.

- node

Node flag. When set, the Prefix-SID refers to the router identified by the prefix. Typically, the N-Flag is set on Prefix-SIDs attached to a router loopback address.

- no-php

Penultimate-Hop-Popping flag. When set, then the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.

- explicit-null

Explicit-Null flag. When set, any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID having an Explicit-NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet.

- value

Value flag. When set, the Prefix-SID carries a value (instead of an index). By default the flag is UNSET.

- local

Local flag. When set, the value/index carried by the Prefix-SID has local significance. By default the flag is UNSET.

Configurable

False

bandwidth <i>binary</i>	
Description	The available bandwidth on a link, forwarding adjacency, or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, available bandwidth is defined to be residual bandwidth minus the measured bandwidth used for the actual forwarding of non-RSVP-TE label switched path packets. For a bundled link, available bandwidth is defined to be the sum of the component link available bandwidths minus the measured bandwidth used for the actual forwarding of non-RSVP-TE label switched path packets. For a bundled link, available bandwidth is defined to be the sum of the component link available bandwidths.

link-loss *number*

Description	Link packet loss as a percentage of the total traffic sent over a configurable interval. The basic unit is 0.000003%, where $(2^{24} - 2)$ is 50.331642%. This value is the highest packet-loss percentage that can be expressed (the assumption being that precision is more important on high-speed links than the ability to advertise loss rates greater than this, and that high-speed links with over 50% loss are unusable). Therefore, measured values that are larger than the field maximum SHOULD be encoded as the maximum value.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type identityref mt-isis-neighbor-attribute neighbors neighbor mt-id <i>number</i> system-id <i>string</i> instances instance id <i>number</i> subtlvs subtlv type identityref link-loss link-loss <i>number</i>

type keyword	
Description	Link protection capabilities.
Context	network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isis-neighbor-attribute neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref link-protection-type type keyword
Tree	type
Options	<ul style="list-style-type: none"> • extra-traffic If set the link has extra traffic protection. If the link is of type Extra Traffic, it means that the link is protecting another link or links. The LSPs on a link of this type will be lost if any of the links it is protecting fail. • unprotected If set, the link is unprotected. If the link is of type Unprotected, it means that there is no other link protecting this link. The LSPs on a link of this type will be lost if the link fails. • shared If set, the link has shared protection. If the link is of type Shared, it means that there are one or more disjoint links of type Extra Traffic that are protecting this link. These Extra Traffic links are shared between one or more links of type Shared. • one-one If set, the link has dedicated 1:1 protection. If the link is of type Dedicated 1:1, it means that there is one dedicated disjoint link of type Extra Traffic that is protecting this link. • plus-one If set, the link has dedicated 1+1 protection. If the link is of type Dedicated 1+1, it means that a dedicated disjoint link is protecting this link. However, the protecting link is not advertised in the link state database and is therefore not available for the routing of LSPs. • enhanced If set the link has enhanced protection. If the link is of type Enhanced, it means that a protection scheme that is more reliable than Dedicated 1+1, e.g., 4 fiber BLSR/MS-SPRING, is being used to protect this link.
Configurable	False

bandwidth <i>binary</i>	
Description	Residual bandwidth on a link, forwarding adjacency [RFC4206], or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, residual bandwidth is defined to be the Maximum Bandwidth [RFC5305] minus the bandwidth currently allocated to RSVP-TE label switched paths. For a bundled link, residual bandwidth is defined to be the sum of the component link residual bandwidths.

bandwidth *binary*

Description The amount of bandwidth reservable in this direction on this link. Note that for oversubscription purposes, this can be greater than the bandwidth of the link. It contains eight 32-bit IEEE floating point numbers(one for each priority). The units are bytes (not bits!) per second. The values correspond

to the bandwidth that can be reserved with a setup priority of 0 through 7, arranged in increasing order with priority 0 occurring at the start of the sub-TLV, and priority 7 at the end of the sub-TLV.

bandwidth *binary*

Description	The bandwidth utilization on a link, forwarding adjacency, or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, bandwidth utilization represents the actual utilization of the link (i.e., as measured by the advertising node). For a bundled link, bandwidth utilization is defined to be the sum of the component link bandwidth utilizations.
