metric number

Description	ISIS metric value.
Context	network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isn neighbors neighbor mt-id number system-id string instances instance id number metric number
Tree	metric
Range	0 to 16777215
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subtlvs

Description	This container describes IS Neighbor sub-TLVs.
Context	network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isn neighbors neighbor mt-id number system-id string instances instance id number subtlvs
Tree	subtlvs
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subtlv type identityref

Description	List of subTLV types in the LSDB for the specified TLV.
Context	network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isn neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref
Tree	subtlv
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

type *identityref*

Description	The type of subTLV being described. The type of subTLV is expressed as a canonical name.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type <i>identityref</i> mt-isn neighbors neighbor mt-id <i>number</i> system-id <i>string</i> instances instance id <i>number</i> subtlvs subtlv type <i>identityref</i>
Options	<ul style="list-style-type: none"> • is-reachability-subtlvs-type Base identity for an ISIS TLV 22, 23, 222, 223, 141 SUB-TLV type. • ip-reachability-subtlvs-type Base identity for an ISIS TLV 135, 235, 236, 237 SUB-TLV type. • router-capability-subtlvs-type Base identity for an ISIS TLV 242 SUB-TLV type.
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

adjacency-sids

Description	This container defines segment routing adjacency SIDs.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type <i>identityref</i> mt-isn neighbors neighbor mt-id <i>number</i> system-id <i>string</i> instances instance id <i>number</i> subtlvs subtlv type <i>identityref</i> adjacency-sids
Tree	adjacency-sids
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

adjacency-sid *value number*

Description	Adjacency Segment-IDs List. An IGP-Adjacency Segment is an IGP segment attached to a unidirectional adjacency or a set of unidirectional adjacencies. By default, an IGP- Adjacency Segment is local to the node which advertises it.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type <i>identityref</i> mt-isn neighbors neighbor mt-id <i>number</i> system-id <i>string</i> instances instance

	<i>id number subtlvs subtlv type identityref adjacency-sids adjacency-sid value number</i>
Tree	adjacency-sid
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
value number	
Description	Adjacency-SID value.
Context	network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isn neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref adjacency-sids adjacency-sid value number

Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
flags keyword	
Description	Flags associated with Adj-Segment-ID.
Context	network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isn neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref adjacency-sids adjacency-sid value number flags keyword
Tree	flags
Options	<ul style="list-style-type: none"> • address-family Address-family flag. When unset, the Adj-SID refers to an adjacency with outgoing IPv4 encapsulation. If set then the Adj-SID refers to an adjacency with outgoing IPv6 encapsulation. • backup Backup flag. When set, the Adj-SID refers to an adjacency being protected (e.g.: using IPFRR or MPLS-FRR). • value Value flag. When set, the SID carries a value (instead of an index). By default the flag is SET. • local

Local flag. When set, the value/index carried by the SID has local significance. By default the flag is SET.

- set

Set flag. When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.

Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
weight number	
Description	Value that represents the weight of the Adj-SID for the purpose of load balancing.

bandwidth *binary*

Description	The available bandwidth on a link, forwarding adjacency, or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, available bandwidth is defined to be residual bandwidth minus the measured bandwidth used for the actual forwarding of non-RSVP-TE label switched path packets. For a bundled link, available bandwidth is defined to be the sum of the component link available bandwidths minus the measured bandwidth used for the actual forwarding of non-RSVP-TE label switched path packets. For a bundled link, available bandwidth is defined to be the sum of the component link available bandwidths.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> tlvs tlv type <i>identityref</i> mt-isn neighbors neighbor mt-id <i>number</i> system-id <i>string</i> instances instance id <i>number</i> subtlvs subtlv type <i>identityref</i> available-bandwidth bandwidth <i>binary</i>

link-loss number	
Description	Link packet loss as a percentage of the total traffic sent over a configurable interval. The basic unit is 0.000003%, where (2 ²⁴ - 2) is 50.331642%. This value is the highest packet-loss percentage that can be expressed (the assumption being that precision is more important on high-speed links than the ability to advertise loss rates greater than this, and that high-speed links with over 50% loss are unusable). Therefore, measured values that are larger than the field maximum SHOULD be encoded as the maximum value.
Context	network-instance name string protocols isis instance name string level level-number number link-state-database lsp lsp-id string tlvs tlv type identityref mt-isn neighbors neighbor mt-id number system-id string instances instance id number subtlvs subtlv type identityref link-loss link-loss number

Tree	type

Options	<ul style="list-style-type: none"> • extra-traffic If set the link has extra traffic protection. If the link is of type Extra Traffic, it means that the link is protecting another link or links. The LSPs on a link of this type will be lost if any of the links it is protecting fail. • unprotected If set, the link is unprotected. If the link is of type Unprotected, it means that there is no other link protecting this link. The LSPs on a link of this type will be lost if the link fails. • shared If set, the link has shared protection. If the link is of type Shared, it means that there are one or more disjoint links of type Extra Traffic that are protecting this link. These Extra Traffic links are shared between one or more links of type Shared. • one-one If set, the link has dedicated 1:1 protection. If the link is of type Dedicated 1:1, it means that there is one dedicated disjoint link of type Extra Traffic that is protecting this link. • plus-one If set, the link has dedicated 1+1 protection. If the link is of type Dedicated 1+1, it means that a dedicated disjoint link is protecting this link. However, the protecting link is not advertised in the link state database and is therefore not available for the routing of LSPs. • enhanced If set the link has enhanced protection. If the link is of type Enhanced, it means that a protection scheme that is more reliable than Dedicated 1+1, e.g., 4 fiber BLSR/MS-SPRING, is being used to protect this link.
Configurable	False

bandwidth <i>binary</i>	
Description	Residual bandwidth on a link, forwarding adjacency [RFC4206], or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, residual bandwidth is defined to be the Maximum Bandwidth [RFC5305] minus the bandwidth currently allocated to RSVP-TE label switched paths. For a bundled link, residual bandwidth is defined to be the sum of the component link residual bandwidths.

bandwidth *binary*

Description	The amount of bandwidth reservable in this direction on this link. Note that for oversubscription purposes, this can be greater than the bandwidth of the link. It contains eight 32-bit IEEE floating point numbers(one for each priority). The units are bytes (not bits!) per second. The values correspond to the bandwidth that can be reserved with a setup priority of 0 through 7, arranged in increasing order with priority 0 occurring at the start of the sub-TLV, and priority 7 at the end of the sub-TLV.

bandwidth <i>binary</i>	
Description	The bandwidth utilization on a link, forwarding adjacency, or bundled link in IEEE floating-point format with units of bytes per second. For a link or forwarding adjacency, bandwidth utilization represents the actual utilization of the link (i.e., as measured by the advertising node). For a bundled link, bandwidth utilization is defined to be the sum of the component link bandwidth utilizations.

length *number*

Description	TLV length.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> undefined-tlvs undefined-tlv type <i>number</i> length <i>number</i>
Tree	length
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

value *binary*

Description	TLV value.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> undefined-tlvs undefined-tlv type <i>number</i> value <i>binary</i>
Tree	value
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version *number*

Description	PDU version. This is set to 1.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> version <i>number</i>
Tree	version
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version2 *number*

Description	PDU version2. This is set to 1
--------------------	--------------------------------

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> link-state-database lsp lsp-id <i>string</i> version2 <i>number</i>
Tree	version2
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

loopfree-alternate-exclude *boolean*

Description	Enable/disable LFA at ISIS level.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> loopfree-alternate-exclude <i>boolean</i>
Tree	loopfree-alternate-exclude
Default	false
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

metric-style *keyword*

Description	Specifies the metric style to be wide or narrow for the level
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> metric-style <i>keyword</i>
Tree	metric-style
Default	wide
Options	<ul style="list-style-type: none"> • narrow This enum describes narrow metric style • wide This enum describes wide metric style
Configurable	True
Platforms	Supported on all platforms

route-preference

Description	Specify the route preference (admin distance) for IP routes associated with the level
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> route-preference

Tree	route-preference
Configurable	True
Platforms	Supported on all platforms

external number

Description	Specify the route preference of external routes carried in this level. By default the route preference of external L1 routes is 160. By default the route preference of external L2 routes is 165.
Context	network-instance name string protocols isis instance name string level level-number number route-preference external number
Tree	external
Range	1 to 255
Configurable	True
Platforms	Supported on all platforms

internal number

Description	Specify the route preference of internal routes carried in this level. By default the route preference of internal L1 routes is 15. By default the route preference of internal L2 routes is 18.
Context	network-instance name string protocols isis instance name string level level-number number route-preference internal number
Tree	internal
Range	1 to 255
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Per level statistics in an ISIS instance
Context	network-instance name string protocols isis instance name string level level-number number statistics
Tree	statistics
Configurable	False
Platforms	Supported on all platforms

authentication-failures *number*

Description	Number of times an IS-IS control PDU associated with this level had the correct auth type but failed to pass authentication validation
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> statistics authentication-failures <i>number</i>
Tree	authentication-failures
Default	0
Configurable	False
Platforms	Supported on all platforms

authentication-type-failures *number*

Description	Number of times an IS-IS control PDU associated with this level had an auth type field different from that for this system
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> statistics authentication-type-failures <i>number</i>
Tree	authentication-type-failures
Default	0
Configurable	False
Platforms	Supported on all platforms

corrupted-lsps *number*

Description	Number of corrupted in-memory LSPs detected. LSPs received from the wire with a bad checksum are silently dropped and not counted. LSPs received from the wire with parse errors are counted by lsp-errors
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> statistics corrupted-lsps <i>number</i>
Tree	corrupted-lsps
Default	0
Configurable	False
Platforms	Supported on all platforms

database-overloads *number*

Description	Number of times the database has become overloaded
--------------------	--

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> statistics database-overloads <i>number</i>
Tree	database-overloads
Default	0
Configurable	False
Platforms	Supported on all platforms

exceeded-max-sequence-number *number*

Description	Number of times the system has attempted to exceed the maximum sequence number
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> statistics exceeded-max-sequence-number <i>number</i>
Tree	exceeded-max-sequence-number
Default	0
Configurable	False
Platforms	Supported on all platforms

lsp-errors *number*

Description	Number of received LSPs with parse errors
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> statistics lsp-errors <i>number</i>
Tree	lsp-errors
Default	0
Configurable	False
Platforms	Supported on all platforms

manual-address-drop-from-area *number*

Description	number of times a manual address has been dropped from area
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> statistics manual-address-drop-from-area <i>number</i>
Tree	manual-address-drop-from-area
Default	0
Configurable	False
Platforms	Supported on all platforms

max-area-address-mismatches *number*

Description	Number of times an IS-IS control PDU associated with this level was received with a max area address field different from that for this system
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> statistics max-area-address-mismatches <i>number</i>
Tree	max-area-address-mismatches
Default	0
Configurable	False
Platforms	Supported on all platforms

own-lsp-purges *number*

Description	Number of times a zero-aged copy of the system's own LSP is received from some other node
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> statistics own-lsp-purges <i>number</i>
Tree	own-lsp-purges
Default	0
Configurable	False
Platforms	Supported on all platforms

sequence-number-skips *number*

Description	Number of times a sequence number skip has occurred
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> statistics sequence-number-skips <i>number</i>
Tree	sequence-number-skips
Default	0
Configurable	False
Platforms	Supported on all platforms

spf-runs *number*

Description	number of times a full SPF run has been performed on the level LSDB since the IS-IS manager restarted
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> statistics spf-runs <i>number</i>

Tree	spf-runs
Default	0
Configurable	False
Platforms	Supported on all platforms

system-id-length-mismatches *number*

Description	Number of times an IS-IS control PDU associated with this level was received with a system ID field length different from that for this system
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> statistics system-id-length-mismatches <i>number</i>
Tree	system-id-length-mismatches
Default	0
Configurable	False
Platforms	Supported on all platforms

total-lsps *number*

Description	Number of LSPs in the database at the system level
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> statistics total-lsps <i>number</i>
Tree	total-lsps
Default	0
Configurable	False
Platforms	Supported on all platforms

trace-options

Description	Level debug trace options for IS-IS
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> trace-options
Tree	trace-options
Configurable	True
Platforms	Supported on all platforms

trace *keyword*

Description	List of tracing options
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level level-number <i>number</i> trace-options trace <i>keyword</i>
Tree	trace
Options	<ul style="list-style-type: none"> • adjacencies • lsdb • routes • spf
Configurable	True
Platforms	Supported on all platforms

level-capability *keyword*

Description	The level-capability of the intermediate system (router)
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-capability <i>keyword</i>
Tree	level-capability
Default	L2
Options	<ul style="list-style-type: none"> • L1 This enum describes ISIS level 1 • L2 This enum describes ISIS level 2 • L1L2 This enum describes ISIS level 1-2
Configurable	True
Platforms	Supported on all platforms

level-database [level-number](#) *number* [lsp-id](#) *string*

Description	Link State database
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i>
Tree	level-database
Configurable	False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

level-number *number*

Description Specifies the IS-IS protocol level to which these attributes are applied.

Context [network-instance name string protocols isis instance name string level-database level-number number lsp-id string](#)

Range 1 to 2

Configurable False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

Isp-id *string*

Description The value specifies the LSP Id and is given in the format as 6 octets of adjacency system-id followed by 1 octet Lan-ID and 1 octet LSP Number.

Context [network-instance name string protocols isis instance name string level-database level-number number lsp-id string](#)

String Length 20

Configurable False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

attributes

Description Enter the attributes context

Context [network-instance name string protocols isis instance name string level-database level-number number lsp-id string attributes](#)

Tree [attributes](#)

Configurable False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

attached *boolean*

Description	Set to true in the L1 LSP when the IS has a Level 2 adjacency.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> attributes attached <i>boolean</i>

level2-is-type *boolean*

Description	Set to true when the router participates in L2
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> attributes level2-is-type <i>boolean</i>
Tree	level2-is-type
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

overload *boolean*

Description	Set to true when the IS is in overload state and should be avoided for transit.
--------------------	---

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> attributes overload <i>boolean</i>
Tree	overload
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

checksum *string*

Description	The value indicates the checksum of contents of LSP from the SourceID field in the LSP till the end. The checksum is computed using the Fletcher checksum algorithm.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> checksum <i>string</i>
Tree	checksum
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

defined-tlvs

Description	List of defined TLV-s contained in LSP.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs
Tree	defined-tlvs
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

application-specific-srlg [neighbor](#) *string*

Description	List of application-specific SRLGs. TLV = 238.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs application-specific-srlg neighbor <i>string</i>

Tree	application-specific-srlg
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

neighbor *string*

Description	A neighbor, identified by its System ID and one octet to indicate the pseudonode number
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs application-specific-srlg neighbor <i>string</i>
String Length	17
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

legacy *boolean*

Description	When the legacy flag is set, all of the applications specified in the bit mask MUST use the legacy advertisements for the corresponding link found in TLV 138 or TLV 139.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs application-specific-srlg neighbor <i>string</i> legacy <i>boolean</i>
Tree	legacy
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

loop-free-alternate *boolean*

Description	F bit is set in the Standard Application Identifier Bit Mask
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs application-specific-srlg neighbor <i>string</i> loop-free-alternate <i>boolean</i>
Tree	loop-free-alternate

area-addresses *string*

Description	Each item represents an area address advertised by the LSP.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs area-addresses <i>string</i>
Tree	area-addresses
String Length	2 to 38
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

authentication

Description	Authentication TLV. TLV type = 10
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs authentication
Tree	authentication
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

auth-data *string*

Description	The authentication data
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs authentication auth-data <i>string</i>
Tree	auth-data
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

auth-type *keyword*

Description	Enter the auth-type context
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs authentication auth-type <i>keyword</i>
Tree	auth-type
Options	<ul style="list-style-type: none"> • cleartext • crypto • hmac-md5
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3,

7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

extended-ipv4-reachability *ipv4-prefix string*

Description	TLV specifying extended IPv4 Reachability information in the LSP. TLV type = 135
Context	network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs extended-ipv4-reachability ipv4-prefix string
Tree	extended-ipv4-reachability
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

ipv4-prefix *string*

Description	An IPv4 prefix that is reachable to the router.
Context	network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs extended-ipv4-reachability ipv4-prefix string
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

down *boolean*

Description	Reads true when the IPv4 prefix was leaked down from Level2 to Level1.
Context	network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs extended-ipv4-reachability ipv4-prefix string down boolean
Tree	down
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

metric number

Description	The default metric to reach the IPv4 prefix.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> metric number
Tree	metric
Range	0 to 16777215
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

sub-tlvs

Description	SubTLVs of TLV 135, TLV 235, TLV 236 and TLV 237
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs
Tree	sub-tlvs
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

prefix-attribute-flags

Description	This sub-TLV supports the advertisement of additional flags associated with a given prefix advertisement.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs prefix-attribute-flags
Tree	prefix-attribute-flags
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

external-prefix *boolean*

Description	Set if the prefix has been redistributed from another protocol (or another IS-IS instance).
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs prefix-attribute-flags external-prefix <i>boolean</i>
Tree	external-prefix
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

node-identifier *boolean*

Description	Set when the prefix identifies the advertising router; i.e. it is a host prefix advertising a globally reachable address typically associated with a loopback address.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs prefix-attribute-flags node-identifier <i>boolean</i>
Tree	node-identifier
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

re-advertised *boolean*

Description	Set when the prefix has been leaked from one level to another (upwards or downwards).
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs prefix-attribute-flags re-advertised <i>boolean</i>
Tree	re-advertised
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

route-tag-32bit *number*

Description	List of 32-bit administrative tag values associated with the IPv4 prefix.
--------------------	---

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs route-tag-32bit <i>number</i>
Tree	route-tag-32bit
Range	1 to 4294967295
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

route-tag-64bit *number*

Description	List of 64-bit administrative tag values associated with the IPv4 prefix.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs route-tag-64bit <i>number</i>
Tree	route-tag-64bit
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

segment-routing-prefix-sid

Description	Carries a segment routing prefix SID
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid
Tree	segment-routing-prefix-sid
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

algorithm *keyword*

Description	Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-

	reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid algorithm <i>keyword</i>
Tree	algorithm
Options	<ul style="list-style-type: none"> • spf • strict-spf
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

explicit-null *boolean*

Description	If set any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID that has an Explicit NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid explicit-null <i>boolean</i>
Tree	explicit-null
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local *boolean*

Description	If set, then the value/index carried by the Prefix-SID has local significance.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid local <i>boolean</i>
Tree	local
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

node-sid *boolean*

Description	If set the prefix SID refers to the router identified by the prefix.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid node-sid <i>boolean</i>

Tree	node-sid
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

penultimate-hop-popping *boolean*

Description	If set the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid penultimate-hop-popping <i>boolean</i>
Tree	penultimate-hop-popping
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

re-advertised *boolean*

Description	If set the prefix to which this Prefix-SID is attached has been propagated by the router from either another level or from another protocol.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid re-advertised <i>boolean</i>
Tree	re-advertised
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-index-or-label *number*

Description	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid sr-index-or-label <i>number</i>
Tree	sr-index-or-label
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

value *boolean*

Description	If set then the Prefix-SID carries a value
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid value <i>boolean</i>
Tree	value
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

extended-is-reachability [neighbor](#) *string*

Description	Each TLV encodes the identity of an adjacent IS neighbor. TLV type = 22
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i>
Tree	extended-is-reachability
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

neighbor *string*

Description	An adjacent IS neighbor
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i>
String Length	17
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

default-metric *number*

Description	The default metric to reach this adjacent neighbor.
--------------------	---

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> default-metric <i>number</i>
Tree	default-metric
Range	0 to 16777215
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

sub-tlvs

Description	SubTLVs of TLV 22 and TLV 222
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs
Tree	sub-tlvs
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

admin-group *number*

Description	A bit mask representing the administrative groups to which the interface belongs. Sub-TLV = 3.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs admin-group <i>number</i>
Tree	admin-group
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

application-specific-link-attributes

Description	Application Specific Link Attributes. Sub-TLV = 16.
--------------------	---

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes
Tree	application-specific-link-attributes
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

legacy *boolean*

Description	When the legacy flag is set, all of the applications specified in the bit mask MUST use the legacy advertisements for the corresponding link found in TLVs 22, 23, 25, 141, 222, and 223, in TLV 138, or in TLV 139 as appropriate.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes legacy <i>boolean</i>
Tree	legacy
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

loop-free-alternate *boolean*

Description	F bit is set in the Standard Application Identifier Bit Mask
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes loop-free-alternate <i>boolean</i>
Tree	loop-free-alternate
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rsvp-te *boolean*

Description	R bit is set in the Standard Application Identifier Bit Mask
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes rsvp-te <i>boolean</i>
Tree	rsvp-te

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-policy *boolean*

Description	S bit is set in the Standard Application Identifier Bit Mask
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sr-policy <i>boolean</i>
Tree	sr-policy
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sub-sub-tlvs

Description	Enter the sub-sub-tlvs context
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs
Tree	sub-sub-tlvs
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-group *number*

Description	A bit mask representing the administrative groups to which the interface belongs. Sub-Sub-TLV = 3.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs admin-group <i>number</i>
Tree	admin-group
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum-link-bandwidth *number*

Description	The (LAG aware) bandwidth of the interface to the neighbor. Sub-Sub-TLV = 9.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs maximum-link-bandwidth <i>number</i>
Tree	maximum-link-bandwidth
Units	bytes-per-second
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

min-max-unidirectional-link-delay

Description	The minimum and maximum delay between two directly connected IS-IS neighbors.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay
Tree	min-max-unidirectional-link-delay
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

anomolous *boolean*

Description	If the A bit is cleared, the values represent steady-state link performance.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay anomolous <i>boolean</i>
Tree	anomolous

Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

msd-type (*keyword* | *number*)

Description	MSD type
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-

	reachability neighbor string sub-tlvs link-msd msd-info msd-type (keyword number) msd-value number
Range	2 to 254
Options	<ul style="list-style-type: none"> base-mpls-imposition-msd
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

msd-value number

Description	A number in the range of 0-255 representing the maximum SID depth; for all MSD-Types, 0 represents the lack of ability to support a SID stack of any depth
Context	network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs extended-is-reachability neighbor string sub-tlvs link-msd msd-info msd-type (keyword number) msd-value number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum-link-bandwidth number

Description	The (LAG aware) bandwidth of the interface to the neighbor. Sub-TLV = 9.
Context	network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs extended-is-reachability neighbor string sub-tlvs maximum-link-bandwidth number
Tree	maximum-link-bandwidth
Units	bytes-per-second
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

min-max-unidirectional-link-delay

Description	The minimum and maximum delay between two directly connected IS-IS neighbors. Sub-TLV = 34.
Context	network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs extended-is-reachability neighbor string sub-tlvs min-max-unidirectional-link-delay
Tree	min-max-unidirectional-link-delay
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

anomolous *boolean*

Description If the A bit is cleared, the values represent steady-state link performance.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-is-reachability neighbor](#) *string* [sub-tlvs min-max-unidirectional-link-delay anomolous](#) *boolean*

Tree [anomolous](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-delay *number*

Description Maximum forward-path delay (from the advertising router to the remote neighbor)

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-is-reachability neighbor](#) *string* [sub-tlvs min-max-unidirectional-link-delay max-delay](#) *number*

Tree [max-delay](#)

Units microseconds

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

min-delay *number*

Description Minimum forward-path delay (from the advertising router to the remote neighbor)

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs extended-is-reachability neighbor](#) *string* [sub-tlvs min-max-unidirectional-link-delay min-delay](#) *number*

Tree [min-delay](#)

Units microseconds

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

segment-routing-adjacency-sid *sr-index-or-label number*

Description	List of Adj-SID sub-TLVs associated with the neighbor. Sub-TLV = 31.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-adjacency-sid sr-index-or-label <i>number</i>
Tree	segment-routing-adjacency-sid
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-index-or-label *number*

Description	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-adjacency-sid sr-index-or-label <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

adj-set *boolean*

Description	When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-adjacency-sid sr-index-or-label <i>number</i> adj-set <i>boolean</i>
Tree	adj-set
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

backup *boolean*

Description	If set, the Adj-SID is eligible for protection
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-

	reachability neighbor <i>string</i> sub-tlvs segment-routing-adjacency-sid sr-index-or-label <i>number</i> backup <i>boolean</i>
Tree	backup
Configurable	False

Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

value *boolean*

Description	If set then the Adj-SID carries a value
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label <i>number</i> value <i>boolean</i>
Tree	value
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

weight *number*

Description	The value represents the weight of the Adj-SID for the purpose of load balancing
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label <i>number</i> weight <i>number</i>
Tree	weight
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

te-default-metric *number*

Description	An administratively assigned metric used as an alternative to the normal SPF metric based (typically) on link bandwidth. Sub-TLV = 18.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs extended-is-reachability neighbor <i>string</i> sub-tlvs te-default-metric <i>number</i>
Tree	te-default-metric
Range	0 to 16777215
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hostname *string*

Description	Host name that advertised this LSP.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs hostname <i>string</i>
Tree	hostname
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

ipv4-external-reachability [ipv4-prefix](#) *string*

Description	TLV specifying external IPv4 Reachability information in the LSP. External reachability is typically routing information learned from another protocol. TLV type = 130
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv4-external-reachability ipv4-prefix <i>string</i>
Tree	ipv4-external-reachability
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

ipv4-prefix *string*

Description	An IPv4 prefix that is reachable to the router.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv4-external-reachability ipv4-prefix <i>string</i>
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

default-metric *number*

Description	The default metric to reach the IPv4 prefix.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv4-external-reachability ipv4-prefix <i>string</i> default-metric <i>number</i>
Tree	default-metric
Range	0 to 63
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

default-metric-type *keyword*

Description	The default metric type: internal or external.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv4-external-reachability ipv4-prefix <i>string</i> default-metric-type <i>keyword</i>
Tree	default-metric-type
Options	<ul style="list-style-type: none"> • internal This enum describes internal route type • external This enum describes external route type
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

down *boolean*

Description	Reads true when the IPv4 prefix was leaked down from Level2 to Level1.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv4-external-reachability ipv4-prefix <i>string</i> down <i>boolean</i>
Tree	down
Configurable	False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

ipv4-interface-addresses (*ipv4-address* | *ipv6-address*)

Description Each item represents an IPv4 address configured on an interface in this IS-IS instance.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs ipv4-interface-addresses](#) (*ipv4-address* | *ipv6-address*)

Tree [ipv4-interface-addresses](#)

Configurable False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

ipv4-internal-reachability [ipv4-prefix](#) *string*

Description TLV specifying internal IPv4 Reachability information in the LSP. TLV type = 128

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs ipv4-internal-reachability ipv4-prefix](#) *string*

Tree [ipv4-internal-reachability](#)

Configurable False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

ipv4-prefix *string*

Description An IPv4 prefix that is reachable to the router.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs ipv4-internal-reachability ipv4-prefix](#) *string*

Configurable False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

default-metric *number*

Description The default metric to reach the IPv4 prefix.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs ipv4-internal-reachability ipv4-prefix](#) *string* [default-metric](#) *number*

Tree [default-metric](#)

Range 0 to 63

Configurable False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

default-metric-type *keyword*

Description The default metric type: internal or external.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs ipv4-internal-reachability ipv4-prefix](#) *string* [default-metric-type](#) *keyword*

Tree [default-metric-type](#)

Options

- internal
This enum describes internal route type
- external
This enum describes external route type

Configurable False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

down *boolean*

Description Reads true when the IPv4 prefix was leaked down from Level2 to Level1.

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv4-internal-reachability ipv4-prefix <i>string</i> down <i>boolean</i>
Tree	down
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

ipv4-srlg neighbor *string*

Description	List of SRLGs advertised by the router. TLV = 138.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv4-srlg neighbor <i>string</i>
Tree	ipv4-srlg
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

neighbor *string*

Description	A neighbor, identified by its System ID and one octet to indicate the pseudonode number
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv4-srlg neighbor <i>string</i>
String Length	17
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4-interface-address *string*

Description	The IPv4 address of the interface to the neighbor
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv4-srlg neighbor <i>string</i> ipv4-interface-address <i>string</i>
Tree	ipv4-interface-address
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4-neighbor-address *string*

Description The IPv4 address of the neighbor

Context [network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs ipv4-srlg neighbor string ipv4-neighbor-address string](#)

Tree [ipv4-neighbor-address](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

numbered *boolean*

Description When set, the interface to the neighbor is numbered. When unset it is unnumbered.

Context [network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs ipv4-srlg neighbor string numbered boolean](#)

Tree [numbered](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

shared-risk-link-group *number*

Description List of SRLGs that apply to the adjacency with this neighbor

Context [network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs ipv4-srlg neighbor string shared-risk-link-group number](#)

Tree [shared-risk-link-group](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-interface-addresses (*ipv4-address* | *ipv6-address*)

Description Each item represents an IPv6 address configured on an interface in this IS-IS instance.

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-interface-addresses (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	ipv6-interface-addresses
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

ipv6-reachability [ipv6-prefix](#) *string*

Description	TLV specifying IPv6 Reachability information in the LSP. TLV type = 236
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i>
Tree	ipv6-reachability
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

ipv6-prefix *string*

Description	An IPv6 prefix that is reachable to the router.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i>
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

down *boolean*

Description	Reads true when the IPv6 prefix was leaked down from Level2 to Level1.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i> down <i>boolean</i>

Tree	down
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

external *boolean*

Description	Reads true when the IPv6 prefix reachability is external (learned from another protocol).
Context	network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs ipv6-reachability ipv6-prefix string external boolean
Tree	external
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

metric *number*

Description	The metric to reach this IPv6 prefix.
Context	network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs ipv6-reachability ipv6-prefix string metric number
Tree	metric
Range	0 to 16777215
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

sub-tlvs

Description	SubTLVs of TLV 135, TLV 235, TLV 236 and TLV 237
Context	network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs ipv6-reachability ipv6-prefix string sub-tlvs

Tree	sub-tlvs
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

prefix-attribute-flags

Description	This sub-TLV supports the advertisement of additional flags associated with a given prefix advertisement.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs prefix-attribute-flags
Tree	prefix-attribute-flags
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

external-prefix *boolean*

Description	Set if the prefix has been redistributed from another protocol (or another IS-IS instance).
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs prefix-attribute-flags external-prefix <i>boolean</i>
Tree	external-prefix
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

node-identifier *boolean*

Description	Set when the prefix identifies the advertising router; i.e. it is a host prefix advertising a globally reachable address typically associated with a loopback address.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs prefix-attribute-flags node-identifier <i>boolean</i>
Tree	node-identifier
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

re-advertised *boolean*

Description	Set when the prefix has been leaked from one level to another (upwards or downwards).
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs prefix-attribute-flags re-advertised <i>boolean</i>
Tree	re-advertised
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

route-tag-32bit *number*

Description	List of 32-bit administrative tag values associated with the IPv4 prefix.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs route-tag-32bit <i>number</i>
Tree	route-tag-32bit
Range	1 to 4294967295
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

route-tag-64bit *number*

Description	List of 64-bit administrative tag values associated with the IPv4 prefix.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs route-tag-64bit <i>number</i>
Tree	route-tag-64bit
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

segment-routing-prefix-sid

Description	Carries a segment routing prefix SID
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid
Tree	segment-routing-prefix-sid
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

algorithm *keyword*

Description	Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid algorithm <i>keyword</i>
Tree	algorithm
Options	<ul style="list-style-type: none"> • <code>spf</code> • <code>strict-spf</code>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

explicit-null *boolean*

Description	If set any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID that has an Explicit NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid explicit-null <i>boolean</i>
Tree	explicit-null
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local *boolean*

Description	If set, then the value/index carried by the Prefix-SID has local significance.
--------------------	--

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid local <i>boolean</i>
Tree	local
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

node-sid *boolean*

Description	If set the prefix SID refers to the router identified by the prefix.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid node-sid <i>boolean</i>
Tree	node-sid
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

penultimate-hop-popping *boolean*

Description	If set the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid penultimate-hop-popping <i>boolean</i>
Tree	penultimate-hop-popping
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

re-advertised *boolean*

Description	If set the prefix to which this Prefix-SID is attached has been propagated by the router from either another level or from another protocol.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid re-advertised <i>boolean</i>
Tree	re-advertised
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-index-or-label *number*

Description	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid sr-index-or-label <i>number</i>
Tree	sr-index-or-label
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

value *boolean*

Description	If set then the Prefix-SID carries a value
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid value <i>boolean</i>
Tree	value
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-srlg [neighbor](#) *string*

Description	List of IPv6 SRLGs advertised by the router. TLV = 139.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-srlg neighbor <i>string</i>
Tree	ipv6-srlg
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

neighbor *string*

Description	A neighbor, identified by its System ID and one octet to indicate the pseudonode number
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-srlg neighbor <i>string</i>

String Length	17
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-interface-address *string*

Description	The IPv6 address of the interface to the neighbor
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-srlg neighbor <i>string</i> ipv6-interface-address <i>string</i>
Tree	ipv6-interface-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-neighbor-address *string*

Description	The IPv6 address of the neighbor
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-srlg neighbor <i>string</i> ipv6-neighbor-address <i>string</i>

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

neighbor-address-included *boolean*

Description	When set, the IPv6 neighbor address is included.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-srlg neighbor <i>string</i> neighbor-address-included <i>boolean</i>
Tree	neighbor-address-included
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

shared-risk-link-group *number*

Description	List of SRLGs that apply to the adjacency with this neighbor
--------------------	--

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-srlg neighbor <i>string</i> shared-risk-link-group <i>number</i>
Tree	shared-risk-link-group
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-te-router-id *string*

Description	A single stable address that can always be referenced in a path that will be reachable from multiple hops away. TLV = 140.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs ipv6-te-router-id <i>string</i>
Tree	ipv6-te-router-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

is-reachability [neighbor](#) *string*

Description	Each TLV encodes the identity of an adjacent IS neighbor. TLV type = 2
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs is-reachability neighbor <i>string</i>
Tree	is-reachability
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

neighbor *string*

Description	An adjacent IS neighbor
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs is-reachability neighbor <i>string</i>
String Length	17
Configurable	False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

default-metric *number*

Description The default metric to reach this adjacent neighbor.

Context [network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs is-reachability neighbor string default-metric number](#)

Tree [default-metric](#)

Range 0 to 63

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

default-metric-type *keyword*

Description The default metric type: internal or external.

Context [network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs is-reachability neighbor string default-metric-type keyword](#)

Tree [default-metric-type](#)

Options

- internal
- external

Configurable False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

mt-ipv4-reachability [ipv4-prefix string](#)

Description TLV specifying multi-topology IPv4 reachability information in the LSP. TLV type = 235

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i>
Tree	mt-ipv4-reachability
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

ipv4-prefix *string*

Description	An IPv4 prefix that is reachable to the router.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i>
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

down *boolean*

Description	Reads true when the IPv4 prefix was leaked down from Level2 to Level1.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> down <i>boolean</i>
Tree	down
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

metric *number*

Description	The default metric to reach the IPv4 prefix.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> metric <i>number</i>

Tree	metric
Range	0 to 16777215
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

mt-id number

Description	A multi-topology ID.
Context	network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs mt-ipv4-reachability ipv4-prefix string mt-id number
Tree	mt-id
Range	0 to 4095
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

sub-tlvs

Description	SubTLVs of TLV 135, TLV 235, TLV 236 and TLV 237
Context	network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs mt-ipv4-reachability ipv4-prefix string sub-tlvs
Tree	sub-tlvs
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

prefix-attribute-flags

Description	This sub-TLV supports the advertisement of additional flags associated with a given prefix advertisement.
--------------------	---

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs prefix-attribute-flags
Tree	prefix-attribute-flags
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

external-prefix *boolean*

Description	Set if the prefix has been redistributed from another protocol (or another IS-IS instance).
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs prefix-attribute-flags external-prefix <i>boolean</i>
Tree	external-prefix
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

node-identifier *boolean*

Description	Set when the prefix identifies the advertising router; i.e. it is a host prefix advertising a globally reachable address typically associated with a loopback address.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs prefix-attribute-flags node-identifier <i>boolean</i>
Tree	node-identifier
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

re-advertised *boolean*

Description	Set when the prefix has been leaked from one level to another (upwards or downwards).
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs prefix-attribute-flags re-advertised <i>boolean</i>
Tree	re-advertised
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

route-tag-32bit *number*

Description List of 32-bit administrative tag values associated with the IPv4 prefix.

Context [network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs mt-ipv4-reachability ipv4-prefix string sub-tlvs route-tag-32bit number](#)

Tree [route-tag-32bit](#)

Range 1 to 4294967295

Configurable False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

route-tag-64bit *number*

Description List of 64-bit administrative tag values associated with the IPv4 prefix.

Context [network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs mt-ipv4-reachability ipv4-prefix string sub-tlvs route-tag-64bit number](#)

Tree [route-tag-64bit](#)

Configurable False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

segment-routing-prefix-sid

Description Carries a segment routing prefix SID

Context [network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs mt-ipv4-reachability ipv4-prefix string sub-tlvs segment-routing-prefix-sid](#)

Tree [segment-routing-prefix-sid](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

algorithm *keyword*

Description	Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid algorithm <i>keyword</i>
Tree	algorithm
Options	<ul style="list-style-type: none"> • <code>spf</code> • <code>strict-spf</code>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

explicit-null *boolean*

Description	If set any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID that has an Explicit NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid explicit-null <i>boolean</i>
Tree	explicit-null
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local *boolean*

Description	If set, then the value/index carried by the Prefix-SID has local significance.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid local <i>boolean</i>
Tree	local
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

node-sid *boolean*

Description	If set the prefix SID refers to the router identified by the prefix.
--------------------	--

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid node-sid <i>boolean</i>
Tree	node-sid
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

penultimate-hop-popping *boolean*

Description	If set the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid penultimate-hop-popping <i>boolean</i>
Tree	penultimate-hop-popping
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

re-advertised *boolean*

Description	If set the prefix to which this Prefix-SID is attached has been propagated by the router from either another level or from another protocol.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid re-advertised <i>boolean</i>
Tree	re-advertised
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-index-or-label *number*

Description	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv4-reachability ipv4-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid sr-index-or-label <i>number</i>
Tree	sr-index-or-label
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

value *boolean*

Description If set then the Prefix-SID carries a value

Context [network-instance name string](#) [protocols isis instance name string](#) [level-database level-number number](#) [lsp-id string](#) [defined-tlvs mt-ipv4-reachability ipv4-prefix string](#) [sub-tlvs segment-routing-prefix-sid value boolean](#)

Range	0 to 4095
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

sub-tlvs

Description	SubTLVs of TLV 135, TLV 235, TLV 236 and TLV 237
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs
Tree	sub-tlvs
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

prefix-attribute-flags

Description	This sub-TLV supports the advertisement of additional flags associated with a given prefix advertisement.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs prefix-attribute-flags
Tree	prefix-attribute-flags
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

external-prefix *boolean*

Description	Set if the prefix has been redistributed from another protocol (or another IS-IS instance).
--------------------	---

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs prefix-attribute-flags external-prefix <i>boolean</i>
Tree	external-prefix
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

node-identifier *boolean*

Description	Set when the prefix identifies the advertising router; i.e. it is a host prefix advertising a globally reachable address typically associated with a loopback address.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs prefix-attribute-flags node-identifier <i>boolean</i>
Tree	node-identifier
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

re-advertised *boolean*

Description	Set when the prefix has been leaked from one level to another (upwards or downwards).
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs prefix-attribute-flags re-advertised <i>boolean</i>
Tree	re-advertised
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

route-tag-32bit *number*

Description	List of 32-bit administrative tag values associated with the IPv4 prefix.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs route-tag-32bit <i>number</i>
Tree	route-tag-32bit
Range	1 to 4294967295
Configurable	False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

route-tag-64bit *number*

Description List of 64-bit administrative tag values associated with the IPv4 prefix.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv6-reachability ipv6-prefix](#) *string* [sub-tlvs route-tag-64bit](#) *number*

Tree [route-tag-64bit](#)

Configurable False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

segment-routing-prefix-sid

Description Carries a segment routing prefix SID

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv6-reachability ipv6-prefix](#) *string* [sub-tlvs segment-routing-prefix-sid](#)

Tree [segment-routing-prefix-sid](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

algorithm *keyword*

Description Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv6-reachability ipv6-prefix](#) *string* [sub-tlvs segment-routing-prefix-sid algorithm](#) *keyword*

Tree [algorithm](#)

Options

- spf
- strict-spf

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

explicit-null *boolean*

Description If set any upstream neighbor of the Prefix-SID originator MUST replace the Prefix-SID with a Prefix-SID that has an Explicit NULL value (0 for IPv4 and 2 for IPv6) before forwarding the packet

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv6-reachability ipv6-prefix](#) *string* [sub-tlvs segment-routing-prefix-sid explicit-null](#) *boolean*

Tree [explicit-null](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local *boolean*

Description If set, then the value/index carried by the Prefix-SID has local significance.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv6-reachability ipv6-prefix](#) *string* [sub-tlvs segment-routing-prefix-sid local](#) *boolean*

Tree [local](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

node-sid *boolean*

Description If set the prefix SID refers to the router identified by the prefix.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-ipv6-reachability ipv6-prefix](#) *string* [sub-tlvs segment-routing-prefix-sid node-sid](#) *boolean*

Tree [node-sid](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

penultimate-hop-popping *boolean*

Description If set the penultimate hop MUST NOT pop the Prefix-SID before delivering the packet to the node that advertised the Prefix-SID.

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid penultimate-hop-popping <i>boolean</i>
Tree	penultimate-hop-popping
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

re-advertised *boolean*

Description	If set the prefix to which this Prefix-SID is attached has been propagated by the router from either another level or from another protocol.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid re-advertised <i>boolean</i>
Tree	re-advertised
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-index-or-label *number*

Description	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid sr-index-or-label <i>number</i>
Tree	sr-index-or-label
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

value *boolean*

Description	If set then the Prefix-SID carries a value
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-ipv6-reachability ipv6-prefix <i>string</i> sub-tlvs segment-routing-prefix-sid value <i>boolean</i>
Tree	value
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mt-is-reachability neighbor string

Description Each TLV encodes the identity of an adjacent IS neighbor in a specific topology. TLV type = 222

Context [network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs mt-is-reachability neighbor string](#)

Tree [mt-is-reachability](#)

Configurable False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

neighbor string

Description An adjacent IS neighbor

Context [network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs mt-is-reachability neighbor string](#)

String Length 17

Configurable False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

default-metric number

Description The default metric to reach this adjacent neighbor.

Context [network-instance name string protocols isis instance name string level-database level-number number lsp-id string defined-tlvs mt-is-reachability neighbor string default-metric number](#)

Tree [default-metric](#)

Range 0 to 16777215

Configurable False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3,

7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

mt-id number

Description	A multi-topology ID.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> mt-id <i>number</i>
Tree	mt-id
Range	0 to 4095
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

sub-tlvs

Description	SubTLVs of TLV 22 and TLV 222
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs
Tree	sub-tlvs
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

admin-group number

Description	A bit mask representing the administrative groups to which the interface belongs. Sub-TLV = 3.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs admin-group <i>number</i>
Tree	admin-group
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

application-specific-link-attributes

Description	Application Specific Link Attributes. Sub-TLV = 16.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes
Tree	application-specific-link-attributes
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

legacy *boolean*

Description	When the legacy flag is set, all of the applications specified in the bit mask MUST use the legacy advertisements for the corresponding link found in TLVs 22, 23, 25, 141, 222, and 223, in TLV 138, or in TLV 139 as appropriate.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes legacy <i>boolean</i>
Tree	legacy
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

loop-free-alternate *boolean*

Description	F bit is set in the Standard Application Identifier Bit Mask
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes loop-free-alternate <i>boolean</i>
Tree	loop-free-alternate
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rsvp-te *boolean*

Description	R bit is set in the Standard Application Identifier Bit Mask
--------------------	--

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes rsvp-te <i>boolean</i>
Tree	rsvp-te
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-policy *boolean*

Description	S bit is set in the Standard Application Identifier Bit Mask
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sr-policy <i>boolean</i>
Tree	sr-policy
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sub-sub-tlvs

Description	Enter the sub-sub-tlvs context
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs
Tree	sub-sub-tlvs
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-group *number*

Description	A bit mask representing the administrative groups to which the interface belongs. Sub-Sub-TLV = 3.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs admin-group <i>number</i>
Tree	admin-group
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum-link-bandwidth *number*

Description	The (LAG aware) bandwidth of the interface to the neighbor. Sub-Sub-TLV = 9.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs maximum-link-bandwidth <i>number</i>
Tree	maximum-link-bandwidth
Units	bytes-per-second
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

min-max-unidirectional-link-delay

Description	The minimum and maximum delay between two directly connected IS-IS neighbors.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay
Tree	min-max-unidirectional-link-delay
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

anomolous *boolean*

Description	If the A bit is cleared, the values represent steady-state link performance.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay anomolous <i>boolean</i>
Tree	anomolous
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-delay *number*

Description	Maximum forward-path delay (from the advertising router to the remote neighbor)
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay max-delay <i>number</i>
Tree	max-delay
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

min-delay *number*

Description	Minimum forward-path delay (from the advertising router to the remote neighbor)
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs min-max-unidirectional-link-delay min-delay <i>number</i>
Tree	min-delay
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

te-default-metric *number*

Description	An administratively assigned metric used as an alternative to the normal SPF metric based (typically) on link bandwidth.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs application-specific-link-attributes sub-sub-tlvs te-default-metric <i>number</i>
Tree	te-default-metric
Range	0 to 16777215
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4-interface-address *string*

Description	The IPv4 address of the interface to the neighbor. Sub-TLV = 6.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs ipv4-interface-address <i>string</i>
Tree	ipv4-interface-address
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

ipv4-neighbor-address *string*

Description	The IPv4 address of the neighbor. Sub-TLV = 8.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs ipv4-neighbor-address <i>string</i>
Tree	ipv4-neighbor-address
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

ipv6-interface-address *string*

Description	The IPv6 address of the interface to the neighbor. Sub-TLV = 12.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs ipv6-interface-address <i>string</i>
Tree	ipv6-interface-address
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

ipv6-neighbor-address *string*

Description	The IPv4 address of the neighbor. Sub-TLV = 13.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs ipv6-neighbor-address <i>string</i>
Tree	ipv6-neighbor-address
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

link-msd

Description	The maximum segment depth of the link to the neighbor. Sub-TLV = 15.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs link-msd
Tree	link-msd
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

msd-info [msd-type](#) (*keyword* | *number*) [msd-value](#) *number*

Description	List of MSD entries
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs link-msd msd-info msd-type (<i>keyword</i> <i>number</i>) msd-value <i>number</i>
Tree	msd-info
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

msd-type (*keyword* | *number*)

Description	MSD type
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability

	neighbor <i>string</i> sub-tlvs link-msd msd-info msd-type (<i>keyword number</i>) msd-value <i>number</i>
Range	2 to 254
Options	<ul style="list-style-type: none"> base-mpls-imposition-msd
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

msd-value *number*

Description	A number in the range of 0-255 representing the maximum SID depth; for all MSD-Types, 0 represents the lack of ability to support a SID stack of any depth
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs link-msd msd-info msd-type (<i>keyword number</i>) msd-value <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum-link-bandwidth *number*

Description	The (LAG aware) bandwidth of the interface to the neighbor. Sub-TLV = 9.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs maximum-link-bandwidth <i>number</i>
Tree	maximum-link-bandwidth
Units	bytes-per-second
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

min-max-unidirectional-link-delay

Description	The minimum and maximum delay between two directly connected IS-IS neighbors. Sub-TLV = 34.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs min-max-unidirectional-link-delay
Tree	min-max-unidirectional-link-delay
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

anomolous *boolean*

Description If the A bit is cleared, the values represent steady-state link performance.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs min-max-unidirectional-link-delay anomolous](#) *boolean*

Tree [anomolous](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-delay *number*

Description Maximum forward-path delay (from the advertising router to the remote neighbor)

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs min-max-unidirectional-link-delay max-delay](#) *number*

Tree [max-delay](#)

Units microseconds

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

min-delay *number*

Description Minimum forward-path delay (from the advertising router to the remote neighbor)

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs min-max-unidirectional-link-delay min-delay](#) *number*

Tree [min-delay](#)

Units microseconds

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

segment-routing-adjacency-sid *sr-index-or-label number*

Description	List of Adj-SID sub-TLVs associated with the neighbor. Sub-TLV = 31.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-adjacency-sid sr-index-or-label <i>number</i>
Tree	segment-routing-adjacency-sid
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-index-or-label *number*

Description	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-adjacency-sid sr-index-or-label <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

adj-set *boolean*

Description	When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-adjacency-sid sr-index-or-label <i>number</i> adj-set <i>boolean</i>
Tree	adj-set
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

backup *boolean*

Description	If set, the Adj-SID is eligible for protection
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability

	neighbor <i>string</i> sub-tlvs segment-routing-adjacency-sid sr-index-or-label number backup <i>boolean</i>
Tree	backup
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-family *boolean*

Description	If set, then the Adj-SID is used for forwarding IPv6 traffic to the neighbor; else the Adj-SID is used for forwarding IPv4 traffic.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-adjacency-sid sr-index-or-label number ipv6-family <i>boolean</i>
Tree	ipv6-family
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local *boolean*

Description	If set, then the value/index carried by the Adj-SID has local significance.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-adjacency-sid sr-index-or-label number local <i>boolean</i>
Tree	local
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

persistent *boolean*

Description	When set, the P-Flag indicates that the Adj-SID is persistently allocated, i.e., the Adj-SID value remains consistent across router restart and/or interface flap
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-adjacency-sid sr-index-or-label number persistent <i>boolean</i>
Tree	persistent
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

value *boolean*

Description If set then the Adj-SID carries a value

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs segment-routing-adjacency-sid sr-index-or-label](#) *number* [value](#) *boolean*

Tree [value](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

weight *number*

Description The value represents the weight of the Adj-SID for the purpose of load balancing

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs segment-routing-adjacency-sid sr-index-or-label](#) *number* [weight](#) *number*

Tree [weight](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

segment-routing-lan-adjacency-sid [sr-index-or-label](#) *number*

Description List of LAN Adj-SID sub-TLVs. Each describes the set of Adj-SIDs the router assigned to each of its LAN neighbors. Sub-TLV = 32.

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs mt-is-reachability neighbor](#) *string* [sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label](#) *number*

Tree [segment-routing-lan-adjacency-sid](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-index-or-label *number*

Description	An index representing an offset in the SID/label space advertised by the router or else a direct encoding of an MPLS label value.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

adj-set *boolean*

Description	When set, the S-Flag indicates that the Adj-SID refers to a set of adjacencies.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label <i>number</i> adj-set <i>boolean</i>

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

neighbor-system-id *string*

Description	IS-IS system-ID of the LAN neighbor
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label number neighbor-system-id <i>string</i>
Tree	neighbor-system-id
String Length	14
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

persistent *boolean*

Description	When set, the P-Flag indicates that the Adj-SID is persistently allocated, i.e., the Adj-SID value remains consistent across router restart and/or interface flap
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label number persistent <i>boolean</i>
Tree	persistent

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

value *boolean*

Description	If set then the Adj-SID carries a value
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label <i>number</i> value <i>boolean</i>
Tree	value
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

weight *number*

Description	The value represents the weight of the Adj-SID for the purpose of load balancing
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs segment-routing-lan-adjacency-sid sr-index-or-label <i>number</i> weight <i>number</i>
Tree	weight
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

te-default-metric *number*

Description	An administratively assigned metric used as an alternative to the normal SPF metric based (typically) on link bandwidth. Sub-TLV = 18.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs mt-is-reachability neighbor <i>string</i> sub-tlvs te-default-metric <i>number</i>
Tree	te-default-metric
Range	0 to 16777215
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

multi-topology

Description	The Multi-Topology TLV, type 229.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs multi-topology
Tree	multi-topology
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

topology [mt-id](#) *number*

Description	The list of multi-topology IDs that the router is participating in
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs multi-topology topology mt-id <i>number</i>
Tree	topology
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

mt-id *number*

Description	A multi-topology ID.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs multi-topology topology mt-id <i>number</i>
Range	0 to 4095
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

attached *boolean*

Description	Reads true when the topology is attached to Level 2
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs multi-topology topology mt-id <i>number</i> attached <i>boolean</i>
Tree	attached
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

overload *boolean*

Description	Reads true when the topology is in overload state.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs multi-topology topology mt-id <i>number</i> overload <i>boolean</i>
Tree	overload
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

nlpid *keyword*

Description	Each item represents a network layer protocol supported by the IS-IS Instance.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs nlpid <i>keyword</i>
Tree	nlpid
Options	<ul style="list-style-type: none"> IPv4 NLPID 0xCC corresponding to IPv4 IPv6 NLPID 0x8E corresponding to IPv6 CLNS NLPID 0x81 corresponding to CLNS

Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

purge-oi *string*

Description	This indicates System ID that originated a purge.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs purge-oi <i>string</i>
Tree	purge-oi
String Length	14
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

router-capability

Description	Allows a router to announce its capabilities within an IS-IS level or the entire routing domain. TLV = 242.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability
Tree	router-capability
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

leaked-down *boolean*

Description	When true, the TLV was leaked down from Level 2 to Level 1 and must not be leaked back up to L2
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability leaked-down <i>boolean</i>
Tree	leaked-down

Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

router-id *string*

Description	Router ID indicating the source of the TLV
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability router-id <i>string</i>
Tree	router-id
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

scope-is-domain-wide *boolean*

Description	When true, the TLV MUST be flooded across the entire routing domain. When false, the TLV MUST NOT be leaked between levels.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability scope-is-domain-wide <i>boolean</i>
Tree	scope-is-domain-wide
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

sub-tlvs

Description	Sub-TLVs of TLV 242
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability sub-tlvs
Tree	sub-tlvs
Configurable	False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

node-msd

Description Used to carry the provisioned SID depth of the router originating the capability TLV. Node MSD is the smallest MSD supported by the node on the set of interfaces configured for use by the advertising IGP instance

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs router-capability sub-tlvs node-msd](#)

Tree [node-msd](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

msd-info [msd-type](#) (*keyword* | *number*) [msd-value](#) *number*

Description List of MSD entries

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs router-capability sub-tlvs node-msd msd-info msd-type](#) (*keyword* | *number*) [msd-value](#) *number*

Tree [msd-info](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

msd-type (*keyword* | *number*)

Description MSD type

Context [network-instance name](#) *string* [protocols isis instance name](#) *string* [level-database level-number](#) *number* [lsp-id](#) *string* [defined-tlvs router-capability sub-tlvs node-msd msd-info msd-type](#) (*keyword* | *number*) [msd-value](#) *number*

Range 2 to 254

Options

- base-mpls-imposition-msd

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

msd-value *number*

Description	A number in the range of 0-255 representing the maximum SID depth; for all MSD-Types, 0 represents the lack of ability to support a SID stack of any depth
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability sub-tlvs node-msd msd-info msd-type (<i>keyword</i> <i>number</i>) msd-value <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-algorithm

Description	Advertises the IGP algorithms that the router is using
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability sub-tlvs sr-algorithm
Tree	sr-algorithm
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

algorithm *number*

Description	List of algorithm types supported by the router. Algorithm 0 should always be in the list
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability sub-tlvs sr-algorithm algorithm <i>number</i>
Tree	algorithm
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-capabilities

Description	Used to advertise its SR data plane capability and the range of MPLS label values each router uses for Segment Routing in the case where global SIDs are allocated.
--------------------	---

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability sub-tlvs sr-capabilities
Tree	sr-capabilities
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4-support *boolean*

Description	When true, the router is capable of processing SR-MPLS-encapsulated IPv4 packets on all interfaces
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability sub-tlvs sr-capabilities ipv4-support <i>boolean</i>
Tree	ipv4-support
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-support *boolean*

Description	When true, the router is capable of processing SR-MPLS-encapsulated IPv6 packets on all interfaces
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability sub-tlvs sr-capabilities ipv6-support <i>boolean</i>
Tree	ipv6-support
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

srgb-descriptor sr-index-or-label *number range number*

Description	List of Segment Routing Global Block descriptors
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability sub-tlvs sr-capabilities srgb-descriptor sr-index-or-label <i>number range number</i>
Tree	srgb-descriptor
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-index-or-label *number*

Description	An index representing the first value of the SRGB. The meaning (index or label) is determined from the length of the sub-tlv.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability sub-tlvs sr-capabilities srgb-descriptor sr-index-or-label <i>number range number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

range *number*

Description	The number of SRGB elements
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability sub-tlvs sr-capabilities srgb-descriptor sr-index-or-label <i>number range number</i>
Range	1 to 16777215
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-local-block

Description	Used to advertise the range of labels the node has reserved for local SIDs.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability sub-tlvs sr-local-block
Tree	sr-local-block
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

srlb-descriptor [sr-index-or-label](#) *number range number*

Description	List of Segment Routing Local Block descriptors
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability sub-tlvs sr-local-block srlb-descriptor sr-index-or-label <i>number range number</i>
Tree	srlb-descriptor

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-index-or-label *number*

Description	An index representing the first value of the SRLB. The meaning (index or label) is determined from the length of the sub-tlv.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability sub-tlvs sr-local-block srlb-descriptor sr-index-or-label <i>number range number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

range *number*

Description	The number of SRLB elements
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs router-capability sub-tlvs sr-local-block srlb-descriptor sr-index-or-label <i>number range number</i>
Range	1 to 16777215
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

te-router-id *string*

Description	A single stable address that can always be referenced in a path that will be reachable from multiple hops away. TLV = 134.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> defined-tlvs te-router-id <i>string</i>
Tree	te-router-id
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

maximum-area-addresses *number*

Description	The value indicates the maximum number of areas supported by the originator of the LSP. A value of 0 indicates a default of 3 areas.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> maximum-area-addresses <i>number</i>
Tree	maximum-area-addresses
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

pdu-length *number*

Description	The value indicates the PDU length for instance LSPs, CSNPs OR PSNPs at both IS-IS protocol levels i.e. L1 and L2 as maintained in the database.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> pdu-length <i>number</i>
Tree	pdu-length
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

pdu-type *number*

Description	The value indicates the PDU type for instance LSPs, CSNPs OR PSNPs at both IS-IS protocol levels i.e. L1 and L2 as maintained in of the object packet-type.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> pdu-type <i>number</i>
Tree	pdu-type
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

pkt-version number

Description	The value indicates the version of the ISIS protocol that has generated the Packet.
Context	network-instance name string protocols isis instance name string level-database level-number number lsp-id string pkt-version number
Tree	pkt-version
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

remaining-lifetime number

Description	The value indicates the remaining lifetime of this LSP and is a decrementing counter that decrements in seconds starting from the value as received in the LSP if not self-originated OR from lsp-life-time for self originated LSPs. When the remaining lifetime becomes zero, the contents of the LSP should not be considered for SPF calculation.
Context	network-instance name string protocols isis instance name string level-database level-number number lsp-id string remaining-lifetime number
Tree	remaining-lifetime
Range	0 to 65535
Units	seconds
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

sequence-number string

Description	The value indicates the sequence number of an LSP and is a four byte quantity that represents the version of an LSP. The higher the sequence number, the more up to date the information. The sequence number is always incremented by the system that originated the LSP and ensures that there is only one version of that LSP in the entire network.
Context	network-instance name string protocols isis instance name string level-database level-number number lsp-id string sequence-number string
Tree	sequence-number

Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

system-id-len *number*

Description	The value indicates the length of the system-id as used by the originator.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> system-id-len <i>number</i>
Tree	system-id-len
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

undefined-tlvs *string*

Description	Undefined TLV-s as contents of the LSP.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> undefined-tlvs <i>string</i>
Tree	undefined-tlvs
String Length	27 to 9190
Configurable	False
Platforms	Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

version *number*

Description	The value indicates the version of the ISIS protocol that has generated the LSP
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> level-database level-number <i>number</i> lsp-id <i>string</i> version <i>number</i>
Tree	version
Configurable	False

Platforms Supported on 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e platforms

loopfree-alternate

Description Loopfree-alternate related context for the instance.

Context [network-instance name string protocols isis instance name string loopfree-alternate](#)

Tree [loopfree-alternate](#)

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description When set, loopfree-alternate protection is enabled for the ISIS instance. Enables ability to seek for LFA, doesn't guarantee LFA protection.

Context [network-instance name string protocols isis instance name string loopfree-alternate admin-state keyword](#)

Tree [admin-state](#)

Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-pq-nodes *number*

Description	Maximum number of PQ nodes found in the LFA SPF. Value 0 disables node protect
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> loopfree-alternate remote-lfa node-protect max-pq-nodes <i>number</i>
Tree	max-pq-nodes
Range	0 to 32
Default	16

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ti-lfa

Description	ti-lfa context
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> loopfree-alternate ti-lfa
Tree	ti-lfa
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	When set, ti-lfa protection is enabled for the ISIS instance. ti-LFA seeks for a viable P,Q intersection based on constraints including max ti-lfa labels.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> loopfree-alternate ti-lfa admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-sr-policy-lfa-labels *number*

Description	Maximum number of labels the TI-LFA backup path can use
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> loopfree-alternate ti-lfa max-sr-policy-lfa-labels <i>number</i>
Tree	max-sr-policy-lfa-labels
Range	0 to 3
Default	2
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

node-protect

Description	Node-protect context
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> loopfree-alternate ti-lfa node-protect
Tree	node-protect
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	When set to enabled, the IS-IS instance enables ti-lfa node protection.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> loopfree-alternate ti-lfa node-protect admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-ecmp-paths *number*

Description	The maximum number of ECMP next-hops to program into the FIB for every IP prefix
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> max-ecmp-paths <i>number</i>
Tree	max-ecmp-paths
Range	1 to 64
Default	1
Configurable	True
Platforms	Supported on all platforms

net *string*

Description	ISIS network entity title (NET)
--------------------	---------------------------------

Context	network-instance name string protocols isis instance name string net string
Tree	net
Configurable	True
Platforms	Supported on all platforms
Max. Elements	1

oper-area-id *string*

Description	The list of area IDs associated with this IS router
Context	network-instance name string protocols isis instance name string oper-area-id string
Tree	oper-area-id
String Length	2 to 38
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	The value of the this object indicates the operational state of the destination.
Context	network-instance name string protocols isis instance name string oper-state keyword
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed

- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable

False

Platforms

Units	seconds
Options	<ul style="list-style-type: none"> • none
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dynamic-adjacency-sids

Description	Enter the dynamic-adjacency-sids context
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls dynamic-adjacency-sids
Tree	dynamic-adjacency-sids
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

all-interfaces *boolean*

Description	When true, IS-IS is instructed to assign a dynamic adjacency SID to all IS-IS interfaces in all levels, except for the interfaces configured with an adjacency SID assignment of 'none' or 'static'.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls dynamic-adjacency-sids all-interfaces <i>boolean</i>
Tree	all-interfaces
Default	false
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum-sid-depth

Description	Container to configure advertise multiple types of Maximum SID Depths (MSDs). maximum-sid-depth advertisements allow entities (e.g., centralized controllers) to determine whether a particular Segment ID (SID) stack can be supported in a given network
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls maximum-sid-depth
Tree	maximum-sid-depth
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

override-bmi *number*

Description	Value to override the announced node MSD-BMI value
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls maximum-sid-depth override-bmi <i>number</i>
Tree	override-bmi
Range	0 to 15
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sid-database

Description	Database of all prefix SIDs associated with the IS-IS instance.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls sid-database
Tree	sid-database
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix-sid [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [sid-label-value](#) *number* [multi-topology-id](#) *number* [algorithm](#) *number*

Description	List of prefix SIDs
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) sid-label-value <i>number</i> multi-topology-id <i>number</i> algorithm <i>number</i>
Tree	prefix-sid
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	The IPv4 or IPv6 prefix associated with the SID.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) sid-label-value <i>number</i> multi-topology-id <i>number</i> algorithm <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sid-label-value *number*

Description	The MPLS label value associated with the SID.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) sid-label-value <i>number</i> multi-topology-id <i>number</i> algorithm <i>number</i>
Range	16 to 1048575
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

multi-topology-id *number*

Description	The multi-topology ID that provided the prefix SID
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) sid-label-value <i>number</i> multi-topology-id <i>number</i> algorithm <i>number</i>
Range	0 to 4095
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

algorithm *number*

Description	Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) sid-label-value <i>number</i> multi-topology-id <i>number</i> algorithm <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

active *boolean*

Description	When false, the prefix SID is inactive. It could be inactive for any of these reasons:
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) sid-label-value <i>number</i> multi-topology-id <i>number</i> algorithm <i>number</i> active <i>boolean</i>
Tree	active

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix-conflict *boolean*

Description	Reads true when the prefix SID entry is involved in a prefix conflict within the scope of this IS-IS instance. This occurs when there are multiple entries for the same (prefix, multi-topology-id, algorithm). All the conflicting entries become inactive except for the one with the smallest sid-index.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) sid-label-value <i>number</i> multi-topology-id <i>number</i> algorithm <i>number</i> prefix-conflict <i>boolean</i>
Tree	prefix-conflict
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sid-conflict *boolean*

Description	Reads true when the prefix SID entry is involved in a SID conflict within the scope of this IS-IS instance. This occurs when the same SID has been assigned to different prefixes after first eliminating entries that have lost the prefix-conflict comparison. All entries involved in a SID conflict that do not have the absolute lowest 'preference' value become inactive. In the SRL implementation SID entries associated with interfaces of this IS-IS instance are considered to have a lower numerical preference than remote prefix-sid entries. If there are still SID conflicts then all the remaining conflicting entries become inactive except for the one with the smallest sid-index.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) sid-label-value <i>number</i> multi-topology-id <i>number</i> algorithm <i>number</i> sid-conflict <i>boolean</i>
Tree	sid-conflict
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sid-out-of-range *boolean*

Description	Reads true when a received prefix SID from another router has a SID index or label value that is not within the locally defined SRGB range of the network instance; the prefix SID entry will be inactive.
--------------------	--

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix ipv6-prefix</i>) sid-label-value <i>number</i> multi-topology-id <i>number</i> algorithm <i>number</i> sid-out-of-range <i>boolean</i>
Tree	sid-out-of-range
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

source-router [system-id](#) *string* [level-number](#) *number*

Description	The ISIS routers that provided the prefix SID. (Multiple in the case of redistribution.)
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix ipv6-prefix</i>) sid-label-value <i>number</i> multi-topology-id <i>number</i> algorithm <i>number</i> source-router system-id <i>string</i> level-number <i>number</i>
Tree	source-router
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

system-id *string*

Description	The system-id of an ISIS router that originated or redistributed the prefix SID
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix ipv6-prefix</i>) sid-label-value <i>number</i> multi-topology-id <i>number</i> algorithm <i>number</i> source-router system-id <i>string</i> level-number <i>number</i>

static-label-block-status *keyword*

Description	Status of the label block. The label block may show as unavailable if there is pending cleanup.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> segment-routing mpls static-label-block-status <i>keyword</i>
Tree	static-label-block-status
Options	<ul style="list-style-type: none"> available unavailable
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Instance level statistics
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> statistics
Tree	statistics
Configurable	False
Platforms	Supported on all platforms

last-partial-spf *string*

Description	The elapsed time since the last time a partial SPF run was run on either the L1 or L2 LSDB
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> statistics last-partial-spf <i>string</i>
Tree	last-partial-spf
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-spf *string*

Description	The elapsed time since the last time a full SPF run was run on either the L1 or L2 LSDB
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> statistics last-spf <i>string</i>
Tree	last-spf
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

partial-spf-runs *number*

Description	The number of times a partial SPF run has been performed on either the L1 or L2 LSDB since the IS-IS manager restarted
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> statistics partial-spf-runs <i>number</i>
Tree	partial-spf-runs

Default	0
Configurable	False
Platforms	Supported on all platforms

pdu *pdu-name keyword*

Description	List of PDUs processed by the IS-IS instance since the IS-IS manager restarted
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> statistics pdu pdu-name <i>keyword</i>
Tree	pdu
Configurable	False
Platforms	Supported on all platforms

pdu-name *keyword*

Description	The PDU type that was processed
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> statistics pdu pdu-name <i>keyword</i>
Options	<ul style="list-style-type: none"> • LSP Link State PDU • IIH IS-to-IS Hello PDU • CSNP Complete Sequence Number PDU • PSNP Partial Sequence Number PDU • Unknown Unknown PDU type
Configurable	False
Platforms	Supported on all platforms

dropped *number*

Description	The number of PDUs that were received and dropped
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> statistics pdu pdu-name <i>keyword</i> dropped <i>number</i>

Tree	dropped
Default	0
Configurable	False
Platforms	Supported on all platforms

processed *number*

Description	The number of PDUs that were received and processed
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> statistics pdu pdu-name <i>keyword</i> processed <i>number</i>
Tree	processed
Default	0
Configurable	False
Platforms	Supported on all platforms

received *number*

Description	The number of PDUs that were received
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> statistics pdu pdu-name <i>keyword</i> received <i>number</i>
Tree	received
Default	0
Configurable	False
Platforms	Supported on all platforms

sent *number*

Description	The number of PDUs that were transmitted
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> statistics pdu pdu-name <i>keyword</i> sent <i>number</i>
Tree	sent
Default	0
Configurable	False
Platforms	Supported on all platforms

spf-runs *number*

Description	The number of times a full SPF run has been performed on either the L1 or L2 LSDB since the IS-IS manager restarted
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> statistics spf-runs <i>number</i>
Tree	spf-runs
Default	0
Configurable	False
Platforms	Supported on all platforms

te-database-install

Description	When present, topology and TE information related to this protocol instance is installed into the TE database
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> te-database-install
Tree	te-database-install
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bgp-ls

Description	When present, topology and TE information related to this protocol instance is installed into the TE database in a format that supports export as BGP-LS routes
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> te-database-install bgp-ls
Tree	bgp-ls
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bgp-ls-identifier *number*

Description	BGP-LS identifier value that is sent in the BGP-LS NLRI
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> te-database-install bgp-ls bgp-ls-identifier <i>number</i>
Tree	bgp-ls-identifier

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

igp-identifier *number*

Description	Unique identifier of the IGP instance that is sent in the BGP-LS NLRI
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> te-database-install bgp-ls igp-identifier <i>number</i>
Tree	igp-identifier
Range	0 to 18446744073709551615
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

timers

Description	Container for IS-IS timers applicable at the instance level
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> timers
Tree	timers
Configurable	True
Platforms	Supported on all platforms

lsp-generation

Description	Container with options for specifying LSP generation timer values
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> timers lsp-generation
Tree	lsp-generation
Configurable	True
Platforms	Supported on all platforms

initial-wait *number*

Description	Time interval between the detection of topology change and when the new LSP is generated. The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms
--------------------	---

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> timers lsp-generation initial-wait <i>number</i>
Tree	initial-wait
Range	10 to 100000
Default	10
Units	milliseconds
Configurable	True
Platforms	Supported on all platforms

max-wait *number*

Description	Specifies the maximum interval between two consecutive generations of an LSP. The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> timers lsp-generation max-wait <i>number</i>
Tree	max-wait
Range	10 to 120000
Default	5000
Units	milliseconds
Configurable	True
Platforms	Supported on all platforms

second-wait *number*

Description	Time interval between the the first and second LSP generation. The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> timers lsp-generation second-wait <i>number</i>
Tree	second-wait
Range	10 to 100000
Default	1000
Units	milliseconds

Configurable	True
Platforms	Supported on all platforms

Isp-lifetime *number*

Description	Time interval in seconds that the LSPs originated by this IS (router) remain valid in the LSDB before they must be refreshed or else they are purged.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> timers lsp-lifetime <i>number</i>
Tree	lsp-lifetime
Range	350 to 65535
Default	1200
Units	seconds
Configurable	True
Platforms	Supported on all platforms

Isp-refresh

Description	Configure LSP refresh timers.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> timers lsp-refresh
Tree	lsp-refresh
Configurable	True
Platforms	Supported on all platforms

half-lifetime *boolean*

Description	When set to true, the LSP refresh interval is half the lsp-lifetime
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> timers lsp-refresh half-lifetime <i>boolean</i>
Tree	half-lifetime
Default	true
Configurable	True
Platforms	Supported on all platforms

interval *number*

Description	Time interval in seconds since the last advertisement of its LSP when the router attempts to refresh the LSP. Must not exceed 90% of the lsp-lifetime. This value is ignored when half-lifetime is set to true.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> timers lsp-refresh interval <i>number</i>
Tree	interval
Range	150 to 65535
Default	600
Units	seconds
Configurable	True
Platforms	Supported on all platforms

spf

Description	Container with options for specifying SPF timer values
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> timers spf
Tree	spf
Configurable	True
Platforms	Supported on all platforms

initial-wait *number*

Description	Time interval between the detection of topology change and when the SPF algorithm runs. The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> timers spf initial-wait <i>number</i>
Tree	initial-wait
Range	10 to 100000
Default	1000
Units	milliseconds
Configurable	True
Platforms	Supported on all platforms

max-wait *number*

Description	Specifies the maximum interval between two consecutive SPF calculations in milliseconds. The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> timers spf max-wait <i>number</i>
Tree	max-wait
Range	10 to 120000
Default	10000
Units	milliseconds
Configurable	True
Platforms	Supported on all platforms

second-wait *number*

Description	Time interval between the the first and second SPF run. The timer granularity is 100 ms. Timer values are rounded down to the nearest granularity, for example a configured value of 550 ms is internally rounded down to 500 ms
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> timers spf second-wait <i>number</i>
Tree	second-wait
Range	10 to 100000
Default	1000
Units	milliseconds
Configurable	True
Platforms	Supported on all platforms

trace-options

Description	Instance level debug trace options for IS-IS
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> trace-options
Tree	trace-options

Configurable	True
Platforms	Supported on all platforms

trace keyword

Description	List of tracing options
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> trace-options trace <i>keyword</i>
Tree	trace
Options	<ul style="list-style-type: none"> • adjacencies • graceful-restart • interfaces • packets-all • packets-p2p-hello • packets-l1-hello • packets-l2-hello • packets-l1-psnp • packets-l2-psnp • packets-l1-csnp • packets-l2-csnp • packets-l1-lsp • packets-l2-lsp • routes • summary-addresses

Configurable	True
Platforms	Supported on all platforms

traffic-engineering

Description	container for traffic engineering information
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> traffic-engineering
Tree	traffic-engineering
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

advertisement *boolean*

Description	A setting of false means that no TE-related TLVs and subTLVs should be added to LSAs or LSPs originated by this IGP instance. A setting of true means that TE-related TLVs and subTLVs should be added to LSAs or LSPs originated by this IGP instance.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> traffic-engineering advertisement <i>boolean</i>
Tree	advertisement
Default	false
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4-te-router-id *string*

Description	<p>A routable IPv4 address to identify the router uniquely in a TE domain. TLV = 134.</p> <p>The ipv4-te-router-id contains the 4-octet router ID of the router originating the LSP. The ipv4-te-router-id guarantees a single stable address that can always be referenced in a path that will be reachable from multiple hops away, regardless of the state of the node's interfaces.</p> <p>The configured ipv4-te-router-id address must be active and reachable within the routing instance and must be associated to either a system or loopback interface. The state value represents the operational advertised of ipv4-te-router-id</p>
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> traffic-engineering ipv4-te-router-id <i>string</i>
Tree	ipv4-te-router-id
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-te-router-id *string*

Description	<p>A routable IPv6 address to identify the router uniquely in a TE domain. TLV = 140.</p> <p>The ipv6-te-router-id contains the 4-octet router ID of the router originating the LSP. The ipv6-te-router-id guarantees a single stable address that can always be referenced in a path that will be reachable from multiple hops away, regardless of the state of the node's interfaces.</p> <p>The configured ipv6-te-router-id address must be active and reachable within the routing instance and must be associated to either a system or loopback</p>
--------------------	--

interface. The state value represents the operational advertised of ipv6-te-router-id

Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> traffic-engineering ipv6-te-router-id <i>string</i>
Tree	ipv6-te-router-id
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

legacy-link-attribute-advertisement *boolean*

Description	The advertisement mode for TE link attributes. A setting of true means that TE properties should be advertised in legacy mode as defined in RFC 8919 and RFC 8920.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> traffic-engineering legacy-link-attribute-advertisement <i>boolean</i>
Tree	legacy-link-attribute-advertisement
Default	true
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transport

Description	Enter the transport context
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> transport
Tree	transport
Configurable	True
Platforms	Supported on all platforms

lsp-mtu-size *number*

Description	Sets the maximum size of LSPs generated by this router
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> transport lsp-mtu-size <i>number</i>
Tree	lsp-mtu-size
Range	490 to 9490
Default	1492
Units	bytes

Configurable	True
Platforms	Supported on all platforms

weighted-ecmp

Description	Enter the weighted-ecmp context
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> weighted-ecmp
Tree	weighted-ecmp
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	<p>Setting enable triggers weighted ECMP programming for all eligible multipath IS-IS routes associated with the instance</p> <p>An IS-IS route is eligible for weighted ECMP if all the next-hop interfaces in the multipath set have a load-balancing-weight other than 'none'.</p> <p>When weighted ECMP is disabled in an IS-IS instance all IS-IS multipath routes are programmed as normal ECMP, even if some or all of the next-hop interfaces in any particular multipath set have a load-balancing-weight other than 'none'.</p>
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> weighted-ecmp admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-ecmp-hash-buckets-per-next-hop-group *number*

Description	<p>Specifies the maximum number of ECMP hash buckets per next-hop-group. Weighted ECMP weights are normalized based on this number of hash buckets.</p>
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> weighted-ecmp max-ecmp-hash-buckets-per-next-hop-group <i>number</i>

Tree	max-ecmp-hash-buckets-per-next-hop-group
Range	1 to 128
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

non-stop-forwarding

Description	Enter the non-stop-forwarding context
Context	network-instance name <i>string</i> protocols isis non-stop-forwarding
Tree	non-stop-forwarding
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Used to administratively enable or disable the IS-IS non-stop forwarding functionality.
Context	network-instance name <i>string</i> protocols isis non-stop-forwarding admin-state keyword
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ldp

Description	Container for LDP configuration and state
Context	network-instance name <i>string</i> protocols ldp
Tree	ldp
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Administratively enable or disable LDP
Context	network-instance name <i>string</i> protocols ldp admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

discovery

Description	Neighbor discovery configuration and operational state
Context	network-instance name <i>string</i> protocols ldp discovery
Tree	discovery
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interfaces

Description	The complete set of interfaces used for LDP Basic Discovery
Context	network-instance name <i>string</i> protocols ldp discovery interfaces
Tree	interfaces
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-holdtime *number*

Description	The time interval for which a LDP Hello adjacency is maintained in the absence of Hello messages from the LDP neighbor
Context	network-instance name <i>string</i> protocols ldp discovery interfaces hello-holdtime <i>number</i>
Tree	hello-holdtime
Range	15 to 3600
Units	seconds

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-interval *number*

Description	The interval between consecutive LDP Hello messages used in LDP discovery
Context	network-instance name <i>string</i> protocols ldp discovery interfaces hello-interval number
Tree	hello-interval
Range	5 to 1200
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface *name string*

Description	List of LDP interfaces used for LDP Basic Discovery
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name string
Tree	interface
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *string*

Description	Reference to a specific subinterface that is bound to the network instance
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name string
String Length	5 to 25
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-holdtime *number*

Description	The time interval for which a LDP Hello adjacency is maintained in the absence of Hello messages from the LDP neighbor
--------------------	--

Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> hello-holdtime <i>number</i>
Tree	hello-holdtime
Range	15 to 3600
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-interval *number*

Description	The interval between consecutive LDP Hello messages used in LDP discovery
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> hello-interval <i>number</i>
Tree	hello-interval
Range	5 to 1200
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4

Description	Enter the ipv4 context
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4
Tree	ipv4
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Administratively enable or disable LDP discovery for IPv4 on a particular interface
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 admin-state <i>keyword</i>
Tree	admin-state
Default	disable

Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

enable-bfd *boolean*

Description	Enable BFD
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 enable-bfd <i>boolean</i>
Tree	enable-bfd
Default	false
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-adjacencies

Description	Container with a list of hello adjacencies
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 hello-adjacencies
Tree	hello-adjacencies
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

adjacency [lsr-id](#) *reference* [label-space-id](#) *reference*

Description	List of hello adjacencies
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i>
Tree	adjacency
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lsr-id *reference*

Description	The LSR ID of the peer, as a portion of the peer LDP ID
--------------------	---

Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i>
Reference	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-space-id *reference*

Description	The Label Space ID of the peer, as a portion of the peer LDP ID
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i>
Reference	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-holdtime

Description	Container for hello holdtime state information
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i> hello-holdtime
Tree	hello-holdtime
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

negotiated *number*

Description	The holdtime negotiated between this LSR and the adjacent LSR
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i> hello-holdtime negotiated <i>number</i>
Tree	negotiated
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

neighbor-proposed *number*

Description	The holdtime value learned from the adjacent LSR
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i> hello-holdtime neighbor-proposed <i>number</i>
Tree	neighbor-proposed
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

remaining *number*

Description	The time remaining until the holdtime timer expires
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i> hello-holdtime remaining <i>number</i>
Tree	remaining
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-received *number*

Description	The number of Hello messages received
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i> hello-received <i>number</i>
Tree	hello-received
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-sent *number*

Description	The number of Hello messages sent
--------------------	-----------------------------------

Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i> hello-sent <i>number</i>
Tree	hello-sent
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-address *string*

Description	Local address of the hello adjacency
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i> local-address <i>string</i>
Tree	local-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

remote-address *string*

Description	Remote address of the hello adjacency
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i> remote-address <i>string</i>
Tree	remote-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

intf-oper-down-reason *keyword*

Description	Reason for the LDP interface being down
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 intf-oper-down-reason <i>keyword</i>
Tree	intf-oper-down-reason
Options	<ul style="list-style-type: none"> • ldp-interface-admin-down • ldp-instance-oper-down • network-instance-subinterface-down • out-of-resources

- unknown

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-oper-state-change *string*

Description	The last time when the IPv4 oper-state changed
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 last-oper-state-change <i>string</i>
Tree	last-oper-state-change
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state *keyword*

Description	Operational state of IPv4 on the LDP interface
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up • down
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

override-lsr-id

Description	Options to override the LSR ID
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 override-lsr-id
Tree	override-lsr-id
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-subinterface *keyword*

Description	Use local subinterface IP address as LSR ID for interface LDP session
--------------------	---

Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 override-lsr-id local-subinterface keyword
Tree	local-subinterface
Options	<ul style="list-style-type: none"> • ipv4 Use the IPv4 address of the subinterface as the LSR ID
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Statistics objects
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 statistics
Tree	statistics
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-message-errors

Description	Counters for received Hello message errors
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 statistics hello-message-errors
Tree	hello-message-errors
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bad-message-length *number*

Description	The number of Hello messages received with a bad message length
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 statistics hello-message-errors bad-message-length <i>number</i>
Tree	bad-message-length
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bad-pdu-length *number*

Description	The number of Hello messages received with a bad PDU length
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 statistics hello-message-errors bad-pdu-length <i>number</i>
Tree	bad-pdu-length
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bad-protocol-version *number*

Description	The number of Hello messages received with a bad protocol version
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 statistics hello-message-errors bad-protocol-version <i>number</i>
Tree	bad-protocol-version
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

malformed-tlv-value *number*

Description	The number of Hello messages received with a malformed TLV value
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 statistics hello-message-errors malformed-tlv-value <i>number</i>
Tree	malformed-tlv-value
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-received *number*

Description	The number of Hello messages received
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 statistics hello-received <i>number</i>
Tree	hello-received

Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-sent *number*

Description	The number of Hello messages sent
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 statistics hello-sent <i>number</i>
Tree	hello-sent
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

trace-options

Description	Configure event/packet tracing for one specific LDP interface
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 trace-options
Tree	trace-options
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

trace *keyword*

Description	Specifies the trace information to be captured
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 trace-options trace <i>keyword</i>
Tree	trace
Options	<ul style="list-style-type: none"> • all Trace all events and packets • events-discovery Trace session related events • messages-hello Trace Hello packets • messages-hello-detail

Trace LDP Hello packets with detailed output

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6

Description	Enter the ipv6 context
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6
Tree	ipv6
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Administratively enable or disable LDP discovery for IPv6 on a particular interface
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

enable-bfd *boolean*

Description	Enable BFD
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 enable-bfd <i>boolean</i>
Tree	enable-bfd
Default	false
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-adjacencies

Description	Container with a list of hello adjacencies
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 hello-adjacencies
Tree	hello-adjacencies
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

adjacency [lsr-id reference](#) [label-space-id reference](#)

Description	List of hello adjacencies
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 hello-adjacencies adjacency lsr-id reference label-space-id reference
Tree	adjacency
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lsr-id [reference](#)

Description	The LSR ID of the peer, as a portion of the peer LDP ID
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 hello-adjacencies adjacency lsr-id reference label-space-id reference
Reference	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-space-id [reference](#)

Description	The Label Space ID of the peer, as a portion of the peer LDP ID
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 hello-adjacencies adjacency lsr-id reference label-space-id reference
Reference	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i>

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-holdtime

Description	Container for hello holdtime state information
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i> hello-holdtime
Tree	hello-holdtime
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

negotiated *number*

Description	The holdtime negotiated between this LSR and the adjacent LSR
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i> hello-holdtime negotiated <i>number</i>
Tree	negotiated
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

neighbor-proposed *number*

Description	The holdtime value learned from the adjacent LSR
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i> hello-holdtime neighbor-proposed <i>number</i>
Tree	neighbor-proposed
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

remaining *number*

Description	The time remaining until the holdtime timer expires
--------------------	---

Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i> hello-holdtime remaining <i>number</i>
Tree	remaining
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-received *number*

Description	The number of Hello messages received
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i> hello-received <i>number</i>
Tree	hello-received
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-sent *number*

Description	The number of Hello messages sent
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i> hello-sent <i>number</i>
Tree	hello-sent
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-address *string*

Description	Local address of the hello adjacency
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 hello-adjacencies adjacency lsr-id <i>reference</i> label-space-id <i>reference</i> local-address <i>string</i>
Tree	local-address
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

remote-address *string*

Description Remote address of the hello adjacency

Context [network-instance name *string*](#) [protocols ldp discovery interfaces interface name *string*](#) [ipv6 hello-adjacencies adjacency lsr-id *reference*](#) [label-space-id *reference*](#) [remote-address *string*](#)

Tree [remote-address](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

intf-oper-down-reason *keyword*

Description Reason for the LDP interface being down

Context [network-instance name *string*](#) [protocols ldp discovery interfaces interface name *string*](#) [ipv6 intf-oper-down-reason *keyword*](#)

Tree [intf-oper-down-reason](#)

Options

- ldp-interface-admin-down
- ldp-instance-oper-down
- network-instance-subinterface-down
- out-of-resources
- unknown

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-oper-state-change *string*

Description The last time when the IPv6 oper-state changed

Context [network-instance name *string*](#) [protocols ldp discovery interfaces interface name *string*](#) [ipv6 last-oper-state-change *string*](#)

Tree [last-oper-state-change](#)

String Length 20 to 32

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state *keyword*

Description	Operational state of IPv6 on the LDP interface
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up • down
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

override-lsr-id

Description	Options to override the LSR ID
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 override-lsr-id
Tree	override-lsr-id
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-subinterface *keyword*

Description	Use local subinterface IP address as LSR ID for interface LDP session
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 override-lsr-id local-subinterface <i>keyword</i>
Tree	local-subinterface
Options	<ul style="list-style-type: none"> • ipv4 Use the IPv4 address of the subinterface as the LSR ID • ipv6 Use the IPv6 address of the subinterface as the LSR ID
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Statistics objects
--------------------	--------------------

Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 statistics
Tree	statistics
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-message-errors

Description	Counters for received Hello message errors
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 statistics hello-message-errors
Tree	hello-message-errors
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bad-message-length *number*

Description	The number of Hello messages received with a bad message length
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 statistics hello-message-errors bad-message-length <i>number</i>
Tree	bad-message-length
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bad-pdu-length *number*

Description	The number of Hello messages received with a bad PDU length
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 statistics hello-message-errors bad-pdu-length <i>number</i>
Tree	bad-pdu-length
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bad-protocol-version *number*

Description	The number of Hello messages received with a bad protocol version
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 statistics hello-message-errors bad-protocol-version <i>number</i>
Tree	bad-protocol-version
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

malformed-tlv-value *number*

Description	The number of Hello messages received with a malformed TLV value
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 statistics hello-message-errors malformed-tlv-value <i>number</i>
Tree	malformed-tlv-value
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-received *number*

Description	The number of Hello messages received
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 statistics hello-received <i>number</i>
Tree	hello-received
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hello-sent *number*

Description	The number of Hello messages sent
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 statistics hello-sent <i>number</i>
Tree	hello-sent

Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

trace-options

Description	Configure event/packet tracing for one specific LDP interface
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 trace-options
Tree	trace-options
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

trace keyword

Description	Specifies the trace information to be captured
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 trace-options trace <i>keyword</i>
Tree	trace
Options	<ul style="list-style-type: none"> • all Trace all events and packets • events-discovery Trace session related events • messages-hello Trace Hello packets • messages-hello-detail Trace LDP Hello packets with detailed output
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

trace-options

Description	Configure event/packet tracing for all LDP interfaces
Context	network-instance name <i>string</i> protocols ldp discovery interfaces trace-options
Tree	trace-options

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

trace keyword

Description	Specifies the trace information to be captured
Context	network-instance name <i>string</i> protocols ldp discovery interfaces trace-options trace <i>keyword</i>
Tree	trace
Options	<ul style="list-style-type: none"> • all Trace all events and packets • events-discovery Trace session related events • messages-hello Trace Hello packets • messages-hello-detail Trace LDP Hello packets with detailed output
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dynamic-label-block reference

Description	Reference to a dynamic label block
Context	network-instance name <i>string</i> protocols ldp dynamic-label-block <i>reference</i>
Tree	dynamic-label-block
Reference	system mpls label-ranges dynamic name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dynamic-label-block-status keyword

Description	<p>Status of the label block</p> <p>The label block may show as unavailable if there is pending cleanup</p>
Context	network-instance name <i>string</i> protocols ldp dynamic-label-block-status <i>keyword</i>
Tree	dynamic-label-block-status

Options	<ul style="list-style-type: none"> • available • unavailable
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

export-prefix-policy *reference*

Description	Apply an export prefix policy to filter advertised label bindings
Context	network-instance name <i>string</i> protocols ldp export-prefix-policy <i>reference</i>
Tree	export-prefix-policy
Reference	routing-policy policy name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

fec-resolution

Description	Container with options for controlling IP prefix FEC resolution
Context	network-instance name <i>string</i> protocols ldp fec-resolution
Tree	fec-resolution
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

longest-prefix *boolean*

Description	<p>When this is set to true IPv4/IPv6 prefix FECs can be resolved by less-specific IPv4/IPv6 routes in the route table, as long as the prefix bits of the route match the prefix bits of the FEC; the IP route with the longest prefix match is the route that is used to resolve the FEC.</p> <p>When this is set to false, IPv4/IPv6 prefix FECs can only be resolved by routes that are an exact match of the FEC in terms of prefix length</p>
Context	network-instance name <i>string</i> protocols ldp fec-resolution longest-prefix <i>boolean</i>
Tree	longest-prefix
Default	false
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

graceful-restart

Description	Attributes for graceful restart
Context	network-instance name <i>string</i> protocols ldp graceful-restart
Tree	graceful-restart
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

helper-enable *boolean*

Description	Enable or disable graceful restart as a helper
Context	network-instance name <i>string</i> protocols ldp graceful-restart helper-enable <i>boolean</i>
Tree	helper-enable
Default	false
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-reconnect-time *number*

Description	Specifies the maximum time interval, in seconds, that this router is willing to wait for the remote LDP peer to reconnect after an LDP communication failure
Context	network-instance name <i>string</i> protocols ldp graceful-restart max-reconnect-time <i>number</i>
Tree	max-reconnect-time
Range	10 to 1800
Default	120
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-recovery-time *number*

Description	Specifies the maximum time interval, in seconds, that this router is willing to preserve its MPLS forwarding state after receiving the Initialization message from the restarted LDP peer
--------------------	---

Context	network-instance name <i>string</i> protocols ldp graceful-restart max-recovery-time <i>number</i>
Tree	max-recovery-time
Range	30 to 3600
Default	120
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

import-prefix-policy *reference*

Description	Apply an import prefix policy to filter received label bindings
Context	network-instance name <i>string</i> protocols ldp import-prefix-policy <i>reference</i>
Tree	import-prefix-policy
Reference	routing-policy policy name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4

Description	Container for configuration and state related to the IPv4 address family
Context	network-instance name <i>string</i> protocols ldp ipv4
Tree	ipv4
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bindings

Description	LDP address and label binding information
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings
Tree	bindings
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

advertised-address

Description	Enter the advertised-address context
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings advertised-address
Tree	advertised-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

peer [lsr-id reference](#) [label-space-id reference](#)

Description	List of LDP peers towards which IPv4 address bindings have been sent
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings advertised-address peer lsr-id reference label-space-id reference
Tree	peer
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

[lsr-id reference](#)

Description	The LSR ID of the peer, as a portion of the peer LDP ID
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings advertised-address peer lsr-id reference label-space-id reference
Reference	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

[label-space-id reference](#)

Description	The Label Space ID of the peer, as a portion of the peer LDP ID
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings advertised-address peer lsr-id reference label-space-id reference
Reference	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ip-address *string*

Description	The list of IPv4 address bindings sent to the peer
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings advertised-address peer lsr-id <i>reference</i> label-space-id <i>reference</i> ip-address <i>string</i>
Tree	ip-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

advertised-prefix-fec

Description	Enter the advertised-prefix-fec context
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings advertised-prefix-fec
Tree	advertised-prefix-fec
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix-fec [fec](#) *string* [lsr-id](#) *reference* [label-space-id](#) *reference*

Description	List of IPv4 FEC-label bindings advertised to LDP peers
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings advertised-prefix-fec prefix-fec fec <i>string</i> lsr-id <i>reference</i> label-space-id <i>reference</i>
Tree	prefix-fec
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

fec *string*

Description	The prefix FEC value in the FEC-label binding, advertised in a Label Mapping message sent to a peer
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings advertised-prefix-fec prefix-fec fec <i>string</i> lsr-id <i>reference</i> label-space-id <i>reference</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lsr-id reference

Description	The LSR ID of the peer, as a portion of the peer LDP ID
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings advertised-prefix-fec prefix-fec fec <i>string</i> lsr-id reference label-space-id reference
Reference	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-space-id reference

Description	The Label Space ID of the peer, as a portion of the peer LDP ID
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings advertised-prefix-fec prefix-fec fec <i>string</i> lsr-id reference label-space-id reference
Reference	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

egress-lsr-fec boolean

Description	When set true, the router is the egress LSR for the FEC (the FEC is locally originated)
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings advertised-prefix-fec prefix-fec fec <i>string</i> lsr-id reference label-space-id reference egress-lsr-fec boolean
Tree	egress-lsr-fec
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label (number | keyword)

Description	Advertised label value
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings advertised-prefix-fec prefix-fec fec <i>string</i> lsr-id reference label-space-id reference label (number keyword)
Tree	label

Range	16 to 1048575
Options	<ul style="list-style-type: none"> • IPV4_EXPLICIT_NULL • IPV6_EXPLICIT_NULL • IMPLICIT_NULL
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-status *keyword*

Description	Label status
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings advertised-prefix-fec prefix-fec fec <i>string</i> lsr-id <i>reference</i> label-space-id <i>reference</i> label-status <i>keyword</i>
Tree	label-status
Options	<ul style="list-style-type: none"> • released • withdrawn • wdraw-pending
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-type *keyword*

Description	The label type of the advertised label
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings advertised-prefix-fec prefix-fec fec <i>string</i> lsr-id <i>reference</i> label-space-id <i>reference</i> label-type <i>keyword</i>
Tree	label-type
Options	<ul style="list-style-type: none"> • pop An advertised label that is programmed with a POP operation • swap An advertised label that is programmed with a SWAP operation
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

received-address

Description	Enter the received-address context
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-address
Tree	received-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

peer [lsr-id reference](#) [label-space-id reference](#)

Description	List of LDP peers from which IPv4 address bindings have been received
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-address peer lsr-id reference label-space-id reference
Tree	peer
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

[lsr-id reference](#)

Description	The LSR ID of the peer, as a portion of the peer LDP ID
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-address peer lsr-id reference label-space-id reference
Reference	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

[label-space-id reference](#)

Description	The Label Space ID of the peer, as a portion of the peer LDP ID
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-address peer lsr-id reference label-space-id reference
Reference	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ip-address *string*

Description	The list of IPv4 address bindings received from the peer
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-address peer lsr-id <i>reference</i> label-space-id <i>reference</i> ip-address <i>string</i>
Tree	ip-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

received-prefix-fec

Description	Enter the received-prefix-fec context
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-prefix-fec prefix-fec fec <i>string</i> lsr-id <i>reference</i> label-space-id <i>reference</i>
Tree	received-prefix-fec
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix-fec [fec](#) *string* [lsr-id](#) *reference* [label-space-id](#) *reference*

Description	List of IPv4 FEC-label bindings received from LDP peers
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-prefix-fec prefix-fec fec <i>string</i> lsr-id <i>reference</i> label-space-id <i>reference</i>
Tree	prefix-fec
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

fec *string*

Description	The prefix FEC value in the FEC-label binding, learned in a Label Mapping message received from a peer
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-prefix-fec prefix-fec fec <i>string</i> lsr-id <i>reference</i> label-space-id <i>reference</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lsr-id reference

Description	The LSR ID of the peer, as a portion of the peer LDP ID
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-prefix-fec prefix-fec fec <i>string</i> lsr-id reference label-space-id reference
Reference	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-space-id reference

Description	The Label Space ID of the peer, as a portion of the peer LDP ID
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-prefix-fec prefix-fec fec <i>string</i> lsr-id reference label-space-id reference
Reference	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

entropy-label-transmit boolean

Description	Entropy label (EL/ELI) is pushed when transmitting to this peer
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-prefix-fec prefix-fec fec <i>string</i> lsr-id reference label-space-id reference entropy-label-transmit <i>boolean</i>
Tree	entropy-label-transmit
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ingress-lsr-fec boolean

Description	When set true, the router is an ingress LSR for the FEC
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-prefix-fec prefix-fec fec <i>string</i> lsr-id reference label-space-id reference ingress-lsr-fec <i>boolean</i>
Tree	ingress-lsr-fec
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label (*number* | *keyword*)

Description Received label value

Context [network-instance name](#) *string* [protocols ldp ipv4 bindings received-prefix-fec prefix-fec fec](#) *string* [lsr-id reference](#) [label-space-id reference](#) [label \(number | keyword\)](#)

Tree [label](#)

Range 16 to 1048575

Options

- IPV4_EXPLICIT_NULL
- IPV6_EXPLICIT_NULL
- IMPLICIT_NULL

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

next-hop [index number](#)

Description List of ECMP next-hops towards the LDP peer

Context [network-instance name](#) *string* [protocols ldp ipv4 bindings received-prefix-fec prefix-fec fec](#) *string* [lsr-id reference](#) [label-space-id reference](#) [next-hop index number](#)

Tree [next-hop](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

index number

Description Label ID index entry

Context [network-instance name](#) *string* [protocols ldp ipv4 bindings received-prefix-fec prefix-fec fec](#) *string* [lsr-id reference](#) [label-space-id reference](#) [next-hop index number](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface *string*

Description The outgoing interface towards the LDP peer

Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-prefix-fec prefix-fec fec <i>string</i> lsr-id <i>reference</i> label-space-id <i>reference</i> next-hop index number interface <i>string</i>
Tree	interface
String Length	5 to 25
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

next-hop (*ipv4-address* | *ipv6-address*)

Description	The IP next-hop towards the LDP peer
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-prefix-fec prefix-fec fec <i>string</i> lsr-id <i>reference</i> label-space-id <i>reference</i> next-hop index number next-hop (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	next-hop
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

next-hop-type *keyword*

Description	Type of next-hop
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-prefix-fec prefix-fec fec <i>string</i> lsr-id <i>reference</i> label-space-id <i>reference</i> next-hop index number next-hop-type <i>keyword</i>
Tree	next-hop-type
Options	<ul style="list-style-type: none"> • primary • alternate • rifa
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

outer-label (*number* | *keyword*)

Description	Outer label value for RLFA
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-prefix-fec prefix-fec fec <i>string</i> lsr-id <i>reference</i> label-space-id <i>reference</i> next-hop index number outer-label (<i>number</i> <i>keyword</i>)
Tree	outer-label

Range	16 to 1048575
Options	<ul style="list-style-type: none"> • IPV4_EXPLICIT_NULL • IPV6_EXPLICIT_NULL • IMPLICIT_NULL
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

not-used-reason *keyword*

Description	The reason why the label mapping is not being used in the dataplane
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-prefix-fec prefix-fec fec <i>string</i> lsr-id <i>reference</i> label-space-id <i>reference</i> not-used-reason <i>keyword</i>
Tree	not-used-reason
Options	<ul style="list-style-type: none"> • rejected-on-rx The received FEC was rejected either because non-host FEC or rejected by import policy • exceeds-multipath-limit The LDP multipath ECMP limit has been reached • exceeds-fec-limit The FEC limit has been reached • fec-unresolved The IP prefix FEC is unused because there is no resolving route matching the IP prefix
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

used-in-forwarding *boolean*

Description	Reads true if the label is used in forwarding and has been programmed for a push operation
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings received-prefix-fec prefix-fec fec <i>string</i> lsr-id <i>reference</i> label-space-id <i>reference</i> used-in-forwarding <i>boolean</i>
Tree	used-in-forwarding
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

service-fec128 virtual-circuit-type keyword virtual-circuit-identifier number peer-lsr-id (ipv4-address | ipv6-address)

Description	Service FEC128 binding
Context	network-instance name string protocols ldp ipv4 bindings service-fec128 virtual-circuit-type keyword virtual-circuit-identifier number peer-lsr-id (ipv4-address ipv6-address)
Tree	service-fec128
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

virtual-circuit-type keyword

Description	The virtual circuit (VC) type of the pseudowire
Context	network-instance name string protocols ldp ipv4 bindings service-fec128 virtual-circuit-type keyword virtual-circuit-identifier number peer-lsr-id (ipv4-address ipv6-address)
Options	<ul style="list-style-type: none"> • ethernet • vlan
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

virtual-circuit-identifier number

Description	The virtual circuit identifier of the pseudowire
Context	network-instance name string protocols ldp ipv4 bindings service-fec128 virtual-circuit-type keyword virtual-circuit-identifier number peer-lsr-id (ipv4-address ipv6-address)
Range	1 to 4294967295
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

peer-lsr-id (ipv4-address | ipv6-address)

Description	Peer IP address, LSR-id
Context	network-instance name string protocols ldp ipv4 bindings service-fec128 virtual-circuit-type keyword virtual-circuit-identifier number peer-lsr-id (ipv4-address ipv6-address)

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

advertised

Description	Configuration and state related to advertised service FECs
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings service-fec128 virtual-circuit-type <i>keyword</i> virtual-circuit-identifier <i>number</i> peer-lsr-id (ipv4-address ipv6-address) advertised
Tree	advertised
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

control-word *boolean*

Description	Whether control word capability is advertised
Context	network-instance name <i>string</i> protocols ldp ipv4 bindings service-fec128 virtual-circuit-type <i>keyword</i> virtual-circuit-identifier <i>number</i> peer-lsr-id (ipv4-address ipv6-address) advertised control-word <i>boolean</i>
Tree	control-word
Configurable	False

last-oper-state-change *string*

Description	The last time that the IPv4 oper-state changed
Context	network-instance name <i>string</i> protocols ldp ipv4 last-oper-state-change <i>string</i>

Tree	last-oper-state-change
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lsr-id string

Description	Returns the value that is being used as the LDP LSR ID
Context	network-instance name string protocols ldp ipv4 lsr-id string
Tree	lsr-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-down-reason keyword

Description	The reason for the LDP for IPv4 being operationally down
Context	network-instance name string protocols ldp ipv4 oper-down-reason keyword
Tree	oper-down-reason
Options	<ul style="list-style-type: none"> • ldp-admin-disabled • mpls-admin-disabled • no-system-ipv4-address System IPv4 address is used as the LSR ID. If this dependency is missing LDP is down • net-instance-mgr-down • label-block-unavailable • no-resource Memory allocation failure • unknown Other failure reason
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state keyword

Description	The operational state of LDP for IPv4
Context	network-instance name string protocols ldp ipv4 oper-state keyword

Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed • synchronizing Component is currently being synchronized • upgrading Component is currently being upgraded • low-power Component is offline due to insufficient system power • degraded Component or process is in a degraded state • warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes. • waiting Component or process is currently waiting This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-up-to-down-transitions *number*

Description	The number of times the oper state for IPv4 has transitioned from up to down
Context	network-instance name <i>string</i> protocols ldp ipv4 oper-up-to-down-transitions <i>number</i>
Tree	oper-up-to-down-transitions
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6

Description	Container for configuration and state related to the IPv6 address family
Context	network-instance name <i>string</i> protocols ldp ipv6
Tree	ipv6
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bindings

Description	LDP address and label binding information
Context	network-instance name <i>string</i> protocols ldp ipv6 bindings
Tree	bindings
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

advertised-address

Description	Enter the advertised-address context
Context	network-instance name <i>string</i> protocols ldp ipv6 bindings advertised-address
Tree	advertised-address
Configurable	False

last-oper-state-change *string*

Description The last time that the IPv6 oper-state changed

Context [network-instance name](#) *string* [protocols ldp ipv6 last-oper-state-change](#) *string*

Tree [last-oper-state-change](#)

String Length 20 to 32

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lsr-id *string*

Description Returns the value that is being used as the LDP LSR ID

Context [network-instance name](#) *string* [protocols ldp ipv6 lsr-id](#) *string*

Tree [lsr-id](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-down-reason *keyword*

Description	The reason for the LDP for IPv6 being operationally down
Context	network-instance name <i>string</i> protocols ldp ipv6 oper-down-reason <i>keyword</i>
Tree	oper-down-reason
Options	<ul style="list-style-type: none"> • ldp-admin-disabled • mpls-admin-disabled • no-system-ipv6-address System IPv6 address is used as the LSR ID. If this dependency is missing LDP is down • net-instance-mgr-down • label-block-unavailable • no-resource Memory allocation failure • unknown Other failure reason
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state *keyword*

Description	The operational state of LDP for IPv6
Context	network-instance name <i>string</i> protocols ldp ipv6 oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting

- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-up-to-down-transitions *number*

Description	The number of times the oper state for IPv6 has transitioned from up to down
Context	network-instance name <i>string</i> protocols ldp ipv6 oper-up-to-down-transitions number
Tree	oper-up-to-down-transitions
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

loopfree-alternate

Description	Enter the loopfree-alternate context
Context	network-instance name <i>string</i> protocols ldp loopfree-alternate
Tree	loopfree-alternate

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Administratively enable or disable Loop Free Alternates
Context	network-instance name <i>string</i> protocols ldp loopfree-alternate admin-state keyword
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

received *boolean*

Description	When this is true, an End-of-LIB marker was received from the LDP peer
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i> end-of-lib ipv4-prefix-fecs received <i>boolean</i>

Tree	received
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sent *boolean*

Description	When this is true, an End-of-LIB marker was sent to the LDP peer
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> end-of-lib ipv6-prefix-fecs sent <i>boolean</i>
Tree	sent
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-prefix-fecs

Description	Enter the ipv6-prefix-fecs context
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> end-of-lib ipv6-prefix-fecs
Tree	ipv6-prefix-fecs
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

received *boolean*

Description	When this is true, an End-of-LIB marker was received from the LDP peer
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> end-of-lib ipv6-prefix-fecs received <i>boolean</i>
Tree	received
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sent *boolean*

Description	When this is true, an End-of-LIB marker was sent to the LDP peer
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> end-of-lib ipv6-prefix-fecs sent <i>boolean</i>

Tree	sent
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

export-prefix-policy *reference*

Description	Apply an export prefix policy to filter advertised label bindings
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> export-prefix-policy <i>reference</i>
Tree	export-prefix-policy
Reference	routing-policy policy name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

fec-limit *number*

Description	The maximum number of FECs of all types combined that will be accepted from the peer The value 0 implies no limit
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> fec-limit <i>number</i>
Tree	fec-limit
Default	0
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

fec-limit-exceeded *boolean*

Description	Reads true when the peer has sent more FECs than the configured limit
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> fec-limit-exceeded <i>boolean</i>
Tree	fec-limit-exceeded
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

graceful-restart

Description	Graceful restart operational state
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> graceful-restart
Tree	graceful-restart
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

peer-reconnect-time *number*

Description	The requested reconnect time
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> graceful-restart peer-reconnect-time <i>number</i>
Tree	peer-reconnect-time
Range	10 to 1800
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

peer-recovery-time *number*

Description	The requested recovery time
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> graceful-restart peer-recovery-time <i>number</i>
Tree	peer-recovery-time
Range	30 to 3600
Default	120
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

peer-restarting *boolean*

Description	If true, the peer is currently in the process of restarting
--------------------	---

Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> graceful-restart peer-restarting <i>boolean</i>
Tree	peer-restarting
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

import-prefix-policy *reference*

Description	Apply an import prefix policy to filter received label bindings
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> import-prefix-policy <i>reference</i>
Tree	import-prefix-policy
Reference	routing-policy policy name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-advertisement-mode

Description	Label advertisement mode state
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> label-advertisement-mode
Tree	label-advertisement-mode
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

negotiated *keyword*

Description	Negotiated Label Advertisement Mode
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> label-advertisement-mode negotiated <i>keyword</i>
Tree	negotiated
Options	<ul style="list-style-type: none"> • downstream-unsolicited Downstream Unsolicited • downstream-on-demand Downstream on Demand
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-oper-state-change *string*

Description Last time the peer state changed

Context [network-instance name](#) *string* [protocols ldp peers peer lsr-id](#) (*ipv4-address* | *ipv6-address*) [label-space-id](#) *number* **last-oper-state-change** *string*

Tree [last-oper-state-change](#)

String Length 20 to 32

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

overload

Description Overload state of the session

Context [network-instance name](#) *string* [protocols ldp peers peer lsr-id](#) (*ipv4-address* | *ipv6-address*) [label-space-id](#) *number* **overload**

Tree [overload](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-router-is-overloaded *boolean*

Description This router transmitted an overload TLV requesting that the peer stop advertising new FECs

Context [network-instance name](#) *string* [protocols ldp peers peer lsr-id](#) (*ipv4-address* | *ipv6-address*) [label-space-id](#) *number* **overload local-router-is-overloaded** *boolean*

Tree [local-router-is-overloaded](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

peer-is-overloaded *boolean*

Description The peer has sent an overload TLV to this router requesting that we stop advertising new FECs

Context [network-instance name](#) *string* [protocols ldp peers peer lsr-id](#) (*ipv4-address* | *ipv6-address*) [label-space-id](#) *number* **overload peer-is-overloaded** *boolean*

Tree	peer-is-overloaded
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

received-capabilities

Description	Capabilities signalled by the peer
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> received-capabilities
Tree	received-capabilities
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dual-stack-capability *boolean*

Description	Dual stack capability. TLV 0x0701
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> received-capabilities dual-stack-capability <i>boolean</i>
Tree	dual-stack-capability
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dynamic-capability *boolean*

Description	Dynamic capability advertisement capability. Indicates support for Capability messages. TLV 0x0506
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> received-capabilities dynamic-capability <i>boolean</i>
Tree	dynamic-capability
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

entropy-label-capability *boolean*

Description	Entropy label capability. TLV 0x0206
--------------------	--------------------------------------

Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> received-capabilities entropy-label-capability <i>boolean</i>
Tree	entropy-label-capability
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

graceful-restart-capability *boolean*

Description	Fault tolerance protection TLV 0x0503
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> received-capabilities graceful-restart-capability <i>boolean</i>
Tree	graceful-restart-capability
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

make-before-break-capability *boolean*

Description	Make before break capability. TLV 0x050A
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> received-capabilities make-before-break-capability <i>boolean</i>
Tree	make-before-break-capability
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

multipoint-to-multipoint-capability *boolean*

Description	Multipoint to multipoint FEC capability. TLV 0x0509
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> received-capabilities multipoint-to-multipoint-capability <i>boolean</i>
Tree	multipoint-to-multipoint-capability
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

nokia-vendor-overload-capability *boolean*

Description	Overload capability
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i> received-capabilities nokia-vendor-overload-capability <i>boolean</i>
Tree	nokia-vendor-overload-capability
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

point-to-multipoint-capability *boolean*

Description	Point to multipoint FEC capability. TLV 0x0508
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i> received-capabilities point-to-multipoint-capability <i>boolean</i>
Tree	point-to-multipoint-capability
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

state-advertisement-control

Description	State advertisement control capability. TLV 0x050D
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i> received-capabilities state-advertisement-control
Tree	state-advertisement-control
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4-prefix-disable *boolean*

Description	Indicates desire to not receive IPv4 prefix FECs
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i> received-capabilities state-advertisement-control ipv4-prefix-disable <i>boolean</i>
Tree	ipv4-prefix-disable
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-prefix-disable *boolean*

Description Indicates desire to not receive IPv6 prefix FECs

Context [network-instance name](#) *string* [protocols](#) [ldp](#) [peers](#) [peer](#) [lsr-id](#) ([ipv4-address](#) | [ipv6-address](#)) [label-space-id](#) *number* [received-capabilities](#) [state-advertisement-control](#) [ipv6-prefix-disable](#) *boolean*

Tree [ipv6-prefix-disable](#)

Configurable False

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-withdraw *number*

Description	The number of label-withdraw messages sent or received
--------------------	--

Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> statistics received-messages label-withdraw <i>number</i>
Tree	label-withdraw
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

notification *number*

Description	The number of messages sent or received
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> statistics received-messages notification <i>number</i>
Tree	notification
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

total-messages *number*

Description	The number of messages sent or received
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> statistics received-messages total-messages <i>number</i>
Tree	total-messages
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sent-messages

Description	Outbound statistics
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> statistics sent-messages
Tree	sent-messages
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

address number

Description	The number of address messages sent or received
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> statistics sent-messages address number
Tree	address
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

address-withdraw number

Description	The number of address-withdraw messages sent or received
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> statistics sent-messages address-withdraw number
Tree	address-withdraw
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

capability number

Description	The number of messages sent or received
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> statistics sent-messages capability number
Tree	capability
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

initialization number

Description	The number of initialization messages sent or received
--------------------	--

Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address ipv6-address</i>) label-space-id <i>number</i> statistics sent-messages initialization number
Tree	initialization
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

keepalive *number*

Description	The number of keepalive messages sent or received
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address ipv6-address</i>) label-space-id <i>number</i> statistics sent-messages keepalive number
Tree	keepalive
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-abort-request *number*

Description	The number of label-abort-request messages sent or received
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address ipv6-address</i>) label-space-id <i>number</i> statistics sent-messages label-abort-request number
Tree	label-abort-request
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-mapping *number*

Description	The number of label-mapping messages sent or received
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address ipv6-address</i>) label-space-id <i>number</i> statistics sent-messages label-mapping number
Tree	label-mapping
Default	0

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-release *number*

Description	The number of label-release messages sent or received
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i> statistics sent-messages label-release <i>number</i>
Tree	label-release
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-request *number*

Description	The number of label-request messages sent or received
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i> statistics sent-messages label-request <i>number</i>
Tree	label-request
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-withdraw *number*

Description	The number of label-withdraw messages sent or received
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i> statistics sent-messages label-withdraw <i>number</i>
Tree	label-withdraw
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

notification number

Description	The number of messages sent or received
Context	network-instance name string protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id number statistics sent-messages notification number
Tree	notification
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

total-messages number

Description	The number of messages sent or received
Context	network-instance name string protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id number statistics sent-messages total-messages number
Tree	total-messages
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

tcp-transport

Description	Enter the tcp-transport context
Context	network-instance name string protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id number tcp-transport
Tree	tcp-transport
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-address (ipv4-address | ipv6-address)

Description	Local address
Context	network-instance name string protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id number tcp-transport local-address (ipv4-address ipv6-address)
Tree	local-address

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-port *number*

Description	Local port number
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> tcp-transport local-port <i>number</i>
Tree	local-port
Range	0 to 65535
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

remote-address (*ipv4-address* | *ipv6-address*)

Description	Remote address
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> tcp-transport remote-address (ipv4-address ipv6-address)
Tree	remote-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

remote-port *number*

Description	Remote port number
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (ipv4-address ipv6-address) label-space-id <i>number</i> tcp-transport remote-port <i>number</i>
Tree	remote-port
Range	0 to 65535
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

trace-options

Description	Configure event/packet tracing for one specific session
--------------------	---

Context	network-instance name <i>string</i> protocols ldp peers peer lsp-id (ipv4-address ipv6-address) label-space-id <i>number</i> trace-options
Tree	trace-options
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

trace *keyword*

Description	Specifies the trace information to be captured
Context	network-instance name <i>string</i> protocols ldp peers peer lsp-id (ipv4-address ipv6-address) label-space-id <i>number</i> trace-options trace <i>keyword</i>
Tree	trace
Options	<ul style="list-style-type: none"> • all Trace all events and packets • events-all Trace all events • events-session Trace session related events • events-binding Trace binding related events • messages-all Trace all LDP messages • messages-all-detail Trace all LDP messages with detailed output • messages-initialization Trace LDP Initialization packets • messages-initialization-detail Trace LDP Initialization packets with detailed output • messages-keepalive Trace LDP Keepalive packets • messages-label Trace LDP Label Mapping, Label Request, Label Abort Request, Label Withdraw and Label Release packets • messages-label-detail Trace LDP Label Mapping, Label Request, Label Abort Request, Label Withdraw and Label Release packets with detailed output • messages-hello

- Trace Hello packets
 - messages-hello-detail
- Trace LDP Hello packets with detailed output

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session-keepalive-holdtime *number*

Description	The time interval after which an inactive LDP session terminates and the corresponding TCP session closes. Inactivity is defined as not receiving LDP packets from the peer
Context	network-instance name <i>string</i> protocols ldp peers session-keepalive-holdtime <i>number</i>
Tree	session-keepalive-holdtime
Range	45 to 3600
Default	180
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session-keepalive-interval *number*

Description	The interval between successive transmissions of keepalive packets. Keepalive packets are only sent in the absence of other LDP packets transmitted over the LDP session
Context	network-instance name <i>string</i> protocols ldp peers session-keepalive-interval <i>number</i>
Tree	session-keepalive-interval
Range	15 to 1200
Default	60
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

trace-options

Description	Configure event/packet tracing for all sessions (configured and dynamic)
--------------------	--

Context	network-instance name <i>string</i> protocols ldp peers trace-options
Tree	trace-options
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

trace keyword

Description	Specifies the trace information to be captured
Context	network-instance name <i>string</i> protocols ldp peers trace-options trace keyword
Tree	trace
Options	<ul style="list-style-type: none"> • all Trace all events and packets • events-all Trace all events • events-session Trace session related events • events-binding Trace binding related events • messages-all Trace all LDP messages • messages-all-detail Trace all LDP messages with detailed output • messages-initialization Trace LDP Initialization packets • messages-initialization-detail Trace LDP Initialization packets with detailed output • messages-keepalive Trace LDP Keepalive packets • messages-label Trace LDP Label Mapping, Label Request, Label Abort Request, Label Withdraw and Label Release packets • messages-label-detail Trace LDP Label Mapping, Label Request, Label Abort Request, Label Withdraw and Label Release packets with detailed output • messages-hello Trace Hello packets

- `messages-hello-detail`
Trace LDP Hello packets with detailed output

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

static-fec `fec-prefix` (*ipv4-prefix* | *ipv6-prefix*)

Description	Configure static FEC
Context	<code>network-instance name string protocols ldp static-fec fec-prefix</code> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	<code>static-fec</code>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

fec-prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	Static FEC IP prefix
Context	<code>network-instance name string protocols ldp static-fec fec-prefix</code> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

swap *boolean*

Description	Swap label. If false, label is popped
Context	<code>network-instance name string protocols ldp static-fec fec-prefix</code> (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) <code>swap boolean</code>
Tree	<code>swap</code>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	LDP instance level statistics
Context	<code>network-instance name string protocols ldp statistics</code>
Tree	<code>statistics</code>
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

fec-statistics

Description Enter the fec-statistics context

Context [network-instance name](#) *string* [protocols ldp statistics fec-statistics](#)

Tree [fec-statistics](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4-prefix

Description Enter the ipv4-prefix context

Context [network-instance name](#) *string* [protocols ldp statistics fec-statistics ipv4-prefix](#)

Tree [ipv4-prefix](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

advertised-fecs *number*

Description The number of advertised IPv4 prefix FECs to a single peer or all peers. In the overall summary the same FEC prefix advertised to multiple peers counts as 1

Context [network-instance name](#) *string* [protocols ldp statistics fec-statistics ipv4-prefix advertised-fecs](#) *number*

Tree [advertised-fecs](#)

Default 0

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

received-fecs *number*

Description The number of received IPv4 prefix FECs from a single peer or all peers. In the overall summary the same FEC prefix from different peers counts as 1

Context [network-instance name](#) *string* [protocols ldp statistics fec-statistics ipv4-prefix received-fecs](#) *number*

Tree [received-fecs](#)

Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-prefix

Description	Enter the ipv6-prefix context
Context	network-instance name <i>string</i> protocols ldp statistics fec-statistics ipv6-prefix
Tree	ipv6-prefix
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

advertised-fecs *number*

Description	The number of advertised IPv6 prefix FECs to a single peer or all peers. In the overall summary the same FEC prefix advertised to multiple peers counts as 1
Context	network-instance name <i>string</i> protocols ldp statistics fec-statistics ipv6-prefix advertised-fecs <i>number</i>
Tree	advertised-fecs
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

received-fecs *number*

Description	The number of received IPv6 prefix FECs from a single peer or all peers. In the overall summary the same FEC prefix from different peers counts as 1
Context	network-instance name <i>string</i> protocols ldp statistics fec-statistics ipv6-prefix received-fecs <i>number</i>
Tree	received-fecs
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4

Description	Enter the ipv4 context
Context	network-instance name <i>string</i> protocols ldp statistics ipv4
Tree	ipv4
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

total-discovery-interfaces *number*

Description	The total number of IP subinterfaces on which basic LDP discovery is active
Context	network-instance name <i>string</i> protocols ldp statistics ipv4 total-discovery-interfaces <i>number</i>
Tree	total-discovery-interfaces
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

total-interface-hello-adjacencies *number*

Description	The total number of interface hello adjacencies that are up
Context	network-instance name <i>string</i> protocols ldp statistics ipv4 total-interface-hello-adjacencies <i>number</i>
Tree	total-interface-hello-adjacencies
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

total-peers *number*

Description	The total number of LDP TCP sessions that are established
Context	network-instance name <i>string</i> protocols ldp statistics ipv4 total-peers <i>number</i>
Tree	total-peers
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6

Description	Enter the ipv6 context
Context	network-instance name <i>string</i> protocols ldp statistics ipv6
Tree	ipv6
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

total-discovery-interfaces *number*

Description	The total number of IP subinterfaces on which basic LDP discovery is active
Context	network-instance name <i>string</i> protocols ldp statistics ipv6 total-discovery-interfaces <i>number</i>
Tree	total-discovery-interfaces
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

total-interface-hello-adjacencies *number*

Description	The total number of interface hello adjacencies that are up
Context	network-instance name <i>string</i> protocols ldp statistics ipv6 total-interface-hello-adjacencies <i>number</i>
Tree	total-interface-hello-adjacencies
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

total-peers *number*

Description	The total number of LDP TCP sessions that are established
Context	network-instance name <i>string</i> protocols ldp statistics ipv6 total-peers <i>number</i>
Tree	total-peers
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

protocol-errors

Description	Enter the protocol-errors context
Context	network-instance name <i>string</i> protocols ldp statistics protocol-errors
Tree	protocol-errors
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bad-ldp-identifier *number*

Description	The number of notification messages sent to advise of a bad LDP identifier
Context	network-instance name <i>string</i> protocols ldp statistics protocol-errors bad-ldp-identifier <i>number</i>
Tree	bad-ldp-identifier
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bad-message-length *number*

Description	The number of notification messages sent to advise of a bad message length
Context	network-instance name <i>string</i> protocols ldp statistics protocol-errors bad-message-length <i>number</i>
Tree	bad-message-length
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bad-pdu-length *number*

Description	The number of notification messages sent to advise of a bad PDU length
Context	network-instance name <i>string</i> protocols ldp statistics protocol-errors bad-pdu-length <i>number</i>
Tree	bad-pdu-length
Default	0
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bad-protocol-version *number*

Description The number of notification messages sent to advise of a bad protocol version

Context [network-instance name](#) *string* [protocols](#) [ldp](#) [statistics](#) [protocol-errors](#) [bad-protocol-version](#) *number*

Tree [bad-protocol-version](#)

Default 0

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bad-tlv-length *number*

Description The number of notification messages sent to advise of a bad TLV length

Context [network-instance name](#) *string* [protocols](#) [ldp](#) [statistics](#) [protocol-errors](#) [bad-tlv-length](#) *number*

Tree [bad-tlv-length](#)

Default 0

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

malformed-tlv-value *number*

Description The number of notification messages sent to advise of a malformed TLV value

Context [network-instance name](#) *string* [protocols](#) [ldp](#) [statistics](#) [protocol-errors](#) [malformed-tlv-value](#) *number*

Tree [malformed-tlv-value](#)

Default 0

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

missing-message-parameters *number*

Description The number of notification messages sent to advise of missing mandatory parameters

Context	network-instance name <i>string</i> protocols ldp statistics protocol-errors missing-message-parameters <i>number</i>
Tree	missing-message-parameters
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session-rejected-bad-keepalive-time *number*

Description	The number of notification messages sent to advise that a TCP connection was closed because the requested keepalive time is not acceptable
Context	network-instance name <i>string</i> protocols ldp statistics protocol-errors session-rejected-bad-keepalive-time <i>number</i>
Tree	session-rejected-bad-keepalive-time
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session-rejected-no-hello *number*

Description	The number of notification messages sent to advise that a TCP connection was closed because there was no matching Hello adjacency
Context	network-instance name <i>string</i> protocols ldp statistics protocol-errors session-rejected-no-hello <i>number</i>
Tree	session-rejected-no-hello
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session-rejected-parameters-adv-mode *number*

Description	The number of notification messages sent to advise that a TCP connection was closed because the requested label advertisement mode is not acceptable
Context	network-instance name <i>string</i> protocols ldp statistics protocol-errors session-rejected-parameters-adv-mode <i>number</i>
Tree	session-rejected-parameters-adv-mode
Default	0

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session-rejected-parameters-label-range *number*

Description	The number of notification messages sent to advise that a TCP connection was closed because the requested label range is not acceptable
Context	network-instance name <i>string</i> protocols ldp statistics protocol-errors session-rejected-parameters-label-range <i>number</i>
Tree	session-rejected-parameters-label-range
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session-rejected-parameters-max-pdu-length *number*

Description	The number of notification messages sent to advise that a TCP connection was closed because the requested Maximum PDU Length is not acceptable
Context	network-instance name <i>string</i> protocols ldp statistics protocol-errors session-rejected-parameters-max-pdu-length <i>number</i>
Tree	session-rejected-parameters-max-pdu-length
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

unknown-message-type *number*

Description	The number of notification messages sent to advise of an unknown message type
Context	network-instance name <i>string</i> protocols ldp statistics protocol-errors unknown-message-type <i>number</i>
Tree	unknown-message-type
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

unknown-tlv *number*

Description	The number of notification messages sent to advise of an unknown TLV
Context	network-instance name <i>string</i> protocols ldp statistics protocol-errors unknown-tlv <i>number</i>
Tree	unknown-tlv
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

unsupported-address-family *number*

Description	The number of notification messages sent to advise that a TCP connection was closed because the FEC type is not IPv4 or IPv6
Context	network-instance name <i>string</i> protocols ldp statistics protocol-errors unsupported-address-family <i>number</i>
Tree	unsupported-address-family
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sessions-terminated-holdtime-expiry *number*

Description	The total number of LDP sessions that were terminated due to keepalive holdtime expiry
Context	network-instance name <i>string</i> protocols ldp statistics sessions-terminated-holdtime-expiry <i>number</i>
Tree	sessions-terminated-holdtime-expiry
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

linux

Description	Enables routing interaction with the Linux kernel
Context	network-instance name <i>string</i> protocols linux
Tree	linux
Configurable	True

Platforms Supported on all platforms

export-neighbors *boolean*

Description Export neighbors to linux routing table

Context [network-instance name](#) *string* [protocols linux export-neighbors](#) *boolean*

Tree [export-neighbors](#)

Default true

Configurable True

Platforms Supported on all platforms

export-routes *boolean*

Description Export routes to linux routing table

Context [network-instance name](#) *string* [protocols linux export-routes](#) *boolean*

Tree [export-routes](#)

Default false

Configurable True

Platforms Supported on all platforms

import-routes *boolean*

Description Import routes from linux routing table

Context [network-instance name](#) *string* [protocols linux import-routes](#) *boolean*

Tree [import-routes](#)

Default false

Configurable True

Platforms Supported on all platforms

mld-snooping

Description Enable the mld-snooping context

Context [network-instance name](#) *string* [protocols mld-snooping](#)

Tree [mld-snooping](#)

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

admin-state *keyword*

Description Administratively enable or disable the MLD instance

Context [network-instance name](#) *string* [protocols mld-snooping admin-state](#) *keyword*

Tree [admin-state](#)

Default disable

Options

- enable
- disable

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

interface [interface-name](#) *string*

Description List of MLD interfaces

Context [network-instance name](#) *string* [protocols mld-snooping interface interface-name](#) *string*

Tree [interface](#)

Configurable True

query-interval *number*

Description Interval at which the router sends the MLD membership queries

Context [network-instance name](#) *string* [protocols mld-snooping interface interface-name](#) *string* **query-interval** *number*

Tree [query-interval](#)

Range 2 to 1024

Default 125

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

query-last-member-interval *number*

Description Interval at which Group-Specific-Query packets are transmitted

When used along with EVPN multi-homing, the result of this value multiplied by the interface robust-count must be a value equal to or less than 25.5 seconds. This is due to the fact that the maximum response time field in the EVPN Multicast Leave Synch route has a limit of 255 units of 1/10 second, and this field encodes the result of $[(\text{query-last-member-interval} * 10) * \text{robust-count}]$.

If the result of that operation is greater than 255, the maximum response time in the EVPN Multicast Leave Synch route is still 255.

Context [network-instance name](#) *string* [protocols mld-snooping interface interface-name](#) *string* **query-last-member-interval** *number*

Tree	query-last-member-interval
Range	1 to 5
Default	1
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

query-response-interval *number*

Description	Time to wait to receive a response to the MLD membership query from the host
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> query-response-interval <i>number</i>
Tree	query-response-interval
Range	1 to 1023
Default	10
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

robust-count *number*

Description	<p>Tune MLD robustness to allow for expected packet loss</p> <p>The robust-count variable allows tuning for the expected packet loss on a subnet. If a subnet anticipates losses, the robust-count variable can be increased.</p> <p>When used along with EVPN multi-homing, the result of this value multiplied by the interface query-last-member-interval must be a value equal to or less than 25.5 seconds. This is due to the fact that the maximum response time field in the EVPN Multicast Leave Synch route has a limit of 255 units of 1/10 second, and this field encodes the result of [(query-last-member-interval* 10) * robust-count].</p> <p>If the result of that operation is greater than 255, the maximum response time in the EVPN Multicast Leave Synch route is still 255.</p>
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> robust-count <i>number</i>
Tree	robust-count
Range	2 to 10
Default	2

Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

router-alert-check *boolean*

Description	Enable or disable router alert checking for MLD messages received on this interface
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> router-alert-check <i>boolean</i>
Tree	router-alert-check
Default	true
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

send-queries *boolean*

Description	Generate MLD general queries
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> send-queries <i>boolean</i>
Tree	send-queries
Default	false
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

static-membership-groups

Description	Container to configure static <S,G>s for this interface
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> static-membership-groups
Tree	static-membership-groups
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

group *group string*

Description	Enter the group list instance
Context	network-instance name string protocols mld-snooping interface interface-name string static-membership-groups group group string
Tree	group
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

group *string*

Description	group address.
Context	network-instance name string protocols mld-snooping interface interface-name string static-membership-groups group group string
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

source *source string*

Description	Multicast source address list
Context	network-instance name string protocols mld-snooping interface interface-name string static-membership-groups group group string source source string
Tree	source
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

source *string*

Description	Multicast source address.
Context	network-instance name string protocols mld-snooping interface interface-name string static-membership-groups group group string source source string
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

starg

Description	any source address (*,G)
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> static-membership-groups group group <i>string</i> starg
Tree	starg
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

statistics

Description	MLD sub-interface statistics
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> statistics
Tree	statistics
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

error

Description	Error message statistics

transmitted

Description	Transmit message statistics
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> statistics transmitted
Tree	transmitted
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

bgp-join-sync *number*

Description	Bgp join sync routes
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> statistics transmitted bgp-join-sync <i>number</i>
Tree	bgp-join-sync
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

bgp-leave-sync *number*

Description	Bgp leave sync routes
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> statistics transmitted bgp-leave-sync <i>number</i>
Tree	bgp-leave-sync
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

error-packets *number*

Description	Transmission error MLD packets
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> statistics transmitted error-packets <i>number</i>
Tree	error-packets

Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

general-queries *number*

Description	General Queries
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> statistics transmitted general-queries <i>number</i>
Tree	general-queries
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

group-queries *number*

Description	Group Specific Queries
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> statistics transmitted group-queries <i>number</i>
Tree	group-queries
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

group-source-queries *number*

Description	Group and Source Specific Queries
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> statistics transmitted group-source-queries <i>number</i>
Tree	group-source-queries
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

leave-messages *number*

Description	Leave messages
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> statistics transmitted leave-messages <i>number</i>
Tree	leave-messages
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

v1-reports *number*

Description	V1 Reports
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> statistics transmitted v1-reports <i>number</i>
Tree	v1-reports
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

v2-reports *number*

Description	V2 Reports
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> statistics transmitted v2-reports <i>number</i>
Tree	v2-reports
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

version *number*

Description	MLD Version
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> version <i>number</i>

Tree	version
Range	1 to 2
Default	2
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

multicast-routers [address string](#)

Description	Enter the multicast-router list instance
Context	network-instance name string protocols mld-snooping multicast-routers address string
Tree	multicast-routers
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

address string

Description	The source IP address used by queries sent out by this multicast router
Context	network-instance name string protocols mld-snooping multicast-routers address string
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

expiry-time number

Description	The time remaining before this multicast router is aged out
Context	network-instance name string protocols mld-snooping multicast-routers address string expiry-time number
Tree	expiry-time
Units	seconds
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

interface *string*

Description	Interface behind which this multicast router is located
Context	network-instance name <i>string</i> protocols mld-snooping multicast-routers address <i>string</i> interface <i>string</i>
Tree	interface
String Length	5 to 25
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

mld-v2-states

Description	Enter the mld-v2-states context
Context	network-instance name <i>string</i> protocols mld-snooping multicast-routers address <i>string</i> mld-v2-states
Tree	mld-v2-states
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

general-query-interval *number*

Description	The General Query Interval used by this multicast router
Context	network-instance name <i>string</i> protocols mld-snooping multicast-routers address <i>string</i> mld-v2-states general-query-interval <i>number</i>
Tree	general-query-interval
Units	seconds
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

general-response-interval *number*

Description	The General Query Response interval used by this multicast router
Context	network-instance name <i>string</i> protocols mld-snooping multicast-routers address <i>string</i> mld-v2-states general-response-interval <i>number</i>
Tree	general-response-interval

Units	seconds
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

robust-count *number*

Description	The Robust Count value used by this multicast router
Context	network-instance name <i>string</i> protocols mld-snooping multicast-routers address <i>string</i> mld-v2-states robust-count <i>number</i>
Tree	robust-count
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

up-time *string*

Description	The time since this multicast router has been known in this service
Context	network-instance name <i>string</i> protocols mld-snooping multicast-routers address <i>string</i> up-time <i>string</i>
Tree	up-time
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

version *number*

Description	The version of the protocol that is sent by this multicast router
Context	network-instance name <i>string</i> protocols mld-snooping multicast-routers address <i>string</i> version <i>number</i>
Tree	version
Range	1 to 2
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

oper-state keyword

Description	Used to report operational state of the MLD instance
Context	network-instance name <i>string</i> protocols mld-snooping oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none">• up Component or process is operational• down Component or process is not operational• empty Component slot is empty• downloading Component is downloading image into memory• booting Component is booting downloaded image• starting Component image operational, application processes starting• failed Component or process has failed• synchronizing Component is currently being synchronized• upgrading Component is currently being upgraded• low-power Component is offline due to insufficient system power• degraded Component or process is in a degraded state• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.• waiting Component or process is currently waiting This state can be set by event handler when the <code>reinvoke-with-delay</code> action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

proxy-evpn-membership-group-count *number*

Description	The number of multicast groups in proxy-evpn-membership-groups
Context	network-instance name <i>string</i> protocols mld-snooping proxy-evpn-membership-group-count <i>number</i>
Tree	proxy-evpn-membership-group-count
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

proxy-evpn-membership-groups

Description	EVPN Proxy Database created for the network-instance The content of this table is used by the router to proxy the reports towards the remote PEs via BGP EVPN SMET (Selective Multicast Ethernet Tag) routes.
Context	network-instance name <i>string</i> protocols mld-snooping proxy-evpn-membership-groups
Tree	proxy-evpn-membership-groups
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

group [group](#) *string*

Description	Multicast group membership

version *number*

Description	The version of the protocol that is sent by this multicast router
Context	network-instance name <i>string</i> protocols mld-snooping querier version <i>number</i>
Tree	version
Range	1 to 2
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

query-interval *number*

Description	Interval at which the router sends the MLD membership queries
Context	network-instance name <i>string</i> protocols mld-snooping query-interval <i>number</i>
Tree	query-interval
Range	1 to 65535
Default	125
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

query-source-address *string*

Description Source IP address used when generating MLD queries

Context [network-instance name](#) *string* [protocols mld-snooping query-source-address](#) *string*

Tree [query-source-address](#)

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

report-source-address *string*

Description Source IP address used when generating MLD reports

Context [network-instance name](#) *string* [protocols mld-snooping report-source-address](#) *string*

Tree [report-source-address](#)

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

robust-count *number*

Description Configures the MLD robustness to allow for the expected MLD packet loss
The robust-count variable allows tuning for the expected packet loss on a subnet. If a subnet anticipates losses, the robust-count variable can be increased.

Context [network-instance name](#) *string* [protocols mld-snooping robust-count](#) *number*

Tree [robust-count](#)

Range 1 to 255

Default 2

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

trace-options

Description	Enter the trace-options context
Context	network-instance name <i>string</i> protocols mld-snooping trace-options
Tree	trace-options
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

trace

Description	Tracing parameter flags
Context	network-instance name <i>string</i> protocols mld-snooping trace-options trace
Tree	trace
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

packet

Description	Trace MLD Packet types
Context	network-instance name <i>string</i> protocols mld-snooping trace-options trace packet
Tree	packet
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

interface [interface-name](#) *string*

Description	List of interfaces to trace
Context	network-instance name <i>string</i> protocols mld-snooping trace-options trace packet interface interface-name <i>string</i>
Tree	interface
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

Max. Elements 8

interface-name *string*

Description Reference to a specific subinterface of the form <interface-name>.<subinterface-index>

Context [network-instance name](#) *string* [protocols mld-snooping trace-options trace packet interface interface-name](#) *string*

String Length 5 to 25

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

modifier *keyword*

Description Enter the modifier context

Context [network-instance name](#) *string* [protocols mld-snooping trace-options trace packet modifier](#) *keyword*

Tree [modifier](#)

Options

- **dropped**
Enable tracing for the packets which are dropped
- **ingress-and-dropped**
Enable tracing for the packets which are sent or received
- **egress-ingress-and-dropped**
Enable tracing for the packets which are sent, received or dropped

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

source-mac [source-mac](#) *string*

Description List of source mac addresses to trace

Context [network-instance name](#) *string* [protocols mld-snooping trace-options trace packet source-mac source-mac](#) *string*

Tree [source-mac](#)

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

Max. Elements 8

source-mac *string*

Description Enter the source-mac context

Reference	routing-policy policy name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

full-spf-runs

Description	The total number of times that complete SPF has been run on the router since OSPF was last enabled.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id full-spf-runs
Tree	full-spf-runs
Configurable	False
Platforms	Supported on all platforms

interface [interface-name](#) *string*

Description	List of OSPF interfaces
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i>
Tree	interface
Configurable	True
Platforms	Supported on all platforms

interface-name *string*

Description	Router logical interface name.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i>
String Length	5 to 25
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	Administrative state of the OSPF
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

advertise-router-capability *boolean*

Description	Allow router advertisement capabilities
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> advertise-router-capability <i>boolean</i>
Tree	advertise-router-capability
Default	true
Configurable	True
Platforms	Supported on all platforms

advertise-subnet *boolean*

Description	Advertise point-to-point interfaces as subnet routes
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> advertise-subnet <i>boolean</i>
Tree	advertise-subnet
Default	true
Configurable	True
Platforms	Supported on all platforms

authentication

Description	Container with authentication options that apply to all peers in this peer-group
--------------------	--

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> authentication
Tree	authentication
Configurable	True
Platforms	Supported on all platforms

keychain *reference*

Description	Reference to a keychain. The keychain type must be ospf
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> authentication keychain reference
Tree	keychain
Reference	system authentication keychain name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

bad-packets

Description	Bad packets counters
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> bad-packets
Tree	bad-packets
Configurable	False
Platforms	Supported on all platforms

auth-failures

Description	The total number of OSPF packets received with an invalid authorization key since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> bad-packets auth-failures
Tree	auth-failures
Configurable	False
Platforms	Supported on all platforms

bad-area

Description	The total number of OSPF packets received with an area mismatch since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> bad-packets bad-area
Tree	bad-area
Configurable	False
Platforms	Supported on all platforms

bad-auth-type

Description	The total number of OSPF packets received with an invalid authorization type since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> bad-packets bad-auth-type
Tree	bad-auth-type
Configurable	False
Platforms	Supported on all platforms

bad-checksum

Description	The count of LS-as received with bad checksums.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> bad-packets bad-checksum
Tree	bad-checksum
Configurable	False
Platforms	Supported on all platforms

bad-dead-interval

Description	The total number of OSPF packets received where the dead interval given in the packet was not equal to that configured on this interface since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> bad-packets bad-dead-interval
Tree	bad-dead-interval
Configurable	False

Platforms Supported on all platforms

bad-dest-address

Description The total number of OSPF packets received with the incorrect IP destination address since admin-state was last set to 'enabled'.

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id](#) [interface interface-name](#) *string* [bad-packets](#) [bad-dest-address](#)

Tree [bad-dest-address](#)

Configurable False

Platforms Supported on all platforms

bad-hello-interval

Description the value of bad-hello-intervals indicates the total number of OSPF packets received where the hello interval given in packet was not equal to that configured on this interface since admin-state was last set to 'enabled'.

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id](#) [interface interface-name](#) *string* [bad-packets](#) [bad-hello-interval](#)

Tree [bad-hello-interval](#)

Configurable False

Platforms Supported on all platforms

bad-length

Description The total number of OSPF packets received with a total length not equal to the length given in the packet itself since admin-state was last set to 'enabled'.

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id](#) [interface interface-name](#) *string* [bad-packets](#) [bad-length](#)

Tree [bad-length](#)

Configurable False

Platforms Supported on all platforms

bad-neighbors

Description The total number of OSPF packets received where the neighbor information does not match the information this router has for the neighbor since admin-state was last set to 'enabled'.

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> bad-packets bad-neighbors
Tree	bad-neighbors
Configurable	False
Platforms	Supported on all platforms

bad-network

Description	The total number of OSPF packets received with invalid network or mask since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> bad-packets bad-network
Tree	bad-network
Configurable	False
Platforms	Supported on all platforms

bad-options

Description	The total number of OSPF packets received with an option that does not match those configured for this interface or area since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> bad-packets bad-options
Tree	bad-options
Configurable	False
Platforms	Supported on all platforms

bad-packet-type

Description	The total number of OSPF packets received with an invalid OSPF packet type since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> bad-packets bad-packet-type
Tree	bad-packet-type
Configurable	False
Platforms	Supported on all platforms

bad-version

Description	The total number of OSPF packets received with bad OSPF version numbers since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> bad-packets bad-version
Tree	bad-version
Configurable	False
Platforms	Supported on all platforms

bad-virtual-link

Description	The total number of OSPF packets received that are destined to a virtual link that does not exist since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> bad-packets bad-virtual-link
Tree	bad-virtual-link
Configurable	False
Platforms	Supported on all platforms

bdr-id

Description	the value of BDR-id indicates the router ID of the backup designated router.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> bdr-id
Tree	bdr-id
Configurable	False
Platforms	Supported on all platforms

dead-interval *number*

Description	Time OSPF waits without receiving Hello packets before declaring a neighbor down
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> dead-interval <i>number</i>
Tree	dead-interval
Range	2 to 65535
Default	40

Units	seconds
Configurable	True
Platforms	Supported on all platforms

dr-id

Description	the value of DR-id indicates the router ID of the designated router.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> <i>dr-id</i>
Tree	dr-id
Configurable	False
Platforms	Supported on all platforms

events

Description	the value of events indicates the number of times this OSPF interface has changed its state, or an error has occurred.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> <i>events</i>
Tree	events
Configurable	False
Platforms	Supported on all platforms

failure-detection

Description	Options related to methods of detecting BGP session failure
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> <i>failure-detection</i>
Tree	failure-detection
Configurable	True
Platforms	Supported on all platforms

enable-bfd *boolean*

Description	Enables the use of BFD for liveliness detection
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> failure-detection enable-bfd <i>boolean</i>

Tree	enable-bfd
Default	false
Configurable	True
Platforms	Supported on all platforms

hello-interval *number*

Description	Time between OSPF Hellos of this interface
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> hello-interval <i>number</i>
Tree	hello-interval
Range	1 to 65535
Default	10
Units	seconds
Configurable	True
Platforms	Supported on all platforms

interface-type *keyword*

Description	Interface type to broadcast or point-to-point
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> interface-type <i>keyword</i>
Tree	interface-type
Options	<ul style="list-style-type: none"> • broadcast • point-to-point
Configurable	True
Platforms	Supported on all platforms

last-enabled-time *string*

Description	the value of last-enabled-time indicates the sys-up-time value when ospf-if-admin-stat was last set to enabled (1) to run the ospf on this interface.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> last-enabled-time <i>string</i>
Tree	last-enabled-time
String Length	20 to 32

Configurable	False
Platforms	Supported on all platforms

last-event-time *string*

Description	the value of last-event-time indicates the value of sys-up-time when an event was last associated with this OSPF interface.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> last-event-time <i>string</i>
Tree	last-event-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

ldp-synchronization

Description	Container with configuration options and state that pertains to the operation of LDP-IGP synchronization on this interface
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> ldp-synchronization
Tree	ldp-synchronization
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

disable

Description	Disable LDP-IGP synchronization procedures on this interface, even if synchronization is enabled globally
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> ldp-synchronization disable
Tree	disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

duration *number*

Description	The length of time that the IGP interface has been in sync or out of sync
--------------------	---

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> ldp-synchronization duration <i>number</i>
Tree	duration
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

end-of-lib *boolean*

Description	<p>When set to true, the IGP restores the normal metric for the IGP adjacency when learning from LDP that all label-FEC mappings have been received from the LDP peer, even if there is remaining time on the hold-down-timer.</p> <p>When set to false, the IGP always waits for the full duration of the hold-down-timer to restore the normal metric for the IGP adjacency.</p> <p>This overrides the global/instance level setting</p>
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> ldp-synchronization end-of-lib <i>boolean</i>
Tree	end-of-lib
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hold-down-timer *number*

Description	<p>The maximum amount of time that the IGP advertises a maximum metric for an interface, measured from the time that the LDP adjacency is re-established after going down.</p> <p>This overrides the global/instance level setting</p>
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> ldp-synchronization hold-down-timer <i>number</i>
Tree	hold-down-timer
Range	1 to 1800
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sync-state *keyword*

Description	The current state of the interface with respect to LDP-IGP sync
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id <i>string</i> interface interface-name <i>string</i> ldp-synchronization sync-state <i>keyword</i>
Tree	sync-state
Options	<ul style="list-style-type: none"> • wait-for-LDP-adjacency The IGP is waiting for the LDP adjacency to come up. The interface is being advertised with max-metric • hold-down-timer-active The LDP adjacency has come up and the IGP has started the hold-down-timer, waiting for either end-of-lib or hold-down-timer expiry. The interface is being advertised with max-metric • end-of-lib-received The IGP received end-of-lib and has switched to normal operation. The interface is being advertised with a normal metric • hold-down-timer-expired The IGP did not receive end-of-lib (or was configured to ignore it) but hold-down-timer has expired and normal metric is restored • manual-exit A tools command was performed to exit ldp-sync. Normal operation is resumed, max-metric is removed • disabled ldp-sync is not applicable on this interface
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

link-lsa-cksum-sum *string*

Description	the value of link-lsa-cksum-sum indicates the 32-bit unsigned sum of the link-scope link-state advertisements' LS checksums contained in this link's link-state database. the sum can be used to determine if there has been a change in a router's link-state database, and to compare the link state database of two routers.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id <i>string</i> interface interface-name <i>string</i> link-lsa-cksum-sum <i>string</i>
Tree	link-lsa-cksum-sum
Configurable	False
Platforms	Supported on all platforms

link-lsa-count

Description	the value of link-lsa-count indicates the total number of link-scope link-state advertisements in this link's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> link-lsa-count
Tree	link-lsa-count
Configurable	False
Platforms	Supported on all platforms

local-ip-address (*ipv4-address* | *ipv6-address*)

Description	the value of local-ip-address indicates the IP address of this OSPF interface.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> local-ip-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	local-ip-address
Configurable	False
Platforms	Supported on all platforms

lsa-filter-out *keyword*

Description	LSA flooding reduction
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> lsa-filter-out <i>keyword</i>
Tree	lsa-filter-out
Default	none
Options	<ul style="list-style-type: none"> • none • all • except-own-rtrlsa • except-own-rtrlsa-and-defaults
Configurable	True
Platforms	Supported on all platforms

lsa-totals

Description	The number of LSAs of each type in this interface's database
--------------------	--

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> lsa-totals
Tree	lsa-totals
Configurable	False
Platforms	Supported on all platforms

e-link-lsa

Description	The number of extended link LSAs in this interface's database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> lsa-totals e-link-lsa
Tree	e-link-lsa
Configurable	False
Platforms	Supported on all platforms

link-lsa

Description	The number of link LSAs in this interface's database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> lsa-totals link-lsa
Tree	link-lsa
Configurable	False
Platforms	Supported on all platforms

link-opaque-lsa

Description	The number of link opaque LSAs in this interface's database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> lsa-totals link-opaque-lsa
Tree	link-opaque-lsa
Configurable	False
Platforms	Supported on all platforms

router-info-lsa

Description	The number of link scoped router information LSAs in this interface's AS database.
--------------------	--

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> lsa-totals router-info-lsa
Tree	router-info-lsa
Configurable	False
Platforms	Supported on all platforms

metric *number*

Description	Explicit route cost metric that is applied to the interface. Setting the value to 0 or removing the metric will cause the metric to be derived from the link bandwidth and the reference-bandwidth
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> metric <i>number</i>
Tree	metric
Configurable	True
Platforms	Supported on all platforms

mtu *number*

Description	MTU for the OSPF to use on the interface. For OSPFv3 this must be minimum 1280. If the MTU defined here exceeds the actual IP-MTU of the interface, then the IP-MTU of the interface is used.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> mtu <i>number</i>
Tree	mtu
Range	512 to 9486
Configurable	True
Platforms	Supported on all platforms

neighbor [router-id](#)

Description	List of neighbors associated with this OSPF interface
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id
Tree	neighbor
Configurable	False

Platforms Supported on all platforms

router-id

Description The router-id advertised by the neighbor

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id](#)

Configurable False

Platforms Supported on all platforms

address (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Description the value of address indicates the IP address of the neighbor associated with the local link.

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id address](#) (*ipv4-address-with-zone* | *ipv6-address-with-zone*)

Tree [address](#)

Configurable False

Platforms Supported on all platforms

adjacency-state *identityref*

Description Current OSPF Neighbor state

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id adjacency-state identityref](#)

Tree [adjacency-state](#)

Options

- down

The initial state of a neighbor, indicating that no recent information has been received from the neighbor.

- attempt

Utilised for neighbors that are attached to NBMA networks, it indicates that no information has been recently received from the neighbor but that Hello packets should be directly sent to that neighbor.

- init

Indicates that a Hello packet has been received from the neighbor but bi-directional communication has not yet been established. That is to say that the local Router ID does not appear in the list of neighbors in the remote system's Hello packet.

- two-way
Communication between the local and remote system is bi-directional such that the local system's Router ID is listed in the received remote system's Hello packet.
- exstart
An adjacency with the remote system is being formed. The local system is currently transmitting empty database description packets in order to establish the primary/standby relationship for the adjacency.
- exchange
The local and remote systems are currently exchanging database description packets in order to determine which elements of their local LSDBs are out of date.
- loading
The local system is sending Link State Request packets to the remote system in order to receive the more recently LSAs that were discovered during the Exchange phase of the procedure establishing the adjacency.
- full
The neighboring routers are fully adjacent such that both LSDBs are synchronized. The adjacency will appear in Router and Network LSAs

Configurable	False
Platforms	Supported on all platforms

backup-designated-router

Description	Advertised backup designated router
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id backup-designated-router
Tree	backup-designated-router
Configurable	False
Platforms	Supported on all platforms

dead-time *number*

Description	The remaining number of seconds remaining in the neighbor's dead time interval
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id dead-time <i>number</i>
Tree	dead-time
Configurable	False

Platforms Supported on all platforms

designated-router

Description Advertised designated router

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id designated-router](#)

Tree [designated-router](#)

Configurable False

Platforms Supported on all platforms

last-established-time *string*

Description Time then OSPF neighbor was last established

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id last-established-time](#) *string*

Tree [last-established-time](#)

String Length 20 to 32

Configurable False

Platforms Supported on all platforms

last-event-time *string*

Description the value of last-event-time indicates the value of sys-up-time when the last event occurred that affected the adjacency to the neighbour.

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [neighbor router-id last-event-time](#) *string*

Tree [last-event-time](#)

String Length 20 to 32

Configurable False

Platforms Supported on all platforms

last-restart-time *string*

Description the value of last-restart-time indicates the last time the neighbor attempted restart.

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id last-restart-time <i>string</i>
Tree	last-restart-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

optional-capabilities

Description	Advertised Optional Capabilities
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id optional-capabilities
Tree	optional-capabilities
Configurable	False
Platforms	Supported on all platforms

priority *number*

Description	Router priority advertised by neighbor
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id priority <i>number</i>
Tree	priority
Configurable	False
Platforms	Supported on all platforms

restart-helper-age *number*

Description	the value of restart-helper-age indicates the remaining time in the current OSPF graceful restart interval, if the router is acting as a restart helper for the neighbor.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id restart-helper-age <i>number</i>
Tree	restart-helper-age
Range	0 to 1800
Units	seconds
Configurable	False
Platforms	Supported on all platforms

restart-helper-exit-rc *keyword*

Description	the value of restart-helper-exit-rc indicates the outcome of the last attempt at acting as a graceful restart helper for the neighbor. none no restart has yet been attempted. in-progress A restart attempt is currently underway. completed the last restart completed successfully. timed-out the last restart timed out. topology-changed the last restart was aborted due to a topology change.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id restart-helper-exit-rc <i>keyword</i>
Tree	restart-helper-exit-rc
Options	<ul style="list-style-type: none"> • none • in-progress • completed • timed-out • topology-changed • bfd-down
Configurable	False
Platforms	Supported on all platforms

restart-helper-status *keyword*

Description	the value of restart-helper-status indicates whether the router is acting as a graceful restart helper for the neighbor.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id restart-helper-status <i>keyword</i>
Tree	restart-helper-status
Options	<ul style="list-style-type: none"> • not-helping • helping
Configurable	False
Platforms	Supported on all platforms

restart-reason (*number* | *keyword*)

Description	the value of restart-reason indicates the OSPF neighbor's graceful restart reason.
--------------------	--

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id restart-reason (<i>number</i> <i>keyword</i>)
Tree	restart-reason
Range	4 to 4294967295
Options	<ul style="list-style-type: none"> • unknown • sw-restart • sw-reload • switch-red
Configurable	False
Platforms	Supported on all platforms

retransmission-queue-length *number*

Description	Enter the retransmission-queue-length context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id retransmission-queue-length <i>number</i>
Tree	retransmission-queue-length
Configurable	False
Platforms	Supported on all platforms

state-changes *number*

Description	total numer of OSPF state changes
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id state-changes <i>number</i>
Tree	state-changes
Configurable	False
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id statistics
Tree	statistics

Configurable	False
Platforms	Supported on all platforms

bad-mtu

Description	the value of bad-MT-us indicates the total number of times when the MTU in a received database description packet was larger than the MTU of the receiving interface since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id statistics bad-mtu
Tree	bad-mtu
Configurable	False
Platforms	Supported on all platforms

bad-nbr-states

Description	the value of bad-nbr-states indicates the total number of OSPF packets received when the neighbor state was not expecting to receive this packet type since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id statistics bad-nbr-states
Tree	bad-nbr-states
Configurable	False
Platforms	Supported on all platforms

bad-packets

Description	the value of bad-packets indicates the total number of times when an LS update was received with an illegal LS type or an option mismatch since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id statistics bad-packets
Tree	bad-packets
Configurable	False
Platforms	Supported on all platforms

bad-seq-nums

Description	the value of bad-seq-nums indicates the total number of times when a database description packet was received with a sequence number mismatch since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id statistics bad-seq-nums
Tree	bad-seq-nums
Configurable	False
Platforms	Supported on all platforms

duplicates

Description	the value of duplicates indicates the total number of times when a duplicate database description packet was received during the exchange state since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id statistics duplicates
Tree	duplicates
Configurable	False
Platforms	Supported on all platforms

events

Description	the value of events indicates the number of times this neighbor relationship has changed state, or an error has occurred.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id statistics events
Tree	events
Configurable	False
Platforms	Supported on all platforms

lsa-install-failed

Description	the value of lsa-install-failed indicates the total number of times an LSA could not be installed into the LSDB due to a resource allocation issue since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id statistics lsa-install-failed

Tree	lsa-install-failed
Configurable	False
Platforms	Supported on all platforms

lsa-not-in-lsdb

Description	the value of lsa-not-in-lsdb indicates the total number of times when an LS request was received for an LSA not installed in the LSDB of this router since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id statistics lsa-not-in-lsdb
Tree	lsa-not-in-lsdb
Configurable	False
Platforms	Supported on all platforms

num-restarts

Description	the value of num-restarts indicates the number of times the neighbor has attempted restart.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id statistics num-restarts
Tree	num-restarts
Configurable	False
Platforms	Supported on all platforms

option-mismatches

Description	the value of option-mismatches indicates the total number of times when a LS update was received with an option mismatch since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id statistics option-mismatches
Tree	option-mismatches
Configurable	False
Platforms	Supported on all platforms

up-time *number*

Description	the value of up-time indicates the uninterrupted time, in hundredths of seconds, the adjacency to this neighbour has been up.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor router-id up-time <i>number</i>
Tree	up-time
Range	0 to 2147483647
Units	centiseconds
Configurable	False
Platforms	Supported on all platforms

neighbor-count

Description	The total number of OSPF neighbors adjacent on this interface, in a state of INIT or greater, since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbor-count
Tree	neighbor-count
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	the OSPF interface state.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • down • loopback • waiting • point-to-point • designated-router • backup-designated-router • other-designated-router
Configurable	False
Platforms	Supported on all platforms

packets

Description	Packet counters
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> packets
Tree	packets
Configurable	False
Platforms	Supported on all platforms

discarded

Description	The total number of OSPF packets discarded since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> packets discarded
Tree	discarded
Configurable	False
Platforms	Supported on all platforms

retransmits

Description	The total number of OSPF retransmits since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> packets retransmits
Tree	retransmits
Configurable	False
Platforms	Supported on all platforms

rx-db-description

Description	The total number of OSPF database description packets received since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> packets rx-db-description
Tree	rx-db-description
Configurable	False
Platforms	Supported on all platforms

rx-hello

Description	The total number of OSPF hello packets received since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> packets rx-hello
Tree	rx-hello
Configurable	False
Platforms	Supported on all platforms

rx-ls-ack

Description	The total number of link state acknowledgements received since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> packets rx-ls-ack
Tree	rx-ls-ack
Configurable	False
Platforms	Supported on all platforms

rx-ls-request

Description	The total number of link state requests (LS-rs) received since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> packets rx-ls-request
Tree	rx-ls-request
Configurable	False
Platforms	Supported on all platforms

rx-ls-update

Description	The total number of link state updates (LS-us) received since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> packets rx-ls-update
Tree	rx-ls-update
Configurable	False

Platforms Supported on all platforms

rx-total

Description The total number of OSPF packets received since admin-state was last set to 'enabled'.

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [packets rx-total](#)

Tree [rx-total](#)

Configurable False

Platforms Supported on all platforms

tx-db-description

Description The total number of OSPF database description packets transmitted since admin-state was last set to 'enabled'.

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [packets tx-db-description](#)

Tree [tx-db-description](#)

Configurable False

Platforms Supported on all platforms

tx-hello

Description The total number of OSPF hello packets transmitted since admin-state was last set to 'enabled'.

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [packets tx-hello](#)

Tree [tx-hello](#)

Configurable False

Platforms Supported on all platforms

tx-ls-ack

Description The total number of OSPF link state acknowledgements transmitted since admin-state was last set to 'enabled'.

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [packets tx-ls-ack](#)

Tree	tx-ls-ack
Configurable	False
Platforms	Supported on all platforms

tx-ls-request

Description	The total number of OSPF link state requests (LS-rs) transmitted since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> packets tx-ls-request
Tree	tx-ls-request
Configurable	False
Platforms	Supported on all platforms

tx-ls-update

Description	The total number of OSPF link state updates (LS-us) transmitted since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> packets tx-ls-update
Tree	tx-ls-update
Configurable	False
Platforms	Supported on all platforms

tx-total

Description	The total number of OSPF packets transmitted since admin-state was last set to 'enabled'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> packets tx-total
Tree	tx-total
Configurable	False
Platforms	Supported on all platforms

passive *boolean*

Description	Allow interface to be advertised as an OSPF interface without running the OSPF protocol
--------------------	---

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> passive <i>boolean</i>
Tree	passive
Configurable	True
Platforms	Supported on all platforms

priority *number*

Description	Priority of the interface to apply in the designated router election on the subnet
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> priority <i>number</i>
Tree	priority
Range	0 to 255
Default	1
Configurable	True
Platforms	Supported on all platforms

retransmit-interval *number*

Description	Time before OSPF retransmits an unacknowledged LSA to a neighbor
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> retransmit-interval <i>number</i>
Tree	retransmit-interval
Range	1 to 1800
Default	5
Units	seconds
Configurable	True
Platforms	Supported on all platforms

trace-options

Description	Enter the trace-options context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> trace-options
Tree	trace-options
Configurable	True

Platforms Supported on all platforms

trace

Description Tracing parameter flags

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [trace-options trace](#)

Tree [trace](#)

Configurable True

Platforms Supported on all platforms

adjacencies

Description Enable tracing all adjacency events.

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [trace-options trace adjacencies](#)

Tree [adjacencies](#)

Configurable True

Platforms Supported on all platforms

interfaces

Description Enable tracing all interface events.

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [trace-options trace interfaces](#)

Tree [interfaces](#)

Configurable True

Platforms Supported on all platforms

packet

Description Trace OSPF Packet types Only one type can be enabled at a time

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id interface interface-name](#) *string* [trace-options trace packet](#)

Tree [packet](#)

Configurable True

Platforms Supported on all platforms

detail

Description	To enable detailed tracing. Includes both received and sent packets.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> trace-options trace packet detail
Tree	detail
Configurable	True
Platforms	Supported on all platforms

modifier *keyword*

Description	Enter the modifier context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> trace-options trace packet modifier <i>keyword</i>
Tree	modifier
Options	<ul style="list-style-type: none"> • ingress To enable tracing for the packets which are received. • egress To enable tracing for the sent packets. • in-and-egress To enable tracing for both sent and received packets • drop To enable tracing for the sent packets.
Configurable	True
Platforms	Supported on all platforms

type *keyword*

Description	Enter the type context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> trace-options trace packet type <i>keyword</i>
Tree	type
Options	<ul style="list-style-type: none"> • all Enable tracing of all OSPF packets • hello Enable tracing of OSPF Hello packets

- `dbdescr`
Enable tracing of OSPF database Descriptor packets
- `ls-request`
Enable tracing of OSPF link-state request packets
- `ls-update`
Enable tracing of OSPF link-state update packets
- `ls-ack`
Enable tracing of OSPF link-state Ack packets

Configurable	True
Platforms	Supported on all platforms

transit-delay *number*

Description	Time required to transmit an LSA on the interface, virtual link, or sham link
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> transit-delay <i>number</i>
Tree	transit-delay
Range	1 to 1800
Default	1
Units	seconds
Configurable	True
Platforms	Supported on all platforms

last-spf-run-time *string*

Description	The sys-up-time when intra-area SPF was last run on this area.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id last-spf-run-time <i>string</i>
Tree	last-spf-run-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

lsa-filter-totals

Description	The number of LSAs not sent due to area policy.
--------------------	---

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-filter-totals
Tree	lsa-filter-totals
Configurable	False
Platforms	Supported on all platforms

export-filtered

Description	The number of LSAs not sent due to area export policy.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-filter-totals export-filtered
Tree	export-filtered
Configurable	False
Platforms	Supported on all platforms

import-filtered

Description	The number of LSAs not sent due to area import policy.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-filter-totals import-filtered
Tree	import-filtered
Configurable	False
Platforms	Supported on all platforms

lsa-totals

Description	The number of LSAs of each type in this area's database
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals
Tree	lsa-totals
Configurable	False
Platforms	Supported on all platforms

area-opaque-lsa

Description	The number of NSSA LSAs in this area's link-state database.
--------------------	---

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals area-opaque-lsa
Tree	area-opaque-lsa
Configurable	False
Platforms	Supported on all platforms

asbr-summary-lsa

Description	The number of ASBR summary LSAs in this area's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals asbr-summary-lsa
Tree	asbr-summary-lsa
Configurable	False
Platforms	Supported on all platforms

e-inter-area-prefix-lsa

Description	The number of OSPFv3 E-inter-area-prefix LSAs in this area's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals e-inter-area-prefix-lsa
Tree	e-inter-area-prefix-lsa
Configurable	False
Platforms	Supported on all platforms

e-inter-area-router-lsa

Description	The number of OSPFv3 E-inter-area-router LSAs in this area's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals e-inter-area-router-lsa
Tree	e-inter-area-router-lsa
Configurable	False
Platforms	Supported on all platforms

e-intra-area-prefix-lsa

Description	The number of OSPFv3 E-intra-area-prefix LSAs in this area's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals e-intra-area-prefix-lsa
Tree	e-intra-area-prefix-lsa
Configurable	False
Platforms	Supported on all platforms

e-network-lsa

Description	The number of OSPFv3 E-network LSAs in this area's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals e-network-lsa
Tree	e-network-lsa
Configurable	False
Platforms	Supported on all platforms

e-nssa-lsa

Description	The number of OSPFv3 E-NSSA LSAs in this area's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals e-nssa-lsa
Tree	e-nssa-lsa
Configurable	False
Platforms	Supported on all platforms

e-router-lsa

Description	The number of OSPFv3 E-router LSAs in this area's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals e-router-lsa
Tree	e-router-lsa
Configurable	False
Platforms	Supported on all platforms

inter-area-prefix-lsa

Description	The number of OSPFv3 inter-area-prefix LSAs in this area's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals inter-area-prefix-lsa
Tree	inter-area-prefix-lsa
Configurable	False
Platforms	Supported on all platforms

inter-area-router-lsa

Description	The number of OSPFv3 inter-area-router LSAs in this area's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals inter-area-router-lsa
Tree	inter-area-router-lsa
Configurable	False
Platforms	Supported on all platforms

intra-area-prefix-lsa

Description	The number of OSPFv3 intra-area-prefix LSAs in this area's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals intra-area-prefix-lsa
Tree	intra-area-prefix-lsa
Configurable	False
Platforms	Supported on all platforms

network-lsa

Description	The number of network LSAs in this area's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals network-lsa
Tree	network-lsa
Configurable	False
Platforms	Supported on all platforms

network-summary-lsa

Description	The number of network summary LSAs in this area's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals network-summary-lsa
Tree	network-summary-lsa
Configurable	False
Platforms	Supported on all platforms

nssa-lsa

Description	The number of NSSA LSAs in this area's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals nssa-lsa
Tree	nssa-lsa
Configurable	False
Platforms	Supported on all platforms

router-info-lsa

Description	The number of OSPFv3 router-info LSAs in this area's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals router-info-lsa
Tree	router-info-lsa
Configurable	False
Platforms	Supported on all platforms

router-lsa

Description	The number of router LSAs in this area's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals router-lsa
Tree	router-lsa
Configurable	False
Platforms	Supported on all platforms

total

Description	The number of area scope LSAs within this area.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals total
Tree	total
Configurable	False
Platforms	Supported on all platforms

total-lsa-cksum-sum *string*

Description	The 32-bit unsigned sum of the area scope LSA checksums contained in this area's link-state database. The sum can be used to determine if there has been a change in a router's link-state database, and to compare the link-state database of two routers.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals total-lsa-cksum-sum <i>string</i>
Tree	total-lsa-cksum-sum
Configurable	False
Platforms	Supported on all platforms

unknown-lsa

Description	The number of unknown LSA advertisements in this area's link-state database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id lsa-totals unknown-lsa
Tree	unknown-lsa
Configurable	False
Platforms	Supported on all platforms

nssa

Description	This command creates the context to configure the associated OSPF or OSPF3 area as Not So Stubby Area (NSSA). NSSAs are similar to stub areas in that no external routes are imported into the area from other OSPF areas. The major difference between a stub area and an NSSA is an NSSA has the capability to flood external routes that
--------------------	--

it learns throughout its area and via an ABR to the entire OSPF or OSPF3 domain.

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id nssa
Tree	nssa
Configurable	True
Platforms	Supported on all platforms

area-range [ip-prefix-mask](#) (*ipv4-prefix | ipv6-prefix*)

Description	Enter the area-range context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id nssa area-range ip-prefix-mask (<i>ipv4-prefix ipv6-prefix</i>)
Tree	area-range
Configurable	True
Platforms	Supported on all platforms

ip-prefix-mask (*ipv4-prefix | ipv6-prefix*)

Description	ip-prefix with host bits set to 0
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id nssa area-range ip-prefix-mask (<i>ipv4-prefix ipv6-prefix</i>)
Configurable	True
Platforms	Supported on all platforms

advertise *boolean*

Description	Advertise summarized range of addresses to other areas
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id nssa area-range ip-prefix-mask (<i>ipv4-prefix ipv6-prefix</i>) advertise <i>boolean</i>
Tree	advertise
Default	true
Configurable	True
Platforms	Supported on all platforms

originate-default-route

Description	Enter the originate-default-route context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id nssa originate-default-route
Tree	originate-default-route
Configurable	True
Platforms	Supported on all platforms

adjacency-check *boolean*

Description	Default route to remove if there is no adjacency
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id nssa originate-default-route adjacency-check <i>boolean</i>
Tree	adjacency-check
Default	true
Configurable	True
Platforms	Supported on all platforms

type-nssa *boolean*

Description	Generate a default route using NSSA-LSA type
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id nssa originate-default-route type-nssa <i>boolean</i>
Tree	type-nssa
Default	false
Configurable	True
Platforms	Supported on all platforms

redistribute-external *boolean*

Description	Enables the redistribution of external routes into the Not So Stubby Area (NSSA) or an NSSA area border router (ABR) that is exporting the routes into non-NSSA areas
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id nssa redistribute-external <i>boolean</i>
Tree	redistribute-external

Default	true
Configurable	True
Platforms	Supported on all platforms

summaries *boolean*

Description	Enables sending summary (type 3) advertisements into a stub area or Not So Stubby Area (NSSA) on an Area Border Router (ABR)
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id nssa summaries <i>boolean</i>
Tree	summaries
Default	true
Configurable	True
Platforms	Supported on all platforms

stub

Description	Enable the stub context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id stub
Tree	stub
Configurable	True
Platforms	Supported on all platforms

default-metric *number*

Description	Defines the default OSPF metric for associated stub area
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id stub default-metric <i>number</i>
Tree	default-metric
Range	1 to 65535
Default	1
Configurable	True
Platforms	Supported on all platforms

summaries *boolean*

Description	Enables sending summary (type 3) advertisements into a stub area or Not So Stubby Area (NSSA) on an Area Border Router (ABR)
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id stub summaries <i>boolean</i>
Tree	summaries
Default	true
Configurable	True
Platforms	Supported on all platforms

area-border-router *boolean*

Description	This indicates whether this router is an area border router.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area-border-router <i>boolean</i>
Tree	area-border-router
Configurable	False
Platforms	Supported on all platforms

as-border-router *boolean*

Description	This indicates whether this router is an AS border router.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> as-border-router <i>boolean</i>
Tree	as-border-router
Configurable	False
Platforms	Supported on all platforms

asbr

Description	Configure the router as an ASBR (Autonomous System Boundary Router)
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> asbr
Tree	asbr
Configurable	True
Platforms	Supported on all platforms

trace-path (*number | keyword*)

Description	Domain identity
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> asbr trace-path (<i>number keyword</i>)
Tree	trace-path
Range	0 to 31
Default	none
Options	<ul style="list-style-type: none"> • none
Configurable	True
Platforms	Supported on all platforms

backbone-router *boolean*

Description	This indicates whether or not this router is configured as an OSPF back bone router.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> backbone-router <i>boolean</i>
Tree	backbone-router
Configurable	False
Platforms	Supported on all platforms

export-limit

Description	Enter the export-limit context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> export-limit
Tree	export-limit
Configurable	True
Platforms	Supported on all platforms

log-percent *number*

Description	Export limit at which warning a log message and SNMP notification are sent
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> export-limit log-percent <i>number</i>
Tree	log-percent

Range	1 to 100
Configurable	True
Platforms	Supported on all platforms

number *number*

Description	Maximum number of routes or prefixes to be exported into IGP instance from route table
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> export-limit number <i>number</i>
Tree	number
Range	1 to 4294967295
Configurable	True
Platforms	Supported on all platforms

export-policy *reference*

Description	Apply an export policy to redistribute routes into OSPF
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> export-policy reference
Tree	export-policy
Reference	routing-policy policy name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

extern-lsa-cksum-sum *string*

Description	the value of extern-lsa-cksum-sum indicates the 32-bit unsigned sum of the LS checksums of the external link-state advertisements contained in the link-state database. This sum can be used to determine if there has been a change in a router's link state database, and to compare the link-state database of two routers.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> extern-lsa-cksum-sum <i>string</i>
Tree	extern-lsa-cksum-sum
Configurable	False
Platforms	Supported on all platforms

extern-lsa-count

Description	the value of extern-lsa-count indicates the number of external LS-as (LS type 0x4005) in the link-state database
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> extern-lsa-count
Tree	extern-lsa-count
Configurable	False
Platforms	Supported on all platforms

external-db-overflow

Description	Enable the external-db-overflow context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> external-db-overflow
Tree	external-db-overflow
Configurable	True
Platforms	Supported on all platforms

interval *number*

Description	Enter the interval context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> external-db-overflow interval <i>number</i>
Tree	interval
Range	0 to 2147483647
Default	0
Units	seconds
Configurable	True
Platforms	Supported on all platforms

limit *number*

Description	Enter the limit context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> external-db-overflow limit <i>number</i>
Tree	limit

Range	0 to 2147483647
Default	0
Configurable	True
Platforms	Supported on all platforms

external-preference *number*

Description	Configure the route preference associated with OSPF external routes
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> external-preference <i>number</i>
Tree	external-preference
Default	150
Configurable	True
Platforms	Supported on all platforms

graceful-restart

Description	Container for options related to OSPF graceful restart
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> graceful-restart
Tree	graceful-restart
Configurable	True
Platforms	Supported on all platforms

helper-mode *boolean*

Description	Enable or disable the OSPF graceful restart helper function. When this leaf is set, the local system supports retaining forwarding information during a neighbor router's restart.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> graceful-restart helper-mode <i>boolean</i>
Tree	helper-mode
Default	false
Configurable	True
Platforms	Supported on all platforms

strict-lsa-checking *boolean*

Description	Enter the strict-lsa-checking context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> graceful-restart strict-lsa-checking <i>boolean</i>
Tree	strict-lsa-checking
Default	false
Configurable	True
Platforms	Supported on all platforms

instance-id *number*

Description	The OSPF multi instance identity as defined in RFC6549 or RFC5838. Supported values are: For OSPFv2 it is between 0 and 31, default is 0. For OSPFv3 address-family ipv6-unicast it is between 0 and 31, default is 0. For OSPFv3 address-family ipv4-unicast it is between 64 and 95, default is 64.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> instance-id <i>number</i>
Tree	instance-id
Range	0 to 255
Configurable	True
Platforms	Supported on all platforms

last-disabled-reason *string*

Description	Reason why the disabled state was entered the last time.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> last-disabled-reason <i>string</i>
Tree	last-disabled-reason
String Length	0 to 20
Configurable	False
Platforms	Supported on all platforms

last-enabled-time *string*

Description	the value of last-enabled-time indicates the value of sys-up-time when admin-state was last set to 'enabled'. when admin-state is set to 'disabled',
--------------------	--

the OSPF counters are stopped when admin-state is reset to 'enabled', the counters are reset to zero.

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> last-enabled-time <i>string</i>
Tree	last-enabled-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-overflow-entered-time *string*

Description	The value of last-ovrflw-entered-time indicates the value of sys-up-time the last time we entered overflow state. this overflow state occurs when the number of non-default AS-external-LS-as entries exceed the link-state database capability.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> last-overflow-entered-time <i>string</i>
Tree	last-overflow-entered-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-overflow-exit-time *string*

Description	the value of last-overflow-exit-time indicates the value of sys-up-time the last time we exited overflow state. this overflow state occurs when the number of non-default AS-external-LS-as entries exceed the link-state database capability.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> last-overflow-exit-time <i>string</i>
Tree	last-overflow-exit-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-overload-enter-code *keyword*

Description	the value of last-overload-enter-code indicates the condition which caused OSPF to get into overload.
--------------------	---

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> last-overload-enter-code <i>keyword</i>
Tree	last-overload-enter-code
Options	<ul style="list-style-type: none"> • none • spf-failed • boot-overload • manual-overload • sfm-overload • fib-add-fail • rtm-add-fail • rtr-adv-lsa-limit
Configurable	False
Platforms	Supported on all platforms

last-overload-entered-time *string*

Description	the value of last-overload-entrd-time indicates the time at which the system last went into overload state.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> last-overload-entered-time <i>string</i>
Tree	last-overload-entered-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-overload-exit-code *keyword*

Description	the value of last-overload-exit-code indicates the reason why OSPF came out of overload state the last time, since reset.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> last-overload-exit-code <i>keyword</i>
Tree	last-overload-exit-code
Options	<ul style="list-style-type: none"> • none • bgp-sig-recv • timer-expired • manual-exit • sfm-overload-done

Configurable	False
Platforms	Supported on all platforms

last-overload-exit-time *string*

Description	the value of last-overload-exit-time indicates the time at which the system last came out of overload state.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> last-overload-exit-time <i>string</i>
Tree	last-overload-exit-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

ldp-synchronization

Description	Enable LDP-IGP synchronization procedures on all P2P interfaces and all LAN interfaces with a single adjacency, except on interfaces where the functionality is explicitly disabled
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> ldp-synchronization
Tree	ldp-synchronization
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

end-of-lib *boolean*

Description	When set to true, the IGP restores the normal metric for the IGP adjacency when learning from LDP that all label-FEC mappings have been received from the LDP peer, even if there is remaining time on the hold-down-timer. When set to false, the IGP always waits for the full duration of the hold-down-timer to restore the normal metric for the IGP adjacency
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> ldp-synchronization end-of-lib <i>boolean</i>
Tree	end-of-lib
Default	false
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hold-down-timer *number*

Description	The maximum amount of time that the IGP advertises a maximum metric for an interface, measured from the time that the LDP adjacency is re-established after going down
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> ldp-synchronization hold-down-timer <i>number</i>
Tree	hold-down-timer
Range	1 to 1800
Default	60
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lsa-totals

Description	The number of LSAs of each type in this instance's AS database
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> lsa-totals
Tree	lsa-totals
Configurable	False
Platforms	Supported on all platforms

as-external-lsa

Description	The number of AS External LSAs in this instance's AS database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> lsa-totals as-external-lsa
Tree	as-external-lsa
Configurable	False
Platforms	Supported on all platforms

as-opaque-lsa

Description	The number of AS opaque LSAs in this instance's AS database.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> lsa-totals as-opaque-lsa
Tree	as-opaque-lsa

Configurable	False
Platforms	Supported on all platforms

e-as-external-lsa

Description	The number of extended AS External LSAs in this instance's AS database.
Context	network-instance name string protocols ospf instance name string lsa-totals e-as-external-lsa
Tree	e-as-external-lsa
Configurable	False
Platforms	Supported on all platforms

router-info-lsa

Description	The number of AS scoped router information LSAs in this instance's AS database.
Context	network-instance name string protocols ospf instance name string lsa-totals router-info-lsa
Tree	router-info-lsa
Configurable	False
Platforms	Supported on all platforms

max-ecmp-paths *number*

Description	The maximum number of ECMP next-hops to program into the FIB for every IP prefix
Context	network-instance name string protocols ospf instance name string max-ecmp-paths number
Tree	max-ecmp-paths
Range	1 to 64
Default	1
Configurable	True
Platforms	Supported on all platforms

new-lsas-originated

Description	The number of new link-state advertisements that have been originated. This number is incremented each time the router originates a new LSA.
--------------------	--

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> new-lsas-originated
Tree	new-lsas-originated
Configurable	False
Platforms	Supported on all platforms

new-lsas-received

Description	The number of link-state advertisements received determined to be new instantiations. This number does not include newer instantiations of self-originated link-state advertisements.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> new-lsas-received
Tree	new-lsas-received
Configurable	False
Platforms	Supported on all platforms

opaque-lsa-support *boolean*

Description	the value of opaque-lsa-support indicates the router's support for opaque LSA types. this object is valid only when version is 'version2'.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> opaque-lsa-support <i>boolean</i>
Tree	opaque-lsa-support
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	Used to report operational state of the OSPF instance
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	False
Platforms	Supported on all platforms

overflow *boolean*

Description	The value of in-overflow-state indicates the current overflow state (true/false). This overflow state occurs when the number of non-default AS-external-LS-as entries exceed the link-state database capability.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> overflow <i>boolean</i>
Tree	overflow
Configurable	False
Platforms	Supported on all platforms

overload

Description	Enter the overload context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> overload
Tree	overload
Configurable	True
Platforms	Supported on all platforms

active *boolean*

Description	Enter the active context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> overload active <i>boolean</i>
Tree	active
Default	false
Configurable	True
Platforms	Supported on all platforms

overload-include-ext-1 *boolean*

Description	Enter the overload-include-ext-1 context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> overload overload-include-ext-1 <i>boolean</i>
Tree	overload-include-ext-1
Default	false
Configurable	True

Platforms Supported on all platforms

overload-include-ext-2 *boolean*

Description Enter the overload-include-ext-2 context

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [overload overload-include-ext-2](#) *boolean*

Tree [overload-include-ext-2](#)

Default false

Configurable True

Platforms Supported on all platforms

overload-include-stub *boolean*

Description Enter the overload-include-stub context

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [overload overload-include-stub](#) *boolean*

Tree [overload-include-stub](#)

Default false

Configurable True

Platforms Supported on all platforms

overload-on-boot

Description Enable the overload-on-boot context

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [overload overload-on-boot](#)

Tree [overload-on-boot](#)

Configurable True

Platforms Supported on all platforms

timeout *number*

Description Enter the timeout context

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [overload overload-on-boot timeout](#) *number*

Tree [timeout](#)

Range	60 to 1800
Default	60
Units	seconds
Configurable	True
Platforms	Supported on all platforms

rtr-adv-lsa-limit

Description	Enter the rtr-adv-lsa-limit context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> overload rtr-adv-lsa-limit
Tree	rtr-adv-lsa-limit
Configurable	True
Platforms	Supported on all platforms

log-only *boolean*

Description	Enter the log-only context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> overload rtr-adv-lsa-limit log-only <i>boolean</i>
Tree	log-only
Configurable	True
Platforms	Supported on all platforms

max-lsa-count *number*

Description	Enter the max-lsa-count context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> overload rtr-adv-lsa-limit max-lsa-count <i>number</i>
Tree	max-lsa-count
Range	1 to 4294967295
Configurable	True
Platforms	Supported on all platforms

overload-timeout *number*

Description	Enter the overload-timeout context
--------------------	------------------------------------

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> overload rtr-adv-lsa-limit overload-timeout <i>number</i>
Tree	overload-timeout
Range	1 to 1800
Configurable	True
Platforms	Supported on all platforms

warning-threshold *number*

Description	Enter the warning-threshold context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> overload rtr-adv-lsa-limit warning-threshold <i>number</i>
Tree	warning-threshold
Range	0 to 100
Default	0
Configurable	True
Platforms	Supported on all platforms

overload-rem-interval *number*

Description	the value of <code>overload-rem-interval</code> indicates the time for which the system will be in overload state if OSPF is in overload state. the value of 0 implies that the system is indefinitely in overload state.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> overload-rem-interval <i>number</i>
Tree	overload-rem-interval
Range	0 to 65535
Units	seconds
Configurable	False
Platforms	Supported on all platforms

overload-state *keyword*

Description	the value of <code>overload-oper-state</code> indicates whether or not the OSPF application is presently in overload state or not.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> overload-state <i>keyword</i>
Tree	overload-state

Options	<ul style="list-style-type: none"> • overload • no-overload
Configurable	False
Platforms	Supported on all platforms

ovld-lsa-limit-rem-interval *number*

Description	the value of ovld-lsa-limit-rem-interval indicates the remaining time in seconds for which the system will be in overload state due to advertising router LSA limit exceeded. the value of 0 implies that the system is either not in overload or indefinitely in overload state.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> ovld-lsa-limit-rem-interval <i>number</i>
Tree	ovld-lsa-limit-rem-interval
Range	0 to 65535
Units	seconds
Configurable	False
Platforms	Supported on all platforms

preference *number*

Description	Sets the route preference for OSPF sourced routes
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> preference <i>number</i>
Tree	preference
Range	1 to 255
Default	10
Configurable	True
Platforms	Supported on all platforms

reference-bandwidth *number*

Description	<p>Configures the reference bandwidth that provides the basis for interface metrics based on link Bandwidth</p> <p>If the reference bandwidth is defined, then the cost is calculated using the following formula: $\text{cost} = \text{reference-bandwidth} / \text{bandwidth}$</p> <p>When a large reference-bandwidth value is configured, a metric calculation may result in a value higher than the supported protocol cost value. If this</p>
--------------------	--

occurs, OSPF automatically reverts to the maximum configurable cost metric.

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> reference-bandwidth <i>number</i>
Tree	reference-bandwidth
Range	1 to 8000000000
Default	400000000
Units	kbps
Configurable	True
Platforms	Supported on all platforms

router-id

Description	Enter the router-id context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> router-id
Tree	router-id
Configurable	True
Platforms	Supported on all platforms

routes-submitted

Description	the value of routes-submitted indicates the number of routes submitted to the route table manager (RTM) by this instance of OSPF.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> routes-submitted
Tree	routes-submitted
Configurable	False
Platforms	Supported on all platforms

spf

Description	SPF related information
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf
Tree	spf
Configurable	False
Platforms	Supported on all platforms

avg-spf-run-interval *number*

Description	the value of avg-spf-run-interval indicates the average time, in hundredths of seconds, of all the total SPF calculations performed by this OSPF router.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf avg-spf-run-interval <i>number</i>
Tree	avg-spf-run-interval
Range	0 to 2147483647
Units	centiseconds
Configurable	False
Platforms	Supported on all platforms

ext-spf-runs

Description	The total number of times that only the external portion of the SPF has been run since OSPF was last enabled.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf ext-spf-runs
Tree	ext-spf-runs
Configurable	False
Platforms	Supported on all platforms

full-spf-runs

Description	The total number of times that complete SPF has been run on the router since OSPF was last enabled.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf full-spf-runs
Tree	full-spf-runs
Configurable	False
Platforms	Supported on all platforms

incremental-ext-spf-runs

Description	The total number of incremental SPF runs triggered by new or updated external LS-as.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf incremental-ext-spf-runs

Tree	incremental-ext-spf-runs
Configurable	False
Platforms	Supported on all platforms

incremental-inter-spf-runs

Description	The total number of incremental SPF runs triggered by new or updated inter-area prefix or inter-area router LS-as.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf incremental-inter-spf-runs
Tree	incremental-inter-spf-runs
Configurable	False
Platforms	Supported on all platforms

last-ext-spf

Description	Information about the last external SPF run
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf last-ext-spf
Tree	last-ext-spf
Configurable	False
Platforms	Supported on all platforms

interval *number*

Description	the value of ext-spf-run-interval indicates the time, in hundredths of seconds, used to perform the most recent total external (not incremental) SPF calculation.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf last-ext-spf interval <i>number</i>
Tree	interval
Range	0 to 2147483647
Units	centiseconds
Configurable	False
Platforms	Supported on all platforms

run-time *string*

Description	the value of last-ext-spf-run-time indicates the value of sys-up-time when the external OSPF dijkstra (SPF) was last run.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf last-ext-spf run-time <i>string</i>
Tree	run-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-full-spf

Description	Information about the last full SPF run
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf last-full-spf
Tree	last-full-spf
Configurable	False
Platforms	Supported on all platforms

extern-spf-time *number*

Description	Time it took, in hundredths of seconds, to complete the external LSA calculations.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf last-full-spf extern-spf-time <i>number</i>
Tree	extern-spf-time
Range	0 to 2147483647
Units	centiseconds
Configurable	False
Platforms	Supported on all platforms

inter-spf-time *number*

Description	Time it took, in hundredths of seconds, to complete the inter-area SPF calculations.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf last-full-spf inter-spf-time <i>number</i>

Tree	inter-spf-time
Range	0 to 2147483647
Units	centiseconds
Configurable	False
Platforms	Supported on all platforms

intra-spf-time *number*

Description	Time it took, in hundredths of seconds, to complete the intra-area SPF calculations.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf last-full-spf intra-spf-time <i>number</i>
Tree	intra-spf-time
Range	0 to 2147483647
Units	centiseconds
Configurable	False
Platforms	Supported on all platforms

rtm-update-time *number*

Description	Time it took, in hundredths of seconds, to complete the RTM updates.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf last-full-spf rtm-update-time <i>number</i>
Tree	rtm-update-time
Range	0 to 2147483647
Units	centiseconds
Configurable	False
Platforms	Supported on all platforms

run-time *string*

Description	the value of last-full-spf-run-time indicates the time at which the system last performed a full dijkstra (SPF) run.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf last-full-spf run-time <i>string</i>
Tree	run-time
String Length	20 to 32

Configurable	False
Platforms	Supported on all platforms

total-time *number*

Description	Time it took, in hundredths of seconds, to complete the last SPF run completely.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf last-full-spf total-time <i>number</i>
Tree	total-time
Range	0 to 2147483647
Units	centiseconds
Configurable	False
Platforms	Supported on all platforms

max-spf-run-interval *number*

Description	the value of max-spf-run-interval indicates the maximum time, in hundredths of seconds, used to perform a total SPF calculation.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf max-spf-run-interval <i>number</i>
Tree	max-spf-run-interval
Range	0 to 2147483647
Units	centiseconds
Configurable	False
Platforms	Supported on all platforms

min-spf-run-interval *number*

Description	the value of min-spf-run-interval indicates the minimum time, in hundredths of seconds, used to perform a total SPF calculation.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> spf min-spf-run-interval <i>number</i>
Tree	min-spf-run-interval
Range	0 to 2147483647
Units	centiseconds
Configurable	False

Platforms Supported on all platforms

spf-attempts-failed

Description The number of times an attempt to run SPF has failed because SPF runs have been stopped as a result of insufficient memory resources.

Context [network-instance name string protocols ospf instance name string spf spf-attempts-failed](#)

Tree [spf-attempts-failed](#)

Configurable False

Platforms Supported on all platforms

timers

Description Enter the timers context

Context [network-instance name string protocols ospf instance name string timers](#)

Tree [timers](#)

Configurable True

Platforms Supported on all platforms

incremental-spf-wait *number*

Description Delay time before an incremental SPF calculation is started

Context [network-instance name string protocols ospf instance name string timers incremental-spf-wait number](#)

Tree [incremental-spf-wait](#)

Range 0 to 1000

Default 1000

Configurable True

Platforms Supported on all platforms

lsa-accumulate *number*

Description Delay time for accumulating multiple LSAs before advertising them to neighbors

Context [network-instance name string protocols ospf instance name string timers lsa-accumulate number](#)

Tree	lsa-accumulate
Range	0 to 1000
Default	1000
Configurable	True
Platforms	Supported on all platforms

Isa-arrival *number*

Description	Minimum delay between receipt of the same LSAs arriving from neighbors
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> timers lsa-arrival number
Tree	lsa-arrival
Range	0 to 600000
Default	1000
Configurable	True
Platforms	Supported on all platforms

Isa-generate

Description	Enter the lsa-generate context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> timers lsa-generate
Tree	lsa-generate
Configurable	True
Platforms	Supported on all platforms

Isa-initial-wait *number*

Description	First waiting period between link state advertisements LSA originates
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> timers lsa-generate lsa-initial-wait number
Tree	lsa-initial-wait
Range	10 to 600000
Default	5000
Units	milliseconds
Configurable	True

Platforms Supported on all platforms

lsa-second-wait *number*

Description Hold time between the first and second LSA generation

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [timers lsa-generate lsa-second-wait](#) *number*

Tree [lsa-second-wait](#)

Range 10 to 600000

Default 5000

Units milliseconds

Configurable True

Platforms Supported on all platforms

max-lsa-wait *number*

Description Maximum time between two consecutive occurrences of an LSA being generated

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [timers lsa-generate max-lsa-wait](#) *number*

Tree [max-lsa-wait](#)

Range 10 to 600000

Default 5000

Units milliseconds

Configurable True

Platforms Supported on all platforms

redistribute-delay *number*

Description Hold down timer for external routes that are redistributed in OSPF

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [timers redistribute-delay](#) *number*

Tree [redistribute-delay](#)

Range 0 to 1000

Default 1000

Configurable True

Platforms Supported on all platforms

spf-wait

Description	Enter the spf-wait context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> timers spf-wait
Tree	spf-wait
Configurable	True
Platforms	Supported on all platforms

spf-initial-wait *number*

Description	Initial SPF calculation delay after a topology change
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> timers spf-wait spf-initial-wait <i>number</i>
Tree	spf-initial-wait
Range	10 to 100000
Default	1000
Units	milliseconds
Configurable	True
Platforms	Supported on all platforms

spf-max-wait *number*

Description	Maximum interval between two consecutive SPF calculations
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> timers spf-wait spf-max-wait <i>number</i>
Tree	spf-max-wait
Range	10 to 120000
Default	10000
Units	milliseconds
Configurable	True
Platforms	Supported on all platforms

spf-second-wait *number*

Description	Hold time between the first and second SPF calculation
--------------------	--

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> timers spf-wait spf-second-wait <i>number</i>
Tree	spf-second-wait
Range	10 to 100000
Default	1000
Units	milliseconds
Configurable	True
Platforms	Supported on all platforms

total-exported-routes

Description	the value of total-exported-routes indicates the total number of routes exported into OSPF from the route table manager when an export policy is configured. value of total-exported-routes would be 0 when no export policy is configured.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> total-exported-routes
Tree	total-exported-routes
Configurable	False
Platforms	Supported on all platforms

trace-options

Description	Enter the trace-options context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> trace-options
Tree	trace-options
Configurable	True
Platforms	Supported on all platforms

trace

Description	Tracing parameter flags
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> trace-options trace
Tree	trace
Configurable	True
Platforms	Supported on all platforms

adjacencies

Description	Enable tracing all adjacency events.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> trace-options trace adjacencies
Tree	adjacencies
Configurable	True
Platforms	Supported on all platforms

graceful-restart

Description	Enable tracing all graceful-restart events.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> trace-options trace graceful-restart
Tree	graceful-restart
Configurable	True
Platforms	Supported on all platforms

interfaces

Description	Enable tracing all interface events.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> trace-options trace interfaces
Tree	interfaces
Configurable	True
Platforms	Supported on all platforms

lsdb

Description	Trace OSPF LSDB events Only one type can be enabled at a time
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> trace-options trace lsdb
Tree	lsdb
Configurable	True
Platforms	Supported on all platforms

link-state-id *string*

Description	Enter the link-state-id context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> trace-options trace lsdb link-state-id <i>string</i>
Tree	link-state-id
Configurable	True
Platforms	Supported on all platforms

router-id *string*

Description	Enter the router-id context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> trace-options trace lsdb router-id <i>string</i>
Tree	router-id
Configurable	True
Platforms	Supported on all platforms

type *keyword*

Description	Enter the type context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> trace-options trace lsdb type <i>keyword</i>
Tree	type
Options	<ul style="list-style-type: none"> • all Enable tracing of all LSDB events • router Enable tracing of LSDB router LSA events • network Enable tracing of OSPF LSDB network LSA events • summary Enable tracing of OSPF LSDB summary LSA events • nssa Enable tracing of OSPF LSDB NSSA LSA events • external Enable tracing of OSPF LSDB events for External LSA • opaque

Enable tracing of OSPF LSDB events involving opaque LSA

- inter-area-prefix

Enable tracing of OSPF LSDB events for inter-area prefixes

- inter-area-router

Enable tracing of OSPF LSDB events for inter-area routers

- intra-area-prefix

Enable tracing of OSPF LSDB events for intra-area prefixes

Configurable

True

Platforms

Supported on all platforms

misc

Description

Enable tracing all Config events.

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lsp-bandwidth *number*

Description	The bandwidth that is being requested by the LSP.
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> path-detail path-type <i>keyword</i> lsp-bandwidth <i>number</i>
Tree	lsp-bandwidth
Units	Mbps
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

record-route-objects [route-object-index](#) *number*

Description	Path RROs details.
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> path-detail path-type <i>keyword</i> record-route-objects route-object-index <i>number</i>
Tree	record-route-objects
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

route-object-index *number*

Description	The unique identifier for RRO/ERO entries
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> path-detail path-type <i>keyword</i> record-route-objects route-object-index <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

as-number *number*

Description	AS-Number for a given segment in ERO or RRO
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> path-detail path-type <i>keyword</i> record-route-objects route-object-index <i>number</i> as-number <i>number</i>
Tree	as-number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-interface-id *number*

Description	Local interface-id for a given unnumbered/link-local segment in ERO or RRO
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> path-detail path-type <i>keyword</i> record-route-objects route-object-index <i>number</i> local-interface-id <i>number</i>
Tree	local-interface-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-interface-name *string*

Description	Local interface name for a given unnumbered/link-local segment in ERO or RRO
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> path-detail path-type <i>keyword</i> record-route-objects route-object-index <i>number</i> local-interface-name <i>string</i>
Tree	local-interface-name
String Length	5 to 25
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-prefix (*ipv4-address-unicast* | *ipv6-address-unicast-without-local*)

Description	Local IP address for a given segment in ERO or RRO
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> path-detail path-type <i>keyword</i> record-route-objects route-object-index <i>number</i> local-prefix (<i>ipv4-address-unicast</i> <i>ipv6-address-unicast-without-local</i>)
Tree	local-prefix
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix (*ipv4-address-unicast* | *ipv6-address-unicast-without-local*)

Description	IP address for a given segment in ERO or RRO
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> path-detail path-type <i>keyword</i> record-route-objects route-object-index <i>number</i> prefix (<i>ipv4-address-unicast</i> <i>ipv6-address-unicast-without-local</i>)

Tree	prefix
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

remote-interface-id *number*

Description	Remote interface-id for a given unnumbered/link-local segment in ERO or RRO
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> path-detail path-type <i>keyword</i> record-route-objects route-object-index <i>number</i> remote-interface-id <i>number</i>
Tree	remote-interface-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

remote-prefix (*ipv4-address-unicast* | *ipv6-address-unicast-without-local*)

Description	Remote IP address for a given segment in ERO or RRO
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> path-detail path-type <i>keyword</i> record-route-objects route-object-index <i>number</i> remote-prefix (<i>ipv4-address-unicast</i> <i>ipv6-address-unicast-without-local</i>)
Tree	remote-prefix
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

router-id (*ipv4-address-unicast* | *ipv6-address-unicast-without-local*)

Description	Router-id for a given unnumbered segment in ERO or RRO
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> path-detail path-type <i>keyword</i> record-route-objects route-object-index <i>number</i> router-id (<i>ipv4-address-unicast</i> <i>ipv6-address-unicast-without-local</i>)
Tree	router-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sid-label *number*

Description	Unique Segment Identifier label value
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> path-detail path-type <i>keyword</i> record-route-objects route-object-index <i>number</i> sid-label <i>number</i>
Tree	sid-label
Range	16 to 1048575
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sid-type *keyword*

Description	Refers to strict or loose hop
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> path-detail path-type <i>keyword</i> record-route-objects route-object-index <i>number</i> sid-type <i>keyword</i>
Tree	sid-type
Options	<ul style="list-style-type: none"> • strict • loose
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

setup-priority *number*

Description	The priority of the TE LSP with respect to holding resources The value of 0 represents highest priority. The holding priority indicates whether this session can be in PCReq message.
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> path-detail path-type <i>keyword</i> setup-priority <i>number</i>
Tree	setup-priority
Range	0 to 7
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

srp-id *number*

Description	Stateful PCE Request Parameters(SRP) identifier for update sent by PCE
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> path-detail path-type <i>keyword</i> srp-id <i>number</i>
Tree	srp-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

te-metric *number*

Description	The Traffic Engineering (TE) metric that must be optimized by the path computation algorithm for providing the cost of computed path It is the METRIC object used in PCReq messages.
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> path-detail path-type <i>keyword</i> te-metric <i>number</i>
Tree	te-metric
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

source-address (*ipv4-address-unicast | ipv6-address-unicast-without-local*)

Description	The sender address of the LSP
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> source-address (<i>ipv4-address-unicast ipv6-address-unicast-without-local</i>)
Tree	source-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

state *keyword*

Description	The state of the LSP
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> state <i>keyword</i>
Tree	state
Options	<ul style="list-style-type: none"> • not-applicable • mbb-in-progress

- MBB procedure is in progress
- mbb-fail
 - MBB procedure failed
- mbb-success
 - MBB procedure succeeded
- update-delegation
 - Delegation update is being processed
- lsp-down
 - LSP down update is being processed

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

tunnel-id *number*

Description	The unique tunnel identifier that remains constant over the life time of a tunnel
Context	network-instance name <i>string</i> protocols pcep pcc lsp-update pce-id <i>number</i> tunnel-id <i>number</i>
Tree	tunnel-id
Range	1 to 65535
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-sessions *number*

Description	The maximum number of sessions involving this PCEP entity that can exist at any time.
Context	network-instance name <i>string</i> protocols pcep pcc max-sessions <i>number</i>
Tree	max-sessions
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-unknown-requests *number*

Description	The maximum number of unrecognized requests and replies that any session on this PCEP entity is willing to accept per minute before terminating the session.
--------------------	--

Context	network-instance name <i>string</i> protocols pcep pcc max-unknown-requests number
Tree	max-unknown-requests
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

open-wait-timer *number*

Description	The time that the PCEP entity will wait to receive an Open message from a peer after the TCP connection has come up If no Open message is received within this time, then PCEP terminates the TCP connection.
Context	network-instance name <i>string</i> protocols pcep pcc open-wait-timer number
Tree	open-wait-timer
Range	1 to 65535
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state *keyword*

Description	Indicates the operational status of this PCEP
Context	network-instance name <i>string</i> protocols pcep pcc oper-state keyword
Tree	oper-state
Options	<ul style="list-style-type: none"> • up The PCEP entity is active • down The PCEP entity is inactive • going-up The PCEP entity is activating • going-down The PCEP entity is deactivating • failed The PCEP entity has failed and will recover when possible • failed-permanently The PCEP entity has failed and will not recover without operator intervention

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

path-request [request-id](#) *number*

Description	List of Path Computation Request (PCReq) messages sent by the PCC to request a path computation.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id <i>number</i>
Tree	path-request
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

request-id *number*

Description	The unique path computation request identifier represented in PCReq message
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id <i>number</i>
Range	1 to 4294967295
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bidirectional *boolean*

Description	Indicates whether the PCReq message relates to a bi-directional TE LSP that has the same traffic engineering requirements in each direction It is the RP object used in PCReq message. TE requirements include fate sharing, protection and restoration, LSRs, TE links, and resource requirements (e.g., latency and jitter)
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id <i>number</i> bidirectional <i>boolean</i>
Tree	bidirectional
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

destination-address (*ipv4-address-unicast | ipv6-address-unicast-without-local*)

Description	The destination address of the path for which the path computation is requested It is the END-POINTS object used in PCReq message.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id <i>number</i> destination-address (<i>ipv4-address-unicast ipv6-address-unicast-without-local</i>)
Tree	destination-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

exclude-any *number*

Description	Set of attribute filters associated with a tunnel, any of which renders a link unacceptable It is the LSPA object used in PCReq message.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id <i>number</i> exclude-any <i>number</i>
Tree	exclude-any
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

extended-profiles *number*

Description	List of extended identifiers associated with the path profile identifier.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id <i>number</i> extended-profiles <i>number</i>
Tree	extended-profiles
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	5

extended-tunnel-id (*ipv4-address-unicast | ipv6-address-unicast*)

Description	The extended tunnel identifier
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id <i>number</i> extended-tunnel-id (<i>ipv4-address-unicast ipv6-address-unicast</i>)

Tree	extended-tunnel-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

holding-priority *number*

Description	The priority of the TE LSP with respect to holding resources The value of 0 represents highest priority. The holding priority indicates whether this session can be preempted by another session. It is the LSPA object used in PCReq message.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number holding-priority number
Tree	holding-priority
Range	0 to 7
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hop-count *number*

Description	The number of hops that are traversed via the TE tunnel It is the METRIC object in PCReq message.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number hop-count number
Tree	hop-count
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

igp-metric *number*

Description	The Interior Gateway Protocol (IGP) metric that must be optimized by the path computation algorithm for providing the cost of computed path It is the METRIC object used in PCReq message.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number igp-metric number
Tree	igp-metric
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

include-all *number*

Description	Set of attribute filters associated with a tunnel, all of which must be present for a link to be acceptable It is the LSPA object used in PCReq message.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number include-all <i>number</i>
Tree	include-all
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

include-any *number*

Description	Set of attribute filters associated with a tunnel, any of which renders a link acceptable It is the LSPA object used in PCReq message.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number include-any <i>number</i>
Tree	include-any
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-protection-desired *boolean*

Description	Indicates whether local protection is desired or not It is the LSPA (LSP Attribute) object used in PCReq message. When the value of this object is set to 'true', it indicates that the computed path must include links protected with Fast Reroute as defined in the maximum number of hops to be traversed that must not be exceeded to consider computed path as acceptable.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number local-protection-desired <i>boolean</i>
Tree	local-protection-desired
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

loose-path-acceptable *boolean*

Description	Indicates whether a loose path is acceptable (true) or not (false) It is the RP object used in PCReq message. When the value of this object is set to 'true', it indicates that a loose path is acceptable. When the value of this object is set to 'false', it indicates that a path exclusively made of strict hops is required.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number loose-path-acceptable <i>boolean</i>
Tree	loose-path-acceptable
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lsp-bandwidth *number*

Description	The bandwidth that is being requested by the LSP.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number lsp-bandwidth <i>number</i>
Tree	lsp-bandwidth
Units	Mbps
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lsp-id *number*

Description	The unique identifier for the LSP
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number lsp-id <i>number</i>
Tree	lsp-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lsp-name *string*

Description	The LSP path name that is unique in the PCC and remains constant throughout a path's life time.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number lsp-name <i>string</i>

Tree	lsp-name
String Length	1 to 255
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lsp-type *keyword*

Description	The type of LSP
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id <i>number</i> lsp-type <i>keyword</i>
Tree	lsp-type
Options	<ul style="list-style-type: none"> • rsvp-p2p Resource Reservation Protocol-Traffic Engineering (RSVP-TE) Point to Point • rsvp-p2mp RSVP-TE Point to Multipoint • segment-routing Segment Routing • pce-initiated-segment-routing Segment Routing
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-lsr-labels *number*

Description	The maximum segment routing label stack size for this LSP.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id <i>number</i> max-lsr-labels <i>number</i>
Tree	max-lsr-labels
Range	1 to 10
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

message-state *keyword*

Description	The state of the PCReq message
--------------------	--------------------------------

Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number message-state <i>keyword</i>
Tree	message-state
Options	<ul style="list-style-type: none"> unknown The state of PCReq message is unknown request-parameter Request Parameter (RP) object is included in the PCReq message sent-for-compute PCReq message has been sent for path computation error-received Path Computation Error (PCErr) message is received by the PCC notify-received Path Computation Notification (PCNtf) message is received by the PCC cancel PCReq message has been cancelled compute-received Path computation is received by the PCC
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

metric-bound *keyword*

Description	Indicates whether the metric-value specifies a bound (a maximum)for the path metric that must not be exceeded for the PCC to consider the computed path as acceptable It is the METRIC object used in PCReq message.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number metric-bound <i>keyword</i>
Tree	metric-bound
Options	<ul style="list-style-type: none"> igp-metric te-metric hop-count
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	3

metric-compute *keyword*

Description	Indicates whether PCE must provide the computed path metric value in Path Computation Response (PCRep) message for the corresponding metric It is the METRIC object used in PCReq message.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number metric-compute <i>keyword</i>
Tree	metric-compute
Options	<ul style="list-style-type: none"> • igp-metric • te-metric • hop-count
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	3

msg-priority *number*

Description	The priority of the PCReq message It is RP object used in PCReq message.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number msg-priority <i>number</i>
Tree	msg-priority
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

profiles *number*

Description	List of path profile identifiers
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number profiles <i>number</i>
Tree	profiles
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	5

reoptimization *boolean*

Description	Indicates whether the PCReq message relates to the reoptimization of an existing TE LSP It is the RP object used in PCReq message.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number reoptimization <i>boolean</i>
Tree	reoptimization
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

setup-priority *number*

Description	The priority of the TE LSP with respect to holding resources The value of 0 represents highest priority. The holding priority indicates whether this session can be in PCReq message.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number setup-priority <i>number</i>
Tree	setup-priority
Range	0 to 7
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

source-address (*ipv4-address-unicast | ipv6-address-unicast-without-local*)

Description	The source address of the path for which path computation is requested It is the END-POINTS object used in PCReq message.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number source-address (<i>ipv4-address-unicast ipv6-address-unicast-without-local</i>)
Tree	source-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sync-vector-id *number*

Description	The Synchronization Vector (svec) identifier for Synchronized Dependent Path Computations
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number sync-vector-id <i>number</i>
Tree	sync-vector-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

te-metric *number*

Description	The Traffic Engineering (TE) metric that must be optimized by the path computation algorithm for providing the cost of computed path It is the METRIC object used in PCReq messages.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number te-metric <i>number</i>
Tree	te-metric
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

tunnel-id *number*

Description	The unique tunnel identifier that remains constant over the life time of a tunnel.
Context	network-instance name <i>string</i> protocols pcep pcc path-request request-id number tunnel-id <i>number</i>
Tree	tunnel-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

peer ip-address (*ipv4-address-unicast | ipv6-address-unicast-without-local*)

Description	Configure peer parameters for PCC
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast ipv6-address-unicast-without-local</i>)
Tree	peer
Configurable	True

Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	2

ip-address (*ipv4-address-unicast | ipv6-address-unicast-without-local*)

Description	The address of the PCE peer
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast ipv6-address-unicast-without-local</i>)
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Administrative state of PCC peer
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast ipv6-address-unicast-without-local</i>) admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

capabilities *keyword*

Description	The capabilities supported by this peer
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast ipv6-address-unicast-without-local</i>) capabilities <i>keyword</i>
Tree	capabilities
Options	<ul style="list-style-type: none"> • stateful-delegate • stateful-pce • stateful-optimize • segment-routing-path • rsvp-path • optical-gmpls • pce-initiated-lsp • stateless

- p2mp
- p2mp-delegate
- p2mp-initiate
- association
- multipath

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	8

is-overloaded *boolean*

Description	The value indicates whether this peer is overloaded with the processing of existing requests and is unable to handle new requests leading to unacceptable response times
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (ipv4-address-unicast ipv6-address-unicast-without-local) is-overloaded <i>boolean</i>
Tree	is-overloaded
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-address ([ipv4-address-unicast](#) | [ipv6-address-unicast-without-local](#))

Description	Configure local IP to be used for PCE peering
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (ipv4-address-unicast ipv6-address-unicast-without-local) local-address (ipv4-address-unicast ipv6-address-unicast-without-local)
Tree	local-address
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

network-instance *reference*

Description	Reference to a configured network-instance used for reachability to PCE. This network-instance must already exist in the system.
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (ipv4-address-unicast ipv6-address-unicast-without-local) network-instance reference
Tree	network-instance

Reference	network-instance name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-dead-timer *number*

Description	The operational value of dead timer interval in use by this peer This is the time after which a peer should declare a session down if it does not receive any PCEP messages
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (ipv4-address-unicast ipv6-address-unicast-without-local) oper-dead-timer <i>number</i>
Tree	oper-dead-timer
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-keepalive *number*

Description	The operational value of keepalive interval in use by this entity's peer This is the maximum time between two consecutive messages sent to a peer
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (ipv4-address-unicast ipv6-address-unicast-without-local) oper-keepalive <i>number</i>
Tree	oper-keepalive
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-local-address (*ipv4-address-unicast | ipv6-address-unicast-without-local*)

Description	The value indicates the internet address being used by this PCEP Peer.
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (ipv4-address-unicast ipv6-address-unicast-without-local) oper-local-address (ipv4-address-unicast ipv6-address-unicast-without-local)
Tree	oper-local-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state keyword

Description	Details the operational state of the Pcep Pcc Peer
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast</i> <i>ipv6-address-unicast-without-local</i>) oper-state keyword
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed • synchronizing Component is currently being synchronized • upgrading Component is currently being upgraded • low-power Component is offline due to insufficient system power • degraded Component or process is in a degraded state • warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes. • waiting Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

preference *number*

Description	The preference value of this peer If a higher preference PCE is unavailable or not connected, the PCE with the next preference is used.
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast</i> <i>ipv6-address-unicast-without-local</i>) preference number
Tree	preference
Range	0 to 100
Default	0
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session-established-time *string*

Description	Indicates when the session with this peer entered into the established state
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast</i> <i>ipv6-address-unicast-without-local</i>) session-established-time string
Tree	session-established-time
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

speaker-id *string*

Description	A unique speaker identifier for the peer that does change during lifetime of the speaker
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast</i> <i>ipv6-address-unicast-without-local</i>) speaker-id string
Tree	speaker-id
String Length	1 to 255

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Holds statistics of messages send to peer
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast</i> <i>ipv6-address-unicast-without-local</i>) statistics
Tree	statistics
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-keepalive-rcvd *number*

Description	The number of Keepalive messages received from this peer
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast</i> <i>ipv6-address-unicast-without-local</i>) statistics num-keepalive-rcvd <i>number</i>
Tree	num-keepalive-rcvd
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-keepalive-sent *number*

Description	The number of Keepalive messages sent to this peer
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast</i> <i>ipv6-address-unicast-without-local</i>) statistics num-keepalive-sent <i>number</i>
Tree	num-keepalive-sent
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-pcerr-rcvd *number*

Description	The number of PCErr messages received from this peer
--------------------	--

Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast ipv6-address-unicast-without-local</i>) statistics num-pcrr-rcvd <i>number</i>
Tree	num-pcrr-rcvd
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-pcrr-sent *number*

Description	The number of PCErr messages sent to this peer
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast ipv6-address-unicast-without-local</i>) statistics num-pcrr-sent <i>number</i>
Tree	num-pcrr-sent
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-pcinit-rcvd *number*

Description	The number of PC initiated messages received from this peer.
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast ipv6-address-unicast-without-local</i>) statistics num-pcinit-rcvd <i>number</i>
Tree	num-pcinit-rcvd
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-pcinit-sent *number*

Description	The number of PC initiated messages sent to this peer.
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast ipv6-address-unicast-without-local</i>) statistics num-pcinit-sent <i>number</i>
Tree	num-pcinit-sent
Default	0

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-pcntf-rcvd *number*

Description	The number of PCNtf messages received from this peer
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (ipv4-address-unicast ipv6-address-unicast-without-local) statistics num-pcntf-rcvd <i>number</i>
Tree	num-pcntf-rcvd
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-pcntf-sent *number*

Description	The number of PCNtf messages sent to this peer
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (ipv4-address-unicast ipv6-address-unicast-without-local) statistics num-pcntf-sent <i>number</i>
Tree	num-pcntf-sent
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-pcrep-rcvd *number*

Description	The number of PCRep messages received from this peer
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (ipv4-address-unicast ipv6-address-unicast-without-local) statistics num-pcrep-rcvd <i>number</i>
Tree	num-pcrep-rcvd
Default	0
Configurable	False

Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-pcrpt-sent *number*

Description	The number of PCRpt messages sent to this peer.
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast ipv6-address-unicast-without-local</i>) statistics num-pcrpt-sent <i>number</i>
Tree	num-pcrpt-sent
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-pcupd-rcvd *number*

Description	The number of PCUpd messages received from this peer
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast ipv6-address-unicast-without-local</i>) statistics num-pcupd-rcvd <i>number</i>
Tree	num-pcupd-rcvd
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-pcupd-sent *number*

Description	The number of PCUpd messages sent to this peer.
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast ipv6-address-unicast-without-local</i>) statistics num-pcupd-sent <i>number</i>
Tree	num-pcupd-sent
Default	0

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-req-rcvd *number*

Description	The number of requests received from this peer A request corresponds 1:1 with an RP object in a PCReq message
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (ipv4-address-unicast ipv6-address-unicast-without-local) statistics num-req-rcvd number
Tree	num-req-rcvd
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-req-sent *number*

Description	The number of requests sent to this peer A request corresponds 1:1 with an RP object in a PCReq message
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (ipv4-address-unicast ipv6-address-unicast-without-local) statistics num-req-sent number
Tree	num-req-sent
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-rpt-rcvd *number*

Description	The number of report messages received from this peer This might be greater than num-pcrpt-rcvd because multiple requests can be batched into a single PCRpt message.
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (ipv4-address-unicast ipv6-address-unicast-without-local) statistics num-rpt-rcvd number
Tree	num-rpt-rcvd
Default	0

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-rpt-sent *number*

Description	The number of report messages sent to this peer This might be greater than num-pcrpt-sent because multiple requests can be batched into a single PCRpt messages.
Context	network-instance name string protocols pcep pcc peer ip-address (ipv4-address-unicast ipv6-address-unicast-without-local) statistics num-rpt-sent number
Tree	num-rpt-sent
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-session-setup-fail *number*

Description	The number of PCEP sessions with the peer that have been attempted but failed before being fully established This counter is incremented each time a session retry to this peer fails
Context	network-instance name string protocols pcep pcc peer ip-address (ipv4-address-unicast ipv6-address-unicast-without-local) statistics num-session-setup-fail number
Tree	num-session-setup-fail
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

num-session-setup-ok *number*

Description	The number of PCEP sessions successfully established with the peer, including any current session This counter is incremented each time a session with this peer is successfully established
Context	network-instance name string protocols pcep pcc peer ip-address (ipv4-address-unicast ipv6-address-unicast-without-local) statistics num-session-setup-ok number

Tree	num-session-setup-ok
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sync-state *keyword*

Description	The synchronization state of this peer.
Context	network-instance name <i>string</i> protocols pcep pcc peer ip-address (<i>ipv4-address-unicast</i> <i>ipv6-address-unicast-without-local</i>) sync-state <i>keyword</i>
Tree	sync-state
Options	<ul style="list-style-type: none"> not-initialized Indicates the State Synchronization has not yet started or not initialized due to no connection with the peer. in-progress Indicates the State Synchronization is in progress done Indicates the State Synchronozation has been completed
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

redelegation-timer *number*

Description	Configure redelegation-timer
Context	network-instance name <i>string</i> protocols pcep pcc redelegation-timer <i>number</i>
Tree	redelegation-timer
Range	1 to 3600
Default	90
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

report-path-constraints *boolean*

Description	Specify whether to enable/disable path constraints in PCC report
--------------------	--

Context	network-instance name <i>string</i> protocols pcep pcc report-path-constraints <i>boolean</i>
Tree	report-path-constraints
Default	true
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

request-timer *number*

Description	The maximum time that the PCEP entity will wait for a response to a PCReq message.
Context	network-instance name <i>string</i> protocols pcep pcc request-timer <i>number</i>
Tree	request-timer
Range	1 to 65535
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

state-timer

Description	Holds state timer information
Context	network-instance name <i>string</i> protocols pcep pcc state-timer
Tree	state-timer
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

timer *number*

Description	Configure state-timer
Context	network-instance name <i>string</i> protocols pcep pcc state-timer timer <i>number</i>
Tree	timer
Range	1 to 3600
Default	180
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

timer-action *keyword*

Description	State timer action remove/none
Context	network-instance name <i>string</i> protocols pcep pcc state-timer timer-action <i>keyword</i>
Tree	timer-action
Default	remove
Options	<ul style="list-style-type: none"> • none • remove
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sync-timer *number*

Description	The value is used in the case of a synchronized path computation request using the SVEC object.
Context	network-instance name <i>string</i> protocols pcep pcc sync-timer <i>number</i>
Tree	sync-timer
Range	1 to 65535
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

unknown-message-rate *number*

Description	Configure unknown message rate
Context	network-instance name <i>string</i> protocols pcep pcc unknown-message-rate <i>number</i>
Tree	unknown-message-rate
Range	1 to 255
Default	10
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ptp

Description	Per network instance PTP configuration and state
Context	network-instance name <i>string</i> protocols ptp
Tree	ptp
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

oper-state *keyword*

Description	Operational state of PTP within the network instance This is dependent on the administrative state of the ptp instance, the administrative state of the this network-instance under ptp, and the operational state of the network-instance itself.
Context	network-instance name <i>string</i> protocols ptp oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed • synchronizing Component is currently being synchronized • upgrading Component is currently being upgraded • low-power Component is offline due to insufficient system power

- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

peer-limit *number*

Description	Number of discovered peers allowed for network-instance If not defined then the number is not restricted within this network-instance.
Context	network-instance name <i>string</i> protocols ptp peer-limit <i>number</i>
Tree	peer-limit
Range	0 to 512
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

source-address-ipv4 *string*

Description	IPv4 source address to be used for PTP messages sent in this network-instance Only unicast IP supported.
Context	network-instance name <i>string</i> protocols ptp source-address-ipv4 <i>string</i>
Tree	source-address-ipv4
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

source-address-ipv6 *string*

Description	IPv6 source address to be used for PTP messages sent in this network-instance Only unicast IP supported.
Context	network-instance name <i>string</i> protocols ptp source-address-ipv6 <i>string</i>
Tree	source-address-ipv6
Configurable	True
Platforms	Supported on 7220 IXR-D5, 7250 IXR-X3b

route-table

Description	Enter the route-table context
Context	network-instance name <i>string</i> route-table
Tree	route-table
Configurable	False
Platforms	Supported on all platforms

ipv4-unicast

Description	The container for the IPv4 unicast routing table of the network instance.
Context	network-instance name <i>string</i> route-table ipv4-unicast
Tree	ipv4-unicast
Configurable	False
Platforms	Supported on all platforms

route [ipv4-prefix](#) *string* [route-type](#) *identityref* [route-owner](#) *string* [id](#) *number* [origin-network-instance](#) *reference*

Description	Enter the route list instance
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type <i>identityref</i> route-owner <i>string</i> id <i>number</i> origin-network-instance <i>reference</i>
Tree	route
Configurable	False
Platforms	Supported on all platforms

ipv4-prefix *string*

Description	The IPv4 prefix associated with the route.
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type identityref route-owner <i>string</i> id <i>number</i> origin-network-instance reference
Configurable	False
Platforms	Supported on all platforms

route-type *identityref*

Description	The type of the IP route
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type identityref route-owner <i>string</i> id <i>number</i> origin-network-instance reference
Options	<ul style="list-style-type: none"> • aggregate Locally configured aggregate route • arp-nd IP route added by ARP ND. • bgp Border Gateway Protocol version 4 • bgp-label Border Gateway Protocol labeled routes • bgp-evpn BGP Ethernet VPN (EVPN) • bgp-ipvpn BGP IP VPN • dhcp IP (default) route added by DHCP. • gribi A gRIBI route • host A host route • isis IS-IS • local A directly connected route

- linux
IP route added by the linux kernel.
- ndk1
Route added by an agent application using the NDK
- ndk2
Route added by an agent application using the NDK
- ospfv2
OSPFv2
- ospfv3
OSPFv3
- static
Locally configured static route

Configurable	False
Platforms	Supported on all platforms

route-owner *string*

Description	The application name of the owner of the IP route
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type identityref route-owner <i>string</i> id number origin-network-instance reference
Configurable	False
Platforms	Supported on all platforms

id *number*

Description	An owner-assigned index value that is unique for each of the routes for a given prefix.
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type identityref route-owner <i>string</i> id number origin-network-instance reference
Configurable	False
Platforms	Supported on all platforms

origin-network-instance *reference*

Description	Origin network instance of the route (where it was originally learned or configured)
--------------------	--

If the route was leaked from another network instance, the value of this leaf reflects the network-instance from which it was learned. If it was not leaked the value is the same as the parent network-instance.

Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type <i>identityref</i> route-owner <i>string</i> id <i>number</i> origin-network-instance <i>reference</i>
Reference	network-instance name <i>string</i>
Configurable	False
Platforms	Supported on all platforms

active *boolean*

Description	If set to true then the route is installed as the active route for the IP prefix in the FIB. A route can be inactive because there is a more preferred route for the same prefix or else its next-hops are unresolved.
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type <i>identityref</i> route-owner <i>string</i> id <i>number</i> origin-network-instance <i>reference</i> active <i>boolean</i>
Tree	active
Configurable	False
Platforms	Supported on all platforms

fib-programming

Description	Container for state related to the FIB programming of the object
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type <i>identityref</i> route-owner <i>string</i> id <i>number</i> origin-network-instance <i>reference</i> fib-programming
Tree	fib-programming
Configurable	False
Platforms	Supported on all platforms

last-failed-complexes *string*

Description	List of forwarding complexes that reported a failure for the last operation. They appear in the format (slot-number,complex-number).
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type <i>identityref</i> route-owner <i>string</i> id <i>number</i> origin-network-instance <i>reference</i> fib-programming last-failed-complexes <i>string</i>
Tree	last-failed-complexes

Configurable	False
Platforms	Supported on all platforms

last-failed-operation-type *keyword*

Description	The last operation type that failed.
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type identityref route-owner <i>string id number</i> origin-network-instance reference fib-programming last-failed-operation-type <i>keyword</i>
Tree	last-failed-operation-type
Options	<ul style="list-style-type: none"> • add The current or last operation was an attempt to create a new entry. • delete The current or last operation was an attempt to delete an existing entry. • modify The current or last operation was an attempt to modify an existing entry. • none There was no prior operation for this entry or there is no current operation that is in process
Configurable	False
Platforms	Supported on all platforms

last-successful-operation-timestamp *string*

Description	<p>The date and time of the last operation to complete successfully, if the entry was not suppressed.</p> <p>A delete operation is immediately timestamped by FIB manager on the assumption that it will ultimately be successful on all complexes. For other operations the timestamp is generated when the last complex that was expected to respond has responded with a success acknowledgement.</p>
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type identityref route-owner <i>string id number</i> origin-network-instance reference fib-programming last-successful-operation-timestamp <i>string</i>
Tree	last-successful-operation-timestamp
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-successful-operation-type *keyword*

Description	The last operation type that completed successfully, if the entry was not suppressed.
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type identityref route-owner <i>string</i> id number origin-network-instance reference fib-programming last-successful-operation-type <i>keyword</i>
Tree	last-successful-operation-type
Options	<ul style="list-style-type: none"> • add The current or last operation was an attempt to create a new entry. • delete The current or last operation was an attempt to delete an existing entry. • modify The current or last operation was an attempt to modify an existing entry. • none There was no prior operation for this entry or there is no current operation that is in process
Configurable	False
Platforms	Supported on all platforms

pending-operation-type *keyword*

Description	The current operation type that is in progress because not all complexes have responded.
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type identityref route-owner <i>string</i> id number origin-network-instance reference fib-programming pending-operation-type <i>keyword</i>
Tree	pending-operation-type
Options	<ul style="list-style-type: none"> • add The current or last operation was an attempt to create a new entry. • delete The current or last operation was an attempt to delete an existing entry. • modify The current or last operation was an attempt to modify an existing entry. • none There was no prior operation for this entry or there is no current operation that is in process
Configurable	False

Platforms Supported on all platforms

suppressed *boolean*

Description When true, FIB programming for this entry has been suppressed and it is only installed in the control plane route table

Context [network-instance name string](#) [route-table ipv4-unicast route ipv4-prefix string](#) [route-type identityref](#) [route-owner string id number](#) [origin-network-instance reference](#) [fib-programming suppressed boolean](#)

Tree [suppressed](#)

Configurable False

Platforms Supported on all platforms

gribi-metadata *binary*

Description Metadata persistently stored with the entry.

Context [network-instance name string](#) [route-table ipv4-unicast route ipv4-prefix string](#) [route-type identityref](#) [route-owner string id number](#) [origin-network-instance reference](#) [gribi-metadata binary](#)

Tree [gribi-metadata](#)

String Length 0 to 8

Configurable False

Platforms Supported on all platforms

internal-tags *string*

Description Internal route tag written in the route/tunnel tables or BGP rib
The internal-tag value is shown with the format 'type-string = hex-value-string'. For example:

Context [network-instance name string](#) [route-table ipv4-unicast route ipv4-prefix string](#) [route-type identityref](#) [route-owner string id number](#) [origin-network-instance reference](#) [internal-tags string](#)

Tree [internal-tags](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

Max. Elements 2

last-app-update *string*

Description	The date and time of the last update of this route by the owning application or protocol.
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type identityref route-owner <i>string</i> id <i>number</i> origin-network-instance reference last-app-update <i>string</i>
Tree	last-app-update
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

leakable *boolean*

Description	Reads true when the route was matched and accepted by the route-leaking inter-instance export-policy
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type identityref route-owner <i>string</i> id <i>number</i> origin-network-instance reference leakable <i>boolean</i>
Tree	leakable
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

metric *number*

Description	The metric of the IP route. In general, when comparing two routes with the same owner and preference, the route with the lower metric is the one that is activated and used for forwarding.
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type identityref route-owner <i>string</i> id <i>number</i> origin-network-instance reference metric <i>number</i>
Tree	metric
Configurable	False
Platforms	Supported on all platforms

next-hop-group *reference*

Description	The next-hop-group indirection object used by this route.
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type identityref route-owner <i>string id number</i> origin-network-instance reference next-hop-group reference
Tree	next-hop-group
Reference	network-instance name <i>string</i> route-table next-hop-group index <i>number</i>
Configurable	False
Platforms	Supported on all platforms

next-hop-group-network-instance *reference*

Description	The network instance where the next-hop-group can be found. If unspecified, the next hop group is in the local network instance.
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type identityref route-owner <i>string id number</i> origin-network-instance reference next-hop-group-network-instance reference
Tree	next-hop-group-network-instance
Reference	network-instance name <i>string</i>
Configurable	False
Platforms	Supported on all platforms

preference *number*

Description	The IP route table preference. This is sometimes called the administrative distance of the route. In general, when comparing any two routes, the route with the lower preference is the one that is activated and used for forwarding.
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type identityref route-owner <i>string id number</i> origin-network-instance reference preference <i>number</i>
Tree	preference
Configurable	False
Platforms	Supported on all platforms

resilient-hash *boolean*

Description	Set to true if the route is covered by a resilient-hash-prefix entry
--------------------	--

Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type <i>identityref</i> route-owner <i>string</i> id <i>number</i> origin-network-instance <i>reference</i> resilient-hash <i>boolean</i>
Tree	resilient-hash
Configurable	False
Platforms	Supported on all platforms

target-network-instances *reference*

Description	List of network-instances that have imported this route as a result of matching and accepting it in their inter-instance import-policy
Context	network-instance name <i>string</i> route-table ipv4-unicast route ipv4-prefix <i>string</i> route-type <i>identityref</i> route-owner <i>string</i> id <i>number</i> origin-network-instance <i>reference</i> target-network-instances <i>reference</i>
Tree	target-network-instances
Reference	network-instance name <i>string</i>
Configurable	False
Platforms	Supported on all platforms

route-summary

Description	Route summary information
Context	network-instance name <i>string</i> route-table ipv4-unicast route-summary
Tree	route-summary
Configurable	False
Platforms	Supported on all platforms

route-type [ip-route-type-name](#) *identityref*

Description	Enter the route-type list instance
Context	network-instance name <i>string</i> route-table ipv4-unicast route-summary route-type ip-route-type-name <i>identityref</i>
Tree	route-type
Configurable	False
Platforms	Supported on all platforms

ip-route-type-name *identityref*

Description	IP route type
Context	network-instance name <i>string</i> route-table ipv4-unicast route-summary route-type ip-route-type-name <i>identityref</i>
Options	<ul style="list-style-type: none">• aggregate Locally configured aggregate route• arp-nd IP route added by ARP ND.• bgp Border Gateway Protocol version 4• bgp-label Border Gateway Protocol labeled routes• bgp-evpn BGP Ethernet VPN (EVPN)• bgp-ipvpn BGP IP VPN• dhcp IP (default) route added by DHCP.• gribi A gRIBI route• host A host route• isis IS-IS• local A directly connected route• linux IP route added by the linux kernel.• ndk1 Route added by an agent application using the NDK• ndk2 Route added by an agent application using the NDK• ospfv2 OSPFv2• ospfv3

- OSPFv3
- static
- Locally configured static route

Configurable	False
Platforms	Supported on all platforms

active-routes *number*

Description	Total number of prefixes associated with this route type that were submitted to fib-mgr and that fib-mgr successfully installed as active routes
Context	network-instance name <i>string</i> route-table ipv4-unicast route-summary route-type ip-route-type-name <i>identityref</i> active-routes <i>number</i>
Tree	active-routes
Configurable	False
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	network-instance name <i>string</i> route-table ipv4-unicast statistics
Tree	statistics
Configurable	False
Platforms	Supported on all platforms

active-routes *number*

Description	The total number of prefixes, belonging to this address family, with an active route in the FIB.
Context	network-instance name <i>string</i> route-table ipv4-unicast statistics active-routes <i>number</i>
Tree	active-routes
Configurable	False
Platforms	Supported on all platforms

active-routes-with-ecmp *number*

Description	The total number of prefixes, belonging to this address family, that have an active route in the FIB with multiple ECMP next-hops.
Context	network-instance name <i>string</i> route-table ipv4-unicast statistics active-routes-with-ecmp <i>number</i>
Tree	active-routes-with-ecmp
Configurable	False
Platforms	Supported on all platforms

fib-failed-routes *number*

Description	The total number of prefixes, belonging to this address family, that were not installed successfully because datapath resources were unavailable.
Context	network-instance name <i>string</i> route-table ipv4-unicast statistics fib-failed-routes <i>number</i>
Tree	fib-failed-routes
Configurable	False
Platforms	Supported on all platforms

resilient-hash-routes *number*

Description	The total number of prefixes, belonging to this address family, with an active route in the FIB that have resilient hash support.
Context	network-instance name <i>string</i> route-table ipv4-unicast statistics resilient-hash-routes <i>number</i>
Tree	resilient-hash-routes
Configurable	False
Platforms	Supported on all platforms

total-routes *number*

Description	The total number of routes, active and inactive, belonging to this address family, that are present in the routing table.
Context	network-instance name <i>string</i> route-table ipv4-unicast statistics total-routes <i>number</i>
Tree	total-routes
Default	0

Configurable	False
Platforms	Supported on all platforms

ipv6-unicast

Description	The container for the IPv6 unicast routing table of the network instance.
Context	network-instance name <i>string</i> route-table ipv6-unicast
Tree	ipv6-unicast
Configurable	False
Platforms	Supported on all platforms

route [ipv6-prefix](#) *string* [route-type](#) *identityref* [route-owner](#) *string* [id](#) *number* [origin-network-instance](#) *reference*

Description	Enter the route list instance
Context	network-instance name <i>string</i> route-table ipv6-unicast route ipv6-prefix <i>string</i> route-type <i>identityref</i> route-owner <i>string</i> id <i>number</i> origin-network-instance <i>reference</i>
Tree	route
Configurable	False
Platforms	Supported on all platforms

ipv6-prefix *string*

Description	The IPv6 prefix associated with the route.
Context	network-instance name <i>string</i> route-table ipv6-unicast route ipv6-prefix <i>string</i> route-type <i>identityref</i> route-owner <i>string</i> id <i>number</i> origin-network-instance <i>reference</i>
Configurable	False
Platforms	Supported on all platforms

route-type *identityref*

Description	The type of the IP route
Context	network-instance name <i>string</i> route-table ipv6-unicast route ipv6-prefix <i>string</i> route-type <i>identityref</i> route-owner <i>string</i> id <i>number</i> origin-network-instance <i>reference</i>
Options	<ul style="list-style-type: none"> • aggregate

Locally configured aggregate route

- arp-nd
IP route added by ARP ND.
- bgp
Border Gateway Protocol version 4
- bgp-label
Border Gateway Protocol labeled routes
- bgp-evpn
BGP Ethernet VPN (EVPN)
- bgp-ipvpn
BGP IP VPN
- dhcp
IP (default) route added by DHCP.
- gribi
A gRIBI route
- host
A host route
- isis
IS-IS
- local
A directly connected route
- linux
IP route added by the linux kernel.
- ndk1
Route added by an agent application using the NDK
- ndk2
Route added by an agent application using the NDK
- ospfv2
OSPFv2
- ospfv3
OSPFv3
- static
Locally configured static route

Configurable

False

Platforms

Supported on all platforms

route-owner *string*

Description	The application name of the owner of the IP route
Context	network-instance name <i>string</i> route-table ipv6-unicast route ipv6-prefix <i>string</i> route-type identityref route-owner <i>string</i> id <i>number</i> origin-network-instance <i>reference</i>
Configurable	False

Max. Elements	2

last-app-update *string*

Description	The date and time of the last update of this route by the owning application or protocol.
Context	network-instance name <i>string</i> route-table ipv6-unicast route ipv6-prefix <i>string</i> route-type identityref route-owner <i>string id number</i> origin-network-instance reference last-app-update <i>string</i>
Tree	last-app-update
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

leakable *boolean*

Description	Reads true when the route was matched and accepted by the route-leaking inter-instance export-policy
Context	network-instance name <i>string</i> route-table ipv6-unicast route ipv6-prefix <i>string</i> route-type identityref route-owner <i>string</i> id <i>number</i> origin-network-instance reference leakable <i>boolean</i>
Tree	leakable
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

metric *number*

Description	The metric of the IP route. In general, when comparing two routes with the same owner and preference, the route with the lower metric is the one that is activated and used for forwarding.
Context	network-instance name <i>string</i> route-table ipv6-unicast route ipv6-prefix <i>string</i> route-type identityref route-owner <i>string</i> id <i>number</i> origin-network-instance reference metric <i>number</i>
Tree	metric
Configurable	False
Platforms	Supported on all platforms

next-hop-group *reference*

Description	The next-hop-group indirection object used by this route.
Context	network-instance name <i>string</i> route-table ipv6-unicast route ipv6-prefix <i>string</i> route-type identityref route-owner <i>string</i> id <i>number</i> origin-network-instance reference next-hop-group reference
Tree	next-hop-group
Reference	network-instance name <i>string</i> route-table next-hop-group index <i>number</i>
Configurable	False
Platforms	Supported on all platforms

next-hop-group-network-instance *reference*

Description	The network instance where the next-hop-group can be found. If unspecified, the next hop group is in the local network instance.
Context	network-instance name <i>string</i> route-table ipv6-unicast route ipv6-prefix <i>string</i> route-type identityref route-owner <i>string id number</i> origin-network-instance reference next-hop-group-network-instance <i>reference</i>
Tree	next-hop-group-network-instance
Reference	network-instance name <i>string</i>
Configurable	False
Platforms	Supported on all platforms

preference *number*

Description	The IP route table preference. This is sometimes called the administrative distance of the route. In general, when comparing any two routes, the route with the lower preference is the one that is activated and used for forwarding.
Context	network-instance name <i>string</i> route-table ipv6-unicast route ipv6-prefix <i>string</i> route-type identityref route-owner <i>string id number</i> origin-network-instance reference preference <i>number</i>
Tree	preference
Configurable	False
Platforms	Supported on all platforms

resilient-hash *boolean*

Description	Set to true if the route is covered by a resilient-hash-prefix entry
Context	network-instance name <i>string</i> route-table ipv6-unicast route ipv6-prefix <i>string</i> route-type identityref route-owner <i>string id number</i> origin-network-instance reference resilient-hash <i>boolean</i>
Tree	resilient-hash
Configurable	False
Platforms	Supported on all platforms

target-network-instances *reference*

Description	List of network-instances that have imported this route as a result of matching and accepting it in their inter-instance import-policy
--------------------	--

Context	network-instance name <i>string</i> route-table ipv6-unicast route ipv6-prefix <i>string</i> route-type identityref route-owner <i>string</i> id <i>number</i> origin-network-instance <i>reference</i> target-network-instances <i>reference</i>
Tree	target-network-instances
Reference	network-instance name <i>string</i>
Configurable	False
Platforms	Supported on all platforms

route-summary

Description	Route summary information
Context	network-instance name <i>string</i> route-table ipv6-unicast route-summary
Tree	route-summary
Configurable	False
Platforms	Supported on all platforms

route-type [ip-route-type-name](#) *identityref*

Description	Enter the route-type list instance
Context	network-instance name <i>string</i> route-table ipv6-unicast route-summary route-type ip-route-type-name <i>identityref</i>
Tree	route-type
Configurable	False
Platforms	Supported on all platforms

[ip-route-type-name](#) *identityref*

Description	IP route type
Context	network-instance name <i>string</i> route-table ipv6-unicast route-summary route-type ip-route-type-name <i>identityref</i>
Options	<ul style="list-style-type: none"> • aggregate Locally configured aggregate route • arp-nd IP route added by ARP ND. • bgp Border Gateway Protocol version 4 • bgp-label

Border Gateway Protocol labeled routes

- bgp-evpn
BGP Ethernet VPN (EVPN)
- bgp-ipvpn
BGP IP VPN
- dhcp
IP (default) route added by DHCP.
- gribi
A gRIBI route
- host
A host route
- isis
IS-IS
- local
A directly connected route
- linux
IP route added by the linux kernel.
- ndk1
Route added by an agent application using the NDK
- ndk2
Route added by an agent application using the NDK
- ospfv2
OSPFv2
- ospfv3
OSPFv3
- static
Locally configured static route

Configurable	False
Platforms	Supported on all platforms

active-routes *number*

Description	Total number of prefixes associated with this route type that were submitted to fib-mgr and that fib-mgr successfully installed as active routes
Context	network-instance name <i>string</i> route-table ipv6-unicast route-summary route-type ip-route-type-name <i>identityref</i> active-routes <i>number</i>

statistics

Description	Enter the statistics context
Context	network-instance name <i>string</i> route-table ipv6-unicast statistics
Tree	statistics
Configurable	False
Platforms	Supported on all platforms

active-routes *number*

Description	The total number of prefixes, belonging to this address family, with an active route in the FIB.
Context	network-instance name <i>string</i> route-table ipv6-unicast statistics active-routes <i>number</i>
Tree	active-routes
Configurable	False
Platforms	Supported on all platforms

active-routes-with-ecmp *number*

Description	The total number of prefixes, belonging to this address family, that have an active route in the FIB with multiple ECMP next-hops.
Context	network-instance name <i>string</i> route-table ipv6-unicast statistics active-routes-with-ecmp <i>number</i>
Tree	active-routes-with-ecmp
Configurable	False
Platforms	Supported on all platforms

fib-failed-routes *number*

Description	The total number of prefixes, belonging to this address family, that were not installed successfully because datapath resources were unavailable.
Context	network-instance name <i>string</i> route-table ipv6-unicast statistics fib-failed-routes <i>number</i>

Tree	fib-failed-routes
Configurable	False
Platforms	Supported on all platforms

resilient-hash-routes *number*

Description	The total number of prefixes, belonging to this address family, with an active route in the FIB that have resilient hash support.
Context	network-instance name <i>string</i> route-table ipv6-unicast statistics resilient-hash-routes <i>number</i>
Tree	resilient-hash-routes
Configurable	False
Platforms	Supported on all platforms

total-routes *number*

Description	The total number of routes, active and inactive, belonging to this address family, that are present in the routing table.
Context	network-instance name <i>string</i> route-table ipv6-unicast statistics total-routes <i>number</i>
Tree	total-routes
Default	0
Configurable	False
Platforms	Supported on all platforms

mpls

Description	The container for the MPLS routing table of the network instance.
Context	network-instance name <i>string</i> route-table mpls
Tree	mpls
Configurable	False
Platforms	Supported on all platforms

label-entry [label-value](#) *number*

Description	Enter the label-entry list instance
--------------------	-------------------------------------

Context	network-instance name <i>string</i> route-table mpls label-entry label-value number
Tree	label-entry
Configurable	False
Platforms	Supported on all platforms

label-value *number*

Description	The MPLS label value
Context	network-instance name <i>string</i> route-table mpls label-entry label-value number
Range	16 to 1048575
Configurable	False
Platforms	Supported on all platforms

entry-type *identityref*

Description	The entry type of the MPLS FIB entry.
Context	network-instance name <i>string</i> route-table mpls label-entry label-value number entry-type <i>identityref</i>
Tree	entry-type
Options	<ul style="list-style-type: none"> • esi ESI mpls label entry, used by BGP-EVPN • pseudowire Pseudowire mpls label entry • ldp Label distribution protocol • network-instance Network Instance mpls label entry, used by EVPN or IP-VPN • sr-mpls Segment routing using MPLS dataplane, programmed by segment routing manager. • static-mpls Locally configured static MPLS route.
Configurable	False
Platforms	Supported on all platforms

last-app-update *string*

Description	The date and time of the last update of this MPLS label entry by the owning application or protocol.
Context	network-instance name <i>string</i> route-table mpls label-entry label-value number last-app-update <i>string</i>
Tree	last-app-update
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

next-bgp-instance *reference*

Description	Enter the next-bgp-instance context
Context	network-instance name <i>string</i> route-table mpls label-entry label-value number next-bgp-instance <i>reference</i>
Tree	next-bgp-instance
Reference	network-instance name <i>string</i> protocols bgp-vpn bgp-instance id <i>number</i>
Configurable	False
Platforms	Supported on all platforms

next-ethernet-segment *reference*

Description	If this ILM entry is for a pop label, and this label is below an EVPN label at the bottom of the stack, the label will identify an Ethernet Segment and forwarding in the network-instance may exclude the bridged subinterfaces associated with the Ethernet Segment
Context	network-instance name <i>string</i> route-table mpls label-entry label-value number next-ethernet-segment <i>reference</i>
Tree	next-ethernet-segment
Reference	system network-instance protocols evpn ethernet-segments bgp-instance id <i>reference</i> ethernet-segment name <i>string</i>
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

next-hop-group *reference*

Description	The next-hop-group indirection object used by this route. Applicable only if the operation is SWAP.
Context	network-instance name <i>string</i> route-table mpls label-entry label-value <i>number</i> next-hop-group reference
Tree	next-hop-group
Reference	network-instance name <i>string</i> route-table next-hop-group index <i>number</i>
Configurable	False
Platforms	Supported on all platforms

next-network-instance *reference*

Description	If this ILM entry is for a pop label, and this label is at the bottom of the stack, the next forwarding lookup will be done in the referenced network-instance
Context	network-instance name <i>string</i> route-table mpls label-entry label-value <i>number</i> next-network-instance reference
Tree	next-network-instance
Reference	network-instance name <i>string</i>
Configurable	False
Platforms	Supported on all platforms

operation *keyword*

Description	The forwarding operation associated with the MPLS label entry.
Context	network-instance name <i>string</i> route-table mpls label-entry label-value <i>number</i> operation keyword
Tree	operation
Options	<ul style="list-style-type: none"> • pop • swap
Configurable	False
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	network-instance name <i>string</i> route-table mpls statistics

Tree	statistics
Configurable	False
Platforms	Supported on all platforms

active-entries *number*

Description	The total number of MPLS entries that are active in the FIB.
Context	network-instance name <i>string</i> route-table mpls statistics active-entries <i>number</i>
Tree	active-entries
Default	0
Configurable	False
Platforms	Supported on all platforms

next-hop [index](#) *number*

Description	Enter the next-hop list instance
Context	network-instance name <i>string</i> route-table next-hop index <i>number</i>
Tree	next-hop
Configurable	False
Platforms	Supported on all platforms

index *number*

Description	A system-wide unique identifier of a next-hop object (system allocated).
Context	network-instance name <i>string</i> route-table next-hop index <i>number</i>
Configurable	False
Platforms	Supported on all platforms

counters

Description	Next-hop forwarding counters
Context	network-instance name <i>string</i> route-table next-hop index <i>number</i> counters
Tree	counters
Configurable	False
Platforms	Supported on all platforms

octets-forwarded *number*

Description	The number of octets in packets forwarded to this next-hop
Context	network-instance name <i>string</i> route-table next-hop index <i>number</i> counters octets-forwarded <i>number</i>
Tree	octets-forwarded
Default	0
Configurable	False
Platforms	Supported on all platforms

packets-forwarded *number*

Description	The number of packets forwarded to this next-hop
Context	network-instance name <i>string</i> route-table next-hop index <i>number</i> counters packets-forwarded <i>number</i>
Tree	packets-forwarded
Default	0
Configurable	False
Platforms	Supported on all platforms

resource-allocation-failed *boolean*

Description	An available decap-next-hop-statistics resource was not available for this next-hop in all forwarding complexes
Context	network-instance name <i>string</i> route-table next-hop index <i>number</i> counters resource-allocation-failed <i>boolean</i>
Tree	resource-allocation-failed
Configurable	False
Platforms	Supported on all platforms

decapsulate-header *keyword*

Description	Packets matching this next-hop are decapsulated by removing the specified header.
Context	network-instance name <i>string</i> route-table next-hop index <i>number</i> decapsulate-header <i>keyword</i>
Tree	decapsulate-header

Options	<ul style="list-style-type: none"> • gre The encapsulation header is a Generic Routing Encapsulation header. • ipv4 The encapsulation header is an IPv4 packet header • ipv6 The encapsulation header is an IPv6 packet header • mpls The encapsulation header is one or more MPLS labels indicated by the pushed and popped label stack lists.
Configurable	False
Platforms	Supported on all platforms

encapsulate-header *keyword*

Description	Packets matching this next-hop are encapsulated by adding the specified header.
Context	network-instance name <i>string</i> route-table next-hop index <i>number</i> encapsulate-header <i>keyword</i>
Tree	encapsulate-header
Options	<ul style="list-style-type: none"> • gre The encapsulation header is a Generic Routing Encapsulation header. • ipv4 The encapsulation header is an IPv4 packet header • ipv6 The encapsulation header is an IPv6 packet header • mpls The encapsulation header is one or more MPLS labels indicated by the pushed and popped label stack lists.
Configurable	False
Platforms	Supported on all platforms

ip-address (*ipv4-address* | *ipv6-address*)

Description	<p>The next-hop IP address. Only populated when the next-hop type is indirect or tunnel or static-mpls.</p> <p>For a VXLAN tunnel this is the destination VTEP address.</p>
--------------------	---

Context	network-instance name <i>string</i> route-table next-hop index number ip-address (ipv4-address ipv6-address)
Tree	ip-address
Configurable	False
Platforms	Supported on all platforms

ip-in-ip

Description	Specifies details of the IP-in-IP header added to the packet. This is valid only when encapsulate-header is ipv4 or ipv6
Context	network-instance name <i>string</i> route-table next-hop index number ip-in-ip
Tree	ip-in-ip
Configurable	False
Platforms	Supported on all platforms

dst-ip ([ipv4-address](#) | [ipv6-address](#))

Description	Destination IP address to use for the encapsulated packet.
Context	network-instance name <i>string</i> route-table next-hop index number ip-in-ip dst-ip (ipv4-address ipv6-address)
Tree	dst-ip
Configurable	False
Platforms	Supported on all platforms

src-ip ([ipv4-address](#) | [ipv6-address](#))

Description	Source IP address to use for the encapsulated packet.
Context	network-instance name <i>string</i> route-table next-hop index number ip-in-ip src-ip (ipv4-address ipv6-address)
Tree	src-ip
Configurable	False
Platforms	Supported on all platforms

mac-address *string*

Description	The MAC address of the next-hop that has been provided directly.
--------------------	--

No value is populated if the next-hop IP is resolved by an ARP or IPv6 ND entry.

Context	network-instance name <i>string</i> route-table next-hop index <i>number</i> mac-address <i>string</i>
Tree	mac-address
Configurable	False
Platforms	Supported on all platforms

mpls

Description	Enter the mpls context
Context	network-instance name <i>string</i> route-table next-hop index <i>number</i> mpls
Tree	mpls
Configurable	False
Platforms	Supported on all platforms

entropy-label-transmit *boolean*

Description	Entropy label (EL/ELI) is pushed when transmitting to this next-hop
Context	network-instance name <i>string</i> route-table next-hop index <i>number</i> mpls entropy-label-transmit <i>boolean</i>
Tree	entropy-label-transmit
Configurable	False
Platforms	Supported on all platforms

pushed-mpls-label-stack (*number* | *keyword*)

Description	The list of MPLS labels to push onto the packet when forwarding to this particular next-hop.
Context	network-instance name <i>string</i> route-table next-hop index <i>number</i> mpls pushed-mpls-label-stack (<i>number</i> <i>keyword</i>)
Tree	pushed-mpls-label-stack
Range	16 to 1048575
Options	<ul style="list-style-type: none"> • IPV4_EXPLICIT_NULL • IPV6_EXPLICIT_NULL • IMPLICIT_NULL
Configurable	False

Platforms	Supported on all platforms
Max. Elements	1

network-instance *reference*

Description	Indicates that the next-hop is another network instance. If this is specified but an IP address or interface is not provided, the meaning is that a new IP lookup should occur in the other network instance.
Context	network-instance name <i>string</i> route-table next-hop index <i>number</i> network-instance reference
Tree	network-instance
Reference	network-instance name <i>string</i>
Configurable	False
Platforms	Supported on all platforms

programmed-index *number*

Description	The index assigned to the next-hop by the gRIBI client
Context	network-instance name <i>string</i> route-table next-hop index <i>number</i> programmed-index <i>number</i>
Tree	programmed-index
Configurable	False
Platforms	Supported on all platforms

resolving-route

Description	Enter the resolving-route context
Context	network-instance name <i>string</i> route-table next-hop index <i>number</i> resolving-route
Tree	resolving-route
Configurable	False
Platforms	Supported on all platforms

ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	The prefix of the resolving route.
Context	network-instance name <i>string</i> route-table next-hop index <i>number</i> resolving-route ip-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)

Tree	ip-prefix
Configurable	False
Platforms	Supported on all platforms

route-owner *string*

Description	The application name of the owner of the resolving route.
Context	network-instance name <i>string</i> route-table next-hop index number resolving-route route-owner <i>string</i>
Tree	route-owner
Configurable	False
Platforms	Supported on all platforms

route-type *identityref*

Description	The type of the resolving route.
Context	network-instance name <i>string</i> route-table next-hop index number resolving-route route-type <i>identityref</i>
Tree	route-type
Options	<ul style="list-style-type: none"> • aggregate Locally configured aggregate route • arp-nd IP route added by ARP ND. • bgp Border Gateway Protocol version 4 • bgp-label Border Gateway Protocol labeled routes • bgp-evpn BGP Ethernet VPN (EVPN) • bgp-ipvpn BGP IP VPN • dhcp IP (default) route added by DHCP. • gribi A gRIBI route • host A host route

- isis
IS-IS
- local
A directly connected route
- linux
IP route added by the linux kernel.
- ndk1
Route added by an agent application using the NDK
- ndk2
Route added by an agent application using the NDK
- ospfv2
OSPFv2
- ospfv3
OSPFv3
- static
Locally configured static route

Context	network-instance name <i>string</i> route-table next-hop-group index <i>number</i> fib-programming last-failed-operation-type <i>keyword</i>
Tree	last-failed-operation-type
Options	<ul style="list-style-type: none"> • add The current or last operation was an attempt to create a new entry. • delete The current or last operation was an attempt to delete an existing entry. • modify The current or last operation was an attempt to modify an existing entry. • none There was no prior operation for this entry or there is no current operation that is in process
Configurable	False
Platforms	Supported on all platforms

last-successful-operation-timestamp *string*

Description	The date and time of the last operation to complete successfully, if the entry was not suppressed. A delete operation is immediately timestamped by FIB manager on the assumption that it will ultimately be successful on all complexes. For other operations the timestamp is generated when the last complex that was expected to respond has responded with a success acknowledgement.
Context	network-instance name <i>string</i> route-table next-hop-group index number fib-programming last-successful-operation-timestamp <i>string</i>
Tree	last-successful-operation-timestamp
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-successful-operation-type *keyword*

Description	The last operation type that completed successfully, if the entry was not suppressed.
Context	network-instance name <i>string</i> route-table next-hop-group index number fib-programming last-successful-operation-type <i>keyword</i>
Tree	last-successful-operation-type
Options	<ul style="list-style-type: none"> • add The current or last operation was an attempt to create a new entry. • delete The current or last operation was an attempt to delete an existing entry. • modify The current or last operation was an attempt to modify an existing entry. • none There was no prior operation for this entry or there is no current operation that is in process
Configurable	False
Platforms	Supported on all platforms

pending-operation-type *keyword*

Description	The current operation type that is in progress because not all complexes have responded.
--------------------	--

Context	network-instance name <i>string</i> route-table next-hop-group index <i>number</i> fib-programming pending-operation-type <i>keyword</i>
Tree	pending-operation-type
Options	<ul style="list-style-type: none"> • add The current or last operation was an attempt to create a new entry. • delete The current or last operation was an attempt to delete an existing entry. • modify The current or last operation was an attempt to modify an existing entry. • none There was no prior operation for this entry or there is no current operation that is in process
Configurable	False
Platforms	Supported on all platforms

suppressed *boolean*

Description	When true, FIB programming for this entry has been suppressed and it is only installed in the control plane route table
Context	network-instance name <i>string</i> route-table next-hop-group index <i>number</i> fib-programming suppressed <i>boolean</i>
Tree	suppressed
Configurable	False
Platforms	Supported on all platforms

group-name-alias *string*

Description	The alias name associated with this next-hop-group.
Context	network-instance name <i>string</i> route-table next-hop-group index <i>number</i> group-name-alias <i>string</i>
Tree	group-name-alias
Configurable	False
Platforms	Supported on all platforms

next-hop [id](#) *number*

Description	List of primary next-hops associated with the NHG
--------------------	---

Context	network-instance name <i>string</i> route-table next-hop-group index <i>number</i> next-hop id <i>number</i>
Tree	next-hop
Configurable	False
Platforms	Supported on all platforms

id *number*

Description	A unique identifier of a next-hop member (system allocated).
Context	network-instance name <i>string</i> route-table next-hop-group index <i>number</i> next-hop id <i>number</i>
Range	0 to 1023
Configurable	False
Platforms	Supported on all platforms

next-hop *reference*

Description	Enter the next-hop context
Context	network-instance name <i>string</i> route-table next-hop-group index <i>number</i> next-hop id <i>number</i> next-hop <i>reference</i>
Tree	next-hop
Reference	network-instance name <i>string</i> route-table next-hop index <i>number</i>
Configurable	False
Platforms	Supported on all platforms

resolved *keyword*

Description	Set to true when the next-hop was resolved. This reads not-applicable for resolve=false next-hops.
Context	network-instance name <i>string</i> route-table next-hop-group index <i>number</i> next-hop id <i>number</i> resolved <i>keyword</i>
Tree	resolved
Options	<ul style="list-style-type: none"> • true • false • not-applicable
Configurable	False
Platforms	Supported on all platforms

weight *number*

Description	The configured/programmed weight assigned to the next-hop within the group This may be different from the actual weight used by the datapath, which changes depending on the next-hops that are up/down in the group. Traffic is balanced across the next-hops within the group in proportion of the actual weight.
Context	network-instance name <i>string</i> route-table next-hop-group index <i>number</i> next-hop id <i>number</i> weight <i>number</i>
Tree	weight
Configurable	False
Platforms	Supported on all platforms

programmed-index *number*

Description	The index assigned to the next-hop-group by the gRIBI client
Context	network-instance name <i>string</i> route-table next-hop-group index <i>number</i> programmed-index <i>number</i>
Tree	programmed-index
Configurable	False
Platforms	Supported on all platforms

router-id *string*

Description	A identifier for the local network instance - typically used within associated routing protocols or signalling routing information in another network instance
Context	network-instance name <i>string</i> router-id <i>string</i>
Tree	router-id
Configurable	True
Platforms	Supported on all platforms

segment-routing

Description	Container with segment routing configuration options
Context	network-instance name <i>string</i> segment-routing
Tree	segment-routing

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mpls

Description	Adding this container activates datapath support for SR-MPLS
Context	network-instance name <i>string</i> segment-routing mpls
Tree	mpls
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

global-block

Description	Container with SRGB configuration that is applicable to all IGP protocol instances
Context	network-instance name <i>string</i> segment-routing mpls global-block
Tree	global-block
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-range *reference*

Description	Reference to a static label range
Context	network-instance name <i>string</i> segment-routing mpls global-block label-range reference
Tree	label-range
Reference	system mpls label-ranges static name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-range-status *keyword*

Description	Status of the label block. The label block may show as unavailable if there is pending cleanup.
Context	network-instance name <i>string</i> segment-routing mpls global-block label-range-status keyword
Tree	label-range-status

Options	<ul style="list-style-type: none"> • available • unavailable
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-prefix-sid [prefix-sid-index](#) *number*

Description	List of configured protocol-independent prefix SIDs associated with the network-instance
Context	network-instance name <i>string</i> segment-routing mpls local-prefix-sid prefix-sid-index <i>number</i>
Tree	local-prefix-sid
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	4

prefix-sid-index *number*

Description	An index to enumerate the different prefix sids
Context	network-instance name <i>string</i> segment-routing mpls local-prefix-sid prefix-sid-index <i>number</i>
Range	1 to 4
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface *string*

Description	<p>Reference to the subinterface that owns the prefix(es) to be advertised.</p> <p>If ipv4-label-index is assigned a value then the primary IPv4 address of the referenced subinterface is advertised as a prefix SID.</p> <p>If ipv6-label-index is assigned a value then the primary IPv6 address of the referenced subinterface is advertised as a prefix SID.</p>
Context	network-instance name <i>string</i> segment-routing mpls local-prefix-sid prefix-sid-index <i>number</i> interface <i>string</i>

Tree	interface
String Length	5 to 25
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4-label-index *number*

Description	Label index to add to SRGB base.
Context	network-instance name <i>string</i> segment-routing mpls local-prefix-sid prefix-sid-index <i>number</i> ipv4-label-index <i>number</i>
Tree	ipv4-label-index
Range	0 to 1048575
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-label-index *number*

Description	Label index to add to SRGB base.
Context	network-instance name <i>string</i> segment-routing mpls local-prefix-sid prefix-sid-index <i>number</i> ipv6-label-index <i>number</i>
Tree	ipv6-label-index
Range	0 to 1048575
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

node-sid *boolean*

Description	If set, the prefix SID(s) identity the router as a whole.
Context	network-instance name <i>string</i> segment-routing mpls local-prefix-sid prefix-sid-index <i>number</i> node-sid <i>boolean</i>
Tree	node-sid
Default	true

Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sid-database

Description	Database of all known prefix SIDs, local and remote.
Context	network-instance name <i>string</i> segment-routing mpls sid-database
Tree	sid-database
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix-sid [prefix](#) (*ipv4-prefix* | *ipv6-prefix*) [sid-label-value](#) *number* [protocol](#) *keyword* [protocol-instance](#) *number* [protocol-multi-topology](#) *number* [algorithm](#) *number*

Description	List of prefix SIDs
Context	network-instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) sid-label-value <i>number</i> protocol <i>keyword</i> protocol-instance <i>number</i> protocol-multi-topology <i>number</i> algorithm <i>number</i>
Tree	prefix-sid
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	The IPv4 or IPv6 prefix associated with the SID.
Context	network-instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) sid-label-value <i>number</i> protocol <i>keyword</i> protocol-instance <i>number</i> protocol-multi-topology <i>number</i> algorithm <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sid-label-value *number*

Description	The MPLS label value associated with the SID.
Context	network-instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) sid-label-value <i>number</i> protocol <i>keyword</i> protocol-instance <i>number</i> protocol-multi-topology <i>number</i> algorithm <i>number</i>

Range	16 to 1048575
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

protocol *keyword*

Description	The protocol that provided the prefix SID
Context	network-instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) sid-label-value <i>number</i> protocol keyword protocol-instance <i>number</i> protocol-multi-topology <i>number</i> algorithm <i>number</i>
Options	<ul style="list-style-type: none"> isis direct
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

protocol-instance *number*

Description	The instance ID that provided the prefix SID
Context	network-instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) sid-label-value <i>number</i> protocol keyword protocol-instance <i>number</i> protocol-multi-topology <i>number</i> algorithm <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

protocol-multi-topology *number*

Description	The multi-topology ID that provided the prefix SID
Context	network-instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) sid-label-value <i>number</i> protocol keyword protocol-instance <i>number</i> protocol-multi-topology <i>number</i> algorithm <i>number</i>
Range	0 to 4095
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

algorithm *number*

Description	Contains the identifier of the algorithm the router uses to compute the reachability of the prefix to which the Prefix-SID is associated
--------------------	--

Context	network-instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix ipv6-prefix</i>) sid-label-value <i>number</i> protocol keyword protocol-instance <i>number</i> protocol-multi-topology <i>number</i> algorithm <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

active *boolean*

Description	When false, the prefix SID is inactive. It could be inactive because it is involved in a prefix or SID conflict that occurred between different protocol-instance. It could also be inactive because datapath programming failed.
Context	network-instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix ipv6-prefix</i>) sid-label-value <i>number</i> protocol keyword protocol-instance <i>number</i> protocol-multi-topology <i>number</i> algorithm <i>number</i> active <i>boolean</i>
Tree	active
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix-conflict *boolean*

Description	Reads true when the prefix SID entry is involved in a prefix conflict that has occurred between protocols. This occurs when there are multiple entries in the SID database for the same prefix. All the conflicting entries become inactive except for the one with the smallest sid-index.
Context	network-instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix ipv6-prefix</i>) sid-label-value <i>number</i> protocol keyword protocol-instance <i>number</i> protocol-multi-topology <i>number</i> algorithm <i>number</i> prefix-conflict <i>boolean</i>
Tree	prefix-conflict
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sid-conflict *boolean*

Description	Reads true when the prefix SID entry is involved in a SID conflict that has occurred between protocols (after first removing inter-protocol prefix conflict entries). All entries involved in a SID conflict that do not have the absolute lowest 'preference' value become inactive. In the SRL implementation local-prefix-sid entries are considered to have a lower numerical preference than
--------------------	---

remote prefix-sid entries. If there are still SID conflicts then all the remaining conflicting entries become inactive except for the one with the smallest sid-index.

Context	network-instance name <i>string</i> segment-routing mpls sid-database prefix-sid prefix (<i>ipv4-prefix ipv6-prefix</i>) sid-label-value <i>number</i> protocol <i>keyword</i> protocol-instance <i>number</i> protocol-multi-topology <i>number</i> algorithm <i>number</i> sid-conflict <i>boolean</i>
Tree	sid-conflict
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

static-routes

Description	Enable the static-routes context
Context	network-instance name <i>string</i> static-routes
Tree	static-routes
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	Enter the admin-state context
Context	network-instance name <i>string</i> static-routes admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

route [prefix](#) (*ipv4-prefix | ipv6-prefix*)

Description	Enter the route list instance
Context	network-instance name <i>string</i> static-routes route prefix (<i>ipv4-prefix ipv6-prefix</i>)
Tree	route
Configurable	True

Platforms	Supported on all platforms
Max. Elements	16384

prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	Enter the prefix context
Context	network-instance name <i>string</i> static-routes route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	Administratively enable or disable the static route.
Context	network-instance name <i>string</i> static-routes route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

installed *boolean*

Description	If set to true, this indicates that the static route was installed into the datapath. If this is false then there are 3 possible reasons: (a) the admin-state is disable (b) there is another IP route for the same prefix that has a superior preference (c) the next-hop-group has no resolvable next-hops
Context	network-instance name <i>string</i> static-routes route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) installed <i>boolean</i>
Tree	installed
Configurable	False
Platforms	Supported on all platforms

metric number

Description	IGP metric of the static route.
Context	network-instance name <i>string</i> static-routes route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) metric number
Tree	metric
Default	1
Configurable	True
Platforms	Supported on all platforms

next-hop-group reference

Description	Enter the next-hop-group context
Context	network-instance name <i>string</i> static-routes route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) next-hop-group reference
Tree	next-hop-group
Reference	network-instance name <i>string</i> next-hop-groups group name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

preference number

Description	Route preference with lower values indicating a higher degree of preference.
Context	network-instance name <i>string</i> static-routes route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) preference number
Tree	preference
Range	0 to 255
Default	5
Configurable	True
Platforms	Supported on all platforms

tag-set reference

Description	Tag set to associate with the static route
Context	network-instance name <i>string</i> static-routes route prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) tag-set reference
Tree	tag-set

Reference	routing-policy tag-set name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

system-ipv4-address

Description	Container for displaying information about the system IPv4 address of the default network-instance
Context	network-instance name <i>string</i> system-ipv4-address
Tree	system-ipv4-address
Configurable	False
Platforms	Supported on all platforms

oper-down-reason *keyword*

Description	The reason why the default network instance does not have a system IPv4 address
Context	network-instance name <i>string</i> system-ipv4-address oper-down-reason <i>keyword</i>
Tree	oper-down-reason
Options	<ul style="list-style-type: none"> • system-interface-not-bound • system-interface-has-no-ipv4-address
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	The operational state of the system IPv4 address binding
Context	network-instance name <i>string</i> system-ipv4-address oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty

- downloading
Component is downloading image into memory
- booting
Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False
Platforms	Supported on all platforms

system-ipv6-address

Description	Container for displaying information about the system IPv6 address of the default network-instance
Context	network-instance name <i>string</i> system-ipv6-address
Tree	system-ipv6-address
Configurable	False
Platforms	Supported on all platforms

oper-down-reason *keyword*

Description	The reason why the default network instance does not have a system IPv6 address
Context	network-instance name <i>string</i> system-ipv6-address oper-down-reason <i>keyword</i>
Tree	oper-down-reason
Options	<ul style="list-style-type: none">• system-interface-not-bound• system-interface-has-no-ipv6-address
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	The operational state of the system IPv6 address binding
Context	network-instance name <i>string</i> system-ipv6-address oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none">• up Component or process is operational• down Component or process is not operational• empty Component slot is empty• downloading Component is downloading image into memory• booting Component is booting downloaded image• starting Component image operational, application processes starting• failed Component or process has failed• synchronizing Component is currently being synchronized• upgrading Component is currently being upgraded• low-power

- Component is offline due to insufficient system power
- degraded
 - Component or process is in a degraded state
- warm-reboot
 - Component or process is currently warm rebooting
 - This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
 - Component or process is currently waiting
 - This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False
Platforms	Supported on all platforms

tcp

Description	State for TCP connections that have been established or could be established using the route tables of this network instance.
Context	network-instance name <i>string</i> tcp
Tree	tcp
Configurable	False
Platforms	Supported on all platforms

connection [local-address](#) (*ipv4-address* | *ipv6-address*) [local-port](#) *number* [remote-address](#) (*ipv4-address* | *ipv6-address*) [remote-port](#) *number*

Description	List of TCP connections that are established or that are in the process of being established – i.e. excluding those in the LISTEN state. An entry in this list is transient in that it ceases to exist when (or soon after) the connection makes the transition to the CLOSED state.
Context	network-instance name <i>string</i> tcp connection local-address (<i>ipv4-address</i> <i>ipv6-address</i>) local-port <i>number</i> remote-address (<i>ipv4-address</i> <i>ipv6-address</i>) remote-port <i>number</i>
Tree	connection
Configurable	False
Platforms	Supported on all platforms

local-address (*ipv4-address* | *ipv6-address*)

Description	The local IP address for this TCP connection.
Context	network-instance name <i>string</i> tcp connection local-address (<i>ipv4-address</i> <i>ipv6-address</i>) local-port <i>number</i> remote-address (<i>ipv4-address</i> <i>ipv6-address</i>) remote-port <i>number</i>
Configurable	False
Platforms	Supported on all platforms

local-port *number*

Description	The local port number for this TCP connection.
Context	network-instance name <i>string</i> tcp connection local-address (<i>ipv4-address</i> <i>ipv6-address</i>) local-port <i>number</i> remote-address (<i>ipv4-address</i> <i>ipv6-address</i>) remote-port <i>number</i>
Range	0 to 65535
Configurable	False
Platforms	Supported on all platforms

remote-address (*ipv4-address* | *ipv6-address*)

Description	The remote IP address for this TCP connection.
Context	network-instance name <i>string</i> tcp connection local-address (<i>ipv4-address</i> <i>ipv6-address</i>) local-port <i>number</i> remote-address (<i>ipv4-address</i> <i>ipv6-address</i>) remote-port <i>number</i>
Configurable	False
Platforms	Supported on all platforms

remote-port *number*

Description	The remote port number for this TCP connection.
Context	network-instance name <i>string</i> tcp connection local-address (<i>ipv4-address</i> <i>ipv6-address</i>) local-port <i>number</i> remote-address (<i>ipv4-address</i> <i>ipv6-address</i>) remote-port <i>number</i>
Range	0 to 65535
Configurable	False
Platforms	Supported on all platforms

process-id *number*

Description	The process ID of the application that owns the socket.
Context	network-instance name <i>string</i> tcp connection local-address (<i>ipv4-address</i> <i>ipv6-address</i>) local-port <i>number</i> remote-address (<i>ipv4-address</i> <i>ipv6-address</i>) remote-port <i>number</i> process-id <i>number</i>
Tree	process-id
Configurable	False
Platforms	Supported on all platforms

session-state *keyword*

Description	The state of this TCP connection.
Context	network-instance name <i>string</i> tcp connection local-address (<i>ipv4-address</i> <i>ipv6-address</i>) local-port <i>number</i> remote-address (<i>ipv4-address</i> <i>ipv6-address</i>) remote-port <i>number</i> session-state <i>keyword</i>
Tree	session-state
Options	<ul style="list-style-type: none"> • closed • syn-sent • syn-received • established • fin-wait1 • fin-wait2 • close-wait • last-ack • closing • time-wait • delete-tcb
Configurable	False
Platforms	Supported on all platforms

listening-application [local-address](#) (*ipv4-address* | *ipv6-address*) [local-port](#) *number*

Description	List of applications that are listening on a particular TCP port bound to the network-instance.
Context	network-instance name <i>string</i> tcp listening-application local-address (<i>ipv4-address</i> <i>ipv6-address</i>) local-port <i>number</i>

Tree	listening-application
Configurable	False
Platforms	Supported on all platforms

local-address (*ipv4-address* | *ipv6-address*)

Description	The local IP address accepted by the application. An all-zeroes value for the <i>ipv4-address</i> means that any IPv4 address is accepted. An all-zeroes value for the <i>ipv6-address</i> means that any IPv6 address is accepted.
Context	network-instance name <i>string</i> tcp listening-application local-address (<i>ipv4-address</i> <i>ipv6-address</i>) local-port <i>number</i>
Configurable	False
Platforms	Supported on all platforms

local-port *number*

Description	The local port number accepted by the application.
Context	network-instance name <i>string</i> tcp listening-application local-address (<i>ipv4-address</i> <i>ipv6-address</i>) local-port <i>number</i>
Range	0 to 65535
Configurable	False
Platforms	Supported on all platforms

process-id *number*

Description	The process ID of the application that owns the socket.
Context	network-instance name <i>string</i> tcp listening-application local-address (<i>ipv4-address</i> <i>ipv6-address</i>) local-port <i>number</i> process-id <i>number</i>
Tree	process-id
Configurable	False
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	network-instance name <i>string</i> tcp statistics
Tree	statistics

Configurable	False
Platforms	Supported on all platforms

active-opens *number*

Description	The total number of times that TCP connections have made a direct transition to the SYN-SENT state from the CLOSED state.
Context	network-instance name <i>string</i> tcp statistics active-opens <i>number</i>
Tree	active-opens
Default	0
Configurable	False
Platforms	Supported on all platforms

attempt-fails *number*

Description	The total number of times that TCP connections have made a direct transition to the CLOSED state from either the SYN-SENT state or the SYN-RCVD state, plus the number of times that TCP connections have made a direct transition to the LISTEN state from the SYN-RCVD state.
Context	network-instance name <i>string</i> tcp statistics attempt-fails <i>number</i>
Tree	attempt-fails
Default	0
Configurable	False
Platforms	Supported on all platforms

established-resets *number*

Description	The total number of times that TCP connections have made a direct transition to the CLOSED state from either the ESTABLISHED state or the CLOSE-WAIT state.
Context	network-instance name <i>string</i> tcp statistics established-resets <i>number</i>
Tree	established-resets
Default	0
Configurable	False
Platforms	Supported on all platforms

in-checksum-errors *number*

Description	The total number of segments that are received as bad TCP checksum errors.
Context	network-instance name <i>string</i> tcp statistics in-checksum-errors <i>number</i>
Tree	in-checksum-errors
Default	0
Configurable	False
Platforms	Supported on all platforms

in-error-segments *number*

Description	The total number of segments received in error (e.g., bad TCP checksums).
Context	network-instance name <i>string</i> tcp statistics in-error-segments <i>number</i>
Tree	in-error-segments
Default	0
Configurable	False
Platforms	Supported on all platforms

in-segments *number*

Description	The total number of segments received, including those received in error. This count includes segments received on currently established connections.
Context	network-instance name <i>string</i> tcp statistics in-segments <i>number</i>
Tree	in-segments
Default	0
Configurable	False
Platforms	Supported on all platforms

out-rst-segments *number*

Description	The total number of TCP segments sent containing the RST flag.
Context	network-instance name <i>string</i> tcp statistics out-rst-segments <i>number</i>
Tree	out-rst-segments
Default	0
Configurable	False

Platforms Supported on all platforms

out-segments *number*

Description The total number of segments sent, including those on current connections but excluding those containing only retransmitted octets.

Context [network-instance name](#) *string* [tcp statistics out-segments](#) *number*

Tree [out-segments](#)

Default 0

Configurable False

Platforms Supported on all platforms

passive-opens *number*

Description The total number of times TCP connections have made a direct transition to the SYN-RCVD state from the LISTEN state.

Context [network-instance name](#) *string* [tcp statistics passive-opens](#) *number*

Tree [passive-opens](#)

Default 0

Configurable False

Platforms Supported on all platforms

retransmitted-segments *number*

Description The total number of segments retransmitted; that is, the number of TCP segments transmitted containing one or more previously transmitted octets.

Context [network-instance name](#) *string* [tcp statistics retransmitted-segments](#) *number*

Tree [retransmitted-segments](#)

Default 0

Configurable False

Platforms Supported on all platforms

traffic-engineering

Description Container with traffic engineering options for the network-instance

Context [network-instance name](#) *string* [traffic-engineering](#)

Tree [traffic-engineering](#)

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-groups

Description	Container for configuring admin groups
Context	network-instance name <i>string</i> traffic-engineering admin-groups
Tree	admin-groups
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

group name *string*

Description	List of admin groups defined for this network instance.
Context	network-instance name <i>string</i> traffic-engineering admin-groups group name <i>string</i>
Tree	group
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *string*

Description	The name of the admin group
Context	network-instance name <i>string</i> traffic-engineering admin-groups group name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bit-position *number*

Description	The bit-position value for the admin-group. The value for the admin group is an integer that represents one of the bit positions in the admin-group bitmask.
Context	network-instance name <i>string</i> traffic-engineering admin-groups group name <i>string</i> bit-position <i>number</i>
Tree	bit-position

Range	0 to 31
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

autonomous-system *number*

Description	The autonomous system number of the network-instance, for protocols and pseudo-protocols that do not have their own configuration of AS number.
Context	network-instance name <i>string</i> traffic-engineering autonomous-system number
Tree	autonomous-system
Range	1 to 4294967295
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface [interface-name](#) *string*

Description	List of routed subinterfaces that have associated TE information
Context	network-instance name <i>string</i> traffic-engineering interface interface-name string
Tree	interface
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface-name *string*

Description	Name of a subinterface
Context	network-instance name <i>string</i> traffic-engineering interface interface-name string
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-group *reference*

Description	The list of admin-groups generically associated with the interface (not application specific)
--------------------	---

Context	network-instance name <i>string</i> traffic-engineering interface interface-name string admin-group <i>reference</i>
Tree	admin-group
Reference	network-instance name <i>string</i> traffic-engineering admin-groups group name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface-ref

Description	Reference to a subinterface
Context	network-instance name <i>string</i> traffic-engineering interface interface-name <i>string interface-ref</i>
Tree	interface-ref
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface *reference*

Description	Reference to a base interface, for example a port or LAG
Context	network-instance name <i>string</i> traffic-engineering interface interface-name <i>string interface-ref interface</i> <i>reference</i>
Tree	interface
Reference	interface name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subinterface *reference*

Description	Reference to a subinterface This requires the base interface to be specified using the interface leaf in this container.
Context	network-instance name <i>string</i> traffic-engineering interface interface-name <i>string interface-ref subinterface</i> <i>reference</i>
Tree	subinterface
Reference	interface name <i>string subinterface index</i> <i>number</i>
Configurable	True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

srlg-membership *reference*

Description The list of srlgs generically associated with the interface (not application specific)

Context [network-instance name](#) *string* [traffic-engineering interface interface-name](#) *string* [srlg-membership](#) *reference*

Tree [srlg-membership](#)

Reference [network-instance name](#) *string* [traffic-engineering shared-risk-link-groups group name](#) *string*

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

te-metric *number*

Description The TE metric associated with the interface (not application specific)

Context [network-instance name](#) *string* [traffic-engineering interface interface-name](#) *string* [te-metric](#) *number*

Tree [te-metric](#)

Range 1 to 16777215

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4-te-router-id *string*

Description A routable IPv4 address to identify the router uniquely in a TE domain.

Context [network-instance name](#) *string* [traffic-engineering ipv4-te-router-id](#) *string*

Tree [ipv4-te-router-id](#)

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-te-router-id *string*

Description A routable IPv6 address to identify the router uniquely in a TE domain.

Context [network-instance name](#) *string* [traffic-engineering ipv6-te-router-id](#) *string*

Tree [ipv6-te-router-id](#)

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

shared-risk-link-groups

Description	Container for configuring SRLGs
Context	network-instance name <i>string</i> traffic-engineering shared-risk-link-groups
Tree	shared-risk-link-groups
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

group *name string*

Description	List of shared risk link groups defined for this network instance.
Context	network-instance name <i>string</i> traffic-engineering shared-risk-link-groups group name <i>string</i>
Tree	group
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *string*

Description	The name of the shared risk link group
Context	network-instance name <i>string</i> traffic-engineering shared-risk-link-groups group name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

value *number*

Description	Group ID for the SRLG
Context	network-instance name <i>string</i> traffic-engineering shared-risk-link-groups group name <i>string</i> value <i>number</i>
Tree	value
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

traffic-engineering-policies

Description	Container with traffic engineering policies
Context	network-instance name <i>string</i> traffic-engineering-policies
Tree	traffic-engineering-policies
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

binding-sid

Description	Configuration and state related to the label block(s) used for the binding SIDs associated with TE policies
Context	network-instance name <i>string</i> traffic-engineering-policies binding-sid
Tree	binding-sid
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

static-label-block *reference*

Description	Reference to a static label range
Context	network-instance name <i>string</i> traffic-engineering-policies binding-sid static-label-block <i>reference</i>
Tree	static-label-block
Reference	system mpls label-ranges static name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

static-label-block-status *keyword*

Description	Status of the label block. The label block may show as unavailable if there is pending cleanup.
Context	network-instance name <i>string</i> traffic-engineering-policies binding-sid static-label-block-status <i>keyword</i>
Tree	static-label-block-status
Options	<ul style="list-style-type: none"> available unavailable

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

explicit-paths

Description	Named paths used to specify SR policy segment lists
Context	network-instance name <i>string</i> traffic-engineering-policies explicit-paths
Tree	explicit-paths
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

path [explicit-path-name](#) *string*

Description	Enter the path list instance
Context	network-instance name <i>string</i> traffic-engineering-policies explicit-paths path explicit-path-name <i>string</i>
Tree	path
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

explicit-path-name *string*

Description	A unique name to identify the explicit path
Context	network-instance name <i>string</i> traffic-engineering-policies explicit-paths path explicit-path-name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hop [index](#) *number*

Description	Enter the hop list instance
Context	network-instance name <i>string</i> traffic-engineering-policies explicit-paths path explicit-path-name <i>string</i> hop index <i>number</i>
Tree	hop
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

index number

Description	The index number of the hop. Hops are processed in ascending sequence.
Context	network-instance name <i>string</i> traffic-engineering-policies explicit-paths path explicit-path-name <i>string</i> hop index number
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ip

Description	Enable the ip context
Context	network-instance name <i>string</i> traffic-engineering-policies explicit-paths path explicit-path-name <i>string</i> hop index number ip
Tree	ip
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hop-type keyword

Description	Enter the hop-type context
Context	network-instance name <i>string</i> traffic-engineering-policies explicit-paths path explicit-path-name <i>string</i> hop index number ip hop-type keyword
Tree	hop-type
Default	loose
Options	<ul style="list-style-type: none"> strict <p>A strict hop is always one hop away from the previous hop (or from the head-end in the case of the first hop). TE DB translates each strict hop into an adjacency-SID label. To be resolved to an adjacency SID, a strict hop must be a non-local IP address on a connected subnet (representing the neighbor's interface address on this subnet) or it must be a loopback or system address of the directly-connected neighbor.</p> loose <p>A loose hop can be any number of hops away from the previous hop (or from the head-end in the case of the first hop). TE DB translates each loose hop into a node-SID label. A loose hop can be any IP address of the remote router associated with the node SID, not just the IP address associated with the node SID itself. Note that the endpoint of the policy is implicitly considered to be a final loose hop. If the final configured hop (previous hop of this implicit loose hop) is unnecessary TEDB indicates</p>

this to SR policy manager and the adjacency SID or node SID of the final configured hop is omitted from the datapath programming.

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ip-address (*ipv4-address-unicast* | *ipv6-address-unicast-without-local*)

Description	An IPv4 or IPv6 address that is a hop to be visited on the way to the destination
Context	network-instance name <i>string</i> traffic-engineering-policies explicit-paths path explicit-path-name <i>string</i> hop index number ip ip-address (<i>ipv4-address-unicast</i> <i>ipv6-address-unicast-without-local</i>)
Tree	ip-address
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mpls-label *number*

Description	An MPLS label value representing a segment routing instruction
Context	network-instance name <i>string</i> traffic-engineering-policies explicit-paths path explicit-path-name <i>string</i> hop index number mpls-label <i>number</i>
Tree	mpls-label
Range	16 to 1048575
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy [policy-name](#) *string*

Description	List of traffic engineering policies
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i>
Tree	policy
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy-name *string*

Description	The name of the traffic engineering policy
--------------------	--

Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Enable/disable the traffic engineering policy
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

binding-sid

Description	Identifier that opaquely represents the Uncolored Traffic Engineering Policy (a.k.a. SR-TE LSP) to upstream routers
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> binding-sid
Tree	binding-sid
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mpls-label *number*

Description	MPLS label that represents the Uncolored Traffic Engineering Policy to upstream routers
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> binding-sid mpls-label <i>number</i>
Tree	mpls-label
Range	16 to 1048575
Configurable	True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

endpoint (*ipv4-address-unicast* | *ipv6-address-unicast-without-local*)

Description Destination of the TE policy

Context [network-instance name](#) *string* [traffic-engineering-policies policy policy-name](#) *string* [endpoint](#) (*ipv4-address-unicast* | *ipv6-address-unicast-without-local*)

Tree [endpoint](#)

Options

- local

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-oper-state-change *string*

Description Time elapsed since the last operational state change for the Traffic Engineering Policy

Context [network-instance name](#) *string* [traffic-engineering-policies policy policy-name](#) *string* [last-oper-state-change](#) *string*

Tree [last-oper-state-change](#)

String Length 20 to 32

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maintenance

Description Maintenance context for TE Policy, hold and wait timers, sBFD, revertive behavior and alike available under this context

Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> maintenance
Tree	maintenance
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maintenance-policy *reference*

Description	The maintenance policy to use with the TE policy
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> maintenance maintenance-policy <i>reference</i>
Tree	maintenance-policy
Reference	network-instance name <i>string</i> maintenance-policies policy maintenance-policy-name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

metric *number*

Description	Metric for the TE Policy
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> metric <i>number</i>
Tree	metric
Range	1 to 16777215
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-down-reason *identityref*

Description	The reason why the Traffic Engineering policy is operationally down. One of the following values:
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> oper-down-reason <i>identityref</i>
Tree	oper-down-reason
Options	<ul style="list-style-type: none"> te-policy-admin-disabled The TE policy is administratively disabled te-policy-no-valid-segment-list

The TE policy has no valid segment lists

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state *keyword*

Description	Traffic Engineering policy operational state.
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> up The te-policy is operationally up. down The te-policy is administratively down or no valid segment-list or due to other reasons.
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state-change-count *number*

Description	Traffic Engineering Policy operational state change count Operational status transition from up to down, down to up, etc all accounted under this counter
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> oper-state-change-count <i>number</i>
Tree	oper-state-change-count
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy-type *keyword*

Description	<p>Specifies the TE policy type</p> <p>TE Policy can be of type sr-mpls-colored where label based segment-list or segment-lists constitute a candidate path and color with endpoint is used to configure a path. TE Policy can be of type uncolored in which case a single primary LSP can be backed by one or more secondary LSPs</p>
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> policy-type <i>keyword</i>
Tree	policy-type

Default	sr-mpls-uncolored
Options	<ul style="list-style-type: none"> • sr-mpls-colored • sr-mpls-uncolored
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

re-optimization-timer (*number* | *keyword*)

Description	Re-optimizaion timer for the TE policy
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> re-optimization-timer (<i>number</i> <i>keyword</i>)
Tree	re-optimization-timer
Range	30 to 10800
Default	30
Units	minutes
Options	<ul style="list-style-type: none"> • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

retry-timer *number*

Description	Time between TE policy re-establishment attempts after failure
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> retry-timer <i>number</i>
Tree	retry-timer
Range	1 to 600
Default	30
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

segment-list [segment-list-index](#) *number*

Description	Enter the segment-list list instance
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i>

Tree	segment-list
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

segment-list-index *number*

Description	Index to enumerate the different segment lists of a TE policy.
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i>
Range	1 to 32
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Administratively enable or disable a segment list
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dynamic

Description	Configuration and state for dynamic segment lists
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> dynamic
Tree	dynamic
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

path-algorithm *keyword*

Description	Path computation method
--------------------	-------------------------

Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> dynamic path-algorithm <i>keyword</i>
Tree	path-algorithm
Default	local-cspf
Options	<ul style="list-style-type: none"> local-cspf pce
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

te-constraints

Description	Enter the te-constraints context
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> dynamic te-constraints
Tree	te-constraints
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

exclude-hop (*ipv4-address-unicast* | *ipv6-address-unicast-without-local*)

Description	Excluded IP addresses from path computation
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> dynamic te-constraints exclude-hop (<i>ipv4-address-unicast</i> <i>ipv6-address-unicast-without-local</i>)
Tree	exclude-hop
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	10

hop-limit *number*

Description	The maximum number of hops for the segment-list
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> dynamic te-constraints hop-limit <i>number</i>
Tree	hop-limit

Range	2 to 255
Default	255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-stack-reduction *boolean*

Description	Set to true to enable label stack reduction for local CSPF computed segment-lists
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> dynamic te-constraints label-stack-reduction <i>boolean</i>
Tree	label-stack-reduction
Default	true
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-sr-protection *keyword*

Description	Protection offered for local CSPF computed segment-lists
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> dynamic te-constraints local-sr-protection <i>keyword</i>
Tree	local-sr-protection
Default	preferred
Options	<ul style="list-style-type: none"> • none • preferred • mandated
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

metric-type *keyword*

Description	Metric type used for segment-list computation
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> dynamic te-constraints metric-type <i>keyword</i>

Tree	metric-type
Default	igp
Options	<ul style="list-style-type: none"> • igp • te
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

secondary-srlg *boolean*

Description	Set to true to consider SRLG for secondary and standby segment list of uncolored type
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> dynamic te-constraints secondary-srlg <i>boolean</i>
Tree	secondary-srlg
Default	false
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

segment-depth

Description	Configuration for the maximum number of SIDs/segments
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> dynamic te-constraints segment-depth
Tree	segment-depth
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

segment-limit *number*

Description	The maximum number of segments in the segment-list
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> dynamic te-constraints segment-depth segment-limit <i>number</i>
Tree	segment-limit
Range	1 to 14

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

explicit-path *reference*

Description	Enter the explicit-path context
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> explicit-path <i>reference</i>
Tree	explicit-path
Reference	network-instance name <i>string</i> traffic-engineering-policies explicit-paths path explicit-path-name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

failed-reason *identityref*

Description	The reason why the segment list is invalid. One of the following values:
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> failed-reason <i>identityref</i>
Tree	failed-reason
Options	<ul style="list-style-type: none"> • path-computation-request-timeout Path computation request timed out • path-computation-no-route No valid route is returned for path computation request • no-resources-available Required resources are depleted, not enough resources to establish the requested segment-list • path-computation-bad-node Path computation failure due to a resolution issue of one or more of the hops • path-computation-routing-loop Path computation failure due to routing loop • unknown Segment-list is down due to unknown reason • path-computation-no-route-owner Path computation failure as none of the IGP instances had a valid route to one of the hops

- path-computation-hop-limit-exceeded
Path computation failure due to hop limit. No path within the hop limit constraint configured
- srlg-not-disjoint
SRLG is shared with primary segment-list and there is no other viable path with dispersed SRLG
- srlg-not-computed-path
SRLG is not applicable, as primary segment-list has no applicable SRLG for path computation
- srlg-primary-segment-list-down
SRLG is not applicable, as primary segment-list is down
- unresolved-first-segment
The router is unable to resolve the first SID (MPLS label value) into one or more outgoing interface(s) and next-hop(s)
- fib-add-pending
Segment-list is kept down, when adding next-hop into the FIB
- fib-add-failed
FIB has failed to add the next-hop group. Next-hop group represents a group of next-hops for valid segment-lists under a TE-policy
- maximum-label-stack-depth-exceeded
The resolution of the named path requires more labels than supported by the datapath.
- pce-update-with-empty-ero
PCE update has empty Explicit Route Object (EROs)
- segment-list-admin-down
Segment-list is administratively down
- ipv4-hops-in-ipv6-path
IPv4 and IPv6 hops are mixed in explicit path
- ipv6-hops-in-ipv4-path
IPv6 and IPv4 hops are mixed in explicit path
- sid-hops-in-ip-path
SID (label-based) and IP hops are mixed in explicit path
- sid-hops-with-invalid-path-computation
SID hops (labeled hops) with path computation local-cspf/pcep is not allowed
- policy-down
Traffic engineering policy is down
- pce-association-conflict

- PCE-association conflict
- retry-on-config-change
Segment-list retry attempted due to config change
- clear-command
Segment-list retry attempted due to manual clear command
- secondary-segment-list
Secondary type segment-list, Primary is always preferred when available
- bfd-down
BFD is reported down
- te-rtr-id-not-configured
TE router ID config is missing
- pce-down
PCE is unavailable
- pce-error
PCE response has error or timed-out
- pcc-error
PCC responded with error

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

forwarding-state *keyword*

Description Forwarding state of the segment-list, tells about the activeness of segment-list in the data-path. active - enabled for forwarding traffic in data-path, inactive - programmed in data-path, not enabled for forwarding, could be standby or waiting for sBFD to come up, backup - enabled as a backup for currently active segment-list

Context [network-instance name](#) *string* [traffic-engineering-policies policy policy-name](#) *string* [segment-list segment-list-index](#) *number* [forwarding-state](#) *keyword*

Tree [forwarding-state](#)

Options

- active
- inactive
- backup

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-oper-state-change *string*

Description	Time elapsed since the last operational state change for the segment-list
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> last-oper-state-change <i>string</i>
Tree	last-oper-state-change
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state *keyword*

Description	Segment list operational state
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up The segment-list is operationally up. • down The segment-list is operationally down
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state-change-count *number*

Description	Traffic Engineering Policy segment-list operational state change count Operational status transition from up to down, down to up, etc all accounted under this counter
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> oper-state-change-count <i>number</i>
Tree	oper-state-change-count
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

pce-control *boolean*

Description	Set to true for a PCE controlled segment-list
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> pce-control <i>boolean</i>
Tree	pce-control
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

pce-report *boolean*

Description	seto to true to enable reporting of the segment-list to the PCE
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> pce-report <i>boolean</i>
Tree	pce-report
Default	false
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

priority

Description	Configure setup and hold priorities to be conveyed to the PCE for preemption purposes
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> priority
Tree	priority
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hold-priority *number*

Description	Hold priority of a TE policy in relation to preemption action
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> priority hold-priority <i>number</i>
Tree	hold-priority
Range	0 to 7
Default	0

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

setup-priority *number*

Description	Setup priority of a TE policy in relation to preemption action
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> priority setup-priority <i>number</i>
Tree	setup-priority
Range	0 to 7
Default	7
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

segment-list-preference *number*

Description	Preference value of this segment-list For an sr-mpls-uncolored TE policy one standby segment list is preferred over another if it has a lower preference value. The implicit default value is 100.
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> segment-list-preference <i>number</i>
Tree	segment-list-preference
Range	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

segment-list-type *keyword*

Description	Segment-list type: primary, standby or secondary Standby is programmed in datapath, consumes resources and is ready for a failover any time. Secondary is programmed upon failure of the previous active
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> segment-list-type <i>keyword</i>
Tree	segment-list-type
Options	<ul style="list-style-type: none"> primary

	<ul style="list-style-type: none"> secondary standby
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy-database

Description	Traffic Engineering Policy Database
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database
Tree	policy-database
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

active-te-policies *number*

Description	Number of active Traffic Engineering Polices
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database active-te-policies <i>number</i>
Tree	active-te-policies
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-uncolored

Description	Uncolored Traffic Engineering Policy Paths. Also referred to as SR-TE LSPs
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored
Tree	sr-uncolored
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy [policy-name](#) *string* [protocol-origin](#) *keyword*

Description	Enter the Uncolored Traffic Engineering Policy Path list instance Also referred to as SR-TE LSP list
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i>

Tree	policy
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy-name *string*

Description	Name of Uncolored Traffic Engineering Policy
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i>
String Length	1 to 255
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

protocol-origin *keyword*

Description	Uncolored Traffic Engineering Policy, origination source. The method Policy path is computed. This list includes Path Computation Engine, explicitly configured paths, etc.
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i>
Options	<ul style="list-style-type: none"> • pcep PCEP used as signalling mechanism for the candidate path • bgp BGP used as signalling mechanism for the candidate path • local Management interface used for candidate path instantiation
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

active-segment-list-index *number*

Description	Uncolored Traffic Engineering Policy active segment-list index
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> active-segment-list-index <i>number</i>
Tree	active-segment-list-index

maintenance-policy *string*

Description	The maintenance policy to use with the TE policy
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin keyword maintenance maintenance-policy <i>string</i>
Tree	maintenance-policy
String Length	1 to 255
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

metric *number*

Description	Uncolored Traffic Engineering Policy metric
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin keyword metric number
Tree	metric
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-down-reason *identityref*

Description	The reason why the Traffic Engineering policy is operationally down. One of the following values:
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin keyword oper-down-reason identityref
Tree	oper-down-reason
Options	<ul style="list-style-type: none"> te-policy-admin-disabled The TE policy is administratively disabled te-policy-no-valid-segment-list The TE policy has no valid segment lists
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state *keyword*

Description	Traffic Engineering policy operational state.
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up The te-policy is operationally up. • down The te-policy is administratively down or no valid segment-list or due to other reasons.
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state-change-count *number*

Description	Traffic Engineering Policy operational state change count Operational status transition from up to down, down to up, etc all accounted under this counter
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> oper-state-change-count <i>number</i>
Tree	oper-state-change-count
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy-type *keyword*

Description	Uncolored Traffic Engineering Policy type
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> policy-type <i>keyword</i>
Tree	policy-type
Options	<ul style="list-style-type: none"> • sr-mpls-colored • sr-mpls-uncolored
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

segment-list *segment-list-index number*

Description	Enter the segment-list list instance
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> segment-list segment-list-index <i>number</i>
Tree	segment-list
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

segment-list-index *number*

Description	Index to enumerate the different segment lists.
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> segment-list segment-list-index <i>number</i>
Range	1 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bfd

Description	Enter the bfd context
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> segment-list segment-list-index <i>number</i> bfd
Tree	bfd
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bfd-state *keyword*

Description	The current state of the BFD session on the LSP path.
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> segment-list segment-list-index <i>number</i> bfd bfd-state <i>keyword</i>
Tree	bfd-state
Options	<ul style="list-style-type: none"> not-applicable

	<ul style="list-style-type: none"> • down • up
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

bfd-wait-for-up-expiry *string*

Description	The time in seconds left to wait for the bfd session to be up.
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin keyword segment-list segment-list-index <i>number</i> bfd bfd-wait-for-up-expiry <i>string</i>
Tree	bfd-wait-for-up-expiry
String Length	20 to 32
Configurable	False

bfd-wait-for-up-timer *number*

Description	<p>Specifies a wait-for-up timer value when seamless-bfd is enabled</p> <p>This timer takes effect if BFD does not come up, or BFD goes from up to down. The timer is started when BFD is first enabled on a segment-list or BFD transitions from up to down. When the timer expires if BFD is not yet come up, then the path is torn down by removing it from the TTM and the PI and the retry timer is started.</p> <p>The default is 3 seconds.</p>
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin keyword segment-list segment-list-index <i>number</i> bfd bfd-wait-for-up-timer <i>number</i>
Tree	bfd-wait-for-up-timer
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hold-down-timer *number*

Description	<p>Specifies a hold-down timer value when seamless-bfd is enabled</p> <p>The timer is started when the number of S-BFD sessions that are up drops below the threshold. The TE-policy path is not considered to be up again until the hold-down timer has expired and the number of S-BFD sessions</p>
--------------------	---

that are up equals or exceeds the threshold. A grace period after session down such that sBFD session flaps does not impact active path.

The default is 3 seconds.

Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> segment-list segment-list-index <i>number</i> bfd hold-down-timer <i>number</i>
Tree	hold-down-timer
Units	seconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hold-down-timer-expiry *string*

Description	Time remaining on seamless-bfd hold down timer
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> segment-list segment-list-index <i>number</i> bfd hold-down-timer-expiry <i>string</i>
Tree	hold-down-timer-expiry
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

computed-segments

Description	Enter the computed-segments context
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> segment-list segment-list-index <i>number</i> computed-segments
Tree	computed-segments
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

segment [segment-index](#) *number*

Description	Enter the segment list instance
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> segment-list segment-list-index <i>number</i> computed-segments segment segment-index <i>number</i>

Tree	segment
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

segment-index *number*

Description	Index to enumerate the different segments in a segment-list
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> segment-list segment-list-index <i>number</i> computed-segments segment segment-index <i>number</i>

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

explicit-path *string*

Description	Explicit-path used for instantiating Segment List under Traffic Engineering Policy
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> segment-list segment-list-index <i>number</i> explicit-path <i>string</i>
Tree	explicit-path
String Length	1 to 255
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

failed-reason *identityref*

Description	The reason why the segment list is invalid. One of the following values:
Context	network-instance name <i>string</i> traffic-engineering-policies policy-database sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> segment-list segment-list-index <i>number</i> failed-reason <i>identityref</i>
Tree	failed-reason
Options	<ul style="list-style-type: none"> • path-computation-request-timeout Path computation request timed out • path-computation-no-route No valid route is returned for path computation request • no-resources-available Required resources are depleted, not enough resources to establish the requested segment-list • path-computation-bad-node Path computation failure due to a resolution issue of one or more of the hops • path-computation-routing-loop Path computation failure due to routing loop • unknown Segment-list is down due to unknown reason • path-computation-no-route-owner

- Path computation failure as none of the IGP instances had a valid route to one of the hops
- path-computation-hop-limit-exceeded
Path computation failure due to hop limit. No path within the hop limit constraint configured
- srlg-not-disjoint
SRLG is shared with primary segment-list and there is no other viable path with dispersed SRLG
- srlg-not-computed-path
SRLG is not applicable, as primary segment-list has no applicable SRLG for path computation
- srlg-primary-segment-list-down
SRLG is not applicable, as primary segment-list is down
- unresolved-first-segment
The router is unable to resolve the first SID (MPLS label value) into one or more outgoing interface(s) and next-hop(s)
- fib-add-pending
Segment-list is kept down, when adding next-hop into the FIB
- fib-add-failed
FIB has failed to add the next-hop group. Next-hop group represents a group of next-hops for valid segment-lists under a TE-policy
- maximum-label-stack-depth-exceeded
The resolution of the named path requires more labels than supported by the datapath.
- pce-update-with-empty-ero
PCE update has empty Explicit Route Object (EROs)
- segment-list-admin-down
Segment-list is administratively down
- ipv4-hops-in-ipv6-path
IPv4 and IPv6 hops are mixed in explicit path
- ipv6-hops-in-ipv4-path
IPv6 and IPv4 hops are mixed in explicit path
- sid-hops-in-ip-path
SID (label-based) and IP hops are mixed in explicit path
- sid-hops-with-invalid-path-computation
SID hops (labeled hops) with path computation local-cspf/pcep is not allowed
- policy-down

- Traffic engineering policy is down
- pce-association-conflict
PCE-association conflict
- retry-on-config-change
Segment-list retry attempted due to config change
- clear-command
Segment-list retry attempted due to manual clear command
- secondary-segment-list
Secondary type segment-list, Primary is always preferred when available
- bfd-down
BFD is reported down
- te-rtr-id-not-configured
TE router ID config is missing
- pce-down
PCE is unavailable
- pce-error
PCE response has error or timed-out
- pcc-error
PCC responded with error

Configurable

False

Platforms

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

forwarding-state *keyword***Description**

Forwarding state of the segment-list, tells about the activeness of segment-list in the data-path. active - enabled for forwarding traffic in data-path, inactive - programmed in data-path, not enabled for forwarding, could be standby or waiting for sBFD to come up, backup - enabled as a backup for currently active segment-list

Context

Tree	failure-reason
Options	<ul style="list-style-type: none"> • path-computation-request-timeout Path computation request timed out • path-computation-no-route No valid route is returned for path computation request • no-resources-available Required resources are depleted, not enough resources to establish the requested segment-list • path-computation-bad-node Path computation failure due to a resolution issue of one or more of the hops • path-computation-routing-loop Path computation failure due to routing loop • unknown Segment-list is down due to unknown reason • path-computation-no-route-owner Path computation failure as none of the IGP instances had a valid route to one of the hops • path-computation-hop-limit-exceeded Path computation failure due to hop limit. No path within the hop limit constraint configured • srlg-not-disjoint SRLG is shared with primary segment-list and there is no other viable path with dispersed SRLG • srlg-not-computed-path SRLG is not applicable, as primary segment-list has no applicable SRLG for path computation • srlg-primary-segment-list-down SRLG is not applicable, as primary segment-list is down • unresolved-first-segment The router is unable to resolve the first SID (MPLS label value) into one or more outgoing interface(s) and next-hop(s) • fib-add-pending Segment-list is kept down, when adding next-hop into the FIB • fib-add-failed

FIB has failed to add the next-hop group. Next-hop group represents a group of next-hops for valid segment-lists under a TE-policy

- maximum-label-stack-depth-exceeded

The resolution of the named path requires more labels than supported by the datapath.

- pce-update-with-empty-ero

PCE update has empty Explicit Route Object (EROs)

- segment-list-admin-down

Segment-list is administratively down

- ipv4-hops-in-ipv6-path

IPv4 and IPv6 hops are mixed in explicit path

- ipv6-hops-in-ipv4-path

IPv6 and IPv4 hops are mixed in explicit path

- sid-hops-in-ip-path

SID (label-based) and IP hops are mixed in explicit path

- sid-hops-with-invalid-path-computation

SID hops (labeled hops) with path computation local-cspf/pcep is not allowed

- policy-down

Traffic engineering policy is down

- pce-association-conflict

PCE-association conflict

- retry-on-config-change

Segment-list retry attempted due to config change

- clear-command

Segment-list retry attempted due to manual clear command

- secondary-segment-list

Secondary type segment-list, Primary is always preferred when available

- bfd-down

BFD is reported down

- te-rtr-id-not-configured

TE router ID config is missing

- pce-down

PCE is unavailable

- pce-error

PCE response has error or timed-out

- pcc-error

PCC responded with error

Tree [failed-reason](#)

Options

- [path-computation-request-timeout](#)
Path computation request timed out
- [path-computation-no-route](#)
No valid route is returned for path computation request
- [no-resources-available](#)
Required resources are depleted, not enough resources to establish the requested segment-list
- [path-computation-bad-node](#)

- Path computation failure due to a resolution issue of one or more of the hops
- path-computation-routing-loop
Path computation failure due to routing loop
- unknown
Segment-list is down due to unknown reason
- path-computation-no-route-owner
Path computation failure as none of the IGP instances had a valid route to one of the hops
- path-computation-hop-limit-exceeded
Path computation failure due to hop limit. No path within the hop limit constraint configured
- srlg-not-disjoint
SRLG is shared with primary segment-list and there is no other viable path with dispersed SRLG
- srlg-not-computed-path
SRLG is not applicable, as primary segment-list has no applicable SRLG for path computation
- srlg-primary-segment-list-down
SRLG is not applicable, as primary segment-list is down
- unresolved-first-segment
The router is unable to resolve the first SID (MPLS label value) into one or more outgoing interface(s) and next-hop(s)
- fib-add-pending
Segment-list is kept down, when adding next-hop into the FIB
- fib-add-failed
FIB has failed to add the next-hop group. Next-hop group represents a group of next-hops for valid segment-lists under a TE-policy
- maximum-label-stack-depth-exceeded
The resolution of the named path requires more labels than supported by the datapath.
- pce-update-with-empty-ero
PCE update has empty Explicit Route Object (EROs)
- segment-list-admin-down
Segment-list is administratively down

ip-in-ip

Description	Enter the ip-in-ip context
Context	network-instance name <i>string</i> tunnel-table ipv4 tunnel ipv4-prefix <i>string</i> type identityref owner <i>string</i> id number ip-in-ip
Tree	ip-in-ip
Configurable	False
Platforms	Supported on all platforms

destination-address (*ipv4-address* | *ipv6-address*)

Description	The IP address that identifies the destination of the tunnel.
Context	network-instance name <i>string</i> tunnel-table ipv4 tunnel ipv4-prefix <i>string</i> type identityref owner <i>string</i> id number ip-in-ip destination-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	destination-address
Configurable	False
Platforms	Supported on all platforms

source-address (*ipv4-address* | *ipv6-address*)

Description	The IP address that identifies the source of the tunnel.
Context	network-instance name <i>string</i> tunnel-table ipv4 tunnel ipv4-prefix <i>string</i> type identityref owner <i>string</i> id number ip-in-ip source-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	source-address
Configurable	False

Platforms Supported on all platforms

last-app-update *string*

Description The date and time of the last update of this tunnel by the owning application or protocol.

Context [network-instance name](#) *string* [tunnel-table ipv4 tunnel ipv4-prefix](#) *string type identityref owner* *string id number last-app-update* *string*

Tree [last-app-update](#)

String Length 20 to 32

Configurable False

Platforms Supported on all platforms

metric *number*

Description The metric of the tunnel.

Context [network-instance name](#) *string* [tunnel-table ipv4 tunnel ipv4-prefix](#) *string type identityref owner* *string id number metric* *number*

Tree [metric](#)

Configurable False

Platforms Supported on all platforms

next-hop-group *reference*

Description Leaf reference to a next-hop-group that has the direct next-hops towards the tunnel far-end

Context [network-instance name](#) *string* [tunnel-table ipv4 tunnel ipv4-prefix](#) *string type identityref owner* *string id number next-hop-group* *reference*

Tree [next-hop-group](#)

Reference [network-instance name](#) *string* [route-table next-hop-group index](#) *number*

Configurable False

Platforms Supported on all platforms

preference *number*

Description The tunnel table preference.

Context [network-instance name](#) *string* [tunnel-table ipv4 tunnel ipv4-prefix](#) *string type identityref owner* *string id number preference* *number*

Tree	preference
Configurable	False
Platforms	Supported on all platforms

vxlan

Description	Enter the vxlan context
Context	network-instance name string tunnel-table ipv4 tunnel ipv4-prefix string type identityref owner string id number vxlan
Tree	vxlan
Configurable	False
Platforms	Supported on all platforms

destination-address (*ipv4-address | ipv6-address*)

Description	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
Context	network-instance name string tunnel-table ipv4 tunnel ipv4-prefix string type identityref owner string id number vxlan destination-address (<i>ipv4-address ipv6-address</i>)
Tree	destination-address
Configurable	False
Platforms	Supported on all platforms

destination-udp-port *number*

Description	The destination UDP port number written into the outer IP/UDP header of VXLAN packets associated with this tunnel and originated by this router.
Context	network-instance name string tunnel-table ipv4 tunnel ipv4-prefix string type identityref owner string id number vxlan destination-udp-port <i>number</i>
Tree	destination-udp-port
Configurable	False
Platforms	Supported on all platforms

source-address (*ipv4-address | ipv6-address*)

Description	The IP address that identifies the local VXLAN Termination Endpoint (VTEP).
--------------------	---

Context	network-instance name <i>string</i> tunnel-table ipv4 tunnel ipv4-prefix <i>string</i> type identityref owner <i>string</i> id number vxlan source-address (<i>ipv4-address ipv6-address</i>)
Tree	source-address
Configurable	False
Platforms	Supported on all platforms

time-to-live *number*

Description	The Time To Live (TTL) value written into the outer IP header of VXLAN packets associated with this tunnel and originated by this router.
Context	network-instance name <i>string</i> tunnel-table ipv4 tunnel ipv4-prefix <i>string</i> type identityref owner <i>string</i> id number vxlan time-to-live <i>number</i>
Tree	time-to-live
Configurable	False
Platforms	Supported on all platforms

tunnel-summary

Description	Tunnel summary information
Context	network-instance name <i>string</i> tunnel-table ipv4 tunnel-summary
Tree	tunnel-summary
Configurable	False
Platforms	Supported on all platforms

tunnel-type *type identityref*

Description	Enter the tunnel-type list instance
Context	network-instance name <i>string</i> tunnel-table ipv4 tunnel-summary tunnel-type <i>type identityref</i>
Tree	tunnel-type
Configurable	False
Platforms	Supported on all platforms

type *identityref*

Description	Tunneling encapsulation format
--------------------	--------------------------------

Context	network-instance name <i>string</i> tunnel-table ipv4 tunnel-summary tunnel-type type identityref
Options	<ul style="list-style-type: none"> • ip-in-ip Tunnels with IP-in-IP encapsulation • gre Tunnels with GRE encapsulation • sr-isis Segment routing using MPLS dataplane, programmed by IS-IS • sr-ospfv2 Segment routing using MPLS dataplane, programmed by OSPFv2 • sr-ospfv3 Segment routing using MPLS dataplane, programmed by OSPFv3 • te-policy-sr-mpls-colored Tunnel setup with sr-mpls-colored type TE-Policy. Labeled Traffic Engineering Policy with color • te-policy-sr-mpls-uncolored Tunnel setup with sr-mpls-uncolored type TE-Policy. Labeled Traffic Engineering Policy with primary and secondary segment-lists. • vxlan Tunnels based on VXLAN encapsulation
Configurable	False
Platforms	Supported on all platforms

active-tunnels *number*

Description	The total number of tunnels, using this encapsulation type, that are active.
Context	network-instance name <i>string</i> tunnel-table ipv4 tunnel-summary tunnel-type type identityref active-tunnels <i>number</i>
Tree	active-tunnels
Configurable	False
Platforms	Supported on all platforms

inactive-tunnels *number*

Description	The total number of tunnels, using this encapsulation type, that are inactive (not programmed).
--------------------	---

Context	network-instance name <i>string</i> tunnel-table ipv4 tunnel-summary tunnel-type type identityref inactive-tunnels <i>number</i>
Tree	inactive-tunnels
Configurable	False
Platforms	Supported on all platforms

total-tunnels *number*

Description	The total number of tunnels, active and inactive, using this encapsulation type.
Context	network-instance name <i>string</i> tunnel-table ipv4 tunnel-summary tunnel-type type identityref total-tunnels <i>number</i>
Tree	total-tunnels
Default	0
Configurable	False
Platforms	Supported on all platforms

ipv6

Description	The container for the IPv6 tunnels associated with the network instance.
Context	network-instance name <i>string</i> tunnel-table ipv6
Tree	ipv6
Configurable	False
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	network-instance name <i>string</i> tunnel-table ipv6 statistics
Tree	statistics
Configurable	False
Platforms	Supported on all platforms

active-tunnels *number*

Description	The total number of tunnels, belonging to this address family, that are active.
--------------------	---

Context	network-instance name <i>string</i> tunnel-table ipv6 statistics active-tunnels <i>number</i>
Tree	active-tunnels
Configurable	False
Platforms	Supported on all platforms

inactive-tunnels *number*

Description	The total number of tunnels, belonging to this address family, that are inactive (not programmed).
Context	network-instance name <i>string</i> tunnel-table ipv6 statistics inactive-tunnels <i>number</i>
Tree	inactive-tunnels
Configurable	False
Platforms	Supported on all platforms

total-tunnels *number*

Description	The total number of tunnels, active and inactive, belonging to this address family
Context	network-instance name <i>string</i> tunnel-table ipv6 statistics total-tunnels <i>number</i>
Tree	total-tunnels
Default	0
Configurable	False
Platforms	Supported on all platforms

tunnel [ipv6-prefix](#) *string* [type](#) [identityref](#) [owner](#) *string* [id](#) *number*

Description	Enter the tunnel list instance
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel ipv6-prefix <i>string</i> type identityref owner <i>string</i> id <i>number</i>
Tree	tunnel
Configurable	False
Platforms	Supported on all platforms

ipv6-prefix *string*

Description	The IPv6 prefix associated with the endpoint of the tunnel.
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel ipv6-prefix <i>string type identityref owner string id number</i>
Configurable	False
Platforms	Supported on all platforms

type *identityref*

Description	The tunnel (encapsulation) type
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel ipv6-prefix <i>string type identityref owner string id number</i>
Options	<ul style="list-style-type: none"> • ip-in-ip Tunnels with IP-in-IP encapsulation • gre Tunnels with GRE encapsulation • sr-isis Segment routing using MPLS dataplane, programmed by IS-IS • sr-ospfv2 Segment routing using MPLS dataplane, programmed by OSPFv2 • sr-ospfv3 Segment routing using MPLS dataplane, programmed by OSPFv3 • te-policy-sr-mpls-colored Tunnel setup with sr-mpls-colored type TE-Policy. Labeled Traffic Engineering Policy with color • te-policy-sr-mpls-uncolored Tunnel setup with sr-mpls-uncolored type TE-Policy. Labeled Traffic Engineering Policy with primary and secondary segment-lists. • vxlan Tunnels based on VXLAN encapsulation
Configurable	False
Platforms	Supported on all platforms

owner *string*

Description	The name of the application that submitted the tunnel to TTM
--------------------	--

Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel ipv6-prefix <i>string</i> type identityref owner <i>string</i> id number
Configurable	False
Platforms	Supported on all platforms

id number

Description	An owner-assigned index value that is unique for each of the tunnels terminating at a particular prefix.
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel ipv6-prefix <i>string</i> type identityref owner <i>string</i> id number
Configurable	False
Platforms	Supported on all platforms

encapsulation-type keyword

Description	The type of encapsulation used by the tunnel.
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel ipv6-prefix <i>string</i> type identityref owner <i>string</i> id number encapsulation-type <i>keyword</i>
Tree	encapsulation-type
Options	<ul style="list-style-type: none"> • vxlan • mpls
Configurable	False
Platforms	Supported on all platforms

fib-programming

Description	Container for state related to the FIB programming of the tunnel
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel ipv6-prefix <i>string</i> type identityref owner <i>string</i> id number fib-programming
Tree	fib-programming
Configurable	False
Platforms	Supported on all platforms

not-programmed-reason keyword

Description	The reason why the tunnel is not programmed
--------------------	---

Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel ipv6-prefix <i>string</i> type identityref owner <i>string</i> id number fib-programming not-programmed-reason <i>keyword</i>
Tree	not-programmed-reason
Options	<ul style="list-style-type: none"> • out-of-tunnel-resources
Configurable	False
Platforms	Supported on all platforms

status *keyword*

Description	The status of the tunnel programming
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel ipv6-prefix <i>string</i> type identityref owner <i>string</i> id number fib-programming status <i>keyword</i>
Tree	status
Options	<ul style="list-style-type: none"> • active The tunnel is active and programmed into the datapath. • inactive The tunnel is inactive and not programmed into the datapath.
Configurable	False
Platforms	Supported on all platforms

internal-tags *string*

Description	Internal route tag written in the route/tunnel tables or BGP rib The internal-tag value is shown with the format 'type-string = hex-value-string'. For example:
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel ipv6-prefix <i>string</i> type identityref owner <i>string</i> id number internal-tags <i>string</i>
Tree	internal-tags
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	2

ip-in-ip

Description	Enter the ip-in-ip context
Context	network-instance name string tunnel-table ipv6 tunnel ipv6-prefix string type identityref owner string id number ip-in-ip
Tree	ip-in-ip
Configurable	False
Platforms	Supported on all platforms

destination-address (*ipv4-address* | *ipv6-address*)

Description	The IP address that identifies the destination of the tunnel.
Context	network-instance name string tunnel-table ipv6 tunnel ipv6-prefix string type identityref owner string id number ip-in-ip destination-address (ipv4-address ipv6-address)
Tree	destination-address
Configurable	False
Platforms	Supported on all platforms

source-address (*ipv4-address* | *ipv6-address*)

Description	The IP address that identifies the source of the tunnel.
Context	network-instance name string tunnel-table ipv6 tunnel ipv6-prefix string type identityref owner string id number ip-in-ip source-address (ipv4-address ipv6-address)
Tree	source-address
Configurable	False
Platforms	Supported on all platforms

last-app-update *string*

Description	The date and time of the last update of this tunnel by the owning application or protocol.
Context	network-instance name string tunnel-table ipv6 tunnel ipv6-prefix string type identityref owner string id number last-app-update string
Tree	last-app-update
String Length	20 to 32
Configurable	False

Platforms Supported on all platforms

metric number

Description The metric of the tunnel.

Context [network-instance name string](#) [tunnel-table ipv6 tunnel ipv6-prefix string type identityref owner string id number metric number](#)

Tree [metric](#)

Configurable False

Platforms Supported on all platforms

next-hop-group reference

Description Leaf reference to a next-hop-group that has the direct next-hops towards the tunnel far-end

Context [network-instance name string](#) [tunnel-table ipv6 tunnel ipv6-prefix string type identityref owner string id number next-hop-group reference](#)

Tree [next-hop-group](#)

Reference [network-instance name string](#) [route-table next-hop-group index number](#)

Configurable False

Platforms Supported on all platforms

preference number

Description The tunnel table preference.

Context [network-instance name string](#) [tunnel-table ipv6 tunnel ipv6-prefix string type identityref owner string id number preference number](#)

Tree [preference](#)

Configurable False

Platforms Supported on all platforms

vxlan

Description Enter the vxlan context

Context [network-instance name string](#) [tunnel-table ipv6 tunnel ipv6-prefix string type identityref owner string id number vxlan](#)

Tree [vxlan](#)

Configurable	False
Platforms	Supported on all platforms

destination-address (*ipv4-address* | *ipv6-address*)

Description	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel ipv6-prefix <i>string type identityref</i> owner <i>string id number vxlan</i> destination-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	destination-address
Configurable	False
Platforms	Supported on all platforms

destination-udp-port *number*

Description	The destination UDP port number written into the outer IP/UDP header of VXLAN packets associated with this tunnel and originated by this router.
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel ipv6-prefix <i>string type identityref</i> owner <i>string id number vxlan</i> destination-udp-port <i>number</i>
Tree	destination-udp-port
Configurable	False
Platforms	Supported on all platforms

source-address (*ipv4-address* | *ipv6-address*)

Description	The IP address that identifies the local VXLAN Termination Endpoint (VTEP).
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel ipv6-prefix <i>string type identityref</i> owner <i>string id number vxlan</i> source-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	source-address
Configurable	False
Platforms	Supported on all platforms

time-to-live *number*

Description	The Time To Live (TTL) value written into the outer IP header of VXLAN packets associated with this tunnel and originated by this router.
--------------------	---

Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel ipv6-prefix <i>string</i> type identityref owner <i>string</i> id <i>number</i> vxlan time-to-live <i>number</i>
Tree	time-to-live
Configurable	False
Platforms	Supported on all platforms

tunnel-summary

Description	Tunnel summary information
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel-summary
Tree	tunnel-summary
Configurable	False
Platforms	Supported on all platforms

tunnel-type [type](#) *identityref*

Description	Enter the tunnel-type list instance
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel-summary tunnel-type type <i>identityref</i>
Tree	tunnel-type
Configurable	False
Platforms	Supported on all platforms

[type](#) *identityref*

Description	Tunneling encapsulation format
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel-summary tunnel-type type <i>identityref</i>
Options	<ul style="list-style-type: none"> • ip-in-ip Tunnels with IP-in-IP encapsulation • gre Tunnels with GRE encapsulation • sr-isis Segment routing using MPLS dataplane, programmed by IS-IS • sr-ospfv2 Segment routing using MPLS dataplane, programmed by OSPFv2 • sr-ospfv3

Segment routing using MPLS dataplane, programmed by OSPFv3

- te-policy-sr-mpls-colored

Tunnel setup with sr-mpls-colored type TE-Policy. Labeled Traffic Engineering Policy with color

- te-policy-sr-mpls-uncolored

Tunnel setup with sr-mpls-uncolored type TE-Policy. Labeled Traffic Engineering Policy with primary and secondary segment-lists.

- vxlan

Tunnels based on VXLAN encapsulation

Configurable	False
Platforms	Supported on all platforms

active-tunnels *number*

Description	The total number of tunnels, using this encapsulation type, that are active.
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel-summary tunnel-type type identityref active-tunnels <i>number</i>
Tree	active-tunnels
Configurable	False
Platforms	Supported on all platforms

inactive-tunnels *number*

Description	The total number of tunnels, using this encapsulation type, that are inactive (not programmed).
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel-summary tunnel-type type identityref inactive-tunnels <i>number</i>
Tree	inactive-tunnels
Configurable	False
Platforms	Supported on all platforms

total-tunnels *number*

Description	The total number of tunnels, active and inactive, using this encapsulation type.
Context	network-instance name <i>string</i> tunnel-table ipv6 tunnel-summary tunnel-type type identityref total-tunnels <i>number</i>
Tree	total-tunnels

Default	0
Configurable	False
Platforms	Supported on all platforms

type *identityref*

Description	The type of network instance. The value of this leaf indicates the type of forwarding entries that should be supported by this network instance
Context	network-instance name <i>string</i> type identityref
Tree	type
Default	default
Options	<ul style="list-style-type: none"> • host A special routing instances that refers to the hosts network instance (i.e. the network namespace of PID 1) • default A special routing instance which acts as the 'default' routing instance for a network device. • ip-vrf A private Layer 3 only routing instance. • mac-vrf A private Layer 2 only switching instance. • vpws A private Layer 2 point-to-point instance.
Configurable	True
Platforms	Supported on all platforms

udp

Description	State for UDP datagrams routed using the route tables of this network instance.
Context	network-instance name <i>string</i> udp
Tree	udp
Configurable	False
Platforms	Supported on all platforms

listening-application *local-address (ipv4-address | ipv6-address) local-port number*

Description	List of applications that are listening on a particular UDP port bound to the network-instance.
Context	network-instance name <i>string</i> udp listening-application local-address (ipv4-address ipv6-address) <i>local-port number</i>
Tree	listening-application
Configurable	False
Platforms	Supported on all platforms

local-address *(ipv4-address | ipv6-address)*

Description	The local IP address accepted by the application. An all-zeroes value for the ipv4-address means that any IPv4 address is accepted. An all-zeroes value for the ipv6-address means that any IPv6 address is accepted.
Context	network-instance name <i>string</i> udp listening-application local-address (ipv4-address ipv6-address) <i>local-port number</i>
Configurable	False
Platforms	Supported on all platforms

local-port *number*

Description	The local port number accepted by the application.
Context	network-instance name <i>string</i> udp listening-application local-address (ipv4-address ipv6-address) <i>local-port number</i>
Range	0 to 65535
Configurable	False
Platforms	Supported on all platforms

process-id *number*

Description	The process ID of the application that owns the socket.
Context	network-instance name <i>string</i> udp listening-application local-address (ipv4-address ipv6-address) <i>local-port number process-id number</i>
Tree	process-id
Configurable	False
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	network-instance name <i>string</i> udp statistics
Tree	statistics
Configurable	False
Platforms	Supported on all platforms

ignored-multicast-packets *number*

Description	The total number of ignored multicast UDP datagrams.
Context	network-instance name <i>string</i> udp statistics ignored-multicast-packets <i>number</i>
Tree	ignored-multicast-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

in-checksum-errors *number*

Description	Increased when a received UDP packet has an invalid checksum.
Context	network-instance name <i>string</i> udp statistics in-checksum-errors <i>number</i>
Tree	in-checksum-errors
Default	0
Configurable	False
Platforms	Supported on all platforms

in-error-packets *number*

Description	The total number of received UDP datagrams that could not be delivered for reasons other than the lack of an application at the destination port.
Context	network-instance name <i>string</i> udp statistics in-error-packets <i>number</i>
Tree	in-error-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

in-no-open-ports-packets *number*

Description	The total number of received UDP datagrams for which there was no application at the destination port.
Context	network-instance name <i>string</i> udp statistics in-no-open-ports-packets <i>number</i>
Tree	in-no-open-ports-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

in-packets *number*

Description	The total number of UDP datagrams delivered to UDP users.
Context	network-instance name <i>string</i> udp statistics in-packets <i>number</i>
Tree	in-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

out-packets *number*

Description	The total number of UDP datagrams sent from this network instance.
Context	network-instance name <i>string</i> udp statistics out-packets <i>number</i>
Tree	out-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

receive-buffer-errors *number*

Description	Increased when memory cannot be allocated to process an incoming UDP packet.
Context	network-instance name <i>string</i> udp statistics receive-buffer-errors <i>number</i>
Tree	receive-buffer-errors
Default	0

Configurable	False
Platforms	Supported on all platforms

send-buffer-errors *number*

Description	Increased when memory cannot be allocated to send a UDP packet.
Context	network-instance name <i>string</i> udp statistics send-buffer-errors <i>number</i>
Tree	send-buffer-errors
Default	0
Configurable	False
Platforms	Supported on all platforms

vxlan-interface [name](#) *string*

Description	List of vxlan-interfaces used by this network-instance
Context	network-instance name <i>string</i> vxlan-interface name <i>string</i>
Tree	vxlan-interface
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
Max. Elements	1

name *string*

Description	Identifier of vxlan-interface used in this network-instance
Context	network-instance name <i>string</i> vxlan-interface name <i>string</i>
String Length	8 to 17
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

oper-down-reason *keyword*

Description	The reason for the vxlan-interface being down in the network-instance
Context	network-instance name <i>string</i> vxlan-interface name <i>string</i> oper-down-reason <i>keyword</i>
Tree	oper-down-reason

Options	<ul style="list-style-type: none"> • vxlan-tunnel-down • net-inst-down • vxlan-if-default-net-inst-source-address-missing • vxlan-if-default-net-inst-source-if-down • vrf-type-mismatch • no-mcid
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

oper-state *keyword*

Description	The operational state of this vxlan-interface.
Context	network-instance name <i>string</i> vxlan-interface name <i>string</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed • synchronizing Component is currently being synchronized • upgrading Component is currently being upgraded • low-power Component is offline due to insufficient system power

- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable

False

7.1 oam Descriptions

oam

Description	Enclosing container for OAM
Context	oam
Tree	oam
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ethcfm

Description	OAM configuration and operational data for the management of Ethernet (ETH-CFM)
Context	oam ethcfm
Tree	ethcfm
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

cfm-stack-table

Description	The cfm-stack-table provides an overview of CFM MEP state in a single view
Context	oam ethcfm cfm-stack-table
Tree	cfm-stack-table
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface

Description	Enter the interface context
Context	oam ethcfm cfm-stack-table interface
Tree	interface
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface *interface string level number direction keyword*

Description	List of interfaces that have CFM configured and the association CFM operational state
Context	oam ethcfm cfm-stack-table interface interface interface string level number direction keyword
Tree	interface
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface *string*

Description	Interface name
Context	oam ethcfm cfm-stack-table interface interface interface string level number direction keyword
String Length	3 to 20
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

level *number*

Description	The maintenance domain level
Context	oam ethcfm cfm-stack-table interface interface interface string level number direction keyword
Range	0 to 7
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

direction *keyword*

Description	The direction the MEP faces If 'down' the MEP sends CFM PDUs away from the MAC Relay Entity. If 'up' the MEP sends CFM PDUs towards the MAC Relay Entity.
Context	oam ethcfm cfm-stack-table interface interface interface string level number direction keyword
Options	<ul style="list-style-type: none"> • down • up

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

association-id *string*

Description	A uniquely assigned administrative name used to identify a maintenance association
Context	oam ethcfm cfm-stack-table interface interface interface <i>string level number direction keyword association-id string</i>
Tree	association-id
String Length	1 to 64
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

defects *keyword*

Description	Current received defects for the local MEP
Context	oam ethcfm cfm-stack-table interface interface interface <i>string level number direction keyword defects keyword</i>
Tree	defects
Options	<ul style="list-style-type: none"> • none • rdi-ccm • mac-status • remote-ccm • error-ccm • xcon-ccm • ais • csf-ais • csf-rdi • csf-los • eth-ed
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

domain-id *string*

Description	A uniquely assigned administrative name used to identify a maintenance domain
Context	oam ethcfm cfm-stack-table interface interface interface <i>string level number direction keyword domain-id string</i>
Tree	domain-id
String Length	1 to 64
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mac-address *string*

Description	MAC address of the Management Point
Context	oam ethcfm cfm-stack-table interface interface interface <i>string level number direction keyword mac-address string</i>
Tree	mac-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mep-id *number*

Description	A uniquely assigned MEP identifier with a given maintenance association
Context	oam ethcfm cfm-stack-table interface interface interface <i>string level number direction keyword mep-id number</i>
Tree	mep-id
Range	1 to 8191
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subinterface

Description	Enter the subinterface context
Context	oam ethcfm cfm-stack-table subinterface
Tree	subinterface
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subinterface *subinterface string primary-vlan (number | keyword) level number direction keyword*

Description	List of subinterfaces that have CFM configured and the association CFM operational state
Context	oam ethcfm cfm-stack-table subinterface subinterface subinterface string primary-vlan (number keyword) level number direction keyword
Tree	subinterface
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subinterface *string*

Description	Subinterface name
Context	oam ethcfm cfm-stack-table subinterface subinterface subinterface string primary-vlan (number keyword) level number direction keyword
String Length	5 to 25
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

primary-vlan *(number | keyword)*

Description	Primary VLAN or 'none'
Context	oam ethcfm cfm-stack-table subinterface subinterface subinterface string primary-vlan (number keyword) level number direction keyword
Range	1 to 4094
Options	<ul style="list-style-type: none"> • none
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

level *number*

Description	The maintenance domain level
Context	oam ethcfm cfm-stack-table subinterface subinterface subinterface string primary-vlan (number keyword) level number direction keyword
Range	0 to 7
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

direction *keyword*

Description The direction the MEP faces
If 'down' the MEP sends CFM PDUs away from the MAC Relay Entity. If 'up' the MEP sends CFM PDUs towards the MAC Relay Entity.

Context [oam ethcfm cfm-stack-table subinterface subinterface subinterface](#) *string primary-vlan (number | keyword) level number direction keyword*

Options

- down
- up

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

association-id *string*

Description A uniquely assigned administrative name used to identify a maintenance association

Context [oam ethcfm cfm-stack-table subinterface subinterface subinterface](#) *string primary-vlan (number | keyword) level number direction keyword association-id string*

Tree [association-id](#)

String Length 1 to 64

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

defects *keyword*

Description Current received defects for the local MEP

Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	32

reply-order *number*

Description	An index to distinguish among multiple LTRs with the same LTR transaction-id field value The reply-order are assigned sequentially from 1, in the order that the Linktrace Initiator received the LTR
Context	oam ethcfm domain domain-id string association association-id string mep mep-id reference linktrace latest-run reply reply-order number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

chassis-id (*mac-address | string | binary*)

Description	The value relating to the chassis-id-subtype in string of MAC address format
Context	oam ethcfm domain domain-id string association association-id string mep mep-id reference linktrace latest-run reply reply-order number chassis-id (mac-address string binary)
Tree	chassis-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

chassis-id-subtype (*number | keyword*)

Description	Data definitions associated with the Sender ID TLV
Context	oam ethcfm domain domain-id string association association-id string mep mep-id reference linktrace latest-run reply reply-order number chassis-id-subtype (number keyword)
Tree	chassis-id-subtype
Range	8 to 255
Options	<ul style="list-style-type: none"> • CHASSIS_COMPONENT Chassis identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737 • INTERFACE_ALIAS Chassis identifier based on the value of ifAlias object defined in IETF RFC 2863 • PORT_COMPONENT Chassis identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737 for a port or backplane component • MAC_ADDRESS

Chassis identifier based on the value of a unicast source address (encoded in network byte order and IEEE 802.3 canonical bit order), of a port on the containing chassis as defined in IEEE Std 802-2001

- NETWORK_ADDRESS

Chassis identifier based on a network address, associated with a particular chassis. The encoded address is composed of two fields. The first field is a single octet, representing the IANA AddressFamilyNumbers value for the specific address type, and the second field is the network address value

- INTERFACE_NAME

Chassis identifier based on the name of the interface, e.g., the value of if Name object defined in IETF RFC 2863

- LOCAL

Chassis identifier based on a locally defined value

Configurable

False

Platforms

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

egress-action *keyword*

Description

An enumerated value indicating the value returned in the Egress Action field
This leaf is not present if no value is returned in the LTR.

Context

[oam ethcfm domain domain-id string association association-id string mep mep-id reference linktrace latest-run reply reply-order number egress-action keyword](#)

Tree

[egress-action](#)

Options

- ok
Indicates the target data frame would be passed through to the MAC Relay Entity
- down
Indicates the Bridge Ports MAC Operational parameter is false
- blocked
Indicates the target data frame would not be forwarded if received on this Port due to active topology enforcement
- vid
Indicates the ingress port is not in the member set of the LTMs VID, and ingress filtering is enabled
This means the target data frame would be filtered by ingress filtering.

Configurable

False

Platforms

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

egress-mac *string*

Description	The MAC address returned in the Egress MAC Address field This leaf is not present if no value is returned in the LTR.
Context	oam ethcfm domain domain-id string association association-id string mep mep-id reference linktrace latest-run reply reply-order number egress-mac string
Tree	egress-mac
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-mep-id *number*

Description	Specifies a local MEP identifier unique over a given maintenance association
Context	oam ethcfm learned-remote-mac domain-id <i>string</i> association-id <i>string</i> local-mep-id <i>number</i> remote-mep-id <i>number</i>
Range	1 to 8191
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

remote-mep-id *number*

Description	Specifies a remote MEP identifier unique over a given maintenance association
Context	oam ethcfm learned-remote-mac domain-id <i>string</i> association-id <i>string</i> local-mep-id <i>number</i> remote-mep-id <i>number</i>
Range	1 to 8191
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

remote-mac-address *string*

Description	The the source MAC address used by the remote MEP in the most recently received CCM PDU
Context	oam ethcfm learned-remote-mac domain-id <i>string</i> association-id <i>string</i> local-mep-id <i>number</i> remote-mep-id <i>number</i> remote-mac-address <i>string</i>
Tree	remote-mac-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

stale-flag *boolean*

Description	<p>Indicates if the learned MAC entry for this remote MEP matches the entry found in the list on the local MEP</p> <p>The value 'false' indicates that the MAC address matches the entry found in both the lists for the same local and remote MEP values and therefore is not considered stale.</p> <p>The value 'true' indicates either the entries do not match, or there is no equivalent entry for the remote MEP in the list on the local MEP, so the learned remote MAC address in this table is considered stale.</p>
--------------------	---

Context	oam ethcfm learned-remote-mac domain-id string association-id string local-mep-id number remote-mep-id number stale-flag boolean
Tree	stale-flag
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Enter the ETH-CFM system level statistics context
Context	oam ethcfm statistics
Tree	statistics
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

error-discards *number*

Description	Indicates the number of discarded ETH-CFM packets received on the node A packet may be discarded for several reasons including, but not limited to, malformed PDU, invalid TLVs, MEP admin down, etc.
Context	oam ethcfm statistics error-discards number
Tree	error-discards
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

receive-congestion-drops *number*

Description	Indicates the number of dropped ETH-CFM packets on the node in the receive direction A packet drop can be caused by resource contention.
Context	oam ethcfm statistics receive-congestion-drops number
Tree	receive-congestion-drops
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

receive-count *number*

Description	Indicates the number of ETH-CFM packets received on the node
Context	oam ethcfm statistics receive-count <i>number</i>
Tree	receive-count
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transmit-congestion-drops *number*

Description	Indicates the number of dropped ETH-CFM packets on the node in the transmit direction A packet drop can be caused by resource contention.
Context	oam ethcfm statistics transmit-congestion-drops <i>number</i>
Tree	transmit-congestion-drops
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transmit-count *number*

Description	Indicates the number of ETH-CFM packets transmitted from the node
Context	oam ethcfm statistics transmit-count <i>number</i>
Tree	transmit-count
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ippm

Description	Context for IP Performance Measurement shared elements
Context	oam ippm
Tree	ippm
Configurable	True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

source-udp-port-pools

Description Context for source UDP port allocation to IPPM application
Context [oam ippm source-udp-port-pools](#)
Tree [source-udp-port-pools](#)
Configurable True
Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

port *port-number number*

Description List of UDP ports
Context [oam ippm source-udp-port-pools port port-number number](#)
Tree [port](#)
Configurable True
Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

port-number *number*

Description UDP port number
Context [oam ippm source-udp-port-pools port port-number number](#)
Range 64374 to 64383
Configurable True
Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

application-assignment *keyword*

Description IP Performance Measurement application assigned to the UDP port
Context [oam ippm source-udp-port-pools port port-number number application-assignment keyword](#)
Tree [application-assignment](#)
Default unassigned
Options

- oam-pm-ip
Performance monitoring IP
- link-measurement

- Link Measurement
 - unassigned
 - No IPPM application assigned

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-use *boolean*

Description	Referenced by an application test When false no test is referencing the UDP port. When true a test is referencing the UDP port. The application assignment can only be changed when the value is false.
Context	oam ippm source-udp-port-pools port port-number number in-use <i>boolean</i>
Tree	in-use
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

link-measurement

Description	Context for Link Measurement
Context	oam link-measurement
Tree	link-measurement
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface name *string*

Description	List of interface names
Context	oam link-measurement interface name <i>string</i>
Tree	interface
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *string*

Description	The interface name
--------------------	--------------------

This can be configured in one of two forms. Fully qualified reference to an interface subinterface, example ethernet-1/1.1, or symbolic alias, example interface-1. When the fully qualified name is specified the 'interface-ref' should not be configured. When the symbolic alias is specified the 'interface-ref' must be configured.

Context	oam link-measurement interface name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

aggregate-newest-index *number*

Description	Index of the newest aggregate sample window for this subinterface
Context	oam link-measurement interface name <i>string</i> aggregate-newest-index <i>number</i>
Tree	aggregate-newest-index
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

destination-ip-auto-assigned *boolean*

Description	Destination IP address auto assigned
Context	oam link-measurement interface name <i>string</i> destination-ip-auto-assigned <i>boolean</i>
Tree	destination-ip-auto-assigned
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

detectable-transmit-error *keyword*

Description	Detectable error interrupting Link Measurement tests Packet transmission is prevented for the following detectable transmit errors; subinterface-down, invalid-dest-ip, invalid-subinterface-type, same-source-ip-destination-ip.
Context	oam link-measurement interface name <i>string</i> detectable-transmit-error <i>keyword</i>
Tree	detectable-transmit-error
Options	<ul style="list-style-type: none"> • none

- subinterface-down
- unexpected-error
- no-route
- source-ip-not-local
- invalid-dest-ip
- subinterface-type-not-supported
- same-source-ip-destination-ip

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dynamic-measurement

Description	Context for Dynamic Measurement of IP interface
Context	oam link-measurement interface name <i>string</i> dynamic-measurement
Tree	dynamic-measurement
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

link-measurement-template *reference*

Description	The link measurement template assigned to the subinterface
Context	oam link-measurement interface name <i>string</i> dynamic-measurement link-measurement-template <i>reference</i>
Tree	link-measurement-template
Reference	oam link-measurement measurement-template template-name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

stamp

Description	Context for STAMP IP protocol configuration
Context	oam link-measurement interface name <i>string</i> dynamic-measurement stamp
Tree	stamp
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4

Description	Context for ipv4 address configuration
Context	oam link-measurement interface name <i>string</i> dynamic-measurement stamp ipv4
Tree	ipv4
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Administrative state of STAMP IPv4 packets
Context	oam link-measurement interface name <i>string</i> dynamic-measurement stamp ipv4 admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

destination-ip *string*

Description	Unicast IPv4 destination address When not specified and the primary local IP address has a prefix length of 30 or 31 the destination address will be the compliment. Otherwise, must be specified.
Context	oam link-measurement interface name <i>string</i> dynamic-measurement stamp ipv4 destination-ip <i>string</i>
Tree	destination-ip
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

source-ip *string*

Description	Unicast IPv4 source address When not specified the primary local interface address will be used.
--------------------	---

Context	oam link-measurement interface name <i>string</i> dynamic-measurement stamp ipv4 source-ip <i>string</i>
Tree	source-ip
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6

Description	Context for ipv6 address
Context	oam link-measurement interface name <i>string</i> dynamic-measurement stamp ipv6
Tree	ipv6
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Administrative state of STAMP IPv6 packets
Context	oam link-measurement interface name <i>string</i> dynamic-measurement stamp ipv6 admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

destination-ip *string*

Description	Global unicast or link-local unicast IPv6 destination address When not specified the IPv6 destination discovery is an option for the measurement template.
Context	oam link-measurement interface name <i>string</i> dynamic-measurement stamp ipv6 destination-ip <i>string</i>
Tree	destination-ip
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

source-ip *string*

Description	Global unicast or link-local unicast IPv6 source address When not specified the link-local interface address will be used.
Context	oam link-measurement interface name <i>string</i> dynamic-measurement stamp ipv6 source-ip <i>string</i>
Tree	source-ip
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-use-destination-udp-port *number*

Description	Destination UDP port in use
Context	oam link-measurement interface name <i>string</i> in-use-destination-udp-port <i>number</i>
Tree	in-use-destination-udp-port
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

in-use-source-udp-port *number*

Description	Source UDP port in use
Context	oam link-measurement interface name <i>string</i> in-use-source-udp-port <i>number</i>
Tree	in-use-source-udp-port
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface-ref

Description	Reference to a subinterface If interface-ref is configured the ../interface/name will be considered as an alias regardless of its form.
Context	oam link-measurement interface name <i>string</i> interface-ref
Tree	interface-ref
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface *reference*

Description Reference to a base interface

Context [oam link-measurement interface name string interface-ref interface reference](#)

Tree [interface](#)

Reference [interface name string](#)

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subinterface *reference*

Description Reference to a subinterface
This requires the base interface to be specified using the interface leaf in this container.

Context [oam link-measurement interface name string interface-ref subinterface reference](#)

Tree [subinterface](#)

Reference [interface name string subinterface index number](#)

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-reported-dynamic-delay (*number | keyword*)

Description Last delay measurement reported

Context [oam link-measurement interface name string last-reported-dynamic-delay \(number | keyword\)](#)

Tree [last-reported-dynamic-delay](#)

Range 0 to 2147483647

Units microseconds

Options

- none

No value has been reported

Configurable

False

Platforms

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state keyword**Description**

Operational state of link measurement on this interface

Context

[oam link-measurement interface name](#) *string* **oper-state** *keyword*

Tree

[oper-state](#)

Options

- up
Component or process is operational
- down
Component or process is not operational
- empty
Component slot is empty
- downloading
Component is downloading image into memory
- booting
Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting
Component or process is currently waiting
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

operational-destination-address (*ipv4-address* | *ipv6-address*)

Description	Destination IP address used by STAMP test packets
Context	oam link-measurement interface name <i>string</i> operational-destination-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	operational-destination-address

Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

integrity *boolean*

Description	Percentage of results meets integrity criteria
Context	oam link-measurement interface name <i>string</i> statistics aggregate-sample-window index index <i>number</i> integrity <i>boolean</i>
Tree	integrity
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum *number*

Description	Maximum delay measurement reported to the aggregate sample window
Context	oam link-measurement interface name <i>string</i> statistics aggregate-sample-window index index <i>number</i> maximum <i>number</i>
Tree	maximum
Units	microseconds
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

minimum *number*

Description Minimum delay measurement reported to the aggregate sample window

Context [oam link-measurement interface name](#) *string* [statistics aggregate-sample-window index index](#) *number* [minimum](#) *number*

Tree [minimum](#)

Units microseconds

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

result *number*

Description Delay being evaluated for reporting

Context [oam link-measurement interface name](#) *string* [statistics aggregate-sample-window index index](#) *number* [result](#) *number*

Tree [result](#)

Units microseconds

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sample-window-count *number*

Description Number of sample windows completed meeting integrity requirement

Context [oam link-measurement interface name](#) *string* [statistics aggregate-sample-window index index](#) *number* [sample-window-count](#) *number*

Tree [sample-window-count](#)

Default 0

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

window-state *keyword*

Description Enter the window-state context

Context [oam link-measurement interface name](#) *string* [statistics aggregate-sample-window index index](#) *number* [window-state](#) *keyword*

Tree	window-state
Options	<ul style="list-style-type: none"> completed Window ran to completion in-progress Window currently active sw-reported Sample window threshold triggered report, aggregated sample window restarted asw-reported Aggregate sample window threshold triggered report terminated Window terminated prior to completion
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sample-window

Description	Context for sample window statistics Rolling buffer maintains the last 50 results.
Context	oam link-measurement interface name <i>string</i> statistics sample-window
Tree	sample-window
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

index *index number*

Description	Index list instance
Context	oam link-measurement interface name <i>string</i> statistics sample-window index <i>index number</i>
Tree	index
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

index *number*

Description	Index used to differentiate sample windows on the same subinterface
--------------------	---

Context	oam link-measurement interface name <i>string</i> statistics sample-window index index <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

average *number*

Description	Average delay computed
Context	oam link-measurement interface name <i>string</i> statistics sample-window index index <i>number</i> average <i>number</i>
Tree	average
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

duplicate-packet-count *number*

Description	Count of duplicate packets that have arrived during this sample window
Context	oam link-measurement interface name <i>string</i> statistics sample-window index index <i>number</i> duplicate-packet-count <i>number</i>
Tree	duplicate-packet-count
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

end-timestamp-utc *string*

Description	Time (UTC) at which this sample window closed
Context	oam link-measurement interface name <i>string</i> statistics sample-window index index <i>number</i> end-timestamp-utc <i>string</i>
Tree	end-timestamp-utc
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

error-count *number*

Description	Number of erroneous delay measurements that occurred in this sample window
Context	oam link-measurement interface name <i>string</i> statistics sample-window index index <i>number</i> error-count <i>number</i>
Tree	error-count
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

integrity *boolean*

Description	Percentage of results meets integrity criteria
Context	oam link-measurement interface name <i>string</i> statistics sample-window index index <i>number</i> integrity <i>boolean</i>
Tree	integrity
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum *number*

Description	Maximum delay computed
Context	oam link-measurement interface name <i>string</i> statistics sample-window index index <i>number</i> maximum <i>number</i>
Tree	maximum
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

minimum *number*

Description	Minimum delay computed
Context	oam link-measurement interface name <i>string</i> statistics sample-window index index <i>number</i> minimum <i>number</i>
Tree	minimum
Units	microseconds

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

received-packets *number*

Description	Number of STAMP packets received from the session-reflector
Context	oam link-measurement interface name <i>string</i> statistics sample-window index index <i>number</i> received-packets <i>number</i>
Tree	received-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

result *number*

Description	Delay evaluated for reporting
Context	oam link-measurement interface name <i>string</i> statistics sample-window index index <i>number</i> result <i>number</i>
Tree	result
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

stamp-malformed-flag-count *number*

Description	Count of packets in this sample window with the M (Malformed) bit set
Context	oam link-measurement interface name <i>string</i> statistics sample-window index index <i>number</i> stamp-malformed-flag-count <i>number</i>
Tree	stamp-malformed-flag-count
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

stamp-unrecognized-flag-count *number*

Description	Number of packets in this sample window with the U (Unrecognized) bit set
--------------------	---

Context	oam link-measurement interface name <i>string</i> statistics sample-window index index <i>number</i> stamp-unrecognized-flag-count <i>number</i>
Tree	stamp-unrecognized-flag-count
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transmitted-packets *number*

Description	Number of STAMP packets transmitted to the session-reflector
Context	oam link-measurement interface name <i>string</i> statistics sample-window index index <i>number</i> transmitted-packets <i>number</i>
Tree	transmitted-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

window-state *keyword*

Description	Enter the window-state context
Context	oam link-measurement interface name <i>string</i> statistics sample-window index index <i>number</i> window-state <i>keyword</i>
Tree	window-state
Options	<ul style="list-style-type: none"> • completed Window ran to completion • in-progress Window currently active • sw-reported Sample window threshold triggered report, aggregated sample window restarted • terminated Window terminated prior to completion
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

zero-or-negative-delay-count *number*

Description	Count of packets that have a zero or negative computed delay during this sample window
Context	oam link-measurement interface name <i>string</i> statistics sample-window index index <i>number</i> zero-or-negative-delay-count <i>number</i>
Tree	zero-or-negative-delay-count
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

measurement-template [template-name](#) *string*

Description	List of measurement templates
Context	oam link-measurement measurement-template template-name <i>string</i>
Tree	measurement-template
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	255

template-name *string*

Description	Measurement template name Modificaiton to bin-group attributes will cause associated tests to be terminated and restarted.
Context	oam link-measurement measurement-template template-name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Administrative state of the measurement template.
Context	oam link-measurement measurement-template template-name <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Default	disable

Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

aggregate-sample-window

Description	Context for aggregate sample window The aggregate sample window is a collection of sample windows. It executes threshold comparisons based on the results in each sample window.
Context	oam link-measurement measurement-template template-name <i>string</i> aggregate-sample-window
Tree	aggregate-sample-window
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

multiplier *number*

Description	Number of sample windows comprising the aggregate sample window
Context	oam link-measurement measurement-template template-name <i>string</i> aggregate-sample-window multiplier <i>number</i>
Tree	multiplier
Range	1 to 12
Default	12
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

threshold

Description	Context for threshold configuration
Context	oam link-measurement measurement-template template-name <i>string</i> aggregate-sample-window threshold
Tree	threshold
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

absolute number

Description	Absolute change compared to previously reported result
Context	oam link-measurement measurement-template template-name string aggregate-sample-window threshold absolute number
Tree	absolute
Range	1 to 100000
Units	microseconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

relative number

Description	Percentage of change compared to previously reported result
Context	oam link-measurement measurement-template template-name string aggregate-sample-window threshold relative number
Tree	relative
Range	1 to 100
Units	percent
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

window-integrity number

Description	Required sample count to consider window integral When not configured, results are compared to the configured thresholds regardless of sample count.
Context	oam link-measurement measurement-template template-name string aggregate-sample-window window-integrity number
Tree	window-integrity
Range	1 to 100
Units	percent
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

delay *keyword*

Description	Delay measurement type of interest
Context	oam link-measurement measurement-template template-name <i>string</i> delay <i>keyword</i>
Tree	delay
Default	minimum
Options	<ul style="list-style-type: none"> • minimum • maximum • average
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

description *string*

Description	Text description for the measurement template
Context	oam link-measurement measurement-template template-name <i>string</i> description <i>string</i>
Tree	description
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interval *number*

Description	Interval between test packet transmissions
Context	oam link-measurement measurement-template template-name <i>string</i> interval <i>number</i>
Tree	interval
Range	1 to 10
Default	1
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-reported-dynamic-delay-hold *number*

Description	Wait time to flush the last reported delay after operational change This command configures the timer that specifies the wait time before the last reported delay measurement is flushed after a link measurement test enters the operationally down state. When 0 the last reported delay is flushed immediately without delay.
Context	oam link-measurement measurement-template template-name <i>string</i> last-reported-dynamic-delay-hold <i>number</i>
Tree	last-reported-dynamic-delay-hold
Range	0 to 86400
Default	86400
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reporting *boolean*

Description	Report value reaching the threshold When true threshold events are reported to the routing engine. When false threshold events are not reported to the routing engine
Context	oam link-measurement measurement-template template-name <i>string</i> reporting <i>boolean</i>
Tree	reporting
Default	true
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sample-window

Description	Context for sample window The sample window is a collection of individual test packet results. It executes threshold comparisons using the results in the sample window.
Context	oam link-measurement measurement-template template-name <i>string</i> sample-window
Tree	sample-window
Configurable	True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

multiplier *number*

Description Defines the length of the measurement window, multiplier times interval

Context [oam link-measurement measurement-template template-name](#) *string*
[sample-window multiplier](#) *number*

Tree [multiplier](#)

Range 1 to 900

Default 10

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

threshold

Description Context for threshold configuration

Context [oam link-measurement measurement-template template-name](#) *string*
[sample-window threshold](#)

Tree [threshold](#)

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

absolute *number*

Description Absolute change compared to previously reported result

Context [oam link-measurement measurement-template template-name](#) *string*
[sample-window threshold absolute](#) *number*

Tree [absolute](#)

Range 1 to 100000

Units microseconds

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

relative *number*

Description Percentage of change compared to previously reported result

Context	oam link-measurement measurement-template template-name <i>string</i> sample-window threshold relative <i>number</i>
Tree	relative
Range	1 to 500
Units	percent
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

window-integrity *number*

Description	Required sample count to consider window integral When not configured, results are compared to the configured thresholds regardless of sample count.
Context	oam link-measurement measurement-template template-name <i>string</i> sample-window window-integrity <i>number</i>
Tree	window-integrity
Range	1 to 100
Units	percent
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

stamp

Description	Context for STAMP options used by the measurement template
Context	oam link-measurement measurement-template template-name <i>string</i> stamp
Tree	stamp
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

destination-udp-port *number*

Description	Destination UDP port
Context	oam link-measurement measurement-template template-name <i>string</i> stamp destination-udp-port <i>number</i>
Tree	destination-udp-port
Range	1 to 65535
Default	862

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dscp (*number | keyword*)

Description	DSCP value
Context	oam link-measurement measurement-template template-name string stamp dscp (<i>number keyword</i>)
Tree	dscp
Range	0 to 63
Default	CS6
Options	<ul style="list-style-type: none"> • CS0 • LE • CS1 • AF11 • AF12 • AF13 • CS2 • AF21 • AF22 • AF23 • CS3 • AF31 • AF32 • AF33 • CS4 • AF41 • AF42 • AF43 • CS5 • EF • CS6 • CS7
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

forwarding-class *reference*

Description	Forwarding class for packet treatment in the local node
Context	oam link-measurement measurement-template template-name <i>string</i> stamp forwarding-class <i>reference</i>
Tree	forwarding-class
Reference	qos forwarding-classes forwarding-class name <i>string</i>
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-destination-discovery

Description	Context for IPv6 destination discovery Ping well-known multicast address ff02::2 (all routers) to solicit response from the peer. Use the source address in the response as the destination address in the STAMP test packets.
Context	oam link-measurement measurement-template template-name <i>string</i> stamp ipv6-destination-discovery
Tree	ipv6-destination-discovery
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Administrative state of IPv6 destination discovery
Context	oam link-measurement measurement-template template-name <i>string</i> stamp ipv6-destination-discovery admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

discovery-interval *number*

Description	Transmission frequency while in discovery phase
Context	oam link-measurement measurement-template template-name <i>string</i> stamp ipv6-destination-discovery discovery-interval <i>number</i>
Tree	discovery-interval
Range	1 to 10
Default	10
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

discovery-timer *number*

Description	Maximum time to remain in the discovery phase The discovery phase will end when the IPv6 peer is discovered or this timer expires.
Context	oam link-measurement measurement-template template-name <i>string</i> stamp ipv6-destination-discovery discovery-timer <i>number</i>
Tree	discovery-timer
Range	1 to 1800
Default	60
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

update-interval *number*

Description	Transmission frequency to maintain the peer address after discovery phase completes When 0 no maintenance of the peer address once the discovery phase ends.
Context	oam link-measurement measurement-template template-name <i>string</i> stamp ipv6-destination-discovery update-interval <i>number</i>
Tree	update-interval
Range	0 to 3600
Default	600

Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

pad-tlv-size *number*

Description	Increase the STAMP PDU by including the PAD TLV
Context	oam link-measurement measurement-template template-name <i>string</i> stamp pad-tlv-size <i>number</i>
Tree	pad-tlv-size
Range	4 to 9714
Units	bytes
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

profile *keyword*

Description	QoS profile for packet treatment in the local node
Context	oam link-measurement measurement-template template-name <i>string</i> stamp profile <i>keyword</i>
Tree	profile
Default	in
Options	<ul style="list-style-type: none"> • in The second level priority profile • out The lowest level priority profile • exceed The third level priority profile • in-plus The highest priority profile
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

return-path

Description	Context for the STAMP return-path control
Context	oam link-measurement measurement-template template-name string stamp return-path
Tree	return-path
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

link *boolean*

Description	Include the Return Path sub-TLV specifying link
Context	oam link-measurement measurement-template template-name string stamp return-path link boolean
Tree	link
Default	false
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

source-udp-port *number*

Description	Automatically allocate or statically configure the source UDP port When 0 source UDP Port will automatically select an available source UDP port from the dynamic range. Configuring a specific value requires the UDP port to be assigned to the link-measurement application /oam ippm source-udp-port-pools port application-assignment.
Context	oam link-measurement measurement-template template-name string stamp source-udp-port number
Tree	source-udp-port
Range	0 64374 to 64383
Default	0
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ttl *number*

Description	Time to live
--------------------	--------------

Context	oam link-measurement measurement-template template-name <i>string</i> stamp ttl <i>number</i>
Tree	ttl
Range	1 to 255
Default	1
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

unidirectional-measurement *keyword*

Description	Method used to compute the forward unidirectional delay value
Context	oam link-measurement measurement-template template-name <i>string</i> unidirectional-measurement <i>keyword</i>
Tree	unidirectional-measurement
Default	derived
Options	<ul style="list-style-type: none"> • derived Computes forward unidirectional measurement using round-trip divide by 2 • actual Computes forward unidirectional measurements using (T2-T1)
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

Isp-ping

Description	Container of last ping results for different MPLS and segment routing tunnels
Context	oam lsp-ping
Tree	lsp-ping
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ldp

Description	Container of LSP ping results for different LDP tunnels
Context	oam lsp-ping ldp
Tree	ldp

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

fec prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	Enter the fec list instance
Context	oam lsp-ping ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	fec
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	The IPv4 or IPv6 prefix associated with the fec This is the destination that was pinged.
Context	oam lsp-ping ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session-id id number

Description	List of recent sessions (up to 10) with saved LSP ping results for the prefix
Context	oam lsp-ping ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number
Tree	session-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	10

id number

Description	The system-assigned session ID
Context	oam lsp-ping ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

path-destination

Description	Enter the path-destination context
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number path-destination
Tree	path-destination
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ip-address (ipv4-address | ipv6-address)

Description	IP address of the path destination
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number path-destination ip-address (ipv4-address ipv6-address)
Tree	ip-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

next-hop (ipv4-address | ipv6-address)

Description	Egress IP next hop address used with path destination
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number path-destination next-hop (ipv4-address ipv6-address)
Tree	next-hop
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subinterface *string*

Description	Egress router sub-interface used with the path destination
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number path-destination subinterface <i>string</i>
Tree	subinterface
String Length	5 to 25
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sequence *sequence-id number*

Description	List of probes sent during the test
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number
Tree	sequence
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sequence-id *number*

Description	Sequence ID of the probe, starting with 1 and incrementing by 1
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-interface *string*

Description	The subinterface that was used to transmit the echo-request message
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number out-interface string
Tree	out-interface
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe-size *number*

Description	The size of the IP packet MPLS echo-request message. Probe size does not include MPLS headers, if any
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number probe-size number
Tree	probe-size
Range	1 to 9500
Default	64
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reply

Description	Details about the reply message for this sequence number or hop
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number reply
Tree	reply
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mpls-ttl *number*

Description	The value of the MPLS TTL in the top label stack entry of the received echo-reply message
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number reply mpls-ttl number
Tree	mpls-ttl
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

received *boolean*

Description	Reads true if the reply message was received
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number reply received boolean
Tree	received
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reply-sender (ipv4-address | ipv6-address)

Description	The IP address of the sender of the echo-reply message
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number reply reply-sender (ipv4-address ipv6-address)
Tree	reply-sender
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

return-code *keyword*

Description	Return code value in the echo-reply
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number reply return-code keyword
Tree	return-code
Default	no-return-code
Options	<ul style="list-style-type: none"> no-return-code malformed-echo-request-received one-or-more-tlvs-not-understood replying-router-is-egress-for-fec-at-stack-depth-n replying-router-has-no-mapping-for-fec-at-stack-depth-n downstream-mapping-mismatch upstream-interface-index-unknown reserved label-switched-at-stack-depth-n label-switched-but-no-MPLS-at-stack-depth-n fec-does-not-use-given-label-at-stack-depth-n no-label-entry-at-stack-depth-n protocol-unavailable-at-stack-depth-n premature-termination ddmap-tlv-has-return-code-subcode-details label-switched-with-fec-change
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

return-subcode *number*

Description	Return subcode in the echo-reply
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number reply return-subcode number
Tree	return-subcode
Default	0
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

round-trip-time *number*

Description The round trip-time between the request and reply for this sequence number or hop

Context [oam lsp-ping ldp fec prefix \(ipv4-prefix | ipv6-prefix\) session-id id number sequence sequence-id number reply round-trip-time number](#)

Tree [round-trip-time](#)

Default 0

Units microseconds

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

udp-data-length *number*

Description The length of the UDP payload

Context [oam lsp-ping ldp fec prefix \(ipv4-prefix | ipv6-prefix\) session-id id number sequence sequence-id number reply udp-data-length number](#)

Tree [udp-data-length](#)

Default 0

Units bytes

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

request-sent *boolean*

Description True when it is possible for the datapath to send the request message

Context [oam lsp-ping ldp fec prefix \(ipv4-prefix | ipv6-prefix\) session-id id number sequence sequence-id number request-sent boolean](#)

Tree [request-sent](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

send-failure-reason *keyword*

Description	Indicates the reason why the OAM manager could not send the request message
Context	oam lsp-ping ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number sequence sequence-id number send-failure-reason keyword
Tree	send-failure-reason
Default	no errors
Options	<ul style="list-style-type: none"> • timeout • source-ip-not-local • invalid-prefix • sr-prefix-is-local • ldp-prefix-is-local • invalid-dest-ip • dest-address-type-mismatch • next-hop-ip-not-found • next-hop-if-name-not-found • packet-size-too-big • far-end-unreachable • prefix-unknown • ds-map-not-supported • unexpected-error • no errors
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Summary statistics for the test
Context	oam lsp-ping ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number statistics
Tree	statistics
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

round-trip-time

Description	Statistics for the round trip time, considering all the probes sent in the test
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number statistics round-trip-time
Tree	round-trip-time
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

average number

Description	The average round trip-time across all probes
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number statistics round-trip-time average number
Tree	average
Default	0
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum number

Description	The maximum round trip-time across all probes
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number statistics round-trip-time maximum number
Tree	maximum
Default	0
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

minimum number

Description	The minimum round trip-time across all probes
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number statistics round-trip-time minimum number
Tree	minimum

Default	0
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

standard-deviation *number*

Description	The standard deviation of the round trip-time across all probes
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number statistics round-trip-time standard-deviation number
Tree	standard-deviation
Default	0
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

test-active *boolean*

Description	Indicates if the test is still running (true) or not (false)
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number test-active boolean
Tree	test-active
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-isis

Description	Container of LSP ping results for different SR-ISIS tunnels
Context	oam lsp-ping sr-isis
Tree	sr-isis
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix-sid [prefix \(ipv4-prefix | ipv6-prefix\)](#)

Description	Enter the prefix-sid list instance
--------------------	------------------------------------

Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix)
Tree	prefix-sid
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix (*ipv4-prefix | ipv6-prefix*)

Description	The IPv4 or IPv6 prefix associated with the SID This is the destination that was pinged.
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix)
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session-id id number

Description	List of recent sessions (up to 10) with saved LSP ping results for the prefix
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number
Tree	session-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	10

id number

Description	The system-assigned session ID
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

path-destination

Description	Enter the path-destination context
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number path-destination
Tree	path-destination

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ip-address (*ipv4-address* | *ipv6-address*)

Description	IP address of the path destination
Context	oam lsp-ping sr-isis prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number path-destination ip-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	ip-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

next-hop (*ipv4-address* | *ipv6-address*)

Description	Egress IP next hop address used with path destination
Context	oam lsp-ping sr-isis prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number path-destination next-hop (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	next-hop
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subinterface *string*

Description	Egress router sub-interface used with the path destination
Context	oam lsp-ping sr-isis prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number path-destination subinterface <i>string</i>
Tree	subinterface
String Length	5 to 25
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sequence [sequence-id](#) *number*

Description	List of probes sent during the test
Context	oam lsp-ping sr-isis prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number sequence sequence-id <i>number</i>
Tree	sequence

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sequence-id *number*

Description	Sequence ID of the probe, starting with 1 and incrementing by 1
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-interface *string*

Description	The subinterface that was used to transmit the echo-request message
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number out-interface string
Tree	out-interface
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe-size *number*

Description	The size of the IP packet MPLS echo-request message. Probe size does not include MPLS headers, if any
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number probe-size number
Tree	probe-size
Range	1 to 9500
Default	64
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reply

Description	Details about the reply message for this sequence number or hop
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number reply

Tree	reply
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mpls-ttl *number*

Description	The value of the MPLS TTL in the top label stack entry of the received echo-reply message
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number reply mpls-ttl number
Tree	mpls-ttl
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

received *boolean*

Description	Reads true if the reply message was received
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number reply received boolean
Tree	received
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reply-sender (*ipv4-address | ipv6-address*)

Description	The IP address of the sender of the echo-reply message
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number reply reply-sender (ipv4-address ipv6-address)
Tree	reply-sender
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

return-code *keyword*

Description	Return code value in the echo-reply
--------------------	-------------------------------------

Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number sequence-id number reply return-code keyword
Tree	return-code
Default	no-return-code
Options	<ul style="list-style-type: none"> • no-return-code • malformed-echo-request-received • one-or-more-tlvs-not-understood • replying-router-is-egress-for-fec-at-stack-depth-n • replying-router-has-no-mapping-for-fec-at-stack-depth-n • downstream-mapping-mismatch • upstream-interface-index-unknown • reserved • label-switched-at-stack-depth-n • label-switched-but-no-MPLS-at-stack-depth-n • fec-does-not-use-given-label-at-stack-depth-n • no-label-entry-at-stack-depth-n • protocol-unavailable-at-stack-depth-n • premature-termination • ddmapi-tlv-has-return-code-subcode-details • label-switched-with-fec-change
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

return-subcode *number*

Description	Return subcode in the echo-reply
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number sequence-id number reply return-subcode number
Tree	return-subcode
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

round-trip-time *number*

Description	The round trip-time between the request and reply for this sequence number or hop
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number reply round-trip-time number
Tree	round-trip-time
Default	0
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

udp-data-length *number*

Description	The length of the UDP payload
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number reply udp-data-length number
Tree	udp-data-length
Default	0
Units	bytes
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

request-sent *boolean*

Description	True when it is possible for the datapath to send the request message
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number sequence sequence-id number request-sent boolean
Tree	request-sent
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

send-failure-reason *keyword*

Description	Indicates the reason why the OAM manager could not send the request message
--------------------	---

Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number sequence-id number send-failure-reason keyword
Tree	send-failure-reason
Default	no errors
Options	<ul style="list-style-type: none"> • timeout • source-ip-not-local • invalid-prefix • sr-prefix-is-local • ldp-prefix-is-local • invalid-dest-ip • dest-address-type-mismatch • next-hop-ip-not-found • next-hop-if-name-not-found • packet-size-too-big • far-end-unreachable • prefix-unknown • ds-map-not-supported • unexpected-error • no errors
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Summary statistics for the test
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number statistics
Tree	statistics
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

round-trip-time

Description	Statistics for the round trip time, considering all the probes sent in the test
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number statistics round-trip-time

Tree	round-trip-time
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

average number

Description	The average round trip-time across all probes
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number statistics round-trip-time average number
Tree	average
Default	0
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum number

Description	The maximum round trip-time across all probes
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number statistics round-trip-time maximum number
Tree	maximum
Default	0
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

minimum number

Description	The minimum round trip-time across all probes
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number statistics round-trip-time minimum number
Tree	minimum
Default	0
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

standard-deviation *number*

Description	The standard deviation of the round trip-time across all probes
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number statistics round-trip-time standard-deviation number
Tree	standard-deviation
Default	0
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

test-active *boolean*

Description	Indicates if the test is still running (true) or not (false)
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number test-active boolean
Tree	test-active
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

te-policy

Description	Parameters required to ping the endpoint of a TE-Policy tunnel
Context	oam lsp-ping te-policy
Tree	te-policy
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-uncolored

Description	Enter the sr-uncolored context
Context	oam lsp-ping te-policy sr-uncolored
Tree	sr-uncolored
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy *policy-name string protocol-origin keyword*

Description	Enter the policy list instance
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword
Tree	policy
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy-name *string*

Description	Name of Uncolored Traffic Engineering Policy to be tested. Any available primary or standby or active secondary candidate-path can be probed.
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword
String Length	1 to 255
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

protocol-origin *keyword*

Description	Uncolored Traffic Engineering Policy, origination source. The method Policy path is computed. This list includes Path Computation Engine, explicitly configured paths, etc.
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword
Options	<ul style="list-style-type: none"> • pcep PCEP used as signalling mechanism for the candidate path • bgp BGP used as signalling mechanism for the candidate path • local Management interface used for candidate path instantiation
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session-id *id number*

Description	List of recent sessions (up to 10) with saved LSP ping results for the prefix
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number
Tree	session-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	10

id *number*

Description	The system-assigned session ID
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

path-destination

Description	Enter the path-destination context
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number path-destination
Tree	path-destination
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ip-address (*ipv4-address | ipv6-address*)

Description	IP address of the path destination
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number path-destination ip-address (ipv4-address ipv6-address)
Tree	ip-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

next-hop (*ipv4-address* | *ipv6-address*)

Description	Egress IP next hop address used with path destination
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number path-destination next-hop (ipv4-address ipv6-address)
Tree	next-hop
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subinterface *string*

Description	Egress router sub-interface used with the path destination
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number path-destination subinterface string
Tree	subinterface
String Length	5 to 25
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sequence [sequence-id](#) *number*

Description	List of probes sent during the test
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number sequence sequence-id number
Tree	sequence
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sequence-id *number*

Description	Sequence ID of the probe, starting with 1 and incrementing by 1
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number sequence sequence-id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-interface *string*

Description	The subinterface that was used to transmit the echo-request message
Context	oam lsp-ping te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> sequence sequence-id <i>number</i> out-interface <i>string</i>
Tree	out-interface
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe-size *number*

Description	The size of the IP packet MPLS echo-request message. Probe size does not include MPLS headers, if any
Context	oam lsp-ping te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> sequence sequence-id <i>number</i> probe-size <i>number</i>
Tree	probe-size
Range	1 to 9500
Default	64
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reply

Description	Details about the reply message for this sequence number or hop
Context	oam lsp-ping te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> sequence sequence-id <i>number</i> reply
Tree	reply
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mpls-ttl *number*

Description	The value of the MPLS TTL in the top label stack entry of the received echo-reply message
--------------------	---

Context	oam lsp-ping te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id number sequence sequence-id number reply mpls-ttl number
Tree	mpls-ttl
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

received *boolean*

Description	Reads true if the reply message was received
Context	oam lsp-ping te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id number sequence sequence-id number reply received boolean
Tree	received
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reply-sender (*ipv4-address | ipv6-address*)

Description	The IP address of the sender of the echo-reply message
Context	oam lsp-ping te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id number sequence sequence-id number reply reply-sender (ipv4-address ipv6-address)
Tree	reply-sender
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

return-code *keyword*

Description	Return code value in the echo-reply
Context	oam lsp-ping te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id number sequence sequence-id number reply return-code keyword
Tree	return-code
Default	no-return-code
Options	<ul style="list-style-type: none"> no-return-code malformed-echo-request-received

- one-or-more-tlvs-not-understood
- replying-router-is-egress-for-fec-at-stack-depth-n

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

return-subcode *number*

Description	Return subcode in the echo-reply
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number sequence sequence-id number reply return-subcode number
Tree	return-subcode
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

round-trip-time *number*

Description	The round trip-time between the request and reply for this sequence number or hop
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number sequence sequence-id number reply round-trip-time number
Tree	round-trip-time
Default	0

Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

udp-data-length *number*

Description	The length of the UDP payload
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number sequence sequence-id number reply udp-data-length number
Tree	udp-data-length
Default	0
Units	bytes
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

request-sent *boolean*

Description	True when it is possible for the datapath to send the request message
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number sequence sequence-id number request-sent boolean
Tree	request-sent
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

send-failure-reason *keyword*

Description	Indicates the reason why the OAM manager could not send the request message
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number sequence sequence-id number send-failure-reason keyword
Tree	send-failure-reason
Default	no errors
Options	<ul style="list-style-type: none"> • timeout • source-ip-not-local • invalid-prefix

- sr-prefix-is-local
- ldp-prefix-is-local

Platforms

7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

average *number*

Description

The average round trip-time across all probes

Context	oam lsp-ping te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> statistics round-trip-time average <i>number</i>
Tree	average
Default	0
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum *number*

Description	The maximum round trip-time across all probes
Context	oam lsp-ping te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> statistics round-trip-time maximum <i>number</i>
Tree	maximum
Default	0
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

minimum *number*

Description	The minimum round trip-time across all probes
Context	oam lsp-ping te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> statistics round-trip-time minimum <i>number</i>
Tree	minimum
Default	0
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

standard-deviation *number*

Description	The standard deviation of the round trip-time across all probes
Context	oam lsp-ping te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> statistics round-trip-time standard-deviation <i>number</i>
Tree	standard-deviation

Default	0
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

test-active *boolean*

Description	Indicates if the test is still running (true) or not (false)
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number test-active boolean
Tree	test-active
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lsp-trace

Description	Container of last trace results for different MPLS and segment routing tunnels
Context	oam lsp-trace
Tree	lsp-trace
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ldp

Description	Container of LSP trace results for different LDP tunnels
Context	oam lsp-trace ldp
Tree	ldp
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

fec prefix (*ipv4-prefix | ipv6-prefix*)

Description	Enter the fec list instance
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix)
Tree	fec

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	The IPv4 or IPv6 prefix associated with the fec This is the destination that was traced.
Context	oam lsp-trace ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session-id [id number](#)

Description	List of recent sessions (up to 10) with saved LSP trace results for the prefix
Context	oam lsp-trace ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number
Tree	session-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	10

id [number](#)

Description	The system-assigned session ID
Context	oam lsp-trace ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hop [hop-index number](#)

Description	List of hops traced
Context	oam lsp-trace ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number hop hop-index number
Tree	hop
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hop-index *number*

Description	The hop index, starting at minimum-mpls-ttl and incrementing by 1 up to maximum-mpls-ttl or until the destination is reached
Context	oam lsp-trace ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number hop hop-index number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe [probe-index](#) *number*

Description	Probes sent to a given hop
Context	oam lsp-trace ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number hop hop-index number probe probe-index number
Tree	probe
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe-index *number*

Description	The probe index, probes received from a given hop. A given LSR may respond one than once, typically once with EgressRouter and once with Destination Router Match Label identifier
Context	oam lsp-trace ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number hop hop-index number probe probe-index number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

downstream-detailed-mapping [id](#) *number*

Description	List of DDMAP TLVs included in the echo-reply from this hop The first one (with id 1) will be used by the sender.
Context	oam lsp-trace ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number
Tree	downstream-detailed-mapping
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

id number

Description	Identifier of the DDMAP TLV
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

address-type keyword

Description	Indicates the addressing of the downstream interface
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number address-type keyword
Tree	address-type
Options	<ul style="list-style-type: none"> • ipv4-numbered • ipv4-unnumbered • ipv6-numbered • ipv6-unnumbered
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

downstream-interface-address (ipv4-address | ipv6-address)

Description	The interface address of the next-hop router
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number downstream-interface-address (ipv4-address ipv6-address)
Tree	downstream-interface-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

downstream-router-address (ipv4-address | ipv6-address)

Description	The router ID or interface address of the next-hop router
--------------------	---

Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number downstream-router-address (ipv4-address ipv6-address)
Tree	downstream-router-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mpls-label [index number](#)

Description	List of labels in the label stack that would have appeared if this router were forwarding the packet through this downstream interface
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mpls-label index number
Tree	mpls-label
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

index [number](#)

Description	Index of label stack entry, starting at 1 (topmost label)
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mpls-label index number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label ([number](#) | [keyword](#))

Description	MPLS label value
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mpls-label index number label (number keyword)
Tree	label
Range	16 to 1048575
Options	<ul style="list-style-type: none"> • IPV4_EXPLICIT_NULL • IPV6_EXPLICIT_NULL

	<ul style="list-style-type: none"> • IMPLICIT_NULL
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

protocol *keyword*

Description	The label distribution protocol for the downstream label
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mpls-label index number protocol keyword
Tree	protocol
Default	unknown
Options	<ul style="list-style-type: none"> • unknown • static • bgp • ldp • rsvp-te • ospf • isis • ospfv3
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mtu *number*

Description	The size in octets of the largest MPLS frame (including label stack) that fits on this downstream interface
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mtu number
Tree	mtu
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-probe-send-failure-reason *keyword*

Description	Indicates the reason why the OAM manager could not send the request message
Context	oam lsp-trace ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number hop hop-index number probe probe-index number last-probe-send-failure-reason <i>keyword</i>
Tree	last-probe-send-failure-reason
Default	no errors
Options	<ul style="list-style-type: none"> • timeout • source-ip-not-local • invalid-prefix • sr-prefix-is-local • ldp-prefix-is-local • invalid-dest-ip • dest-address-type-mismatch • next-hop-ip-not-found • next-hop-if-name-not-found • packet-size-too-big • far-end-unreachable • prefix-unknown • ds-map-not-supported • unexpected-error • no errors
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe-size *number*

Description	The size of the IP packet MPLS trace message. Probe size does not include MPLS headers, if any
Context	oam lsp-trace ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number hop hop-index number probe probe-index number probe-size <i>number</i>
Tree	probe-size
Range	1 to 9500
Default	64
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probes-sent *number*

Description The number of echo-request messages sent to the hop until a reply was received

Context [oam lsp-trace ldp fec prefix \(ipv4-prefix | ipv6-prefix\) session-id id number hop hop-index number probe probe-index number probes-sent number](#)

Tree [probes-sent](#)

Range 1 to 10

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reply

Description Details about the reply message for this sequence number or hop

Context [oam lsp-trace ldp fec prefix \(ipv4-prefix | ipv6-prefix\) session-id id number hop hop-index number probe probe-index number reply](#)

Tree [reply](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mpls-ttl *number*

Description The value of the MPLS TTL in the top label stack entry of the received echo-reply message

Context [oam lsp-trace ldp fec prefix \(ipv4-prefix | ipv6-prefix\) session-id id number hop hop-index number probe probe-index number reply mpls-ttl number](#)

Tree [mpls-ttl](#)

Default 0

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

received *boolean*

Description Reads true if the reply message was received

Context [oam lsp-trace ldp fec prefix \(ipv4-prefix | ipv6-prefix\) session-id id number hop hop-index number probe probe-index number reply received boolean](#)

Tree	received
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

next-hop (ipv4-address | ipv6-address)

Description Egress IP next hop address used with path destination

Context [oam lsp-trace ldp fec prefix \(ipv4-prefix | ipv6-prefix\) session-id id number path-destination next-hop \(ipv4-address | ipv6-address\)](#)

Tree [next-hop](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subinterface *string*

Description Egress router sub-interface used with the path destination

Context [oam lsp-trace ldp fec prefix \(ipv4-prefix | ipv6-prefix\) session-id id number path-destination subinterface *string*](#)

Tree [subinterface](#)

String Length 5 to 25

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

test-active *boolean*

Description Indicates if the test is still running (true) or not (false)

Context [oam lsp-trace ldp fec prefix \(ipv4-prefix | ipv6-prefix\) session-id id number test-active boolean](#)

Tree [test-active](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-isis

Description Container of LSP trace results for different SR-ISIS tunnels

Context [oam lsp-trace sr-isis](#)

Tree [sr-isis](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix-sid [prefix \(ipv4-prefix | ipv6-prefix\)](#)

Description Enter the prefix-sid list instance

Context [oam lsp-trace sr-isis prefix-sid prefix \(ipv4-prefix | ipv6-prefix\)](#)

Tree [prefix-sid](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix [\(ipv4-prefix | ipv6-prefix\)](#)

Description The IPv4 or IPv6 prefix associated with the SID
This is the destination that was traced.

Context [oam lsp-trace sr-isis prefix-sid prefix \(ipv4-prefix | ipv6-prefix\)](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session-id *id number*

Description	List of recent sessions (up to 10) with saved LSP trace results for the prefix
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number
Tree	session-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	10

id *number*

Description	The system-assigned session ID
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hop *hop-index number*

Description	List of hops traced
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number
Tree	hop
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hop-index *number*

Description	The hop index, starting at minimum-mpls-ttl and incrementing by 1 up to maximum-mpls-ttl or until the destination is reached
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe *probe-index number*

Description	Probes sent to a given hop
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number
Tree	probe
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe-index *number*

Description	The probe index, probes received from a given hop. A given LSR may respond one than once, typically once with EgressRouter and once with Destination Router Match Label identifier
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

downstream-detailed-mapping *id number*

Description	List of DDMAP TLVs included in the echo-reply from this hop The first one (with id 1) will be used by the sender.
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number
Tree	downstream-detailed-mapping
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

id *number*

Description	Identifier of the DDMAP TLV
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

address-type *keyword*

Description	Indicates the addressing of the downstream interface
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number address-type keyword
Tree	address-type
Options	<ul style="list-style-type: none"> • ipv4-numbered • ipv4-unnumbered • ipv6-numbered • ipv6-unnumbered
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

downstream-interface-address (*ipv4-address | ipv6-address*)

Description	The interface address of the next-hop router
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number downstream-interface-address (ipv4-address ipv6-address)
Tree	downstream-interface-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

downstream-router-address (*ipv4-address | ipv6-address*)

Description	The router ID or interface address of the next-hop router
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number downstream-router-address (ipv4-address ipv6-address)
Tree	downstream-router-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mpls-label *index number*

Description	List of labels in the label stack that would have appeared if this router were forwarding the packet through this downstream interface
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mpls-label index number
Tree	mpls-label
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

index *number*

Description	Index of label stack entry, starting at 1 (topmost label)
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mpls-label index number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label (*number | keyword*)

Description	MPLS label value
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mpls-label index number label (number keyword)
Tree	label
Range	16 to 1048575
Options	<ul style="list-style-type: none"> • IPV4_EXPLICIT_NULL • IPV6_EXPLICIT_NULL • IMPLICIT_NULL
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

protocol *keyword*

Description	The label distribution protocol for the downstream label
--------------------	--

Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mpls-label index number protocol keyword
Tree	protocol
Default	unknown
Options	<ul style="list-style-type: none"> • unknown • static • bgp • ldp • rsvp-te • ospf • isis • ospfv3
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mtu number

Description	The size in octets of the largest MPLS frame (including label stack) that fits on this downstream interface
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number mtu number
Tree	mtu
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-probe-send-failure-reason keyword

Description	Indicates the reason why the OAM manager could not send the request message
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number last-probe-send-failure-reason keyword
Tree	last-probe-send-failure-reason

probe-size *number*

Description	The size of the IP packet MPLS trace message. Probe size does not include MPLS headers, if any
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number probe-size number
Tree	probe-size
Range	1 to 9500
Default	64
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probes-sent *number*

Description	The number of echo-request messages sent to the hop until a reply was received
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number probes-sent number
Tree	probes-sent
Range	1 to 10

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reply

Description	Details about the reply message for this sequence number or hop
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply
Tree	reply
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mpls-ttl *number*

Description	The value of the MPLS TTL in the top label stack entry of the received echo-reply message
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply mpls-ttl number
Tree	mpls-ttl
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

received *boolean*

Description	Reads true if the reply message was received
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply received boolean
Tree	received
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reply-sender (*ipv4-address | ipv6-address*)

Description	The IP address of the sender of the echo-reply message
--------------------	--

Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply reply-sender (ipv4-address ipv6-address)
Tree	reply-sender
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

return-code *keyword*

Description	Return code value in the echo-reply
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply return-code keyword
Tree	return-code
Default	no-return-code

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

round-trip-time *number*

Description	The round trip-time between the request and reply for this sequence number or hop
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply round-trip-time number
Tree	round-trip-time
Default	0
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

udp-data-length *number*

Description	The length of the UDP payload
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number hop hop-index number probe probe-index number reply udp-data-length number
Tree	udp-data-length
Default	0
Units	bytes
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

path-destination

Description	Enter the path-destination context
Context	oam lsp-trace sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) session-id id number path-destination

Tree	path-destination
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ip-address (*ipv4-address* | *ipv6-address*)

Description	IP address of the path destination
Context	oam lsp-trace sr-isis prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number path-destination ip-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	ip-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

next-hop (*ipv4-address* | *ipv6-address*)

Description	Egress IP next hop address used with path destination
Context	oam lsp-trace sr-isis prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number path-destination next-hop (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	next-hop
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subinterface *string*

Description	Egress router sub-interface used with the path destination
Context	oam lsp-trace sr-isis prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number path-destination subinterface <i>string</i>
Tree	subinterface
String Length	5 to 25
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

test-active *boolean*

Description	Indicates if the test is still running (true) or not (false)
Context	oam lsp-trace sr-isis prefix-sid prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) session-id id number test-active <i>boolean</i>

Tree	test-active
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

te-policy

Description	Parameters required to trace the endpoint of a TE-Policy tunnel
Context	oam lsp-trace te-policy
Tree	te-policy
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-uncolored

Description	Enter the sr-uncolored context
Context	oam lsp-trace te-policy sr-uncolored
Tree	sr-uncolored
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy [policy-name](#) *string* [protocol-origin](#) *keyword*

Description	Enter the policy list instance
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i>
Tree	policy
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy-name *string*

Description	Name of Uncolored Traffic Engineering Policy which is to be traced. Any available primary or standby or active secondary candidate-path can be traced.
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i>
String Length	1 to 255

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

protocol-origin *keyword*

Description	Uncolored Traffic Engineering Policy, origination source. The method Policy path is computed. This list includes Path Computation Engine, explicitly configured paths, etc.
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword
Options	<ul style="list-style-type: none"> • pcep PCEP used as signalling mechanism for the candidate path • bgp BGP used as signalling mechanism for the candidate path • local Management interface used for candidate path instantiation
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session-id *id number*

Description	List of recent sessions (up to 10) with saved LSP trace results for the prefix
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id number
Tree	session-id
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	10

id *number*

Description	The system-assigned session ID
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hop *hop-index number*

Description	List of hops traced
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> session-id id <i>number</i> hop hop-index <i>number</i>
Tree	hop
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

hop-index *number*

Description	The hop index, starting at minimum-mpls-ttl and incrementing by 1 up to maximum-mpls-ttl or until the destination is reached
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> session-id id <i>number</i> hop hop-index <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe *probe-index number*

Description	Probes sent to a given hop
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i>
Tree	probe
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe-index *number*

Description	The probe index, probes received from a given hop. A given LSR may respond one than once, typically once with EgressRouter and once with Destination Router Match Label identifier
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

downstream-detailed-mapping *id number*

Description	List of DDMAP TLVs included in the echo-reply from this hop The first one (with id 1) will be used by the sender.
Context	oam lsp-trace te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number
Tree	downstream-detailed-mapping
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

id *number*

Description	Identifier of the DDMAP TLV
Context	oam lsp-trace te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

address-type *keyword*

Description	Indicates the addressing of the downstream interface
Context	oam lsp-trace te-policy sr-uncolored policy policy-name string protocol-origin keyword session-id id number hop hop-index number probe probe-index number downstream-detailed-mapping id number address-type keyword
Tree	address-type
Options	<ul style="list-style-type: none"> • ipv4-numbered • ipv4-unnumbered • ipv6-numbered • ipv6-unnumbered
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

downstream-interface-address (*ipv4-address | ipv6-address*)

Description	The interface address of the next-hop router
--------------------	--

Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> downstream-detailed-mapping id <i>number</i> downstream-interface-address (ipv4-address ipv6-address)
Tree	downstream-interface-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

downstream-router-address ([ipv4-address](#) | [ipv6-address](#))

Description	The router ID or interface address of the next-hop router
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> downstream-detailed-mapping id <i>number</i> downstream-router-address (ipv4-address ipv6-address)
Tree	downstream-router-address
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mpls-label [index](#) *number*

Description	List of labels in the label stack that would have appeared if this router were forwarding the packet through this downstream interface
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> downstream-detailed-mapping id <i>number</i> mpls-label index <i>number</i>
Tree	mpls-label
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

index *number*

Description	Index of label stack entry, starting at 1 (topmost label)
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> downstream-detailed-mapping id <i>number</i> mpls-label index <i>number</i>
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label (*number* | *keyword*)

Description	MPLS label value
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> downstream-detailed-mapping id <i>number</i> mpls-label index <i>number</i> label (<i>number</i> <i>keyword</i>)
Tree	label
Range	16 to 1048575
Options	<ul style="list-style-type: none"> • IPV4_EXPLICIT_NULL • IPV6_EXPLICIT_NULL • IMPLICIT_NULL
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

protocol *keyword*

Description	The label distribution protocol for the downstream label
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> downstream-detailed-mapping id <i>number</i> mpls-label index <i>number</i> protocol <i>keyword</i>
Tree	protocol
Default	unknown
Options	<ul style="list-style-type: none"> • unknown • static • bgp • ldp • rsvp-te • ospf • isis • ospfv3
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mtu number

Description	The size in octets of the largest MPLS frame (including label stack) that fits on this downstream interface
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> downstream-detailed-mapping id <i>number</i> mtu <i>number</i>
Tree	mtu
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-probe-send-failure-reason keyword

Description	Indicates the reason why the OAM manager could not send the request message
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> last-probe-send-failure-reason <i>keyword</i>
Tree	last-probe-send-failure-reason
Default	no errors
Options	<ul style="list-style-type: none"> • timeout • source-ip-not-local • invalid-prefix • sr-prefix-is-local • ldp-prefix-is-local • invalid-dest-ip • dest-address-type-mismatch • next-hop-ip-not-found • next-hop-if-name-not-found • packet-size-too-big • far-end-unreachable • prefix-unknown • ds-map-not-supported • unexpected-error • no errors
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe-size *number*

Description	The size of the IP packet MPLS trace message. Probe size does not include MPLS headers, if any
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> probe-size <i>number</i>
Tree	probe-size
Range	1 to 9500
Default	64
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probes-sent *number*

Description	The number of echo-request messages sent to the hop until a reply was received
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> probes-sent <i>number</i>
Tree	probes-sent
Range	1 to 10
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reply

Description	Details about the reply message for this sequence number or hop
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> reply
Tree	reply
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mpls-ttl *number*

Description	The value of the MPLS TTL in the top label stack entry of the received echo-reply message
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> reply mpls-ttl <i>number</i>
Tree	mpls-ttl
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

received *boolean*

Description	Reads true if the reply message was received
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> reply received <i>boolean</i>
Tree	received
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reply-sender (*ipv4-address* | *ipv6-address*)

Description	The IP address of the sender of the echo-reply message
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> reply reply-sender (ipv4-address ipv6-address)
Tree	reply-sender
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

return-code *keyword*

Description	Return code value in the echo-reply
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> reply return-code <i>keyword</i>

Tree	return-code
Default	no-return-code
Options	<ul style="list-style-type: none"> no-return-code malformed-echo-request-received one-or-more-tlvs-not-understood replying-router-is-egress-for-fec-at-stack-depth-n replying-router-has-no-mapping-for-fec-at-stack-depth-n downstream-mapping-mismatch upstream-interface-index-unknown reserved label-switched-at-stack-depth-n label-switched-but-no-MPLS-at-stack-depth-n fec-does-not-use-given-label-at-stack-depth-n no-label-entry-at-stack-depth-n protocol-unavailable-at-stack-depth-n premature-termination ddmap-tlv-has-return-code-subcode-details label-switched-with-fec-change
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

return-subcode *number*

Description	Return subcode in the echo-reply
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> session-id <i>id</i> <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> reply return-subcode <i>number</i>
Tree	return-subcode
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

round-trip-time *number*

Description	The round trip-time between the request and reply for this sequence number or hop
--------------------	---

Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> reply round-trip-time <i>number</i>
Tree	round-trip-time
Default	0
Units	microseconds
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

udp-data-length *number*

Description	The length of the UDP payload
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> hop hop-index <i>number</i> probe probe-index <i>number</i> reply udp-data-length <i>number</i>
Tree	udp-data-length
Default	0
Units	bytes
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

path-destination

Description	Enter the path-destination context
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> path-destination
Tree	path-destination
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ip-address (*ipv4-address* | *ipv6-address*)

Description	IP address of the path destination
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword session-id id <i>number</i> path-destination ip-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	ip-address
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

next-hop (*ipv4-address* | *ipv6-address*)

Description Egress IP next hop address used with path destination

Context [oam lsp-trace te-policy sr-uncolored policy policy-name](#) *string* [protocol-origin keyword session-id id number path-destination next-hop](#) (*ipv4-address* | *ipv6-address*)

Tree [next-hop](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subinterface *string*

Description Egress router sub-interface used with the path destination

Context [oam lsp-trace te-policy sr-uncolored policy policy-name](#) *string* [protocol-origin keyword session-id id number path-destination subinterface](#) *string*

Tree [subinterface](#)

String Length 5 to 25

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

test-active *boolean*

Description Indicates if the test is still running (true) or not (false)

Context [oam lsp-trace te-policy sr-uncolored policy policy-name](#) *string* [protocol-origin keyword session-id id number test-active](#) *boolean*

Tree [test-active](#)

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

stamp

Description Enable the stamp context

Context [oam stamp](#)

Tree [stamp](#)

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session-reflector

Description STAMP Session-Reflector configuration and state

Context [oam stamp session-reflector](#)

Tree [session-reflector](#)

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

inactivity-timer *number*

Description STAMP test session timeout on inactivity

The amount of time (ref-wait) a test session must be inactive, no packets arriving, before the test session is removed from the Session-Reflector stateful table.

Context [oam stamp session-reflector inactivity-timer *number*](#)

Tree [inactivity-timer](#)

Range 1 to 604800

Default 900

Units seconds

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

network-instance [name reference](#)

Description The list of network instances configured for STAMP Session-Reflector function

Context [oam stamp session-reflector network-instance \[name reference\]\(#\)](#)

Tree [network-instance](#)

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *reference*

Description The name of the network instances to which the Session-Reflector state and configuration applies

Context	oam stamp session-reflector network-instance name <i>reference</i>
Reference	network-instance name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	This attribute specifies whether the STAMP Session-Reflector is enabled or disabled
Context	oam stamp session-reflector network-instance name <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

description *string*

Description	A string describing the STAMP Session-Reflector
Context	oam stamp session-reflector network-instance name <i>reference</i> description <i>string</i>
Tree	description
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ip-prefix [ip-prefix](#) (*ipv4-prefix* | *ipv6-prefix*)

Description	The list of IP source addresses or ranges allowed to send STAMP test packets to Session-Reflector
Context	oam stamp session-reflector network-instance name <i>reference</i> ip-prefix ip-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	ip-prefix
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ip-prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	The IP address or range allowed to send STAMP test packets to the Session-Reflector
Context	oam stamp session-reflector network-instance name <i>reference</i> ip-prefix ip-prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state *keyword*

Description	Enter the oper-state context
Context	oam stamp session-reflector network-instance name <i>reference</i> oper-state keyword
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed • synchronizing Component is currently being synchronized • upgrading Component is currently being upgraded • low-power Component is offline due to insufficient system power • degraded Component or process is in a degraded state

- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	oam stamp session-reflector network-instance name <i>reference</i> statistics

Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

server-ip (*ipv4-address | ipv6-address*)

Description	The destination IP address in the TWAMP Control message sent by the Control-Client targeting an IP address of the Server
Context	oam twamp server network-instance name <i>reference</i> control-connection client-ip (ipv4-address ipv6-address) client-tcp-port number server-ip (ipv4-address ipv6-address) server-tcp-port number
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

server-tcp-port *number*

Description	The destination TCP port the Server listens for TWAMP-Control messages
Context	oam twamp server network-instance name <i>reference</i> control-connection client-ip (ipv4-address ipv6-address) client-tcp-port number server-ip (ipv4-address ipv6-address) server-tcp-port number
Range	0 to 65535
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

control-packet-dscp *number*

Description	The DSCP value used in the IP header of the TWAMP-Control (TCP) packets sent by the Server
--------------------	--

Context	oam twamp server network-instance name <i>reference</i> control-connection client-ip (ipv4-address ipv6-address) client-tcp-port number server-ip (ipv4-address ipv6-address) server-tcp-port number control-packet-dscp number
Tree	control-packet-dscp
Range	0 to 63
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

selected-mode *keyword*

Description	The TWAMP Mode chosen in the Mode field of the TWAMP Set-Up-Response message
Context	oam twamp server network-instance name <i>reference</i> control-connection client-ip (ipv4-address ipv6-address) client-tcp-port number server-ip (ipv4-address ipv6-address) server-tcp-port number selected-mode keyword
Tree	selected-mode
Options	<ul style="list-style-type: none"> • unauthenticated No encryption or authentication is applied in TWAMP-Control and TWAMP-Test • authenticated Control-Client and Server pass a shared secret for authentication • encrypted Additional level of protection using encryption • unauth-test-encrypt-control Mixed Security Mode, the TWAMP-Test uses unauthenticated mode and TWAMP-Control uses encrypted mode • individual-session-control Individual TWAMP-Test sessions start and stop using individual session identifiers This allows TWAMP-Test sessions using the same control channel to be started individually instead of using the bulk all sessions start. • reflect-octets Reflect octets capability • symmetrical-size Symmetrical size for test packets between Session-Sender and Session-Reflector
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

state keyword

Description	Indicates the Server TWAMP-Control connection state
Context	oam twamp server network-instance name reference control-connection client-ip (ipv4-address ipv6-address) client-tcp-port number server-ip (ipv4-address ipv6-address) server-tcp-port number state keyword
Tree	state
Options	<ul style="list-style-type: none"> active TWAMP-Control connection between the Server and the Control-Client is active Packets are arriving on the TWAMP-Control channel or there are active TWAMP-Test sessions on the TWAMP-Control channel. servwait TWAMP-Control connection between the Server and the Control-Client is in SERVWAIT This state is entered when no there are no TWAMP-Control messages between the Control-Client and Server and all test sessions on the TWAMP-Control channel have been stopped, and the REFWAIT (timeout following test session stop) has expired.
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	oam twamp server network-instance name reference control-connection client-ip (ipv4-address ipv6-address) client-tcp-port number server-ip (ipv4-address ipv6-address) server-tcp-port number statistics
Tree	statistics
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

test-packets-received number

Description	Total number of TWAMP-Test packets received relevant to the context
Context	oam twamp server network-instance name reference control-connection client-ip (ipv4-address ipv6-address) client-tcp-port number server-ip (ipv4-address ipv6-address) server-tcp-port number statistics test-packets-received number

Tree	test-packets-received
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

test-packets-transmitted *number*

Description	Total number of TWAMP-Test packets sent relevant to the context
Context	oam twamp server network-instance name reference control-connection client-ip (ipv4-address ipv6-address) client-tcp-port number server-ip (ipv4-address ipv6-address) server-tcp-port number statistics test-packets-transmitted number
Tree	test-packets-transmitted
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

test-sessions-aborted *number*

Description	Total number of aborted TWAMP_test sessions relative to the context
Context	oam twamp server network-instance name reference control-connection client-ip (ipv4-address ipv6-address) client-tcp-port number server-ip (ipv4-address ipv6-address) server-tcp-port number statistics test-sessions-aborted number
Tree	test-sessions-aborted
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

test-sessions-active *number*

Description	Total number of active TWAMP-Test sessions relative to the context
Context	oam twamp server network-instance name reference control-connection client-ip (ipv4-address ipv6-address) client-tcp-port number server-ip (ipv4-address ipv6-address) server-tcp-port number statistics test-sessions-active number
Tree	test-sessions-active
Default	0

Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

test-sessions-completed *number*

Description	Total number of completed TWAMP-Test sessions relative to the context
Context	oam twamp server network-instance name reference control-connection client-ip (ipv4-address ipv6-address) client-tcp-port number server-ip (ipv4-address ipv6-address) server-tcp-port number statistics test-sessions-completed number
Tree	test-sessions-completed
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

test-sessions-rejected *number*

Description	Total number of rejected TWAMP-Test sessions relative to the context
Context	oam twamp server network-instance name reference control-connection client-ip (ipv4-address ipv6-address) client-tcp-port number server-ip (ipv4-address ipv6-address) server-tcp-port number statistics test-sessions-rejected number
Tree	test-sessions-rejected
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

control-packet-dscp (*number | keyword*)

Description	The DSCP to be placed in the IP header of TWAMP-Control (TCP) packets generated by the Server
Context	oam twamp server network-instance name reference control-packet-dscp (number keyword)
Tree	control-packet-dscp
Range	0 to 63
Default	CS7
Options	<ul style="list-style-type: none"> • CS0 • LE

Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

description string

Description	TWAMP Server common configuration
Context	oam twamp server network-instance name <i>reference</i> description string
Tree	description
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

enforce-test-session-start-time boolean

Description	Discard or process TWAMP-Test packets arriving before the negotiated session start time
--------------------	---

A Request-TW-Session includes a start-time value for the test session. A value 'true' enforces the server check that will drop the TWAMP-Test packets if the test session start-time is before the Server time of day. In environments where the TWAMP Client and TWAMP Servers are not synchronized the value 'false' can be used to skip this validation check and process TWAMP test packets that arrive before their indicated start time.

Context	oam twamp server network-instance name <i>reference</i> enforce-test-session-start-time <i>boolean</i>
Tree	enforce-test-session-start-time
Default	true
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

maximum-connections *number*

Description	The system wide maximum number of concurrent TWAMP-Control connections the Server supports
Context	oam twamp server network-instance name <i>reference</i> maximum-connections <i>number</i>
Tree	maximum-connections
Range	1 to 64
Default	32
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

maximum-sessions *number*

Description	The system wide maximum number of concurrent TWAMP-Test sessions the Server supports
Context	oam twamp server network-instance name <i>reference</i> maximum-sessions <i>number</i>
Tree	maximum-sessions
Range	1 to 128
Default	32
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

modes *keyword*

Description	The list of TWAMP Modes this Server supports
Context	oam twamp server network-instance name reference modes keyword
Tree	modes
Options	<ul style="list-style-type: none"> • unauthenticated No encryption or authentication is applied in TWAMP-Control and TWAMP-Test • authenticated Control-Client and Server pass a shared secret for authentication • encrypted Additional level of protection using encryption • unauth-test-encrypt-control Mixed Security Mode, the TWAMP-Test uses unauthenticated mode and TWAMP-Control uses encrypted mode • individual-session-control Individual TWAMP-Test sessions start and stop using individual session identifiers This allows TWAMP-Test sessions using the same control channel to be started individually instead of using the bulk all sessions start. • reflect-octets Reflect octets capability • symmetrical-size Symmetrical size for test packets between Session-Sender and Session-Reflector
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

oper-state *keyword*

Description	The operational state of the TWAMP Server and Session/Reflector
Context	oam twamp server network-instance name reference oper-state keyword
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational

- empty
Component slot is empty
- downloading
Component is downloading image into memory
- booting
Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable

False

Platforms

7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

servwait *number*

Description

TWAMP-Control (TCP) session timeout, in seconds

The length of time the Server maintains the TWAMP-Control channel in the absence of any activity for the channel. This state is entered when there is no TWAMP-Control messages between the Control-Client and Server, and

all test sessions on the TWAMP-Control channel have been stopped, and the timeout following test session stop (REFWAIT) has expired.

Context	oam twamp server network-instance name <i>reference</i> servwait number
Tree	servwait
Range	60 to 3600
Default	900
Units	seconds
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

session-reflector

Description	Configuration and state for the TWAMP Session-Reflector
Context	oam twamp server network-instance name <i>reference</i> session-reflector
Tree	session-reflector
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

test-session [sender-ip \(ipv4-address | ipv6-address\)](#) [sender-udp-port number](#) [reflector-ip \(ipv4-address | ipv6-address\)](#) [reflector-udp-port number](#)

Description	TWAMP Session-Reflector test sessions.
Context	oam twamp server network-instance name <i>reference</i> session-reflector test-session sender-ip (ipv4-address ipv6-address) sender-udp-port number reflector-ip (ipv4-address ipv6-address) reflector-udp-port number
Tree	test-session
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

[sender-ip \(ipv4-address | ipv6-address\)](#)

Description	The IP address of the TWAMP Session-Sender for the TWAMP test packets belonging to this test session
Context	oam twamp server network-instance name <i>reference</i> session-reflector test-session sender-ip (ipv4-address ipv6-address) sender-udp-port number reflector-ip (ipv4-address ipv6-address) reflector-udp-port number
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

sender-udp-port *number*

Description	The source UDP port used by the TWAMP Session-Sender for the TWAMP test packets belonging to this test session
Context	oam twamp server network-instance name <i>reference</i> session-reflector test-session sender-ip (ipv4-address ipv6-address) sender-udp-port number reflector-ip (ipv4-address ipv6-address) reflector-udp-port number
Range	0 to 65535
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

reflector-ip (*ipv4-address | ipv6-address*)

Description	The IP address of the TWAMP Session-Reflector, the destination IP address used in the TWAMP test packets belonging to this test
Context	oam twamp server network-instance name <i>reference</i> session-reflector test-session sender-ip (ipv4-address ipv6-address) sender-udp-port number reflector-ip (ipv4-address ipv6-address) reflector-udp-port number
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

reflector-udp-port *number*

Description	The UDP port number the TWAMP Session-Reflector listens on for TWAMP test packets belonging to this test session
Context	oam twamp server network-instance name <i>reference</i> session-reflector test-session sender-ip (ipv4-address ipv6-address) sender-udp-port number reflector-ip (ipv4-address ipv6-address) reflector-udp-port number
Range	862 49152 to 65535
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

last-sequence-number-received *number*

Description	The last sequence number in the TWAMP-Test packet sent by the Session-Sender to the Session-Reflector for this test session
Context	oam twamp server network-instance name <i>reference</i> session-reflector test-session sender-ip (ipv4-address ipv6-address) sender-udp-port number reflector-ip (ipv4-address ipv6-address) reflector-udp-port number last-sequence-number-received number

Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

dropped-connections

Description	TWAMP-Control (TCP) dropped or closed connections
Context	oam twamp statistics dropped-connections
Tree	dropped-connections
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

connection-timeout *number*

Description	TCP connection timeout
Context	oam twamp statistics dropped-connections connection-timeout <i>number</i>
Tree	connection-timeout
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

control-command-not-valid *number*

Description	TCP connection failure because invalid TWAMP-Control command received from Control-Client
Context	oam twamp statistics dropped-connections control-command-not-valid <i>number</i>
Tree	control-command-not-valid
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

incorrect-stop-session-count *number*

Description	TCP connection failure because invalid session count was received in the Stop-Sessions message from the Control-Client
Context	oam twamp statistics dropped-connections incorrect-stop-session-count <i>number</i>
Tree	incorrect-stop-session-count
Default	0
Configurable	False

Platforms 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

invalid-invalid-hmac *number*

Description Invalid Hash-based Message Authentication Code (HMAC)
Context [oam twamp statistics dropped-connections invalid-invalid-hmac *number*](#)
Tree [invalid-invalid-hmac](#)
Default 0
Configurable False
Platforms 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

maximum-global-limit-exceed *number*

Description TCP connection failures because global connection limit exceeds
Context [oam twamp statistics dropped-connections maximum-global-limit-exceed *number*](#)
Tree [maximum-global-limit-exceed](#)
Default 0
Configurable False
Platforms 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

maximum-prefix-limit-exceed *number*

Description TCP connection failures because per prefix connection limit exceeds
Context [oam twamp statistics dropped-connections maximum-prefix-limit-exceed *number*](#)
Tree [maximum-prefix-limit-exceed](#)
Default 0
Configurable False
Platforms 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

memory-allocation-error *number*

Description TCP connection failure because of memory allocation error
Context [oam twamp statistics dropped-connections memory-allocation-error *number*](#)
Tree [memory-allocation-error](#)

Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

message-send-error *number*

Description	TCP connection failure because of server message send error (Greeting, Start or Accept)
Context	oam twamp statistics dropped-connections message-send-error <i>number</i>
Tree	message-send-error
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

no-client-prefix-match *number*

Description	TCP connection failures because no prefix match for Client IP
Context	oam twamp statistics dropped-connections no-client-prefix-match <i>number</i>
Tree	no-client-prefix-match
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

no-internal-resource *number*

Description	TCP connection failures because internal resource unavailable
Context	oam twamp statistics dropped-connections no-internal-resource <i>number</i>
Tree	no-internal-resource
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

non-zero-sid-in-client-control-message *number*

Description	TCP connection failure because of invalid non-zero SID received from Control-Client
--------------------	---

Context	oam twamp statistics dropped-connections non-zero-sid-in-client-control-message <i>number</i>
Tree	non-zero-sid-in-client-control-message
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

tcp-connection-closed *number*

Description	TCP connection closed
Context	oam twamp statistics dropped-connections tcp-connection-closed <i>number</i>
Tree	tcp-connection-closed
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

tcp-connection-fatal-error *number*

Description	TCP connection errors
Context	oam twamp statistics dropped-connections tcp-connection-fatal-error <i>number</i>
Tree	tcp-connection-fatal-error
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

tcp-unexpected-event *number*

Description	TCP connection failures because of unexpected protocol events
Context	oam twamp statistics dropped-connections tcp-unexpected-event <i>number</i>
Tree	tcp-unexpected-event
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

unspecified-mode *number*

Description	TCP connection failures because unspecified TWAMP mode received from Control-Client
Context	oam twamp statistics dropped-connections unspecified-mode <i>number</i>
Tree	unspecified-mode
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

unsupported-mode *number*

Description	TCP connection failures because unsupported TWAMP mode requested by Control-Client
Context	oam twamp statistics dropped-connections unsupported-mode <i>number</i>
Tree	unsupported-mode
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

dropped-test-packet

Description	TWAMP-Test packet drop stats
Context	oam twamp statistics dropped-test-packet
Tree	dropped-test-packet
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

arrived-before-start-time *number*

Description	<p>Test packets dropped because they arrived before start time</p> <p>The TWAMP-Test packets arrived on the Session-Reflector before the indicated start-time in the Request-TW-Session. This is likely caused by a difference in Time of Day (ToD) clocks used for timestamping the TWAMP-Test packet. This may occur when the Server/Session-Reflector clock is ahead of the ToD clock of the Control-Client/Session-Sender.</p>
Context	oam twamp statistics dropped-test-packet arrived-before-start-time <i>number</i>

Tree	arrived-before-start-time
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

incorrect-packet-size *number*

Description	Test packets dropped because of unexpected packet size
Context	oam twamp statistics dropped-test-packet incorrect-packet-size <i>number</i>
Tree	incorrect-packet-size
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

incorrect-source-address *number*

Description	Test packets dropped because incorrect source address
Context	oam twamp statistics dropped-test-packet incorrect-source-address <i>number</i>
Tree	incorrect-source-address
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

invalid-error-estimate *number*

Description	Test packets dropped because invalid TWAMP-Test error estimate received from the Session-Sender
Context	oam twamp statistics dropped-test-packet invalid-error-estimate <i>number</i>
Tree	invalid-error-estimate
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

invalid-server-octets *number*

Description	Test packets dropped because of invalid server octets
--------------------	---

Context	oam twamp statistics dropped-test-packet invalid-server-octets <i>number</i>
Tree	invalid-server-octets
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

invalid-symmetric-mbz *number*

Description	Test packets dropped because of invalid symmetric padding Must Be Zero (MBZ)
Context	oam twamp statistics dropped-test-packet invalid-symmetric-mbz <i>number</i>
Tree	invalid-symmetric-mbz
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

no-start-sessions *number*

Description	Test packets dropped because they arrived before Client-Control start-sessions message for the session
Context	oam twamp statistics dropped-test-packet no-start-sessions <i>number</i>
Tree	no-start-sessions
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

reply-error *number*

Description	Test reply send errors.
Context	oam twamp statistics dropped-test-packet reply-error <i>number</i>
Tree	reply-error
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

rejected-session

Description	Per reason code error statistics for test session rejection
Context	oam twamp statistics rejected-session
Tree	rejected-session
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

bad-type-p *number*

Description	Sessions rejected because of non-DSCP type-p
Context	oam twamp statistics rejected-session bad-type-p <i>number</i>
Tree	bad-type-p
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

client-source-ip-unreachable *number*

Description	Session rejected because Control-Client IP is not reachable
Context	oam twamp statistics rejected-session client-source-ip-unreachable <i>number</i>
Tree	client-source-ip-unreachable
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

duplicate-session *number*

Description	Sessions rejected because duplicate session already exists
Context	oam twamp statistics rejected-session duplicate-session <i>number</i>
Tree	duplicate-session
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

invalid-ip-address-version *number*

Description	Sessions rejected because of bad IP version
Context	oam twamp statistics rejected-session invalid-ip-address-version <i>number</i>
Tree	invalid-ip-address-version
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

maximum-global-session-exceed *number*

Description	Sessions rejected because of global session limit exceeds
Context	oam twamp statistics rejected-session maximum-global-session-exceed <i>number</i>
Tree	maximum-global-session-exceed
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

maximum-prefix-session-exceed *number*

Description	Sessions rejected because of prefix session limit exceeds
Context	oam twamp statistics rejected-session maximum-prefix-session-exceed <i>number</i>
Tree	maximum-prefix-session-exceed
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

no-internal-resource *number*

Description	Sessions rejected because internal resource is not available
Context	oam twamp statistics rejected-session no-internal-resource <i>number</i>
Tree	no-internal-resource
Default	0
Configurable	False

Platforms 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

non-local-ip-destination *number*

Description Sessions rejected because destination IP in the TWAMP-Test packet from the Session-Sender was not local to the Session-Reflector

Context [oam twamp statistics rejected-session non-local-ip-destination *number*](#)

Tree [non-local-ip-destination](#)

Default 0

Configurable False

Platforms 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

non-zero-mbz-value *number*

Description Sessions rejected because Must Be Zero (MBZ) values in TWAMP-Test packet were not zero

Context [oam twamp statistics rejected-session non-zero-mbz-value *number*](#)

Tree [non-zero-mbz-value](#)

Default 0

Configurable False

Platforms 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

non-zero-session-sender-sid *number*

Description Sessions rejected because Session-Sender SID is not zero

Context [oam twamp statistics rejected-session non-zero-session-sender-sid *number*](#)

Tree [non-zero-session-sender-sid](#)

Default 0

Configurable False

Platforms 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

padding-too-big *number*

Description Sessions rejected because padding length requested is too large

Context [oam twamp statistics rejected-session padding-too-big *number*](#)

Tree [padding-too-big](#)

Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

refwait-timeout *number*

Description	Sessions dropped because Session-Reflector inactivity timer (REFWAIT) elapsed
Context	oam twamp statistics rejected-session refwait-timeout <i>number</i>
Tree	refwait-timeout
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

timeout-too-large *number*

Description	Sessions rejected because timeout advertised is larger than reference wait (REFWAIT)
Context	oam twamp statistics rejected-session timeout-too-large <i>number</i>
Tree	timeout-too-large
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

udp-port-in-use *number*

Description	Sessions rejected because UDP Port is not available
Context	oam twamp statistics rejected-session udp-port-in-use <i>number</i>
Tree	udp-port-in-use
Default	0
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

Platforms	Supported on all platforms

failure-reason *string*

Description	The reason the component transitioned to a failed state Field is empty if the component is not currently in a failure state
Context	platform chassis failure-reason string
Tree	failure-reason
Configurable	False
Platforms	Supported on all platforms

healthz

Description	The health of the component The parameters within this container indicate the status of the component beyond whether it is operationally up or down. When a signal is received that a component is in an unhealthy state the gNOI.Healthz service can be used to retrieve further diagnostic information relating to the component. The contents of this directory relate only to the specific component that it is associated with.
Context	platform chassis healthz
Tree	healthz
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-unhealthy *string*

Description	Last unhealthy time The time at which the component was last observed to transition from the healthy state to any other state, represented as nanoseconds since the Unix epoch.
Context	platform chassis healthz last-unhealthy string
Tree	last-unhealthy
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

status *keyword*

Description	Health status The status of the component, indicating its current health.
Context	platform chassis healthz status keyword
Tree	status
Options	<ul style="list-style-type: none"> unspecified Unspecified status The component's health status has not yet been checked by the system.

- **healthy**
Healthy status
The component is in a healthy state, and is operating within the expected parameters.
- **unhealthy**
Unhealthy status
The component is in a unhealthy state, it is not performing the function expected of it.

Configurable

False

Platforms

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

unhealthy-count *number***Description**

Unhealthy count

The number of times the component has transitioned from the healthy state to any other state.

Context[platform chassis healthz unhealthy-count](#) *number***Tree**[unhealthy-count](#)**Default**

0

Configurable

False

Platforms

hw-mac-address *string***Description**

The chassis MAC address

Read from hardware, or derived from the systems UUID

Context[platform chassis hw-mac-address](#) *string***Tree**[hw-mac-address](#)**Configurable**

False

Platforms

Supported on all platforms

id *number***Description**

A user configured chassis ID

	This value is not used by the system, but is provided for user convenience.
Context	platform chassis id <i>number</i>
Tree	id
Configurable	True
Platforms	Supported on all platforms

last-boot-type *string*

Description	The type of boot the chassis initialized from This field indicates what type of reboot occurred, whether it be warm, normal, or otherwise.
Context	platform chassis last-boot-type <i>string</i>
Tree	last-boot-type
Configurable	False
Platforms	Supported on all platforms

last-booted *string*

Description	The date and time this component last booted For components that do not boot, this is the time the component was last discovered by the active control module
Context	platform chassis last-booted <i>string</i>
Tree	last-booted
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-booted-reason *identityref*

Description	The reason this component last booted or rebooted For components without the ability to 'boot' this field is never populated
Context	platform chassis last-booted-reason <i>identityref</i>
Tree	last-booted-reason
Options	<ul style="list-style-type: none"> • user-initiated-reboot A user initiated the reboot directly via a management interface • power-failure

- The system rebooted the component due to insufficient power
- critical-error
 - The system rebooted the component due to an internal critical error

Configurable	False
Platforms	Supported on all platforms

last-change *string*

Description	The date and time this component last changed state
Context	platform chassis last-change <i>string</i>
Tree	last-change
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

manufactured-date *string*

Description	The date this component was manufactured
Context	platform chassis manufactured-date <i>string</i>
Tree	manufactured-date
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	The operational state of this component
Context	platform chassis oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> up <ul style="list-style-type: none"> Component or process is operational down <ul style="list-style-type: none"> Component or process is not operational empty <ul style="list-style-type: none"> Component slot is empty downloading

- Component is downloading image into memory
- booting
Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False
Platforms	Supported on all platforms

part-number *string*

Description	Part number for this component
Context	platform chassis part-number <i>string</i>
Tree	part-number
Configurable	False
Platforms	Supported on all platforms

power

Description	Top-level container for chassis-wide power state
Context	platform chassis power
Tree	power
Configurable	True
Platforms	Supported on all platforms

control

Description	Top-level container for power usage of control modules
Context	platform chassis power control
Tree	control
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

peak *number*

Description	Peak power used
Context	platform chassis power control peak <i>number</i>
Tree	peak
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

required *number*

Description	Power required to power on all present admin enabled components as part of power management
Context	platform chassis power control required <i>number</i>
Tree	required
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

used *number*

Context	platform chassis power linecard used number
Tree	used
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

total

Description	Top-level container for total power usage and capacity
--------------------	--

Context	platform chassis power total
Tree	total
Configurable	False
Platforms	Supported on all platforms

capacity number

Description	Total power capacity provided by all power supplies
Context	platform chassis power total capacity number
Tree	capacity
Configurable	False
Platforms	Supported on all platforms

peak number

Description	Peak power used
Context	platform chassis power total peak number
Tree	peak
Configurable	False
Platforms	Supported on all platforms

required number

Description	Power required to power on all present admin enabled components as part of power management
Context	platform chassis power total required number
Tree	required
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

used number

Description	Used power
Context	platform chassis power total used number
Tree	used
Configurable	False

Platforms Supported on all platforms

rebooting-at *string*

Description Indicates the date and time this component will reboot
If empty, no delayed reboots are queued for this component.
A non empty value implies that a delayed reboot operation has been triggered for this component, which can be aborted using 'tools platform <component> reboot cancel'.

Context [platform chassis rebooting-at string](#)

Tree [rebooting-at](#)

String Length 20 to 32

Configurable False

Platforms Supported on all platforms

removable *boolean*

Description Details if this component can be removed from the system

Context [platform chassis removable boolean](#)

Tree [removable](#)

Configurable False

Platforms Supported on all platforms

secondary-mac-address *string*

Description MAC address programmed as a secondary terminating MAC address on every IP interface, across all network instances
If an IP packet is received on a routed subinterface and it arrives with a DMAC equal to the secondary-mac-address then it is terminated and forwarded exactly the same way it would be forwarded if it had arrived on this subinterface with a DMAC equal to the subinterface MAC address.

Context [platform chassis secondary-mac-address string](#)

Tree [secondary-mac-address](#)

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

serial-number *string*

Description	The serial number for this component
Context	platform chassis serial-number <i>string</i>
Tree	serial-number
Configurable	False
Platforms	Supported on all platforms

slots *number*

Description	The number of line card slots supported by the chassis
Context	platform chassis slots <i>number</i>
Tree	slots
Configurable	False
Platforms	Supported on all platforms

type *string*

Description	The chassis type
Context	platform chassis type <i>string</i>
Tree	type
Configurable	False
Platforms	Supported on all platforms

control [slot](#) *string*

Description	Top-level container for control module configuration and state
Context	platform control slot <i>string</i>
Tree	control
Configurable	True
Platforms	Supported on all platforms

slot *string*

Description	Slot identifier for the control module This is set to 'A' for systems without removable control modules.
--------------------	---

Context	platform control slot string
Configurable	True
Platforms	Supported on all platforms

bios

Description	State related to the BIOS of this component
Context	platform control slot string bios
Tree	bios
Configurable	False
Platforms	Supported on all platforms

manufacturer string

Description	The manufacturer of this component
Context	platform control slot string bios manufacturer string
Tree	manufacturer
Configurable	False
Platforms	Supported on all platforms

software-version string

Description	The software version of this component
Context	platform control slot string bios software-version string
Tree	software-version
Configurable	False
Platforms	Supported on all platforms

bootloader

Description	State related to the boot loader of this component
Context	platform control slot string bootloader
Tree	bootloader
Configurable	False
Platforms	Supported on all platforms

manufacturer *string*

Description	The manufacturer of this component
Context	platform control slot <i>string</i> bootloader manufacturer <i>string</i>
Tree	manufacturer
Configurable	False
Platforms	Supported on all platforms

software-version *string*

Description	The software version of this component
Context	platform control slot <i>string</i> bootloader software-version <i>string</i>
Tree	software-version
Configurable	False
Platforms	Supported on all platforms

cgroup *name string*

Description	List of cgroups present in the system
Context	platform control slot <i>string</i> cgroup name <i>string</i>
Tree	cgroup
Configurable	False
Platforms	Supported on all platforms

name *string*

Description	Name of the cgroup, as defined by its directory location in the filesystem
Context	platform control slot <i>string</i> cgroup name <i>string</i>
Configurable	False
Platforms	Supported on all platforms

cpuacct-statistics

Description	Top-level container for cgroup cpuacct statistics
Context	platform control slot <i>string</i> cgroup name <i>string</i> cpuacct-statistics
Tree	cpuacct-statistics

Configurable	False
Platforms	Supported on all platforms

system number

Description	CPU usage user system
Context	platform control slot string cgroup name string cpuacct-statistics system number
Tree	system
Units	useconds
Configurable	False
Platforms	Supported on all platforms

user number

Description	CPU usage user mode
Context	platform control slot string cgroup name string cpuacct-statistics user number
Tree	user
Units	useconds
Configurable	False
Platforms	Supported on all platforms

memory-statistics

Description	Top-level container for cgroup memory statistics
Context	platform control slot string cgroup name string memory-statistics
Tree	memory-statistics
Configurable	False
Platforms	Supported on all platforms

anon number

Description	Amount of memory used in anonymous mappings such as brk(), sbrk(), and mmap(MAP_ANONYMOUS)
Context	platform control slot string cgroup name string memory-statistics anon number
Tree	anon

Units	bytes
Configurable	False
Platforms	Supported on all platforms

anon-thp *number*

Description	Amount of memory used in anonymous mappings backed by transparent hugepages
Context	platform control slot <i>string</i> cgroup name <i>string</i> memory-statistics anon-thp number
Tree	anon-thp
Units	bytes
Configurable	False
Platforms	Supported on all platforms

current *number*

Description	The total amount of memory currently being used by the cgroup and its descendants. Read from <code>memory.current</code>
Context	platform control slot <i>string</i> cgroup name <i>string</i> memory-statistics current number
Tree	current
Units	bytes
Configurable	False
Platforms	Supported on all platforms

current-swap *number*

Description	The total amount of swap currently being used by the cgroup and its descendants. Read from <code>memory.swap.current</code>
Context	platform control slot <i>string</i> cgroup name <i>string</i> memory-statistics current-swap number
Tree	current-swap
Units	bytes
Configurable	False
Platforms	Supported on all platforms

file number

Description	Amount of memory used to cache filesystem data, including tmpfs and shared memory
Context	platform control slot <i>string</i> cgroup name <i>string</i> memory-statistics file number
Tree	file
Units	bytes
Configurable	False
Platforms	Supported on all platforms

file-dirty number

Description	Amount of cached filesystem data that was modified but not yet written back to disk
Context	platform control slot <i>string</i> cgroup name <i>string</i> memory-statistics file-dirty number
Tree	file-dirty
Units	bytes
Configurable	False
Platforms	Supported on all platforms

file-writeback number

Description	Amount of cached filesystem data that was modified and is currently being written back to disk
Context	platform control slot <i>string</i> cgroup name <i>string</i> memory-statistics file-writeback number
Tree	file-writeback
Units	bytes
Configurable	False
Platforms	Supported on all platforms

kernel-stack number

Description	Amount of memory allocated to kernel stacks
Context	platform control slot <i>string</i> cgroup name <i>string</i> memory-statistics kernel-stack number

Tree	kernel-stack
Units	bytes
Configurable	False
Platforms	Supported on all platforms

memory-events

Description	Top-level container for cgroup memory events
Context	platform control slot string cgroup name string memory-statistics memory-events
Tree	memory-events
Configurable	False
Platforms	Supported on all platforms

high *number*

Description	The number of times processes of the cgroup are throttled and routed to perform direct memory reclaim because the high memory boundary was exceeded.
Context	platform control slot string cgroup name string memory-statistics memory-events high number
Tree	high
Configurable	False
Platforms	Supported on all platforms

low *number*

Description	The number of times the cgroup is reclaimed due to high memory pressure even though its usage is under the low boundary.
Context	platform control slot string cgroup name string memory-statistics memory-events low number
Tree	low
Configurable	False
Platforms	Supported on all platforms

max number

Description	The number of times the cgroup's memory usage was about to go over the max boundary
Context	platform control slot <i>string</i> cgroup name <i>string</i> memory-statistics memory-events max <i>number</i>
Tree	max
Configurable	False
Platforms	Supported on all platforms

oom number

Description	The number of time the cgroup's memory usage had reached the limit and allocation was about to fail
Context	platform control slot <i>string</i> cgroup name <i>string</i> memory-statistics memory-events oom <i>number</i>
Tree	oom
Configurable	False
Platforms	Supported on all platforms

oom-kill number

Description	The number of processes belonging to this cgroup killed by any kind of out-of-memory killer
Context	platform control slot <i>string</i> cgroup name <i>string</i> memory-statistics memory-events oom-kill <i>number</i>
Tree	oom-kill
Configurable	False
Platforms	Supported on all platforms

slab number

Description	Amount of memory used for storing in-kernel data structures
Context	platform control slot <i>string</i> cgroup name <i>string</i> memory-statistics slab <i>number</i>
Tree	slab
Units	bytes
Configurable	False

Platforms Supported on all platforms

sock number

Description Amount of memory used in network transmission buffers

Context [platform control slot string cgroup name string memory-statistics sock number](#)

Tree [sock](#)

Units bytes

Configurable False

Platforms Supported on all platforms

clei-code string

Description The Common Language Identification Code for this component

Context [platform control slot string clei-code string](#)

Tree [clei-code](#)

Configurable False

Platforms Supported on all platforms

cpu index (keyword | number)

Description List of all CPUs in the system

Context [platform control slot string cpu index \(keyword | number\)](#)

Tree [cpu](#)

Configurable False

Platforms Supported on all platforms

index (keyword | number)

Description CPU index for each processor core on the system
On a single-core system, the index should be zero. The 'all' index signifies an aggregation of the CPU utilization statistics over all cores in the system.

Context [platform control slot string cpu index \(keyword | number\)](#)

Options

- all
Index value indicating all CPUs in the system

Configurable	False
Platforms	Supported on all platforms

Platforms	Supported on all platforms

average-15 *number*

Description	The arithmetic mean value of this statistic over the last fifteen minutes
Context	platform control slot <i>string</i> cpu index (<i>keyword number</i>) software-interrupt average-15 <i>number</i>
Tree	average-15
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

average-5 *number*

Description	The arithmetic mean value of this statistic over the last five minutes
Context	platform control slot <i>string</i> cpu index (<i>keyword number</i>) software-interrupt average-5 <i>number</i>
Tree	average-5
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

instant *number*

Description	The instantaneous percentage value
Context	platform control slot <i>string</i> cpu index (<i>keyword number</i>) software-interrupt instant <i>number</i>
Tree	instant
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

speed *decimal-number*

Description	Capable speed of the CPU
Context	platform control slot <i>string</i> cpu index (<i>keyword number</i>) speed <i>decimal-number</i>
Tree	speed
Units	gigahertz
Configurable	False
Platforms	Supported on all platforms

system

Description	Time spent executing at the system level This can otherwise be known as kernel time, and does not include time spent servicing hardware and software interrupts.
Context	platform control slot <i>string</i> cpu index (<i>keyword number</i>) system
Tree	system
Configurable	False
Platforms	Supported on all platforms

average-1 *number*

Description	The arithmetic mean value of this statistic over the last minute
Context	platform control slot <i>string</i> cpu index (<i>keyword number</i>) system average-1 <i>number</i>
Tree	average-1
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

average-15 *number*

Description	The arithmetic mean value of this statistic over the last fifteen minutes
Context	platform control slot <i>string</i> cpu index (<i>keyword number</i>) system average-15 <i>number</i>
Tree	average-15
Range	0 to 100

Configurable	False
Platforms	Supported on all platforms

average-5 *number*

Description	The arithmetic mean value of this statistic over the last five minutes
Context	platform control slot <i>string</i> cpu index (<i>keyword</i> <i>number</i>) system average-5 <i>number</i>
Tree	average-5
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

instant *number*

Description	The instantaneous percentage value
Context	platform control slot <i>string</i> cpu index (<i>keyword</i> <i>number</i>) system instant <i>number</i>
Tree	instant
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

total

Description	Total CPU utilization
Context	platform control slot <i>string</i> cpu index (<i>keyword</i> <i>number</i>) total
Tree	total
Configurable	False
Platforms	Supported on all platforms

average-1 *number*

Description	The arithmetic mean value of this statistic over the last minute
Context	platform control slot <i>string</i> cpu index (<i>keyword</i> <i>number</i>) total average-1 <i>number</i>
Tree	average-1

Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

average-15 *number*

Description	The arithmetic mean value of this statistic over the last fifteen minutes
Context	platform control slot <i>string</i> cpu index (<i>keyword number</i>) total average-15 number
Tree	average-15
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

average-5 *number*

Description	The arithmetic mean value of this statistic over the last five minutes
Context	platform control slot <i>string</i> cpu index (<i>keyword number</i>) total average-5 number
Tree	average-5
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

instant *number*

Description	The instantaneous percentage value
Context	platform control slot <i>string</i> cpu index (<i>keyword number</i>) total instant number
Tree	instant
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

type *string*

Description	Model name of the CPU
--------------------	-----------------------

Context	platform control slot string cpu index (keyword number) type string
Tree	type
Configurable	False
Platforms	Supported on all platforms

user

Description	Time spent executing at the user level This can otherwise be known as application or user space time.
Context	platform control slot string cpu index (keyword number) user
Tree	user
Configurable	False
Platforms	Supported on all platforms

average-1 number

Description	The arithmetic mean value of this statistic over the last minute
Context	platform control slot string cpu index (keyword number) user average-1 number
Tree	average-1
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

average-15 number

Description	The arithmetic mean value of this statistic over the last fifteen minutes
Context	platform control slot string cpu index (keyword number) user average-15 number
Tree	average-15
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

average-5 *number*

Description	The arithmetic mean value of this statistic over the last five minutes
Context	platform control slot <i>string</i> cpu index (<i>keyword number</i>) user average-5 <i>number</i>
Tree	average-5
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

instant *number*

Description	The instantaneous percentage value
Context	platform control slot <i>string</i> cpu index (<i>keyword number</i>) user instant <i>number</i>
Tree	instant
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

disk name *string*

Description	List of disks present in the system
Context	platform control slot <i>string</i> disk name <i>string</i>
Tree	disk
Configurable	False
Platforms	Supported on all platforms

name *string*

Description	Name of the disk, as defined by its physical location in the system
Context	platform control slot <i>string</i> disk name <i>string</i>
Configurable	False
Platforms	Supported on all platforms

model-number *string*

Description	Model name of the disk
Context	platform control slot <i>string</i> disk name <i>string</i> model-number <i>string</i>
Tree	model-number
Configurable	False
Platforms	Supported on all platforms

partition name *string*

Description	List of partitions available on this disk
Context	platform control slot <i>string</i> disk name <i>string</i> partition name <i>string</i>
Tree	partition
Configurable	False
Platforms	Supported on all platforms

name *string*

Description	Name of the partition
Context	platform control slot <i>string</i> disk name <i>string</i> partition name <i>string</i>
Configurable	False
Platforms	Supported on all platforms

free *number*

Description	Space free on the partition
Context	platform control slot <i>string</i> disk name <i>string</i> partition name <i>string</i> free <i>number</i>
Tree	free
Units	bytes
Configurable	False
Platforms	Supported on all platforms

mount-point *string*

Description	Path to where this partition is mounted
--------------------	---

Context	platform control slot <i>string</i> disk name <i>string</i> partition name <i>string</i> mount-point <i>string</i>
Tree	mount-point
Configurable	False
Platforms	Supported on all platforms

mount-status *keyword*

Description	Current mount status of this partition
Context	platform control slot <i>string</i> disk name <i>string</i> partition name <i>string</i> mount-status <i>keyword</i>
Tree	mount-status
Options	<ul style="list-style-type: none"> • <code>ro</code> Partition is currently mounted read-only • <code>rw</code> Partition is currently mounted read-write
Configurable	False
Platforms	Supported on all platforms

percent-used *number*

Description	Percentage of the partition in use
Context	platform control slot <i>string</i> disk name <i>string</i> partition name <i>string</i> percent-used <i>number</i>
Tree	percent-used
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

size *number*

Description	Size of the partition
Context	platform control slot <i>string</i> disk name <i>string</i> partition name <i>string</i> size <i>number</i>
Tree	size
Units	bytes
Configurable	False

Platforms Supported on all platforms

used number

Description Space used on the partition

Context [platform control slot string disk name string partition name string used number](#)

Tree [used](#)

Units bytes

Configurable False

Platforms Supported on all platforms

uuid string

Description UUID of the partition

Context [platform control slot string disk name string partition name string uuid string](#)

Tree [uuid](#)

Configurable False

Platforms Supported on all platforms

serial-number string

Description Serial number of the disk

Context [platform control slot string disk name string serial-number string](#)

Tree [serial-number](#)

Configurable False

Platforms Supported on all platforms

size number

Description Total size of the disk

Context [platform control slot string disk name string size number](#)

Tree [size](#)

Configurable False

Platforms Supported on all platforms

statistics

Description	Top-level container for disk statistics
Context	platform control slot <i>string</i> disk name <i>string</i> statistics
Tree	statistics
Configurable	False
Platforms	Supported on all platforms

io-errors *number*

Description	Enter the io-errors context
Context	platform control slot <i>string</i> disk name <i>string</i> statistics io-errors <i>number</i>
Tree	io-errors
Configurable	False
Platforms	Supported on all platforms

max-erase-count *number*

Description	Enter the max-erase-count context
Context	platform control slot <i>string</i> disk name <i>string</i> statistics max-erase-count <i>number</i>
Tree	max-erase-count
Configurable	False
Platforms	Supported on all platforms

read-per-second *decimal-number*

Description	Indicates the amount of data read from the device per second
Context	platform control slot <i>string</i> disk name <i>string</i> statistics read-per-second <i>decimal-number</i>
Tree	read-per-second
Units	bytes
Configurable	False
Platforms	Supported on all platforms

transfers-per-second *decimal-number*

Description	Indicates the number of transfers per second that were issued to the device. A transfer is an I/O request to the device. Multiple logical requests can be combined into a single I/O request to the device. A transfer is of indeterminate size.
Context	platform control slot <i>string</i> disk name <i>string</i> statistics transfers-per-second <i>decimal-number</i>
Tree	transfers-per-second
Configurable	False
Platforms	Supported on all platforms

utilization *number*

Description	The current tps utilization of the disk, expressed as a percentage
Context	platform control slot <i>string</i> disk name <i>string</i> statistics utilization <i>number</i>
Tree	utilization
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

written-per-second *decimal-number*

Description	Indicates the amount of data written to the device per second
Context	platform control slot <i>string</i> disk name <i>string</i> statistics written-per-second <i>decimal-number</i>
Tree	written-per-second
Units	bytes
Configurable	False
Platforms	Supported on all platforms

type *keyword*

Description	Type of disk
Context	platform control slot <i>string</i> disk name <i>string</i> type <i>keyword</i>
Tree	type
Options	<ul style="list-style-type: none"> compactflash

	<ul style="list-style-type: none"> • <code>ssd</code> • <code>hdd</code> • <code>usb</code> • <code>mmc</code>
Configurable	False
Platforms	Supported on all platforms

failure-reason *string*

Description	The reason the component transitioned to a failed state Field is empty if the component is not currently in a failure state
Context	platform control slot <i>string</i> failure-reason <i>string</i>
Tree	failure-reason
Configurable	False
Platforms	Supported on all platforms

healthz

Description	The health of the component The parameters within this container indicate the status of the component beyond whether it is operationally up or down. When a signal is received that a component is in an unhealthy state the gNOI.Healthz service can be used to retrieve further diagnostic information relating to the component. The contents of this directory relate only to the specific component that it is associated with.
Context	platform control slot <i>string</i> healthz
Tree	healthz
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-unhealthy *string*

Description	Last unhealthy time The time at which the component was last observed to transition from the healthy state to any other state, represented as nanoseconds since the Unix epoch.
--------------------	--

Context	platform control slot <i>string</i> healthz last-unhealthy <i>string</i>
Tree	last-unhealthy
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

status *keyword*

Description	Health status The status of the component, indicating its current health.
Context	platform control slot <i>string</i> healthz status <i>keyword</i>
Tree	status
Options	<ul style="list-style-type: none"> unspecified Unspecified status The component's health status has not yet been checked by the system. healthy Healthy status The component is in a healthy state, and is operating within the expected parameters. unhealthy Unhealthy status The component is in a unhealthy state, it is not performing the function expected of it.
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

unhealthy-count *number*

Description	Unhealthy count The number of times the component has transitioned from the healthy state to any other state.
Context	platform control slot <i>string</i> healthz unhealthy-count <i>number</i>
Tree	unhealthy-count

Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface *name identityref*

Description	Enter the interface list instance
Context	platform control slot <i>string</i> interface name <i>identityref</i>
Tree	interface
Configurable	True
Platforms	7250 IXR-X3b

name *identityref*

Description	Name of a specific control module interface
Context	platform control slot <i>string</i> interface name <i>identityref</i>
Options	<ul style="list-style-type: none"> usb The single USB type A interface present on the control module
Configurable	True
Platforms	7250 IXR-X3b

admin-state *keyword*

Description	Set the administrative state of this interface
Context	platform control slot <i>string</i> interface name <i>identityref</i> admin-state <i>keyword</i>
Tree	admin-state
Options	<ul style="list-style-type: none"> enable disable
Configurable	True
Platforms	7250 IXR-X3b

oper-state *keyword*

Description	Indicates the current operational state of this interface
--------------------	---

Context	platform control slot <i>string</i> interface name <i>identityref</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed • synchronizing Component is currently being synchronized • upgrading Component is currently being upgraded • low-power Component is offline due to insufficient system power • degraded Component or process is in a degraded state • warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes. • waiting Component or process is currently waiting This state can be set by event handler when the <code>reinvoke-with-delay</code> action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.
Configurable	False
Platforms	7250 IXR-X3b

last-booted *string*

Description	The date and time this component last booted For components that do not boot, this is the time the component was last discovered by the active control module
Context	platform control slot <i>string</i> last-booted <i>string</i>
Tree	last-booted
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-booted-reason *identityref*

Description	The reason this component last booted or rebooted For components without the ability to 'boot' this field is never populated
Context	platform control slot <i>string</i> last-booted-reason <i>identityref</i>
Tree	last-booted-reason
Options	<ul style="list-style-type: none"> • user-initiated-reboot A user initiated the reboot directly via a management interface • power-failure The system rebooted the component due to insufficient power • critical-error The system rebooted the component due to an internal critical error
Configurable	False
Platforms	Supported on all platforms

last-change *string*

Description	The date and time this component last changed state
Context	platform control slot <i>string</i> last-change <i>string</i>
Tree	last-change
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-switchover-reason

Description	State information relating to the last control module switchover
Context	platform control slot <i>string</i> last-switchover-reason
Tree	last-switchover-reason
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

details *string*

Description	Any additional details relating to the last switchover This field is not populated if the system has not performed a switchover since initial startup.
Context	platform control slot <i>string</i> last-switchover-reason details <i>string</i>
Tree	details
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

trigger *identityref*

Description	Indicates the trigger of the last switchover This field is not populated if the system has not performed a switchover since initial startup.
Context	platform control slot <i>string</i> last-switchover-reason trigger <i>identityref</i>
Tree	trigger
Options	<ul style="list-style-type: none"> • user-initiated A user initiated the switchover directly via the tools schema • control-reboot A user initiated the switchover indirectly via rebooting the active control module • control-failure The system has forced a switchover due to a failure on the active control module • linecard-connectivity The system has forced a switchover due to a loss of connectivity between the active control module and one or more linecards
Configurable	False

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

locator-state *keyword*

Description Details if the locator LED is active on this component

Context [platform control slot](#) *string* [locator-state](#) *keyword*

Tree [locator-state](#)

Default inactive

Options

- active
Locator LED is currently active
- inactive
Locator LED is currently inactive

Configurable False

Platforms Supported on all platforms

manufactured-date *string*

Description The date this component was manufactured

Context [platform control slot](#) *string* [manufactured-date](#) *string*

Tree [manufactured-date](#)

String Length 20 to 32

Configurable False

Platforms Supported on all platforms

memory

Description Top-level container for system memory state

Context [platform control slot](#) *string* [memory](#)

Tree [memory](#)

Configurable False

Platforms Supported on all platforms

free *number*

Description Memory available for system use

Context [platform control slot](#) *string* [memory](#) [free](#) *number*

Tree	free
Units	bytes
Configurable	False
Platforms	Supported on all platforms

physical *number*

Description	Total physical memory available on this component
Context	platform control slot <i>string</i> memory physical <i>number</i>
Tree	physical
Units	bytes
Configurable	False
Platforms	Supported on all platforms

reserved *number*

Description	Memory reserved for system use
Context	platform control slot <i>string</i> memory reserved <i>number</i>
Tree	reserved
Units	bytes
Configurable	False
Platforms	Supported on all platforms

utilization *number*

Description	Total memory utilized
Context	platform control slot <i>string</i> memory utilization <i>number</i>
Tree	utilization
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	The operational state of this component
Context	platform control slot <i>string</i> oper-state <i>keyword</i>

Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed • synchronizing Component is currently being synchronized • upgrading Component is currently being upgraded • low-power Component is offline due to insufficient system power • degraded Component or process is in a degraded state • warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes. • waiting Component or process is currently waiting This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.
Configurable	False
Platforms	Supported on all platforms

part-number *string*

Description	Part number for this component
Context	platform control slot <i>string</i> part-number <i>string</i>
Tree	part-number
Configurable	False
Platforms	Supported on all platforms

power

Description	State related to power consumption and allocation for this component
Context	platform control slot <i>string</i> power
Tree	power
Configurable	False
Platforms	Supported on all platforms

required *number*

Description	The power budget required to enable this component
Context	platform control slot <i>string</i> power required <i>number</i>
Tree	required
Units	watts
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

used *number*

Description	The power in use by this component
Context	platform control slot <i>string</i> power used <i>number</i>
Tree	used
Units	watts
Configurable	False
Platforms	Supported on all platforms

process *pid number*

Description	List of system processes
Context	platform control slot <i>string</i> process pid number
Tree	process
Configurable	False
Platforms	Supported on all platforms

pid *number*

Description	The process ID
Context	platform control slot <i>string</i> process pid number
Configurable	False
Platforms	Supported on all platforms

args *string*

Description	Current process command line arguments Arguments with a parameter (e.g., --option 10 or -option=10) should be represented as a single element of the list with the argument name and parameter together. Flag arguments, i.e., those without a parameter should also be in their own list element.
Context	platform control slot <i>string</i> process pid number args <i>string</i>
Tree	args
Configurable	False
Platforms	Supported on all platforms

cpu-utilization *number*

Description	The percentage of CPU that is being used by the process
Context	platform control slot <i>string</i> process pid number cpu-utilization <i>number</i>
Tree	cpu-utilization
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

memory-usage *number*

Description	Bytes allocated and in use by the process
Context	platform control slot <i>string</i> process pid <i>number</i> memory-usage <i>number</i>
Tree	memory-usage
Units	bytes
Configurable	False
Platforms	Supported on all platforms

memory-utilization *number*

Description	The percentage of RAM that is being used by the process
Context	platform control slot <i>string</i> process pid <i>number</i> memory-utilization <i>number</i>
Tree	memory-utilization
Range	0 to 100
Configurable	False
Platforms	Supported on all platforms

name *string*

Description	The process name
Context	platform control slot <i>string</i> process pid <i>number</i> name <i>string</i>
Tree	name
Configurable	False
Platforms	Supported on all platforms

start-time *string*

Description	The time at which this process started
Context	platform control slot <i>string</i> process pid <i>number</i> start-time <i>string</i>
Tree	start-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

rebooting-at *string*

Description	Indicates the date and time this component will reboot If empty, no delayed reboots are queued for this component. A non empty value implies that a delayed reboot operation has been triggered for this component, which can be aborted using 'tools platform <component> reboot cancel'.
Context	platform control slot <i>string</i> rebooting-at <i>string</i>
Tree	rebooting-at
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

removable *boolean*

Description	Details if this component can be removed from the system
Context	platform control slot <i>string</i> removable <i>boolean</i>
Tree	removable
Configurable	False
Platforms	Supported on all platforms

role *keyword*

Description	Control module role, detailing active or standby state This field is not present on systems without removable control modules.
Context	platform control slot <i>string</i> role <i>keyword</i>
Tree	role
Options	<ul style="list-style-type: none"> • active • standby
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

serial-number *string*

Description	The serial number for this component
Context	platform control slot <i>string</i> serial-number <i>string</i>

Tree	serial-number
Configurable	False
Platforms	Supported on all platforms

software-version *string*

Description	Image version version running on this component This version is the squashfs version, and may not represent the current per-application versions if versions have been modified after the system has been installed.
Context	platform control slot <i>string</i> software-version <i>string</i>
Tree	software-version
Configurable	False
Platforms	Supported on all platforms

temperature

Description	State related to temperature for this component
Context	platform control slot <i>string</i> temperature
Tree	temperature
Configurable	False
Platforms	Supported on all platforms

alarm-status *boolean*

Description	Indicates if a temperature sensor of this component is currently in an alarm state An alarm state is triggered if the margin is <=2 degrees, indicating that a thermal protection shut down is imminent unless adequate system cooling is provided to bring the temperature sensor back into safe operating ranges.
Context	platform control slot <i>string</i> temperature alarm-status <i>boolean</i>
Tree	alarm-status
Configurable	False
Platforms	Supported on all platforms

instant *number*

Description	Represents the highest current temperature of any sensor on this component Note that as multiple sensors may feed in, that this field and the margin field may be referencing different sensors.
Context	platform control slot <i>string</i> temperature instant <i>number</i>
Tree	instant
Configurable	False
Platforms	Supported on all platforms

margin *number*

Description	Indicates the lowest alarm margin of any sensor on this component The margin is the delta between the current sensor temperature and the thermal protection threshold for that sensor. Note that as multiple sensors may feed in, that this field and the instant field may be referencing different sensors.
Context	platform control slot <i>string</i> temperature margin <i>number</i>
Tree	margin
Configurable	False
Platforms	Supported on all platforms

maximum *number*

Description	Represents the highest temperature any sensor on this component has reached since it booted
Context	platform control slot <i>string</i> temperature maximum <i>number</i>
Tree	maximum
Configurable	False
Platforms	Supported on all platforms

maximum-time *string*

Description	Indicates the time this component reached the temperature referenced in the maximum field
Context	platform control slot <i>string</i> temperature maximum-time <i>string</i>
Tree	maximum-time

String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

type *string*

Description	Control module type, as translated from the components EEPROM
Context	platform control slot <i>string type string</i>
Tree	type
Configurable	False
Platforms	Supported on all platforms

fabric slot *number*

Description	Top-level container for fabric configuration and state
Context	platform fabric slot <i>number</i>
Tree	fabric
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

slot *number*

Description	Numeric identifier for the fabric module
Context	platform fabric slot <i>number</i>
Range	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

admin-state *keyword*

Description	The administrative state of this component
Context	platform fabric slot <i>number</i> admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> enable

	<ul style="list-style-type: none"> • disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

clei-code *string*

Description	The Common Language Identification Code for this component
Context	platform fabric slot number clei-code string
Tree	clei-code
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

failure-reason *string*

Description	The reason the component transitioned to a failed state Field is empty if the component is not currently in a failure state
Context	platform fabric slot number failure-reason string
Tree	failure-reason
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

healthz

Description	The health of the component The paramaters within this container indicate the status of the component beyond whether it is operationally up or down. When a signal is received that a component is in an unhealthy state the gNOI.Healthz service can be used to retrieve further diagnostic information relating to the component. The contents of this directory relate only to the specific component that it is associated with.
Context	platform fabric slot number healthz
Tree	healthz
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-unhealthy string

Description	Last unhealthy time The time at which the component was last observed to transition from the healthy state to any other state, represented as nanoseconds since the Unix epoch.
Context	platform fabric slot number healthz last-unhealthy string
Tree	last-unhealthy
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

status keyword

Description	Health status The status of the component, indicating its current health.
Context	platform fabric slot number healthz status keyword
Tree	status
Options	<ul style="list-style-type: none"> unspecified Unspecified status The component's health status has not yet been checked by the system. healthy Healthy status The component is in a healthy state, and is operating within the expected parameters. unhealthy Unhealthy status The component is in a unhealthy state, it is not performing the function expected of it.
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

unhealthy-count *number*

Description	Unhealthy count The number of times the component has transitioned from the healthy state to any other state.
Context	platform fabric slot number healthz unhealthy-count number
Tree	unhealthy-count
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-booted *string*

Description	The date and time this component last booted For components that do not boot, this is the time the component was last discovered by the active control module
Context	platform fabric slot number last-booted string
Tree	last-booted
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

last-booted-reason *identityref*

Description	The reason this component last booted or rebooted For components without the ability to 'boot' this field is never populated
Context	platform fabric slot number last-booted-reason identityref
Tree	last-booted-reason
Options	<ul style="list-style-type: none"> • user-initiated-reboot A user initiated the reboot directly via a management interface • power-failure The system rebooted the component due to insufficient power • critical-error The system rebooted the component due to an internal critical error

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

last-change *string*

Description	The date and time this component last changed state
Context	platform fabric slot number last-change string
Tree	last-change
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

locator-state *keyword*

Description	Details if the locator LED is active on this component
Context	platform fabric slot number locator-state keyword
Tree	locator-state
Default	inactive
Options	<ul style="list-style-type: none"> • active Locator LED is currently active • inactive Locator LED is currently inactive
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

manufactured-date *string*

Description	The date this component was manufactured
Context	platform fabric slot number manufactured-date string
Tree	manufactured-date
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

oper-state keyword

Description	The operational state of this component
Context	platform fabric slot <i>number</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none">• up Component or process is operational• down Component or process is not operational• empty Component slot is empty• downloading Component is downloading image into memory• booting Component is booting downloaded image• starting Component image operational, application processes starting• failed Component or process has failed• synchronizing Component is currently being synchronized• upgrading Component is currently being upgraded• low-power Component is offline due to insufficient system power• degraded Component or process is in a degraded state• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.• waiting Component or process is currently waiting This state can be set by event handler when the <code>reinvoke-with-delay</code> action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

part-number string

Description	Part number for this component
Context	platform fabric slot number part-number string
Tree	part-number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

power

Description	State related to power consumption and allocation for this component
Context	platform fabric slot number power
Tree	power
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

required number

Description	The power budget required to enable this component
Context	platform fabric slot number power required number
Tree	required
Units	watts
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

used number

Description	The power in use by this component
Context	platform fabric slot number power used number
Tree	used
Units	watts
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

rebooting-at *string*

Description	Indicates the date and time this component will reboot If empty, no delayed reboots are queued for this component. A non empty value implies that a delayed reboot operation has been triggered for this component, which can be aborted using 'tools platform <component> reboot cancel'.
Context	platform fabric slot number rebooting-at string
Tree	rebooting-at
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

removable *boolean*

Description	Details if this component can be removed from the system
Context	platform fabric slot number removable boolean
Tree	removable
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

serial-number *string*

Description	The serial number for this component
Context	platform fabric slot number serial-number string
Tree	serial-number
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

temperature

Description	State related to temperature for this component
Context	platform fabric slot number temperature
Tree	temperature
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

alarm-status *boolean*

Description	Indicates if a temperature sensor of this component is currently in an alarm state An alarm state is triggered if the margin is ≤ 2 degrees, indicating that a thermal protection shut down is imminent unless adequate system cooling is provided to bring the temperature sensor back into safe operating ranges.
Context	platform fabric slot number temperature alarm-status <i>boolean</i>
Tree	alarm-status
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

instant *number*

Description	Represents the highest current temperature of any sensor on this component Note that as multiple sensors may feed in, that this field and the margin field may be referencing different sensors.
Context	platform fabric slot number temperature instant <i>number</i>
Tree	instant
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

margin *number*

Description	Indicates the lowest alarm margin of any sensor on this component The margin is the delta between the current sensor temperature and the thermal protection threshold for that sensor. Note that as multiple sensors may feed in, that this field and the instant field may be referencing different sensors.
Context	platform fabric slot number temperature margin <i>number</i>
Tree	margin
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

maximum *number*

Description	Represents the highest temperature any sensor on this component has reached since it booted
--------------------	---

Context	platform fabric slot number temperature maximum number
Tree	maximum
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

maximum-time *string*

Description	Indicates the time this component reached the temperature referenced in the maximum field
Context	platform fabric slot number temperature maximum-time string
Tree	maximum-time
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

type *string*

Description	Fabric module type, as translated from the components EEPROM
Context	platform fabric slot number type string
Tree	type
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

fan-tray *id number*

Description	Top-level container for fan module configuration and state
Context	platform fan-tray id number
Tree	fan-tray
Configurable	False
Platforms	Supported on all platforms

id *number*

Description	Numeric identifier for the fan tray
Context	platform fan-tray id number
Range	1 to 255

Configurable	False
Platforms	Supported on all platforms

clei-code *string*

Description	The Common Language Identification Code for this component
Context	platform fan-tray id <i>number</i> clei-code <i>string</i>
Tree	clei-code
Configurable	False
Platforms	Supported on all platforms

failure-reason *string*

Description	The reason the component transitioned to a failed state Field is empty if the component is not currently in a failure state
Context	platform fan-tray id <i>number</i> failure-reason <i>string</i>
Tree	failure-reason
Configurable	False
Platforms	Supported on all platforms

healthz

Description	The health of the component The paramaters within this container indicate the status of the component beyond whether it is operationally up or down. When a signal is received that a component is in an unhealthy state the gNOI.Healthz service can be used to retrieve further diagnostic information relating to the component. The contents of this directory relate only to the specific component that it is associated with.
Context	platform fan-tray id <i>number</i> healthz
Tree	healthz
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-unhealthy string

Description	Last unhealthy time The time at which the component was last observed to transition from the healthy state to any other state, represented as nanoseconds since the Unix epoch.
Context	platform fan-tray id number healthz last-unhealthy string
Tree	last-unhealthy
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

status keyword

Description	Health status The status of the component, indicating its current health.
Context	platform fan-tray id number healthz status keyword
Tree	status
Options	<ul style="list-style-type: none"> unspecified Unspecified status The component's health status has not yet been checked by the system. healthy Healthy status The component is in a healthy state, and is operating within the expected parameters. unhealthy Unhealthy status The component is in a unhealthy state, it is not performing the function expected of it.
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

unhealthy-count *number*

Description	Unhealthy count The number of times the component has transitioned from the healthy state to any other state.
Context	platform fan-tray id number healthz unhealthy-count number
Tree	unhealthy-count
Default	0
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-booted *string*

Description	The date and time this component last booted For components that do not boot, this is the time the component was last discovered by the active control module
Context	platform fan-tray id number last-booted string
Tree	last-booted
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-booted-reason *identityref*

Description	The reason this component last booted or rebooted For components without the ability to 'boot' this field is never populated
Context	platform fan-tray id number last-booted-reason identityref
Tree	last-booted-reason
Options	<ul style="list-style-type: none"> • user-initiated-reboot A user initiated the reboot directly via a management interface • power-failure The system rebooted the component due to insufficient power • critical-error The system rebooted the component due to an internal critical error

Configurable	False
Platforms	Supported on all platforms

last-change *string*

Description	The date and time this component last changed state
Context	platform fan-tray id <i>number</i> last-change <i>string</i>
Tree	last-change
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

locator-state *keyword*

Description	Details if the locator LED is active on this component
Context	platform fan-tray id <i>number</i> locator-state <i>keyword</i>
Tree	locator-state
Default	inactive
Options	<ul style="list-style-type: none"> • active Locator LED is currently active • inactive Locator LED is currently inactive
Configurable	False
Platforms	Supported on all platforms

manufactured-date *string*

Description	The date this component was manufactured
Context	platform fan-tray id <i>number</i> manufactured-date <i>string</i>
Tree	manufactured-date
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

oper-reason *keyword*

Description	Indicates the reason for the current state of this fan tray
Context	platform fan-tray id number oper-reason keyword
Tree	oper-reason
Options	<ul style="list-style-type: none"> • fault Hardware fault detected • eprom-invalid EEPROM of this fan tray is either invalid or corrupt • airflow-mismatch The detected airflow of this fan tray does not match the system-calculated airflow direction The logic for determining the system-calculated direction is: - Majority wins between present fan trays - In the case where there are equal F2B or B2F fan-trays, PSUs are used as a tie break (PSUs only are counted in the event a tie breaker is needed) - F2B wins if no tie break can be used
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	The operational state of this component
Context	platform fan-tray id number oper-state keyword
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed

- Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False

Description	Enter the resource list instance
Context	platform linecard slot number forwarding-complex name keyword acl resource name identityref
Tree	resource
Configurable	False
Platforms	Supported on all platforms

name *identityref*

Description	The name of the ACL resource
Context	platform linecard slot number forwarding-complex name keyword acl resource name identityref
Options	<ul style="list-style-type: none"> • input-ipv4-filter-instances This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on the forwarding complex. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every subinterface using the IPv4 filter. • input-ipv4-qos-multifield-instances This resource is used every time an IPv4 multifield classifier policy is applied to ingress traffic on a subinterface. • input-ipv4-filter-instances-routed This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on routed subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only;

otherwise one instance is used for every routed subinterface using the IPv4 filter.

- **input-ipv4-filter-instances-bridged**

This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on bridged subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every bridged subinterface using the IPv4 filter.

- **input-ipv6-filter-instances**

This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on the forwarding complex. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every subinterface using the IPv6 filter.

- **input-ipv6-qos-multifield-instances**

This resource is used every time an IPv6 multifield classifier policy is applied to ingress traffic on a subinterface.

- **input-ipv6-filter-instances-routed**

This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on routed subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every routed subinterface using the IPv6 filter.

- **input-ipv6-filter-instances-bridged**

This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on bridged subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every bridged subinterface using the IPv6 filter.

- **if-input-ipv4-stats**

Resource pool of stats entries available for ingress IPv4 ACLs

- **if-input-ipv6-stats**

Resource pool of stats entries available for ingress IPv6 ACLs

- **if-output-ipv4-stats**

Resource pool of stats entries available for egress IPv4 ACLs

- **if-output-ipv6-stats**

Resource pool of stats entries available for egress IPv6 ACLs

- **if-output-cpm-stats**

Resource pool of stats entries shared by egress IPv4/IPv6/MAC TCAM entries, and CPM-filter IPv4/IPv6/MAC TCAM entries

Egress Ipv4 -> uses single stat counter Egress Ipv6 -> uses single stat counter Egress MAC -> uses single stat counter Cpm Ipv4 -> uses two stat counters Cpm Ipv6 -> uses two stat counters Cpm MAC -> uses two stat counters

- **input-acl-qos-template-policers**
This resource is used every time an IPv4 or IPv6 input subinterface filter entry uses a rate-limit policer, or subinterface policer-template is used.
- **input-qos-template-policers**
This resource is used every time a QoS subinterface policer-template is used.
- **input-acl-ipv4-policers**
This resource is used every time an IPv4 input subinterface filter entry uses a rate-limit policer.
- **input-acl-ipv6-policers**
This resource is used every time an IPv6 input subinterface filter entry uses a rate-limit policer.
- **output-acl-cpm-filter-policers**
This resource is used every time an IPv4 or IPv6 output subinterface filter or CPM filter entry uses a rate-limit policer.

Options	<ul style="list-style-type: none"> ip-lpm-ipv4-routes IPv4 longest prefix match route resources <p>7220 D1/D2/D3: Reports the number of IPv4 entries in the hardware LPM table. In non-ALPM mode, free entries is the remaining number of half-wide entries in all partitions (i.e. it assumes no IPv6 routes consume</p>

those entries). In ALPM mode, free entries is the Minimum Guaranteed Capacity returned by the BCM SDK.

7220 D4/D5 and 7220 H2/H3/H4: Reports the number of IPv4 routes installed in the FIB. Free entries is the Minimum Guaranteed Capacity returned by the BCM SDK.

- ip-lpm-ipv6-routes

IPv6 longest prefix match route resources

Reports the number of IPv6 routes installed in the FIB. Free entries is the Minimum Guaranteed Capacity returned by the BCM SDK.

- ip-lpm-ipv6-shorter-routes

IPv6 longest prefix match route resources when the prefix length is less than or equal to 64

7220 D1/D2/D3: Reports the number of IPv6 entries with prefix length less than 65 bits in the hardware LPM table. In non-ALPM mode, free entries is the remaining number of single-wide + double-wide entries (i.e. it assumes no other types of routes consume those entries). In ALPM mode, free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

7220 H2/H3: Reports the number of IPv6 entries with prefix length less than 65 bits installed in the FIB. Free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

- ip-lpm-ipv6-longer-routes

IPv6 longest prefix match route resources when the prefix length is greater than 64

7220 D1/D2/D3: Reports the number of IPv6 entries with prefix length greater than 64 bits in the hardware LPM table. In non-ALPM mode, free entries is the remaining number of double-wide entries (i.e. it assumes no other types of routes consume those entries). In ALPM mode, free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

7220 H2/H3: Reports the number of IPv6 entries with prefix length greater than 64 bits installed in the FIB. Free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

- exact-match-entries

IP exact match lookup table resources

Reports the number of half-wide entries used in the LEM table. Each MPLS ILM record uses one half-wide entry. Each IPv4 address used as a host route, ARP entry or subnet broadcast address requires a half-wide entry. An IPv6 address used as a host route, or ND entry requires a single-wide entry (2 half-wide entries). Free entries is the remaining number of half-wide entries.

- ip-tunnel-source-ipv4-addresses

IP tunnel source IPv4 address resources

Each IPinIP and GRE tunnel with a different source IPv4 address uses one of these resources.

- ip-tunnel-source-ipv6-addresses

IP tunnel source IPv6 address resources

Each IPinIP and GRE tunnel with a different source IPv6 address uses one of these resources.

- underlay-ecmp-groups

Underlay ECMP group resources

ECMP groups are partitioned into overlay and underlay groups. The underlay partition is further subdivided into groups used for underlay ECMP and groups used for VP LAGs (EVPN M-H). This counts the utilization of the sub-resource used for ECMP.

- vp-lag-groups

VP LAG group resources

ECMP groups are partitioned into overlay and underlay groups. The underlay partition is further subdivided into groups used for underlay ECMP and groups used for VP LAGs (EVPN M-H). This counts the utilization of the sub-resource used for VP LAGs.

- overlay-ecmp-groups

Overlay ECMP group resources

ECMP groups are partitioned into overlay and underlay groups. This counts the utilization of the overlay ECMP partition.

- underlay-ecmp-members

Underlay ECMP member resources

ECMP members are partitioned into overlay and underlay. This counts the utilization of the partition used for underlay.

- overlay-ecmp-members

Overlay ECMP member resources

ECMP members are partitioned into overlay and underlay. This counts the utilization of the partition used for overlay.

- underlay-egress-next-hops

Underlay egress next-hop resources

Egress next-hops are partitioned into overlay and underlay. This counts the utilization of the partition used for underlay.

- overlay-egress-next-hops

Overlay egress next-hop resources

Egress next-hops are partitioned into overlay and underlay. This counts the utilization of the partition used for overlay.

- dgpp-module-ids

DGPP module ID resources

DGPPs are an aggregate id consisting of a `module_id` and a `port_id`. There are 64 modules and 120 ports per module. Each 'network' ARP entry (IP next-hop) needs a DGPP - the `module_id` is allocated against the network interface (port) and a `port_id` is allocated from within the module. A `module_id` will only be allocated when the first `ArpEntry` is added (freed when last is removed) but is owned exclusively by that network interface. A network interface may require more than one `module_id` - i.e. if there are 245 `ArpEntries` on `ethernet-1/1` (possibly spread across multiple network-instance interfaces) then 3 `module_ids` are required.

- `egress-vlan-translate-egress-vnis`
EGR_VLAN_XLATE_1 resources
Corresponds to the 'EGR_VLAN_XLATE_1' HW table (8K entries). These entries are used for finding the egress VNI to be used for VXLAN packets.
- `egress-vlan-translate-local-bias-pairs`
EGR_VLAN_XLATE_2 resources
Corresponds to the 'EGR_VLAN_XLATE_2' HW table (24K entries). These entries are used for local bias (ES pruning).
- `level-1-ecmp-groups`
Level 1 (top level) ECMP group resources.
- `level-2-ecmp-groups`
Level 2 (middle level) ECMP group resources.
- `level-3-ecmp-groups`
Level 3 (bottom level) ECMP group resources.
- `level-1-ecmp-members`
Level 1 (top level) ECMP member resources.
- `level-2-ecmp-members`
Level 2 (middle level) ECMP member resources.
- `level-3-ecmp-members`
Level 3 (bottom level) ECMP member resources.
- `level-1-non-ecmp-fecs`
Level 1 (top level) non-ECMP FEC resources.
- `level-2-non-ecmp-fecs`
Level 2 (middle level) non-ECMP FEC resources.
- `level-3-non-ecmp-fecs`
Level 3 (bottom level) non-ECMP FEC resources.
- `decap-next-hop-statistics`
Statistics resources for counting packets matching a tunnel termination entry and then forwarded to a next-hop

One resource is one packet/octet counter pair that is allocated to counting each case where packets: (a) match a gRIBI-programmed tunnel termination entry and get forwarded to a next-hop that does redirect to another network-instance (1 counter pair for all redirect targets) (b) match a gRIBI-programmed tunnel termination entry and get forwarded to a next-hop that does IP-in-IP encapsulation towards a new endpoint address (1 counter pair per new endpoint address)

requires 1 entry. Every local host /128 route, and ND entry requires 2 entries.

- ip-lpm-routes

IP longest prefix match route resources

7250 IXR/IXRe: Every installed IPv4 and IPv6 route counts as one used route.

7220 D1/D2/D3: In ALPM-disabled mode: Reports the number of half-wide entries. An IPv4 route requires a half-wide entry. An IPv6 route that is /64 or less requires a single-wide entry (2 half-wide entries). An IPv6 route that is more than /64 requires a double-wide entry (4 half-wide entries). In ALPM mode: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 2 used routes.

7220 D4/D5: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 4 used routes.

- mac-addresses

MAC lookup table resources

Reports the number of entries used in the MAC lookup table. On 7220 D1/D2/D3, free entries reflects the total number of entries remaining in shared + dedicated UFT banks

- mac-next-hops

Direct MAC next-hop resources

A resource consumed by every next-hop of a gRIBI route that is specified as an interface name plus MAC address

- direct-ip-next-hops

Direct IP next-hop resources

Reports the number of entries, where 1 entry is used for every next-hop of an IP route or MPLS route/tunnel that is resolved directly to a local interface.

- indirect-ip-next-hops

Indirect IP next-hop resources

Reports the number of entries, where 1 entry is used for every next-hop of an IP route that requires resolution by a non-local route. This does not consider underlying ASIC resources.

- tunnel-next-hops

Tunnel next-hop resources

Reports the number of tunnel next-hop entries. 1 tunnel next-hop is required every time an indirect next-hop (e.g. a BGP next-hop) is resolved by a tunnel (BGP-LU, LDP, SR-ISIS or VXLAN)

- ecmp-groups

ECMP group resources

7250 IXR/IXRe: Reports the used number of ECMP FECs, adding L1 ECMP FECs, L2 ECMP FECs and L3 ECMP FECs.

7220 D1/D2/D3/D4/D5: Reports the used number of ECMP groups, adding overlay and underlay ECMP groups (if applicable).

7220 H2/H3/H4: Reports used number of ECMP groups.

- ecmp-members

ECMP member resources

7250 IXR/IXRe: Reports the used number of ECMP member FECs, adding L1 ECMP member FECs, L2 ECMP member FECs and L3 ECMP member FECs.

7220 D1/D2/D3/D4/D5: Reports the used number of ECMP members, adding overlay and underlay ECMP members (if applicable).

7220 H2/H3/H4: Reports used number of ECMP members.

- egress-next-hops

Egress next-hop resources

7220 D2/D3/D4/D5: Reports the number of entries used in the egress next-hop table, counting entries in the overlay partition and entries in the underlay partition. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.

7220 H2/H3/H4: Reports the number of entries used in the egress next-hop table. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.

- lag-groups

LAG group resources

Reports the number of LAG resources used, including DGPP LAGs.

- lag-members

LAG member resources

Reports the number of LAG member resources used, including DGPP LAG members.

- subinterfaces

Subinterface resources

There are a maximum of 127 subinterfaces per TH3 pipeline (limited by VFP/EFP TCAM resources). This counts the utilization of those resources.

- mpls-next-hops

MPLS next-hop (NHLFE) resources

One resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an ILM entry that performs a 'swap'. One additional resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an MPLS tunnel.

- mpls-incoming-labels

MPLS label lookup (ILM) resources

One resource is used for every MPLS ILM entry that performs either a 'swap' or a 'pop' operation.

- originating-tunnels

Originating tunnel resources

One resource is used for every VXLAN, LDP, SR-ISIS or IPinIP tunnel originating on this node as head-end. On TD3 and TD4 systems this equates to a DVP resource.

- terminating-tunnels

Terminating tunnel resources

One resource is used for every IPinIP tunnel terminating entry on this node.

congestion-aggregate *number*

Description	Aggregation of all counters incremented when packets are dropped because the aggregate ingress traffic rate exceeds internal performance limits of the integrated circuit
Context	platform linecard slot number forwarding-complex name keyword drop-counters congestion-aggregate number
Tree	congestion-aggregate
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

no-route *number*

Description	Aggregation of all counters incremented when packets are dropped due to no FIB entry for an IPv4 or IPv6 packet This counter and the packet-processing-aggregate counter should be incremented for each no-route packet drop.
Context	platform linecard slot number forwarding-complex name keyword drop-counters no-route number
Tree	no-route
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

packet-processing-aggregate *number*

Description	Aggregation of all counters incremented when packets are dropped due to legitimate programming decisions This is derived by summing: * subinterface-level in-discarded counters (counts FIB lookup failures, packets dropped due to ACL drop action, packets dropped due to TTL expiry) * subinterface-level out-error counters (packets dropped due to IP MTU exceeded) * port-level out-error counters (packets dropped due to port MTU exceeded) * port-level in-error counters (packets dropped due to MRU exceeded or packet CRC error)
Context	platform linecard slot number forwarding-complex name keyword drop-counters packet-processing-aggregate number
Tree	packet-processing-aggregate
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

fabric

Description	Top-level container for fabric configuration and state
Context	platform linecard slot number forwarding-complex name keyword fabric
Tree	fabric
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

availability number

Description	Details the percentage bandwidth available to the fabric for the line card
Context	platform linecard slot number forwarding-complex name keyword fabric availability number
Tree	availability
Range	0 to 100
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

consumed-capacity number

Description	Backplane-facing capacity that is consumed by front-panel ports that are connected to the integrated circuit and are operationally up
Context	platform linecard slot number forwarding-complex name keyword fabric consumed-capacity number
Tree	consumed-capacity
Units	bits per second
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

operational-capacity number

Description	Total backplane-facing capacity that is currently available based on the active links
Context	platform linecard slot number forwarding-complex name keyword fabric operational-capacity number
Tree	operational-capacity
Units	bits per second
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

total-capacity number

Description	Total backplane-facing capacity that is available in the presence of no link failures or degradation
Context	platform linecard slot number forwarding-complex name keyword fabric total-capacity number
Tree	total-capacity
Units	bits per second
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

utilization-egress number

Description	Provides the linecard bandwidth utilization from the switch fabric
Context	platform linecard slot number forwarding-complex name keyword fabric utilization-egress number
Tree	utilization-egress
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

utilization-ingress number

Description	Provides the linecard bandwidth utilization into the switch fabric
Context	platform linecard slot number forwarding-complex name keyword fabric utilization-ingress number
Tree	utilization-ingress
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

fib-table

Description	Enter the fib-table context
Context	platform linecard slot number forwarding-complex name keyword fib-table
Tree	fib-table
Configurable	False

Platforms Supported on all platforms

next-hop-group *index number*

Description List of next hop groups (NHGs) in the FIB table

Context [platform linecard slot number forwarding-complex name keyword fib-table next-hop-group index number](#)

Tree [next-hop-group](#)

Configurable False

Platforms Supported on all platforms

index *number*

Description A system-wide unique identifier of a next-hop-group

Context [platform linecard slot number forwarding-complex name keyword fib-table next-hop-group index number](#)

Configurable False

Platforms Supported on all platforms

backup-active *boolean*

Description When true, this NHG is not being used to forward traffic and its backup NHG is being relied upon to provide reachability

Context [platform linecard slot number forwarding-complex name keyword fib-table next-hop-group index number backup-active boolean](#)

Tree [backup-active](#)

Configurable False

Platforms Supported on all platforms

backup-next-hop-group *reference*

Description The backup next-hop-group for the current group. When all entries within the next-hop group become unusable, the backup next-hop group is used if specified.

Context [platform linecard slot number forwarding-complex name keyword fib-table next-hop-group index number backup-next-hop-group reference](#)

Tree [backup-next-hop-group](#)

Reference	platform linecard slot <i>number</i> forwarding-complex name keyword fib-table next-hop-group index <i>number</i>
Configurable	False
Platforms	Supported on all platforms

next-hop id *number*

Description	Enter the next-hop list instance
Context	platform linecard slot <i>number</i> forwarding-complex name keyword fib-table next-hop-group index <i>number</i> next-hop id <i>number</i>
Tree	next-hop
Configurable	False
Platforms	Supported on all platforms

id *number*

Description	Index of the next-hop within the NHG
Context	platform linecard slot <i>number</i> forwarding-complex name keyword fib-table next-hop-group index <i>number</i> next-hop id <i>number</i>
Range	0 to 1023
Configurable	False
Platforms	Supported on all platforms

next-hop *number*

Description	The system-wide unique identifier of the next-hop object
Context	platform linecard slot <i>number</i> forwarding-complex name keyword fib-table next-hop-group index <i>number</i> next-hop id <i>number</i> next-hop <i>number</i>
Tree	next-hop
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	Operational state of the next-hop member
Context	platform linecard slot <i>number</i> forwarding-complex name keyword fib-table next-hop-group index <i>number</i> next-hop id <i>number</i> oper-state <i>keyword</i>

Tree	oper-state
Options	<ul style="list-style-type: none"> • up The NHG or NH is fully resolved and operational • down The NHG or NH is unresolved and not viable for carrying traffic • failed The NHG or NH is not operational because of an underlying hardware resource issue • up-unused The NH is up and resolved but not used for carrying traffic, possibly because of resilient-hash-prefix configuration
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	Operational state of the next-hop group
Context	platform linecard slot number forwarding-complex name keyword fib-table next-hop-group index number oper-state keyword
Tree	oper-state
Options	<ul style="list-style-type: none"> • up The NHG or NH is fully resolved and operational • down The NHG or NH is unresolved and not viable for carrying traffic • failed The NHG or NH is not operational because of an underlying hardware resource issue • up-unused The NH is up and resolved but not used for carrying traffic, possibly because of resilient-hash-prefix configuration
Configurable	False
Platforms	Supported on all platforms

interfaces *string*

Description	List of interfaces that belong to this forwarding complex
--------------------	---

Context	platform linecard slot number forwarding-complex name keyword interfaces <i>string</i>
Tree	interfaces
String Length	3 to 20
Configurable	False
Platforms	Supported on all platforms

last-booted *string*

Description	The date and time this component last booted For components that do not boot, this is the time the component was last discovered by the active control module
Context	platform linecard slot number forwarding-complex name keyword last-booted <i>string</i>
Tree	last-booted
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-booted-reason *identityref*

Description	The reason this component last booted or rebooted For components without the ability to 'boot' this field is never populated
Context	platform linecard slot number forwarding-complex name keyword last-booted-reason identityref
Tree	last-booted-reason
Options	<ul style="list-style-type: none"> • user-initiated-reboot A user initiated the reboot directly via a management interface • power-failure The system rebooted the component due to insufficient power • critical-error The system rebooted the component due to an internal critical error
Configurable	False
Platforms	Supported on all platforms

last-change *string*

Description	The date and time this component last changed state
Context	platform linecard slot number forwarding-complex name <i>keyword last-change string</i>
Tree	last-change
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

mtu

Description	Enter the mtu context
Context	platform linecard slot number forwarding-complex name <i>keyword mtu</i>
Tree	mtu
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

resource [name](#) *identityref*

Description	Enter the resource list instance
Context	platform linecard slot number forwarding-complex name <i>keyword mtu resource name identityref</i>
Tree	resource
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *identityref*

Description	The name of the MTU resource
Context	platform linecard slot number forwarding-complex name <i>keyword mtu resource name identityref</i>
Options	<ul style="list-style-type: none"> ip-mtu IP MTU resource pool. One resource from this pool is consumed by every different IP MTU value used by the subinterfaces on the linecard forwarding-complex. port-mtu

Port MTU resource pool. One resource from this pool is consumed by every different port MTU value used by a port on the linecard forwarding-complex.

- mpls-mtu

MPLS MTU resource pool. One resource from this pool is consumed by every different MPLS MTU value used by the subinterfaces on the linecard forwarding-complex.

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

free number

Description	The number of resources that are unused and available
Context	platform linecard slot number forwarding-complex name keyword mtu resource name identityref free number
Tree	free
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

used number

Description	The number of resources that are in use
Context	platform linecard slot number forwarding-complex name keyword mtu resource name identityref used number
Tree	used
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state keyword

Description	The operational state of this component
Context	platform linecard slot number forwarding-complex name keyword oper-state keyword
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational

- empty
Component slot is empty
- downloading
Component is downloading image into memory
- booting
Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

name *identityref*

Description	The name of the XDP datapath resource
Context	platform linecard slot <i>number</i> forwarding-complex name <i>keyword</i> pipeline index (<i>number</i> <i>keyword</i>) datapath xdp resource name <i>identityref</i>
Options	<ul style="list-style-type: none"> arp-nd-entries <p>IPv4 ARP and IPv6 neighbor discovery resources</p> <p>Each IPv4 ARP and each IPv6 neighbor entry counts as 1 used resource against a total that is platform dependent.</p> ip-hosts <p>IP host route resources</p> <p>7220 D1/D2/D3: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. Every IPv4 multicast snoop entry requires 2 entries. In non-ALPM operation every remote /32 route also requires 1 entry. Every local host /128 route, and ND entry requires 2 entries. Every IPv6 multicast snoop entry requires 4 entries. In non-ALPM operation every remote /128 route also requires 2 entries. Free entries reflects the total number of entries remaining in shared + dedicated UFT banks.</p> <p>7220 D4/D5: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. Every local host /128 route, and ND entry requires 2 entries. Every (*, G) IPv4 multicast snoop entry requires 1 entry. Every (S, G) IPv4 multicast snoop entry requires 2 entries. Every (*, G) IPv6 multicast snoop entry requires 2 entries. Every (S, G) IPv6 multicast snoop entry requires 4 entries.</p> <p>7220 H2/H3/H4: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. Every local host /128 route, and ND entry requires 2 entries.</p> ip-lpm-routes <p>IP longest prefix match route resources</p>

7250 IXR/IXRe: Every installed IPv4 and IPv6 route counts as one used route.

7220 D1/D2/D3: In ALPM-disabled mode: Reports the number of half-wide entries. An IPv4 route requires a half-wide entry. An IPv6 route that is /64 or less requires a single-wide entry (2 half-wide entries). An IPv6 route that is more than /64 requires a double-wide entry (4 half-wide entries). In ALPM mode: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 2 used routes.

7220 D4/D5: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 4 used routes.

- mac-addresses

MAC lookup table resources

Reports the number of entries used in the MAC lookup table. On 7220 D1/D2/D3, free entries reflects the total number of entries remaining in shared + dedicated UFT banks

- mac-next-hops

Direct MAC next-hop resources

A resource consumed by every next-hop of a gRIBI route that is specified as an interface name plus MAC address

- direct-ip-next-hops

Direct IP next-hop resources

Reports the number of entries, where 1 entry is used for every next-hop of an IP route or MPLS route/tunnel that is resolved directly to a local interface.

- indirect-ip-next-hops

Indirect IP next-hop resources

Reports the number of entries, where 1 entry is used for every next-hop of an IP route that requires resolution by a non-local route. This does not consider underlying ASIC resources.

- tunnel-next-hops

Tunnel next-hop resources

Reports the number of tunnel next-hop entries. 1 tunnel next-hop is required every time an indirect next-hop (e.g. a BGP next-hop) is resolved by a tunnel (BGP-LU, LDP, SR-ISIS or VXLAN)

- ecmp-groups

ECMP group resources

7250 IXR/IXRe: Reports the used number of ECMP FECs, adding L1 ECMP FECs, L2 ECMP FECs and L3 ECMP FECs.

7220 D1/D2/D3/D4/D5: Reports the used number of ECMP groups, adding overlay and underlay ECMP groups (if applicable).

7220 H2/H3/H4: Reports used number of ECMP groups.

- **ecmp-members**
ECMP member resources
7250 IXR/IXRe: Reports the used number of ECMP member FECs, adding L1 ECMP member FECs, L2 ECMP member FECs and L3 ECMP member FECs.
7220 D1/D2/D3/D4/D5: Reports the used number of ECMP members, adding overlay and underlay ECMP members (if applicable).
7220 H2/H3/H4: Reports used number of ECMP members.
- **egress-next-hops**
Egress next-hop resources
7220 D2/D3/D4/D5: Reports the number of entries used in the egress next-hop table, counting entries in the overlay partition and entries in the underlay partition. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.
7220 H2/H3/H4: Reports the number of entries used in the egress next-hop table. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.
- **lag-groups**
LAG group resources
Reports the number of LAG resources used, including DGPP LAGs.
- **lag-members**
LAG member resources
Reports the number of LAG member resources used, including DGPP LAG members.
- **subinterfaces**
Subinterface resources
There are a maximum of 127 subinterfaces per TH3 pipeline (limited by VFP/EFP TCAM resources). This counts the utilization of those resources.
- **mpls-next-hops**
MPLS next-hop (NHLFE) resources
One resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an ILM entry that performs a 'swap'. One additional resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an MPLS tunnel.
- **mpls-incoming-labels**
MPLS label lookup (ILM) resources
One resource is used for every MPLS ILM entry that performs either a 'swap' or a 'pop' operation.
- **originating-tunnels**
Originating tunnel resources

One resource is used for every VXLAN, LDP, SR-ISIS or IPinIP tunnel originating on this node as head-end. On TD3 and TD4 systems this equates to a DVP resource.

- terminating-tunnels

Terminating tunnel resources

One resource is used for every IPinIP tunnel terminating entry on this node.

reason *identityref*

Description	A reason for extracting the packet towards the host CPU
--------------------	---

Context	platform linecard slot <i>number</i> forwarding-complex name <i>keyword</i> pipeline index (<i>number</i> <i>keyword</i>) pipeline-counters host-interface-block packet-extraction extraction-reason reason <i>identityref</i>
Options	<ul style="list-style-type: none"> • ipv4-header-options IPv4 header options are present in the packet. • ipv6-hop-by-hop-option IPv6 packet with topmost next-header value of zero. • icmp ICMPv4 packets with this router as destination. • icmp6 ICMPv6 packets including neighbor-solicitation and neighbor-advertisement messages. • icmp-redirect Received IPv4 and IPv6 packets that should cause an ICMP redirect to be generated. • bfd BFD and micro-BFD packets with this router as destination. • bgp BGP packets; TCP port 179. • grpc GRPC packets; TCP port 57400 • ospf OSPF packets; IP protocol 89 • vrrp VRRP packets; IP protocol 112 • ldp LDP packets; UDP port 646 • dhcp DHCP packets; UDP ports 67,68 • ip-other-terminating Any other IP packets that are locally destined • ip-blackhole-icmp Traffic matched a blackhole route with generate-icmp=true • ipv6-multicast IPv6 DA = FF01:0:0:0:0:0:1 or IPv6 DA = FF01:0:0:0:0:0:2 • ipv6-link-local IPv6 DA = FE80::/10 address

- **ipv4-broadcast**
IPv4 packets were received with a subnet broadcast address or a limited broadcast and not recognized as another type
- **ip-no-route**
IPv4 and IPv6 packets for which there was no route to the destination
- **ip-header-errors**
IP version error, IP header checksum error, IP header length error, IP header total length error, IPv6 next-header is null, IPv6 SA is link-local while IPv6 DA is global
- **ip-ttl-expired**
The IP packet is not destined for this router and it was received with TTL 0 or TTL 1
- **mpls-ttl-expired**
The MPLS packet was received with MPLS label stack TTL 0 or TTL 1
- **ip-arp-miss**
The IP DA itself or the next-hop of the route used to forward the packet has no ARP/IPv6 neighbor entry
- **ip-arp**
The received frame is an ARP packet recognized by ethertype 0x0806
- **lldp**
The received frame is an LLDP packet recognized by ethertype 0x88cc
- **isis**
The received frame is an ISIS packet
- **lacp**
The received frame is an LACP packet
- **google-discovery**
The received frame is a GDP packet recognized by ethertype 0x6007
- **capture-filter-copy**
Packets matching a capture-filter copy rule
- **cpm-filter-log**
Packets matching a CPM-filter rule with log action
- **ingress-acl-log**
Packets matching an interface IP filter rule with log action
- **egress-acl-log**
Packet matched an egress ACL rule with log action.
- **ip-mpls-mtu-exceeded**
The egress subinterface IP MTU or MPLS MTU (as applicable) is less than the size of the IP or MPLS packet that needs to be transmitted.

Resource pool of TCAM entries used by MAC ACLs applied as subinterface-input filters
- if-output-cpm-mac
Resource pool of TCAM entries used by MAC egress ACLs and MAC cpm-filter ACLs
- policy-forwarding-vrf-selection-ipv4
Resource pool of TCAM entries used by IPv4 policy-forwarding entries that redirect flows to a different network-instance
- policy-forwarding-nhg-ipv4
Resource pool of TCAM entries used by IPv4 policy-forwarding entries that redirect flows to a NHG of IP next-hops or tunnels
- policy-forwarding-nhg-ipv6

Resource pool of TCAM entries used by IPv6 policy-forwarding entries that redirect flows to a NHG of IP next-hops or tunnels

- if-input-policer

Resource pool of TCAM entries used by ingress subinterface policer templates

- if-input-ipv4-qos

Resource pool of TCAM entries associated with IPv4 multi-field QoS classification entries, when applied to subinterface input

- if-input-ipv6-qos

Resource pool of TCAM entries associated with IPv6 multi-field QoS classification entries, when applied to subinterface input

- mrouter-mfib-redirect

Resource pool of TCAM entries used by multicast snooping protocols in MAC-VRF network-instances

One TCAM entry is used per multicast snooping protocol enabled in a MAC-VRF. For instance, if igmp-snooping and mld-snooping are enabled on a MAC-VRF, two entries are used. If only igmp-snooping is enabled, only one entry is used.

- tunnel-decap-ipv4-ipv6

Resource pool of TCAM entries used for IPv4 and IPv6 tunnel-decapsulation groups

- if-output-evpn-mh-multicast-non-df

Resource pool of TCAM entries used by egress filtering of IP multicast traffic to non-Designated Forwarder subinterfaces

One TCAM entry is used when multicast snooping protocols are enabled on at least one MAC-VRF that has one or more subinterfaces associated with Ethernet Segments.

Configurable

False

Platforms

Supported on all platforms

free-dynamic number

Description

The number of available and unused TCAM entries for the entry type, assuming that all the remaining unused TCAM slices would be dynamically allocated to this one type of entry (subject to chip level constraints on the placement of double-wide and triple-wide TCAM slice groups).

Description The operational state of this component
Context [platform linecard slot number oper-state keyword](#)
Tree [oper-state](#)
Options

- up
Component or process is operational
- down
Component or process is not operational
- empty
Component slot is empty
- downloading
Component is downloading image into memory
- booting
Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power

- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable False

Platforms Supported on all platforms

last-booted *string*

Description The date and time this component last booted
For components that do not boot, this is the time the component was last discovered by the active control module

Context [platform power-supply id number last-booted string](#)

Tree [last-booted](#)

String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-booted-reason *identityref*

Description	The reason this component last booted or rebooted For components without the ability to 'boot' this field is never populated
Context	platform power-supply id number last-booted-reason identityref
Tree	last-booted-reason
Options	<ul style="list-style-type: none"> • user-initiated-reboot A user initiated the reboot directly via a management interface • power-failure The system rebooted the component due to insufficient power • critical-error The system rebooted the component due to an internal critical error
Configurable	False
Platforms	Supported on all platforms

last-change *string*

Description	The date and time this component last changed state
Context	platform power-supply id number last-change string
Tree	last-change
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

manufactured-date *string*

Description	The date this component was manufactured
Context	platform power-supply id number manufactured-date string
Tree	manufactured-date
String Length	20 to 32
Configurable	False

Platforms Supported on all platforms

oper-reason *keyword*

Description Indicates the reason for the current state of the component

Context [platform power-supply id number oper-reason keyword](#)

Tree [oper-reason](#)

Options

- no-input/fault
No power input, or other hardware fault detected
- eeprom-invalid
EEPROM of this power supply is either invalid or corrupt
- airflow-mismatch
The detected airflow of this power supply does not match the system-calculated airflow direction

The logic for determining the system-calculated direction is: - Majority wins between present fan trays - In the case where there are equal F2B or B2F fan-trays, PSUs are used as a tie break (PSUs only are counted in the event a tie breaker is needed) - F2B wins if no tie break can be used

Configurable False

Platforms Supported on all platforms

oper-state *keyword*

Description The operational state of this component

Context [platform power-supply id number oper-state keyword](#)

Tree [oper-state](#)

Options

- up
Component or process is operational
- down
Component or process is not operational
- empty
Component slot is empty
- downloading
Component is downloading image into memory
- booting
Component is booting downloaded image
- starting

- Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

In non-ALPM mode, free entries is the remaining number of half-wide entries in all partitions (i.e. it assumes no IPv6 routes consume those entries). In ALPM mode, free entries is the Minimum Guaranteed Capacity returned by the BCM SDK. 7220 D4/D5 and 7220 H2/H3/H4: Reports the number of IPv4 routes installed in the FIB. Free entries is the Minimum Guaranteed Capacity returned by the BCM SDK. ip-lpm-ipv6-routes IPv6 longest prefix match route resources Reports the number of IPv6 routes installed in the FIB. Free entries is the Minimum Guaranteed Capacity returned by the BCM SDK. ip-lpm-ipv6-shorter-routes IPv6 longest prefix match route resources when the prefix length is less than or equal to 64

7220 D1/D2/D3: Reports the number of IPv6 entries with prefix length less than 65 bits in the hardware LPM table. In non-ALPM mode, free entries is the remaining number of single-wide + double-wide entries (i.e. it assumes no other types of routes consume those entries). In ALPM mode, free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

7220 H2/H3: Reports the number of IPv6 entries with prefix length less than 65 bits installed in the FIB. Free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

- ip-lpm-ipv6-longer-routes

IPv6 longest prefix match route resources when the prefix length is greater than 64

7220 D1/D2/D3: Reports the number of IPv6 entries with prefix length greater than 64 bits in the hardware LPM table. In non-ALPM mode, free entries is the remaining number of double-wide entries (i.e. it assumes no other types of routes consume those entries). In ALPM mode, free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

7220 H2/H3: Reports the number of IPv6 entries with prefix length greater than 64 bits installed in the FIB. Free entries is based on the Minimum Guaranteed Capacity returned by the BCM SDK.

- exact-match-entries

IP exact match lookup table resources

Reports the number of half-wide entries used in the LEM table. Each MPLS ILM record uses one half-wide entry. Each IPv4 address used as a host route, ARP entry or subnet broadcast address requires a half-wide entry. An IPv6 address used as a host route, or ND entry requires a single-wide entry (2 half-wide entries). Free entries is the remaining number of half-wide entries.

- ip-tunnel-source-ipv4-addresses

IP tunnel source IPv4 address resources

Each IPinIP and GRE tunnel with a different source IPv4 address uses one of these resources.

- ip-tunnel-source-ipv6-addresses

IP tunnel source IPv6 address resources

Each IPinIP and GRE tunnel with a different source IPv6 address uses one of these resources.

- underlay-ecmp-groups

Underlay ECMP group resources

ECMP groups are partitioned into overlay and underlay groups. The underlay partition is further subdivided into groups used for underlay ECMP and groups used for VP LAGs (EVPN M-H). This counts the utilization of the sub-resource used for ECMP.

- **vp-lag-groups**
VP LAG group resources
ECMP groups are partitioned into overlay and underlay groups. The underlay partition is further subdivided into groups used for underlay ECMP and groups used for VP LAGs (EVPN M-H). This counts the utilization of the sub-resource used for VP LAGs.
- **overlay-ecmp-groups**
Overlay ECMP group resources
ECMP groups are partitioned into overlay and underlay groups. This counts the utilization of the overlay ECMP partition.
- **underlay-ecmp-members**
Underlay ECMP member resources
ECMP members are partitioned into overlay and underlay. This counts the utilization of the partition used for underlay.
- **overlay-ecmp-members**
Overlay ECMP member resources
ECMP members are partitioned into overlay and underlay. This counts the utilization of the partition used for overlay.
- **underlay-egress-next-hops**
Underlay egress next-hop resources
Egress next-hops are partitioned into overlay and underlay. This counts the utilization of the partition used for underlay.
- **overlay-egress-next-hops**
Overlay egress next-hop resources
Egress next-hops are partitioned into overlay and underlay. This counts the utilization of the partition used for overlay.
- **dgpp-module-ids**
DGPP module ID resources
DGPPs are an aggregate id consisting of a module_id and a port_id. There are 64 modules and 120 ports per module. Each 'network' ARP entry (IP next-hop) needs a DGPP - the module_id is allocated against the network interface (port) and a port_id is allocated from within the module. A module_id will only be allocated when the first ArpEntry is added (freed when last is removed) but is owned exclusively by that network interface. A network interface may require more than one module_id - i.e. if there are 245 ArpEntries on ethernet-1/1 (possibly spread across multiple network-instance interfaces) then 3 module_ids are required.
- **egress-vlan-translate-egress-vnis**
EGR_VLAN_XLATE_1 resources

Corresponds to the 'EGR_VLAN_XLATE_1' HW table (8K entries). These entries are used for finding the egress VNI to be used for VXLAN packets.

- egress-vlan-translate-local-bias-pairs

EGR_VLAN_XLATE_2 resources

Corresponds to the 'EGR_VLAN_XLATE_2' HW table (24K entries). These entries are used for local bias (ES pruning).

- level-1-ecmp-groups

Level 1 (top level) ECMP group resources.

- level-2-ecmp-groups

Level 2 (middle level) ECMP group resources.

- level-3-ecmp-groups

Level 3 (bottom level) ECMP group resources.

- level-1-ecmp-members

Level 1 (top level) ECMP member resources.

- level-2-ecmp-members

Level 2 (middle level) ECMP member resources.

- level-3-ecmp-members

Level 3 (bottom level) ECMP member resources.

- level-1-non-ecmp-fecs

Level 1 (top level) non-ECMP FEC resources.

- level-2-non-ecmp-fecs

Level 2 (middle level) non-ECMP FEC resources.

- level-3-non-ecmp-fecs

Level 3 (bottom level) non-ECMP FEC resources.

- decap-next-hop-statistics

Statistics resources for counting packets matching a tunnel termination entry and then forwarded to a next-hop

One resource is one packet/octet counter pair that is allocated to counting each case where packets: (a) match a gRIBI-programmed tunnel termination entry and get forwarded to a next-hop that does redirect to another network-instance (1 counter pair for all redirect targets) (b) match a gRIBI-programmed tunnel termination entry and get forwarded to a next-hop that does IP-in-IP encapsulation towards a new endpoint address (1 counter pair per new endpoint address)

- ip-lpm-routes
 - IP longest prefix match route resources
 - 7250 IXR/IXRe: Every installed IPv4 and IPv6 route counts as one used route.
 - 7220 D1/D2/D3: In ALPM-disabled mode: Reports the number of half-wide entries. An IPv4 route requires a half-wide entry. An IPv6 route that is /64 or less requires a single-wide entry (2 half-wide entries). An IPv6 route that is more than /64 requires a double-wide entry (4 half-wide entries). In ALPM mode: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 2 used routes.
 - 7220 D4/D5: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 4 used routes.
- mac-addresses
 - MAC lookup table resources
 - Reports the number of entries used in the MAC lookup table. On 7220 D1/D2/D3, free entries reflects the total number of entries remaining in shared + dedicated UFT banks
- mac-next-hops
 - Direct MAC next-hop resources
 - A resource consumed by every next-hop of a gRIBI route that is specified as an interface name plus MAC address
- direct-ip-next-hops
 - Direct IP next-hop resources
 - Reports the number of entries, where 1 entry is used for every next-hop of an IP route or MPLS route/tunnel that is resolved directly to a local interface.
- indirect-ip-next-hops
 - Indirect IP next-hop resources
 - Reports the number of entries, where 1 entry is used for every next-hop of an IP route that requires resolution by a non-local route. This does not consider underlying ASIC resources.
- tunnel-next-hops
 - Tunnel next-hop resources
 - Reports the number of tunnel next-hop entries. 1 tunnel next-hop is required every time an indirect next-hop (e.g. a BGP next-hop) is resolved by a tunnel (BGP-LU, LDP, SR-ISIS or VXLAN)
- ecmp-groups
 - ECMP group resources
 - 7250 IXR/IXRe: Reports the used number of ECMP FECs, adding L1 ECMP FECs, L2 ECMP FECs and L3 ECMP FECs.
 - 7220 D1/D2/D3/D4/D5: Reports the used number of ECMP groups, adding overlay and underlay ECMP groups (if applicable).

- 7220 H2/H3/H4: Reports used number of ECMP groups.
- ecmp-members
ECMP member resources
7250 IXR/IXRe: Reports the used number of ECMP member FECs, adding L1 ECMP member FECs, L2 ECMP member FECs and L3 ECMP member FECs.
7220 D1/D2/D3/D4/D5: Reports the used number of ECMP members, adding overlay and underlay ECMP members (if applicable).
7220 H2/H3/H4: Reports used number of ECMP members.
- egress-next-hops
Egress next-hop resources
7220 D2/D3/D4/D5: Reports the number of entries used in the egress next-hop table, counting entries in the overlay partition and entries in the underlay partition. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.
7220 H2/H3/H4: Reports the number of entries used in the egress next-hop table. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.
- lag-groups
LAG group resources
Reports the number of LAG resources used, including DGPP LAGs.
- lag-members
LAG member resources
Reports the number of LAG member resources used, including DGPP LAG members.
- subinterfaces
Subinterface resources
There are a maximum of 127 subinterfaces per TH3 pipeline (limited by VFP/EFP TCAM resources). This counts the utilization of those resources.
- mpls-next-hops
MPLS next-hop (NHLFE) resources
One resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an ILM entry that performs a 'swap'. One additional resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an MPLS tunnel.
- mpls-incoming-labels
MPLS label lookup (ILM) resources
One resource is used for every MPLS ILM entry that performs either a 'swap' or a 'pop' operation.
- originating-tunnels

Originating tunnel resources

One resource is used for every VXLAN, LDP, SR-ISIS or IPinIP tunnel originating on this node as head-end. On TD3 and TD4 systems this equates to a DVP resource.

- terminating-tunnels

Terminating tunnel resources

One resource is used for every IPinIP tunnel terminating entry on this node.

- **system-capture-ipv6**
Resource pool of TCAM entries used by IPv6 capture-filter ACLs and IPv6 system-filter ACLs
- **system-capture**
Resource pool of TCAM entries used by IPv4 + IPv6 capture-filter ACLs and system-filter ACLs
- **capture-ipv4**
Resource pool of TCAM entries used by IPv4 capture-filter ACLs
- **capture-ipv6**
Resource pool of TCAM entries used by IPv6 capture-filter ACLs
- **if-output-cpm-ipv4**
Resource pool of TCAM entries used by IPv4 egress ACLs and cpm-filter ACLs
- **if-output-cpm-ipv6**
Resource pool of TCAM entries used by IPv6 egress ACLs and cpm-filter ACLs
- **if-output-cpm**
Resource pool of TCAM entries used by IPv4 + IPv6 egress ACLs and cpm-filter ACLs
- **if-input-mac**
Resource pool of TCAM entries used by MAC ACLs applied as subinterface-input filters
- **if-output-cpm-mac**
Resource pool of TCAM entries used by MAC egress ACLs and MAC cpm-filter ACLs
- **policy-forwarding-vrf-selection-ipv4**
Resource pool of TCAM entries used by IPv4 policy-forwarding entries that redirect flows to a different network-instance
- **policy-forwarding-nhg-ipv4**
Resource pool of TCAM entries used by IPv4 policy-forwarding entries that redirect flows to a NHG of IP next-hops or tunnels
- **policy-forwarding-nhg-ipv6**
Resource pool of TCAM entries used by IPv6 policy-forwarding entries that redirect flows to a NHG of IP next-hops or tunnels
- **if-input-policer**
Resource pool of TCAM entries used by ingress subinterface policer templates

- **if-input-ipv4-qos**
Resource pool of TCAM entries associated with IPv4 multi-field QoS classification entries, when applied to subinterface input
 - **if-input-ipv6-qos**
Resource pool of TCAM entries associated with IPv6 multi-field QoS classification entries, when applied to subinterface input
 - **mrouter-mfib-redirect**
Resource pool of TCAM entries used by multicast snooping protocols in MAC-VRF network-instances

One TCAM entry is used per multicast snooping protocol enabled in a MAC-VRF. For instance, if igmp-snooping and mld-snooping are enabled on a MAC-VRF, two entries are used. If only igmp-snooping is enabled, only one entry is used.
 - **tunnel-decap-ipv4-ipv6**
Resource pool of TCAM entries used for IPv4 and IPv6 tunnel-decapsulation groups
 - **if-output-evpn-mh-multicast-non-df**
Resource pool of TCAM entries used by egress filtering of IP multicast traffic to non-Designated Forwarder subinterfaces

One TCAM entry is used when multicast snooping protocols are enabled on at least one MAC-VRF that has one or more subinterfaces associated with Ethernet Segments.

Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

uefi-variables *variable string*

Description	Content of the UEFI Secure Boot variables programmed in the control module
Context	platform trust secure-boot control slot <i>string</i> uefi-variables <i>variable string</i>
Tree	uefi-variables
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

variable *string*

Description	UEFI Secure Boot database variable name
Context	platform trust secure-boot control slot <i>string</i> uefi-variables <i>variable string</i>
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

contents

Description	Content Secure Boot database variable
Context	platform trust secure-boot control slot <i>string</i> uefi-variables <i>variable string</i> contents
Tree	contents
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

certificate *index number*

Description	List of X.509 certificates
Context	platform trust secure-boot control slot <i>string</i> uefi-variables <i>variable string</i> contents certificate <i>index number</i>
Tree	certificate
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

index *number*

Description	The index of the certificate
--------------------	------------------------------

Context	platform trust secure-boot control slot <i>string</i> uefi-variables variable <i>string</i> contents certificate index <i>number</i>
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

data *binary*

Description	DER encoded X.509 certificate
Context	platform trust secure-boot control slot <i>string</i> uefi-variables variable <i>string</i> contents certificate index <i>number</i> data <i>binary</i>
Tree	data
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

sha1-hash [index](#) *number*

Description	List of SHA-1 hash digests
Context	platform trust secure-boot control slot <i>string</i> uefi-variables variable <i>string</i> contents sha1-hash index <i>number</i>
Tree	sha1-hash
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

index *number*

Description	The index of the hash
Context	platform trust secure-boot control slot <i>string</i> uefi-variables variable <i>string</i> contents sha1-hash index <i>number</i>
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

digest-value *binary*

Description	SHA-1 digest
Context	platform trust secure-boot control slot <i>string</i> uefi-variables variable <i>string</i> contents sha1-hash index <i>number</i> digest-value <i>binary</i>
Tree	digest-value

Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

sha256-hash *index number*

Description	List of SHA-256 hash digests
Context	platform trust secure-boot control slot <i>string</i> uefi-variables variable <i>string</i> contents sha256-hash index number
Tree	sha256-hash
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

index number

Description	The index of the hash
Context	platform trust secure-boot control slot <i>string</i> uefi-variables variable <i>string</i> contents sha256-hash index number
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

digest-value *binary*

Description	SHA-256 digest
Context	platform trust secure-boot control slot <i>string</i> uefi-variables variable <i>string</i> contents sha256-hash index number digest-value binary
Tree	digest-value
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

sha256-hash-cert *index number*

Description	List of SHA-256 hash digests of X.509 certificates
Context	platform trust secure-boot control slot <i>string</i> uefi-variables variable <i>string</i> contents sha256-hash-cert index number
Tree	sha256-hash-cert
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

index number

Description	The index of the hash
Context	platform trust secure-boot control slot string uefi-variables variable string contents sha256-hash-cert index number
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

digest-value binary

Description	SHA-256 digest of an X.509 certificate
Context	platform trust secure-boot control slot string uefi-variables variable string contents sha256-hash-cert index number digest-value binary
Tree	digest-value
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

revocation-time string

Description	Certificate revocation start time
Context	platform trust secure-boot control slot string uefi-variables variable string contents sha256-hash-cert index number revocation-time string
Tree	revocation-time
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

uefi-variables-update

Description	Update status of the UEFI Secure Boot variables PK, KEK, DB and DBx programmed in the control module compared to the UEFI variables update in the modification dataset
Context	platform trust secure-boot control slot string uefi-variables-update
Tree	uefi-variables-update
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

db-update-required *boolean*

Description	The authorized database (db) update status compared to the modification dataset true = the authorized database (db) is not up to date, update required false = the authorized database (db) is up to date
Context	platform trust secure-boot control slot <i>string</i> uefi-variables-update db-update-required <i>boolean</i>
Tree	db-update-required
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

dbx-update-required *boolean*

Description	The forbidden database (dbx) update status compared to the modification dataset true = the forbidden database (dbx) is not up to date, update required false = the forbidden database (dbx) is up to date
Context	platform trust secure-boot control slot <i>string</i> uefi-variables-update dbx-update-required <i>boolean</i>
Tree	dbx-update-required
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

kek-update-required *boolean*

Description	The Key Exchange Key database (KEK) update status compared to the modification dataset true = the Key Exchange Key database (KEK) is not up to date, update required false = the Key Exchange Key database (KEK) is up to date
Context	platform trust secure-boot control slot <i>string</i> uefi-variables-update kek-update-required <i>boolean</i>
Tree	kek-update-required
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

modification-dataset-db-conflict *boolean*

Description	The authorized database (db) conflict status between the modification dataset and the current running image true = conflict false = no conflict
--------------------	---

Context	platform trust secure-boot control slot string uefi-variables-update modification-dataset-db-conflict <i>boolean</i>
Tree	modification-dataset-db-conflict
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

modification-dataset-dbx-conflict *boolean*

Description	The forbidden database (dbx) conflict status between the modification dataset and the current running image true = conflict false = no conflict
Context	platform trust secure-boot control slot string uefi-variables-update modification-dataset-dbx-conflict <i>boolean</i>
Tree	modification-dataset-dbx-conflict
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

modification-dataset-digest *binary*

Description	The SHA256 digest of the modification dataset file
Context	platform trust secure-boot control slot string uefi-variables-update modification-dataset-digest <i>binary</i>
Tree	modification-dataset-digest
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

modification-dataset-present *boolean*

Description	The modification dataset is present
Context	platform trust secure-boot control slot string uefi-variables-update modification-dataset-present <i>boolean</i>
Tree	modification-dataset-present
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

modification-dataset-valid *boolean*

Description	The status of the modification dataset true = the modification dataset is valid false = the modification dataset is invalid
--------------------	---

Context	platform trust secure-boot control slot <i>string</i> uefi-variables-update modification-dataset-valid <i>boolean</i>
Tree	modification-dataset-valid
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

pk-update-required *boolean*

Description	The Platform Key (PK) update status compared to the modification dataset true = the Platform Key is not up to date, update required false = the Platform Key is up to date
Context	platform trust secure-boot control slot <i>string</i> uefi-variables-update pk-update-required <i>boolean</i>
Tree	pk-update-required
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

up-to-date *boolean*

Description	Status of the Secure Boot variables programmed in the control module compared to the current modification dataset true = UEFI variables are up to date false = UEFI variable update required
Context	platform trust secure-boot control slot <i>string</i> uefi-variables-update up-to-date <i>boolean</i>
Tree	up-to-date
Configurable	False
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

tpm

Description	Enter the tpm context
Context	platform trust tpm
Tree	tpm
Configurable	False
Platforms	Supported on all platforms

control *slot string*

Description	TPM status, PCR indexes and certificates per control module
Context	platform trust tpm control slot string
Tree	control
Configurable	False
Platforms	Supported on all platforms

slot *string*

Description	Slot identifier for the control module. The slot identifier is the system wide unique name for the module's TPM
Context	platform trust tpm control slot string
Configurable	False
Platforms	Supported on all platforms

certificates *name string*

Description	List of TPM certificates Three main types of certificates can be accessed via this statement, including Endorsement Key Certificate (EK), Attestation Key Certificate (AK), Device ID key Certificate (DevID)
Context	platform trust tpm control slot string certificates name string
Tree	certificates
Configurable	False
Platforms	Supported on all platforms

name *string*

Description	An arbitrary name uniquely identifying a certificate associated to a key within a TPM Endorsement Key Certificate (EK): endorsement-certificate Initial Device ID Certificate (IDeVID): initial-device-id-certificate Initial Attestation Key Certificate (IAK): initial-attestation-certificate
Context	platform trust tpm control slot string certificates name string
Configurable	False
Platforms	Supported on all platforms

data *binary*

Description	DER encoded X.509 certificate
Context	platform trust tpm control slot <i>string</i> certificates name <i>string</i> data <i>binary</i>
Tree	data
Configurable	False
Platforms	Supported on all platforms

nv-index *number*

Description	NV index for the certificate
Context	platform trust tpm control slot <i>string</i> certificates name <i>string</i> nv-index <i>number</i>
Tree	nv-index
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	TPM chip self-test status
Context	platform trust tpm control slot <i>string</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up The TPM currently is running normally and is ready to accept and process TPM quotes • down TPM is in a state such as startup or shutdown which precludes the processing of TPM quotes
Configurable	False
Platforms	Supported on all platforms

tpm20-pcr-bank [tpm20-hash-algo](#) *string*

Description	Specifies the list of PCRs that may be extracted for a specific Hash Algorithm A TPM2.0 bank is a set of PCRs which are extended using a particular hash algorithm
Context	platform trust tpm control slot <i>string</i> tpm20-pcr-bank tpm20-hash-algo <i>string</i>
Tree	tpm20-pcr-bank

Configurable	False
Platforms	Supported on all platforms

tpm20-hash-algo *string*

Description	The hash algorithm that is used to hash TPM2.0 PCRs
Context	platform trust tpm control slot <i>string</i> tpm20-pcr-bank tpm20-hash-algo <i>string</i>
Configurable	False
Platforms	Supported on all platforms

pcr-index *number*

Description	List the TPM2.0 PCRs available to be extracted
Context	platform trust tpm control slot <i>string</i> tpm20-pcr-bank tpm20-hash-algo <i>string</i> pcr-index <i>number</i>
Tree	pcr-index
Range	0 to 31
Configurable	False
Platforms	Supported on all platforms

9.1 qos Descriptions

qos

Description	Top-level container for QoS data
Context	qos
Tree	qos
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

buffer-management

Description	Container for the list of configured queue management profiles
Context	qos buffer-management
Tree	buffer-management
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

buffer-allocation-profile *name string*

Description	The name of a buffer-allocation-profile
Context	qos buffer-management buffer-allocation-profile name string
Tree	buffer-allocation-profile
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *string*

Description	Unique string name used for the buffer-allocation-profile
Context	qos buffer-management buffer-allocation-profile name string
String Length	1 to 255

Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

queues

Description	Buffer allocation parameters for individual queues
Context	qos buffer-management buffer-allocation-profile name <i>string</i> queues
Tree	queues
Configurable	True

high-threshold-bytes *number*

Description The queue depth that, when crossed in a rising direction, triggers a hardware interrupt and a recording of the current system time.

The default value of 0 disables the functionality.

On IXR-6/10 this parameter applies to a set of VOQs (and therefore to unicast traffic only). On 7220-D2/D3/H2/H3 this parameter applies to a unicast queue only; the configuration of this leaf is ignored when the queue-template is attached to a queue with queue-type other than unicast.

On 7220-D2/D3 the threshold is rounded up the nearest multiple of 2048 bytes. On IXR-6/10 the threshold is rounded up to the nearest multiple of 4096 bytes. On 7220-H2/H3 the threshold is rounded up to the nearest multiple of 254 bytes

Context	qos buffer-management buffer-allocation-profile name <i>string</i> queues queue queue-name <i>reference</i> high-threshold-bytes <i>number</i>
Tree	high-threshold-bytes
Default	0
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-H2, 7220 IXR-H3, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum-burst-size *number*

Description	<p>Maximum amount of shared buffer memory available to the queue.</p> <p>On IXR-6/10 this parameter applies to a set of VOQs. If the configured value is 0 or no value is configured the limit is 256 MB (268435456 bytes), however the use of 'alpha' may limit the effective value to less than 256 MB. A configured non-zero value sets a static limit without 'alpha'.</p> <p>On 7220-D2/D3/D5/H2/H3 this parameter applies to an egress queue and the default value of zero instructs the forwarding chip to apply its own limit based on 'alpha'. A non-zero value disables 'alpha'. The alpha value is 5 (0.25 multiplier of shared buffer space) for unicast queues and 4 (0.125 multiplier of shared buffer space) for multicast queues.</p> <p>On 7730 this parameter applies to egress-queue and setting value to 0 means default value (still need to determine that)</p> <p>Must be non-zero/non-default in order to add the active-queue-management presence container</p>

source-ip**Description**

Packet matching criteria based on source IPv4 address

Context[qos classifiers multifield-classifier name string entry sequence-id number match ipv4 source-ip](#)**Tree**[source-ip](#)**Configurable**

True

Platforms

7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

address string**Description**

Match a packet if its source IP address logically anded with the inverse of the mask equals this IP address.

Context	qos classifiers multifield-classifier name string entry sequence-id number match ipv4 source-ip address string
Tree	address
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mask string

Description	Match a packet if its source IP address logically anded with the inverse of this mask equals the configured IP address.
Context	qos classifiers multifield-classifier name string entry sequence-id number match ipv4 source-ip mask string
Tree	mask
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix string

Description	Match a packet if its source IP address is within the specified IPv4 prefix.
Context	qos classifiers multifield-classifier name string entry sequence-id number match ipv4 source-ip prefix string
Tree	prefix
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6

Description	Container for the layer-3 IPv6 match criteria
Context	qos classifiers multifield-classifier name string entry sequence-id number match ipv6
Tree	ipv6
Configurable	True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

destination-ip

Description Packet matching criteria based on destination IPv6 address

Context [qos classifiers multifield-classifier name string entry sequence-id number match ipv6 destination-ip](#)

Tree [destination-ip](#)

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

address string

Description Match a packet if its destination IP address logically anded with the inverse of the mask equals this IP address.

Context [qos classifiers multifield-classifier name string entry sequence-id number match ipv6 destination-ip address string](#)

Tree [address](#)

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mask string

Description Match a packet if its destination IP address logically anded with the inverse of this mask equals the configured IP address.

Context [qos classifiers multifield-classifier name string entry sequence-id number match ipv6 destination-ip mask string](#)

Tree [mask](#)

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix string

Description	Match a packet if its destination IP address is within the specified IPv6 prefix.
Context	qos classifiers multifield-classifier name string entry sequence-id number match ipv6 destination-ip prefix string
Tree	prefix
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dscp-set (number | keyword)

Description	A list of DSCP values to be matched for incoming packets. An OR match should be performed, such that a packet must match one of the values defined in this list. If the field is left empty then any DSCP value matches.
Context	qos classifiers multifield-classifier name string entry sequence-id number match ipv6 dscp-set (number keyword)
Tree	dscp-set
Range	0 to 63

source-port**Description**

A packet matches this condition if its source TCP or UDP port number matches the value or range that is specified

The rule should also have a condition that the IP protocol equals 6 (TCP) or 17 (UDP) in order for this to be interpreted correctly.

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

forwarding-complex [complex-identifier](#) [string](#)

Description List of forwarding complexes in the system

Context [qos classifiers multifield-classifier name](#) [string](#) [entry](#) [sequence-id](#) [number](#)
[tcam-entries](#) [forwarding-complex](#) [complex-identifier](#) [string](#)

Tree [forwarding-complex](#)

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

complex-identifier [string](#)

Description A forwarding complex in the format (slot-number,complex-number).

Context [qos classifiers multifield-classifier name](#) [string](#) [entry](#) [sequence-id](#) [number](#)
[tcam-entries](#) [forwarding-complex](#) [complex-identifier](#) [string](#)

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

input-total [number](#)

Description The number of TCAM entries required to implement this entry on all subinterfaces of this complex where the filter is applied to ingress traffic.

For example, if a single-instance of the entry takes 2 TCAM entries and the filter is an output-only subinterface-specific filter and the filter is applied to 5 subinterfaces on output and to 5 subinterfaces on input then input-total=2. If the entry is not applied to ingress traffic on any subinterfaces of this complex then input-total=0.

Context	qos classifiers multifield-classifier name <i>string</i> entry sequence-id <i>number</i> tcam-entries forwarding-complex complex-identifier <i>string</i> input-total <i>number</i>
Tree	input-total
Configurable	False
Platforms	Supported on all platforms

output-total *number*

Description	The number of TCAM entries required to implement this entry on all subinterfaces of this complex where the filter is applied to egress traffic. For example, if a single-instance of the entry takes 2 TCAM entries and the filter is an output-only subinterface-specific filter and the filter is applied to 5 subinterfaces on output and to 5 subinterfaces on input then output-total=10. If the entry is not applied to egress traffic on any subinterfaces of this complex then output-total=0.
Context	qos classifiers multifield-classifier name <i>string</i> entry sequence-id <i>number</i> tcam-entries forwarding-complex complex-identifier <i>string</i> output-total <i>number</i>
Tree	output-total
Configurable	False
Platforms	Supported on all platforms

single-instance *number*

Description	The number of TCAM entries required to implement this entry if it is applied to only one subinterface and one traffic direction specific to this slot. This is non-zero even if the filter is not applied to any subinterfaces of this complex. It captures the effect of TCAM entry expansion to deal with L4 port or VLAN ranges, for example.
Context	qos classifiers multifield-classifier name <i>string</i> entry sequence-id <i>number</i> tcam-entries forwarding-complex complex-identifier <i>string</i> single-instance <i>number</i>
Tree	single-instance
Configurable	False

Default	0
Configurable	False
Platforms	Supported on all platforms

committed-octets *number*

Description	The number of octets in packets that were accepted with low drop-probability at policer output Not available in violating-focus mode
Context	qos interfaces interface interface-id <i>string</i> input policer-templates policer sequence-id <i>number</i> statistics committed-octets <i>number</i>
Tree	committed-octets
Default	0
Configurable	False
Platforms	Supported on all platforms

committed-packets *number*

Description	The number of packets that were accepted with low drop-probability at policer output Not available in violating-focus mode
Context	qos interfaces interface interface-id <i>string</i> input policer-templates policer sequence-id <i>number</i> statistics committed-packets <i>number</i>
Tree	committed-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

exceeding-octets *number*

Description	The number of octets in packets that were accepted with medium drop-probability at policer output Not available in violating-focus mode
Context	qos interfaces interface interface-id <i>string</i> input policer-templates policer sequence-id <i>number</i> statistics exceeding-octets <i>number</i>
Tree	exceeding-octets
Default	0
Configurable	False
Platforms	Supported on all platforms

exceeding-packets *number*

Description	The number of packets that were accepted with medium drop-probability at policer output Not available in violating-focus mode
Context	qos interfaces interface interface-id <i>string</i> input policer-templates policer sequence-id <i>number</i> statistics exceeding-packets <i>number</i>
Tree	exceeding-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

last-clear *string*

Description	Time of the last clear command performed by the user at this level
Context	qos interfaces interface interface-id <i>string</i> input policer-templates policer sequence-id <i>number</i> statistics last-clear <i>string</i>
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

violating-octets *number*

Description	The number of octets in packets that were considered violating by the policer
--------------------	---

	Not available in forwarding-focus mode
Context	qos interfaces interface interface-id <i>string</i> input policer-templates policer sequence-id <i>number</i> statistics violating-octets <i>number</i>
Tree	violating-octets
Default	0
Configurable	False
Platforms	Supported on all platforms

violating-packets *number*

Description	The number of packets that were considered violating by the policer Not available in forwarding-focus mode
Context	qos interfaces interface interface-id <i>string</i> input policer-templates policer sequence-id <i>number</i> statistics violating-packets <i>number</i>
Tree	violating-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

policer-template *reference*

Description	The name of the policer template applied to input traffic on the subinterface
Context	qos interfaces interface interface-id <i>string</i> input policer-templates policer-template <i>reference</i>
Tree	policer-template
Reference	qos policer-templates policer-template name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

interface-ref

Description	Reference to an interface or subinterface
Context	qos interfaces interface interface-id <i>string</i> interface-ref
Tree	interface-ref
Configurable	True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface *reference*

Description Reference to a base interface, for example a port or LAG

Context [qos interfaces interface interface-id](#) *string* [interface-ref](#) [interface](#) *reference*

Tree [interface](#)

Reference [interface name](#) *string*

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subinterface *reference*

Description Reference to a subinterface
This requires the base interface to be specified using the interface leaf in this container

Context [qos interfaces interface interface-id](#) *string* [interface-ref](#) [subinterface](#) *reference*

Tree [subinterface](#)

Reference [interface name](#) *string* [subinterface](#) [index](#) *number*

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

output

Description Top-level container for QoS configuration and state relating to egress traffic on the interface or subinterface

Context [qos interfaces interface interface-id](#) *string* [output](#)

Tree [output](#)

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

buffer-allocation-profile *reference*

Description	Buffer-allocation-profile for interface output queues
Context	qos interfaces interface interface-id <i>string</i> output buffer-allocation-profile reference
Tree	buffer-allocation-profile
Reference	qos buffer-management buffer-allocation-profile name <i>string</i>
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

output-class-map-pending *reference*

Description	List of interfaces, related to this subinterface, where the configured output-class-map is not yet operational
Context	qos interfaces interface interface-id <i>string</i> output output-class-map-pending reference
Tree	output-class-map-pending
Reference	interface name <i>string</i>
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

queues

Description	Container for a list of queues that are instantiated on an interface
Context	qos interfaces interface interface-id <i>string</i> output queues
Tree	queues
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

queue [queue-name](#) *reference*

Description	List of queues
--------------------	----------------

Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference
Tree	queue
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

queue-name reference

Description	The queue name
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference
Reference	qos queues queue name <i>string</i>
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

active-queue-management

Description	Enter the active-queue-management context
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference active-queue-management
Tree	active-queue-management
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

wred-slope [traffic-type](#) *keyword* [drop-probability](#) *keyword* [enable-ecn](#) *boolean*

Description	List of WRED slopes
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference active-queue-management wred-slope traffic-type <i>keyword</i> drop-probability <i>keyword</i> enable-ecn <i>boolean</i>
Tree	wred-slope
Configurable	False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

traffic-type *keyword*

Description The traffic type to which the WRED slope applies

Context [qos interfaces interface interface-id](#) *string* [output queues queue queue-name](#) *reference* [active-queue-management wred-slope traffic-type](#) *keyword* [drop-probability](#) *keyword* [enable-ecn](#) *boolean*

Options

- tcp
Refers to IPv4/IPv6 packets with a protocol/next-header indicating a value of 6
- non-tcp
Refers to all packets that are not IPv4/IPv6 packets with a protocol/next-header indicating a value of 6
- all
Refers to all traffic, whether it is TCP or non-TCP

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

drop-probability *keyword*

Description The drop probability to which the WRED slope applies

Context [qos interfaces interface interface-id](#) *string* [output queues queue queue-name](#) *reference* [active-queue-management wred-slope traffic-type](#) *keyword* [drop-probability](#) *keyword* [enable-ecn](#) *boolean*

Options

- low
Traffic that should be dropped last when there is congestion. Internally this is traffic that is colored green
- medium
Traffic that should be dropped before green traffic but after red traffic when there is congestion. Internally this is traffic that is colored yellow
- high
Traffic that should be dropped first when there is congestion. Internally this is traffic that is colored red
- all

All traffic, consisting of traffic marked low, medium and high drop-probability

Configurable

False

Platforms

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

enable-ecn *boolean***Description**

Indicates that packets should be marked with ecn-bit when the result of wred-slope would discard the packet. It is mutually exclusive with 'drop' flag

Context

[qos interfaces interface interface-id string output queues queue queue-name reference active-queue-management wred-slope traffic-type keyword drop-probability keyword enable-ecn boolean](#)

Configurable

False

Platforms

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

drop *boolean***Description**

Indicates that packets will be dropped based on WRED slope policy

Context

[qos interfaces interface interface-id string output queues queue queue-name reference active-queue-management wred-slope traffic-type keyword drop-probability keyword enable-ecn boolean drop boolean](#)

Tree

[drop](#)

Configurable

False

Platforms

7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

max-probability *number***Description**

The maximum probability of dropping a packet (at or above the max-threshold).

On 7250 IXR-6/10 there can be a significant difference between the configured value and the operational value

Context

[qos interfaces interface interface-id string output queues queue queue-name reference active-queue-management wred-slope traffic-type keyword drop-probability keyword enable-ecn boolean max-probability number](#)

Tree	max-probability
Range	0 to 100
Configurable	False

transmitted-octets *number*

Description	Number of octets transmitted by the queue, including transit traffic and locally originated traffic
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics in-profile transmitted-octets number
Tree	transmitted-octets
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transmitted-packets *number*

Description	Number of packets transmitted by the queue, including transit traffic and locally originated traffic
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics in-profile transmitted-packets number
Tree	transmitted-packets
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-clear *string*

Description	Timestamp of the last time the statistics associated with this queue were cleared
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference queue-statistics aggregate-statistics last-clear <i>string</i>
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

out-profile

Description	Stats for packets marked with Out profile transmitted by the queue
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference queue-statistics aggregate-statistics out-profile
Tree	out-profile
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dropped-octets *number*

Description	Number of octets transmitted by the queue dropped by the queue
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference queue-statistics aggregate-statistics out-profile dropped-octets <i>number</i>
Tree	dropped-octets
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dropped-packets *number*

Description	Number of packets transmitted by the queue dropped by the queue
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics out-profile dropped-packets number
Tree	dropped-packets
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transmitted-octets *number*

Description	Number of octets transmitted by the queue, including transit traffic and locally originated traffic
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics out-profile transmitted-octets number
Tree	transmitted-octets
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transmitted-packets *number*

Description	Number of packets transmitted by the queue, including transit traffic and locally originated traffic
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics out-profile transmitted-packets number
Tree	transmitted-packets
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

queue-depth

Description	Enter the queue-depth context
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics aggregate-statistics queue-depth
Tree	queue-depth
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

high-threshold-bytes *number*

Description	The operational hardware value of the high threshold in bytes
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics aggregate-statistics queue-depth high-threshold-bytes <i>number</i>
Tree	high-threshold-bytes
Units	bytes
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-high-threshold-time *string*

Description	The last time the queue depth exceeded the high-threshold in a rising direction
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics aggregate-statistics queue-depth last-high-threshold-time <i>string</i>
Tree	last-high-threshold-time
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

virtual-output-queue *slot number*

Description	List of virtual output queues that can send traffic to this egress queue. The list always has one entry for each IMM slot in the chassis, even if one or more slots are empty
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number
Tree	virtual-output-queue
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

slot number

Description	The slot identifier for the virtual output queue
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number
Range	1 to 8
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

high-drop-probability

Description	The unicast statistics unicast packets transmitted from the VOQ to the egress queue that were classified as high drop-probability. This reads 0 when the IMM associated with the VOQ is not inserted and it resets to 0 whenever the IMM associated with the VOQ is removed
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number high-drop-probability
Tree	high-drop-probability
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dropped-octets *number*

Description	Number of octets transmitted by the queue dropped by the queue
--------------------	--

Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number high-drop-probability dropped-octets <i>number</i>
Tree	dropped-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dropped-packets *number*

Description	Number of packets transmitted by the queue dropped by the queue
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number high-drop-probability dropped-packets <i>number</i>
Tree	dropped-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transmitted-octets *number*

Description	Number of octets transmitted by the queue, including transit traffic and locally originated traffic
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number high-drop-probability transmitted-octets <i>number</i>
Tree	transmitted-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transmitted-packets *number*

Description	Number of packets transmitted by the queue, including transit traffic and locally originated traffic
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number high-drop-probability transmitted-packets <i>number</i>
Tree	transmitted-packets

Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

low-drop-probability

Description	The unicast statistics from the VOQ to the egress queue that were classified as low drop-probability. This reads 0 when the IMM associated with the VOQ is not inserted and it resets to 0 whenever the IMM associated with the VOQ is removed
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number low-drop-probability
Tree	low-drop-probability
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dropped-octets *number*

Description	Number of octets transmitted by the queue dropped by the queue
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number low-drop-probability dropped-octets number
Tree	dropped-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dropped-packets *number*

Description	Number of packets transmitted by the queue dropped by the queue
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number low-drop-probability dropped-packets number
Tree	dropped-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transmitted-octets *number*

Description	Number of octets transmitted by the queue, including transit traffic and locally originated traffic
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number low-drop-probability transmitted-octets <i>number</i>
Tree	transmitted-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transmitted-packets *number*

Description	Number of packets transmitted by the queue, including transit traffic and locally originated traffic
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number low-drop-probability transmitted-packets <i>number</i>
Tree	transmitted-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

medium-drop-probability

Description	The unicast statistics from the VOQ to the egress queue that were classified as medium drop-probability. This reads 0 when the IMM associated with the VOQ is not inserted and it resets to 0 whenever the IMM associated with the VOQ is removed
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number medium-drop-probability
Tree	medium-drop-probability
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dropped-octets *number*

Description	Number of octets transmitted by the queue dropped by the queue
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number medium-drop-probability dropped-octets number
Tree	dropped-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dropped-packets *number*

Description	Number of packets transmitted by the queue dropped by the queue
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number medium-drop-probability dropped-packets number
Tree	dropped-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transmitted-octets *number*

Description	Number of octets transmitted by the queue, including transit traffic and locally originated traffic
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number medium-drop-probability transmitted-octets number
Tree	transmitted-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transmitted-packets *number*

Description	Number of packets transmitted by the queue, including transit traffic and locally originated traffic
--------------------	--

Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number medium-drop-probability transmitted-packets <i>number</i>
Tree	transmitted-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

queue-depth

Description	Enter the queue-depth context
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number queue-depth
Tree	queue-depth
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

high-threshold-bytes *number*

Description	The operational hardware value of the high threshold in bytes
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number queue-depth high-threshold-bytes <i>number</i>
Tree	high-threshold-bytes
Units	bytes
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-high-threshold-time *string*

Description	The last time the depth of either VOQ associated with this slot exceeded the high-threshold in a rising direction
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference queue-statistics aggregate-statistics virtual-output-queue slot number queue-depth last-high-threshold-time <i>string</i>
Tree	last-high-threshold-time
String Length	20 to 32

Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

per-lag-member-statistics

Description	Queue statistics per-LAG member. These statistics are relevant only for LAG
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics per-lag-member-statistics
Tree	per-lag-member-statistics
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

member-interface [member-interface-name string](#)

Description	Enter the member-interface list instance
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics per-lag-member-statistics member-interface member-interface-name string
Tree	member-interface
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

member-interface-name [string](#)

Description	Enter the member-interface-name context
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics per-lag-member-statistics member-interface member-interface-name string
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

egq-dropped-octets *number*

Description	Number of octets dropped by the queue at egress
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> egq-dropped-octets <i>number</i>
Tree	egq-dropped-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

egq-dropped-packets *number*

Description	Number of packets dropped by the queue at egress
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> egq-dropped-packets <i>number</i>
Tree	egq-dropped-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

exceed-profile

Description	Stats for packets marked with Exceed profile transmitted by the queue
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> exceed-profile
Tree	exceed-profile
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dropped-octets *number*

Description	Number of octets transmitted by the queue dropped by the queue
--------------------	--

Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> exceed-profile dropped-octets <i>number</i>
Tree	dropped-octets
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dropped-packets *number*

Description	Number of packets transmitted by the queue dropped by the queue
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> exceed-profile dropped-packets <i>number</i>
Tree	dropped-packets
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transmitted-octets *number*

Description	Number of octets transmitted by the queue, including transit traffic and locally originated traffic
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> exceed-profile transmitted-octets <i>number</i>
Tree	transmitted-octets

queue-depth

Description	Enter the queue-depth context
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> queue-depth
Tree	queue-depth
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

high-threshold-bytes *number*

Description	The operational hardware value of the high threshold in bytes
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> queue-depth high-threshold-bytes <i>number</i>
Tree	high-threshold-bytes
Units	bytes
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-high-threshold-time *string*

Description	The last time the queue depth exceeded the high-threshold in a rising direction
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> queue-depth last-high-threshold-time <i>string</i>
Tree	last-high-threshold-time
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

virtual-output-queue *slot number*

Description	List of virtual output queues that can send traffic to this egress queue. The list always has one entry for each IMM slot in the chassis, even if one or more slots are empty
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> virtual-output-queue slot number
Tree	virtual-output-queue
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

slot number

Description	The slot identifier for the virtual output queue
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> virtual-output-queue slot number
Range	1 to 8
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

high-drop-probability

Description	The unicast statistics unicast packets transmitted from the VOQ to the egress queue that were classified as high drop-probability. This reads 0 when the IMM associated with the VOQ is not inserted and it resets to 0 whenever the IMM associated with the VOQ is removed
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics per-lag-member-statistics member-interface member-interface-name string virtual-output-queue slot number high-drop-probability
Tree	high-drop-probability
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dropped-octets *number*

Description	Number of octets transmitted by the queue dropped by the queue
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics per-lag-member-statistics member-interface member-interface-name string virtual-output-queue slot number high-drop-probability dropped-octets number
Tree	dropped-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dropped-packets *number*

Description	Number of packets transmitted by the queue dropped by the queue
Context	qos interfaces interface interface-id string output queues queue queue-name reference queue-statistics per-lag-member-statistics member-interface member-interface-name string virtual-output-queue slot number high-drop-probability dropped-packets number
Tree	dropped-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transmitted-octets *number*

Description	Number of octets transmitted by the queue, including transit traffic and locally originated traffic
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> virtual-output-queue slot <i>number</i> high-drop-probability transmitted-octets <i>number</i>
Tree	transmitted-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

transmitted-packets *number*

Description	Number of packets transmitted by the queue, including transit traffic and locally originated traffic
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> virtual-output-queue slot <i>number</i> high-drop-probability transmitted-packets <i>number</i>
Tree	transmitted-packets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

low-drop-probability

Description	The unicast statistics from the VOQ to the egress queue that were classified as low drop-probability. This reads 0 when the IMM associated with the VOQ is not inserted and it resets to 0 whenever the IMM associated with the VOQ is removed
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> virtual-output-queue slot <i>number</i> low-drop-probability
Tree	low-drop-probability
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dropped-octets *number*

Description	Number of octets transmitted by the queue dropped by the queue
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> virtual-output-queue slot <i>number</i> low-drop-probability dropped-octets <i>number</i>
Tree	dropped-octets
Default	0
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dropped-packets *number*

Description	Number of packets transmitted by the queue dropped by the queue
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> virtual-output-queue slot <i>number</i> low-drop-probability dropped-packets <i>number</i>
Tree	dropped-packets

high-threshold-bytes *number*

Description	The operational hardware value of the high threshold in bytes
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> virtual-output-queue slot <i>number</i> queue-depth high-threshold-bytes <i>number</i>
Tree	high-threshold-bytes
Units	bytes
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-high-threshold-time *string*

Description	The last time the depth of either VOQ associated with this slot exceeded the high-threshold in a rising direction
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> queue-statistics per-lag-member-statistics member-interface member-interface-name <i>string</i> virtual-output-queue slot <i>number</i> queue-depth last-high-threshold-time <i>string</i>
Tree	last-high-threshold-time
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

scheduling

Description	Container for queue scheduling parameters
--------------------	---

Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference scheduling
Tree	scheduling
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

peak-rate-bps *number*

Description	The actual/operational peak rate in bits per second
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference scheduling peak-rate-bps <i>number</i>
Tree	peak-rate-bps
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

peak-rate-percent *number*

Description	The maximum percentage of port bandwidth that is available to the traffic in this queue during the PIR scheduling loop. The default is 100
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference scheduling peak-rate-percent <i>number</i>
Tree	peak-rate-percent
Range	1 to 100
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

strict-priority *boolean*

Description	When set to true the queue is serviced as a strict priority queue, regardless of whether a weight is configured or its value. When set to false the queue is serviced using WRR, even if the queue does not have a configured weight; in this case the default weight value of 1 is used
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name reference scheduling strict-priority <i>boolean</i>

Tree	strict-priority
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

weight number

Description	Configures the relative weight of a queue. For DWRR, this is determined by the scheduler policy For Strict Priority the weight is as follows J2: unicast-0..unicast-7 -> weight 9..16 multicast-0..multicast-7 -> weight 1..8 TD3 (D2/D3/D5): unicast-0..unicast-7 -> weight 1..8 multicast-0..multicast-7 -> weight 1..8 TH3: unicast-0 -> weight 2 unicast-1 -> weight 3 unicast-2 -> weight 5 unicast-3 -> weight 6 unicast-4 -> weight 8 unicast-5 -> weight 9 unicast-6 -> weight 11 unicast-7 -> weight 12 multicast-0 -> weight 1 multicast-1 -> weight 4 multicast-2 -> weight 7 multicast-3 -> weight 10
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>reference</i> scheduling weight number
Tree	weight
Range	1 to 255
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rewrite-rules

Description	Enable the rewrite-rules context
Context	qos interfaces interface interface-id <i>string</i> output rewrite-rules
Tree	rewrite-rules
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dot1p-policy reference

Description	Reference to the name of a dot1p rewrite policy
Context	qos interfaces interface interface-id <i>string</i> output rewrite-rules dot1p-policy reference
Tree	dot1p-policy
Reference	qos rewrite-rules dot1p-policy name <i>string</i>
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

dscp-policy reference

Description	Reference to the name of a DSCP rewrite-rule policy that applies to both IPv4 and IPv6 traffic
Context	qos interfaces interface interface-id <i>string</i> output rewrite-rules dscp-policy reference
Tree	dscp-policy
Reference	qos rewrite-rules dscp-policy name <i>string</i>
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4

ipv4-dscp-policy reference

Description	Reference to the name of a DSCP rewrite-rule policy that applies only to IPv4 traffic
Context	qos interfaces interface interface-id <i>string</i> output rewrite-rules ipv4-dscp-policy reference
Tree	ipv4-dscp-policy
Reference	qos rewrite-rules dscp-policy name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-dscp-policy reference

Description	Reference to the name of a DSCP rewrite-rule policy that applies only to IPv6 traffic
--------------------	---

Context	qos interfaces interface interface-id <i>string</i> output rewrite-rules ipv6-dscp-policy <i>reference</i>
Tree	ipv6-dscp-policy
Reference	qos rewrite-rules dscp-policy name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mpls-traffic-class-policy *reference*

Description	Reference to the name of an MPLS traffic-class rewrite-rule policy
Context	qos interfaces interface interface-id <i>string</i> output rewrite-rules mpls-traffic-class-policy <i>reference</i>
Tree	mpls-traffic-class-policy
Reference	qos rewrite-rules mpls-traffic-class-policy name <i>string</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

scheduler

Description	Output traffic scheduler options
Context	qos interfaces interface interface-id <i>string</i> output scheduler
Tree	scheduler
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

scheduler-policy *reference*

Description	The scheduler policy to be applied to traffic on this interface
Context	qos interfaces interface interface-id <i>string</i> output scheduler scheduler-policy <i>reference</i>
Tree	scheduler-policy
Reference	qos scheduler-policies scheduler-policy name <i>string</i>
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

pfc

Description	Parameters and information related to PFC on the interface
Context	qos interfaces interface interface-id <i>string</i> pfc
Tree	pfc
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

deadlock-detection-timer *number*

Description	The actual value of deadlock-detection-timer
Context	qos interfaces interface interface-id <i>string</i> pfc deadlock-detection-timer <i>number</i>
Tree	deadlock-detection-timer
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state *keyword*

Description	Details if the PFC feature is operationally available
Context	qos interfaces interface interface-id <i>string</i> pfc oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting

- Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable

False

Platforms

7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

pfc-enable *boolean***Description**

Enables/disables reaction to received pfc-frames for a given interface

statistics

Description	Statistics related to PFC functionality
Context	qos interfaces interface interface-id <i>string</i> pfc statistics
Tree	statistics
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-clear *string*

Description	Timestamp of the last time the statistics associated with this queue were cleared
Context	qos interfaces interface interface-id <i>string</i> pfc statistics last-clear <i>string</i>
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

pfc-priority *index number*

Description	Enter the pfc-priority list instance
Context	qos interfaces interface interface-id <i>string</i> pfc statistics pfc-priority <i>index number</i>
Tree	pfc-priority
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

index *number*

Description	PFC-priority index
Context	qos interfaces interface interface-id <i>string</i> pfc statistics pfc-priority <i>index number</i>
Range	0 to 7
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

deadlock-recovery-occurrences *number*

Description	Number of deadlock recovery events
Context	qos interfaces interface interface-id <i>string</i> pfc statistics pfc-priority <i>index number</i> deadlock-recovery-occurrences <i>number</i>

Tree	deadlock-recovery-occurrences
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

pfc-pause-frames-generated *number*

Description	Number of pfc-pause-frames generated on the interface for a given pfc-priority
Context	qos interfaces interface interface-id <i>string</i> pfc statistics pfc-priority index number pfc-pause-frames-generated <i>number</i>
Tree	pfc-pause-frames-generated
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

pfc-pause-frames-received *number*

Description	Number of pfc-pause-frames received on the interface and given pfc-priority
Context	qos interfaces interface interface-id <i>string</i> pfc statistics pfc-priority index number pfc-pause-frames-received <i>number</i>
Tree	pfc-pause-frames-received
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

pfc-transitions *number*

Description	Number of transitions PFC-ON --> PFC-OFF on the interface for a given pfc-priority
Context	qos interfaces interface interface-id <i>string</i> pfc statistics pfc-priority index number pfc-transitions <i>number</i>
Tree	pfc-transitions
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

total-packet-pfc-discards *number*

Description	Total number of packets discarded because pfc-buffer-allocation was depleted. Under normal condition this counter should not be incremented
Context	qos interfaces interface interface-id <i>string</i> pfc statistics total-packet-pfc-discards <i>number</i>
Tree	total-packet-pfc-discards
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

total-pfc-pause-frames-generated *number*

Description	Total number of pfc-pause-frames generated on the interface
Context	qos interfaces interface interface-id <i>string</i> pfc statistics total-pfc-pause-frames-generated <i>number</i>
Tree	total-pfc-pause-frames-generated
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

total-pfc-pause-frames-received *number*

Description	Total number of pfc-pause-frames received on the interface
Context	qos interfaces interface interface-id <i>string</i> pfc statistics total-pfc-pause-frames-received <i>number</i>
Tree	total-pfc-pause-frames-received
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

linecard [slot](#) *number*

Description	Container for QoS linecard configuration
Context	qos linecard slot <i>number</i>
Tree	linecard

Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

slot number

Description	Numeric identifier for the linecard
Context	qos linecard slot number
Range	1 to 8
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

forwarding-complex name keyword

Description	List of forwarding complexes on the card
Context	qos linecard slot number forwarding-complex name keyword
Tree	forwarding-complex
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name keyword

Description	Forwarding-complex name
Context	qos linecard slot number forwarding-complex name keyword
Options	<ul style="list-style-type: none"> • 0 • 1
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

input

Description	QoS input parameters at forwarding-complex level
Context	qos linecard slot number forwarding-complex name keyword input
Tree	input
Configurable	True
Platforms	7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H4, 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

pfc-buffer-reservation *number*

Description	Percentage of the buffer reserved for accommodating incoming traffic while upstream node reacts to generated PFC-pause frames
Context	qos linecard slot number forwarding-complex name keyword input pfc-buffer-reservation number
Tree	pfc-buffer-reservation
Range	0 to 100
Default	1
Configurable	True
Platforms	7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H4

pfc-reserved-buffer-size *number*

Description	Displays the actual size of pfc-reserved buffer in bytes
Context	qos linecard slot number forwarding-complex name keyword input pfc-reserved-buffer-size number
Tree	pfc-reserved-buffer-size
Units	bytes
Configurable	False
Platforms	7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H4, 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

output

Description	QoS output parameters at forwarding-complex level
Context	qos linecard slot number forwarding-complex name keyword output
Tree	output

Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

output-class-map **name** *string*

Description	Enter the output-class-map list instance
Context	qos output-class-map name <i>string</i>
Tree	output-class-map
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	64

name *string*

Description	User defined output-class-map name
Context	qos output-class-map name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

forwarding-class **name** *reference*

Description	Enter the forwarding-class list instance
Context	qos output-class-map name <i>string</i> forwarding-class name <i>reference</i>
Tree	forwarding-class
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *reference*

Description	The forwarding class
Context	qos output-class-map name <i>string</i> forwarding-class name <i>reference</i>
Reference	qos forwarding-classes forwarding-class name <i>string</i>
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

queue

Description	Container used to define whether local subinterface should be created or re-direction to remote queue at interface level should be used
Context	qos output-class-map name <i>string</i> forwarding-class name <i>reference</i> queue
Tree	queue
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *reference*

Description	The queue name
Context	qos output-class-map name <i>string</i> forwarding-class name <i>reference</i> queue name <i>reference</i>
Tree	name
Reference	qos queues queue name <i>string</i>
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

re-direct-to *keyword*

Description	The re-direction to interface level queue
Context	qos output-class-map name <i>string</i> forwarding-class name <i>reference</i> queue re-direct-to <i>keyword</i>

Tree	re-direct-to
Options	• remote
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

pfm-mapping-profile *name string*

Description	Enter the pfm-mapping-profile list instance
Context	qos pfm-mapping-profile name string
Tree	pfm-mapping-profile
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	7

name *string*

Description	User defined pfm-mapping-profile name. The name 'default' is reserved for system use
Context	qos pfm-mapping-profile name string
String Length	1 to 255
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

received-pfm-pause-frames

Description	Parameters describing the behaviour when pfm-pause-frames are received on outgoing interface
Context	qos pfm-mapping-profile name string received-pfm-pause-frames
Tree	received-pfm-pause-frames
Configurable	True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

deadlock

Description Parameters related to avoid a deadlock related to pfc on outgoing interface

Context [qos pfc-mapping-profile name](#) *string* [received-pfc-pause-frames](#) [deadlock](#)

Tree [deadlock](#)

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

detection-timer *number*

Description Number of milliseconds during which outgoing interface is receiving pfc-pause-frames before triggering recovery-timer

Context [qos pfc-mapping-profile name](#) *string* [received-pfc-pause-frames](#) [deadlock](#) [detection-timer](#) *number*

Tree [detection-timer](#)

Range 10 to 1500

Default 750

Units millisecond

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

enable *boolean*

Description Enables/disables deadlock mechanism

Context [qos pfc-mapping-profile name](#) *string* [received-pfc-pause-frames](#) [deadlock](#) [enable](#) *boolean*

Tree [enable](#)

Default false

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

recovery-timer *number*

Description Number of milliseconds during which the pfc-pause-frames will be ignored

Context [qos pfc-mapping-profile name](#) *string* [received-pfc-pause-frames deadlock recovery-timer](#) *number*

Tree [recovery-timer](#)

Range 100 to 1500

Default 750

Units milliseconds

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

queue [queue-name](#) *reference*

Description List of egress-queue which should react to PFC-pause-frames

Context [qos pfc-mapping-profile name](#) *string* [received-pfc-pause-frames queue queue-name](#) *reference*

Tree [queue](#)

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

queue-name *reference*

Description Egress-queue name

Context [qos pfc-mapping-profile name](#) *string* [received-pfc-pause-frames queue queue-name](#) *reference*

Reference [qos queues queue name](#) *string*

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

enable-pfc *boolean*

Description	Enables/disables reaction to received pfc-frames for a given pfc-priority
Context	qos pfc-mapping-profile name <i>string</i> received-pfc-pause-frames queue queue-name <i>reference</i> enable-pfc <i>boolean</i>
Tree	enable-pfc
Default	false
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

pfc-pause-frame-priority *number*

Description	The pfc-priority received in pfc-pause-frame
Context	qos pfc-mapping-profile name <i>string</i> received-pfc-pause-frames queue queue-name <i>reference</i> pfc-pause-frame-priority <i>number</i>
Tree	pfc-pause-frame-priority
Range	0 to 7
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	1

received-traffic

Description	Parameters related to receiving traffic for pfc-generation
Context	qos pfc-mapping-profile name <i>string</i> received-traffic
Tree	received-traffic
Configurable	True
Platforms	7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H4

unicast-mapping

Description	Parameters defing mapping of incoming unicast traffic into a pfc-queues
Context	qos pfc-mapping-profile name <i>string</i> received-traffic unicast-mapping

Tree	unicast-mapping
Configurable	True
Platforms	7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H4

10.1 routing-policy Descriptions

routing-policy

Description	Top-level container for all routing policy configuration
Context	routing-policy
Tree	routing-policy
Configurable	True
Platforms	Supported on all platforms

as-path-set *name string*

Description	AS Path regular expressions for use in policy entries
Context	routing-policy as-path-set name string
Tree	as-path-set
Configurable	True
Platforms	Supported on all platforms

name *string*

Description	A name used to identify the AS path regular expression
Context	routing-policy as-path-set name string
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

expression *string*

Description	A regular expression where each AS number is an elemental term
Context	routing-policy as-path-set name string expression string
Tree	expression
String Length	1 to 65535
Configurable	True
Platforms	Supported on all platforms

community-set *name string*

Description	List of BGP community sets containing standard and large BGP communities
Context	routing-policy community-set name string
Tree	community-set
Configurable	True
Platforms	Supported on all platforms

name *string*

Description	A name used to identify the community set
Context	routing-policy community-set name string
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

match-set-options *keyword*

Description	Options that determine the matching criteria that applies to the list of community members
Context	routing-policy community-set name string match-set-options keyword
Tree	match-set-options
Default	all
Options	<ul style="list-style-type: none"> • any Match is true if any of the listed community member values is present in the route • all Match is true if all of the listed community member values are present in the route • invert Match is true if none of the listed community member values are present in the route
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

member (*identityref* | *bgp-std-community-type* | *bgp-large-community-type* | *string* | *string* | *string* | *string* | *string* | *string* | *string* | *string* | *string* | *string* | *bgp-large-community-regexp-type* | *bgp-std-community-regexp-type*)

Description	A standard BGP community value, regular expression or well-known name or else a large BGP community value or regular expression
Context	routing-policy community-set name string member (<i>identityref</i> <i>bgp-std-community-type</i> <i>bgp-large-community-type</i> <i>string</i> <i>string</i> <i>string</i> <i>string</i> <i>string</i> <i>string</i> <i>string</i> <i>string</i> <i>string</i> <i>string</i> <i>bgp-large-community-regexp-type</i> <i>bgp-std-community-regexp-type</i>)
Tree	member
Options	<ul style="list-style-type: none"> • no-export Do not export NLRI received carrying this community outside the bounds of this autonomous system, or this confederation if the local autonomous system is a confederation member AS. This community has a value of 0xFFFFFFFF01. • no-advertise All NLRI received carrying this community must not be advertised to other BGP peers. This community has a value of 0xFFFFFFFF02. • no-export-subconfed All NLRI received carrying this community must not be advertised to external BGP peers - including over confederation sub-AS boundaries. This community has a value of 0xFFFFFFFF03.
Configurable	True
Platforms	Supported on all platforms

policy name *string*

Description	List of policy definitions, keyed by unique name These policy definitions are expected to be referenced (by name) in policy in import-policy and/or export-policy statements.
Context	routing-policy policy name <i>string</i>
Tree	policy
Configurable	True
Platforms	Supported on all platforms

name *string*

Description	A name used to identify the policy
--------------------	------------------------------------

Context	routing-policy policy name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

default-action

Description	Actions for routes that do not match any policy entry
Context	routing-policy policy name <i>string</i> default-action
Tree	default-action
Configurable	True
Platforms	Supported on all platforms

bgp

Description	Enter the bgp context
Context	routing-policy policy name <i>string</i> default-action bgp
Tree	bgp
Configurable	True
Platforms	Supported on all platforms

as-path

Description	Modify AS Path attribute of routes
Context	routing-policy policy name <i>string</i> default-action bgp as-path
Tree	as-path
Configurable	True
Platforms	Supported on all platforms

prepend

Description	Prepend a BGP AS number to the AS Path attribute of routes
Context	routing-policy policy name <i>string</i> default-action bgp as-path prepend
Tree	prepend
Configurable	True
Platforms	Supported on all platforms

as-number (*number* | *keyword*)

Description	The AS number to prepend to the AS Path attributes If 'auto' is specified then the peer's AS number is used in the context of an import policy and the local AS number is used in the context of an export policy.
Context	routing-policy policy name <i>string</i> default-action bgp as-path prepend as-number (<i>number</i> <i>keyword</i>)
Tree	as-number
Range	1 to 4294967295
Options	<ul style="list-style-type: none"> • auto
Configurable	True
Platforms	Supported on all platforms

repeat-n *number*

Description	The number of repetitions of the prepended AS number
Context	routing-policy policy name <i>string</i> default-action bgp as-path prepend repeat-n <i>number</i>
Tree	repeat-n
Range	1 to 50
Configurable	True
Platforms	Supported on all platforms

remove *boolean*

Description	Clear the AS path to make it empty.
Context	routing-policy policy name <i>string</i> default-action bgp as-path remove <i>boolean</i>
Tree	remove
Configurable	True
Platforms	Supported on all platforms

replace *number*

Description	Clear the existing AS path and replace it a new AS_SEQUENCE containing the listed AS numbers.
Context	routing-policy policy name <i>string</i> default-action bgp as-path replace <i>number</i>

Tree	replace
Range	1 to 4294967295
Configurable	True
Platforms	Supported on all platforms

communities

Description	Modify BGP communities attached to routes
Context	routing-policy policy name <i>string</i> default-action bgp communities
Tree	communities
Configurable	True
Platforms	Supported on all platforms

add *reference*

Description	Reference to a community-set name All of the non-regex community members in the referenced community-set are added to the COMMUNITIES and LARGE_COMMUNITIES attributes.
Context	routing-policy policy name <i>string</i> default-action bgp communities add reference
Tree	add
Reference	routing-policy community-set name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

remove *reference*

Description	Reference to a community-set name The communities in the route are compared to all of the community members in the referenced community-set, and all matching communities are removed from the COMMUNITIES and LARGE_COMMUNITIES attributes.
Context	routing-policy policy name <i>string</i> default-action bgp communities remove reference
Tree	remove
Reference	routing-policy community-set name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

replace *reference*

Description	Reference to a community-set name All of the existing communities are deleted and then all of the non-regex community members in the referenced community-set are encoded in new COMMUNITIES and LARGE_COMMUNITIES attributes.
Context	routing-policy policy name <i>string</i> default-action bgp communities replace reference
Tree	replace
Reference	routing-policy community-set name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

label-allocation

Description	Actions that determine the method used to assign labels to BGP LU routes matched and accepted by route-table-import policies
Context	routing-policy policy name <i>string</i> default-action bgp label-allocation
Tree	label-allocation
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix-sid

Description	RIB-OUT label is based on prefix SID configuration
Context	routing-policy policy name <i>string</i> default-action bgp label-allocation prefix-sid
Tree	prefix-sid
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reuse-igp *boolean*

Description	When true use the programmed SR-IGP label index for the matching prefix, resulting in a stitch to the IGP segment routing tunnel
Context	routing-policy policy name <i>string</i> default-action bgp label-allocation prefix-sid reuse-igp <i>boolean</i>
Tree	reuse-igp

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

local-preference

Description	Enter the local-preference context
Context	routing-policy policy name <i>string</i> default-action bgp local-preference
Tree	local-preference
Configurable	True
Platforms	Supported on all platforms

set *number*

Description	The new value of LOCAL_PREF to write into the matching BGP routes
Context	routing-policy policy name <i>string</i> default-action bgp local-preference set number
Tree	set
Configurable	True
Platforms	Supported on all platforms

med

Description	Enter the med context
Context	routing-policy policy name <i>string</i> default-action bgp med
Tree	med
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

set (*number* | *keyword*)

Description	The new value of the Multi-Exit Discriminator attribute value to write into the matching BGP routes. The route-table-cost option derives the MED from the route metric.
Context	routing-policy policy name <i>string</i> default-action bgp med set (<i>number</i> <i>keyword</i>)
Tree	set

Options	<ul style="list-style-type: none"> route-table-cost
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

next-hop

Description	Container for BGP next-hop modifications
Context	routing-policy policy name <i>string</i> default-action bgp next-hop
Tree	next-hop
Configurable	True
Platforms	Supported on all platforms

set (*ipv4-address* | *ipv6-address* | *keyword*)

Description	Set the protocol next-hop address of matched BGP routes
Context	routing-policy policy name <i>string</i> default-action bgp next-hop set (<i>ipv4-address</i> <i>ipv6-address</i> <i>keyword</i>)
Tree	set
Options	<ul style="list-style-type: none"> self <p>Special designation for local router's own address, i.e., next-hop-self</p>
Configurable	True

next-hop-resolution

Description	Actions related to next-hop resolution of matched BGP routes
Context	routing-policy policy name <i>string</i> default-action bgp next-hop-resolution
Tree	next-hop-resolution
Configurable	True
Platforms	Supported on all platforms

set-tag-set *reference*

Description	Reference to a tag-set to be used for controlling next-hop resolution
Context	routing-policy policy name <i>string</i> default-action bgp next-hop-resolution set-tag-set <i>reference</i>
Tree	set-tag-set
Reference	routing-policy tag-set name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

origin

Description	Enter the origin context
Context	routing-policy policy name <i>string</i> default-action bgp origin
Tree	origin
Configurable	True
Platforms	Supported on all platforms

set *keyword*

Description	The new value of the ORIGIN attribute to write into the matching BGP routes
Context	routing-policy policy name <i>string</i> default-action bgp origin set <i>keyword</i>
Tree	set
Options	<ul style="list-style-type: none"> • igp • egp • incomplete
Configurable	True
Platforms	Supported on all platforms

internal-tags

Description	Configuration of internal tags
Context	routing-policy policy name <i>string</i> default-action internal-tags
Tree	internal-tags
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

set-tag-set *reference*

Description Reference to a tag-set defined under routing-policy

Context [routing-policy policy name](#) *string* [default-action internal-tags set-tag-set reference](#)

Tree [set-tag-set](#)

Reference [routing-policy tag-set name](#) *string*

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

Max. Elements 1

policy-result *keyword*

Description Select the action type for routes that do not match any policy statement.

Context [routing-policy policy name](#) *string* [default-action policy-result keyword](#)

Tree [policy-result](#)

Options

- accept
The route is accepted, route property modifications are applied, and evaluation stops immediately
- reject
The route is rejected and evaluation stops immediately
- next-policy
Route policy modifications are applied and evaluation continues to the next policy

Configurable True

Platforms Supported on all platforms

route-preference

Description Options for modifying route preference

Context [routing-policy policy name](#) *string* [default-action route-preference](#)

Tree [route-preference](#)

Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

set number

Description	Overwrite the route preference with the specified value The IP route table preference is sometimes called the administrative distance of the route. In general, when comparing any two routes, the route with the lower preference is the one that is activated and used for forwarding. This action has an effect only in BGP import policies and VRF import policies
Context	routing-policy policy name string default-action route-preference set number
Tree	set
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statement name string

Description	Policy statements group conditions and actions within a policy definition. They are evaluated in configuration order.
Context	routing-policy policy name string statement name string
Tree	statement
Configurable	True
Platforms	Supported on all platforms

name string

Description	Name given to the policy statement (rule).
Context	routing-policy policy name string statement name string
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

action

Description	Actions for routes that match the policy statement
Context	routing-policy policy name <i>string</i> statement name <i>string</i> action
Tree	action
Configurable	True
Platforms	Supported on all platforms

bgp

Description	Enter the bgp context
Context	routing-policy policy name <i>string</i> statement name <i>string</i> action bgp
Tree	bgp
Configurable	True
Platforms	Supported on all platforms

as-path

Description	Modify AS Path attribute of routes
Context	routing-policy policy name <i>string</i> statement name <i>string</i> action bgp as-path
Tree	as-path
Configurable	True
Platforms	Supported on all platforms

prepend

Description	Prepend a BGP AS number to the AS Path attribute of routes
Context	routing-policy policy name <i>string</i> statement name <i>string</i> action bgp as-path prepend
Tree	prepend
Configurable	True
Platforms	Supported on all platforms

as-number (*number* | *keyword*)

Description	The AS number to prepend to the AS Path attributes
--------------------	--

If 'auto' is specified then the peer's AS number is used in the context of an import policy and the local AS number is used in the context of an export policy.

Context	routing-policy policy name string statement name string action bgp as-path prepend as-number (number keyword)
Tree	as-number
Range	1 to 4294967295
Options	<ul style="list-style-type: none"> • auto
Configurable	True
Platforms	Supported on all platforms

repeat-n *number*

Description	The number of repetitions of the prepended AS number
Context	routing-policy policy name string statement name string action bgp as-path prepend repeat-n number
Tree	repeat-n
Range	1 to 50
Configurable	True
Platforms	Supported on all platforms

remove *boolean*

Description	Clear the AS path to make it empty.
Context	routing-policy policy name string statement name string action bgp as-path remove boolean
Tree	remove
Configurable	True
Platforms	Supported on all platforms

replace *number*

Description	Clear the existing AS path and replace it a new AS_SEQUENCE containing the listed AS numbers.
Context	routing-policy policy name string statement name string action bgp as-path replace number
Tree	replace

Range	1 to 4294967295
Configurable	True
Platforms	Supported on all platforms

communities

Description	Modify BGP communities attached to routes
Context	routing-policy policy name string statement name string action bgp communities
Tree	communities
Configurable	True
Platforms	Supported on all platforms

add *reference*

Description	Reference to a community-set name All of the non-regex community members in the referenced community-set are added to the COMMUNITIES and LARGE_COMMUNITIES attributes.
Context	routing-policy policy name string statement name string action bgp communities add reference
Tree	add
Reference	routing-policy community-set name string
Configurable	True
Platforms	Supported on all platforms

remove *reference*

Description	Reference to a community-set name The communities in the route are compared to all of the community members in the referenced community-set, and all matching communities are removed from the COMMUNITIES and LARGE_COMMUNITIES attributes.
Context	routing-policy policy name string statement name string action bgp communities remove reference
Tree	remove
Reference	routing-policy community-set name string
Configurable	True
Platforms	Supported on all platforms

replace *reference*

Description	Reference to a community-set name All of the existing communities are deleted and then all of the non-regex community members in the referenced community-set are encoded in new COMMUNITIES and LARGE_COMMUNITIES attributes.
Context	routing-policy policy name string statement name string action bgp communities replace reference
Tree	replace
Reference	routing-policy community-set name string
Configurable	True
Platforms	Supported on all platforms

label-allocation

Description	Actions that determine the method used to assign labels to BGP LU routes matched and accepted by route-table-import policies
Context	routing-policy policy name string statement name string action bgp label-allocation
Tree	label-allocation

11.1 system Descriptions

system

Description	Enclosing container for system management
Context	system
Tree	system
Configurable	True
Platforms	Supported on all platforms

aaa

Description	Top-level container for AAA services
Context	system aaa
Tree	aaa
Configurable	True
Platforms	Supported on all platforms

accounting

Description	Top-level container for accounting
Context	system aaa accounting
Tree	accounting
Configurable	True
Platforms	Supported on all platforms

accounting-method *reference*

Description	Ordered list of server-groups to use for accounting in the system If accounting fails with one method, the next defined method is tried -- failure of all methods results in the accounting request failing.
Context	system aaa accounting accounting-method <i>reference</i>
Tree	accounting-method
Reference	system aaa server-group name <i>string</i>
Configurable	True

Platforms Supported on all platforms

acctz

Description Top-level container for acctz accounting

Context [system aaa accounting acctz](#)

Tree [acctz](#)

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

history-size *number*

Description Size of the kept accounting events history

Context [system aaa accounting acctz history-size *number*](#)

Tree [history-size](#)

Range 1 to 100000

Default 1000

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

event [event-type *identityref*](#)

Description List of events subject to accounting

Context [system aaa accounting event \[event-type *identityref*\]\(#\)](#)

Tree [event](#)

Configurable True

Platforms Supported on all platforms

event-type *identityref*

Description The type of activity to record at the accounting server

Context [system aaa accounting event \[event-type *identityref*\]\(#\)](#)

Options

- `command`

Specifies interactive command events for AAA accounting

Configurable	True
Platforms	Supported on all platforms

record *identityref*

Description	Type of record to send to the accounting server for this activity type
Context	system aaa accounting event event-type identityref record identityref
Tree	record
Options	<ul style="list-style-type: none"> • start-stop Send start and stop records for user activities A start record is sent to the accounting server at the beginning of the activity, and a stop record at the end of the activity • stop Send only stop records for user activities A stop record is sent to the accounting server when the user activity completes
Configurable	True
Platforms	Supported on all platforms

authentication

Description	Top-level container for global authentication data
Context	system aaa authentication
Tree	authentication
Configurable	True
Platforms	Supported on all platforms

admin-user

Description	Enclosing container for admin user
Context	system aaa authentication admin-user
Tree	admin-user
Configurable	True
Platforms	Supported on all platforms

credentialz

Description	Information relating to the active user credentials as provided via Credentialz State is provided by the gNSI Credentialz service, and can be changed using the gNSI.Credentialz.RotateAccountCredentials RPC
Context	system aaa authentication admin-user credentialz
Tree	credentialz
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

authorized-keys

Description	State relating to the Authorized Keys provided via Credentialz
Context	system aaa authentication admin-user credentialz authorized-keys
Tree	authorized-keys
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

created-on *string*

Description	The created on timestamp as provided by the gNSI client at the time of uploading the artifact The maps to the created_on field within a Entity message in the Credentialz protobuf.
Context	system aaa authentication admin-user credentialz authorized-keys created-on string
Tree	created-on
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version string

Description	The version string as provided by the gNSI client at the time of uploading the artifact The maps to the version field within a Entity message in the Credentialz protobuf.
Context	system aaa authentication admin-user credentialz authorized-keys version string
Tree	version
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

authorized-principals

Description	State relating to the Authorized Principals provided via Credentialz
Context	system aaa authentication admin-user credentialz authorized-principals
Tree	authorized-principals
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

created-on string

Description	The created on timestamp as provided by the gNSI client at the time of uploading the artifact The maps to the created_on field within a Entity message in the Credentialz protobuf.
Context	system aaa authentication admin-user credentialz authorized-principals created-on string
Tree	created-on
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version string

Description	The version string as provided by the gNSI client at the time of uploading the artifact The maps to the version field within a Entity message in the Credentialz protobuf.
Context	system aaa authentication admin-user credentialz authorized-principals version string
Tree	version
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

password

Description	State relating to the Password provided via Credentialz.
Context	system aaa authentication admin-user credentialz password
Tree	password
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

created-on string

Description	The created on timestamp as provided by the gNSI client at the time of uploading the artifact The maps to the created_on field within a Entity message in the Credentialz protobuf.
Context	system aaa authentication admin-user credentialz password created-on string
Tree	created-on
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version string

Description	The version string as provided by the gNSI client at the time of uploading the artifact The maps to the version field within a Entity message in the Credentialz protobuf.
Context	system aaa authentication admin-user credentialz password version string
Tree	version
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

failed-login-attempts number

Description	Number of failed login attempts from the user
Context	system aaa authentication admin-user failed-login-attempts number
Tree	failed-login-attempts
Default	0
Configurable	False
Platforms	Supported on all platforms

last-failed-login string

Description	The date and time of the last login failure from this user
Context	system aaa authentication admin-user last-failed-login string
Tree	last-failed-login
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-successful-login string

Description	The date and time of the last successful login from this user
Context	system aaa authentication admin-user last-successful-login string
Tree	last-successful-login
String Length	20 to 32

Configurable	False
Platforms	Supported on all platforms

lockout

Description	Information relating to the lockout state of this user
Context	system aaa authentication admin-user lockout
Tree	lockout
Configurable	False
Platforms	Supported on all platforms

active *boolean*

Description	Indicates if a lockout is active for the user Lockouts can occur after successive failed logins, and can be cleared by 'tools system aaa authentication user <username> unlock'
Context	system aaa authentication admin-user lockout active <i>boolean</i>
Tree	active
Configurable	False
Platforms	Supported on all platforms

end *string*

Description	Indicates the time at which the most recent lockout for this user ended or will end
Context	system aaa authentication admin-user lockout end <i>string</i>
Tree	end
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

start *string*

Description	Indicates the time at which the most recent lockout for this user started
Context	system aaa authentication admin-user lockout start <i>string</i>
Tree	start

String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

password *string*

Description	The admin password, supplied either as cleartext or as a hashed value If provided as cleartext, the system will hash the value on input, storing only the hashed value. If provided as a hashed value, the value should include any '\$' characters, for example '\$ar2\$aOvsuj0ALIU=\$r750fMa3ZEA/Di8dIfU2fQ=='
Context	system aaa authentication admin-user password string
Tree	password
Default	\$y\$j9T\$pNVjOgcNNGIWjBcdDfK/7.\$lr4uYxsztqzVj5AGiZvdWJGs.bpLWBjvHON3YgqnC2
Configurable	True
Platforms	Supported on all platforms

password-change-required *boolean*

Description	Indicates if the user must change their password on next login
Context	system aaa authentication admin-user password-change-required boolean
Tree	password-change-required
Configurable	False
Platforms	Supported on all platforms

role *reference*

Description	List of roles to assign to this user The most specific rule for a particular role takes precedence. Rules from all user roles are evaluated together, most permissive privilege taking precedence.
Context	system aaa authentication admin-user role reference
Tree	role
Reference	system aaa authorization role rolename string
Configurable	True

Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	32

spiffe-ids *string*

Description	The SPIFFE ID list for the user, including the spiffe:// URI This list of IDs is evaluated by TLS-consuming servers (e.g. gNMI, JSON-RPC) that use a TLS server-profile with authenticate-client set to true. If a match is found in any incoming offered client certificates, the provider of the certificate is associated with this local user, and given resulting permissions.
Context	system aaa authentication admin-user spiffe-ids <i>string</i>
Tree	spiffe-ids
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ssh-key *string*

Description	SSH public key(s) for the user If defined, the user may login to the system over SSH with this key. This should use the SSH public authorized key format.
Context	system aaa authentication admin-user ssh-key <i>string</i>
Tree	ssh-key
Configurable	True
Platforms	Supported on all platforms
Max. Elements	32

ssh-principals *string*

Description	List of principals to associate with this user If any of the principals in the list are matched in a SSH client's certificate, and that clients username matches this user, and the certificate is verified, the client will authenticate.
Context	system aaa authentication admin-user ssh-principals <i>string</i>

Tree	ssh-principals
Configurable	True
Platforms	Supported on all platforms
Max. Elements	32

superuser *boolean*

Description	Indicates if the admin user is a superuser A superuser is granted implicit authorization to all YANG paths, has the ability to execute all CLI plugins, and by default is permitted to access the device through any interface. Additionally, users with the superuser attribute are able to execute 'sudo' in bash. A user may also be assigned a role or list of roles, but these are only evaluated for service authorization.
Context	system aaa authentication admin-user superuser <i>boolean</i>
Tree	superuser
Default	true
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

username *string*

Description	Assigned username for admin user
Context	system aaa authentication admin-user username <i>string</i>
Tree	username
Default	admin
Configurable	False
Platforms	Supported on all platforms

authentication-method *reference*

Description	Ordered list of server-groups to be used during user authentication If authentication fails with one method, the next defined method is tried -- failure of all methods results in the user being denied access.
Context	system aaa authentication authentication-method <i>reference</i>
Tree	authentication-method

Reference	system aaa server-group name string
Configurable	True
Platforms	Supported on all platforms

dynamic-spiffe

Description	Dynamic SPIFFE settings
Context	system aaa authentication dynamic-spiffe
Tree	dynamic-spiffe
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

allow *boolean*

Description	Accept clients with SPIFFE ID values that are not configured under any local user With this behaviour enabled, when a client using a client certificate containing SPIFFE ID connects the system will accept the client. Otherwise the SPIFFE ID must be configured under some local user. Even if enabled, any client using local user's configured SPIFFE ID will use that user's identity in all operations
Context	system aaa authentication dynamic-spiffe allow boolean
Tree	allow
Default	false
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

role *reference*

Description	List of roles to assign to all dynamic SPIFFE clients Dynamic SPIFFE clients are clients authenticated using a client certificate containing SPIFFE ID value that is not configured under any local user. The most specific rule for a particular role takes precedence. Rules from all user roles are evaluated together, most permissive privilege taking precedence.
Context	system aaa authentication dynamic-spiffe role reference

Tree	role
Reference	system aaa authorization role rolename <i>string</i>
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	32

exit-on-reject *boolean*

Description	Enable/disable exit-on-reject behaviour for authentication attempts With this behaviour enabled, when a reject is received from any server the system will not try further methods, and will reject the user authentication attempt. Default behaviour is to continue trying methods until one accepts the user, or the system runs out of methods to try.
Context	system aaa authentication exit-on-reject <i>boolean</i>
Tree	exit-on-reject
Default	false
Configurable	True
Platforms	Supported on all platforms

idle-timeout *number*

Description	Set the idle timeout of all CLI sessions After the timeout is reached, the session is disconnected from the system.
Context	system aaa authentication idle-timeout <i>number</i>
Tree	idle-timeout
Default	600
Units	seconds
Configurable	True
Platforms	Supported on all platforms

linuxadmin-user

Description	Enclosing container for linuxadmin user
Context	system aaa authentication linuxadmin-user
Tree	linuxadmin-user

Configurable	True
Platforms	Supported on all platforms

credentialz

Description	Information relating to the active user credentials as provided via Credentialz State is provided by the gNSI Credentialz service, and can be changed using the gNSI.Credentialz.RotateAccountCredentials RPC
Context	system aaa authentication linuxadmin-user credentialz
Tree	credentialz
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

authorized-keys

Description	State relating to the Authorized Keys provided via Credentialz
Context	system aaa authentication linuxadmin-user credentialz authorized-keys
Tree	authorized-keys
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

created-on *string*

Description	The created on timestamp as provided by the gNSI client at the time of uploading the artifact The maps to the created_on field within a Entity message in the Credentialz protobuf.
Context	system aaa authentication linuxadmin-user credentialz authorized-keys created-on string
Tree	created-on
String Length	20 to 32
Configurable	False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version string

Description The version string as provided by the gNSI client at the time of uploading the artifact
The maps to the version field within a Entity message in the Credentialz protobuf.

Context [system aaa authentication linuxadmin-user credentialz authorized-keys version string](#)

Tree [version](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

authorized-principals

Description State relating to the Authorized Principals provided via Credentialz

Context [system aaa authentication linuxadmin-user credentialz authorized-principals](#)

Tree [authorized-principals](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

created-on string

Description The created on timestamp as provided by the gNSI client at the time of uploading the artifact
The maps to the created_on field within a Entity message in the Credentialz protobuf.

Context [system aaa authentication linuxadmin-user credentialz authorized-principals created-on string](#)

Tree [created-on](#)

String Length 20 to 32

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version string

Description The version string as provided by the gNSI client at the time of uploading the artifact

The maps to the version field within a Entity message in the Credentialz protobuf.

Context [system aaa authentication linuxadmin-user credentialz authorized-principals version string](#)

Tree [version](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

password

Description State relating to the Password provided via Credentialz.

Context [system aaa authentication linuxadmin-user credentialz password](#)

Tree [password](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

created-on string

Description The created on timestamp as provided by the gNSI client at the time of uploading the artifact

The maps to the created_on field within a Entity message in the Credentialz protobuf.

Context [system aaa authentication linuxadmin-user credentialz password created-on string](#)

Tree [created-on](#)

String Length 20 to 32

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version string

Description The version string as provided by the gNSI client at the time of uploading the artifact

The maps to the version field within a Entity message in the Credentialz protobuf.

Context [system aaa authentication linuxadmin-user credentialz password version string](#)

Tree [version](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

password string

Description The linuxadmin password, supplied either as cleartext or as a hashed value
If provided as cleartext, the system will hash the value on input, storing only the hashed value. If provided as a hashed value, the value should include any '\$' characters, for example '\$6\$c66a15569d3f5952\$kA2Wpt9iqR5uMbaCUBNxsjKyXROQFdJtV1HX0CFY9wk7F326/yB3h.dERX9cH7YpeJ1N872hjzTb2tlaZFwwg0'.

Configurable True

Platforms Supported on all platforms

ssh-key string

Description SSH public key(s) for the user

If defined, the user may login to the system over SSH with this key. This should use the SSH public authorized key format.

Context [system aaa authentication linuxadmin-user ssh-key string](#)

Tree	ssh-key
Configurable	True
Platforms	Supported on all platforms
Max. Elements	32

ssh-principals *string*

Description	List of principals to associate with this user If any of the principals in the list are matched in a SSH client's certificate, and that client's username matches this user, and the certificate is verified, the client will authenticate.
Context	system aaa authentication linuxadmin-user ssh-principals <i>string</i>
Tree	ssh-principals
Configurable	True
Platforms	Supported on all platforms
Max. Elements	32

username *string*

Description	Assigned username for linuxadmin user
Context	system aaa authentication linuxadmin-user username <i>string</i>
Tree	username
Default	linuxadmin
Configurable	False
Platforms	Supported on all platforms

password

Description	Top-level container for policies around user passwords
Context	system aaa authentication password
Tree	password
Configurable	True
Platforms	Supported on all platforms

aging *number*

Description	Expire user passwords after this period A value of 0 means that the user passwords do not expire
Context	system aaa authentication password aging number
Tree	aging
Range	0 to 500
Default	0
Units	days
Configurable	True
Platforms	Supported on all platforms

change-on-first-login *boolean*

Description	Enable or disable a user being forced to change their password on first time login
Context	system aaa authentication password change-on-first-login boolean
Tree	change-on-first-login
Default	false
Configurable	True
Platforms	Supported on all platforms

complexity-rules

Description	Top-level container for password complexity rules
Context	system aaa authentication password complexity-rules
Tree	complexity-rules
Configurable	True
Platforms	Supported on all platforms

allow-username *boolean*

Description	Enable or disable using username as part of the user password
Context	system aaa authentication password complexity-rules allow-username boolean
Tree	allow-username

Default	true
Configurable	True
Platforms	Supported on all platforms

maximum-length *number*

Description	The maximum length of the password for local users, including admin and linuxadmin
Context	system aaa authentication password complexity-rules maximum-length number
Tree	maximum-length
Range	1 to 1023
Default	1023
Configurable	True
Platforms	Supported on all platforms

minimum-length *number*

Description	The minimum length of the password for local users, including admin and linuxadmin
Context	system aaa authentication password complexity-rules minimum-length number
Tree	minimum-length
Range	1 to 12
Default	1
Configurable	True
Platforms	Supported on all platforms

minimum-lowercase *number*

Description	The minimum lowercase characters from (a-z) that the user password must include A value of 0 results in no minimum-lowercase being enforced.
Context	system aaa authentication password complexity-rules minimum-lowercase number
Tree	minimum-lowercase
Range	0 to 10

Default	0
Configurable	True
Platforms	Supported on all platforms

minimum-numeric *number*

Description	The minimum numeric digits that the user password must include A value of 0 results in no minimum-numeric being enforced.
Context	system aaa authentication password complexity-rules minimum-numeric number
Tree	minimum-numeric
Range	0 to 10
Default	0
Configurable	True
Platforms	Supported on all platforms

minimum-special-character *number*

Description	The minimum special characters that the user password must include A value of 0 results in no minimum-special-character being enforced.
Context	system aaa authentication password complexity-rules minimum-special-character number
Tree	minimum-special-character
Range	0 to 10
Default	0
Configurable	True
Platforms	Supported on all platforms

minimum-uppercase *number*

Description	The minimum uppercase characters from (A-Z) that the user password must include A value of 0 results in no minimum-uppercase being enforced.
Context	system aaa authentication password complexity-rules minimum-uppercase number
Tree	minimum-uppercase

Range	0 to 10
Default	0
Configurable	True
Platforms	Supported on all platforms

hash-method *keyword*

Description	The hash algorithm for the passwords entered as plain text If no value is configured, then Yescrypt will be used as the hash algorithm unless overridden for specific leafs using the srl_nokia-extensions:hash-algorithm yang extension. The Argon2 (ar2) hash algorithm is not supported for the linuxadmin user and if selected then the linuxadmin password will be hashed using Yescrypt.
Context	system aaa authentication password hash-method keyword
Tree	hash-method
Options	<ul style="list-style-type: none"> • ar2 The Argon2 password hashing algorithm • sha2 The SHA512 password hashing algorithm • yescrypt The Yescrypt password hashing algorithm
Configurable	True
Platforms	Supported on all platforms

history *number*

Description	Defines how many previous passwords a new password is matched against, such that a new password can't be one of the previous n passwords
Context	system aaa authentication password history number
Tree	history
Range	0 to 20
Default	0
Configurable	True
Platforms	Supported on all platforms

lockout-policy

Description	Top-level container for lockout policy
Context	system aaa authentication password lockout-policy
Tree	lockout-policy
Configurable	True
Platforms	Supported on all platforms

attempts *number*

Description	The number of failed login attempts that will lock the account A value of 0 means unlimited number of failed login attempts is allowed
Context	system aaa authentication password lockout-policy attempts <i>number</i>
Tree	attempts
Range	0 to 64
Default	0
Configurable	True
Platforms	Supported on all platforms

lockout *number*

Description	The time duration in minutes the user account will be locked out A value of 0 means that the user account will be locked out/disabled indefinitely
Context	system aaa authentication password lockout-policy lockout <i>number</i>
Tree	lockout
Range	0 to 1440
Default	15
Units	minutes
Configurable	True
Platforms	Supported on all platforms

time *number*

Description	The time period in minutes within which the failed login attempts occur
Context	system aaa authentication password lockout-policy time <i>number</i>

Tree	time
Range	0 to 1440
Default	1
Units	minutes
Configurable	True
Platforms	Supported on all platforms

require-ntp-sync *boolean*

Description	Enable or disable dependence of password aging and user lockout on NTP sync status
Context	system aaa authentication password require-ntp-sync <i>boolean</i>
Tree	require-ntp-sync
Default	true
Configurable	True
Platforms	Supported on all platforms

session id *number*

Description	List of active sessions in the system
Context	system aaa authentication session id <i>number</i>
Tree	session
Configurable	False
Platforms	Supported on all platforms

id *number*

Description	System generated session ID
Context	system aaa authentication session id <i>number</i>
Configurable	False
Platforms	Supported on all platforms

authentication-method *string*

Description	Authentication method that authorized the user (the server-group name or local)
--------------------	---

Context	system aaa authentication session id number authentication-method string
Tree	authentication-method
Configurable	False
Platforms	Supported on all platforms

login-time string

Description	Time the user logged in
Context	system aaa authentication session id number login-time string
Tree	login-time
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

network-instance string

Description	Network instance
Context	system aaa authentication session id number network-instance string
Tree	network-instance
Configurable	False
Platforms	Supported on all platforms

priv-lvl number

Description	TACACS+ authorization priv-lvl (if TACACS+ authorization is enabled)
Context	system aaa authentication session id number priv-lvl number
Tree	priv-lvl
Configurable	False
Platforms	Supported on all platforms

remote-host string

Description	Remote host of the session
Context	system aaa authentication session id number remote-host string
Tree	remote-host
Configurable	False

Platforms Supported on all platforms

role *string*

Description List of roles assigned to this user

Context [system aaa authentication session id number role string](#)

Tree [role](#)

Configurable False

Platforms Supported on all platforms

service-name *string*

Description Service name that called login for the session

Context [system aaa authentication session id number service-name string](#)

Tree [service-name](#)

Configurable False

Platforms Supported on all platforms

spiffe-id *string*

Description SPIFFE ID linked to the session

Context [system aaa authentication session id number spiffe-id string](#)

Tree [spiffe-id](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

tty-name *string*

Description Terminal type

Context [system aaa authentication session id number tty-name string](#)

Tree [tty-name](#)

Configurable False

Platforms Supported on all platforms

username *string*

Description	Username linked to the session
Context	system aaa authentication session id <i>number</i> username <i>string</i>
Tree	username
Configurable	False
Platforms	Supported on all platforms

user [username](#) *string*

Description	List of local users configured on the system
Context	system aaa authentication user username <i>string</i>
Tree	user
Configurable	True
Platforms	Supported on all platforms
Max. Elements	128

username *string*

Description	Assigned username for this user
Context	system aaa authentication user username <i>string</i>
String Length	1 to 32
Configurable	True
Platforms	Supported on all platforms

credentialz

Description	Information relating to the active user credentials as provided via Credentialz State is provided by the gNSI Credentialz service, and can be changed using the gNSI.Credentialz.RotateAccountCredentials RPC
Context	system aaa authentication user username <i>string</i> credentialz
Tree	credentialz
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

authorized-keys

Description	State relating to the Authorized Keys provided via Credentialz
Context	system aaa authentication user username string credentialz authorized-keys
Tree	authorized-keys
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

created-on *string*

Description	The created on timestamp as provided by the gNSI client at the time of uploading the artifact The maps to the created_on field within a Entity message in the Credentialz protobuf.
Context	system aaa authentication user username string credentialz authorized-keys created-on string
Tree	created-on
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version *string*

Description	The version string as provided by the gNSI client at the time of uploading the artifact The maps to the version field within a Entity message in the Credentialz protobuf.
Context	system aaa authentication user username string credentialz authorized-keys version string
Tree	version
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

authorized-principals

Description	State relating to the Authorized Principals provided via Credentialz
Context	system aaa authentication user username string credentialz authorized-principals
Tree	authorized-principals
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

created-on *string*

Description	The created on timestamp as provided by the gNSI client at the time of uploading the artifact The maps to the created_on field within a Entity message in the Credentialz protobuf.
Context	system aaa authentication user username string credentialz authorized-principals created-on string
Tree	created-on
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version *string*

Description	The version string as provided by the gNSI client at the time of uploading the artifact The maps to the version field within a Entity message in the Credentialz protobuf.
Context	system aaa authentication user username string credentialz authorized-principals version string
Tree	version
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

password

Description	State relating to the Password provided via Credentialz.
Context	system aaa authentication user username string credentialz password
Tree	password
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

created-on string

Description	The created on timestamp as provided by the gNSI client at the time of uploading the artifact The maps to the created_on field within a Entity message in the Credentialz protobuf.
Context	system aaa authentication user username string credentialz password created-on string
Tree	created-on
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version string

Description	The version string as provided by the gNSI client at the time of uploading the artifact The maps to the version field within a Entity message in the Credentialz protobuf.
Context	system aaa authentication user username string credentialz password version string
Tree	version
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

failed-login-attempts *number*

Description	Number of failed login attempts from the user
Context	system aaa authentication user username <i>string</i> failed-login-attempts <i>number</i>
Tree	failed-login-attempts
Default	0
Configurable	False
Platforms	Supported on all platforms

last-failed-login *string*

Description	The date and time of the last login failure from this user
Context	system aaa authentication user username <i>string</i> last-failed-login <i>string</i>
Tree	last-failed-login
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-successful-login *string*

Description	The date and time of the last successful login from this user
Context	system aaa authentication user username <i>string</i> last-successful-login <i>string</i>
Tree	last-successful-login
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

lockout

Description	Information relating to the lockout state of this user
Context	system aaa authentication user username <i>string</i> lockout
Tree	lockout
Configurable	False
Platforms	Supported on all platforms

active *boolean*

Description	Indicates if a lockout is active for the user Lockouts can occur after successive failed logins, and can be cleared by 'tools system aaa authentication user <username> unlock'
Context	system aaa authentication user username <i>string</i> lockout active <i>boolean</i>
Tree	active
Configurable	False
Platforms	Supported on all platforms

end *string*

Description	Indicates the time at which the most recent lockout for this user ended or will end
Context	system aaa authentication user username <i>string</i> lockout end <i>string</i>
Tree	end
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

start *string*

Description	Indicates the time at which the most recent lockout for this user started
Context	system aaa authentication user username <i>string</i> lockout start <i>string</i>
Tree	start
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

password *string*

Description	The user password, supplied either as cleartext or as a hashed value If provided as cleartext, the system will hash the value on input, storing only the hashed value. If provided as a hashed value, the value should include any '\$' characters, for example '\$ar2\$aOvsuj0ALIU=\$r750fMa3ZEA/Di8dIfU2fQ=='
Context	system aaa authentication user username <i>string</i> password <i>string</i>

Tree	password
Configurable	True
Platforms	Supported on all platforms

password-change-required *boolean*

Description	Indicates if the user must change their password on next login
Context	system aaa authentication user username <i>string</i> password-change-required <i>boolean</i>
Tree	password-change-required
Configurable	False
Platforms	Supported on all platforms

role *reference*

Description	List of roles to assign to this user The most specific rule for a particular role takes precedence. Rules from all user roles are evaluated together, most permissive privilege taking precedence.
Context	system aaa authentication user username <i>string</i> role <i>reference</i>
Tree	role
Reference	system aaa authorization role rolename <i>string</i>
Configurable	True
Platforms	Supported on all platforms
Max. Elements	32

spiffe-ids *string*

Description	The SPIFFE ID list for the user, including the spiffe:// URI This list of IDs is evaluated by TLS-consuming servers (e.g. gNMI, JSON-RPC) that use a TLS server-profile with authenticate-client set to true. If a match is found in any incoming offered client certificates, the provider of the certificate is associated with this local user, and given resulting permissions.
Context	system aaa authentication user username <i>string</i> spiffe-ids <i>string</i>
Tree	spiffe-ids
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ssh-key *string*

Description SSH public key(s) for the user
If defined, the user may login to the system over SSH with this key. This should use the SSH public authorized key format.

Context [system aaa authentication user username string ssh-key string](#)

Tree [ssh-key](#)

Configurable True

Platforms Supported on all platforms

Max. Elements 32

ssh-principals *string*

Description List of principals to associate with this user
If any of the principals in the list are matched in a SSH client's certificate, and that client's username matches this user, and the certificate is verified, the client will authenticate.

Context [system aaa authentication user username string ssh-principals string](#)

Tree [ssh-principals](#)

Configurable True

Platforms Supported on all platforms

Max. Elements 32

superuser *boolean*

Description Indicates that this user is a superuser
A superuser is granted implicit authorization to all YANG paths, has the ability to execute all CLI plugins, and by default is permitted to access the device through any interface.
Additionally, users with the superuser attribute are able to execute 'sudo' in bash. A user may also be assigned a role or list of roles, but these are only evaluated for service authorization.

Context [system aaa authentication user username string superuser boolean](#)

Tree [superuser](#)

Default	false
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

authorization

Description	Top-level container for authorization configuration and operational state data
Context	system aaa authorization
Tree	authorization
Configurable	True
Platforms	Supported on all platforms

authz-policy

Description	Information relating to the active gRPC authorization policy This policy is provided by the gNSI gRPC service, and can be changed using the gNSI.Authz.Rotate RPC
Context	system aaa authorization authz-policy
Tree	authz-policy
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

counters

Description	A collection of counters collected by the gNSI.authz module.
Context	system aaa authorization authz-policy counters
Tree	counters
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rpc name string

Description	A collection of counters collected by the gNSI.authz module for a RPC identified by the `name`.
Context	system aaa authorization authz-policy counters rpc name string
Tree	rpc
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name string

Description	The name of the RPC the counters were collected for.
Context	system aaa authorization authz-policy counters rpc name string
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

access-accepts number

Description	The total number of times the gNSI.authz module allowed access to a RPC.
Context	system aaa authorization authz-policy counters rpc name string access-accepts number
Tree	access-accepts
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

access-rejects number

Description	The total number of times the gNSI.authz module denied access to a RPC.
Context	system aaa authorization authz-policy counters rpc name string access-rejects number
Tree	access-rejects
Configurable	False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-access-accept *string*

Description A timestamp of the last time the gNSI.authz allowed access to a RPC.

Context [system aaa authorization authz-policy counters rpc name string last-access-accept string](#)

Tree [last-access-accept](#)

String Length 20 to 32

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-access-reject *string*

Description A timestamp of the last time the gNSI.authz denied access to a RPC.

Context [system aaa authorization authz-policy counters rpc name string last-access-reject string](#)

Tree [last-access-reject](#)

String Length 20 to 32

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

created-on *string*

Description The created on timestamp as provided by the gNSI client at the time of uploading the policy
This maps to the created_on field within a UploadRequest message in the Authz protobuf.

Context [system aaa authorization authz-policy created-on string](#)

Tree [created-on](#)

String Length 20 to 32

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy string

Description The policy definition
 This JSON string contains the full gRPC authorization rules conforming to the gRPC authorization policy schema:
 This maps to the policy field within a UploadRequest message in the Authz protobuf.

Context [system aaa authorization authz-policy policy string](#)

Tree [policy](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version string

Description The version string as provided by the gNSI client at the time of uploading the policy
 The maps to the version field within a UploadRequest message in the Authz protobuf.

Context [system aaa authorization authz-policy version string](#)

Tree [version](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

role rolename string

Description List of local roles configured on the system

Context [system aaa authorization role rolename string](#)

Tree [role](#)

Configurable True

Platforms Supported on all platforms

rolename *string*

Description	Assigned rolename for this role
Context	system aaa authorization role rolename string
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

cli

Description	Top-level container for cli plugin configuration
Context	system aaa authorization role rolename string cli
Tree	cli
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

allow-command-list *string*

Description	List of cli commands that are allowed for this role Python style regular expressions are supported. Every item is left anchored (it matches from the beginning of line). Empty allow-command-list means anything that is not in deny-command-list is allowed. If both lists are empty then everything is allowed.
Context	system aaa authorization role rolename string cli allow-command-list string
Tree	allow-command-list
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	100

deny-command-list *string*

Description	List of cli commands that are denied for this role Python style regular expressions are supported. Every item is left anchored (it matches from the beginning of line). Empty deny-command-list means
--------------------	--

anything that is not in allow-command-list is denied. If both lists are empty then everything is allowed.

Context	system aaa authorization role rolename <i>string</i> cli deny-command-list <i>string</i>
Tree	deny-command-list
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b
Max. Elements	100

load-global-plugins *boolean*

Description	Specifies whether cli should load plugins from global plugin directory (from /etc/opt/srlinux/cli/plugins/).
Context	system aaa authorization role rolename <i>string</i> cli load-global-plugins <i>boolean</i>
Tree	load-global-plugins
Default	true
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

load-user-plugins *boolean*

Description	Specifies whether cli should load plugins from user home directory (from ~/cli/plugins/).
Context	system aaa authorization role rolename <i>string</i> cli load-user-plugins <i>boolean</i>
Tree	load-user-plugins
Default	true
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

netconf

Description	Top-level container for netconf plugin configuration
Context	system aaa authorization role rolename <i>string</i> netconf

Tree	netconf
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

allowed-operations *keyword*

Description	List of netconf operation, that are allowed for this role. Rest of the operations are denied.
Context	system aaa authorization role rolename <i>string</i> netconf allowed-operations <i>keyword</i>
Tree	allowed-operations
Options	<ul style="list-style-type: none"> • action • cancel-commit • close-session • commit • copy-config • delete-config • discard-changes • edit-config • edit-data • get • get-config • get-data • get-schema • kill-session • lock • unlock • validate
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

services *keyword*

Description	Services that members of this role are authorized for
--------------------	---

Services are additive, if a user is a member of multiple roles, the available services are merged.

Context	<code>system aaa authorization role rolename string services keyword</code>
Tree	<code>services</code>
Options	<ul style="list-style-type: none"> • cli • gnmi • gnoi • gnsi • gribi • netconf • p4rt • json-rpc • ftp • grpc-reflection
Configurable	True
Platforms	Supported on all platforms

superuser *boolean*

Description	<p>Indicates if users with this role are given superuser</p> <p>A superuser is granted implicit authorization to all YANG paths, has the ability to execute all CLI plugins, and by default is permitted to access the device through any interface.</p> <p>Additionally, users with the superuser attribute are able to execute 'sudo' in bash. A user may also be assigned a role or list of roles, but these are only evaluated for service authorization.</p>
Context	<code>system aaa authorization role rolename string superuser boolean</code>
Tree	<code>superuser</code>
Default	false
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

tacacs

Description	Top-level container for configuration relating to TACACS+ interworking with roles
--------------------	---

Context	system aaa authorization role rolename string tacacs
Tree	tacacs
Configurable	True
Platforms	Supported on all platforms

priv-lvl *number*

Description	The TACACS+ priv-lvl to map to this role All roles matching each specific priv-lvl, and their lessers are merged together to create the final ruleset applied to the user.
Context	system aaa authorization role rolename string tacacs priv-lvl number
Tree	priv-lvl
Range	0 to 15
Configurable	True
Platforms	Supported on all platforms

server-group *name string*

Description	List of AAA server-groups in the system Each server group specifies a type, of which all servers must use. If using the 'local' type, then no servers may be specified.
Context	system aaa server-group name string
Tree	server-group
Configurable	True
Platforms	Supported on all platforms
Max. Elements	3

name *string*

Description	User defined name for the server group
Context	system aaa server-group name string
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

priv-lvl-authorization *boolean*

Description	Use TACACS+ priv-lvl based authorization If false, then authorization is skipped for TACACS+ users granting full admin access for those users.
Context	system aaa server-group name <i>string</i> priv-lvl-authorization <i>boolean</i>
Tree	priv-lvl-authorization
Default	false
Configurable	True
Platforms	Supported on all platforms

server [address](#) (*ipv4-address* | *ipv6-address*)

Description	List of AAA servers to use within this server-group Servers are tried in a round-robin fashion, with the first server always being tried if it is operationally available
Context	system aaa server-group name <i>string</i> server address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	server
Configurable	True
Platforms	Supported on all platforms
Max. Elements	5

address (*ipv4-address* | *ipv6-address*)

Description	Address used to reach the server
Context	system aaa server-group name <i>string</i> server address (<i>ipv4-address</i> <i>ipv6-address</i>)
Configurable	True
Platforms	Supported on all platforms

name *string*

Description	User defined name assigned to the server
Context	system aaa server-group name <i>string</i> server address (<i>ipv4-address</i> <i>ipv6-address</i>) name <i>string</i>
Tree	name

String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

network-instance *reference*

Description	Reference to a configured network-instance used for reachability to the server This network-instance must already exist in the system, and different servers within the same server-group may use difference network-instances for connectivity.
Context	system aaa server-group name string server address (ipv4-address ipv6-address) network-instance reference
Tree	network-instance
Reference	network-instance name string
Configurable	True
Platforms	Supported on all platforms

oper-state *keyword*

Description	Details the operational state of the server A server is defined as being down if it fails to respond before the timeout period, or if a path towards the server is not available.
Context	system aaa server-group name string server address (ipv4-address ipv6-address) oper-state keyword
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting

- Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable

False

Platforms

Supported on all platforms

radius**Description**

Top-level container for RADIUS server data

Tree [type](#)

Options

- tacacs
 - Specifies servers using the TACACS+ protocol
 - Terminal Access Controller Access Control System (TACACS+)
- radius
 - Specifies servers using RADIUS protocol
 - Remote Authentication Dial In User Service (RADIUS) AAA server
- local
 - Specifies using Linux local methods
 - This type cannot be combined with a server address

Configurable True

Platforms Supported on all platforms

app-management

Description Top-level container for application configuration and state

Context [system app-management](#)

Tree	app-management
Configurable	False
Platforms	Supported on all platforms

application name *string*

Description	List of all applications managed by the application manager
Context	system app-management application name <i>string</i>
Tree	application
Configurable	False
Platforms	Supported on all platforms

name *string*

Description	Unique name of this application instance
Context	system app-management application name <i>string</i>
Configurable	False
Platforms	Supported on all platforms

author *string*

Description	The author of the application
Context	system app-management application name <i>string</i> author <i>string</i>
Tree	author
Configurable	False
Platforms	Supported on all platforms

cgroup *string*

Description	Cgroup in with this application is started
Context	system app-management application name <i>string</i> cgroup <i>string</i>
Tree	cgroup
Configurable	False
Platforms	Supported on all platforms

failure-action *string*

Description	The action taken after 'failure-threshold' failures within 'failure-window' This action can be to reboot the system, wait forever, or wait for a predefined number of seconds
Context	system app-management application name <i>string</i> failure-action <i>string</i>
Tree	failure-action
Configurable	False
Platforms	Supported on all platforms

failure-threshold *number*

Description	How many restarts within 'failure-window' are required to trigger the failure action Setting this value to 0 will result in no action taking place on application restarts
Context	system app-management application name <i>string</i> failure-threshold <i>number</i>
Tree	failure-threshold
Range	0 to 255
Configurable	False
Platforms	Supported on all platforms

failure-window *number*

Description	Sliding window in seconds, over which to count restarts towards failure-threshold
Context	system app-management application name <i>string</i> failure-window <i>number</i>
Tree	failure-window
Range	300 to 86400
Units	seconds
Configurable	False
Platforms	Supported on all platforms

last-change *string*

Description	Date and time the application instance last changed state
Context	system app-management application name <i>string</i> last-change <i>string</i>

Tree	last-change
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-start-type *keyword*

Description	Indicates the type of the most recent start or restart of this application instance
Context	system app-management application name <i>string</i> last-start-type <i>keyword</i>
Tree	last-start-type
Options	<ul style="list-style-type: none"> • warm A warm start indicates that the application will leave state in IDB during a restart, and recover it post restart This type results in less disruption to surrounding applications and functionality. • cold A cold start indicates that the application will not leave state in IDB during a restart This type is equivalent to a normal application restart, i.e. one where the application's state is purged from the system during the restart, and recreated after.
Configurable	False
Platforms	Supported on all platforms

launch-command *string*

Description	The command used to launch the application
Context	system app-management application name <i>string</i> launch-command <i>string</i>
Tree	launch-command
Configurable	False
Platforms	Supported on all platforms

oom-score-adj *number*

Description	OOM score adj value set for this application
Context	system app-management application name <i>string</i> oom-score-adj <i>number</i>

Tree	oom-score-adj
Configurable	False
Platforms	Supported on all platforms

path *string*

Description	The directory where the application can be found
Context	system app-management application name <i>string path string</i>
Tree	path
Configurable	False
Platforms	Supported on all platforms

pid *number*

Description	Process ID of this application instance
Context	system app-management application name <i>string pid number</i>
Tree	pid
Configurable	False
Platforms	Supported on all platforms

restricted-operations *keyword*

Description	The operations that may not be manually performed on this application
Context	system app-management application name <i>string restricted-operations keyword</i>
Tree	restricted-operations
Options	<ul style="list-style-type: none"> • restart This application may not be restarted manually • stop This application may not be stopped manually • start This application may not be started manually • reload This application may not be reloaded manually • quit This application may not be terminated manually

- kill
This application may not be terminated ungracefully manually

Configurable

False

Platforms

Supported on all platforms

search-command *string***Description**

The command used to search for the applications liveness

Context[system app-management application name](#) *string* [search-command](#) *string***Tree**[search-command](#)**Configurable**

False

Platforms

Supported on all platforms

state *keyword***Description**

Current state of this application instance

Context[system app-management application name](#) *string* [state](#) *keyword***Tree**[state](#)**Options**

- running
Application instance is running
This is the normal, active state of an application
- waiting-for-config
Application instance is loaded, but has no configuration
This state requires wait-for-config true within the applications YAML configuration. This results in the application being loaded into app-mgr, but not starting until the system receives configuration for it
- error
The application has not started successfully, or has failed
This state can be caused by an application hitting the restart backoff, or an application failing to start following triggering a system reboot
- starting
The application has been asked to start
All applications enter this state after initial execution, after which application manager will wait five seconds before checking their status. IDB connected applications may announce their state before this five second window has passed, resulting in them transitioning from this state faster than PID-monitored applications.
- stopped

The application is not running
This state is most likely caused by an operator action

Configurable	False
Platforms	Supported on all platforms

statistics

Description	Top-level container for application statistics
Context	system app-management application name <i>string</i> statistics
Tree	statistics
Configurable	False
Platforms	Supported on all platforms

restart-count *number*

Description	The number of times this application instance has restarted
Context	system app-management application name <i>string</i> statistics restart-count <i>number</i>
Tree	restart-count
Default	0
Configurable	False
Platforms	Supported on all platforms

supported-restart-types *keyword*

Description	Indicates the supported restart types for this application
Context	system app-management application name <i>string</i> supported-restart-types <i>keyword</i>
Tree	supported-restart-types
Options	<ul style="list-style-type: none"> warm <p>A warm start indicates that the application will leave state in IDB during a restart, and recover it post restart</p> <p>This type results in less disruption to surrounding applications and functionality.</p> cold <p>A cold start indicates that the application will not leave state in IDB during a restart</p>

This type is equivalent to a normal application restart, i.e. one where the application's state is purged from the system during the restart, and recreated after.

Configurable	False
Platforms	Supported on all platforms

banner

Description Contains configuration and state related to system banners
Context [system banner](#)
Tree [banner](#)
Configurable True
Platforms Supported on all platforms

login-banner *string*

Description Banner to display before a user has authenticated
Context [system banner login-banner](#) *string*
Tree [login-banner](#)
Configurable True
Platforms Supported on all platforms

motd-banner *string*

Description Banner to display after a user has authenticated
Context [system banner motd-banner](#) *string*

Tree	motd-banner
Configurable	True
Platforms	Supported on all platforms

boot

Description	Top-level container for configuration and state data related to booting the system
Context	system boot
Tree	boot
Configurable	True
Platforms	Supported on all platforms

autoboot

Description	Top-level container for configuration and state data related to autobooting the system
Context	system boot autoboot
Tree	autoboot
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	Administratively enable or disable autoboot functionality
Context	system boot autoboot admin-state <i>keyword</i>
Tree	admin-state
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

attempts *number*

Description	Sets the amount of executions to try autoboot, before rebooting the system
Context	system boot autoboot attempts <i>number</i>

Tree	attempts
Range	1 to 10
Configurable	True
Platforms	Supported on all platforms

client-id *keyword*

Description	The client ID to use on outgoing DHCP requests
Context	system boot autoboot client-id <i>keyword</i>
Tree	client-id
Options	<ul style="list-style-type: none"> serial Use the chassis serial number as the client ID
Configurable	True
Platforms	Supported on all platforms

interface *reference*

Description	Sets the interface to use for autoboot functionality
Context	system boot autoboot interface <i>reference</i>
Tree	interface
Default	mgmt0
Reference	interface name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

mode *string*

Description	Ztp operation modes. One or more modes can passed
Context	system boot autoboot mode <i>string</i>
Tree	mode
Configurable	True
Platforms	Supported on all platforms

oper-state *string*

Description	The current operational status of the autoboot process
Context	system boot autoboot oper-state <i>string</i>
Tree	oper-state
Configurable	False
Platforms	Supported on all platforms

timeout *number*

Description	Sets the timeout for each attempt to autoboot
Context	system boot autoboot timeout <i>number</i>
Tree	timeout
Range	200 to 3600
Units	seconds
Configurable	True
Platforms	Supported on all platforms

fips-140

Description	Boot up the router in fips-provider mode In fips-provider mode only fips approved algorithms are allowed. In addition for fip-provider mode to take effect a reboot of the router is needed.
Context	system boot fips-140
Tree	fips-140
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	This leaf contains the configured, desired state of the fips-provider.
Context	system boot fips-140 admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> enable

	<ul style="list-style-type: none"> • disable
Configurable	True
Platforms	Supported on all platforms

oper-down-reason *keyword*

Description	The reason for not enabling fips operational down
Context	system boot fips-140 oper-down-reason keyword
Tree	oper-down-reason
Options	<ul style="list-style-type: none"> • unknown
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	This leaf contains the operational state of fips-provider.
Context	system boot fips-140 oper-state keyword
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed • synchronizing Component is currently being synchronized • upgrading Component is currently being upgraded

- low-power
Component is offline due to insufficient system power
 - degraded
Component or process is in a degraded state
 - warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
 - waiting
Component or process is currently waiting
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.
- Configurable** False
- Platforms** Supported on all platforms

golden-image *string*

- Description** The local image the system reverts to when a factory reset operation is requested
The value is the folder that contains the `initramfs`, `kernel`, and `squashfs` image. The search path for these directories is `/mnt/nokiaos/<folder>`
- Context** [system boot golden-image](#) *string*
- Tree** [golden-image](#)
- String Length** 1 to 255
- Configurable** False
- Platforms** 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

image *string*

- Description** Ordered list of local images used to boot the system
This directly translates into boot configuration in `grub`, where the images are tried in the order specified by the user. Images are sourced via the internal SD card, and the value passed is the folder that contains the `initramfs`, `kernel`, and `squashfs` image. The search path for these directories is `/mnt/nokiaos/<folder>`

Context	system boot image <i>string</i>
Tree	image
String Length	1 to 255

tep (*ipv4-address* | *ipv6-address*)

Description	The IP address that identifies the remote BGP-EVPN MPLS multicast Termination Endpoint (TEP)
Context	system bridge-table evpn mpls-multicast-tep tep tep (<i>ipv4-address</i> <i>ipv6-address</i>)
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

index number

Description	The hardware index (system allocated) for the BGP-EVPN MPLS multicast Termination Endpoint (TEP) If a non-zero hardware index is allocated, then there are available system resources and there is at least one BGP-EVPN MPLS multicast destination (using this TEP) ready to be programmed. If the hardware index is 0, there are not resources left and the TEP is not programmed, even if an Inclusive Multicast Ethernet Tag route was correctly imported from a peer.
Context	system bridge-table evpn mpls-multicast-tep tep tep (<i>ipv4-address</i> <i>ipv6-address</i>) index number
Tree	index
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-changed *string*

Description	The date and time of the last update of this BGP-EVPN MPLS multicast Termination Endpoint
Context	system bridge-table evpn mpls-multicast-tep tep tep (<i>ipv4-address</i> <i>ipv6-address</i>) last-changed string

Tree	last-changed
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mac-learning

Description	Enter the mac-learning context
Context	system bridge-table mac-learning
Tree	mac-learning
Configurable	True
Platforms	Supported on all platforms

mac-relearn-only *boolean*

Description	The value of this leaf indicates that the system will not learn any new mac addresses, but will relearn any that are already programmed
Context	system bridge-table mac-learning mac-relearn-only boolean
Tree	mac-relearn-only
Configurable	False
Platforms	Supported on all platforms

mac-limit

Description	Bridge Table size and thresholds.
Context	system bridge-table mac-limit
Tree	mac-limit
Configurable	True
Platforms	Supported on all platforms

maximum-entries *number*

Description	Maximum number of mac addresses allowed in the system bridge-table.
Context	system bridge-table mac-limit maximum-entries number
Tree	maximum-entries
Configurable	False

Platforms Supported on all platforms

warning-threshold-pct *number*

Description Percentage of the configured max-number-macs over which a warning is triggered. The warning message is cleared when the percentage drops below the configured percentage minus 5%

Context [system bridge-table mac-limit warning-threshold-pct](#) *number*

Tree [warning-threshold-pct](#)

Configurable False

Platforms Supported on all platforms

proxy-arp

Configurable
Platforms

True
Supported on all platforms

configuration

Description	Top-level container for configuration and state data related to the system configuration
Context	system configuration
Tree	configuration
Configurable	True
Platforms	Supported on all platforms

auto-checkpoint *boolean*

Description	Configuration checkpoint will be automatically created after every successful commit (if set to true).
Context	system configuration auto-checkpoint <i>boolean</i>
Tree	auto-checkpoint
Default	false
Configurable	True
Platforms	Supported on all platforms

auto-save *boolean*

Description	Configuration save will be automatically done after every successful commit (if set to true).
Context	system configuration auto-save <i>boolean</i>
Tree	auto-save
Default	false
Configurable	True
Platforms	Supported on all platforms

candidate *name string*

Description	List of configuration candidates currently active
Context	system configuration candidate <i>name string</i>
Tree	candidate
Configurable	False
Platforms	Supported on all platforms

name *string*

Description	Name of the configuration candidate
Context	system configuration candidate name <i>string</i>
String Length	1 to 255
Configurable	False
Platforms	Supported on all platforms

started *string*

Description	Start date and time of the configuration session
Context	system configuration candidate name <i>string</i> started <i>string</i>
Tree	started
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

type *keyword*

Description	Type of configuration candidate
Context	system configuration candidate name <i>string</i> type <i>keyword</i>
Tree	type
Options	<ul style="list-style-type: none">• shared• private
Configurable	False
Platforms	Supported on all platforms

username *string*

Description	User that started the configuration session
Context	system configuration candidate name <i>string</i> username <i>string</i>
Tree	username
String Length	1 to 255
Configurable	False
Platforms	Supported on all platforms

checkpoint id *number*

Description	List of current checkpoints present in the system
Context	system configuration checkpoint id <i>number</i>
Tree	checkpoint
Configurable	False
Platforms	Supported on all platforms

id *number*

Description	System generated ID for the checkpoint
Context	system configuration checkpoint id <i>number</i>
Configurable	False
Platforms	Supported on all platforms

comment *string*

Description	User provided annotations associated with the checkpoint
Context	system configuration checkpoint id <i>number</i> comment <i>string</i>
Tree	comment
Configurable	False
Platforms	Supported on all platforms

created *string*

Description	Date and time this checkpoint was created
Context	system configuration checkpoint id <i>number</i> created <i>string</i>
Tree	created
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

name *string*

Description	User provided name of the checkpoint
Context	system configuration checkpoint id <i>number</i> name <i>string</i>

Tree	name
Configurable	False
Platforms	Supported on all platforms

size *number*

Description	Size of the checkpoint configuration file
Context	system configuration checkpoint id <i>number</i> size <i>number</i>
Tree	size
Units	bytes
Configurable	False
Platforms	Supported on all platforms

tag *string*

Description	Full system version that the checkpoint was generated on
Context	system configuration checkpoint id <i>number</i> tag <i>string</i>
Tree	tag
Configurable	False
Platforms	Supported on all platforms

username *string*

Description	Username that created this checkpoint
Context	system configuration checkpoint id <i>number</i> username <i>string</i>
Tree	username
String Length	1 to 255
Configurable	False
Platforms	Supported on all platforms

version *string*

Description	System version that the checkpoint was generated on
Context	system configuration checkpoint id <i>number</i> version <i>string</i>
Tree	version
Configurable	False

Platforms Supported on all platforms

commit id number

Description List of configuration transactions
Context [system configuration commit id number](#)
Tree [commit](#)
Configurable False
Platforms Supported on all platforms

id number

Description System identifier for the commit
Context [system configuration commit id number](#)
Configurable False
Platforms Supported on all platforms

comment string

Description Operator provided comment associated with this commit
Context [system configuration commit id number comment string](#)
Tree [comment](#)
Configurable False
Platforms Supported on all platforms

ended string

Description End date and time of the commit
 This field is not populated if the commit is in progress
Context [system configuration commit id number ended string](#)
Tree [ended](#)
String Length 20 to 32
Configurable False
Platforms Supported on all platforms

name *string*

Description	Name of the configuration candidate the commit was triggered from
Context	system configuration commit id <i>number name string</i>
Tree	name
String Length	1 to 255
Configurable	False
Platforms	Supported on all platforms

persist-id *string*

Description	Persistent confirmed commit identifier
Context	system configuration commit id <i>number persist-id string</i>
Tree	persist-id
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

started *string*

Description	Start date and time of the commit
Context	system configuration commit id <i>number started string</i>
Tree	started
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

status *keyword*

Description	Current status of the commit
Context	system configuration commit id <i>number status keyword</i>
Tree	status
Options	<ul style="list-style-type: none"> • validating • publishing • unconfirmed

- checkpoint
- save

Platforms

Supported on all platforms

idle-timeout *number***Description**

The idle timeout of configuration candidates

After this period of no activity, the candidate is emptied and removed from the system.

Context[system configuration idle-timeout number](#)**Tree**[idle-timeout](#)**Default**

10080

Units

minutes

Configurable	True
Platforms	Supported on all platforms

last-change *string*

Description	Date and time of the last successful commit Set to the time the configuration was loaded by management server, so is refreshed at boot time.
Context	system configuration last-change <i>string</i>
Tree	last-change
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

max-candidates *number*

Description	The maximum number of combined private and shared candidates
Context	system configuration max-candidates <i>number</i>
Tree	max-candidates
Range	1 to 255
Default	10
Configurable	True
Platforms	Supported on all platforms

max-checkpoints *number*

Description	The number of checkpoints kept by the system
Context	system configuration max-checkpoints <i>number</i>
Tree	max-checkpoints
Range	1 to 255
Default	10
Configurable	True
Platforms	Supported on all platforms

role *name reference*

Description	List of roles configured in the system
Context	system configuration role name reference
Tree	role
Configurable	True
Platforms	Supported on all platforms
Max. Elements	32

name *reference*

Description	Enter the name context
Context	system configuration role name reference
Reference	system aaa authorization role rolename string
Configurable	True
Platforms	Supported on all platforms

rule *path-reference string*

Description	List of paths to perform access control against
Context	system configuration role name reference rule path-reference string
Tree	rule
Configurable	True
Platforms	Supported on all platforms
Max. Elements	256

path-reference *string*

Description	Reference to a valid YANG path, in CLI notation This path may include keys, wildcards, ranges, and other management server supported constructs. Ranges will be expanded. The root path can be specified with '/'. E.g. / "/interface" "/acl ipv4-filter foo* description"
Context	system configuration role name reference rule path-reference string
Configurable	True
Platforms	Supported on all platforms

action *keyword*

Description	Action to allow for this path
Context	system configuration role name reference rule path-reference string action keyword
Tree	action
Options	<ul style="list-style-type: none"> • read This path may be read by the role • write This path may be written and read by the role • deny This path may not be read or written to by the role
Configurable	True
Platforms	Supported on all platforms

session id *number*

Description	List of configuration sessions currently active
Context	system configuration session id number
Tree	session
Configurable	False
Platforms	Supported on all platforms

id *number*

Description	System generated ID for the configuration session
Context	system configuration session id number
Configurable	False
Platforms	Supported on all platforms

exclusive *boolean*

Description	Details if this session is running in exclusive mode
Context	system configuration session id number exclusive boolean
Tree	exclusive
Configurable	False

Platforms Supported on all platforms

name *string*

Description Name of the candidate the session is active on
Set to 'default' if a non-named candidate is active

Context [system configuration session id number name string](#)

Tree [name](#)

String Length 1 to 255

Configurable False

Platforms Supported on all platforms

Description Start date and time of the configuration session

Context [system configuration session id number started string](#)

Tree [started](#)

String Length 20 to 32

Configurable False

Platforms Supported on all platforms

type *keyword*

Description Type of configuration session

Context [system configuration session id number type keyword](#)

Tree [type](#)

Options

- shared
- private

Configurable False

Platforms Supported on all platforms

username *string*

Description User that started the configuration session

Context [system configuration session id number username string](#)

Tree	username
String Length	1 to 255
Configurable	False
Platforms	Supported on all platforms

control-plane-traffic

Description	Container for the control plane traffic.
Context	system control-plane-traffic
Tree	control-plane-traffic
Configurable	True
Platforms	Supported on all platforms

input

Description	Defines parameters determining the handling of system generated traffic.
Context	system control-plane-traffic input
Tree	input
Configurable	True
Platforms	Supported on all platforms

acl

Description	Container for ACL.
Context	system control-plane-traffic input acl
Tree	acl
Configurable	True
Platforms	Supported on all platforms

acl-filter *name reference type reference*

Description	List MAC, IPv4, IPv6 ACL filter(s) to be applied on this subinterface direction
Context	system control-plane-traffic input acl acl-filter <i>name reference type reference</i>
Tree	acl-filter
Configurable	True
Platforms	Supported on all platforms

name *reference*

Description	Reference to the ACL Filter policy name
Context	system control-plane-traffic input acl acl-filter name reference type reference
Reference	acl acl-filter name string type keyword
Configurable	True
Platforms	Supported on all platforms

type *reference*

Description	Reference to the ACL Filter policy type
Context	system control-plane-traffic input acl acl-filter name reference type reference
Reference	acl acl-filter type
Configurable	True
Platforms	Supported on all platforms

output

Description	Defines parameters determining the handling of system generated traffic.
Context	system control-plane-traffic output
Tree	output
Configurable	True
Platforms	Supported on all platforms

qos

Description	Parameters describing QoS handling of system generated traffic
Context	system control-plane-traffic output qos
Tree	qos
Configurable	True
Platforms	Supported on all platforms

management-protocols-dscp (*number | keyword*)

Description	Defines dscp value the system generated traffic by management-protocols should be marked with
--------------------	---

Context	system control-plane-traffic output qos management-protocols-dscp (<i>number</i> <i>keyword</i>)
Tree	management-protocols-dscp
Range	0 to 63

 dhcp-server	
Description	Configures the dhcp server
Context	system dhcp-server

Tree	dhcp-server
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	Globally enable or disable the dhcp server Disabling this will disable all dhcp servers.
Context	system dhcp-server admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

network-instance [name](#) *reference*

Description	List of network instances to run a dhcp server in
Context	system dhcp-server network-instance name <i>reference</i>
Tree	network-instance
Configurable	True
Platforms	Supported on all platforms

name *reference*

Description	Reference to a configured network instance
Context	system dhcp-server network-instance name <i>reference</i>
Reference	network-instance name <i>string</i>
Configurable	True
Platforms	Supported on all platforms

dhcpv4

Description	Enter the dhcpv4 context
Context	system dhcp-server network-instance name <i>reference</i> dhcpv4

Tree	dhcpv4
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	Administratively enable or disable the dhcp server
Context	system dhcp-server network-instance name <i>reference</i> dhcpv4 admin-state keyword
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

oper-state *keyword*

Description	Details if the dhcp server is operationally available
Context	system dhcp-server network-instance name <i>reference</i> dhcpv4 oper-state keyword
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed

- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Description	The output printed on STDOUT or STDERR during this execution
Context	system event-handler instance name <i>string</i> last-execution stdout-stderr <i>string</i>
Tree	stdout-stderr
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

upython-duration *number*

Description	Time taken for the instance to return output
Context	system event-handler instance name <i>string</i> last-execution upython-duration <i>number</i>
Tree	upython-duration
Units	microseconds
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state *keyword*

Description	Details if this event handler instance is operationally available
Context	system event-handler instance name <i>string</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting

- Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

------------------	--

upython-duration *number*

Description	Total time taken for all executions of this script to return output
Context	system event-handler instance name <i>string</i> statistics upython-duration number
Tree	upython-duration
Units	milliseconds
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

upython-script *string*

Description	File name of a MicroPython script, including .py suffix This script should exist in /etc/opt/srlinux/eventmgr or /opt/srlinux/eventmgr already. Explicit paths outside of these two directories are not permitted.
Context	system event-handler instance name <i>string</i> upython-script string
Tree	upython-script
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

run-as-user *reference*

Description	The user to run event handler instances as If no user is configured, scripts are executed as the 'admin' user.
Context	system event-handler run-as-user reference
Tree	run-as-user
Reference	system aaa authentication user username <i>string</i>
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

features *string*

Description Features enabled on this platform
Context [system features *string*](#)
Tree [features](#)
String Length 1 to 255
Configurable False
Platforms Supported on all platforms

ftp-server

Description Top-level container for FTP server configuration and state
Context [system ftp-server](#)
Tree [ftp-server](#)
Configurable True
Platforms Supported on all platforms except IMGMT

network-instance [name *reference*](#)

Description List of network-instances to run an FTP server in
Context [system ftp-server network-instance \[name *reference*\]\(#\)](#)
Tree [network-instance](#)
Configurable True
Platforms Supported on all platforms except IMGMT

name *reference*

Description Reference to a configured network-instance
Context [system ftp-server network-instance \[name *reference*\]\(#\)](#)
Reference [network-instance \[name *string*\]\(#\)](#)
Configurable True
Platforms Supported on all platforms except IMGMT

admin-state *keyword*

Description	Enables or disables the FTP server in this network-instance
Context	system ftp-server network-instance name <i>reference</i> admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms except IMGMT

oper-state *keyword*

Description	Details the operational state of the FTP server
Context	system ftp-server network-instance name <i>reference</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed • synchronizing Component is currently being synchronized • upgrading Component is currently being upgraded • low-power

- Component is offline due to insufficient system power
- degraded
 - Component or process is in a degraded state
- warm-reboot
 - Component or process is currently warm rebooting
 - This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
 - Component or process is currently waiting
 - This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False
Platforms	Supported on all platforms except IMGMT

session-limit *number*

Description	Set a limit on the number of simultaneous active FTP sessions
Context	system ftp-server network-instance name <i>reference</i> session-limit number
Tree	session-limit
Default	20
Configurable	True
Platforms	Supported on all platforms except IMGMT

source-address (*ipv4-address | ipv6-address*)

Description	IPv4 or IPv6 address for the FTP server to listen on within the network-instance Default behavior is to listen on '::', which will listen on all addresses for both IPv4 and IPv6. In order to listen on IPv4 only, this field should be set to '0.0.0.0'.
Context	system ftp-server network-instance name <i>reference</i> source-address (ipv4-address ipv6-address)
Tree	source-address
Default	::
Configurable	True
Platforms	Supported on all platforms except IMGMT

timeout *number*

Description	Set the idle timeout in seconds on FTP connections
Context	system ftp-server network-instance name <i>reference</i> timeout <i>number</i>
Tree	timeout
Default	300
Units	seconds
Configurable	True
Platforms	Supported on all platforms except IMGMT

grpc-server *name string*

Description	List of configured gRPC server instances
Context	system grpc-server <i>name string</i>
Tree	grpc-server
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *string*

Description	User-provided name of this server instance
Context	system grpc-server <i>name string</i>
String Length	1 to 255
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Globally enable or disable the gRPC server instance Disabling this will disable all gRPC server sockets in all network instances, and any configured unix domain sockets.
Context	system grpc-server <i>name string</i> admin-state <i>keyword</i>
Tree	admin-state

Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

certz

Description	Information relating to the active certificate and bundle/s as provided via Certz State is provided by the gNSI Certz service, and can be changed using the gNSI.Certz.Rotate RPC
Context	system grpc-server name <i>string</i> certz
Tree	certz
Configurable	False

Tree	created-on
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version string

Description	The version string as provided by the gNSI client at the time of uploading the certificate or bundle/s The maps to the version field within a Entity message in the Certz protobuf.
Context	system grpc-server name string certz crt version string
Tree	version
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ssl-profile-id string

Description	The ID of this gRPC server's SSL profile as used by the gNSI Certz service
Context	system grpc-server name string certz ssl-profile-id string
Tree	ssl-profile-id
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

trust-anchor

Description	State relating to the active trust anchor provided via Certz This is equivalent to the certificate authority bundle, and is the list of certificates used to validate clients in mTLS, and to validate servers in outbound TLS.
Context	system grpc-server name string certz trust-anchor
Tree	trust-anchor
Configurable	False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

created-on *string*

Description The created on timestamp as provided by the gNSI client at the time of uploading the policy

The maps to the created_on field within a Entity message in the Certz protobuf.

Context [system](#) [grpc-server name](#) *string* [certz](#) [trust-anchor](#) [created-on](#) *string*

Tree [created-on](#)

String Length 20 to 32

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version *string*

Description The version string as provided by the gNSI client at the time of uploading the certificate or bundle/s

The maps to the version field within a Entity message in the Certz protobuf.

Context [system](#) [grpc-server name](#) *string* [certz](#) [trust-anchor](#) [version](#) *string*

Tree [version](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

client id *number*

Description List of active gRPC client sessions

Context [system](#) [grpc-server name](#) *string* [client id](#) *number*

Tree [client](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

id number

Description	System generated ID for for the client
Context	system grpc-server name <i>string</i> client id number
Range	0 to 4294967295
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

acctz-starting-point string

Description	Time of the acctz accounting subscription starting point
Context	system grpc-server name <i>string</i> client id number acctz-starting-point string
Tree	acctz-starting-point
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

election-id string

Description	Election ID of this client Provided only for services supporting an election ID
Context	system grpc-server name <i>string</i> client id number election-id string
Tree	election-id
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

gnmi

Description	Container for gNMI related session info
Context	system grpc-server name <i>string</i> client id number gnmi
Tree	gnmi

Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

paths *id number*

Description	List of paths being subscribed to
Context	system grpc-server name <i>string</i> client id <i>number</i> gnmi paths id <i>number</i>
Tree	paths
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

id *number*

Description	System generated ID for the subscribed path (within subscription)
Context	system grpc-server name <i>string</i> client id <i>number</i> gnmi paths id <i>number</i>
Range	0 to 65535
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mode *keyword*

Description	Subscription mode (on-change, sample, target-defined, poll, once)
Context	system grpc-server name <i>string</i> client id <i>number</i> gnmi paths id <i>number</i> mode <i>keyword</i>
Tree	mode
Options	<ul style="list-style-type: none"> • ON_CHANGE • SAMPLE • TARGET_DEFINED • POLL • ONCE
Configurable	False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

path *string*

Description Path being subscribed to

Context [system grpc-server name string client id number gnmi paths id number path string](#)

Tree [path](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sample-interval *number*

Description Time in seconds to provide updates to the remote host, set to 0 for all subscription modes except SAMPLE

Context [system grpc-server name string client id number gnmi paths id number sample-interval number](#)

Tree [sample-interval](#)

Units seconds

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

gribi

Description Container for gRIBI related session info

Context [system grpc-server name string client id number gribi](#)

Tree [gribi](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

persistence-mode *keyword*

Description	The defined persistence mode as signaled by the client
Context	system grpc-server name <i>string</i> client id <i>number</i> gribi persistence-mode keyword
Tree	persistence-mode
Options	<ul style="list-style-type: none"> • <code>preserve</code> Entries populated by the client will be persisted during a client disconnect, or control module switchover • <code>delete</code> Entries populated by the client will be purged on the client disconnecting, or a control module switchover If no persistence mode is signaled, the default is to delete entries.
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

p4rt

Description	Container for P4RT related session info
Context	system grpc-server name <i>string</i> client id <i>number</i> p4rt
Tree	p4rt
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

forwarding-complex

Description	Enter the forwarding-complex context
Context	system grpc-server name <i>string</i> client id <i>number</i> p4rt forwarding-complex
Tree	forwarding-complex
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

device number

Description	The P4Runtime ID of the forwarding complex for which this client has established itself This is the value configured at /platform/linecard/forwarding-complex/p4rt/id, or a system derived default.
Context	system grpc-server name string client id number p4rt forwarding-complex device number
Tree	device
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

id string

Description	The normalized ID for this forwarding-complex This is the slot number and complex number separated by a '/', 0 indexed. For example '1/0', or '1/1' representing two forwarding complexes on slot 1.
Context	system grpc-server name string client id number p4rt forwarding-complex id string
Tree	id
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

slot number

Description	The linecard slot for which this forwarding complex resides on
Context	system grpc-server name string client id number p4rt forwarding-complex slot number
Tree	slot
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

primary *boolean*

Description	Indicates if this client is the primary for the specified forwarding complex Only a single primary per forwarding complex is supported
Context	system grpc-server name <i>string</i> client id <i>number</i> p4rt <i>primary</i> <i>boolean</i>
Tree	primary
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

remote-host (*ipv4-address* | *ipv6-address*)

Description	Remote host of the client
Context	system grpc-server name <i>string</i> client id <i>number</i> remote-host (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	remote-host
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

remote-port *number*

Description	Remote port of the client
Context	system grpc-server name <i>string</i> client id <i>number</i> remote-port <i>number</i>
Tree	remote-port
Range	0 to 65535
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rpc *string*

Description	The called package, service, and RPC For example gnmi.gNMI.Subscribe
Context	system grpc-server name <i>string</i> client id <i>number</i> rpc <i>string</i>

Tree	rpc
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

start-time string

Description	Time of the subscription creation
Context	system grpc-server name string client id number start-time string
Tree	start-time
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

type keyword

Description	Enter the type context
Context	system grpc-server name string client id number type keyword
Tree	type
Options	<ul style="list-style-type: none"> • gnmi • acctz
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

user string

Description	Authenticated username for the client
Context	system grpc-server name string client id number user string
Tree	user
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

user-agent *string*

Description	User agent used for the client
Context	system grpc-server name <i>string</i> client id <i>number</i> user-agent <i>string</i>
Tree	user-agent
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

default-tls-profile *boolean*

Description	Whether to use default TLS profile (generated by the system) if none is configured via <code>tls-profile</code> field
Context	system grpc-server name <i>string</i> default-tls-profile <i>boolean</i>
Tree	default-tls-profile
Default	false
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

gnmi

Description	Container for gnmi configuration and state
Context	system grpc-server name <i>string</i> gnmi
Tree	gnmi
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

commit-confirmed-timeout *number*

Description	Number of seconds to wait for confirmation A value of 0 means commit confirmed is not used
Context	system grpc-server name <i>string</i> gnmi commit-confirmed-timeout <i>number</i>
Tree	commit-confirmed-timeout

Range	0 to 86400
Default	0
Units	seconds
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

commit-save *boolean*

Description	Specifies whether to save startup configuration after every successful commit
Context	system grpc-server name <i>string</i> gnmi commit-save <i>boolean</i>
Tree	commit-save
Default	false
Configurable	True

oper-state *keyword*

Description	Details if the JSON RPC server is operationally available
Context	system json-rpc-server network-instance name <i>reference</i> http oper-state keyword
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting

- Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable

Context	system license id <i>string</i> valid <i>boolean</i>
Tree	valid
Configurable	False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

Ildp

Description Top-level container for LLDP configuration and state data

Context [system Ildp](#)

Tree [Ildp](#)

Configurable True

Platforms Supported on all platforms

admin-state *keyword*

Description Enable or disable LLDP at the system level

Context [system Ildp admin-state keyword](#)

Tree [admin-state](#)

Default enable

Options

- enable
- disable

Configurable True

Platforms Supported on all platforms

chassis-id *string*

Description The Chassis ID is a mandatory TLV which identifies the chassis component of the endpoint identifier associated with the transmitting LLDP agent

Context [system Ildp chassis-id string](#)

Tree [chassis-id](#)

Configurable False

Platforms Supported on all platforms

chassis-id-type *keyword*

Description The source for the chassis identifier string

It is an enumerator defined by the LldpChassisIdSubtype object from IEEE 802.1AB MIB.

Context	system lldp chassis-id-type <i>keyword</i>
Tree	chassis-id-type
Default	MAC_ADDRESS
Options	<ul style="list-style-type: none"> • CHASSIS_COMPONENT Chassis identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737 • INTERFACE_ALIAS Chassis identifier based on the value of ifAlias object defined in IETF RFC 2863 • PORT_COMPONENT Chassis identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737 for a port or backplane component • MAC_ADDRESS Chassis identifier based on the value of a unicast source address (encoded in network byte order and IEEE 802.3 canonical bit order), of a port on the containing chassis as defined in IEEE Std 802-2001 • NETWORK_ADDRESS Chassis identifier based on a network address, associated with a particular chassis. The encoded address is composed of two fields. The first field is a single octet, representing the IANA AddressFamilyNumbers value for the specific address type, and the second field is the network address value • INTERFACE_NAME Chassis identifier based on the name of the interface, e.g., the value of if Name object defined in IETF RFC 2863 • LOCAL Chassis identifier based on a locally defined value
Configurable	False
Platforms	Supported on all platforms

hello-timer *number*

Description	System level hello timer for the LLDP protocol
Context	system lldp hello-timer <i>number</i>
Tree	hello-timer
Default	30
Units	seconds
Configurable	True

Platforms Supported on all platforms

hold-multiplier *number*

Description System level hold multiplier, used to define neighbor aging
This field defines how many hellos need to be missed before a neighbor is aged out.
This field also is used along with the 'hello-timer' field to define the TTL TLV in outgoing LLDPDUs.

Context [system lldp hold-multiplier number](#)

Tree [hold-multiplier](#)

Default 4

Configurable True

Platforms Supported on all platforms

interface [name reference](#)

Description List of interfaces on which LLDP can be enabled

Context [system lldp interface name reference](#)

The encoded address is composed of two fields. The first field is a single octet, representing the IANA AddressFamilyNumbers value for the specific address type, and the second field is the network address value

- **INTERFACE_NAME**
Chassis identifier based on the name of the interface, e.g., the value of if Name object defined in IETF RFC 2863
- **LOCAL**
Chassis identifier based on a locally defined value

Configurable	False
Platforms	Supported on all platforms

custom-tlv *type number oui string oui-subtype string*

Description	List of custom LLDP TLVs from a neighbor
Context	system lldp interface name <i>reference</i> neighbor id string custom-tlv type number oui string oui-subtype string
Tree	custom-tlv
Configurable	False
Platforms	Supported on all platforms

type *number*

Description	The integer value identifying the type of information contained in the value field.
Context	system lldp interface name <i>reference</i> neighbor id string custom-tlv type number oui string oui-subtype string
Configurable	False
Platforms	Supported on all platforms

oui *string*

Description	The organizationally unique identifier field from the custom TLV This field shall contain the organization's OUI as defined in Clause 9 of IEEE Std 802. The high-order octet is 0 and the low-order 3 octets are the SMI Network Management Private Enterprise Code of the Vendor in network byte order, as defined in the 'Assigned Numbers' RFC [RFC3232].
Context	system lldp interface name <i>reference</i> neighbor id string custom-tlv type number oui string oui-subtype string
Configurable	False
Platforms	Supported on all platforms

oui-subtype *string*

Description	The subtype value defined by the OUI for this custom TLV The organizationally defined subtype field shall contain a unique subtype value assigned by the defining organization.
Context	system lldp interface name reference neighbor id string custom-tlv type number oui string oui-subtype string
Configurable	False
Platforms	Supported on all platforms

value *binary*

Description	A variable-length octet-string containing the value for this TLV
Context	system lldp interface name reference neighbor id string custom-tlv type number oui string oui-subtype string value binary
Tree	value
Configurable	False
Platforms	Supported on all platforms

first-message *string*

Description	Date and time of the first message from neighbor
Context	system lldp interface name reference neighbor id string first-message string
Tree	first-message
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

last-update *string*

Description	Date and time of the last update from neighbor
Context	system lldp interface name reference neighbor id string last-update string
Tree	last-update
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

management-address *address string*

Description	List of management addresses received from the remote LLDP neighbor
Context	system lldp interface name <i>reference</i> neighbor id <i>string</i> management-address <i>address string</i>
Tree	management-address
Configurable	False
Platforms	Supported on all platforms

address *string*

Description	The management address received from the remote LLDP neighbor The Management Address is a mandatory TLV which identifies a network address associated with the LLDP agent, which can be used to reach the agent on the port identified in the Port ID TLV.
Context	system lldp interface name <i>reference</i> neighbor id <i>string</i> management-address <i>address string</i>
Configurable	False
Platforms	Supported on all platforms

type *keyword*

Description	The type of management address referenced in the address field The enumerated value for the network address type identified in this TLV. This enumeration is defined in the 'Assigned Numbers' RFC [RFC3232] and the ianaAddressFamilyNumbers object.
Context	system lldp interface name <i>reference</i> neighbor id <i>string</i> management-address <i>address string</i> type <i>keyword</i>
Tree	type
Options	<ul style="list-style-type: none"> • IPv4 Use IPv4 address for management address type • IPv6 Use IPv6 address for management address type
Configurable	False
Platforms	Supported on all platforms

port-description *string*

Description	The description of the port referenced in the port-id field The binary string containing the actual port identifier for the port which this LLDP PDU was transmitted. The source and format of this field is defined by PtopoPortId from RFC2922.
Context	system lldp interface name <i>reference</i> neighbor id <i>string</i> port-description <i>string</i>
Tree	port-description
Configurable	False
Platforms	Supported on all platforms

port-id (*string* | *binary*)

Description	The Port ID of the remote neighbor The Port ID is a mandatory TLV which identifies the port component of the endpoint identifier associated with the transmitting LLDP agent. If the specified port is an IEEE 802.3 Repeater port, then this TLV is optional.
Context	system lldp interface name <i>reference</i> neighbor id <i>string</i> port-id (<i>string</i> <i>binary</i>)
Tree	port-id
Configurable	False
Platforms	Supported on all platforms

port-id-type *keyword*

Description	The type of identifier used in the port-id field This field identifies the format and source of the port identifier string. It is an enumerator defined by the PtopoPortIdType object from RFC2922.
Context	system lldp interface name <i>reference</i> neighbor id <i>string</i> port-id-type <i>keyword</i>
Tree	port-id-type
Options	<ul style="list-style-type: none"> • INTERFACE_ALIAS Chassis identifier based on the value of ifAlias object defined in IETF RFC 2863 • PORT_COMPONENT Port identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737 for a port component • MAC_ADDRESS

Port identifier based on the value of a unicast source address (encoded in network byte order and IEEE 802.3 canonical bit order) associated with a port

- NETWORK_ADDRESS

Port identifier based on a network address, associated with a particular port

- INTERFACE_NAME

Port identifier based on the name of the interface, e.g., the value of if Name object defined in IETF RFC 2863

- AGENT_CIRCUIT_ID

Port identifier based on the circuit id in the DHCP relay agent information option as defined in IETF RFC 3046

- LOCAL

Port identifier based on a locally defined alphanumeric string

Configurable

False

Platforms

Supported on all platforms

system-description *string*

Description

The system description of the remote neighbor

The system description field shall contain an alpha-numeric string that is the textual description of the network entity. The system description should include the full name and version identification of the system's hardware type, software operating system, and networking software. If implementations support IETF RFC 3418, the sysDescr object should be used for this field.

Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

Description	Details the operational state of LLDP on the interface
Context	system lldp interface name <i>reference</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed • synchronizing Component is currently being synchronized • upgrading Component is currently being upgraded • low-power Component is offline due to insufficient system power • degraded Component or process is in a degraded state • warm-reboot Component or process is currently warm rebooting

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False

Description	Indicates the last time the counters were cleared
Context	system lldp interface name <i>reference</i> statistics last-clear string
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

tlv-discard *number*

Description	The number of TLV frames received and discarded
Context	system lldp interface name <i>reference</i> statistics tlv-discard number
Tree	tlv-discard
Default	0
Configurable	False
Platforms	Supported on all platforms

tlv-unknown *number*

Description	The number of frames received with unknown TLV
Context	system lldp interface name <i>reference</i> statistics tlv-unknown number
Tree	tlv-unknown
Default	0
Configurable	False
Platforms	Supported on all platforms

management-address [subinterface](#) *string*

Description	List of subinterfaces to source management addresses from This list is sent in the management address TLV by LLDP.
Context	system lldp management-address subinterface <i>string</i>
Tree	management-address
Configurable	True
Platforms	Supported on all platforms

subinterface *string*

Description	Reference to the subinterface to source management addresses
Context	system lldp management-address subinterface <i>string</i>
String Length	5 to 25
Configurable	True
Platforms	Supported on all platforms

type *keyword*

Description	Types of addresses sent in the management address TLV The enumerated value for the network address type identified in this TLV. This enumeration is defined in the 'Assigned Numbers' RFC [RFC3232] and the ianaAddressFamilyNumbers object.
Context	system lldp management-address subinterface <i>string type keyword</i>
Tree	type
Options	<ul style="list-style-type: none"> • IPv4 Use IPv4 address for management address type • IPv6 Use IPv6 address for management address type
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Global LLDP counters
Context	system lldp statistics
Tree	statistics
Configurable	False
Platforms	Supported on all platforms

entries-aged-out *number*

Description	The number of entries aged out due to timeout.
Context	system lldp statistics entries-aged-out <i>number</i>
Tree	entries-aged-out
Default	0
Configurable	False
Platforms	Supported on all platforms

frame-discard *number*

Description	The number of LLDP frames received and discarded
Context	system lldp statistics frame-discard <i>number</i>

Tree	frame-discard
Default	0
Configurable	False
Platforms	Supported on all platforms

frame-error-in *number*

Description	The number of LLDP frames received with errors
Context	system lldp statistics frame-error-in <i>number</i>
Tree	frame-error-in
Default	0
Configurable	False
Platforms	Supported on all platforms

frame-in *number*

Description	The number of LLDP frames received
Context	system lldp statistics frame-in <i>number</i>
Tree	frame-in
Default	0
Configurable	False
Platforms	Supported on all platforms

frame-out *number*

Description	The number of LLDP frames transmitted
Context	system lldp statistics frame-out <i>number</i>
Tree	frame-out
Default	0
Configurable	False
Platforms	Supported on all platforms

last-clear *string*

Description	Indicates the last time the counters were cleared
Context	system lldp statistics last-clear <i>string</i>

Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

tlv-accepted *number*

Description	The number of valid TLVs received.
Context	system lldp statistics tlv-accepted <i>number</i>
Tree	tlv-accepted
Default	0
Configurable	False
Platforms	Supported on all platforms

tlv-discard *number*

Description	The number of TLV frames received and discarded
Context	system lldp statistics tlv-discard <i>number</i>
Tree	tlv-discard
Default	0
Configurable	False
Platforms	Supported on all platforms

tlv-unknown *number*

Description	The number of frames received with unknown TLV
Context	system lldp statistics tlv-unknown <i>number</i>
Tree	tlv-unknown
Default	0
Configurable	False
Platforms	Supported on all platforms

system-description *string*

Description	Field detailing system description, including name and versions
--------------------	---

The system description field shall contain an alpha-numeric string that is the textual description of the network entity. The system description should include the full name and version identification of the system's hardware type, software operating system, and networking software.

Context	system lldp system-description <i>string</i>
Tree	system-description
String Length	0 to 255
Configurable	False
Platforms	Supported on all platforms

system-name *string*

Description	The systems administratively assigned name The system name field shall contain an alpha-numeric string that indicates the system's administratively assigned name. The system name should be the system's fully qualified domain name.
Context	system lldp system-name <i>string</i>
Tree	system-name
String Length	0 to 255
Configurable	False
Platforms	Supported on all platforms

trace-options *keyword*

Description	LLDP trace options
Context	system lldp trace-options <i>keyword</i>
Tree	trace-options
Options	<ul style="list-style-type: none"> • received • transmitted • common
Configurable	True
Platforms	Supported on all platforms

load-balancing

Description	Adjust system-wide ECMP load balancing options.
Context	system load-balancing

Tree	load-balancing
Configurable	True
Platforms	Supported on all platforms

hash-options

Description	Container for packet header fields and other inputs used in hashing calculations
Context	system load-balancing hash-options
Tree	hash-options
Configurable	True
Platforms	Supported on all platforms

destination-address *boolean*

Description	Include the destination IP address in the hash calculation
Context	system load-balancing hash-options destination-address <i>boolean</i>
Tree	destination-address
Default	true
Configurable	True
Platforms	Supported on all platforms

destination-port *boolean*

Description	Include the destination TCP/UDP port number in the hash calculation if the packet is an unfragmented IP packet carrying a TCP/UDP payload
Context	system load-balancing hash-options destination-port <i>boolean</i>
Tree	destination-port
Default	true
Configurable	True
Platforms	Supported on all platforms

hash-seed (*number* | *keyword*)

Description	The hash seed to use for random selection of ECMP/LAG members To avoid polarization effects, directly-connected nodes should have unique hash-seeds. This can be achieved through explicit configuration of the hash-
--------------------	--

seed, or using the generate-from-mac option (which is the default), and checking that the auto-generated hash-seed is in fact unique (by reading the state value of this leaf).

Context	system load-balancing hash-options hash-seed (<i>number</i> <i>keyword</i>)
Tree	hash-seed
Default	generate-from-mac
Options	<ul style="list-style-type: none"> • generate-from-mac
Configurable	True
Platforms	Supported on all platforms

ipv6-flow-label *boolean*

Description	<p>Include the IPv6 flow label in the hash calculation if the packet is an IPv6 packet</p> <p>It is expected that the IPv6 flow label value is written by the server or other host originating the flow and not changed by any intermediate switch or router.</p>
Context	system load-balancing hash-options ipv6-flow-label <i>boolean</i>
Tree	ipv6-flow-label
Default	false
Configurable	True
Platforms	Supported on all platforms

mpls-label-stack *boolean*

Description	Include the received labels (terminated and non-terminated) in the hash calculation
Context	system load-balancing hash-options mpls-label-stack <i>boolean</i>
Tree	mpls-label-stack
Default	false
Configurable	True
Platforms	Supported on all platforms

protocol *boolean*

Description	Include the IP protocol number in the hash calculation. For an IPv6 packet this is protocol value in the next-header field of the last extension header.
--------------------	--

Context	system load-balancing hash-options protocol <i>boolean</i>
Tree	protocol
Default	true
Configurable	True
Platforms	Supported on all platforms

source-address *boolean*

Description	Include the source IP address in the hash calculation
Context	system load-balancing hash-options source-address <i>boolean</i>
Tree	source-address
Default	true
Configurable	True
Platforms	Supported on all platforms

source-port *boolean*

Description	Include the source TCP/UDP port number in the hash calculation if the packet is an unfragmented IP packet carrying a TCP/UDP payload
Context	system load-balancing hash-options source-port <i>boolean</i>
Tree	source-port
Default	true
Configurable	True
Platforms	Supported on all platforms

vlan *boolean*

Description	Include the received VLAN ID in the hash calculation
Context	system load-balancing hash-options vlan <i>boolean</i>
Tree	vlan
Default	true
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4

logging

Description	System logging provides the interface to syslog services to setup output entities on a selection of log sources.
Context	system logging
Tree	logging
Configurable	True
Platforms	Supported on all platforms except IMGMT

buffer [buffer-name](#) *string*

Description	Log files maintained in memory, non-persistent across system reboots These files are stored at directory <code>/var/log/srlinux/buffer</code> . Rotation into multiple files is available.
Context	system logging buffer buffer-name <i>string</i>
Tree	buffer
Configurable	True
Platforms	Supported on all platforms except IMGMT

buffer-name *string*

Description	Base name of the file(s) to be stored in memory
Context	system logging buffer buffer-name <i>string</i>
Configurable	True
Platforms	Supported on all platforms except IMGMT

facility [facility-name](#) *keyword*

Description	List of facilities to source messages from
Context	system logging buffer buffer-name <i>string</i> facility facility-name <i>keyword</i>
Tree	facility
Configurable	True
Platforms	Supported on all platforms except IMGMT

facility-name *keyword*

Description	Name of a Linux syslog facility
Context	system logging buffer buffer-name <i>string</i> facility facility-name <i>keyword</i>
Options	<ul style="list-style-type: none"> • all • audit • auth • authpriv • console • cron • daemon • ftp • kern • lpr • mail • news • ntp • syslog • user • uucp • local0 • local1 • local2 • local3 • local4 • local5 • local6 • local7
Configurable	True
Platforms	Supported on all platforms except IMGMT

priority

Description	Narrows the capture to a given severity, a range or a specific set of severities
Context	system logging buffer buffer-name <i>string</i> facility facility-name <i>keyword</i> priority

Tree	priority
Configurable	True
Platforms	Supported on all platforms except IMGMT

match-above *keyword*

Description	At a given severity and above
Context	system logging buffer buffer-name <i>string</i> facility facility-name <i>keyword</i> priority match-above <i>keyword</i>
Tree	match-above
Options	<ul style="list-style-type: none"> • emergency • alert • critical • error • warning • notice • informational • debug
Configurable	True
Platforms	Supported on all platforms except IMGMT

match-exact *keyword*

Description	Individually specified severities
Context	system logging buffer buffer-name <i>string</i> facility facility-name <i>keyword</i> priority match-exact <i>keyword</i>
Tree	match-exact
Options	<ul style="list-style-type: none"> • emergency • alert • critical • error • warning • notice • informational • debug
Configurable	True

Platforms Supported on all platforms except IMGMT

filter *reference*

Description A set of all-matching criteria that messages must fulfill in order to be captured

Context [system logging buffer buffer-name string filter reference](#)

Tree [filter](#)

Reference [system logging filter filter-name string](#)

Configurable True

Platforms Supported on all platforms except IMGMT

format (*string* | *keyword*)

Description Text format of syslog messages to a local output (buffer, file or console), in legacy rsyslog \$template style or one of the predefined templates
The default presents a date timestamp according to rfc3339. The predefined templates are the ones supported by rsyslogd.

Context [system logging buffer buffer-name string format \(string | keyword\)](#)

Tree [format](#)

Default RSYSLOG_FileFormat

Options

- RSYSLOG_FileFormat
- RSYSLOG_TraditionalFileFormat
- RSYSLOG_DebugFormat

Configurable True

Platforms Supported on all platforms except IMGMT

persist *number*

Description Time in seconds to shadow the buffer to persistent storage
Setting this field to 0 results in the buffer not being persisted. A value other than 0 will result in the log being persisted to disk based on the configured value. Logs with a non-zero persist value are persisted automatically on rollover, or at the configured value.

Context [system logging buffer buffer-name string persist number](#)

Tree [persist](#)

Range 0 | 60 to 604800

Default	0
Units	seconds
Configurable	True
Platforms	Supported on all platforms except IMGMT

rotate *number*

Description	Number of files to keep in rotation when a maximum file size is reached
Context	system logging buffer buffer-name <i>string rotate number</i>
Tree	rotate
Default	4
Configurable	True
Platforms	Supported on all platforms except IMGMT

rotations *number*

Description	Number of file rotations occurred
Context	system logging buffer buffer-name <i>string rotations number</i>
Tree	rotations
Default	0
Configurable	False
Platforms	Supported on all platforms except IMGMT

size *string*

Description	Number of bytes an individual output file cannot exceed The field allows the 'K, M, or G' suffixes as shorthand. When reaching that size, a rotation happens and subsequent data is stored in a new file with the same base name.
Context	system logging buffer buffer-name <i>string size string</i>
Tree	size
Default	10M
Configurable	True
Platforms	Supported on all platforms except IMGMT

subsystem *subsystem-name keyword*

Description	Entity or entities that may produce messages to be captured
Context	system logging buffer buffer-name <i>string</i> subsystem subsystem-name <i>keyword</i>
Tree	subsystem
Configurable	True
Platforms	Supported on all platforms except IMGMT

subsystem-name *keyword*

Description	Reference to an available subsystem to source messages from
Context	system logging buffer buffer-name <i>string</i> subsystem subsystem-name <i>keyword</i>
Options	<ul style="list-style-type: none"> • aaa • accounting • acl • app • arpd • bfd • bgp • bridgetable • chassis • debug • dhcp • ethcfm • evpn • fib • gnmi • gnsi • gribi • grpc • igmp • isis • json • lag

Description	Text to be present at the beginning of the MSG property of a message This is a fast lookup.
Context	system logging filter filter-name string prefix string
Tree	prefix
Configurable	True
Platforms	Supported on all platforms except IMGMT

regex *string*

Description	Extended regular expression to search in the MSG property of messages
Context	system logging filter filter-name string regex string
Tree	regex
Configurable	True
Platforms	Supported on all platforms except IMGMT

tag *string*

Description	Text to be searched in the SYSLOGTAG property of messages Usually a program name or part of it.
Context	system logging filter filter-name <i>string tag string</i>
Tree	tag
Configurable	True
Platforms	Supported on all platforms except IMGMT

network-instance *reference*

Description	Reference to a configured network-instance to run rsyslogd in This network-instance will be used as a source for requests to remote syslog servers.
Context	system logging network-instance <i>reference</i>
Tree	network-instance
Reference	network-instance name <i>string</i>
Configurable	True
Platforms	Supported on all platforms except IMGMT

remote-server [host](#) (*ipv4-address | ipv6-address | domain-name*)

Description	List of output remote syslog servers
Context	system logging remote-server host (<i>ipv4-address ipv6-address domain-name</i>)
Tree	remote-server
Configurable	True
Platforms	Supported on all platforms except IMGMT

host (*ipv4-address | ipv6-address | domain-name*)

Description	Domain or IP address of a remote syslog server destination
Context	system logging remote-server host (<i>ipv4-address ipv6-address domain-name</i>)
String Length	1 to 253
Configurable	True
Platforms	Supported on all platforms except IMGMT

facility *facility-name* *keyword*

Description	List of facilities to source messages from
Context	system logging remote-server host (<i>ipv4-address</i> <i>ipv6-address</i> <i>domain-name</i>) facility <i>facility-name</i> <i>keyword</i>
Tree	facility
Configurable	True
Platforms	Supported on all platforms except IMGMT

facility-name *keyword*

Description	Name of a Linux syslog facility
Context	system logging remote-server host (<i>ipv4-address</i> <i>ipv6-address</i> <i>domain-name</i>) facility <i>facility-name</i> <i>keyword</i>
Options	<ul style="list-style-type: none">• all• audit• auth• authpriv• console• cron• daemon• ftp• kern• lpr• mail• news• ntp• syslog• user• uucp• local0• local1• local2• local3• local4• local5

	<ul style="list-style-type: none"> • local6 • local7
Configurable	True
Platforms	Supported on all platforms except IMGMT

priority

Description	Narrows the capture to a given severity, a range or a specific set of severities
Context	system logging remote-server host (ipv4-address ipv6-address domain-name) facility facility-name keyword priority
Tree	priority
Configurable	True
Platforms	Supported on all platforms except IMGMT

match-above *keyword*

Description	At a given severity and above
Context	system logging remote-server host (ipv4-address ipv6-address domain-name) facility facility-name keyword priority match-above keyword
Tree	match-above
Options	<ul style="list-style-type: none"> • emergency • alert • critical • error • warning • notice • informational • debug
Configurable	True
Platforms	Supported on all platforms except IMGMT

match-exact *keyword*

Description	Individually specified severities
Context	system logging remote-server host (ipv4-address ipv6-address domain-name) facility facility-name keyword priority match-exact keyword
Tree	match-exact

Options	<ul style="list-style-type: none"> • emergency • alert • critical • error • warning • notice • informational • debug
Configurable	True
Platforms	Supported on all platforms except IMGMT

filter *reference*

Description	A set of all-matching criteria that messages must fulfill in order to be captured
Context	system logging remote-server host (<i>ipv4-address</i> <i>ipv6-address</i> <i>domain-name</i>) filter reference
Tree	filter
Reference	system logging filter filter-name <i>string</i>
Configurable	True
Platforms	Supported on all platforms except IMGMT

format (*string* | *keyword*)

Description	Text format of syslog messages to a remote server, in legacy rsyslog \$template style or one of the predefined templates The default presents a date timestamp according to rfc3339. The predefined templates are the ones supported by rsyslogd.
Context	system logging remote-server host (<i>ipv4-address</i> <i>ipv6-address</i> <i>domain-name</i>) format (<i>string</i> <i>keyword</i>)
Tree	format
Default	RSYSLOG_SyslogProtocol23Format
Options	<ul style="list-style-type: none"> • RSYSLOG_ForwardFormat • RSYSLOG_SyslogProtocol23Format • RSYSLOG_TraditionalForwardFormat
Configurable	True
Platforms	Supported on all platforms except IMGMT

remote-port *number*

Description	Transport port for syslog to use for messages sent to a remote server
Context	system logging remote-server host (<i>ipv4-address</i> <i>ipv6-address</i> <i>domain-name</i>) remote-port <i>number</i>
Tree	remote-port
Default	514
Configurable	True
Platforms	Supported on all platforms except IMGMT

source-address (*ipv4-address* | *ipv6-address*)

Description	Source address for syslog to use for messages sent to a remote server If no source address is provided, then packets will be sent to the remote server using the source address indicated by the routing table.
Context	system logging remote-server host (<i>ipv4-address</i> <i>ipv6-address</i> <i>domain-name</i>) source-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	source-address
Configurable	True
Platforms	Supported on all platforms except IMGMT

subsystem [subsystem-name](#) *keyword*

Description	Entity or entities that may produce messages to be captured
Context	system logging remote-server host (<i>ipv4-address</i> <i>ipv6-address</i> <i>domain-name</i>) subsystem subsystem-name <i>keyword</i>
Tree	subsystem
Configurable	True
Platforms	Supported on all platforms except IMGMT

subsystem-name *keyword*

Description	Reference to an available subsystem to source messages from
Context	system logging remote-server host (<i>ipv4-address</i> <i>ipv6-address</i> <i>domain-name</i>) subsystem subsystem-name <i>keyword</i>
Options	<ul style="list-style-type: none"> • <code>aaa</code> • <code>accounting</code>

Description Indicates the operational state of the OpenConfig management server

Context [system management openconfig oper-state](#) *keyword*

Tree [oper-state](#)

Options

- up
Component or process is operational
- down
Component or process is not operational
- empty
Component slot is empty
- downloading
Component is downloading image into memory
- booting
Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Platforms	Supported on all platforms

default-ip-mtu *number*

Description	System default IP MTU in bytes including the IP header but excluding Ethernet overhead The 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-H2, and 7220 IXR-H3 systems support a maximum IP MTU of 9398 bytes.
Context	system mtu default-ip-mtu <i>number</i>
Tree	default-ip-mtu
Range	1280 to 9486
Default	1500
Configurable	True
Platforms	Supported on all platforms

default-l2-mtu *number*

Description	System default Layer-2 MTU in bytes for bridged subinterfaces It includes the ethernet overhead and VLAN tags but excludes 4-bytes FCS. The default-l2-mtu is also used as the oper-mac-vrf-mtu and oper-vpws-mtu value if the network-instance does not have subinterfaces.
--------------------	---

The 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-H2, and 7220 IXR-H3 systems support a maximum L2 MTU of 9412 bytes.

Context	system mtu default-l2-mtu number
Tree	default-l2-mtu
Range	1500 to 9500
Default	9232
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

default-mpls-mtu number

Description	System default MPLS MTU in bytes including the size of the transmitted label stack.
Context	system mtu default-mpls-mtu number
Tree	default-mpls-mtu
Range	1284 to 9496
Default	1508
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

default-port-mtu number

Description	System default port MTU in bytes including ethernet overhead but excluding 4-bytes FCS The 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D3, 7220 IXR-H2, and 7220 IXR-H3 systems support a maximum port MTU of 9412 bytes.
Context	system mtu default-port-mtu number
Tree	default-port-mtu
Range	1500 to 9500
Default	9232
Configurable	True
Platforms	Supported on all platforms

min-path-mtu *number*

Description	Sets the minimum path MTU to use when receiving an ICMP fragmentation needed message This is controlled via the kernel <code>min_pmtu</code> option. In the event an ICMP fragmentation needed message is received by the kernel, the system will drop the session to this MTU to allow packets to traverse the entire path.
Context	system mtu min-path-mtu <i>number</i>
Tree	min-path-mtu
Range	552 to 9232
Default	552
Configurable	True
Platforms	Supported on all platforms

multicast

Description	system multicast information
Context	system multicast
Tree	multicast
Configurable	True
Platforms	Supported on all platforms

multicast-ids

Description	system multicast id information
Context	system multicast multicast-ids
Tree	multicast-ids
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	system multicast multicast-ids statistics
Tree	statistics
Configurable	False

Platforms Supported on all platforms

current-usage *number*

Description The total number of multicast ids that are in use on the system.
Context [system multicast multicast-ids statistics current-usage](#) *number*
Tree [current-usage](#)
Default 0
Configurable False
Platforms Supported on all platforms

maximum-ids *number*

Description Maximum number of multicast ids available in the system.
Context [system multicast multicast-ids statistics maximum-ids](#) *number*
Tree [maximum-ids](#)
Configurable False
Platforms Supported on all platforms

multicast-id-user-type *user* *keyword*

Description the type of the user of multicast id in the system.
Context [system multicast multicast-ids statistics multicast-id-user-type](#) *user* *keyword*
Tree [multicast-id-user-type](#)
Configurable False
Platforms Supported on all platforms

user *keyword*

Description Enter the user context
Context [system multicast multicast-ids statistics multicast-id-user-type](#) *user* *keyword*
Options

- mac-vrf
- vxlan-interface
- l2-proxy-arp-nd
- mfib
- mac-vrf-bgp-evpn

Configurable	False
Platforms	Supported on all platforms

current-usage *number*

Description	The total number of multicast ids that are in use on the system.
Context	system multicast multicast-ids statistics multicast-id-user-type user <i>keyword</i> current-usage <i>number</i>
Tree	current-usage
Default	0
Configurable	False
Platforms	Supported on all platforms

total-pending *number*

Description	The total number of multicast ids pending allocation on the system.
Context	system multicast multicast-ids statistics multicast-id-user-type user <i>keyword</i> total-pending <i>number</i>
Tree	total-pending
Default	0
Configurable	False
Platforms	Supported on all platforms

total-pending *number*

Description	The total number of multicast ids pending allocation on the system.
Context	system multicast multicast-ids statistics total-pending <i>number</i>
Tree	total-pending
Default	0
Configurable	False
Platforms	Supported on all platforms

multicast-forwarding-information-base

Description	System Multicast Forwarding Information Base table
Context	system multicast-forwarding-information-base

Tree	multicast-forwarding-information-base
Configurable	False
Platforms	Supported on all platforms

multicast-route [network-instance](#) *reference* [source](#) (*ipv4-address* | *ipv6-address*) [group](#) (*ipv4-address* | *ipv6-address*)

Description	List of all the MFIB entries in the system
Context	system multicast-forwarding-information-base multicast-route network-instance <i>reference</i> source (<i>ipv4-address</i> <i>ipv6-address</i>) group (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	multicast-route
Configurable	False
Platforms	Supported on all platforms

network-instance *reference*

Description	Indicates that the MFIB entry is associated to this network instance
Context	system multicast-forwarding-information-base multicast-route network-instance <i>reference</i> source (<i>ipv4-address</i> <i>ipv6-address</i>) group (<i>ipv4-address</i> <i>ipv6-address</i>)
Reference	network-instance <i>name</i> <i>string</i>
Configurable	False
Platforms	Supported on all platforms

source (*ipv4-address* | *ipv6-address*)

Description	Source IP address of the MFIB entry
Context	system multicast-forwarding-information-base multicast-route network-instance <i>reference</i> source (<i>ipv4-address</i> <i>ipv6-address</i>) group (<i>ipv4-address</i> <i>ipv6-address</i>)
Configurable	False
Platforms	Supported on all platforms

group (*ipv4-address* | *ipv6-address*)

Description	Multicast group address of the MFIB entry
--------------------	---

Context	system multicast-forwarding-information-base multicast-route network-instance reference source (ipv4-address ipv6-address) group (ipv4-address ipv6-address)
Configurable	False
Platforms	Supported on all platforms

last-update *string*

Description	Last update of this MFIB entry
Context	system multicast-forwarding-information-base multicast-route network-instance reference source (ipv4-address ipv6-address) group (ipv4-address ipv6-address) last-update string
Tree	last-update
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

line-card-replication-index *number*

Description	Line card Replication Index (LRID) allocated by mfib_mgr Upon programming an MFIB entry, mfib_mgr requests a Multicast Identifier (MCID) to mcid_mgr and based on the response with an allocated MCID, mfib_mgr allocates a LRID for the entry. A value 0 indicates that no MCID was received for the entry, and therefore the MFIB entry cannot forward multicast traffic.
Context	system multicast-forwarding-information-base multicast-route network-instance reference source (ipv4-address ipv6-address) group (ipv4-address ipv6-address) line-card-replication-index number
Tree	line-card-replication-index
Default	0
Configurable	False
Platforms	Supported on all platforms

name

Description	Contains configuration and state related to system naming
Context	system name
Tree	name

Configurable	True
Platforms	Supported on all platforms

domain-name *string*

Description	The system domain name
Context	system name domain-name <i>string</i>
Tree	domain-name
String Length	1 to 253
Configurable	True
Platforms	Supported on all platforms

host-name *string*

Description	The system host name
Context	system name host-name <i>string</i>
Tree	host-name
String Length	1 to 63
Configurable	True
Platforms	Supported on all platforms

netconf-server [name](#) *string*

Description	Configures the NETCONF server instance
Context	system netconf-server name <i>string</i>
Tree	netconf-server
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *string*

Description	NETCONF service instance name
Context	system netconf-server name <i>string</i>
String Length	1 to 247

Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Administratively enable or disable the NETCONF server instance
Context	system netconf-server name <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

last-oper-change *string*

Description	NETCONF last operational state change Time of last change of operational state of NETCONF server instance
Context	system netconf-server name <i>string</i> last-oper-change <i>string</i>
Tree	last-oper-change
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

oper-state *keyword*

Description	Details if the NETCONF server instance is operationally available
Context	system netconf-server name <i>string</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational

- down
Component or process is not operational
- empty
Component slot is empty
- downloading
Component is downloading image into memory
- booting
Component is booting downloaded image
- starting
Component image operational, application processes starting
- failed
Component or process has failed
- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable

False

value number

Description The value of the label field

If the route is an EVPN MPLS route, the mpls-label is read out of the 20-bit high order value. If the route is an EVPN VXLAN route, the vni is read out of the 24-bit value. If the route is an EVPN SRv6 route, this field is set to zero if no transposition is used and set to a non-zero value if transposition is used. For all the cases, if this is an Auto-Discovery per ES route, this leaf is set to zero.

leave-sync-propagation *number*

Description This value is the delta time applied by a node sending the leave synch route before removing the multicast state

When EVPN multi-homing is used along with igmp/mld snooping, a node receiving a leave message from a receiver will advertise an EVPN Multicast Leave Sync route to synchronize the leave state across all nodes attached to the Ethernet Segment. This route encodes the maximum response time that the receiving node needs to apply for a given (S,G) or (*,G) state before removing it. The leave-sync-propagation time accounts for the BGP propagation time so that the local node minimizes the potential churn of removing the multicast state before the route made it to the node receiving a

join for the multicast group to be removed. The value must be adjusted to the estimated BGP propagation time between the Ethernet Segment peers.

Context	system network-instance protocols evpn multicast leave-sync-propagation number
Tree	leave-sync-propagation

duration number

Description	Duration of the test
Context	system packet-link-qualification profile name <i>string</i> rpc duration number
Tree	duration
Range	1 to 4294967295
Units	seconds
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

post-sync-duration number

Description	Duration of the post-sync phase
Context	system packet-link-qualification profile name <i>string</i> rpc post-sync-duration number
Tree	post-sync-duration
Units	seconds
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

pre-sync-duration number

Description	Duration of the pre-sync phase
Context	system packet-link-qualification profile name <i>string</i> rpc pre-sync-duration number
Tree	pre-sync-duration
Units	seconds
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

setup-duration *number*

Description	Duration of the setup phase
Context	system packet-link-qualification profile name <i>string</i> rpc setup-duration <i>number</i>
Tree	setup-duration
Range	20 to 4294967295
Units	seconds
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

teardown-duration *number*

Description	Duration of the teardown phase
Context	system packet-link-qualification profile name <i>string</i> rpc teardown-duration <i>number</i>
Tree	teardown-duration
Range	15 to 4294967295
Units	seconds
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

protocols

Description	The routing protocols that are supported by the system
Context	system protocols
Tree	protocols
Configurable	True
Platforms	Supported on all platforms

bgp

Description	Enable the bgp context
--------------------	------------------------

Context	system protocols bgp
Tree	bgp
Configurable	True
Platforms	Supported on all platforms

restart-max-wait *number*

Description	The maximum amount of time that BGP will wait to receive End of RIB markers from all peers and for all address families that were up prior to restart. After this time elapses BGP declares that convergence has occurred and sends its own EOR markers to its peers.
Context	system protocols bgp restart-max-wait <i>number</i>
Tree	restart-max-wait
Range	0 to 3600
Default	600
Units	seconds
Configurable	True
Platforms	Supported on all platforms

ra-guard-policy *name string*

Description	List containing RA Guard Policy and parameters
Context	system ra-guard-policy <i>name string</i>
Tree	ra-guard-policy
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
Max. Elements	64

name *string*

Description	RA Guard Policy name
Context	system ra-guard-policy <i>name string</i>
String Length	1 to 255
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

action *keyword*

Description Describes the RA Guard Policy action for RA Messages matching the specified attributes. RA Messages not matching the specified attributes will be handled in the opposite manner.

Context [system ra-guard-policy name](#) *string* **action** *keyword*

Tree [action](#)

Default discard

Options

- accept
- discard

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

advertise-prefix-set *reference*

Description Reference to a prefix set to match advertised address within RA message

Context [system ra-guard-policy name](#) *string* **advertise-prefix-set** *reference*

Tree [advertise-prefix-set](#)

Reference [routing-policy prefix-set name](#) *string*

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

hop-limit *number*

Description Verifies the minimum advertised hop count limit, RA message value must be equal to or greater than hop-limit. If not specified the verification is skipped.

Context [system ra-guard-policy name](#) *string* **hop-limit** *number*

Tree [hop-limit](#)

Range 1 to 255

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

managed-config-flag *boolean*

Description	Causes the RA Guard policy to match IPv6 RA messages with the M (Managed address) flag set. If not specified the verification is skipped.
Context	system ra-guard-policy name <i>string</i> managed-config-flag <i>boolean</i>
Tree	managed-config-flag
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

other-config-flag *boolean*

Description	Causes the RA Guard policy to match IPv6 RA messages with the O (Other config) flag set. If not specified the verification is skipped.
Context	system ra-guard-policy name <i>string</i> other-config-flag <i>boolean</i>
Tree	other-config-flag
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

router-preference *keyword*

Description	Verifies that the advertised default router preference parameter value is equal to or less than the specified limit. If not specified the verification is skipped.
Context	system ra-guard-policy name <i>string</i> router-preference <i>keyword</i>
Tree	router-preference
Options	<ul style="list-style-type: none"> • high • medium • low
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

source-prefix-set *reference*

Description	Reference to a prefix set to match RA source address. If not specified the verification is skipped.
--------------------	---

Context	system ra-guard-policy name <i>string</i> source-prefix-set <i>reference</i>
Tree	source-prefix-set
Reference	routing-policy prefix-set name <i>string</i>
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

sflow

Description	Context to configure sFlow Agent parameters and report sFlow state
Context	system sflow
Tree	sflow
Configurable	True
Platforms	Supported on all platforms

admin-state *keyword*

Description	Administratively enable or disable sFlow for the system
Context	system sflow admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	Supported on all platforms

collector [collector-id](#) *number*

Description	List of sFlow collectors to which sFlow sample data is sent
Context	system sflow collector collector-id <i>number</i>
Tree	collector
Configurable	True
Platforms	Supported on all platforms
Max. Elements	8

collector-id *number*

Description	Specify the collector ID
Context	system sflow collector collector-id <i>number</i>
Range	1 to 8
Configurable	True
Platforms	Supported on all platforms

collector-address (*ipv4-address* | *ipv6-address*)

Description	The IP address for an sFlow collector
Context	system sflow collector collector-id <i>number</i> collector-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	collector-address
Configurable	True
Platforms	Supported on all platforms

network-instance *reference*

Description	Reference to a configured network-instance
Context	system sflow collector collector-id <i>number</i> network-instance <i>reference</i>
Tree	network-instance
Reference	network-instance <i>name</i> <i>string</i>
Configurable	True
Platforms	Supported on all platforms

next-hop (*ipv4-address* | *ipv6-address*)

Description	Specifies the active IP next hop used to reach the associated collector
Context	system sflow collector collector-id <i>number</i> next-hop (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	next-hop
Configurable	False
Platforms	Supported on all platforms

port number

Description	Specifies the destination UDP port number to be used in sFlow packets
Context	system sflow collector collector-id number port number
Tree	port
Default	6343
Configurable	True
Platforms	Supported on all platforms

source-address (*ipv4-address* | *ipv6-address*)

Description	Specifies the IP address to be used as the source address in sFlow packets
Context	system sflow collector collector-id number source-address (ipv4-address ipv6-address)
Tree	source-address
Configurable	True
Platforms	Supported on all platforms

dscp number

Description	Specify sFlow DSCP value This value specifies the DSCP value used in IP header of samples sent to the associated collectors.
Context	system sflow dscp number
Tree	dscp
Range	0 to 63
Default	0
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sample-rate number

Description	Specify sFlow sample rate This value is the rate at which traffic will be sampled at a rate of 1:N received packets.
Context	system sflow sample-rate number

Tree	sample-rate
Range	1 to 2000000
Default	10000
Configurable	True
Platforms	Supported on all platforms

sample-size *number*

Description	Specify sFlow sample size This value specifies the number of bytes the sFlow agent samples from each frame.
Context	system sflow sample-size number
Tree	sample-size
Range	256 512
Default	256
Configurable	True
Platforms	Supported on all platforms

source-address (*ipv4-address* | *ipv6-address*)

Description	Specifies the IP address to be used as the source address in sFlow packets
Context	system sflow source-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	source-address
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	system sflow statistics
Tree	statistics
Configurable	False
Platforms	Supported on all platforms

total-offered-packets *number*

Description	Total number of packets subject to sFlow sampling
Context	system sflow statistics total-offered-packets <i>number</i>
Tree	total-offered-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

total-samples-taken *number*

Description	Total number of sFlow samples taken
Context	system sflow statistics total-samples-taken <i>number</i>
Tree	total-samples-taken
Default	0
Configurable	False
Platforms	Supported on all platforms

total-sent-packets *number*

Description	Total number of sFlow packets sent to collectors
Context	system sflow statistics total-sent-packets <i>number</i>
Tree	total-sent-packets
Default	0
Configurable	False
Platforms	Supported on all platforms

snmp

Description	Top-level container for SNMP configuration and state
Context	system snmp
Tree	snmp
Configurable	True
Platforms	Supported on all platforms except IMGMT

access-group name *string*

Description	List of configured SNMP access-groups
Context	system snmp access-group name <i>string</i>
Tree	access-group
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *string*

Description	Name of the SNMP access-group
Context	system snmp access-group name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

admin-state *keyword*

Description	Enables the SNMP access-group
Context	system snmp access-group name <i>string</i> admin-state <i>keyword</i>
Tree	admin-state
Default	enable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

community-entry name *string*

Description	List of configured SNMPv2 communities
Context	system snmp access-group name <i>string</i> community-entry name <i>string</i>

Tree	community-entry
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name string

Description	Unique name for the SNMPv2 community.
Context	system snmp access-group name string community-entry name string
String Length	1 to 255
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

community string

Description	SNMPv2 community
Context	system snmp access-group name string community-entry name string community string
Tree	community
String Length	1 to 255
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

description string

Description	Description for the SNMPv2 community
Context	system snmp access-group name string community-entry name string description string
Tree	description
String Length	1 to 255
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix-list (*ipv4-prefix* | *ipv6-prefix*)

Description	Prefixes where this community can be used, both IPv4 and IPv6 addresses. A /32 or /128 mask can be used to limit it to a single ip-address
Context	system snmp access-group name <i>string</i> community-entry name <i>string</i> prefix-list (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)

oper-state *keyword*

Description	Details the operational state of the SNMP server
Context	system snmp network-instance name <i>reference</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed

- synchronizing
Component is currently being synchronized
- upgrading
Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable

Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version *string*

Description	The version string as provided by the gNSI client at the time of uploading the artifact The maps to the version field within a Entity message in the Credentialz protobuf.
Context	system ssh-server name <i>string</i> credentialz trusted-user-ca-keys version <i>string</i>
Tree	version
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

disable-shell *boolean*

Description	Disable the ability to spawn a shell for incoming connections
Context	system ssh-server name <i>string</i> disable-shell <i>boolean</i>
Tree	disable-shell
Default	false
Configurable	True
Platforms	Supported on all platforms

host-key

Description	Enter the host-key context
Context	system ssh-server name <i>string</i> host-key
Tree	host-key
Configurable	True
Platforms	Supported on all platforms

preserve *boolean*

Description	<p>Indicates whether the autogenerated SSH server host keys should be preserved on reboots</p> <p>Setting this to true will result in host keys in /etc/sshd not being cleared on a reboot. Alternatively setting this to false will result in host keys being removed and regenerated on each reboot of the system.</p> <p>This is useful only when the host keys are not statically configured and not dynamically configured using gNSI Credentialz service (and therefore are suitable to be potentially regenerated on every reboot).</p> <p>Takes effect only if the value is set to false for every configured ssh server instance.</p>
Context	system ssh-server name <i>string</i> host-key preserve <i>boolean</i>
Tree	preserve
Default	true
Configurable	True
Platforms	Supported on all platforms

type *type* *keyword*

Description	List of the SSH servers host private-keys and certificates
Context	system ssh-server name <i>string</i> host-key type <i>type</i> <i>keyword</i>
Tree	type
Configurable	True
Platforms	Supported on all platforms

type *keyword*

Description	Type of generated host key
--------------------	----------------------------

Context [system ssh-server name string host-key type type keyword](#)

- Options**
- [ssh-rsa-3076](#)
 - [ecdsa-sha2-nistp256](#)
 - [ecdsa-sha2-nistp521](#)
 - [ssh-ed25519](#)
 - [ssh-rsa-2048](#)
 - [ssh-rsa-4096](#)

Configurable True

Platforms Supported on all platforms

certificate string

Description Each item value should be the host key certificate as read from the *-cert.pub file generated by the CA including the certificate type, e.g. 'ssh-rsa-cert-v01@openssh.com AAAA<...> comment'.
This certificate is returned to clients during SSH init for the client to verify the host it is communicating with.
This sets the HostCertificate option within each SSH servers configuration file. The certificate should be generated by first extracting the systems current public key and having this signed by a CA.

Context [system ssh-server name string host-key type type keyword certificate string](#)

Tree [certificate](#)

Configurable True

Platforms Supported on all platforms

private-key string

Description The value should be the host private key as read from the private key file.
This sets the HostKey option within each SSH servers configuration file.

Context [system ssh-server name string host-key type type keyword private-key string](#)

Tree [private-key](#)

Configurable True

Platforms Supported on all platforms

public-key string

Description The value is be the host public key as read from the public key file.

Context	system ssh-server name string host-key type type keyword public-key string
Tree	public-key
Configurable	False
Platforms	Supported on all platforms

network-instance *reference*

Description	Network instance to run the SSH server in
Context	system ssh-server name string network-instance reference
Tree	network-instance
Reference	network-instance name string
Configurable	True
Platforms	Supported on all platforms except IMGMT

oper-state *keyword*

Description	Operational state of the SSH server instance
Context	system ssh-server name string oper-state keyword
Tree	oper-state
Options	<ul style="list-style-type: none"> • up Component or process is operational • down Component or process is not operational • empty Component slot is empty • downloading Component is downloading image into memory • booting Component is booting downloaded image • starting Component image operational, application processes starting • failed Component or process has failed • synchronizing Component is currently being synchronized • upgrading

- Component is currently being upgraded
- low-power
Component is offline due to insufficient system power
- degraded
Component or process is in a degraded state
- warm-reboot
Component or process is currently warm rebooting
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting
Component or process is currently waiting
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False
Platforms	Supported on all platforms

port number

Description	Port the SSH server instance will listen on for incoming connections
Context	system ssh-server name <i>string</i> port number
Tree	port
Range	0 to 65535
Default	22
Configurable	True
Platforms	Supported on all platforms

protocol-version number

Description	Protocol version in use by the SSH server
Context	system ssh-server name <i>string</i> protocol-version number
Tree	protocol-version
Configurable	False
Platforms	Supported on all platforms

rate-limit *number*

Description	Set a limit on the number of unauthenticated sessions to the SSH server after this number is met, the server will start dropping connection attempts
Context	system ssh-server name <i>string</i> rate-limit <i>number</i>
Tree	rate-limit
Default	20
Configurable	True
Platforms	Supported on all platforms

revoked-keys *string*

Description	List of revoked public keys Each items value should be the public key of a revoked keypair, e.g. 'ssh-rsa AAAA<...>= comment'. Any keys provided here cannot be used for public key authentication. This sets the RevokedKeys option within each SSH servers configuration file.
Context	system ssh-server name <i>string</i> revoked-keys <i>string</i>
Tree	revoked-keys
Configurable	True
Platforms	Supported on all platforms

source-address (*ipv4-address* | *ipv6-address*)

Description	List of IP addresses for the SSH server to listen on within the network-instance
Context	system ssh-server name <i>string</i> source-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	source-address
Configurable	True
Platforms	Supported on all platforms

timeout *number*

Description	Set the idle timeout in seconds on SSH connections
Context	system ssh-server name <i>string</i> timeout <i>number</i>
Tree	timeout

Default	0
Units	seconds
Configurable	True
Platforms	Supported on all platforms

trust-anchors *string*

Description	<p>List of public keys used to verify user certificates during authentication</p> <p>Each items value should be the public key of a CA, e.g. 'ssh-rsa AAAA<...>=comment'. If no trust anchors are configured, authentication using SSH certificates will not function.</p> <p>This sets the TrustedUserCAKeys option within each SSH servers configuration file.</p>
Context	system ssh-server name <i>string</i> trust-anchors <i>string</i>
Tree	trust-anchors
Configurable	True
Platforms	Supported on all platforms

use-credentialz *boolean*

Description	<p>Use the gNSI Credentialz service global SSH configuration for this SSH server instance</p> <p>Setting this to true will apply any gNSI Credentialz configuration for this SSH server instance. Static configuration will override any gNSI Credentialz configuration.</p>
Context	system ssh-server name <i>string</i> use-credentialz <i>boolean</i>
Tree	use-credentialz
Configurable	True
Platforms	Supported on all platforms

sync

Description	Context to configure sync parameters and report sessions state
Context	system sync
Tree	sync
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

freq-clock

Description	Enter the freq-clock context
Context	system sync freq-clock
Tree	freq-clock
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

active-reference *keyword*

Description	Indicates the current selected reference This will be an instance-number; or internal for the case of holdover or freerun.
Context	system sync freq-clock active-reference <i>keyword</i>
Tree	active-reference
Options	<ul style="list-style-type: none"> • 1 • 2 • 3 • 4 • 5 • internal
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

freq-clock-state *keyword*

Description	Shows the frequency clock mode state
Context	system sync freq-clock freq-clock-state <i>keyword</i>
Tree	freq-clock-state
Options	<ul style="list-style-type: none"> • not-present Frequency clock is locked to a line timing reference signal • master-free-run Frequency clock is master free run mode • master-holdover Frequency clock is master holdover mode • master-locked

Frequency clock is master locked mode

- slave

Frequency clock is slave mode

- acquiring

Frequency clock is acquiring mode

Configurable False

Platforms 7220 IXR-D5, 7250 IXR-X3b

freq-offset *decimal-number*

Description The frequency offset between the central frequency clock and the selected reference in ppb

Context [system sync freq-clock freq-offset decimal-number](#)

Tree [freq-offset](#)

Units parts-per-billion

Configurable False

Platforms 7220 IXR-D5, 7250 IXR-X3b

network-type *keyword*

Description Configures SyncE for SSM code-type as SONET or SDH mode `sdh` specifies the values corresponding to ITU-T G.781 Option 1 compliant networks. `sonet` specifies the values corresponding to ITU-T G.781 Option 2 compliant networks.

Context [system sync freq-clock network-type keyword](#)

Tree [network-type](#)

Default sonet

- Options**
- `sdh`
`sdh` specifies the values corresponding to G.781 Option 1 compliant networks
 - `sonet`
`sonet` specifies the values corresponding to G.781 Option 2 compliant networks

Configurable True

Platforms 7220 IXR-D5, 7250 IXR-X3b

ql-input-threshold *keyword*

Description	This command configures the minimum acceptable QL value Frequency references with lower QL will not be considered for selection by the system timing module. Options: unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec, eec1, eec2
Context	system sync freq-clock ql-input-threshold <i>keyword</i>
Tree	ql-input-threshold

Description	If the reference is not qualified, this identifies the reason
Context	system sync freq-references instance instance-number number not-qualified-reason keyword
Tree	not-qualified-reason
Options	<ul style="list-style-type: none"> • not-applicable Reason is not applicable • los Reference is not-qualified because of Loss of Signal (LOS) • ssm-quality Reference is not-qualified because of received SSM/QL level • out-of-range Reference is not-qualified because the reference is out of range in frequency • wtr Reference is not-qualified because the wait-to-restore timer has not expired • admin-disabled Reference is not-qualified because the reference has not been admin enabled
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

oper-state *keyword*

Description	Indicates the operational state of this line reference
Context	system sync freq-references instance instance-number <i>number</i> oper-state <i>keyword</i>
Tree	oper-state
Options	<ul style="list-style-type: none">• up Component or process is operational• down Component or process is not operational• empty Component slot is empty• downloading Component is downloading image into memory• booting Component is booting downloaded image• starting Component image operational, application processes starting• failed Component or process has failed• synchronizing Component is currently being synchronized• upgrading Component is currently being upgraded• low-power Component is offline due to insufficient system power• degraded Component or process is in a degraded state• warm-reboot Component or process is currently warm rebooting This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.• waiting Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

priority number

Description	Sets the priority of this line timing reference for the system timing selection process 1 = highest priority 5 = lowest priority Duplicate numbers are not allowed
Context	system sync freq-references instance instance-number number priority number
Tree	priority
Range	1 to 5
Default	3
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

ql-override keyword

Description	Override the incoming QL/SSM value for this line reference Quality level override of a timing reference Options are unused, prs, stu, st2, tnc, st3e, st3, prc, ssua, ssub, sec, eec1, eec2
Context	system sync freq-references instance instance-number number ql-override keyword
Tree	ql-override
Default	unused
Options	<ul style="list-style-type: none"> • unused No override or minimum QL level selected • prs QL of PRS • stu QL of STU • st2 QL of Stratum 2 • tnc QL of TNC

	<ul style="list-style-type: none"> • st3e QL of Stratum 3E • st3 QL of Stratum 3 • prc QL of PRC • ssua QL of SSU-A • ssub QL of SSU-B • sec QL of SEC • eec1 QL of EEC-1 • eec2 QL of EEC-2
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

ql-value *keyword*

Description	The incoming QL/SSM value from this line reference
Context	system sync freq-references instance instance-number number ql-value keyword
Tree	ql-value
Options	<ul style="list-style-type: none"> • unknown Unknown • prs QL of PRS • stu QL of STU • st2 QL of Stratum 2 • tnc QL of TNC • st3e

Configurable

False

Platforms

7220 IXR-D5, 7250 IXR-X3b

reference-status *keyword*

Description

The current status this line reference

Context	system sync freq-references instance instance-number number reference-status keyword
Tree	reference-status
Options	<ul style="list-style-type: none"> qualified Reference is in normal qualified state not-qualified Reference is in not-qualified state
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

source

Description	Source for this input frequency reference This shall be either a leafref to an interface or an application. The leafref must point to an existing physical ethernet interface.
Context	system sync freq-references instance instance-number number source
Tree	source
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

interface *reference*

Description	Enter the interface context
Context	system sync freq-references instance instance-number number source interface reference
Tree	interface
Reference	interface name string
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync0

Description	Enable the sync0 context
Context	system sync freq-references instance instance-number number source sync0
Tree	sync0

Configurable	True
Platforms	Supported on 7220 IXR-D5, 7250 IXR-X3b

one-pps

Description	Enter the one-pps context
Context	system sync one-pps
Tree	one-pps
Configurable	True
Platforms	7220 IXR-D5

admin-state *keyword*

Description	Configure the administrative state of the 1PPS (50 ohm) output port When enabled, output is enabled. Otherwise, the output is disabled.
Context	system sync one-pps admin-state <i>keyword</i>
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7220 IXR-D5

ptp

Description	Enter the ptp context
Context	system sync ptp
Tree	ptp
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

instance [instance-index](#) *number*

Description	List of one or more PTP instances in the product (PTP Node)
--------------------	---

Each PTP instance represents a distinct instance of PTP implementation (i.e. distinct Ordinary Clock, Boundary Clock, or Transparent Clock), maintaining a distinct time.

Context	system sync ptp instance instance-index number
Tree	instance
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

instance-index number

Description	The instance index of the current PTP instance This instance index is used for management purposes only. This instance index does not represent the PTP domain number and is not used in PTP messages.
Context	system sync ptp instance instance-index number
Range	1 to 2
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

current-ds

Description	Provides current data from operation of the protocol
Context	system sync ptp instance instance-index number current-ds
Tree	current-ds
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

mean-delay number

Description	The mean propagation time between this PTP instance and the master clock
Context	system sync ptp instance instance-index number current-ds mean-delay number
Tree	mean-delay
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

offset-from-master *number*

Description	The time difference between this PTP instance and the master clock
Context	system sync ptp instance instance-index number current-ds offset-from-master number
Tree	offset-from-master
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

steps-removed *number*

Description	The number of PTP clock steps in the path between the this PTP instance and the GM
Context	system sync ptp instance instance-index number current-ds steps-removed number
Tree	steps-removed
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

default-ds

Description	The default data set of the PTP instance In the context of the protocol, this data set is required for an Ordinary Clock or Boundary Clock
Context	system sync ptp instance instance-index number default-ds
Tree	default-ds
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

announce-receipt-timeout *number*

Description	Sets the time limit for missed Announce packets before the master clock is deemed down This command configures the announceReceiptTimeout value for all peer associations. This defines the number of Announce message intervals that must expire with no received Announce messages before declaring an ANNOUNCE_RECEIPT_TIMEOUT event.
--------------------	---

Context	system sync ptp instance instance-index number default-ds announce-receipt-timeout number
Tree	announce-receipt-timeout
Range	2 to 10
Default	3
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

clock-identity *binary*

Description	The clockIdentity of the local clock
Context	system sync ptp instance instance-index number default-ds clock-identity binary
Tree	clock-identity
String Length	8
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

clock-quality

Description	The clockQuality of the local clock
Context	system sync ptp instance instance-index number default-ds clock-quality
Tree	clock-quality
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

clock-accuracy *number*

Description	The clockAccuracy indicates the expected accuracy of the clock
Context	system sync ptp instance instance-index number default-ds clock-quality clock-accuracy number
Tree	clock-accuracy
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

clock-class *number*

Description	The clockClass denotes the traceability of the time or frequency distributed by the clock
Context	system sync ptp instance instance-index <i>number</i> default-ds clock-quality clock-class <i>number</i>
Tree	clock-class
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

offset-scaled-log-variance *number*

Description	The offsetScaledLogVariance provides an estimate of the variations of the clock
Context	system sync ptp instance instance-index <i>number</i> default-ds clock-quality offset-scaled-log-variance <i>number</i>
Tree	offset-scaled-log-variance
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

current-time

Description	The current time in the current data set
Context	system sync ptp instance instance-index <i>number</i> default-ds current-time
Tree	current-time
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

date-time *string*

Description	PTP current time converted to UTC and presented as a date-time string
Context	system sync ptp instance instance-index <i>number</i> default-ds current-time date-time <i>string</i>
Tree	date-time
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

time-nano-seconds *number*

Description	Nano-seconds of time
Context	system sync ptp instance instance-index number default-ds current-time time-nano-seconds number
Tree	time-nano-seconds
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

time-seconds *number*

Description	Seconds of time
Context	system sync ptp instance instance-index number default-ds current-time time-seconds number
Tree	time-seconds
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

domain-number *number*

Description	The IEEE Std 1588 domainNumber of the PTP instance A domain consists of one or more PTP instances communicating with each other as defined by the protocol. A domain shall define the scope of PTP message communication, state, operations, data sets, and timescale. Therefore, each domain represents a distinct time. The default domain number is defined by the profile. itug8275dot1: 24 itug8275dot2: 44
Context	system sync ptp instance instance-index number default-ds domain-number number
Tree	domain-number
Range	0 to 255
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

instance-enable *boolean*

Description	Enable PTP clock
Context	system sync ptp instance instance-index number default-ds instance-enable boolean

Tree	instance-enable
Default	false
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

instance-type *keyword*

Description	The type of PTP instance as per IEEE1588 standard For G.8275.1: oc is for T-GM, bc is for T-BC; T-TSC not supported since T-BC can be used for this role For G.8275.2: oc is for T-GM, bc is for T-BC-A and T-BC-P; T-TSC-A and T-TSC-P are not supported since T-BC-A or T-BC-P can be used for this role
Context	system sync ptp instance instance-index number default-ds instance-type keyword
Tree	instance-type
Default	bc
Options	<ul style="list-style-type: none"> bc boundary clock
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

local-priority *number*

Description	The IEEE Std 1588 priority2 of the PTP instance The priority2 member is compared by the Best Master Clock Algorithm (BMCA) after priority1 and clockQuality. Lower values take precedence.
Context	system sync ptp instance instance-index number default-ds local-priority number
Tree	local-priority
Range	1 to 255
Default	128
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

log-announce-interval *number*

Description	The base-2 logarithm of the mean announceInterval
--------------------	---

This is the mean time interval between successive Announce messages. The default log announce interval is defined by the profile. itug8275dot1: -3 (8 messages per second) itug8275dot2: 1 (1 message every two seconds)

Context	system sync ptp instance instance-index number default-ds log-announce-interval number
Tree	log-announce-interval
Range	-3 to 4
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

number-ports *number*

Description	The number of PTP ports on the instance
Context	system sync ptp instance instance-index number default-ds number-ports number
Tree	number-ports
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

priority1 *number*

Description	The IEEE Std 1588 priority1 of the PTP instance Since priority1 is one of the first comparisons performed by the Best Master Clock Algorithm (BMCA). Range is 0-255.
Context	system sync ptp instance instance-index number default-ds priority1 number
Tree	priority1
Range	0 to 255
Default	128
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

priority2 *number*

Description	The IEEE Std 1588 priority2 of the PTP instance The priority2 member is compared by the Best Master Clock Algorithm (BMCA) after priority1 and clockQuality. Lower values take precedence.
Context	system sync ptp instance instance-index number default-ds priority2 number

Tree	priority2
Range	0 to 255
Default	128
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

statistics

Description	Aggregate statistics for the PTP clock
Context	system sync ptp instance instance-index number default-ds statistics
Tree	statistics
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

anno-msg-rx *number*

Description	Specifies the number of announce messages received
Context	system sync ptp instance instance-index number default-ds statistics anno-msg-rx number
Tree	anno-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

anno-msg-tx *number*

Description	Specifies the number of announce messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics anno-msg-tx number
Tree	anno-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-req-msg-rx *number*

Description	Specifies the number of delay-req messages received
Context	system sync ptp instance instance-index number default-ds statistics del-req-msg-rx number

Tree	del-req-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-req-msg-tx number

Description	Specifies the number of delay-req messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics del-req-msg-tx number
Tree	del-req-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-resp-msg-rx number

Description	Specifies the number of delay-resp messages received
Context	system sync ptp instance instance-index number default-ds statistics del-resp-msg-rx number
Tree	del-resp-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-resp-msg-tx number

Description	Specifies the number of delay-resp messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics del-resp-msg-tx number
Tree	del-resp-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

delay-high-packet-loss number

Description	The number of events with high packet loss for delay req packets
Context	system sync ptp instance instance-index number default-ds statistics delay-high-packet-loss number
Tree	delay-high-packet-loss

Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

delay-packet-loss *number*

Description	The number of events with detected packet loss for the delay request/response packets
Context	system sync ptp instance instance-index <i>number</i> default-ds statistics delay-packet-loss <i>number</i>
Tree	delay-packet-loss
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

discards

Description	Aggregate discard statistics for the PTP clock
Context	system sync ptp instance instance-index <i>number</i> default-ds statistics discards
Tree	discards
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

alternate-master *number*

Description	Specifies the number of alternate master messages that were discarded
Context	system sync ptp instance instance-index <i>number</i> default-ds statistics discards alternate-master <i>number</i>
Tree	alternate-master
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

bad-domain *number*

Description	Specifies the number of bad domain messages that were discarded
--------------------	---

Context	system sync ptp instance instance-index number default-ds statistics discards bad-domain number
Tree	bad-domain
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

other number

Description	Specifies the number of other messages that were discarded
Context	system sync ptp instance instance-index number default-ds statistics discards other number
Tree	other
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

out-of-sequence number

Description	Specifies the number of out of sequence messages that were discarded
Context	system sync ptp instance instance-index number default-ds statistics discards out-of-sequence number
Tree	out-of-sequence
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

peer-disabled number

Description	Specifies the number of PTP messages that were discarded from disabled PTP peer Occurs when a PTP peer has been administratively disabled. This information is only available for configured and discovered peers.
Context	system sync ptp instance instance-index number default-ds statistics discards peer-disabled number
Tree	peer-disabled
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

follow-up-msg-rx *number*

Description	Specifies the number of follow-up messages received
Context	system sync ptp instance instance-index number default-ds statistics follow-up-msg-rx number
Tree	follow-up-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

follow-up-msg-tx *number*

Description	Specifies the number of follow-up messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics follow-up-msg-tx number
Tree	follow-up-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

multicast-msg-rate

Description	Aggregate multicast message rates for the PTP clock
Context	system sync ptp instance instance-index number default-ds statistics multicast-msg-rate
Tree	multicast-msg-rate
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

anno-msg-rate-rx *decimal-number*

Description	Specifies the rate of messages of announce messages received
Context	system sync ptp instance instance-index number default-ds statistics multicast-msg-rate anno-msg-rate-rx decimal-number
Tree	anno-msg-rate-rx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

anno-msg-rate-tx *decimal-number*

Description	Specifies the rate of messages of announce messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics multicast-msg-rate anno-msg-rate-tx decimal-number
Tree	anno-msg-rate-tx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-req-msg-rate-rx *decimal-number*

Description	Specifies the rate of messages of delay-req messages received
Context	system sync ptp instance instance-index number default-ds statistics multicast-msg-rate del-req-msg-rate-rx decimal-number
Tree	del-req-msg-rate-rx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-req-msg-rate-tx *decimal-number*

Description	Specifies the rate of messages of delay-req messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics multicast-msg-rate del-req-msg-rate-tx decimal-number
Tree	del-req-msg-rate-tx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-resp-msg-rate-rx *decimal-number*

Description	Specifies the rate of messages of delay-resp messages received
Context	system sync ptp instance instance-index number default-ds statistics multicast-msg-rate del-resp-msg-rate-rx decimal-number
Tree	del-resp-msg-rate-rx
Units	messages-per-second

Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-resp-msg-rate-tx *decimal-number*

Description	Specifies the rate of messages of delay-resp messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics multicast-msg-rate del-resp-msg-rate-tx <i>decimal-number</i>
Tree	del-resp-msg-rate-tx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

follow-up-msg-rate-rx *decimal-number*

Description	Specifies the rate of messages of follow-up messages received
Context	system sync ptp instance instance-index number default-ds statistics multicast-msg-rate follow-up-msg-rate-rx <i>decimal-number</i>
Tree	follow-up-msg-rate-rx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

follow-up-msg-rate-tx *decimal-number*

Description	Specifies the rate of messages of follow-up messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics multicast-msg-rate follow-up-msg-rate-tx <i>decimal-number</i>
Tree	follow-up-msg-rate-tx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

other-rate-rx *decimal-number*

Description	Specifies the rate of messages of other messages received
--------------------	---

Context	system sync ptp instance instance-index number default-ds statistics multicast-msg-rate other-rate-rx decimal-number
Tree	other-rate-rx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

signaling-msg-rate-rx *decimal-number*

Description	Specifies the rate of messages of signaling messages received
Context	system sync ptp instance instance-index number default-ds statistics multicast-msg-rate signaling-msg-rate-rx decimal-number
Tree	signaling-msg-rate-rx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

signaling-msg-rate-tx *decimal-number*

Description	Specifies the rate of messages of signaling messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics multicast-msg-rate signaling-msg-rate-tx decimal-number
Tree	signaling-msg-rate-tx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync-msg-rate-rx *decimal-number*

Description	Specifies the rate of messages of sync messages received
Context	system sync ptp instance instance-index number default-ds statistics multicast-msg-rate sync-msg-rate-rx decimal-number
Tree	sync-msg-rate-rx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync-msg-rate-tx *decimal-number*

Description	Specifies the rate of messages of sync messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics multicast-msg-rate sync-msg-rate-tx decimal-number
Tree	sync-msg-rate-tx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

other-rx *number*

Description	Specifies the number of other messages received
Context	system sync ptp instance instance-index number default-ds statistics other-rx number
Tree	other-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

signaling-msg-rx *number*

Description	Specifies the number of follow-up messages received
Context	system sync ptp instance instance-index number default-ds statistics signaling-msg-rx number
Tree	signaling-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

signaling-msg-tx *number*

Description	Specifies the number of follow-up messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics signaling-msg-tx number
Tree	signaling-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

signaling-uni-neg-tlv

Description	Counts of different unicast negotiation TLVs
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv
Tree	signaling-uni-neg-tlv
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ack-cancel-anno-rx number

Description	Specifies the number of acknowledgements of cancels for announce messages have been received
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv ack-cancel-anno-rx number
Tree	ack-cancel-anno-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ack-cancel-anno-tx number

Description	Specifies the number of acknowledgements of cancels for announce messages have been transmitted
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv ack-cancel-anno-tx number
Tree	ack-cancel-anno-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ack-cancel-delay-resp-rx number

Description	Specifies the number of acknowledgements of cancels for delay-resp messages have been received
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv ack-cancel-delay-resp-rx number
Tree	ack-cancel-delay-resp-rx

Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ack-cancel-delay-resp-tx *number*

Description	Specifies the number of acknowledgements of cancels for delay-resp messages have been transmitted
Context	system sync ptp instance instance-index <i>number</i> default-ds statistics signaling-uni-neg-tlv ack-cancel-delay-resp-tx <i>number</i>
Tree	ack-cancel-delay-resp-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ack-cancel-sync-rx *number*

Description	Specifies the number of acknowledgements of cancels for sync messages have been received
Context	system sync ptp instance instance-index <i>number</i> default-ds statistics signaling-uni-neg-tlv ack-cancel-sync-rx <i>number</i>
Tree	ack-cancel-sync-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ack-cancel-sync-tx *number*

Description	Specifies the number of acknowledgements of cancels for sync messages have been transmitted
Context	system sync ptp instance instance-index <i>number</i> default-ds statistics signaling-uni-neg-tlv ack-cancel-sync-tx <i>number</i>
Tree	ack-cancel-sync-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

cancel-anno-rx *number*

Description	Specifies the number of cancels for announce messages have been received
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv cancel-anno-rx number
Tree	cancel-anno-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

cancel-anno-tx *number*

Description	Specifies the number of cancels for announce messages have been transmitted
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv cancel-anno-tx number
Tree	cancel-anno-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

cancel-delay-resp-rx *number*

Description	Specifies the number of cancels for delay-resp messages have been received
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv cancel-delay-resp-rx number
Tree	cancel-delay-resp-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

cancel-delay-resp-tx *number*

Description	Specifies the number of cancels for delay-resp messages have been transmitted
--------------------	---

Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv cancel-delay-resp-tx number
Tree	cancel-delay-resp-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

cancel-sync-rx number

Description	Specifies the number of cancels for sync messages have been received
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv cancel-sync-rx number
Tree	cancel-sync-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

cancel-sync-tx number

Description	Specifies the number of cancels for sync messages have been transmitted
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv cancel-sync-tx number
Tree	cancel-sync-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-anno-rx number

Description	Specifies the number of grants for announce messages have been received
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv grant-anno-rx number
Tree	grant-anno-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-anno-tx *number*

Description	Specifies the number of grants for announce messages have been transmitted
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv grant-anno-tx number
Tree	grant-anno-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-delay-resp-rx *number*

Description	Specifies the number of grants for delay-resp messages have been received
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv grant-delay-resp-rx number
Tree	grant-delay-resp-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-delay-resp-tx *number*

Description	Specifies the number of grants for delay-resp messages have been transmitted
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv grant-delay-resp-tx number
Tree	grant-delay-resp-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-sync-rx *number*

Description	Specifies the number of grants for sync messages have been received
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv grant-sync-rx number

Tree	grant-sync-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-sync-tx *number*

Description	Specifies the number of grants for sync messages have been transmitted
Context	system sync ptp instance instance-index <i>number</i> default-ds statistics signaling-uni-neg-tlv grant-sync-tx <i>number</i>
Tree	grant-sync-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

other-tlv *number*

Description	The count of unsupported signaling message TLVs received.
Context	system sync ptp instance instance-index <i>number</i> default-ds statistics signaling-uni-neg-tlv other-tlv <i>number</i>
Tree	other-tlv
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-anno-rx *number*

Description	Specifies the number of rejections for announce messages have been received
Context	system sync ptp instance instance-index <i>number</i> default-ds statistics signaling-uni-neg-tlv reject-anno-rx <i>number</i>
Tree	reject-anno-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-anno-tx *number*

Description	Specifies the number of rejections for announce messages have been transmitted
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv reject-anno-tx number
Tree	reject-anno-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-delay-resp-rx *number*

Description	Specifies the number of rejections for delay-resp messages have been received
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv reject-delay-resp-rx number
Tree	reject-delay-resp-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-delay-resp-tx *number*

Description	Specifies the number of rejections for delay-resp messages have been transmitted
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv reject-delay-resp-tx number
Tree	reject-delay-resp-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-sync-rx *number*

Description	Specifies the number of rejections for sync messages have been received
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv reject-sync-rx number

Tree	reject-sync-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-sync-tx *number*

Description	Specifies the number of rejections for sync messages have been transmitted
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv reject-sync-tx number
Tree	reject-sync-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-anno-rx *number*

Description	Specifies the number of requests for announce messages have been received
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv request-anno-rx number
Tree	request-anno-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-anno-tx *number*

Description	Specifies the number of requests for announce messages have been transmitted
Context	system sync ptp instance instance-index number default-ds statistics signaling-uni-neg-tlv request-anno-tx number
Tree	request-anno-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-delay-resp-rx *number*

Description	Specifies the number of requests for delay-resp messages have been received
Context	system sync ptp instance instance-index <i>number</i> default-ds statistics signaling-uni-neg-tlv request-delay-resp-rx <i>number</i>
Tree	request-delay-resp-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-delay-resp-tx *number*

Description	Specifies the number of requests for delay-resp messages have been transmitted
Context	system sync ptp instance instance-index <i>number</i> default-ds statistics signaling-uni-neg-tlv request-delay-resp-tx <i>number</i>
Tree	request-delay-resp-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-sync-rx *number*

Description	Specifies the number of requests for sync messages have been received
Context	system sync ptp instance instance-index <i>number</i> default-ds statistics signaling-uni-neg-tlv request-sync-rx <i>number</i>
Tree	request-sync-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-sync-tx *number*

Description	Specifies the number of requests for sync messages have been transmitted
Context	system sync ptp instance instance-index <i>number</i> default-ds statistics signaling-uni-neg-tlv request-sync-tx <i>number</i>

Tree	request-sync-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync-high-packet-loss *number*

Description	The number of events with high packet loss of sync packets
Context	system sync ptp instance instance-index number default-ds statistics sync-high-packet-loss number
Tree	sync-high-packet-loss
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync-msg-rx *number*

Description	Specifies the number of sync messages received
Context	system sync ptp instance instance-index number default-ds statistics sync-msg-rx number
Tree	sync-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync-msg-tx *number*

Description	Specifies the number of sync messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics sync-msg-tx number
Tree	sync-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync-packet-loss *number*

Description	The number of events with detected packet loss of sync packets from the master clock
--------------------	--

Context	system sync ptp instance instance-index number default-ds statistics sync-packet-loss number
Tree	sync-packet-loss
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

unicast-msg-rate

Description	Aggregate unicast message rates for the PTP clock
Context	system sync ptp instance instance-index number default-ds statistics unicast-msg-rate
Tree	unicast-msg-rate
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

anno-msg-rate-rx *decimal-number*

Description	Specifies the rate of messages of announce messages received
Context	system sync ptp instance instance-index number default-ds statistics unicast-msg-rate anno-msg-rate-rx decimal-number
Tree	anno-msg-rate-rx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

anno-msg-rate-tx *decimal-number*

Description	Specifies the rate of messages of announce messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics unicast-msg-rate anno-msg-rate-tx decimal-number
Tree	anno-msg-rate-tx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-req-msg-rate-rx *decimal-number*

Description	Specifies the rate of messages of delay-req messages received
Context	system sync ptp instance instance-index number default-ds statistics unicast-msg-rate del-req-msg-rate-rx decimal-number
Tree	del-req-msg-rate-rx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-req-msg-rate-tx *decimal-number*

Description	Specifies the rate of messages of delay-req messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics unicast-msg-rate del-req-msg-rate-tx decimal-number
Tree	del-req-msg-rate-tx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-resp-msg-rate-rx *decimal-number*

Description	Specifies the rate of messages of delay-resp messages received
Context	system sync ptp instance instance-index number default-ds statistics unicast-msg-rate del-resp-msg-rate-rx decimal-number
Tree	del-resp-msg-rate-rx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-resp-msg-rate-tx *decimal-number*

Description	Specifies the rate of messages of delay-resp messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics unicast-msg-rate del-resp-msg-rate-tx decimal-number
Tree	del-resp-msg-rate-tx
Units	messages-per-second

Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

follow-up-msg-rate-rx *decimal-number*

Description	Specifies the rate of messages of follow-up messages received
Context	system sync ptp instance instance-index number default-ds statistics unicast-msg-rate follow-up-msg-rate-rx <i>decimal-number</i>
Tree	follow-up-msg-rate-rx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

follow-up-msg-rate-tx *decimal-number*

Description	Specifies the rate of messages of follow-up messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics unicast-msg-rate follow-up-msg-rate-tx <i>decimal-number</i>
Tree	follow-up-msg-rate-tx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

other-rate-rx *decimal-number*

Description	Specifies the rate of messages of other messages received
Context	system sync ptp instance instance-index number default-ds statistics unicast-msg-rate other-rate-rx <i>decimal-number</i>
Tree	other-rate-rx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

signaling-msg-rate-rx *decimal-number*

Description	Specifies the rate of messages of signaling messages received
--------------------	---

Context	system sync ptp instance instance-index number default-ds statistics unicast-msg-rate signaling-msg-rate-rx decimal-number
Tree	signaling-msg-rate-rx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

signaling-msg-rate-tx decimal-number

Description	Specifies the rate of messages of signaling messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics unicast-msg-rate signaling-msg-rate-tx decimal-number
Tree	signaling-msg-rate-tx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync-msg-rate-rx decimal-number

Description	Specifies the rate of messages of sync messages received
Context	system sync ptp instance instance-index number default-ds statistics unicast-msg-rate sync-msg-rate-rx decimal-number
Tree	sync-msg-rate-rx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync-msg-rate-tx decimal-number

Description	Specifies the rate of messages of sync messages transmitted
Context	system sync ptp instance instance-index number default-ds statistics unicast-msg-rate sync-msg-rate-tx decimal-number
Tree	sync-msg-rate-tx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

time-recovery-engine

Description	Enter the time-recovery-engine context
Context	system sync ptp instance instance-index number default-ds time-recovery-engine
Tree	time-recovery-engine
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

last-adjustment number

Description	Specifies the last adjustment in nanoseconds to the local time of the PTP clock
Context	system sync ptp instance instance-index number default-ds time-recovery-engine last-adjustment number
Tree	last-adjustment
Units	nanoseconds
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

last-adjustment-timestamp string

Description	The time when last-adjustment was last calculated
Context	system sync ptp instance instance-index number default-ds time-recovery-engine last-adjustment-timestamp string
Tree	last-adjustment-timestamp
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

recovery-state keyword

Description	Specifies the current state of the time recovery engine in the PTP clock
Context	system sync ptp instance instance-index number default-ds time-recovery-engine recovery-state keyword
Tree	recovery-state
Options	<ul style="list-style-type: none"> not-applicable

Not applicable to time recovery

- initial
Initializing state
- acquiring
Acquiring state
- holdover
Holdover state
- locked
Locked state

Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

state-last-changed *string*

Description	Specifies the last occurrence of a ptp state change for the time recovery engine
Context	system sync ptp instance instance-index number default-ds time-recovery-engine state-last-changed <i>string</i>
Tree	state-last-changed
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

statistics

Description	Time recovery engine state statistics for the PTP clock
Context	system sync ptp instance instance-index number default-ds time-recovery-engine statistics
Tree	statistics
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

delay-too-much-pdv *number*

Description	The number of events with high PDV for delay request/response packets for time recovery
--------------------	---

Context	system sync ptp instance instance-index number default-ds time-recovery-engine statistics delay-too-much-pdv number
Tree	delay-too-much-pdv
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync-too-much-pdv *number*

Description	The number of events with high PDV for sync packets for time recovery
Context	system sync ptp instance instance-index number default-ds time-recovery-engine statistics sync-too-much-pdv number
Tree	sync-too-much-pdv
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

time-in-acquiring *number*

Description	Specifies the number of seconds while in Acquiring state
Context	system sync ptp instance instance-index number default-ds time-recovery-engine statistics time-in-acquiring number
Tree	time-in-acquiring
Units	seconds
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

time-in-holdover *number*

Description	Specifies the number of seconds while in Holdover state
Context	system sync ptp instance instance-index number default-ds time-recovery-engine statistics time-in-holdover number
Tree	time-in-holdover
Units	seconds
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

time-in-initial *number*

Description	Specifies the number of seconds while in Initializing state
Context	system sync ptp instance instance-index number default-ds time-recovery-engine statistics time-in-initial number
Tree	time-in-initial
Units	seconds
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

time-in-locked *number*

Description	Specifies the number of seconds while in Locked state
Context	system sync ptp instance instance-index number default-ds time-recovery-engine statistics time-in-locked number
Tree	time-in-locked
Units	seconds
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

two-step-flag *boolean*

Description	Indicates if the clock is operating in two-step mode
Context	system sync ptp instance instance-index number default-ds two-step-flag boolean
Tree	two-step-flag
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

parent-ds

Description	The parent data set of the clock
Context	system sync ptp instance instance-index number parent-ds
Tree	parent-ds
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grandmaster-clock-quality

Description	The clockQuality of the grandmaster clock
Context	system sync ptp instance instance-index number parent-ds grandmaster-clock-quality
Tree	grandmaster-clock-quality
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

clock-accuracy number

Description	The clockAccuracy indicates the expected accuracy of the clock
Context	system sync ptp instance instance-index number parent-ds grandmaster-clock-quality clock-accuracy number
Tree	clock-accuracy
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

clock-class number

Description	The clockClass denotes the traceability of the time or frequency distributed by the clock
Context	system sync ptp instance instance-index number parent-ds grandmaster-clock-quality clock-class number
Tree	clock-class
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

offset-scaled-log-variance number

Description	The offsetScaledLogVariance provides an estimate of the variations of the clock
Context	system sync ptp instance instance-index number parent-ds grandmaster-clock-quality offset-scaled-log-variance number
Tree	offset-scaled-log-variance
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grandmaster-identity *binary*

Description	The clockIdentity of the grandmaster clock
Context	system sync ptp instance instance-index number parent-ds grandmaster-identity binary
Tree	grandmaster-identity
String Length	8
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grandmaster-priority1 *number*

Description	The priority1 attribute of the grandmaster clock
Context	system sync ptp instance instance-index number parent-ds grandmaster-priority1 number
Tree	grandmaster-priority1
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grandmaster-priority2 *number*

Description	The priority2 attribute of the grandmaster clock
Context	system sync ptp instance instance-index number parent-ds grandmaster-priority2 number
Tree	grandmaster-priority2
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

parent-port-identity

Description	The portIdentity of the port on the master
Context	system sync ptp instance instance-index number parent-ds parent-port-identity
Tree	parent-port-identity
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

clock-identity *binary*

Description	Identity of the parent clock
Context	system sync ptp instance instance-index number parent-ds parent-port-identity clock-identity binary
Tree	clock-identity
String Length	8
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-number *number*

Description	Port number of the parent clock
Context	system sync ptp instance instance-index number parent-ds parent-port-identity port-number number
Tree	port-number
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

protocol-address

Description	The protocol address of the PTP Port that issues the Sync messages
Context	system sync ptp instance instance-index number parent-ds protocol-address
Tree	protocol-address
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ip

Description	Enter the ip context
Context	system sync ptp instance instance-index number parent-ds protocol-address ip
Tree	ip
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ip-address (*ipv4-address* | *ipv6-address*)

Description	IP address for the PTP peer
Context	system sync ptp instance instance-index number parent-ds protocol-address ip ip-address (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	ip-address
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

network-instance *reference*

Description	Network instance containing the IP address
Context	system sync ptp instance instance-index number parent-ds protocol-address ip network-instance reference
Tree	network-instance
Reference	network-instance name string
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

mac-address *string*

Description	The MAC address of the PTP port This is only valid for PTP over ethernet encapsulation.
Context	system sync ptp instance instance-index number parent-ds protocol-address mac-address string
Tree	mac-address
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

network-protocol *identityref*

Description	Protocol used by a PTP instance to transport PTP messages
Context	system sync ptp instance instance-index number parent-ds protocol-address network-protocol identityref
Tree	network-protocol
Options	<ul style="list-style-type: none"> udp-ipv4 UDP on IPv4. Numeric value is 0001 hex

- `udp-ipv6`
UDP on IPv6. Numeric value is 0002 hex
- `ieee802-3`
IEEE Std 802.3 (Ethernet). Numeric value is 0003 hex
- `devicenet`
DeviceNet. Numeric value is 0004 hex
- `controlnet`
ControlNet. Numeric value is 0005 hex
- `profinet`
PROFINET. Numeric value is 0006 hex
- `otn`
Optical Transport Network (OTN). Numeric value is 0007 hex
- `unknown`
Unknown. Numeric value is FFFE hex

Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-ds-cfg-ip-list [port-index](#) *number*

Description	List of port data sets for configured IP peers
Context	system sync ptp instance instance-index <i>number</i> port-ds-cfg-ip-list port-index <i>number</i>
Tree	port-ds-cfg-ip-list
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-index *number*

Description	<p>Index into the port-ds list</p> <p>This is not the PTP port number. Configurable ports use port indices 1 through 999 but there is a limit on the overall number of these configured ports based on the platform and software release.</p> <p>The data sets (i.e., information model) of IEEE Std 1588-2008 specify a member <code>portDS.portIdentity</code>, which uses a typed struct with members <code>clockIdentity</code> and <code>portNumber</code>.</p> <p>In this YANG data model, <code>portIdentity</code> is not modeled in the <code>port-ds</code>. However, its members are provided as follows: <code>portIdentity.portNumber</code> is provided as this <code>ptp-port-number</code> leaf in <code>port-ds</code>, and <code>portIdentity.clockIdentity</code> is provided</p>
--------------------	--

as the clock-identity leaf in default-ds of the instance (i.e., ../default-ds/clock-identity).

Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number
Range	1 to 999
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

admin-state *keyword*

Description	The administrative state of the ptp port
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number admin-state keyword
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

announce-receipt-timeout *number*

Description	<p>Sets the time limit for missed Announce packets before the master clock is deemed down</p> <p>This command configures the announceReceiptTimeout value for all peer associations. This defines the number of Announce message intervals that must expire with no received Announce messages before declaring an ANNOUNCE_RECEIPT_TIMEOUT event. To change this setting, refer to announce-receipt-timeout in the Default data set.</p>
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number announce-receipt-timeout number
Tree	announce-receipt-timeout
Range	2 to 10
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

best-master *boolean*

Description	Indicates if this peer was selected by the BMCA to be the best master
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number best-master boolean
Tree	best-master
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

clock-identity *binary*

Description	Identity of the peer clock
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number clock-identity binary
Tree	clock-identity
String Length	8
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grandmaster-clock-quality

Description	The clock quality of the grandmaster clock in the last Announce message received from this peer
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number grandmaster-clock-quality
Tree	grandmaster-clock-quality
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

clock-accuracy *number*

Description	The clockAccuracy indicates the expected accuracy of the clock
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number grandmaster-clock-quality clock-accuracy number
Tree	clock-accuracy
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

clock-class *number*

Description	The clockClass denotes the traceability of the time or frequency distributed by the clock
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number grandmaster-clock-quality clock-class number
Tree	clock-class
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

offset-scaled-log-variance *number*

Description	The offsetScaledLogVariance provides an estimate of the variations of the clock
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number grandmaster-clock-quality offset-scaled-log-variance number
Tree	offset-scaled-log-variance
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grandmaster-identity *binary*

Description	The clockIdentity of the grandmaster clock in the last Announce message received from this peer
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number grandmaster-identity binary
Tree	grandmaster-identity
String Length	8
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grandmaster-priority1 *number*

Description	The priority1 of the grandmaster clock in the last Announce message received from this peer
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number grandmaster-priority1 number
Tree	grandmaster-priority1

Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grandmaster-priority2 *number*

Description	The priority2 of the grandmaster clock in the last Announce message received from this peer
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number grandmaster-priority2 number
Tree	grandmaster-priority2
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

last-rx-interface *reference*

Description	Interface used for the last PTP message received from this peer
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number last-rx-interface reference
Tree	last-rx-interface
Reference	interface name string
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

last-tx-interface *reference*

Description	Interface used for the last PTP message transmitted to this peer
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number last-tx-interface reference
Tree	last-tx-interface
Reference	interface name string
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

local-priority *number*

Description	Specifies the local priority of the ptp port
--------------------	--

Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number local-priority number
Tree	local-priority
Range	1 to 255
Default	128
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

log-announce-interval *number*

Description	The base-2 logarithm of the mean announceInterval Mean time interval between successive Announce messages. To change this setting, refer to log-announce-interval in the Default data set.
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number log-announce-interval number
Tree	log-announce-interval
Range	-3 to 4
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

log-min-delay-req-interval *number*

Description	The base-2 logarithm of the minDelayReqInterval The minimum permitted mean time interval between successive Delay_Req messages. The value is not configurable. The delay messages use the same interval as for Sync messages (log-sync-interval)
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number log-min-delay-req-interval number
Tree	log-min-delay-req-interval
Range	-6 to 0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

log-sync-interval *number*

Description	The base-2 logarithm of the mean SyncInterval for multicast messages The default log sync interval is defined by the profile. itug8275dot1: -4 (16 messages per second) itug8275dot2: -6 (64 messages per second) The
--------------------	--

rates for unicast transmissions are negotiated separately on a per-port basis and are not constrained by this attribute.

Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number log-sync-interval number
Tree	log-sync-interval
Range	-6 to 0
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

major-version-number *number*

Description	The PTP major version number in use on the port
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number major-version-number number
Tree	major-version-number
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

minor-version-number *number*

Description	The PTP minor version number in use on the port
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number minor-version-number number
Tree	minor-version-number
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

parent-clock *boolean*

Description	Indicates if this peer is the current parent clock of this PTP clock May differ from best-master due to use of local GNSS as time source.
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number parent-clock boolean
Tree	parent-clock
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

peer

Description	Enter the peer context
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number peer
Tree	peer
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

ip-address (*ipv4-address* | *ipv6-address*)

Description	IP address for the PTP peer Only Unicast addresses are supported
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number peer ip-address (ipv4-address ipv6-address)
Tree	ip-address
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

network-instance *reference*

Description	Network instance used by this peer All configured peers use the same network-instance. It can be configured at the top level of the ptp tree.
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number peer network-instance reference
Tree	network-instance
Reference	network-instance name string
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-number *number*

Description	Port number of the peer clock
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number port-number number
Tree	port-number

Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-state *keyword*

Description	Current state associated with the port
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number port-state keyword
Tree	port-state
Options	<ul style="list-style-type: none"> • initializing The port is initializing its data sets, hardware, and communication facilities • faulty The port is in the fault state • disabled The port is disabled and is not communicating PTP messages • listening The port is listening for an Announce message • pre-master The port is in the pre-master state • master The port is behaving as a master port • passive The port is in the passive state • uncalibrated A master port has been selected, but the port is still in the uncalibrated state • slave The port is synchronizing to the selected master port
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ptp-port-number *number*

Description	IEEE Std 1588 portNumber This is the port-number that will appear in messages sent for this port-index.
--------------------	--

Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number ptp-port-number number
Tree	ptp-port-number
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

statistics

Description	Total messages for a specific PTP port
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics
Tree	statistics
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

anno-msg-rx *number*

Description	Specifies the number of announce messages received
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics anno-msg-rx number
Tree	anno-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

anno-msg-tx *number*

Description	Specifies the number of announce messages transmitted
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics anno-msg-tx number
Tree	anno-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-req-msg-rx *number*

Description	Specifies the number of delay-req messages received
--------------------	---

Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics del-req-msg-rx number
Tree	del-req-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-req-msg-tx number

Description	Specifies the number of delay-req messages transmitted
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics del-req-msg-tx number
Tree	del-req-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-resp-msg-rx number

Description	Specifies the number of delay-resp messages received
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics del-resp-msg-rx number
Tree	del-resp-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-resp-msg-tx number

Description	Specifies the number of delay-resp messages transmitted
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics del-resp-msg-tx number
Tree	del-resp-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

discards

Description	Aggregate discard statistics for the PTP clock
--------------------	--

Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics discards
Tree	discards
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

alternate-master number

Description	Specifies the number of alternate master messages that were discarded
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics discards alternate-master number
Tree	alternate-master
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

bad-domain number

Description	Specifies the number of bad domain messages that were discarded
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics discards bad-domain number
Tree	bad-domain
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

other number

Description	Specifies the number of other messages that were discarded
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics discards other number
Tree	other
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

out-of-sequence number

Description	Specifies the number of out of sequence messages that were discarded
--------------------	--

Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics discards out-of-sequence number
Tree	out-of-sequence
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

peer-disabled number

Description	Specifies the number of PTP messages that were discarded from disabled PTP peer Occurs when a PTP peer has been administratively disabled. This information is only available for configured and discovered peers.
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics discards peer-disabled number
Tree	peer-disabled
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

follow-up-msg-rx number

Description	Specifies the number of follow-up messages received
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics follow-up-msg-rx number
Tree	follow-up-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

follow-up-msg-tx number

Description	Specifies the number of follow-up messages transmitted
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics follow-up-msg-tx number
Tree	follow-up-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

other-rx number

Description	Specifies the number of other messages received
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics other-rx number
Tree	other-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

signaling-msg-rx number

Description	Specifies the number of follow-up messages received
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-msg-rx number
Tree	signaling-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

signaling-msg-tx number

Description	Specifies the number of follow-up messages transmitted
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-msg-tx number
Tree	signaling-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

signaling-uni-neg-tlv

Description	Counts of different unicast negotiation TLVs
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv
Tree	signaling-uni-neg-tlv
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ack-cancel-anno-rx *number*

Description	Specifies the number of acknowledgements of cancels for announce messages have been received
Context	system sync ptp instance instance-index <i>number</i> port-ds-cfg-ip-list port-index <i>number</i> statistics signaling-uni-neg-tlv ack-cancel-anno-rx <i>number</i>
Tree	ack-cancel-anno-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ack-cancel-anno-tx *number*

Description	Specifies the number of acknowledgements of cancels for announce messages have been transmitted
Context	system sync ptp instance instance-index <i>number</i> port-ds-cfg-ip-list port-index <i>number</i> statistics signaling-uni-neg-tlv ack-cancel-anno-tx <i>number</i>
Tree	ack-cancel-anno-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ack-cancel-delay-resp-rx *number*

Description	Specifies the number of acknowledgements of cancels for delay-resp messages have been received
Context	system sync ptp instance instance-index <i>number</i> port-ds-cfg-ip-list port-index <i>number</i> statistics signaling-uni-neg-tlv ack-cancel-delay-resp-rx <i>number</i>
Tree	ack-cancel-delay-resp-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ack-cancel-delay-resp-tx *number*

Description	Specifies the number of acknowledgements of cancels for delay-resp messages have been transmitted
--------------------	---

Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv ack-cancel-delay-resp-tx number
Tree	ack-cancel-delay-resp-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ack-cancel-sync-rx number

Description	Specifies the number of acknowledgements of cancels for sync messages have been received
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv ack-cancel-sync-rx number
Tree	ack-cancel-sync-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ack-cancel-sync-tx number

Description	Specifies the number of acknowledgements of cancels for sync messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv ack-cancel-sync-tx number
Tree	ack-cancel-sync-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

cancel-anno-rx number

Description	Specifies the number of cancels for announce messages have been received
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv cancel-anno-rx number
Tree	cancel-anno-rx
Default	0
Configurable	False

Platforms 7220 IXR-D5, 7250 IXR-X3b

cancel-anno-tx *number*

Description Specifies the number of cancels for announce messages have been transmitted

Context [system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv cancel-anno-tx number](#)

Tree [cancel-anno-tx](#)

Default 0

Configurable False

Platforms 7220 IXR-D5, 7250 IXR-X3b

cancel-delay-resp-rx *number*

Description Specifies the number of cancels for delay-resp messages have been received

Context [system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv cancel-delay-resp-rx number](#)

Tree [cancel-delay-resp-rx](#)

Default 0

Configurable False

Platforms 7220 IXR-D5, 7250 IXR-X3b

cancel-delay-resp-tx *number*

Description Specifies the number of cancels for delay-resp messages have been transmitted

Context [system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv cancel-delay-resp-tx number](#)

Tree [cancel-delay-resp-tx](#)

Default 0

Configurable False

Platforms 7220 IXR-D5, 7250 IXR-X3b

cancel-sync-rx *number*

Description Specifies the number of cancels for sync messages have been received

Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv cancel-sync-rx number
Tree	cancel-sync-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

cancel-sync-tx number

Description	Specifies the number of cancels for sync messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv cancel-sync-tx number
Tree	cancel-sync-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-anno-rx number

Description	Specifies the number of grants for announce messages have been received
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv grant-anno-rx number
Tree	grant-anno-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-anno-tx number

Description	Specifies the number of grants for announce messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv grant-anno-tx number
Tree	grant-anno-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-delay-resp-rx *number*

Description	Specifies the number of grants for delay-resp messages have been received
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv grant-delay-resp-rx number
Tree	grant-delay-resp-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-delay-resp-tx *number*

Description	Specifies the number of grants for delay-resp messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv grant-delay-resp-tx number
Tree	grant-delay-resp-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-sync-rx *number*

Description	Specifies the number of grants for sync messages have been received
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv grant-sync-rx number
Tree	grant-sync-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-sync-tx *number*

Description	Specifies the number of grants for sync messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv grant-sync-tx number
Tree	grant-sync-tx

Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

other-tlv number

Description	The count of unsupported signaling message TLVs received.
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv other-tlv number
Tree	other-tlv
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-anno-rx number

Description	Specifies the number of rejections for announce messages have been received
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv reject-anno-rx number
Tree	reject-anno-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-anno-tx number

Description	Specifies the number of rejections for announce messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv reject-anno-tx number
Tree	reject-anno-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-delay-resp-rx *number*

Description	Specifies the number of rejections for delay-resp messages have been received
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv reject-delay-resp-rx number
Tree	reject-delay-resp-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-delay-resp-tx *number*

Description	Specifies the number of rejections for delay-resp messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv reject-delay-resp-tx number
Tree	reject-delay-resp-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-sync-rx *number*

Description	Specifies the number of rejections for sync messages have been received
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv reject-sync-rx number
Tree	reject-sync-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-sync-tx *number*

Description	Specifies the number of rejections for sync messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv reject-sync-tx number

Tree	reject-sync-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-anno-rx *number*

Description	Specifies the number of requests for announce messages have been received
Context	system sync ptp instance instance-index <i>number</i> port-ds-cfg-ip-list port-index <i>number</i> statistics signaling-uni-neg-tlv request-anno-rx <i>number</i>
Tree	request-anno-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-anno-tx *number*

Description	Specifies the number of requests for announce messages have been transmitted
Context	system sync ptp instance instance-index <i>number</i> port-ds-cfg-ip-list port-index <i>number</i> statistics signaling-uni-neg-tlv request-anno-tx <i>number</i>
Tree	request-anno-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-delay-resp-rx *number*

Description	Specifies the number of requests for delay-resp messages have been received
Context	system sync ptp instance instance-index <i>number</i> port-ds-cfg-ip-list port-index <i>number</i> statistics signaling-uni-neg-tlv request-delay-resp-rx <i>number</i>
Tree	request-delay-resp-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-delay-resp-tx *number*

Description	Specifies the number of requests for delay-resp messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv request-delay-resp-tx number
Tree	request-delay-resp-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-sync-rx *number*

Description	Specifies the number of requests for sync messages have been received
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv request-sync-rx number
Tree	request-sync-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-sync-tx *number*

Description	Specifies the number of requests for sync messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics signaling-uni-neg-tlv request-sync-tx number
Tree	request-sync-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync-msg-rx *number*

Description	Specifies the number of sync messages received
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics sync-msg-rx number
Tree	sync-msg-rx

Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync-msg-tx *number*

Description	Specifies the number of sync messages transmitted
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number statistics sync-msg-tx number
Tree	sync-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

steps-removed *number*

Description	The stepsRemoved in the last Announce message received from this peer
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number steps-removed number
Tree	steps-removed
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

unicast-negotiation

Description	Details of each negotiation session
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number unicast-negotiation
Tree	unicast-negotiation
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

rx-announce

Description	Statistics for receive announce sessions
Context	system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number unicast-negotiation rx-announce
Tree	rx-announce
Configurable	False

Platforms 7220 IXR-D5, 7250 IXR-X3b

duration *number*

Description The duration, in seconds, requested/granted for unicast transmission between the PTP peers

Context [system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number unicast-negotiation rx-announce duration number](#)

Tree [duration](#)

Units seconds

Configurable False

Platforms 7220 IXR-D5, 7250 IXR-X3b

log-interval *number*

Description The packet rate requested or granted for unicast transmission between the PTP peers

Context [system sync ptp instance instance-index number port-ds-cfg-ip-list port-index number unicast-negotiation rx-announce log-interval number](#)

Tree [log-interval](#)

Configurable False

Platforms 7220 IXR-D5, 7250 IXR-X3b

state *keyword*

Description Indicates the state of the negotiation

Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-ds-dsc-ip-list port-index number

Description	List of port data sets for discovered IP peers
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number
Tree	port-ds-dsc-ip-list
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-index number

Description	<p>Index into the port-ds list</p> <p>This is not the PTP port number. Discovered IP peer ports are created based on Unicast negotiation.</p> <p>If an IP peer is a discovered IP peer and later that IP address is entered as a configured peer, then port DS information will move from this list to the port-ds-cfg-ip-list to cover both aspects of communication with this peer.</p> <p>The data sets (i.e., information model) of IEEE Std 1588-2008 specify a member portDS.portIdentity, which uses a typed struct with members clockIdentity and portNumber.</p> <p>In this YANG data model, portIdentity is not modeled in the port-ds. However, its members are provided as follows: portIdentity.portNumber is provided as this ptp-port-number leaf in port-ds, and portIdentity.clockIdentity is provided as the clock-identity leaf in default-ds of the instance (i.e., ../default-ds/clock-identity).</p>
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

last-rx-interface reference

Description	Interface used for the last PTP message received from this peer
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number last-rx-interface reference
Tree	last-rx-interface
Reference	interface name string
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

last-tx-interface reference

Description	Interface used for the last PTP message transmitted to this peer
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number last-tx-interface reference
Tree	last-tx-interface
Reference	interface name string
Configurable	False

Platforms 7220 IXR-D5, 7250 IXR-X3b

log-announce-interval *number*

Description The base-2 logarithm of the mean announceInterval
Mean time interval between successive Announce messages. This reports the value that was established during the unicast negotiation.

Context [system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number log-announce-interval number](#)

Tree [log-announce-interval](#)

Range -3 to 4

Configurable False

Platforms 7220 IXR-D5, 7250 IXR-X3b

log-min-delay-req-interval *number*

Description The base-2 logarithm of the minDelayReqInterval
This reports the value that was established during the unicast negotiation.

Context [system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number log-min-delay-req-interval number](#)

Tree [log-min-delay-req-interval](#)

Range -6 to 0

Configurable False

Platforms 7220 IXR-D5, 7250 IXR-X3b

log-sync-interval *number*

Description The base-2 logarithm of the mean SyncInterval for multicast messages
This reports the value that was established during the unicast negotiation.

Context [system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number log-sync-interval number](#)

Tree [log-sync-interval](#)

Range -6 to 0

Configurable False

Platforms 7220 IXR-D5, 7250 IXR-X3b

major-version-number *number*

Description	The PTP major version number in use on the port
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number major-version-number number
Tree	major-version-number
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

minor-version-number *number*

Description	The PTP minor version number in use on the port
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number minor-version-number number
Tree	minor-version-number
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

peer

Description	Enter the peer context
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number peer
Tree	peer
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ip-address (*ipv4-address* | *ipv6-address*)

Description	IP address for the PTP peer Only Unicast addresses are supported
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number peer ip-address (ipv4-address ipv6-address)
Tree	ip-address
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

network-instance *reference*

Description	Network instance that owns the PTP peer
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number peer network-instance reference
Tree	network-instance
Reference	network-instance name string
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-state *keyword*

Description	Current state associated with the port
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number port-state keyword
Tree	port-state
Options	<ul style="list-style-type: none"> • initializing The port is initializing its data sets, hardware, and communication facilities • faulty The port is in the fault state • disabled The port is disabled and is not communicating PTP messages • listening The port is listening for an Announce message • pre-master The port is in the pre-master state • master The port is behaving as a master port • passive The port is in the passive state • uncalibrated A master port has been selected, but the port is still in the uncalibrated state • slave The port is synchronizing to the selected master port
Configurable	False

Platforms 7220 IXR-D5, 7250 IXR-X3b

ptp-port-number *number*

Description IEEE Std 1588 portNumber
This is the port-number that will appear in messages sent for this port-index.

Context [system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number ptp-port-number number](#)

Tree [ptp-port-number](#)

Configurable False

Platforms 7220 IXR-D5, 7250 IXR-X3b

statistics

Description Total messages for a specific PTP port
This container is not used with PTP special ports (gnss).

Description	Specifies the number of acknowledgements of cancels for announce messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv ack-cancel-anno-tx number
Tree	ack-cancel-anno-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ack-cancel-delay-resp-rx *number*

Description	Specifies the number of acknowledgements of cancels for delay-resp messages have been received
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv ack-cancel-delay-resp-rx number
Tree	ack-cancel-delay-resp-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ack-cancel-delay-resp-tx *number*

Description	Specifies the number of acknowledgements of cancels for delay-resp messages have been transmitted
--------------------	---

Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv ack-cancel-delay-resp-tx number
Tree	ack-cancel-delay-resp-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ack-cancel-sync-rx number

Description	Specifies the number of acknowledgements of cancels for sync messages have been received
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv ack-cancel-sync-rx number
Tree	ack-cancel-sync-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ack-cancel-sync-tx number

Description	Specifies the number of acknowledgements of cancels for sync messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv ack-cancel-sync-tx number
Tree	ack-cancel-sync-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

cancel-anno-rx number

Description	Specifies the number of cancels for announce messages have been received
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv cancel-anno-rx number
Tree	cancel-anno-rx
Default	0

Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

cancel-anno-tx *number*

Description	Specifies the number of cancels for announce messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv cancel-anno-tx number
Tree	cancel-anno-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

cancel-delay-resp-rx *number*

Description	Specifies the number of cancels for delay-resp messages have been received
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv cancel-delay-resp-rx number
Tree	cancel-delay-resp-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

cancel-delay-resp-tx *number*

Description	Specifies the number of cancels for delay-resp messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv cancel-delay-resp-tx number
Tree	cancel-delay-resp-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

cancel-sync-rx *number*

Description	Specifies the number of cancels for sync messages have been received
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv cancel-sync-rx number
Tree	cancel-sync-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

cancel-sync-tx *number*

Description	Specifies the number of cancels for sync messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv cancel-sync-tx number
Tree	cancel-sync-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-anno-rx *number*

Description	Specifies the number of grants for announce messages have been received
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv grant-anno-rx number
Tree	grant-anno-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-anno-tx *number*

Description	Specifies the number of grants for announce messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv grant-anno-tx number
Tree	grant-anno-tx

Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-delay-resp-rx *number*

Description	Specifies the number of grants for delay-resp messages have been received
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv grant-delay-resp-rx number
Tree	grant-delay-resp-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-delay-resp-tx *number*

Description	Specifies the number of grants for delay-resp messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv grant-delay-resp-tx number
Tree	grant-delay-resp-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-sync-rx *number*

Description	Specifies the number of grants for sync messages have been received
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv grant-sync-rx number
Tree	grant-sync-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

grant-sync-tx *number*

Description	Specifies the number of grants for sync messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv grant-sync-tx number
Tree	grant-sync-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

other-tlv *number*

Description	The count of unsupported signaling message TLVs received.
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv other-tlv number
Tree	other-tlv
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-anno-rx *number*

Description	Specifies the number of rejections for announce messages have been received
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv reject-anno-rx number
Tree	reject-anno-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-anno-tx *number*

Description	Specifies the number of rejections for announce messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv reject-anno-tx number

Tree	reject-anno-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-delay-resp-rx *number*

Description	Specifies the number of rejections for delay-resp messages have been received
Context	system sync ptp instance instance-index <i>number</i> port-ds-dsc-ip-list port-index <i>number</i> statistics signaling-uni-neg-tlv reject-delay-resp-rx <i>number</i>
Tree	reject-delay-resp-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-delay-resp-tx *number*

Description	Specifies the number of rejections for delay-resp messages have been transmitted
Context	system sync ptp instance instance-index <i>number</i> port-ds-dsc-ip-list port-index <i>number</i> statistics signaling-uni-neg-tlv reject-delay-resp-tx <i>number</i>
Tree	reject-delay-resp-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-sync-rx *number*

Description	Specifies the number of rejections for sync messages have been received
Context	system sync ptp instance instance-index <i>number</i> port-ds-dsc-ip-list port-index <i>number</i> statistics signaling-uni-neg-tlv reject-sync-rx <i>number</i>
Tree	reject-sync-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

reject-sync-tx *number*

Description	Specifies the number of rejections for sync messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv reject-sync-tx number
Tree	reject-sync-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-anno-rx *number*

Description	Specifies the number of requests for announce messages have been received
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv request-anno-rx number
Tree	request-anno-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-anno-tx *number*

Description	Specifies the number of requests for announce messages have been transmitted
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv request-anno-tx number
Tree	request-anno-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-delay-resp-rx *number*

Description	Specifies the number of requests for delay-resp messages have been received
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics signaling-uni-neg-tlv request-delay-resp-rx number

Tree	request-delay-resp-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-delay-resp-tx *number*

Description	Specifies the number of requests for delay-resp messages have been transmitted
Context	system sync ptp instance instance-index <i>number</i> port-ds-dsc-ip-list port-index <i>number</i> statistics signaling-uni-neg-tlv request-delay-resp-tx <i>number</i>
Tree	request-delay-resp-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-sync-rx *number*

Description	Specifies the number of requests for sync messages have been received
Context	system sync ptp instance instance-index <i>number</i> port-ds-dsc-ip-list port-index <i>number</i> statistics signaling-uni-neg-tlv request-sync-rx <i>number</i>
Tree	request-sync-rx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

request-sync-tx *number*

Description	Specifies the number of requests for sync messages have been transmitted
Context	system sync ptp instance instance-index <i>number</i> port-ds-dsc-ip-list port-index <i>number</i> statistics signaling-uni-neg-tlv request-sync-tx <i>number</i>
Tree	request-sync-tx
Default	0
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync-msg-rx *number*

Description	Specifies the number of sync messages received
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics sync-msg-rx number
Tree	sync-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync-msg-tx *number*

Description	Specifies the number of sync messages transmitted
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number statistics sync-msg-tx number
Tree	sync-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

unicast-negotiation

Description	Details of each negotiation session
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation
Tree	unicast-negotiation
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

rx-announce

Description	Statistics for receive announce sessions
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation rx-announce
Tree	rx-announce
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

duration *number*

Description	The duration, in seconds, requested/granted for unicast transmission between the PTP peers
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation rx-announce duration number
Tree	duration
Units	seconds
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

log-interval *number*

Description	The packet rate requested or granted for unicast transmission between the PTP peers
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation rx-announce log-interval number
Tree	log-interval
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

state *keyword*

Description	Indicates the state of the negotiation
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation rx-announce state keyword
Tree	state
Options	<ul style="list-style-type: none"> • pending • granted • denied • expired • canceled
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

time-of-last-grant *string*

Description	The time when status last changed or the unicast session between the PTP clocks was renewed
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation rx-announce time-of-last-grant string
Tree	time-of-last-grant
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

rx-delay-resp

Description	Statistics for receive delay-resp sessions
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation rx-delay-resp
Tree	rx-delay-resp
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

duration *number*

Description	The duration, in seconds, requested/granted for unicast transmission between the PTP peers
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation rx-delay-resp duration number
Tree	duration
Units	seconds
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

log-interval *number*

Description	The packet rate requested or granted for unicast transmission between the PTP peers
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation rx-delay-resp log-interval number
Tree	log-interval

Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

state *keyword*

Description	Indicates the state of the negotiation
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation rx-delay-resp state <i>keyword</i>
Tree	state
Options	<ul style="list-style-type: none"> • pending • granted • denied • expired • canceled
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

time-of-last-grant *string*

Description	The time when status last changed or the unicast session between the PTP clocks was renewed
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation rx-delay-resp time-of-last-grant <i>string</i>
Tree	time-of-last-grant
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

rx-sync

Description	Statistics for receive sync sessions
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation rx-sync
Tree	rx-sync
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

duration *number*

Description	The duration, in seconds, requested/granted for unicast transmission between the PTP peers
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation rx-sync duration number
Tree	duration
Units	seconds
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

log-interval *number*

Description	The packet rate requested or granted for unicast transmission between the PTP peers
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation rx-sync log-interval number
Tree	log-interval
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

state *keyword*

Description	Indicates the state of the negotiation
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation rx-sync state keyword
Tree	state
Options	<ul style="list-style-type: none"> • pending • granted • denied • expired • canceled
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

time-of-last-grant *string*

Description	The time when status last changed or the unicast session between the PTP clocks was renewed
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation rx-sync time-of-last-grant string
Tree	time-of-last-grant
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

tx-announce

Description	Statistics for transmit announce sessions
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation tx-announce
Tree	tx-announce
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

duration *number*

Description	The duration, in seconds, requested/granted for unicast transmission between the PTP peers
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation tx-announce duration number
Tree	duration
Units	seconds
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

log-interval *number*

Description	The packet rate requested or granted for unicast transmission between the PTP peers
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation tx-announce log-interval number
Tree	log-interval

Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

state keyword

Description	Indicates the state of the negotiation
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation tx-announce state keyword
Tree	state
Options	<ul style="list-style-type: none"> • pending • granted • denied • expired • canceled
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

time-of-last-grant string

Description	The time when status last changed or the unicast session between the PTP clocks was renewed
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation tx-announce time-of-last-grant string
Tree	time-of-last-grant
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

tx-delay-resp

Description	Statistics for transmit delay-resp sessions
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation tx-delay-resp
Tree	tx-delay-resp
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

duration *number*

Description	The duration, in seconds, requested/granted for unicast transmission between the PTP peers
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation tx-delay-resp duration number
Tree	duration
Units	seconds
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

log-interval *number*

Description	The packet rate requested or granted for unicast transmission between the PTP peers
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation tx-delay-resp log-interval number
Tree	log-interval
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

state *keyword*

Description	Indicates the state of the negotiation
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation tx-delay-resp state keyword
Tree	state
Options	<ul style="list-style-type: none"> • pending • granted • denied • expired • canceled
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

time-of-last-grant *string*

Description	The time when status last changed or the unicast session between the PTP clocks was renewed
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation tx-delay-resp time-of-last-grant <i>string</i>
Tree	time-of-last-grant
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

tx-sync

Description	Statistics for transmit sync sessions
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation tx-sync
Tree	tx-sync
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

duration *number*

Description	The duration, in seconds, requested/granted for unicast transmission between the PTP peers
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation tx-sync duration <i>number</i>
Tree	duration
Units	seconds
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

log-interval *number*

Description	The packet rate requested or granted for unicast transmission between the PTP peers
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation tx-sync log-interval <i>number</i>
Tree	log-interval

Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

state keyword

Description	Indicates the state of the negotiation
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation tx-sync state keyword
Tree	state
Options	<ul style="list-style-type: none"> • pending • granted • denied • expired • canceled
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

time-of-last-grant string

Description	The time when status last changed or the unicast session between the PTP clocks was renewed
Context	system sync ptp instance instance-index number port-ds-dsc-ip-list port-index number unicast-negotiation tx-sync time-of-last-grant string
Tree	time-of-last-grant
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-ds-interface-list port-index number

Description	List of port data sets for interfaces
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number
Tree	port-ds-interface-list
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-index *number*

Description	<p>Index into the port-ds list</p> <p>This is not the PTP port number. Configurable ports use port indices 1 through 999 but there is a limit on the overall number of these configured ports based on the platform and software release.</p> <p>The data sets (i.e., information model) of IEEE Std 1588-2008 specify a member portDS.portIdentity, which uses a typed struct with members clockIdentity and portNumber.</p> <p>In this YANG data model, portIdentity is not modeled in the port-ds. However, its members are provided as follows: portIdentity.portNumber is provided as this ptp-port-number leaf in port-ds, and portIdentity.clockIdentity is provided as the clock-identity leaf in default-ds of the instance (i.e., ../default-ds/clock-identity).</p>
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number
Range	1 to 999
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

admin-state *keyword*

Description	The administrative state of the ptp port
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number admin-state keyword
Tree	admin-state
Default	disable
Options	<ul style="list-style-type: none"> • enable • disable
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

announce-receipt-timeout *number*

Description	<p>Sets the time limit for missed Announce packets before the master clock is deemed down</p> <p>This defines the number of Announce message intervals that must expire with no received Announce messages before declaring an ANNOUNCE_</p>
--------------------	--

RECEIPT_TIMEOUT event. To change this setting, refer to announce-receipt-timeout in the Default data set.

Context	system sync ptp instance instance-index number port-ds-interface-list port-index number announce-receipt-timeout number
Tree	announce-receipt-timeout
Range	2 to 10
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

best-master *boolean*

Description	Indicates if this interface was selected by the BMCA to be the best master
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number best-master boolean
Tree	best-master
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

dest-mac *keyword*

Description	Configure the MAC address associated with forwardable or non-forwardable
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number dest-mac keyword
Tree	dest-mac
Default	forwardable
Options	<ul style="list-style-type: none"> forwardable The clock uses the forwardable MAC address: 01-1B-19-00-00-00 non-forwardable The clock uses the non-forwardable MAC address: 01-80-C2-00-00-0E
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

local-priority *number*

Description	Specifies the local priority of the ptp port
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number local-priority number

Tree	local-priority
Range	1 to 255
Default	128
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

log-announce-interval *number*

Description	The base-2 logarithm of the mean announceInterval Mean time interval between successive Announce messages. To change this setting, refer to log-announce-interval in the Default data set.
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number log-announce-interval number
Tree	log-announce-interval
Range	-3 to 4
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

log-min-delay-req-interval *number*

Description	The base-2 logarithm of the minDelayReqInterval The minimum permitted mean time interval between successive Delay_Req messages. The default log-min-delay-req-interval is defined by the profile. itug8275dot1: -4 (16 messages per second) itug8275dot2: -6 (64 messages per second)
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number log-min-delay-req-interval number
Tree	log-min-delay-req-interval
Range	-6 to 0
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

log-sync-interval *number*

Description	The base-2 logarithm of the mean SyncInterval for multicast messages The default log sync interval is defined by the profile. itug8275dot1: -4 (16 messages per second) itug8275dot2: -6 (64 messages per second)
--------------------	--

Context	system sync ptp instance instance-index number port-ds-interface-list port-index number log-sync-interval number
Tree	log-sync-interval
Range	-6 to 0
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

major-version-number *number*

Description	The PTP major version number in use on the port
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number major-version-number number
Tree	major-version-number
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

master-only *boolean*

Description	Specifies the masterOnly attribute of the ptp port
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number master-only boolean
Tree	master-only
Default	true
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

minor-version-number *number*

Description	The PTP minor version number in use on the port
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number minor-version-number number
Tree	minor-version-number
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

neighbor-count *number*

Description	The number of neighbors for the port
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number neighbor-count number
Tree	neighbor-count
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

neighbor-list [clock-identity binary port-number number](#)

Description	List of MAC address of all the neighbors of this port
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number neighbor-list clock-identity binary port-number number
Tree	neighbor-list
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

clock-identity *binary*

Description	The clockIdentity of this neighbor clock
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number neighbor-list clock-identity binary port-number number
String Length	8
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-number *number*

Description	The port number of this neighbor clock
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number neighbor-list clock-identity binary port-number number
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

mac-address *string*

Description	Specifies the MAC address of this neighbor
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number neighbor-list clock-identity binary port-number number mac-address string
Tree	mac-address
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

parent-clock *boolean*

Description	Indicates if this neighbor is the current parent clock of this PTP clock
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number neighbor-list clock-identity binary port-number number parent-clock boolean
Tree	parent-clock
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

rx-message-rate *decimal-number*

Description	The receive message rate from this neighbor clock
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number neighbor-list clock-identity binary port-number number rx-message-rate decimal-number
Tree	rx-message-rate
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

parent-clock *boolean*

Description	Indicates if this interface is the current parent clock of this PTP clock May differ from best-master due to use of local GNSS as time source.
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number parent-clock boolean
Tree	parent-clock

Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-state *keyword*

Description	Current state associated with the port
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number port-state keyword
Tree	port-state
Options	<ul style="list-style-type: none"> • initializing The port is initializing its data sets, hardware, and communication facilities • faulty The port is in the fault state • disabled The port is disabled and is not communicating PTP messages • listening The port is listening for an Announce message • pre-master The port is in the pre-master state • master The port is behaving as a master port • passive The port is in the passive state • uncalibrated A master port has been selected, but the port is still in the uncalibrated state • slave The port is synchronizing to the selected master port
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ptp-port-number *number*

Description	IEEE Std 1588 portNumber This is the port-number that will appear in messages sent for this port-index.
--------------------	--

Context	system sync ptp instance instance-index number port-ds-interface-list port-index number ptp-port-number number
Tree	ptp-port-number
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

source

Description	Source interface used by this PTP port
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number source
Tree	source
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

interface *reference*

Description	Enter the interface context
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number source interface reference
Tree	interface
Reference	interface name string
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync0

Description	Enable the sync0 context
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number source sync0
Tree	sync0
Configurable	True
Platforms	Supported on 7220 IXR-D5, 7250 IXR-X3b

statistics

Description	Total messages for a specific PTP port
--------------------	--

Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics
Tree	statistics
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

anno-msg-rx number

Description	Specifies the number of announce messages received
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics anno-msg-rx number
Tree	anno-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

anno-msg-tx number

Description	Specifies the number of announce messages transmitted
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics anno-msg-tx number
Tree	anno-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-req-msg-rx number

Description	Specifies the number of delay-req messages received
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics del-req-msg-rx number
Tree	del-req-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-req-msg-tx number

Description	Specifies the number of delay-req messages transmitted
--------------------	--

Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics del-req-msg-tx number
Tree	del-req-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-req-msg-rx number

Description	Specifies the number of delay-req messages received
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics del-req-msg-rx number
Tree	del-req-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

del-req-msg-tx number

Description	Specifies the number of delay-req messages transmitted
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics del-req-msg-tx number
Tree	del-req-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

discards

Description	Aggregate discard statistics for the PTP clock
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics discards
Tree	discards
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

alternate-master number

Description	Specifies the number of alternate master messages that were discarded
--------------------	---

Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics discards alternate-master number
Tree	alternate-master
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

bad-domain number

Description	Specifies the number of bad domain messages that were discarded
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics discards bad-domain number
Tree	bad-domain
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

other number

Description	Specifies the number of other messages that were discarded
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics discards other number
Tree	other
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

out-of-sequence number

Description	Specifies the number of out of sequence messages that were discarded
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics discards out-of-sequence number
Tree	out-of-sequence
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

peer-disabled number

Description	Specifies the number of PTP messages that were discarded from disabled PTP peer
--------------------	---

Occurs when a PTP peer has been administratively disabled. This information is only available for configured and discovered peers.

Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics discards peer-disabled number
Tree	peer-disabled
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

follow-up-msg-rx number

Description	Specifies the number of follow-up messages received
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics follow-up-msg-rx number
Tree	follow-up-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

follow-up-msg-tx number

Description	Specifies the number of follow-up messages transmitted
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics follow-up-msg-tx number
Tree	follow-up-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

other-rx number

Description	Specifies the number of other messages received
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics other-rx number
Tree	other-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

signaling-msg-rx number

Description	Specifies the number of follow-up messages received
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics signaling-msg-rx number
Tree	signaling-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

signaling-msg-tx number

Description	Specifies the number of follow-up messages transmitted
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics signaling-msg-tx number
Tree	signaling-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync-msg-rx number

Description	Specifies the number of sync messages received
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics sync-msg-rx number
Tree	sync-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

sync-msg-tx number

Description	Specifies the number of sync messages transmitted
Context	system sync ptp instance instance-index number port-ds-interface-list port-index number statistics sync-msg-tx number
Tree	sync-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

time-properties-ds

Description	The timeProperties data set of the clock
Context	system sync ptp instance instance-index number time-properties-ds
Tree	time-properties-ds
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

current-utc-offset *number*

Description	The offset between TAI and UTC Only applies when the epoch of the PTP system is the PTP epoch in units of seconds (i.e. when ptp-timescale is TRUE). Otherwise, the value has no meaning.
Context	system sync ptp instance instance-index number time-properties-ds current-utc-offset number
Tree	current-utc-offset
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

current-utc-offset-valid *boolean*

Description	When set to true, the current UTC offset is valid
Context	system sync ptp instance instance-index number time-properties-ds current-utc-offset-valid boolean
Tree	current-utc-offset-valid
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

frequency-traceable *boolean*

Description	If true, the frequency determining the timescale is traceable to a primary reference
Context	system sync ptp instance instance-index number time-properties-ds frequency-traceable boolean
Tree	frequency-traceable
Configurable	False

Platforms 7220 IXR-D5, 7250 IXR-X3b

leap59 *boolean*

Description If true, the last minute of the current UTC day contains 59 seconds

Context [system sync ptp instance instance-index number time-properties-ds leap59](#)
boolean

Tree [leap59](#)

Configurable False

Platforms 7220 IXR-D5, 7250 IXR-X3b

leap61 *boolean*

Description If true, the last minute of the current UTC day contains 61 seconds

Context [system sync ptp instance instance-index number time-properties-ds leap61](#)
boolean

Tree [leap61](#)

Configurable False

Platforms 7220 IXR-D5, 7250 IXR-X3b

ptp-timescale *boolean*

Description If true clock timescale of the grandmaster is PTP; false it is ARB (arbitrary)

Context [system sync ptp instance instance-index number time-properties-ds ptp-timescale](#)
boolean

Tree [ptp-timescale](#)

Configurable False

Platforms 7220 IXR-D5, 7250 IXR-X3b

time-source *keyword*

Description The source of time used by the grandmaster clock
If a value is received that does not map to one of the enumerations, then the reserved value is used

Context [system sync ptp instance instance-index number time-properties-ds time-source](#)
keyword

Tree [time-source](#)

Options	<ul style="list-style-type: none"> • atomic-clock • gps • terrestrial-radio • ptp • ntp • hand-set • other • internal-oscillator • reserved
----------------	--

Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

time-traceable *boolean*

Description	If true, the timescale and the currentUtcOffset are traceable to a primary reference
Context	system sync ptp instance instance-index number time-properties-ds time-traceable <i>boolean</i>
Tree	time-traceable
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-X3b

ptp-profile *keyword*

Description	Specifies the PTP profile mode for the PTP clock
Context	system sync ptp ptp-profile <i>keyword</i>
Tree	ptp-profile
Default	itug8275dot1
Options	<ul style="list-style-type: none"> • itug8275dot1 ITU-T G.8275.1 (2014) Profile • itug8275dot2 ITU-T G.8275.2 Profile
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

timing-source-net-inst *reference*

Description	Network instance to be used for configured peers This is the network instance that will be used to provide timing into the local clock via PTP over IP.
Context	system sync ptp timing-source-net-inst <i>reference</i>
Tree	timing-source-net-inst
Reference	network-instance name <i>string</i>
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

tls

Description	Top-level container for TLS configuration and state
Context	system tls
Tree	tls
Configurable	True
Platforms	Supported on all platforms

server-profile [name](#) *string*

Description	List of configured TLS server profiles
Context	system tls server-profile name <i>string</i>
Tree	server-profile
Configurable	True
Platforms	Supported on all platforms

name *string*

Description	Name of the TLS server-profile
Context	system tls server-profile name <i>string</i>
String Length	1 to 247
Configurable	True
Platforms	Supported on all platforms

authenticate-client *boolean*

Description	Defines if the server should authenticate the identity of connecting clients using the trust anchor
Context	system tls server-profile name <i>string</i> authenticate-client <i>boolean</i>
Tree	authenticate-client
Default	false
Configurable	True
Platforms	Supported on all platforms

certificate *string*

Description	Base64 encoded certificate to use with the private key This includes the '-----BEGIN CERTIFICATE-----' and '-----END CERTIFICATE-----' header and footer
Context	system tls server-profile name <i>string</i> certificate <i>string</i>
Tree	certificate
Configurable	True
Platforms	Supported on all platforms

certificate-revocation-list *string*

Description	Base64 encoded certificate revocation list This includes the '-----BEGIN X509 CRL' and '-----END X509 CRL' header and footer
Context	system tls server-profile name <i>string</i> certificate-revocation-list <i>string</i>
Tree	certificate-revocation-list
Configurable	True
Platforms	Supported on all platforms

certz

Description	Information relating to the active certificate and bundle/s as provided via Certz State is provided by the gNSI Certz service, and can be changed using the gNSI.Certz.Rotate RPC
Context	system tls server-profile name <i>string</i> certz

Tree	certz
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

certificate

Description	State relating to the active certificate provided via Certz
Context	system tls server-profile name string certz certificate
Tree	certificate
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

created-on *string*

Description	The created on timestamp as provided by the gNSI client at the time of uploading the policy The maps to the created_on field within a Entity message in the Certz protobuf.
Context	system tls server-profile name string certz certificate created-on string
Tree	created-on
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version *string*

Description	The version string as provided by the gNSI client at the time of uploading the certificate or bundle/s The maps to the version field within a Entity message in the Certz protobuf.
Context	system tls server-profile name string certz certificate version string
Tree	version
Configurable	False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

crl

Description State relating to the active certificate revocation list provided via Certz
The list of certificates provided will not be used to validate mTLS or servers, even if those certificates exist within the trust anchor.

Context [system tls server-profile name string certz crl](#)

Tree [crl](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

created-on *string*

Description The created on timestamp as provided by the gNSI client at the time of uploading the policy
The maps to the created_on field within a Entity message in the Certz protobuf.

Context [system tls server-profile name string certz crl created-on string](#)

Tree [created-on](#)

String Length 20 to 32

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version *string*

Description The version string as provided by the gNSI client at the time of uploading the certificate or bundle/s
The maps to the version field within a Entity message in the Certz protobuf.

Context [system tls server-profile name string certz crl version string](#)

Tree [version](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ssl-profile-id *string*

Description The ID of this gRPC server's SSL profile as used by the gNSI Certz service

Context [system tls server-profile name](#) *string* [certz ssl-profile-id](#) *string*

Tree [ssl-profile-id](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

trust-anchor

Description State relating to the active trust anchor provided via Certz

This is equivalent to the certificate authority bundle, and is the list of certificates used to validate clients in mTLS, and to validate servers in outbound TLS.

Context [system tls server-profile name](#) *string* [certz trust-anchor](#)

Tree [trust-anchor](#)

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

created-on *string*

Description The created on timestamp as provided by the gNSI client at the time of uploading the policy

The maps to the created_on field within a Entity message in the Certz protobuf.

Context [system tls server-profile name](#) *string* [certz trust-anchor created-on](#) *string*

Tree [created-on](#)

String Length 20 to 32

Configurable False

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version string

Description The version string as provided by the gNSI client at the time of uploading the certificate or bundle/s
The maps to the version field within a Entity message in the Certz protobuf.

Context [system tls server-profile name string certz trust-anchor version string](#)

Tree [version](#)

12.1 acl Descriptions

acl

Description	Top level enclosing container for ACL operational tools
Context	acl
Tree	acl
Configurable	True
Platforms	Supported on all platforms

acl-filter *name string type keyword*

Description	List MAC, IPv4, IPv6 ACL filter policies
Context	acl acl-filter <i>name string type keyword</i>
Tree	acl-filter
Configurable	True
Platforms	Supported on all platforms

name string

Description	Reference to the ACL filter policy name
Context	acl acl-filter <i>name string type keyword</i>
Configurable	True
Platforms	Supported on all platforms

type keyword

Description	Defines the type of ACL filter: ipv4: IPv4 ACL filter ipv6: IPv6 ACL filter mac: MAC ACL filter
Context	acl acl-filter <i>name string type keyword</i>
Options	<ul style="list-style-type: none"> • ipv4 • ipv6 • mac
Configurable	True
Platforms	Supported on all platforms

entry *sequence-id number*

Description	List of filter rules.
Context	acl acl-filter name <i>string type keyword</i> entry sequence-id <i>number</i>
Tree	entry
Configurable	True
Platforms	Supported on all platforms

sequence-id *number*

Description	A number to indicate the relative evaluation order of the different entries; lower numbered entries are evaluated before higher numbered entries
Context	acl acl-filter name <i>string type keyword</i> entry sequence-id <i>number</i>
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	acl acl-filter name <i>string type keyword</i> entry sequence-id <i>number</i> statistics
Tree	statistics
Configurable	True
Platforms	Supported on all platforms

clear

Description	Reset all aggregate and per-interface statistics associated with this particular entry to zero
Context	acl acl-filter name <i>string type keyword</i> entry sequence-id <i>number</i> statistics clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
--------------------	------------------------------

14.1 interface Descriptions

interface *name string*

Description	The list of named interfaces on the device.
Context	interface name string
Tree	interface
Configurable	True
Platforms	Supported on all platforms

name *string*

Description	References the configured name of the interface
Context	interface name string
Configurable	True
Platforms	Supported on all platforms

ethernet

Description	Enter the ethernet context
Context	interface name string ethernet
Tree	ethernet
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	interface name string ethernet statistics
Tree	statistics
Configurable	True
Platforms	Supported on all platforms

clear

Description	Clear interface ethernet statistics
Context	interface name <i>string</i> ethernet statistics clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

include-members

Description	Causes the member link ethernet statistics to also be cleared
Context	interface name <i>string</i> ethernet statistics clear include-members
Tree	include-members
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

packet-link-qualification

Description	Enter the packet-link-qualification context
Context	interface name <i>string</i> packet-link-qualification
Tree	packet-link-qualification
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

cancel

Description	Cancel the packet link qualification and delete the results
Context	interface name <i>string</i> packet-link-qualification cancel
Tree	cancel
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

id string

Description	Packet link qualification test ID
Context	interface name <i>string</i> packet-link-qualification cancel id string
Tree	id
String Length	1 to 255
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

start

Description	Start packet link qualification
Context	interface name <i>string</i> packet-link-qualification start
Tree	start
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

id string

Description	Packet link qualification test ID
Context	interface name <i>string</i> packet-link-qualification start id string
Tree	id
String Length	1 to 255
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

qualification-profile string

Description	Packet link qualification profile name
Context	interface name <i>string</i> packet-link-qualification start qualification-profile string
Tree	qualification-profile

String Length	1 to 255
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

resource

Description	Enable the resource context
Context	interface name <i>string</i> resource
Tree	resource
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

retry

Description	Causes the specified lag to be reevaluate for missing system resources
Context	interface name <i>string</i> resource retry
Tree	retry
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	interface name <i>string</i> statistics
Tree	statistics
Configurable	True
Platforms	Supported on all platforms

clear

Description	Clear interface statistics
--------------------	----------------------------

Context	interface name <i>string</i> statistics clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

include-members

Description	Causes the member link statistics to also be cleared
Context	interface name <i>string</i> statistics clear include-members
Tree	include-members
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

subinterface [index number](#)

Description	The list of subinterfaces (logical interfaces) associated with a physical interface
Context	interface name <i>string</i> subinterface index number
Tree	subinterface
Configurable	True
Platforms	Supported on all platforms

[index number](#)

Description	The index of the subinterface, or logical interface number
Context	interface name <i>string</i> subinterface index number
Configurable	True
Platforms	Supported on all platforms

bridge-table

Description	Enter the bridge-table context
Context	interface name <i>string</i> subinterface index number bridge-table
Tree	bridge-table
Configurable	True

Platforms Supported on all platforms

mac-duplication

Description Enable the mac-duplication context

Context [interface name](#) *string* [subinterface](#) [index](#) *number* [bridge-table](#) [mac-duplication](#)

Tree [mac-duplication](#)

Configurable True

Platforms Supported on all platforms

delete-all-macs

Description Delete all learnt mac entries.

Context [interface name](#) *string* [subinterface](#) [index](#) *number* [bridge-table](#) [mac-duplication](#) [delete-all-macs](#)

Tree [delete-all-macs](#)

Configurable True

Platforms Supported on all platforms

duplicate-entries

Description Enter the duplicate-entries context

Context [interface name](#) *string* [subinterface](#) [index](#) *number* [bridge-table](#) [mac-duplication](#) [duplicate-entries](#)

Tree [duplicate-entries](#)

Configurable True

Platforms Supported on all platforms

mac [address](#) *string*

Description macs learnt on the bridging instance

Context [interface name](#) *string* [subinterface](#) [index](#) *number* [bridge-table](#) [mac-duplication](#) [duplicate-entries](#) [mac](#) [address](#) *string*

Tree [mac](#)

Configurable True

Platforms Supported on all platforms

address *string*

Description	Enter the address context
Context	interface name <i>string</i> subinterface index <i>number</i> bridge-table mac-duplication duplicate-entries mac address <i>string</i>
Configurable	True
Platforms	Supported on all platforms

delete-mac

Description	delete the duplicate mac address.
Context	interface name <i>string</i> subinterface index <i>number</i> bridge-table mac-duplication duplicate-entries mac address <i>string</i> delete-mac
Tree	delete-mac
Configurable	True
Platforms	Supported on all platforms

mac-learning

Description	Enable the mac-learning context
Context	interface name <i>string</i> subinterface index <i>number</i> bridge-table mac-learning
Tree	mac-learning
Configurable	True
Platforms	Supported on all platforms

delete-all-macs

Description	Delete all learnt mac entries.
Context	interface name <i>string</i> subinterface index <i>number</i> bridge-table mac-learning delete-all-macs
Tree	delete-all-macs
Configurable	True
Platforms	Supported on all platforms

learnt-entries

Description	Enter the learnt-entries context
--------------------	----------------------------------

Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> bridge-table mac-learning learnt-entries
Tree	learnt-entries
Configurable	True
Platforms	Supported on all platforms

mac [address](#) *string*

Description	macs learnt on the bridging instance
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> bridge-table mac-learning learnt-entries mac address <i>string</i>
Tree	mac
Configurable	True
Platforms	Supported on all platforms

address *string*

Description	Enter the address context
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> bridge-table mac-learning learnt-entries mac address <i>string</i>
Configurable	True
Platforms	Supported on all platforms

delete-mac

Description	delete the learnt mac address.
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> bridge-table mac-learning learnt-entries mac address <i>string</i> delete-mac
Tree	delete-mac
Configurable	True
Platforms	Supported on all platforms

ipv4

Description	Enter the ipv4 context
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4
Tree	ipv4

Configurable	True
Platforms	Supported on all platforms

address *ip-prefix string*

Description	Enter the address list instance
Context	interface name string subinterface index number ipv4 address ip-prefix string
Tree	address
Configurable	True
Platforms	Supported on all platforms

ip-prefix *string*

Description	Enter the ip-prefix context
Context	interface name string subinterface index number ipv4 address ip-prefix string
Configurable	True
Platforms	Supported on all platforms

vrrp-group *virtual-router-id number*

Description	VRRP Group Specific Configuration under IPv4 context
Context	interface name string subinterface index number ipv4 address ip-prefix string vrrp-group virtual-router-id number
Tree	vrrp-group
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

virtual-router-id *number*

Description	VRRP Group Index
Context	interface name string subinterface index number ipv4 address ip-prefix string vrrp-group virtual-router-id number
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 address ip-prefix <i>string</i> vrrp-group virtual-router-id <i>number</i> statistics
Tree	statistics
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Enter the clear context
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 address ip-prefix <i>string</i> vrrp-group virtual-router-id <i>number</i> statistics clear
Tree	clear
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

arp

Description	Enable the arp context
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 arp
Tree	arp
Configurable	True
Platforms	Supported on all platforms

delete-dynamic

Description	Delete all dynamic ARP entries
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv4 arp delete-dynamic
Tree	delete-dynamic
Configurable	True
Platforms	Supported on all platforms

neighbor ipv4-address *string*

Description	Enter the neighbor list instance
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 arp neighbor ipv4-address <i>string</i>
Tree	neighbor
Configurable	True
Platforms	Supported on all platforms

ipv4-address *string*

Description	IPv4 address resolved by the ARP entry
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 arp neighbor ipv4-address <i>string</i>
Configurable	True
Platforms	Supported on all platforms

delete-dynamic

Description	Delete one specific dynamic ARP entry
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 arp neighbor ipv4-address <i>string</i> delete-dynamic
Tree	delete-dynamic
Configurable	True
Platforms	Supported on all platforms

virtual-ipv4-discovery

Description	Enter the virtual-ipv4-discovery context
Context	interface name <i>string</i> subinterface index <i>number</i> ipv4 arp virtual-ipv4-discovery
Tree	virtual-ipv4-discovery
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

address `ipv4-address` *string*

Description	The list of Virtual IP addresses
Context	<code>interface name</code> <i>string</i> <code>subinterface</code> <i>index</i> <i>number</i> <code>ipv4</code> <code>arp</code> <code>virtual-ipv4-discovery</code> <code>address</code> <code>ipv4-address</code> <i>string</i>
Tree	<code>address</code>
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4-address *string*

Description	The virtual IPv4 address.
Context	<code>interface name</code> <i>string</i> <code>subinterface</code> <i>index</i> <i>number</i> <code>ipv4</code> <code>arp</code> <code>virtual-ipv4-discovery</code> <code>address</code> <code>ipv4-address</code> <i>string</i>
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	<code>interface name</code> <i>string</i> <code>subinterface</code> <i>index</i> <i>number</i> <code>ipv4</code> <code>arp</code> <code>virtual-ipv4-discovery</code> <code>address</code> <code>ipv4-address</code> <i>string</i> <code>statistics</code>
Tree	<code>statistics</code>
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Clears the statistics for the Virtual IP addresses
Context	<code>interface name</code> <i>string</i> <code>subinterface</code> <i>index</i> <i>number</i> <code>ipv4</code> <code>arp</code> <code>virtual-ipv4-discovery</code> <code>address</code> <code>ipv4-address</code> <i>string</i> <code>statistics</code> <code>clear</code>
Tree	<code>clear</code>
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description Enter the statistics context

Context [interface name](#) *string* [subinterface](#) *index* *number* [ipv4 arp virtual-ipv4-discovery](#) [statistics](#)

Tree [statistics](#)

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description Clears the global statistics for all the Virtual IP addresses

Context [interface name](#) *string* [subinterface](#) *index* *number* [ipv4 arp virtual-ipv4-discovery](#) [statistics](#) [clear](#)

Tree [clear](#)

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dhcp-relay

Description Enable the dhcp-relay context

Context [interface name](#) *string* [subinterface](#) *index* *number* [ipv4 dhcp-relay](#)

Tree [dhcp-relay](#)

Configurable True

Platforms Supported on all platforms

statistics

Description Enter the statistics context

Context [interface name](#) *string* [subinterface](#) *index* *number* [ipv4 dhcp-relay](#) [statistics](#)

Tree	statistics
Configurable	True
Platforms	Supported on all platforms

clear

Description	Enter the clear context
Context	interface name string subinterface index number ipv4 dhcp-relay statistics clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

ipv6

Description	Enter the ipv6 context
Context	interface name string subinterface index number ipv6
Tree	ipv6
Configurable	True
Platforms	Supported on all platforms

address [ip-prefix string](#)

Description	Enter the address list instance
Context	interface name string subinterface index number ipv6 address ip-prefix string
Tree	address
Configurable	True
Platforms	Supported on all platforms

[ip-prefix string](#)

Description	Enter the ip-prefix context
Context	interface name string subinterface index number ipv6 address ip-prefix string
Configurable	True
Platforms	Supported on all platforms

vrrp-group virtual-router-id number

Description	VRRP Group Specific Configuration under IPv4 context
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 address ip-prefix <i>string</i> vrrp-group virtual-router-id <i>number</i>
Tree	vrrp-group
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

virtual-router-id number

Description	VRRP Group Index
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 address ip-prefix <i>string</i> vrrp-group virtual-router-id <i>number</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 address ip-prefix <i>string</i> vrrp-group virtual-router-id <i>number</i> statistics
Tree	statistics
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Enter the clear context
Context	interface name <i>string</i> subinterface index <i>number</i> ipv6 address ip-prefix <i>string</i> vrrp-group virtual-router-id <i>number</i> statistics clear
Tree	clear
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

dhcp-relay

Description	Enable the dhcp-relay context
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv6 dhcp-relay
Tree	dhcp-relay
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv6 dhcp-relay statistics
Tree	statistics
Configurable	True
Platforms	Supported on all platforms

clear

Description	Enter the clear context
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv6 dhcp-relay statistics clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

neighbor-discovery

Description	Enable the neighbor-discovery context
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv6 neighbor-discovery
Tree	neighbor-discovery
Configurable	True
Platforms	Supported on all platforms

delete-dynamic

Description	Delete all dynamic neighbor cache entries
--------------------	---

Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv6 neighbor-discovery delete-dynamic
Tree	delete-dynamic
Configurable	True
Platforms	Supported on all platforms

neighbor [ipv6-address](#) *string*

Description	Enter the neighbor list instance
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv6 neighbor-discovery neighbor ipv6-address <i>string</i>
Tree	neighbor
Configurable	True
Platforms	Supported on all platforms

ipv6-address *string*

Description	IPv6 address resolved by the ND cache entry
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv6 neighbor-discovery neighbor ipv6-address <i>string</i>
Configurable	True
Platforms	Supported on all platforms

delete-dynamic

Description	Delete one specific dynamic neighbor cache entry
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv6 neighbor-discovery neighbor ipv6-address <i>string</i> delete-dynamic
Tree	delete-dynamic
Configurable	True
Platforms	Supported on all platforms

virtual-ipv6-discovery

Description	Enter the virtual-ipv6-discovery context
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv6 neighbor-discovery virtual-ipv6-discovery

Tree	virtual-ipv6-discovery
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

address [ipv6-address](#) *string*

Description	The list of Virtual IP addresses
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv6 neighbor-discovery virtual-ipv6-discovery address ipv6-address <i>string</i>
Tree	address
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

[ipv6-address](#) *string*

Description	The virtual IPv6 address.
Context	interface name <i>string</i> subinterface <i>index</i> <i>number</i> ipv6 neighbor-discovery virtual-ipv6-discovery address ipv6-address <i>string</i>
Configurable	True

15.1 network-instance Descriptions

network-instance *name string*

Description	Enter the network-instance list instance
Context	network-instance name string
Tree	network-instance
Configurable	True
Platforms	Supported on all platforms

name *string*

Description	A unique name identifying the network instance
Context	network-instance name string
Configurable	True
Platforms	Supported on all platforms

bridge-table

Description	bridge-table
Context	network-instance name string bridge-table
Tree	bridge-table
Configurable	True
Platforms	Supported on all platforms

mac-duplication

Description	Enable the mac-duplication context
Context	network-instance name string bridge-table mac-duplication
Tree	mac-duplication
Configurable	True
Platforms	Supported on all platforms

delete-macs-type *keyword*

Description	Type of duplicate mac entries to delete.
Context	network-instance name <i>string</i> bridge-table mac-duplication delete-macs-type <i>keyword</i>
Tree	delete-macs-type
Options	<ul style="list-style-type: none"> • all • blackhole-only
Configurable	True
Platforms	Supported on all platforms

duplicate-entries

Description	Enter the duplicate-entries context
Context	network-instance name <i>string</i> bridge-table mac-duplication duplicate-entries
Tree	duplicate-entries
Configurable	True
Platforms	Supported on all platforms

mac [address](#) *string*

Description	macs learnt on the bridging instance
Context	network-instance name <i>string</i> bridge-table mac-duplication duplicate-entries mac address <i>string</i>
Tree	mac
Configurable	True
Platforms	Supported on all platforms

address *string*

Description	Enter the address context
Context	network-instance name <i>string</i> bridge-table mac-duplication duplicate-entries mac address <i>string</i>
Configurable	True
Platforms	Supported on all platforms

delete-mac

Description	delete the duplicate mac address.
Context	network-instance name <i>string</i> bridge-table mac-duplication duplicate-entries mac address <i>string</i> delete-mac
Tree	delete-mac
Configurable	True
Platforms	Supported on all platforms

mac-learning

Description	Enable the mac-learning context
Context	network-instance name <i>string</i> bridge-table mac-learning
Tree	mac-learning
Configurable	True
Platforms	Supported on all platforms

delete-all-macs

Description	Delete all learnt mac entries.
Context	network-instance name <i>string</i> bridge-table mac-learning delete-all-macs
Tree	delete-all-macs
Configurable	True
Platforms	Supported on all platforms

learnt-entries

Description	Enter the learnt-entries context
Context	network-instance name <i>string</i> bridge-table mac-learning learnt-entries
Tree	learnt-entries
Configurable	True
Platforms	Supported on all platforms

mac *address string*

Description	macs learnt on the bridging instance
--------------------	--------------------------------------

Context	network-instance name <i>string</i> bridge-table mac-learning learnt-entries mac address <i>string</i>
Tree	mac
Configurable	True
Platforms	Supported on all platforms

address *string*

Description	Enter the address context
Context	network-instance name <i>string</i> bridge-table mac-learning learnt-entries mac address <i>string</i>
Configurable	True
Platforms	Supported on all platforms

delete-mac

Description	delete the learnt mac address.
Context	network-instance name <i>string</i> bridge-table mac-learning learnt-entries mac address <i>string</i> delete-mac
Tree	delete-mac
Configurable	True
Platforms	Supported on all platforms

proxy-arp

Description	Enable the proxy-arp context
Context	network-instance name <i>string</i> bridge-table proxy-arp
Tree	proxy-arp
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

duplicate

Description	Enable the duplicate context

Platforms	Supported on all platforms

peer-as *number*

Description	Hard reset only BGP peers that have the specified peer-AS number, whether they are configured peers or dynamic peers
Context	network-instance name <i>string</i> protocols bgp reset-peer peer-as <i>number</i>
Tree	peer-as
Range	1 to 4294967295
Configurable	True
Platforms	Supported on all platforms

soft-clear

Description	Enable the soft-clear context
Context	network-instance name <i>string</i> protocols bgp soft-clear
Tree	soft-clear
Configurable	True
Platforms	Supported on all platforms

peer-as *number*

Description	Soft reset only BGP peers that have the specified peer-AS number, whether they are configured peers or dynamic peers
--------------------	--

Context	network-instance name <i>string</i> protocols bgp soft-clear peer-as <i>number</i>
Tree	peer-as
Range	1 to 4294967295
Configurable	True
Platforms	Supported on all platforms

route-refresh *identityref*

Description	<p>The address family to refresh</p> <p>This is encoded in the ROUTE_REFRESH message. By default all families are refreshed.</p>
Context	network-instance name <i>string</i> protocols bgp soft-clear route-refresh identityref
Tree	route-refresh
Options	<ul style="list-style-type: none"> • ipv4-unicast Unlabeled IPv4 unicast routes (AFI = 1, SAFI = 1) • ipv6-unicast Unlabeled IPv6 unicast routes (AFI = 2, SAFI = 1) • l3vpn-ipv4-unicast VPN-IPv4 unicast address family (AFI = 1, SAFI = 128) • l3vpn-ipv6-unicast VPN-IPv6 unicast address family (AFI = 2, SAFI = 128) • ipv4-labeled-unicast Labeled IPv4 unicast routes (AFI 1, SAFI 4) • ipv6-labeled-unicast Labeled IPv6 unicast routes (AFI 2, SAFI 4) • evpn EVPN routes (AFI = 25, SAFI = 70) • route-target Route target constraint routes (AFI 1, SAFI 132) • sr-policy-ipv4 SR-TE Policy (AFI 1, SAFI 73) • sr-policy-ipv6 SR-TE Policy (AFI 2, SAFI 73)
Configurable	True
Platforms	Supported on all platforms

igmp-snooping

Description	Enable the igmp-snooping context
Context	network-instance name <i>string</i> protocols igmp-snooping
Tree	igmp-snooping
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

interface [interface-name](#) *string*

Description	List of IGMP SNOOPING interfaces
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i>
Tree	interface
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

[interface-name](#) *string*

Description	Reference to a specific subinterface of the form <interface-name>.<subinterface-index>
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i>
String Length	5 to 25
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

membership-groups

Description	Enter the membership-groups context
Context	network-instance name <i>string</i> protocols igmp-snooping interface interface-name <i>string</i> membership-groups
Tree	membership-groups
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

clear

Description Clear all IGMP SNOOPING memberships for this interface

Context [network-instance name string protocols igmp-snooping interface interface-name string membership-groups clear](#)

Tree [clear](#)

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

group [group string](#)

Description Multicast group membership

querier

Description	Enter the querier context
Context	network-instance name <i>string</i> protocols igmp-snooping querier
Tree	querier
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

clear

Description	Clear all IGMP SNOOPING querier info on all interfaces
Context	network-instance name <i>string</i> protocols igmp-snooping querier clear
Tree	clear
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

statistics

Description	Enter the statistics context
Context	network-instance name <i>string</i> protocols igmp-snooping statistics
Tree	statistics
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

clear

Description	Reset IGMP SNOOPING statistics for all interfaces
Context	network-instance name <i>string</i> protocols igmp-snooping statistics clear
Tree	clear
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

isis

Description	Enable the isis context
Context	network-instance name <i>string</i> protocols isis
Tree	isis
Configurable	True
Platforms	Supported on all platforms

instance [name](#) *string*

Description	List of IS-IS protocol instances associated with this network-instance. Only a single instance is supported for now
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i>
Tree	instance
Configurable	True
Platforms	Supported on all platforms
Max. Elements	1

name *string*

Description	The name of the IS-IS instance
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

interface [interface-name](#) *string*

Description	List of IS-IS interfaces
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i>
Tree	interface
Configurable	True
Platforms	Supported on all platforms

interface-name *string*

Description	Reference to a specific subinterface of the form <interface-name>.<subinterface-index>
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

adjacencies

Description	Enter the adjacencies context
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> interface interface-name <i>string</i> adjacencies
Tree	adjacencies
Configurable	True
Platforms	Supported on all platforms

clear

Description	Reset all of the adjacencies on this interface
Context	network-instance name string protocols isis instance name string interface interface-name string adjacencies clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

ldp-synchronization

Description	IS-IS LDP-IGP synchronisation
Context	network-instance name string protocols isis instance name string ldp-synchronization
Tree	ldp-synchronization
Configurable	True
Platforms	Supported on all platforms

exit

Description	Advertise the normal metric for all IS-IS interfaces, even if some are configured for LDP synchronization and ISIS is not in sync with LDP on these interfaces
Context	network-instance name string protocols isis instance name string ldp-synchronization exit
Tree	exit
Configurable	True
Platforms	Supported on all platforms

link-state-database

Description	The ISIS link state database
Context	network-instance name string protocols isis instance name string link-state-database
Tree	link-state-database
Configurable	True
Platforms	Supported on all platforms

clear

Description	Clear the contents of the LSDB.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> link-state-database clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> statistics
Tree	statistics
Configurable	True
Platforms	Supported on all platforms

clear

Description	Reset all of the IS-IS instance statistics to zero.
Context	network-instance name <i>string</i> protocols isis instance name <i>string</i> statistics clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

ldp

Description	Operational tools commands for LDP.
Context	network-instance name <i>string</i> protocols ldp
Tree	ldp
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

discovery

Description	Enter the discovery context
Context	network-instance name <i>string</i> protocols ldp discovery
Tree	discovery
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interfaces

Description	Enter the interfaces context
Context	network-instance name <i>string</i> protocols ldp discovery interfaces
Tree	interfaces
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface *name string*

Description	Enter the interface list instance
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i>
Tree	interface
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *string*

Description	Reference type to a specific subinterface of the form <interface-name>.<subinterface-index>
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i>
String Length	5 to 25
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4

Description	Enter the ipv4 context
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4
Tree	ipv4
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 statistics
Tree	statistics
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Resets all the LDP instance state counters to zero
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv4 statistics clear
Tree	clear
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6

Description	Enter the ipv6 context
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6
Tree	ipv6
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 statistics
Tree	statistics
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Resets all the LDP instance state counters to zero
Context	network-instance name <i>string</i> protocols ldp discovery interfaces interface name <i>string</i> ipv6 statistics clear
Tree	clear
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

peers

Description	Enter the peers context
Context	network-instance name <i>string</i> protocols ldp peers
Tree	peers
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

peer [lsr-id](#) (*ipv4-address* | *ipv6-address*) [label-space-id](#) *number*

Description	List of peers.
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i>
Tree	peer
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lsr-id (*ipv4-address* | *ipv6-address*)

Description	The LSR ID of the peer, to identify the globally unique LSR. This leaf is used together with the leaf 'label-space-id' to form the LDP ID.
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

label-space-id *number*

Description	The Label Space ID of the peer, to identify a specific label space within the LSR. This is the last two octets of the LDP ID. This leaf is used together with the leaf 'lsr-id' to form the LDP ID.
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reset

Description	Reset the LDP session by closing the TCP connection and establishing a new one.
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i> reset
Tree	reset
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i> statistics
Tree	statistics
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Resets all the LDP instance state counters to zero
Context	network-instance name <i>string</i> protocols ldp peers peer lsr-id (<i>ipv4-address</i> <i>ipv6-address</i>) label-space-id <i>number</i> statistics clear
Tree	clear
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

reset-overload

Description	Enable the reset-overload context
Context	network-instance name <i>string</i> protocols ldp reset-overload
Tree	reset-overload
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	network-instance name <i>string</i> protocols ldp statistics
Tree	statistics
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Resets all the LDP instance state counters to zero
Context	network-instance name <i>string</i> protocols ldp statistics clear
Tree	clear
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mld-snooping

Description	Enable the mld-snooping context
--------------------	---------------------------------

Context	network-instance name <i>string</i> protocols mld-snooping
Tree	mld-snooping
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

interface [interface-name](#) *string*

Description	List of MLD SNOOPING interfaces
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i>
Tree	interface
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

interface-name *string*

Description	Reference to a specific subinterface of the form <interface-name>.<subinterface-index>
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i>
String Length	5 to 25
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

membership-groups

Description	Enter the membership-groups context
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> membership-groups
Tree	membership-groups
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

clear

Description	Clear all MLD SNOOPING memberships for this interface
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> membership-groups clear
Tree	clear
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

group [group](#) *string*

Description	Multicast group membership
Context	network-instance name <i>string</i> protocols mld-snooping interface interface-name <i>string</i> membership-groups group group <i>string</i>
Tree	group
Configurable	True

ospf

Description	Enable the ospf context
Context	network-instance name <i>string</i> protocols ospf
Tree	ospf
Configurable	True
Platforms	Supported on all platforms

instance [name](#) *string*

Description	List of OSPF protocol instances associated with this network-instance. Only a single instance is supported for now
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i>
Tree	instance
Configurable	True
Platforms	Supported on all platforms
Max. Elements	1

name *string*

Description	The name of the OSPF instance
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i>
String Length	1 to 255
Configurable	True

Platforms Supported on all platforms

area [area-id](#)

Description List of OSPF area

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id](#)

Tree [area](#)

Configurable True

Platforms Supported on all platforms

area-id

Description Enter the area-id context

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id](#)

Configurable True

Platforms Supported on all platforms

interface [interface-name](#) *string*

Description List of OSPF interfaces

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id](#) [interface interface-name](#) *string*

Tree [interface](#)

Configurable True

Platforms Supported on all platforms

interface-name *string*

Description Reference to a specific subinterface of the form <interface-name>.<subinterface-index>

Context [network-instance name](#) *string* [protocols ospf instance name](#) *string* [area area-id](#) [interface interface-name](#) *string*

String Length 5 to 25

Configurable True

Platforms Supported on all platforms

neighbors

Description	Enter the neighbors context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbors
Tree	neighbors
Configurable	True
Platforms	Supported on all platforms

clear

Description	Reset all of the adjacencies on this interface
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> area area-id interface interface-name <i>string</i> neighbors clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

ldp-synchronization

Description	Enter the ldp-synchronization context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> ldp-synchronization
Tree	ldp-synchronization
Configurable	True
Platforms	Supported on all platforms

exit

Description	Advertise the normal metric for all OSPF interfaces, even if some are configured for LDP synchronization and OSPF is not in sync with LDP on these interfaces
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> ldp-synchronization exit
Tree	exit
Configurable	True
Platforms	Supported on all platforms

link-state-database

Description	The OSPF link state database
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> link-state-database
Tree	link-state-database
Configurable	True
Platforms	Supported on all platforms

clear

Description	Clear the contents of the LSDB.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> link-state-database clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

manual-spf

Description	Enter the manual-spf context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> manual-spf
Tree	manual-spf
Configurable	True
Platforms	Supported on all platforms

run

Description	Run a SPF calculation.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> manual-spf run
Tree	run
Configurable	True
Platforms	Supported on all platforms

neighbors

Description	Container for OSPF neighbors tools
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> neighbors
Tree	neighbors
Configurable	True
Platforms	Supported on all platforms

clear

Description	Clear all OSPF neighbors
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> neighbors clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

neighbor [neighbor-id](#)

Description	Enter the neighbor list instance
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> neighbors neighbor neighbor-id
Tree	neighbor
Configurable	True
Platforms	Supported on all platforms

neighbor-id

Description	The neighbor's ip-address in case of OSPFv2, the router-id otherwise
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> neighbors neighbor neighbor-id
Configurable	True
Platforms	Supported on all platforms

clear

Description	Reset this neighbor in the OSPF instance
--------------------	--

Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> neighbors neighbor neighbor-id clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

overload

Description	Enter the overload context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> overload
Tree	overload
Configurable	True
Platforms	Supported on all platforms

clear

Description	Reset OSPF instance overload status.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> overload clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> statistics
Tree	statistics
Configurable	True
Platforms	Supported on all platforms

clear

Description	Reset all of the OSPF instance statistics to zero.
Context	network-instance name <i>string</i> protocols ospf instance name <i>string</i> statistics clear
Tree	clear

Configurable	True
Platforms	Supported on all platforms

route-table

Description	Enable the route-table context
Context	network-instance name <i>string</i> route-table
Tree	route-table
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4-unicast

Description	The container for the IPv4 unicast routing table of the network instance.
Context	network-instance name <i>string</i> route-table ipv4-unicast
Tree	ipv4-unicast
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

longest-prefix-match

Description	Enter the longest-prefix-match context
Context	network-instance name <i>string</i> route-table ipv4-unicast longest-prefix-match
Tree	longest-prefix-match
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv4-address *string*

Description	The IPv4 address for which the longest prefix match route should be returned
--------------------	--

Context	network-instance name <i>string</i> route-table ipv4-unicast longest-prefix-match ipv4-address <i>string</i>
Tree	ipv4-address
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-unicast

Description	The container for the IPv6 unicast routing table of the network instance.
Context	network-instance name <i>string</i> route-table ipv6-unicast
Tree	ipv6-unicast
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

longest-prefix-match

Description	Enter the longest-prefix-match context
Context	network-instance name <i>string</i> route-table ipv6-unicast longest-prefix-match
Tree	longest-prefix-match
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ipv6-address *string*

Description	The IPv6 address for which the longest prefix match route should be returned
Context	network-instance name <i>string</i> route-table ipv6-unicast longest-prefix-match ipv6-address <i>string</i>
Tree	ipv6-address
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

traffic-engineering-policies

Description	Enter the traffic-engineering-policies context
Context	network-instance name <i>string</i> traffic-engineering-policies
Tree	traffic-engineering-policies
Configurable	True
Platforms	Supported on all platforms

policy [policy-name](#) *string*

Description	List of traffic engineering policies
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i>
Tree	policy
Configurable	True
Platforms	Supported on all platforms

policy-name *string*

Description	The name of the traffic engineering policy
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

segment-list [segment-list-index](#) *number*

Description	Enter the segment-list list instance
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i>
Tree	segment-list
Configurable	True
Platforms	Supported on all platforms

segment-list-index *number*

Description	Index to enumerate the different segment lists of a TE policy.
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i>
Range	1 to 32
Configurable	True
Platforms	Supported on all platforms

clear

Description	Clear segment-list
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

resignal

Description	Trigger resignal for segment-list
Context	network-instance name <i>string</i> traffic-engineering-policies policy policy-name <i>string</i> segment-list segment-list-index <i>number</i> resignal
Tree	resignal
Configurable	True
Platforms	Supported on all platforms

16.1 oam Descriptions

oam

Description	Enclosing container for OAM management.
Context	oam
Tree	oam
Configurable	True
Platforms	Supported on all platforms

ethcfm

Description	Enter ETH-CFM on-demand tools
Context	oam ethcfm
Tree	ethcfm
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear-cfm-statistics

Description	<p>Clears ETH-CFM statistics</p> <p>This clears the statistics at the relative hierarchy to the command instance. For example, if the command is issued directly under ethcfm all ETH-CFM system statistics are cleared. If the command is issued at the ethcfm domain association local-mep those individual mep OpCode statistics will be cleared.</p>
Context	oam ethcfm clear-cfm-statistics
Tree	clear-cfm-statistics
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

delete-auto-discovered-meps

Description	<p>Delete discovered meps from the remote mep database</p> <p>This deletes the entries at the relative hierarchy to the command instance. For example, if the command is issued directly under ethcfm all entries are</p>
--------------------	---

deleted. If the command is issued at the ethcfm domain association local-mep remote-mep that specific entry will be deleted.

Context	oam ethcfm delete-auto-discovered-meps
Tree	delete-auto-discovered-meps
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

delete-learned-remote-macs

Description	Delete learned remote macs from the mep mac table This deletes the entries at the relative hierarchy to the command instance. For example, if the command is issued directly under ethcfm all entries are deleted. If the command is issued at the ethcfm domain association local-mep remote-mep that specific entry will be delete.
Context	oam ethcfm delete-learned-remote-macs

Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interval *number*

Description	The time interval between successive MPLS echo-request messages in case of send-count > 1
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) interval number
Tree	interval
Range	1 to 10
Default	1
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mpls-ttl *number*

Description	The TTL value written into the topmost label stack entry of the MPLS echo-request message This TTL is expected to be decremented at each hop along the path to the destination. If TTL reaches 1 the segment routing packet will be discarded due to TTL expiry and the ping will fail if the destination has not been reached yet.
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) mpls-ttl <i>number</i>
Tree	mpls-ttl
Range	1 to 255
Default	255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe-size *number*

Description	The size of the IP packet MPLS echo-request message. Probe size does not include MPLS headers, if any
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) probe-size <i>number</i>
Tree	probe-size
Range	1 to 9500
Default	1
Units	bytes
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

send-count *number*

Description	The number of MPLS echo-request messages to be sent in sequence
Context	oam lsp-ping ldp fec prefix (ipv4-prefix ipv6-prefix) send-count <i>number</i>
Tree	send-count
Range	1 to 100
Default	1
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

source-ip (*ipv4-address* | *ipv6-address*)

Description	The source IP address of the UDP/IP MPLS echo request message This should be a routable address of the router. This will be destination of the MPLS echo reply message sent back to the sender. By default this is the system address of the default network-instance; if the default network-instance does not have system interface then it will be primary address of the lowest numbered loopback subinterface of the default network-instance.
Context	oam lsp-ping ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) source-ip (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	source-ip
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

timeout *number*

Description	The maximum time the sender waits to receive an MPLS echo-reply message before considering that the ping failed
Context	oam lsp-ping ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) timeout <i>number</i>
Tree	timeout
Range	1 to 60
Default	3
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

traffic-class *number*

Description	MPLS Header Traffic Class/Exp value
Context	oam lsp-ping ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>) traffic-class <i>number</i>
Tree	traffic-class
Range	0 to 7
Default	7
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

Description	The number of MPLS echo-request messages to be sent in sequence
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) send-count number
Tree	send-count
Range	1 to 100
Default	1
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

source-ip (*ipv4-address | ipv6-address*)

Description	The source IP address of the UDP/IP MPLS echo request message This should be a routable address of the router. This will be destination of the MPLS echo reply message sent back to the sender. By default this is the system address of the default network-instance; if the default network-instance does not have system interface then it will be primary address of the lowest numbered loopback subinterface of the default network-instance.
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) source-ip (ipv4-address ipv6-address)
Tree	source-ip
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

timeout *number*

Description	The maximum time the sender waits to receive an MPLS echo-reply message before considering that the ping failed
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) timeout number
Tree	timeout

Range	1 to 60
Default	3
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

traffic-class *number*

Description	MPLS Header Traffic Class/Exp value
Context	oam lsp-ping sr-isis prefix-sid prefix (ipv4-prefix ipv6-prefix) traffic-class number
Tree	traffic-class
Range	0 to 7
Default	7
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

te-policy

Description	Parameters required to ping the endpoint of a TE-Policy tunnel
Context	oam lsp-ping te-policy
Tree	te-policy
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-uncolored

Description	Enter the sr-uncolored context
Context	oam lsp-ping te-policy sr-uncolored
Tree	sr-uncolored
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Clear all uncolored MPLS TE-Policy ping session transmit and receive packet counts and all error counts
Context	oam lsp-ping te-policy sr-uncolored clear
Tree	clear
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy [policy-name string protocol-origin keyword](#)

Description	Enter the policy list instance
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword
Tree	policy
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy-name string

Description	Name of Uncolored Traffic Engineering Policy to be tested. ny available primary or standby or active secondaty candidate-path can be probed.
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

protocol-origin keyword

Description	Uncolored Traffic Engineering Policy, origination source. The method Policy path is computed. This list includes Path Computation Engine, explicitly configured paths, etc.
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword
Options	<ul style="list-style-type: none"> • pcep PCEP used as signalling mechanism for the candidate path • bgp

- BGP used as signalling mechanism for the candidate path
- local
- Management interface used for candidate path instantiation

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

destination-ip (*ipv4-address* | *ipv6-address*)

Description	The destination IP address of the UDP/IP MPLS echo request message This should be a non-forwardable address in the 127/8 address block (or the 0:0:0:0:FFFF:7F00:0/104 IPv6 address block). Varying this address can help to exercise different ECMP paths towards the destination. By default, the destination address is selected randomly from these address blocks.
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword destination-ip (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	destination-ip
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ecmp-interface-select *string*

Description	Send the LSP ping messages out the specified subinterface If this router has multiple ECMP next-hops to the endpoint of the MPLS tunnel this can select one of those subinterfaces specifically
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword ecmp-interface-select <i>string</i>
Tree	ecmp-interface-select
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ecmp-next-hop-select (*ipv4-address* | *ipv6-address*)

Description	Send the LSP ping messages to the specified next-hop If this router has multiple ECMP next-hops to the endpoint of the MPLS tunnel this can select one of those next-hops specifically
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword ecmp-next-hop-select (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	ecmp-next-hop-select

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interval *number*

Description	The time interval between successive MPLS echo-request messages in case of send-count > 1
Context	oam lsp-ping te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword interval <i>number</i>
Tree	interval
Range	1 to 10
Default	1
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mpls-ttl *number*

Description	The TTL value written into the topmost label stack entry of the MPLS echo-request message This TTL is expected to be decremented at each hop along the path to the destination. If TTL reaches 1 the segment routing packet will be discarded due to TTL expiry and the ping will fail if the destination has not been reached yet.
Context	oam lsp-ping te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword mpls-ttl <i>number</i>
Tree	mpls-ttl
Range	1 to 255
Default	255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe-size *number*

Description	The size of the IP packet MPLS echo-request message. Probe size does not include MPLS headers, if any
Context	oam lsp-ping te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin keyword probe-size <i>number</i>

Tree	probe-size
Range	1 to 9500
Default	1
Units	bytes
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

segment-list-index *number*

Description	Uncolored Traffic Engineering Policy active segment-list index
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword segment-list-index number
Tree	segment-list-index
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

send-count *number*

Description	The number of MPLS echo-request messages to be sent in sequence
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword send-count number
Tree	send-count
Range	1 to 100
Default	1
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

source-ip (*ipv4-address* | *ipv6-address*)

Description	The source IP address of the UDP/IP MPLS echo request message This should be a routable address of the router. This will be destination of the MPLS echo reply message sent back to the sender. By default this is the system address of the default network-instance; if the default network-instance does not have system interface then it will be primary address of the lowest numbered loopback subinterface of the default network-instance.
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword source-ip (ipv4-address ipv6-address)
Tree	source-ip

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

timeout *number*

Description	The maximum time the sender waits to receive an MPLS echo-reply message before considering that the ping failed
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword timeout number
Tree	timeout
Range	1 to 60
Default	3
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

traffic-class *number*

Description	MPLS Header Traffic Class/Exp value
Context	oam lsp-ping te-policy sr-uncolored policy policy-name string protocol-origin keyword traffic-class number
Tree	traffic-class
Range	0 to 7
Default	7
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

lsp-trace

Description	Perform LSP trace of the path towards the remote endpoint of an MPLS or segment routing tunnel
Context	oam lsp-trace
Tree	lsp-trace
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ldp

Description	Parameters required to trace a path towards the endpoint of an LDP tunnel
Context	oam lsp-trace ldp
Tree	ldp
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Clear all LDP trace session transmit and receive packet counts and all error counts
Context	oam lsp-trace ldp clear
Tree	clear
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

fec prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	Enter the fec list instance
Context	oam lsp-trace ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Tree	fec
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

prefix (*ipv4-prefix* | *ipv6-prefix*)

Description	The IPv4 or IPv6 prefix associated with the FEC This is the destination that is being traced.
Context	oam lsp-trace ldp fec prefix (<i>ipv4-prefix</i> <i>ipv6-prefix</i>)
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

destination-ip (*ipv4-address* | *ipv6-address*)

Description	The destination IP address of the UDP/IP MPLS trace message
--------------------	---

This should be a non-forwardable address in the 127/8 address block (or the 0:0:0:0:FFFF:7F00:0/104 IPv6 address block). Varying this address can help to exercise different ECMP paths towards the destination. By default, the destination address is selected randomly from these address blocks.

Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) destination-ip (ipv4-address ipv6-address)
Tree	destination-ip
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ecmp-interface-select *string*

Description	Send the LSP trace messages out the specified subinterface If this router has multiple ECMP next-hops to the endpoint of the MPLS tunnel this can select one of those subinterfaces specifically
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) ecmp-interface-select string
Tree	ecmp-interface-select
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ecmp-next-hop-select (*ipv4-address | ipv6-address*)

Description	Send the LSP trace messages to the specified next-hop If this router has multiple ECMP next-hops to the endpoint of the MPLS tunnel this can select one of those next-hops specifically
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) ecmp-next-hop-select (ipv4-address ipv6-address)
Tree	ecmp-next-hop-select
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interval *number*

Description	The time interval between successive MPLS trace messages while incrementing the TTL
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) interval number
Tree	interval

Range	1 to 10
Default	1
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum-failures *number*

Description	The maximum number of consecutive MPLS trace requests that do not receive a reply before the trace operation fails for a given TTL
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) maximum-failures number
Tree	maximum-failures
Range	1 to 255
Default	5
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum-mpls-ttl *number*

Description	The maximum or final TTL value of the MPLS trace messages
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) maximum-mpls-ttl number
Tree	maximum-mpls-ttl
Range	1 to 255
Default	30
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

minimum-mpls-ttl *number*

Description	The minimum or starting TTL value of the MPLS trace messages
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) minimum-mpls-ttl number
Tree	minimum-mpls-ttl
Range	1 to 255
Default	1

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe-count *number*

Description	The maximum number of MPLS trace messages sent per hop
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) probe-count <i>number</i>
Tree	probe-count
Range	1 to 10
Default	1
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe-size *number*

Description	The size of the IP packet MPLS trace message. Probe size does not include MPLS headers, if any
Context	oam lsp-trace ldp fec prefix (ipv4-prefix ipv6-prefix) probe-size <i>number</i>
Tree	probe-size
Range	1 to 9500
Default	1
Units	bytes
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

source-ip (*ipv4-address* | *ipv6-address*)

Description	The source IP address of the UDP/IP MPLS trace message This should be a routable address of the router. This will be destination of the MPLS echo reply message sent back to the sender. By default this is the system address of the default network-instance; if the default network-instance does not have system interface then it will be primary address of the lowest numbered loopback subinterface of the default network-instance.

Description MPLS Header Traffic Class/Exp value

Context [oam lsp-trace sr-isis prefix-sid prefix \(ipv4-prefix | ipv6-prefix\) traffic-class number](#)

Tree [traffic-class](#)

Range 0 to 7

Default 7

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

te-policy

Description Parameters required to trace the endpoint of a TE-Policy tunnel

Context [oam lsp-trace te-policy](#)

Tree [te-policy](#)

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sr-uncolored

Description Enter the sr-uncolored context

Context	oam lsp-trace te-policy sr-uncolored
Tree	sr-uncolored
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Clear all uncolored MPLS TE-Policy trace session transmit and receive packet counts and all error counts
Context	oam lsp-trace te-policy sr-uncolored clear
Tree	clear
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy [policy-name](#) *string* [protocol-origin](#) *keyword*

Description	Enter the policy list instance
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i>
Tree	policy
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy-name *string*

Description	Name of Uncolored Traffic Engineering Policy which is to be traced. Any available primary or standby or active secondary candidate-path can be traced.
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i>
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

protocol-origin *keyword*

Description	Uncolored Traffic Engineering Policy, origination source. The method Policy path is computed. This list includes Path Computation Engine, explicitly configured paths, etc.
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i>
Options	<ul style="list-style-type: none"> • pcep PCEP used as signalling mechanism for the candidate path • bgp BGP used as signalling mechanism for the candidate path • local Management interface used for candidate path instantiation
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

destination-ip (*ipv4-address* | *ipv6-address*)

Description	The destination IP address of the UDP/IP MPLS trace message This should be a non-forwardable address in the 127/8 address block (or the 0:0:0:0:FFFF:7F00:0/104 IPv6 address block). Varying this address can help to exercise different ECMP paths towards the destination. By default, the destination address is selected randomly from these address blocks.
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> destination-ip (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	destination-ip
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ecmp-interface-select *string*

Description	Send the LSP trace messages out the specified subinterface If this router has multiple ECMP next-hops to the endpoint of the MPLS tunnel this can select one of those subinterfaces specifically
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> ecmp-interface-select <i>string</i>
Tree	ecmp-interface-select
Configurable	True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

ecmp-next-hop-select (*ipv4-address* | *ipv6-address*)

Description Send the LSP trace messages to the specified next-hop
If this router has multiple ECMP next-hops to the endpoint of the MPLS tunnel this can select one of those next-hops specifically

Context [oam lsp-trace te-policy sr-uncolored policy policy-name](#) *string* [protocol-origin keyword ecmp-next-hop-select](#) (*ipv4-address* | *ipv6-address*)

Tree [ecmp-next-hop-select](#)

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interval *number*

Description The time interval between successive MPLS trace messages while incrementing the TTL

Context [oam lsp-trace te-policy sr-uncolored policy policy-name](#) *string* [protocol-origin keyword interval](#) *number*

Tree [interval](#)

Range 1 to 10

Default 1

Units seconds

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum-failures *number*

Description The maximum number of consecutive MPLS trace requests that do not receive a reply before the trace operation fails for a given TTL

Context [oam lsp-trace te-policy sr-uncolored policy policy-name](#) *string* [protocol-origin keyword maximum-failures](#) *number*

Tree [maximum-failures](#)

Range 1 to 255

Default 5

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

maximum-mpls-ttl *number*

Description	The maximum or final TTL value of the MPLS trace messages
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> maximum-mpls-ttl <i>number</i>
Tree	maximum-mpls-ttl
Range	1 to 255
Default	30
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

minimum-mpls-ttl *number*

Description	The minimum or starting TTL value of the MPLS trace messages
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> minimum-mpls-ttl <i>number</i>
Tree	minimum-mpls-ttl
Range	1 to 255
Default	1
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe-count *number*

Description	The maximum number of MPLS trace messages sent per hop
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> probe-count <i>number</i>
Tree	probe-count
Range	1 to 10
Default	1
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe-size *number*

Description	The size of the IP packet MPLS trace message. Probe size does not include MPLS headers, if any
--------------------	--

Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> probe-size <i>number</i>
Tree	probe-size
Range	1 to 9500
Default	1
Units	bytes
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

segment-list-index *number*

Description	Uncolored Traffic Engineering Policy active segment-list index
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> segment-list-index <i>number</i>
Tree	segment-list-index
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

source-ip (*ipv4-address* | *ipv6-address*)

Description	The source IP address of the UDP/IP MPLS trace message This should be a routable address of the router. This will be destination of the MPLS echo reply message sent back to the sender. By default this is the system address of the default network-instance; if the default network-instance does not have system interface then it will be primary address of the lowest numbered loopback subinterface of the default network-instance.
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> source-ip (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	source-ip
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

timeout *number*

Description	The maximum time the sender waits to receive an MPLS trace message before considering that the ping failed
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> timeout <i>number</i>

Tree	timeout
Range	1 to 60
Default	3
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

traffic-class *number*

Description	MPLS Header Traffic Class/Exp value
Context	oam lsp-trace te-policy sr-uncolored policy policy-name <i>string</i> protocol-origin <i>keyword</i> traffic-class <i>number</i>
Tree	traffic-class
Range	0 to 7
Default	7
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

twamp

Description	Enable the twamp context
Context	oam twamp
Tree	twamp
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

server

Description	Enter the server context
Context	oam twamp server
Tree	server
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

network-instance *name string*

Description	Enter the network-instance list instance
Context	oam twamp server network-instance name string
Tree	network-instance
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

name *string*

Description	Enter the name context
Context	oam twamp server network-instance name string
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Clear all TWAMP test session transmit and receive packet counts and all error counts
Context	oam twamp server network-instance name string clear
Tree	clear
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

17.1 platform Descriptions

platform

Description	Top-level container for platform operational commands
Context	platform
Tree	platform
Configurable	True
Platforms	Supported on all platforms

chassis

Description	Operational commands related to the chassis
Context	platform chassis
Tree	chassis
Configurable	True
Platforms	Supported on all platforms

reboot

Description	Trigger a reboot of the chassis
Context	platform chassis reboot
Tree	reboot
Configurable	True
Platforms	Supported on all platforms

cancel

Description	Cancels a pending reboot on this component
Context	platform chassis reboot cancel
Tree	cancel
Configurable	True
Platforms	Supported on all platforms

delay *number*

Description	The amount of time to delay the reboot During this period, the reboot can be cancelled.
Context	platform chassis reboot delay <i>number</i>
Tree	delay
Units	seconds
Configurable	True
Platforms	Supported on all platforms

force

Description	Force a reboot of this component, overriding any synchronizations or other activities in progress This option can be dangerous, and may result in a module booting on an older image if used after an image change
Context	platform chassis reboot force
Tree	force
Configurable	True
Platforms	Supported on all platforms

message *string*

Description	A user-defined message to broadcast to other users of the system
Context	platform chassis reboot message <i>string</i>
Tree	message
Configurable	True
Platforms	Supported on all platforms

warm

Description	Perform a warm reboot of the system This option will perform checks against the current configuration, before prompting to confirm the reboot, and then rebooting the system without impacting the datapath - if a new image has been configured, this will upgrade the system.
Context	platform chassis reboot warm

Tree	warm
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

force

Description	Force a warm reboot of the system, overriding any validation, synchronizations or other activities in progress This option can be dangerous, and may result in an outage - but can be used to support a fast reboot of the system.
Context	platform chassis reboot warm force
Tree	force
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

validate

Description	Validate that the system's current configuration and state supports a warm reboot operation
Context	platform chassis reboot warm validate
Tree	validate
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

control *slot string*

Description	Operational commands related to control modules
Context	platform control slot <i>string</i>
Tree	control
Configurable	True
Platforms	Supported on all platforms

slot *string*

Description	Slot identifier for the control module
Context	platform control slot <i>string</i>

Configurable	True
Platforms	Supported on all platforms

locator

Description	Operational commands for the locator LED
Context	platform control slot <i>string</i> locator
Tree	locator
Configurable	True
Platforms	Supported on all platforms

disable

Description	Deactivates the locator LED for this component
Context	platform control slot <i>string</i> locator disable
Tree	disable
Configurable	True
Platforms	Supported on all platforms

enable

Description	Activate the locator LED for this component
Context	platform control slot <i>string</i> locator enable
Tree	enable
Configurable	True
Platforms	Supported on all platforms

duration *number*

Description	Sets the duration to activate the locator LED, after which it will disable automatically
Context	platform control slot <i>string</i> locator enable duration <i>number</i>
Tree	duration
Range	10 to 3600
Units	seconds
Configurable	True

Platforms Supported on all platforms

reboot

Description Trigger or a reboot of this component

Context [platform control slot](#) *string* [reboot](#)

Tree [reboot](#)

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

cancel

Description Cancels a pending reboot on this component

Context [platform control slot](#) *string* [reboot](#) [cancel](#)

Tree [cancel](#)

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

delay *number*

Description The amount of time to delay the reboot
During this period, the reboot can be cancelled.

Context [platform control slot](#) *string* [reboot](#) [delay](#) *number*

Tree [delay](#)

Units seconds

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

force

Description Force a reboot of this component, overriding any synchronizations or other activities in progress
This option can be dangerous, and may result in a module booting on an older image if used after an image change

Context [platform control slot](#) *string* [reboot](#) [force](#)

Tree [force](#)

Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

message *string*

Description	A user-defined message to broadcast to other users of the system
Context	platform control slot <i>string</i> reboot message <i>string</i>
Tree	message
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

fabric slot *number*

Description	Operational commands related to fabric modules
Context	platform fabric slot <i>number</i>
Tree	fabric
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

slot *number*

Description	Numeric identifier for the fabric module
Context	platform fabric slot <i>number</i>
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

locator

Description	Operational commands for the locator LED
Context	platform fabric slot <i>number</i> locator
Tree	locator
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

disable

Description	Deactivates the locator LED for this component
Context	platform fabric slot number locator disable
Tree	disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

enable

Description	Activate the locator LED for this component
Context	platform fabric slot number locator enable
Tree	enable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

duration *number*

Description	Sets the duration to activate the locator LED, after which it will disable automatically
Context	platform fabric slot number locator enable duration number
Tree	duration
Range	10 to 3600
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

reboot

Description	Trigger or a reboot of this component
Context	platform fabric slot number reboot
Tree	reboot
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

cancel

Description	Cancels a pending reboot on this component
Context	platform fabric slot number reboot cancel
Tree	cancel
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

delay *number*

Description	The amount of time to delay the reboot During this period, the reboot can be cancelled.
Context	platform fabric slot number reboot delay number
Tree	delay
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

message *string*

Description	A user-defined message to broadcast to other users of the system
Context	platform fabric slot number reboot message string
Tree	message
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

fan-tray *id number*

Description	Operational commands related to fan modules
Context	platform fan-tray id number
Tree	fan-tray
Configurable	True
Platforms	Supported on all platforms

id number

Description	Numeric identifier for the fan module
Context	platform fan-tray id number
Configurable	True
Platforms	Supported on all platforms

locator

Description	Operational commands for the locator LED
Context	platform fan-tray id number locator
Tree	locator
Configurable	True
Platforms	Supported on all platforms

disable

Description	Deactivates the locator LED for this component
Context	platform fan-tray id number locator disable
Tree	disable
Configurable	True
Platforms	Supported on all platforms

enable

Description	Activate the locator LED for this component
Context	platform fan-tray id number locator enable
Tree	enable
Configurable	True
Platforms	Supported on all platforms

duration number

Description	Sets the duration to activate the locator LED, after which it will disable automatically
Context	platform fan-tray id number locator enable duration number

Tree	duration
Range	10 to 3600
Units	seconds
Configurable	True
Platforms	Supported on all platforms

linecard [slot number](#)

Description	Operational commands related to line cards
Context	platform linecard slot number
Tree	linecard
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

slot number

Description	Numeric identifier for the line card
Context	platform linecard slot number
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

locator

Description	Operational commands for the locator LED
Context	platform linecard slot number locator
Tree	locator
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

disable

Description	Deactivates the locator LED for this component
Context	platform linecard slot number locator disable
Tree	disable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

enable

Description	Activate the locator LED for this component
Context	platform linecard slot number locator enable
Tree	enable
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

duration *number*

Description	Sets the duration to activate the locator LED, after which it will disable automatically
Context	platform linecard slot number locator enable duration number
Tree	duration
Range	10 to 3600
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

reboot

Description	Trigger or a reboot of this component
Context	platform linecard slot number reboot
Tree	reboot
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

cancel

Description	Cancels a pending reboot on this component
Context	platform linecard slot number reboot cancel
Tree	cancel
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

delay *number*

Description	The amount of time to delay the reboot During this period, the reboot can be cancelled.
Context	platform linecard slot number reboot delay number
Tree	delay
Units	seconds
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

message *string*

Description	A user-defined message to broadcast to other users of the system
Context	platform linecard slot number reboot message string
Tree	message
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

redundancy

Description	Top-level container for redundancy operational commands
Context	platform redundancy
Tree	redundancy
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

switchover

Description	Trigger a redundancy switchover to the other control module
Context	platform redundancy switchover
Tree	switchover
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

synchronize

Description	Top-level container for manual synchronization activities
Context	platform redundancy synchronize
Tree	synchronize
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

overlay

Description	Force a synchronization of the overlay filesystem between the active control module and the standby This synchronizes all non-excluded directories in the overlay filesystem
Context	platform redundancy synchronize overlay
Tree	overlay
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

system

Description	Force a synchronization of the system-required data between the active control module and the standby This synchronizes images, configuration, checkpoints, and other system-required data
Context	platform redundancy synchronize system
Tree	system
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

show-fabric-bandwidth

Description	Show fabric bandwidth
Context	platform show-fabric-bandwidth
Tree	show-fabric-bandwidth
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

trust

Description	Operational commands related to Platform Trust
Context	platform trust
Tree	trust
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

attestation

Description	Tools commands input parameter for attestation to retrieve TCG BIOS Logs, IMA Logs
Context	platform trust attestation
Tree	attestation
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

control [slot string](#)

Description	Operational commands related to log retrieval for control modules
Context	platform trust attestation control slot string
Tree	control
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

slot *string*

Description	Slot identifier for the control module
Context	platform trust attestation control slot string
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

log-retrieval

Description	Tools commands to retrieve BIOS and IMA Log
Context	platform trust attestation control slot string log-retrieval

Tree	log-retrieval
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

bios

Description	TCG BIOS log retrieval commands
Context	platform trust attestation control slot <i>string</i> log-retrieval bios
Tree	bios
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

display

Description	Enter the display context
Context	platform trust attestation control slot <i>string</i> log-retrieval bios display
Tree	display
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

from *number*

Description	1-based log display starting index.
Context	platform trust attestation control slot <i>string</i> log-retrieval bios display from <i>number</i>
Tree	from
Default	1
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

pcr *number*

Description	limit display to entries associated with a specific PCR. A value of -1 shows all PCRs
Context	platform trust attestation control slot <i>string</i> log-retrieval bios display pcr <i>number</i>
Tree	pcr

Default	-1
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

to number

Description	1-based log display terminal index. 0 indicates use maximum index in log.
Context	platform trust attestation control slot <i>string</i> log-retrieval bios display to number
Tree	to
Default	0
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

summary

Description	retrieve a summary of the log
Context	platform trust attestation control slot <i>string</i> log-retrieval bios summary
Tree	summary
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

ima

Description	IMA log retrieval commands
Context	platform trust attestation control slot <i>string</i> log-retrieval ima
Tree	ima
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

display

Description	Enter the display context
Context	platform trust attestation control slot <i>string</i> log-retrieval ima display
Tree	display
Configurable	True

Platforms 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

from *number*

Description 1-based log display starting index.

Context [platform trust attestation control slot](#) *string* [log-retrieval ima display from number](#)

Tree [from](#)

Default 1

Configurable True

Platforms 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

pcr *number*

Description limit display to entries associated with a specific PCR. A value of -1 shows all PCRs

Context [platform trust attestation control slot](#) *string* [log-retrieval ima display pcr number](#)

Tree [pcr](#)

Default -1

Configurable True

Platforms 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

to *number*

Description 1-based log display terminal index. 0 indicates use maximum index in log.

Context [platform trust attestation control slot](#) *string* [log-retrieval ima display to number](#)

Tree [to](#)

Default 0

Configurable True

Platforms 7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

summary

Description retrieve a summary of the log

Context [platform trust attestation control slot](#) *string* [log-retrieval ima summary](#)

Tree	summary
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

pcr-quote

Description	Tools commands input parameter to retrieve TPM PCR Quote This container includes every information element defined in the reference challenge-response interaction model for remote attestation. Corresponding values are based on TPM 2.0 structure definitions
Context	platform trust attestation control slot string pcr-quote
Tree	pcr-quote
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

nonce *binary*

Description	A random number intended to guarantee freshness and for use as part of a replay-detection mechanism Note that a nonce sent into a TPM will typically be 160 or 256 binary digits long (20 or 32 bytes) If fewer binary digits are sent, this nonce object will be padded with leading zeros within Quotes returned from the TPM. Additionally if more bytes are sent, the nonce will be trimmed to the most significant binary digits
Context	platform trust attestation control slot string pcr-quote nonce binary
Tree	nonce
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

pcr-selection *string*

Description	A tpm2-tools compliant pcr selection string
Context	platform trust attestation control slot string pcr-quote pcr-selection string
Tree	pcr-selection
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

secure-boot

Description	Secure Boot operational commands
Context	platform trust secure-boot
Tree	secure-boot
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

control [slot string](#)

Description	Operational commands related Secure Boot for control modules
Context	platform trust secure-boot control slot string
Tree	control
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

slot [string](#)

Description	Slot identifier for the control module
Context	platform trust secure-boot control slot string
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

activate

Description	Activate Secure Boot
Context	platform trust secure-boot control slot string activate
Tree	activate
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

confirmation-code [string](#)

Description	Indicates the secure-boot command confirmation-code
Context	platform trust secure-boot control slot string activate confirmation-code string
Tree	confirmation-code

Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

serial-number *string*

Description	Indicates the serial-number of the control module
Context	platform trust secure-boot control slot <i>string</i> activate serial-number <i>string</i>
Tree	serial-number
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

revoke

Description	Update UEFI Secure Boot forbidden database (dbx), Key Exchange Key (KEK), Platform Key (PK)
Context	platform trust secure-boot control slot <i>string</i> revoke
Tree	revoke
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

confirmation-code *string*

Description	Indicates the secure-boot command confirmation-code
Context	platform trust secure-boot control slot <i>string</i> revoke confirmation-code <i>string</i>
Tree	confirmation-code
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

serial-number *string*

Description	Indicates the serial-number of the control module
Context	platform trust secure-boot control slot <i>string</i> revoke serial-number <i>string</i>
Tree	serial-number
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

update

Description	Update UEFI Secure Boot authorized database (db), Key Exchange Key (KEK), Platform Key (PK)
Context	platform trust secure-boot control slot string update
Tree	update
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

confirmation-code *string*

Description	Indicates the secure-boot command confirmation-code
Context	platform trust secure-boot control slot string update confirmation-code string
Tree	confirmation-code
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

serial-number *string*

Description	Indicates the serial-number of the control module
Context	platform trust secure-boot control slot string update serial-number string
Tree	serial-number
Configurable	True
Platforms	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X3b

classifiers

Description	Top level enclosing container for qos classifiers operational tools
Context	qos classifiers
Tree	classifiers
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

multifield-classifier *name string*

Description	List of multifield-classifier QoS policies
Context	qos classifiers multifield-classifier name string
Tree	multifield-classifier
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *string*

Description	The name of multifield-classifier QoS policy
Context	qos classifiers multifield-classifier name string
String Length	1 to 255

Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interfaces

Description	Interfaces and subinterfaces with QoS configuration and state
Context	qos interfaces
Tree	interfaces
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface [interface-id](#) *string*

Description	List of interfaces and subinterfaces referenced by QoS policies
Context	qos interfaces interface interface-id <i>string</i>
Tree	interface
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface-id *string*

Description	Identifier for the interface or subinterface
Context	qos interfaces interface interface-id <i>string</i>
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

output

Description	Enter the output context
Context	qos interfaces interface interface-id <i>string</i> output

Tree	output
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

queues

Description	Enter the queues context
Context	qos interfaces interface interface-id <i>string</i> output queues
Tree	queues
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear-statistics

Description	Enter the clear-statistics context
Context	qos interfaces interface interface-id <i>string</i> output queues clear-statistics
Tree	clear-statistics
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

queue [queue-name](#) *string*

Description	Enter the queue list instance
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>string</i>
Tree	queue
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

queue-name *string*

Description	The queue name
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>string</i>
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

queue-statistics

Description	Enter the queue-statistics context
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>string</i> queue-statistics
Tree	queue-statistics
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Enter the clear context
Context	qos interfaces interface interface-id <i>string</i> output queues queue queue-name <i>string</i> queue-statistics clear
Tree	clear
Configurable	True

Description System generated session ID
Context [system aaa authentication session id number](#)
Configurable True
Platforms Supported on all platforms

disconnect

Description Disconnect the cli session, requesting the cli to terminate
Context [system aaa authentication session id number disconnect](#)
Tree [disconnect](#)
Configurable True
Platforms Supported on all platforms

user username string

Description List of local users including admin and linuxadmin
Context [system aaa authentication user username string](#)
Tree [user](#)
Configurable True
Platforms Supported on all platforms

username *string*

Description	Enter the username context
Context	system aaa authentication user username <i>string</i>
Configurable	True
Platforms	Supported on all platforms

force-password-change

Description	Set change-on-first-login to true for this user This command will only take effect if the feature change-on-first-login is currently set to true.
Context	system aaa authentication user username <i>string</i> force-password-change
Tree	force-password-change
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

unlock

Description	Unlock the user, This will change its lockout state into false
Context	system aaa authentication user username <i>string</i> unlock
Tree	unlock
Configurable	True
Platforms	Supported on all platforms

authorization

Description	Operational commands relating to authorization
Context	system aaa authorization
Tree	authorization
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

authz-policy

Description	Top-level container for operational commands relating to Authz gRPC policies
Context	system aaa authorization authz-policy
Tree	authz-policy
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Clear Authz authorization policy counters
Context	system aaa authorization authz-policy clear
Tree	clear
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

probe

Description	Perform a test against the current policy Both a user and rpc must be provided.
Context	system aaa authorization authz-policy probe
Tree	probe
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rpc string

Description	The RPC to test access to as the provided user This follows the gNSI gRPC path format, in that it is /<pkg>.<service>/<rpc>, for example /gnmi.gNMI/Get.
Context	system aaa authorization authz-policy probe rpc string

Tree	rpc
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

user string

Description	The user to test the current policy with This can be either a SPIFFE URI or username.
Context	system aaa authorization authz-policy probe user string
Tree	user
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

remove

Description	Remove Authz authorization policy from the system Since there is only a single system-wide gRPC authorization policy, it will revert its contents to the factory default authorization policy which authorizes any gRPC calls for every user.
Context	system aaa authorization authz-policy remove
Tree	remove
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rotate

Description	Perform a rotation of the Authz gRPC policy
Context	system aaa authorization authz-policy rotate
Tree	rotate
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

created-on *number*

Description Sets the created on value for the new policy
Value is the number of seconds since the epoch. For reference the current time from the epoch in most Linux distributions can be retrieved via 'date +%s'. You can also select a specific date via 'date -d "2023-03-31" +%s'.
If no value is provided the systems current date and time is used.

Context [system aaa authorization authz-policy rotate created-on number](#)

Tree [created-on](#)

Units seconds

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

policy *string*

Description Contains the gRPC authorization policy as a JSON-formatted string
For example: { "name": "Default policy", "allow_rules": [{ "name": "admin-access", "source": { "principals": ["admin"] }, "request": { "paths": ["/"] } }] }

Context [system aaa authorization authz-policy rotate policy string](#)

Tree [policy](#)

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

version *string*

Description A version string to store with the policy
No constraints are applied other than the value must be a string.
If no value is provided no default is used.

Context [system aaa authorization authz-policy rotate version string](#)

Tree [version](#)

Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

app-management

Description	Operational commands related to app-management
Context	system app-management
Tree	app-management
Configurable	True
Platforms	Supported on all platforms

application *name string*

Description	List of all applications managed by the application manager
Context	system app-management application name string
Tree	application
Configurable	True
Platforms	Supported on all platforms

name *string*

Description	Unique name of this application instance
Context	system app-management application name string
Configurable	True
Platforms	Supported on all platforms

kill

Description	Terminate the application instance ungracefully
Context	system app-management application name string kill
Tree	kill
Configurable	True
Platforms	Supported on all platforms

quit

Description	Terminate the application instance, requesting it to core dump
Context	system app-management application name <i>string</i> quit
Tree	quit
Configurable	True
Platforms	Supported on all platforms

reload

Description	Reload the configuration of the application instance
Context	system app-management application name <i>string</i> reload
Tree	reload
Configurable	True
Platforms	Supported on all platforms

restart

Description	<p>Restart the application instance</p> <p>The best restart that is supported by the application is used if neither 'warm' or 'cold' is specified. If 'warm' restart is supported that will be used, or 'cold' if 'warm' is unavailable.</p> <p>A 'warm' restart will result in the application leaving its state in IDB during the restart, and recovering it post restart. This restart type results in less disruption to surrounding applications that would depend on the restarting applications state.</p> <p>A 'cold' restart will result in a normal stop/start of the application, including the purging of its state in IDB.</p>
Context	system app-management application name <i>string</i> restart
Tree	restart
Configurable	True
Platforms	Supported on all platforms

cold

Description	Perform a cold restart of the application instance
Context	system app-management application name <i>string</i> restart cold

Tree	cold
Configurable	True
Platforms	Supported on all platforms

warm

Description	Perform a warm restart of the application instance
Context	system app-management application name <i>string</i> restart warm
Tree	warm
Configurable	True
Platforms	Supported on all platforms

start

Description	Start the application instance
Context	system app-management application name <i>string</i> start
Tree	start
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Top-level grouping of operational commands related to application statistics
Context	system app-management application name <i>string</i> statistics
Tree	statistics
Configurable	True
Platforms	Supported on all platforms

clear

Description	Clear statistics for this application instance
Context	system app-management application name <i>string</i> statistics clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

stop

Description	Terminate the application instance gracefully
Context	system app-management application name <i>string</i> stop
Tree	stop
Configurable	True
Platforms	Supported on all platforms

boot

Description	Top-level container for operational commands related to booting the system
Context	system boot
Tree	boot
Configurable	True
Platforms	Supported on all platforms

golden-image

Description	Container for operational commands related to golden image
Context	system boot golden-image
Tree	golden-image
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Unset the golden-image
Context	system boot golden-image clear
Tree	clear
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

image string

Description	Sets the golden image the system uses This command selects an image to act as a golden-image to which the system reverts when a factory reset operation is requested.
Context	system boot golden-image image string
Tree	image
String Length	1 to 255
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

cgroup

Description	Top-level container for query commands related to cgroup in the system
Context	system cgroup
Tree	cgroup
Configurable	True
Platforms	Supported on all platforms

configuration

Description	Top-level container for operational commands related to the system configuration
Context	system configuration
Tree	configuration
Configurable	True
Platforms	Supported on all platforms

candidate name string

Description	List of configuration candidates currently active
Context	system configuration candidate name string
Tree	candidate
Configurable	True

Platforms Supported on all platforms

name *string*

Description The name of the candidate

Context [system configuration candidate name](#) *string*

String Length 1 to 255

Configurable True

Platforms Supported on all platforms

clear

Description Clear the candidate from the system, discarding any changes
This results in any users currently in the candidate being dropped back to running mode.

Context [system configuration candidate name](#) *string* **clear**

Tree [clear](#)

Configurable True

Platforms Supported on all platforms

checkpoint id (*number* | *checkpoint-name*)

Description List of current checkpoints present in the system

Context [system configuration checkpoint id](#) (*number* | *checkpoint-name*)

Tree [checkpoint](#)

Configurable True

Platforms Supported on all platforms

id (*number* | *checkpoint-name*)

Description System generated ID, or operator defined name for the checkpoint

Context [system configuration checkpoint id](#) (*number* | *checkpoint-name*)

Configurable True

Platforms Supported on all platforms

clear

Description	Clear the checkpoint from the system
Context	system configuration checkpoint id (number checkpoint-name) clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

load

Description	Load candidate from saved checkpoint configuration
Context	system configuration checkpoint id (number checkpoint-name) load
Tree	load
Configurable	True
Platforms	Supported on all platforms

revert

Description	Revert running system configuration to the saved checkpoint configuration This functions as a load and commit action.
Context	system configuration checkpoint id (number checkpoint-name) revert
Tree	revert
Configurable	True
Platforms	Supported on all platforms

confirmed-accept

Description	Accepts an in progress commit and stops the confirmation timer
Context	system configuration confirmed-accept
Tree	confirmed-accept
Configurable	True
Platforms	Supported on all platforms

persist-id *string*

Description	Specifies the persist-id to which the commit confirmed accept applies
--------------------	---

Context	system configuration confirmed-accept persist-id <i>string</i>
Tree	persist-id
Configurable	True
Platforms	Supported on all platforms

confirmed-reject

Description	Rejects an in progress commit and stops the confirmation timer
Context	system configuration confirmed-reject
Tree	confirmed-reject
Configurable	True
Platforms	Supported on all platforms

persist-id *string*

Description	Specifies the persist-id to which the commit confirmed reject applies
Context	system configuration confirmed-reject persist-id <i>string</i>
Tree	persist-id
Configurable	True
Platforms	Supported on all platforms

generate-checkpoint

Description	Generate a checkpoint point based on the current running configuration
Context	system configuration generate-checkpoint
Tree	generate-checkpoint
Configurable	True
Platforms	Supported on all platforms

comment *string*

Description	User provided comment to associate with the checkpoint
Context	system configuration generate-checkpoint comment <i>string</i>
Tree	comment
Configurable	True
Platforms	Supported on all platforms

name *string*

Description	User provided name of the checkpoint
Context	system configuration generate-checkpoint name <i>string</i>
Tree	name
Configurable	True
Platforms	Supported on all platforms

rescue-clear

Description	Remove rescue configuration
Context	system configuration rescue-clear
Tree	rescue-clear
Configurable	True
Platforms	Supported on all platforms

rescue-save

Description	Save current running configuration as rescue configuration - rescue-config.json
Context	system configuration rescue-save
Tree	rescue-save
Configurable	True
Platforms	Supported on all platforms

save

Description	Save current running configuration as initial (startup) configuration - config.json
Context	system configuration save
Tree	save
Configurable	True
Platforms	Supported on all platforms

session id *number*

Description	List of configuration sessions currently active
Context	system configuration session id number
Tree	session
Configurable	True
Platforms	Supported on all platforms

id *number*

Description	System generated ID for the configuration session
Context	system configuration session id number
Configurable	True
Platforms	Supported on all platforms

clear

Description	Clear the session from the system, discarding any changes
Context	system configuration session id number clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

upgrade

Description	Operational commands related to configuration upgrade
Context	system configuration upgrade
Tree	upgrade
Configurable	True
Platforms	Supported on all platforms

checkpoint id (*number* | *checkpoint-name*)

Description	List of configuration checkpoints
Context	system configuration upgrade checkpoint id (number checkpoint-name)
Tree	checkpoint

Configurable	True
Platforms	Supported on all platforms

id (*number | checkpoint-name*)

Description	System generated ID, or operator defined name for the checkpoint
Context	system configuration upgrade checkpoint id (<i>number checkpoint-name</i>)
Configurable	True
Platforms	Supported on all platforms

file *string*

Description	System file path to a json configuration file
Context	system configuration upgrade file <i>string</i>
Tree	file
Configurable	True
Platforms	Supported on all platforms

rescue

Description	Rescue configuration
Context	system configuration upgrade rescue
Tree	rescue
Configurable	True
Platforms	Supported on all platforms

startup

Description	Startup (initial) configuration
Context	system configuration upgrade startup
Tree	startup
Configurable	True
Platforms	Supported on all platforms

validation-check *keyword*

Description	Specifies the kind of validation that will be executed after the content is upgraded If the validation fails the upgraded content will not be persisted.
Context	system configuration upgrade validation-check keyword
Tree	validation-check
Default	replace
Options	<ul style="list-style-type: none">• skip Skip validation of the upgraded content• merge Validation is done as if the content was used in a load merge operation• replace Validation is done as if the content was used in a full config replace operation
Configurable	True
Platforms	Supported on all platforms

dhcp-relay

Description	Enable the dhcp-relay context
Context	system dhcp-relay
Tree	dhcp-relay
Configurable	True
Platforms	Supported on all platforms

update-dns-entries

Description	Update all dhcp-relay server domain name resolutions A server host entry that cannot be resolved will be unavailable until it can be successfully resolved.
Context	system dhcp-relay update-dns-entries
Tree	update-dns-entries
Configurable	True
Platforms	Supported on all platforms

dhcp-server

Description	Enable the dhcp-server context
Context	system dhcp-server
Tree	dhcp-server
Configurable	True
Platforms	Supported on all platforms

network-instance *name string*

Description	List of network instances to run a dhcp server in
Context	system dhcp-server network-instance name string
Tree	network-instance
Configurable	True
Platforms	Supported on all platforms

name *string*

Description	Network Instance
Context	system dhcp-server network-instance name string
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

dhcpv4

Description	Enter the dhcpv4 context
Context	system dhcp-server network-instance name string dhcpv4
Tree	dhcpv4
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	system dhcp-server network-instance name string dhcpv4 statistics

Tree	statistics
Configurable	True
Platforms	Supported on all platforms

clear

Description	Enter the clear context
Context	system dhcp-server network-instance name <i>string</i> dhcpv4 statistics clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

dhcpv6

Description	Enter the dhcpv6 context
Context	system dhcp-server network-instance name <i>string</i> dhcpv6
Tree	dhcpv6
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Enter the statistics context
Context	system dhcp-server network-instance name <i>string</i> dhcpv6 statistics
Tree	statistics
Configurable	True
Platforms	Supported on all platforms

clear

Description	Enter the clear context
Context	system dhcp-server network-instance name <i>string</i> dhcpv6 statistics clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

event-handler

Description	Top-level container for operational commands on event handler and event handling instances
Context	system event-handler
Tree	event-handler
Configurable	True
Platforms	Supported on all platforms

instance [name string](#)

Description	List of all event handler instances
Context	system event-handler instance name string
Tree	instance
Configurable	True
Platforms	Supported on all platforms
Max. Elements	20

name [string](#)

Description	A user-defined name for this event handler instance
Context	system event-handler instance name string
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

reload

Description	Reload the Python script for this event handler instance
Context	system event-handler instance name string reload
Tree	reload
Configurable	True
Platforms	Supported on all platforms

statistics

Description	Top-level container for operational commands on event handler statistics
Context	system event-handler instance name <i>string</i> statistics
Tree	statistics
Configurable	True
Platforms	Supported on all platforms

clear

Description	Clear statistics for this event handler instance
Context	system event-handler instance name <i>string</i> statistics clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

grpc-server *name string*

Description	List of configured gRPC server instances
Context	system grpc-server name <i>string</i>
Tree	grpc-server
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *string*

Description	User-provided name of this server instance
Context	system grpc-server name <i>string</i>
String Length	1 to 255
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

client id number

Description	List of active gRIBI client sessions
Context	system grpc-server name <i>string</i> client id number
Tree	client
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

id number

Description	System generated ID for for the client
Context	system grpc-server name <i>string</i> client id number
Range	0 to 4294967295
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

disconnect

Description	Disconnect this client from the server
Context	system grpc-server name <i>string</i> client id number disconnect
Tree	disconnect
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

gnoi

Description	Top-level container for operational commands related to gNOI
Context	system grpc-server name <i>string</i> gnoi
Tree	gnoi
Configurable	True

Context	system mirroring mirroring-instance name <i>string</i>
Tree	mirroring-instance
Configurable	True
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name *string*

Description	A unique name identifying the mirroring instance
Context	system mirroring mirroring-instance name <i>string</i>
Configurable	True
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

mirror-destination

Description	tools mirror destination
Context	system mirroring mirroring-instance name <i>string</i> mirror-destination
Tree	mirror-destination
Configurable	True
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	system mirroring mirroring-instance name <i>string</i> mirror-destination statistics
Tree	statistics
Configurable	True
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Enter the clear context
Context	system mirroring mirroring-instance name <i>string</i> mirror-destination statistics clear

Tree	clear
Configurable	True
Platforms	7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

netconf-server [name string](#)

Description	Enter the netconf-server list instance
Context	system netconf-server name string
Tree	netconf-server
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

name [string](#)

Description	NETCONF server instance name
Context	system netconf-server name string
String Length	1 to 247
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session [session-id number](#)

Description	Enter the session list instance
Context	system netconf-server name string session session-id number
Tree	session
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

session-id [number](#)

Description	Enter the session-id context
--------------------	------------------------------

Context	system netconf-server name <i>string</i> session session-id <i>number</i>
Range	1 to 4294967295
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Clear the NETCONF server instance session
Context	system netconf-server name <i>string</i> session session-id <i>number</i> clear
Tree	clear
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	system netconf-server name <i>string</i> session session-id <i>number</i> statistics
Tree	statistics
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Clear statistics information for the NETCONF session
Context	system netconf-server name <i>string</i> session session-id <i>number</i> statistics clear
Tree	clear
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	system netconf-server name <i>string</i> statistics
Tree	statistics
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

clear

Description	Clear statistics information for the NETCONF server instance
Context	system netconf-server name <i>string</i> statistics clear
Tree	clear
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

packet-trace-base64

Description	Tools command to report the forwarding behavior for a specified test packet (packet specified in base64 format)
Context	system packet-trace-base64
Tree	packet-trace-base64
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

interface *string*

Description	References the configured name of the interface in which to inject the probe packet
Context	system packet-trace-base64 interface <i>string</i>
Tree	interface
Configurable	True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

packet *binary*

Description Packet content encoded in base64 string format

Context [system packet-trace-base64 packet binary](#)

Tree [packet](#)

Configurable True

Platforms 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

sync

Description Top-level grouping for sync operational commands

Context [system sync](#)

Tree [sync](#)

Configurable True

Platforms 7220 IXR-D5, 7250 IXR-X3b

ptp

Description Grouping for ptp operational commands

Context [system sync ptp](#)

Tree [ptp](#)

Configurable True

Platforms 7220 IXR-D5, 7250 IXR-X3b

instance [instance-index](#) *number*

Description Grouping for PTP instance operational commands

Context [system sync ptp instance instance-index number](#)

Tree [instance](#)

Configurable True

Platforms 7220 IXR-D5, 7250 IXR-X3b

instance-index *number*

Description	Enter the instance-index context
Context	system sync ptp instance instance-index <i>number</i>
Range	1 to 10
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

clear-statistics

Description	Clears all PTP statistics for PTP
Context	system sync ptp instance instance-index <i>number</i> clear-statistics
Tree	clear-statistics
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

default-ds

Description	The default data set of the PTP Instance In the context of the protocol, this data set is required for an Ordinary Clock or Boundary Clock
Context	system sync ptp instance instance-index <i>number</i> default-ds
Tree	default-ds
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	system sync ptp instance instance-index <i>number</i> default-ds statistics
Tree	statistics
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

clear

Description	Clears PTP statistics and event counters in the default-ds
--------------------	--

Context	system sync ptp instance instance-index number default-ds statistics clear
Tree	clear
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

time-recovery-engine

Description	Enter the time-recovery-engine context
Context	system sync ptp instance instance-index number default-ds time-recovery-engine
Tree	time-recovery-engine
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	system sync ptp instance instance-index number default-ds time-recovery-engine statistics
Tree	statistics
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

clear

Description	Clears all PTP statistics for PTP time recovery engine
Context	system sync ptp instance instance-index number default-ds time-recovery-engine statistics clear
Tree	clear
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

inactive-peers

Description	Enter the inactive-peers context
Context	system sync ptp instance instance-index number inactive-peers
Tree	inactive-peers

Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

clear

Description	Clears information related to inactive PTP peers
Context	system sync ptp instance instance-index number inactive-peers clear
Tree	clear
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-ds-configured-peer [port-index number](#)

Description	Grouping for PTP Port DS for configured IP peers operational commands
Context	system sync ptp instance instance-index number port-ds-configured-peer port-index number
Tree	port-ds-configured-peer
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-index *number*

Description	Enter the port-index context
Context	system sync ptp instance instance-index number port-ds-configured-peer port-index number
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	system sync ptp instance instance-index number port-ds-configured-peer port-index number statistics
Tree	statistics
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

clear

Description	Clears all PTP statistics for this PTP Port DS
Context	system sync ptp instance instance-index number port-ds-configured-peer port-index number statistics clear
Tree	clear
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-ds-discovered-peer [port-index number](#)

Description	Grouping for PTP Port DS for discovered IP peers operational commands
Context	system sync ptp instance instance-index number port-ds-discovered-peer port-index number
Tree	port-ds-discovered-peer
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-index *number*

Description	Enter the port-index context
Context	system sync ptp instance instance-index number port-ds-discovered-peer port-index number
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	system sync ptp instance instance-index number port-ds-discovered-peer port-index number statistics
Tree	statistics
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

clear

Description	Clears all PTP statistics for this PTP Port DS
Context	system sync ptp instance instance-index number port-ds-discovered-peer port-index number statistics clear
Tree	clear
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-ds-interface [port-index number](#)

Description	Grouping for PTP Port DS for interfaces operational commands
Context	system sync ptp instance instance-index number port-ds-interface port-index number
Tree	port-ds-interface
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

port-index [number](#)

Description	Enter the port-index context
Context	system sync ptp instance instance-index number port-ds-interface port-index number
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

statistics

Description	Enter the statistics context
Context	system sync ptp instance instance-index number port-ds-interface port-index number statistics
Tree	statistics
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

clear

Description	Clears all PTP statistics for this PTP Port DS
Context	system sync ptp instance instance-index number port-ds-interface port-index number statistics clear
Tree	clear
Configurable	True
Platforms	7220 IXR-D5, 7250 IXR-X3b

tls

Description	Top-level container for operational commands related to TLS
Context	system tls
Tree	tls
Configurable	True
Platforms	Supported on all platforms

generate-csr

Description	Generates a certificate signing request and key pair Fields for the certificate are taken from OpenSSL defaults, with the exception of the common name, which is taken from the system host name and domain name combination.
Context	system tls generate-csr
Tree	generate-csr
Configurable	True
Platforms	Supported on all platforms

common-name *string*

Description	The common name to use for the certificate signing request By default the common name is set to the system host name and domain name combination.
Context	system tls generate-csr common-name string
Tree	common-name
String Length	1 to 64

Configurable	True
Platforms	Supported on all platforms

country *string*

Description	The country name to use for the certificate signing request The expected format is two characters long, e.g. 'US'.
Context	system tls generate-csr country string
Tree	country
String Length	2
Default	US
Configurable	True
Platforms	Supported on all platforms

domain-names *string*

Description	Domain names to add to the SubjectAlternativeName field within the certificate signing request These names are encoded as DNS:<name> within the certificate SAN.
Context	system tls generate-csr domain-names string
Tree	domain-names
String Length	1 to 253
Configurable	True
Platforms	Supported on all platforms
Max. Elements	32

email *string*

Description	The email address to use for the certificate signing request
Context	system tls generate-csr email string
Tree	email
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

ip-addresses (*ipv4-address* | *ipv6-address*)

Description	IP addresses to add to the SubjectAlternativeName field within the certificate signing request These addresses are encoded as IP:<ip> within the certificate SAN.
Context	system tls generate-csr ip-addresses (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	ip-addresses
Configurable	True
Platforms	Supported on all platforms
Max. Elements	32

key-size *number*

Description	The size of the private key to generate for the certificate signing request
Context	system tls generate-csr key-size <i>number</i>
Tree	key-size
Range	1024 to 16384
Default	4096
Configurable	True
Platforms	Supported on all platforms

key-type *keyword*

Description	The type of private key to generate for the certificate signing request
Context	system tls generate-csr key-type <i>keyword</i>
Tree	key-type
Default	rsa
Options	<ul style="list-style-type: none"> rsa
Configurable	True
Platforms	Supported on all platforms

locality *string*

Description	The city or locality to use for the certificate signing request
Context	system tls generate-csr locality <i>string</i>

Tree	locality
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

organization *string*

Description	The organization to use for the certificate signing request
Context	system tls generate-csr organization <i>string</i>
Tree	organization
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

organization-unit *string*

Description	The organization unit to use for the certificate signing request
Context	system tls generate-csr organization-unit <i>string</i>
Tree	organization-unit
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

spiffe-id *string*

Description	A SPIFFE ID to use for the certificate signing request This ID is in URI form, including the leading 'spiffe://', for example 'spiffe://srlinux.dev/sa/user'.
Context	system tls generate-csr spiffe-id <i>string</i>
Tree	spiffe-id
Configurable	True
Platforms	Supported on all platforms

state *string*

Description	The state or province to use for the certificate signing request
--------------------	--

Context	system tls generate-csr state <i>string</i>
Tree	state
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

type *keyword*

Description	The type of certificate to use for the certificate signing request
Context	system tls generate-csr type <i>keyword</i>
Tree	type
Default	x509
Options	<ul style="list-style-type: none"> • x509
Configurable	True
Platforms	Supported on all platforms

generate-self-signed

Description	<p>Generates a self signed certificate and key pair</p> <p>Fields for the self signed certificate are taken from OpenSSL defaults, with the exception of the common name, which is taken from the system host name and domain name combination.</p>
Context	system tls generate-self-signed
Tree	generate-self-signed
Configurable	True
Platforms	Supported on all platforms

common-name *string*

Description	<p>The common name to use for the certificate signing request</p> <p>By default the common name is set to the system host name and domain name combination.</p>
Context	system tls generate-self-signed common-name <i>string</i>
Tree	common-name
String Length	1 to 64
Configurable	True

Platforms Supported on all platforms

country *string*

Description The country name to use for the certificate signing request
The expected format is two characters long, e.g. 'US'.

Context [system tls generate-self-signed country string](#)

Tree [country](#)

String Length 2

Default US

Configurable True

Platforms Supported on all platforms

domain-names *string*

Description Domain names to add to the SubjectAlternativeName field within the certificate signing request
These names are encoded as DNS:<name> within the certificate SAN.

Context [system tls generate-self-signed domain-names string](#)

Tree [domain-names](#)

String Length 1 to 253

Configurable True

Platforms Supported on all platforms

Max. Elements 32

duration *number*

Description The time in which the certificate is valid

Context [system tls generate-self-signed duration number](#)

Tree [duration](#)

Range 1 to 3650

Default 365

Units days

Configurable True

Platforms Supported on all platforms

email string

Description	The email address to use for the certificate signing request
Context	system tls generate-self-signed email string
Tree	email
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

ip-addresses (*ipv4-address* | *ipv6-address*)

Description	IP addresses to add to the SubjectAlternativeName field within the certificate signing request These addresses are encoded as IP:<ip> within the certificate SAN.
Context	system tls generate-self-signed ip-addresses (<i>ipv4-address</i> <i>ipv6-address</i>)
Tree	ip-addresses
Configurable	True
Platforms	Supported on all platforms
Max. Elements	32

key-size number

Description	The size of the private key to generate for the certificate signing request
Context	system tls generate-self-signed key-size number
Tree	key-size
Range	1024 to 16384
Default	4096
Configurable	True
Platforms	Supported on all platforms

key-type keyword

Description	The type of private key to generate for the certificate signing request
Context	system tls generate-self-signed key-type keyword
Tree	key-type
Default	rsa

Options	• <code>rsa</code>
Configurable	True
Platforms	Supported on all platforms

locality string

Description	The city or locality to use for the certificate signing request
Context	system tls generate-self-signed locality string
Tree	locality
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

organization string

Description	The organization to use for the certificate signing request
Context	system tls generate-self-signed organization string
Tree	organization
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

organization-unit string

Description	The organization unit to use for the certificate signing request
Context	system tls generate-self-signed organization-unit string
Tree	organization-unit
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

spiffe-id string

Description	A SPIFFE ID to use for the certificate signing request This ID is in URI form, including the leading 'spiffe://', for example 'spiffe://srlinux.dev/sa/user'.
--------------------	--

Context	system tls generate-self-signed spiffe-id <i>string</i>
Tree	spiffe-id
Configurable	True
Platforms	Supported on all platforms

state *string*

Description	The state or province to use for the certificate signing request
Context	system tls generate-self-signed state <i>string</i>
Tree	state
String Length	1 to 255
Configurable	True
Platforms	Supported on all platforms

type *keyword*

Description	The type of certificate to use for the certificate signing request
Context	system tls generate-self-signed type <i>keyword</i>
Tree	type
Default	x509
Options	<ul style="list-style-type: none"> • x509
Configurable	True
Platforms	Supported on all platforms

server-profile [name](#) *string*

Description	Enter the server-profile list instance
Context	system tls server-profile name <i>string</i>
Tree	server-profile
Configurable	True
Platforms	Supported on all platforms

name *string*

Description	Name of the TLS server-profile
--------------------	--------------------------------

Context	system tls server-profile name string
String Length	1 to 247
Configurable	True
Platforms	Supported on all platforms

certz

Description	Information relating to the active certificates and bundles as provided via Certz State is provided by the gNSI Certz service, and can be changed using the gNSI.Certz.Rotate RPC
Context	system tls server-profile name string certz
Tree	certz
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

remove

Description	Remove Certz SSL profile from the system.
Context	system tls server-profile name string certz remove
Tree	remove
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

rotate

Description	Perform a rotation of a certificate, trust anchor, or certificate revocation list within Certz SSL profile.
Context	system tls server-profile name string certz rotate
Tree	rotate
Configurable	True

certificate string

Description	Base64 encoded certificate to use with the provided or existing private key This includes the '-----BEGIN CERTIFICATE-----' and '-----END CERTIFICATE-----' header and footer
Context	system tls server-profile name string certz rotate certificate string
Tree	certificate
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

created-on number

Description	Sets the created on value for the new policy Value is the number of seconds since the epoch. For reference the current time from the epoch in most Linux distributions can be retrieved via 'date +%s'. You can also select a specific date via 'date -d "2023-03-31" +%s'. If no value is provided the systems current date and time is used.
Context	system tls server-profile name string certz rotate created-on number
Tree	created-on
Units	seconds
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

crl string

Description	Base64 encoded bundle of certificates to add to the certificate revocation list
Context	system tls server-profile name string certz rotate crl string
Tree	crl
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X3b

key string

Description	Base64 encoded key to use with the server certificate This includes the '-----BEGIN PRIVATE KEY-----', and '-----END PRIVATE KEY-----' header and footer The value is hashed, and only the hashed value is kept
Context	system tls server-profile name string certz rotate key string

21.1 tunnel-interface Descriptions

tunnel-interface *name string*

Description	In the case that the interface is logical tunnel interface, the parameters for the tunnel are specified within this subtree. Tunnel interfaces have only a single logical subinterface associated with them.
Context	tunnel-interface name string
Tree	tunnel-interface
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

name string

Description	The name of the tunnel-interface. Valid options are: vxlan<N>, N=0..255
Context	tunnel-interface name string
String Length	6 to 8
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

vxlan-interface *index number*

Description	The list of vxlan-interfaces.
Context	tunnel-interface name string vxlan-interface index number
Tree	vxlan-interface
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
Max. Elements	16384

index number

Description	The index of the vxlan-tunnel.
--------------------	--------------------------------

Context	tunnel-interface name <i>string</i> vxlan-interface index <i>number</i>
Range	0 to 999999999
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

bridge-table

Description	Enable the bridge-table context
Context	tunnel-interface name <i>string</i> vxlan-interface index <i>number</i> bridge-table
Tree	bridge-table
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

multicast-destinations

Description	Enter the multicast-destinations context
Context	tunnel-interface name <i>string</i> vxlan-interface index <i>number</i> bridge-table multicast-destinations
Tree	multicast-destinations
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

destination [vtep](#) ([ipv4-address](#) | [ipv6-address](#)) [vni](#) *number*

Description	Enter the destination list instance
Context	tunnel-interface name <i>string</i> vxlan-interface index <i>number</i> bridge-table multicast-destinations destination vtep (ipv4-address ipv6-address) vni <i>number</i>
Tree	destination
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

vtep (*ipv4-address* | *ipv6-address*)

Description	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
Context	tunnel-interface name <i>string</i> vxlan-interface index number bridge-table multicast-destinations destination vtep (<i>ipv4-address</i> <i>ipv6-address</i>) vni number
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

vni number

Description	VXLAN Network Identifier of the destination.
Context	tunnel-interface name <i>string</i> vxlan-interface index number bridge-table multicast-destinations destination vtep (<i>ipv4-address</i> <i>ipv6-address</i>) vni number
Range	1 to 16777215
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

destination-index number

Description	A system-wide unique identifier of this vxlan destination object (system allocated).
Context	tunnel-interface name <i>string</i> vxlan-interface index number bridge-table multicast-destinations destination vtep (<i>ipv4-address</i> <i>ipv6-address</i>) vni number destination-index number
Tree	destination-index
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

multicast-forwarding keyword

Description	The type of multicast data forwarded by this vxlan destination.
Context	tunnel-interface name <i>string</i> vxlan-interface index number bridge-table multicast-destinations destination vtep (<i>ipv4-address</i> <i>ipv6-address</i>) vni number multicast-forwarding keyword

Tree	multicast-forwarding
Options	<ul style="list-style-type: none"> • none • BUM • unknown-unicast • broadcast-mcast
Configurable	False

not-programmed-reason *keyword*

Description	The reason why the destination is not programmed in the floodlist
Context	tunnel-interface name <i>string</i> vxlan-interface index <i>number</i> bridge-table multicast-destinations destination vtep (<i>ipv4-address</i> <i>ipv6-address</i>) vni number not-programmed-reason <i>keyword</i>
Tree	not-programmed-reason
Options	<ul style="list-style-type: none"> • no-destination-index • multicast-limit
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

multicast-limit

Description	Multicast limits per vxlan interface.
Context	tunnel-interface name <i>string</i> vxlan-interface index <i>number</i> bridge-table multicast-destinations multicast-limit
Tree	multicast-limit
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

current-usage *number*

Description	Maximum number of multicast vxlan-destinations in use on this vxlan-interface.
Context	tunnel-interface name <i>string</i> vxlan-interface index <i>number</i> bridge-table multicast-destinations multicast-limit current-usage <i>number</i>

Tree	current-usage
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

maximum-entries *number*

Description	Maximum number of multicast vxlan-destinations allowed on a vxlan-interface.
Context	tunnel-interface name <i>string</i> vxlan-interface index <i>number</i> bridge-table multicast-destinations multicast-limit maximum-entries <i>number</i>
Tree	maximum-entries
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

statistics

Description	Enter the statistics context
Context	tunnel-interface name <i>string</i> vxlan-interface index <i>number</i> bridge-table statistics
Tree	statistics
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

active-entries *number*

Description	The total number of entries that are active on the sub-interface.
Context	tunnel-interface name <i>string</i> vxlan-interface index <i>number</i> bridge-table statistics active-entries <i>number</i>
Tree	active-entries
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

failed-entries *number*

Description	The total number of macs, which have not been programmed on at least one slot
Context	tunnel-interface name <i>string</i> vxlan-interface index <i>number</i> bridge-table statistics failed-entries <i>number</i>
Tree	failed-entries
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

mac-type *type keyword*

Description	The type of the mac on the sub-interface.
Context	tunnel-interface name <i>string</i> vxlan-interface index <i>number</i> bridge-table statistics mac-type type <i>keyword</i>
Tree	mac-type
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

type *keyword*

Description	Enter the type context
Context	tunnel-interface name <i>string</i> vxlan-interface index <i>number</i> bridge-table statistics mac-type type <i>keyword</i>
Options	<ul style="list-style-type: none"> • static • duplicate • learnt • irb-interface • evpn • evpn-static • irb-interface-anycast • proxy-anti-spoof • reserved • eth-cfm

22.1 tunnel Descriptions

tunnel

Description	This model collects all config and state aspects of the tunnel table in SRLinux.
Context	tunnel
Tree	tunnel
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

pseudowire-tunnel

Description	Enter the pseudowire-tunnel context
Context	tunnel pseudowire-tunnel
Tree	pseudowire-tunnel
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

tunnel *name string*

Description	The name that identifies the remote system of the tunnel
Context	tunnel pseudowire-tunnel tunnel name string
Tree	tunnel
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
Max. Elements	4096

name string

Description	The name that identifies the remote system
Context	tunnel pseudowire-tunnel tunnel name string
String Length	1 to 255

Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

allowed-tunnel-types *identityref*

Description	List of allowed transport tunnel types for the pseudowire If multiple tunnel types are allowed and there are multiple tunnel types available to the remote system, the router selects the lowest preference tunnel in the tunnel-table.
Context	tunnel pseudowire-tunnel tunnel name string allowed-tunnel-types identityref
Tree	allowed-tunnel-types
Options	<ul style="list-style-type: none"> • ip-in-ip Tunnels with IP-in-IP encapsulation • gre Tunnels with GRE encapsulation • sr-isis Segment routing using MPLS dataplane, programmed by IS-IS • sr-ospfv2 Segment routing using MPLS dataplane, programmed by OSPFv2 • sr-ospfv3 Segment routing using MPLS dataplane, programmed by OSPFv3 • te-policy-sr-mpls-colored Tunnel setup with sr-mpls-colored type TE-Policy. Labeled Traffic Engineering Policy with color • te-policy-sr-mpls-uncolored Tunnel setup with sr-mpls-uncolored type TE-Policy. Labeled Traffic Engineering Policy with primary and secondary segment-lists. • vxlan Tunnels based on VXLAN encapsulation
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
Min. Elements	1

index number

Description	The system allocated ID of the pw tunnel
Context	tunnel pseudowire-tunnel tunnel name string index number
Tree	index
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

last-change string

Description	The date and time of the most recent change to the tunnel state
Context	tunnel pseudowire-tunnel tunnel name string last-change string
Tree	last-change
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

operational-tunnel-id number

Description	The owner-assigned tunnel table index value that identifies the tunnel used by the pseudowire .
Context	tunnel pseudowire-tunnel tunnel name string operational-tunnel-id number
Tree	operational-tunnel-id
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

operational-tunnel-type identityref

Description	Enter the operational-tunnel-type context
Context	tunnel pseudowire-tunnel tunnel name string operational-tunnel-type identityref
Tree	operational-tunnel-type
Options	<ul style="list-style-type: none"> ip-in-ip Tunnels with IP-in-IP encapsulation

- gre
Tunnels with GRE encapsulation
- sr-isis
Segment routing using MPLS dataplane, programmed by IS-IS
- sr-ospfv2
Segment routing using MPLS dataplane, programmed by OSPFv2
- sr-ospfv3
Segment routing using MPLS dataplane, programmed by OSPFv3
- te-policy-sr-mpls-colored
Tunnel setup with sr-mpls-colored type TE-Policy. Labeled Traffic Engineering Policy with color
- te-policy-sr-mpls-uncolored
Tunnel setup with sr-mpls-uncolored type TE-Policy. Labeled Traffic Engineering Policy with primary and secondary segment-lists.
- vxlan
Tunnels based on VXLAN encapsulation

Configurable

False

Platforms

7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

remote-system (*ipv4-address-unicast | ipv6-address-unicast-without-local*)**Description**

The ip-address of the remote system that hosts the remote pseudowire-tunnel

Context[tunnel pseudowire-tunnel tunnel name string remote-system](#) (*ipv4-address-unicast | ipv6-address-unicast-without-local*)**Tree**[remote-system](#)**Configurable**

True

Platforms

7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

vxlan-tunnel**Description**

Enter the vxlan-tunnel context

Context[tunnel vxlan-tunnel](#)**Tree**[vxlan-tunnel](#)**Configurable**

True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

statistics

Description Container for vxlan-tunnel global statistics.

Context [tunnel vxlan-tunnel statistics](#)

Tree [statistics](#)

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

admin-state *keyword*

Description The configured state of the VXLAN statistics on the router

The default value is disable. No statistics are collected on VXLAN when the admin-state is disable. When enabled, the router starts collecting VXLAN statistics at both, global and VTEP level, however, the total number of layer-2 subinterfaces is decreased. A change in the configuration of this command also resets the statistic counters on layer-2 subinterfaces as a side effect, before resuming the collection of statistics (on these layer-2 subinterfaces).

Context [tunnel vxlan-tunnel statistics admin-state keyword](#)

Tree [admin-state](#)

Default disable

Options

- enable
- disable

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

in-discarded-packets *number*

Description The total number of discarded ingress VXLAN packets.

Ingress VXLAN packets can be discarded due to one of the following reasons:

Context [tunnel vxlan-tunnel statistics in-discarded-packets number](#)

Tree [in-discarded-packets](#)

Default 0

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

in-octets *number*

Description The total sum of ingress VXLAN octets.

Context [tunnel vxlan-tunnel statistics in-octets number](#)

Tree [in-octets](#)

Default 0

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

in-packets *number*

Description The total sum of ingress VXLAN packets.
A packet in this context is an inner frame.

Context [tunnel vxlan-tunnel statistics in-packets number](#)

Tree [in-packets](#)

Default 0

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

last-clear *string*

Description Timestamp of the last time the vxlan tunnel counters were cleared.

Context [tunnel vxlan-tunnel statistics last-clear string](#)

Tree [last-clear](#)

String Length 20 to 32

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

out-octets *number*

Description The total sum of egress VXLAN octets

Context [tunnel vxlan-tunnel statistics out-octets number](#)

Tree [out-octets](#)

Default 0

Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

out-packets *number*

Description	The total sum of egress VXLAN packets. . A packet in this context is an inner frame.
Context	tunnel vxlan-tunnel statistics out-packets number
Tree	out-packets
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

vtep address (*ipv4-address* | *ipv6-address*)

Description	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
Context	tunnel vxlan-tunnel vtep address (ipv4-address ipv6-address)
Tree	vtep
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

address (*ipv4-address* | *ipv6-address*)

Description	The IP address that identifies the remote VXLAN Termination Endpoint (VTEP).
Context	tunnel vxlan-tunnel vtep address (ipv4-address ipv6-address)
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

index *number*

Description	the next-hop-group-id (system allocated) for resolving the VXLAN termination endpoint
Context	tunnel vxlan-tunnel vtep address (ipv4-address ipv6-address) index number

Tree	index
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

last-change *string*

Description	The date and time of the most recent change to the tunnel state
Context	tunnel vxlan-tunnel vtep address (ipv4-address ipv6-address) last-change string
Tree	last-change
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

statistics

Description	Container for vxlan-tunnel per VTEP (Vxlan Termination EndPoint) statistics.
Context	tunnel vxlan-tunnel vtep address (ipv4-address ipv6-address) statistics
Tree	statistics
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

in-discarded-packets *number*

Description	The number of discarded ingress VXLAN packets. Ingress VXLAN packets can be discarded due to one of the following reasons:
Context	tunnel vxlan-tunnel vtep address (ipv4-address ipv6-address) statistics in-discarded-packets number
Tree	in-discarded-packets
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

in-octets *number*

Description	The number of octets encapsulated in ingress VXLAN packets.
Context	tunnel vxlan-tunnel vtep address (ipv4-address ipv6-address) statistics in-octets number
Tree	in-octets
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

in-packets *number*

Description	The number of packets encapsulated in ingress VXLAN packets. A packet in this context is an inner frame.
Context	tunnel vxlan-tunnel vtep address (ipv4-address ipv6-address) statistics in-packets number
Tree	in-packets
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

last-clear *string*

Description	Timestamp of the last time the vxlan tunnel counters were cleared.
Context	tunnel vxlan-tunnel vtep address (ipv4-address ipv6-address) statistics last-clear string
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

out-discarded-packets *number*

Description	The number of discarded egress VXLAN packets. Egress VXLAN packets can be discarded due to one of the following reasons:
--------------------	---

Context	tunnel vxlan-tunnel vtep address (ipv4-address ipv6-address) statistics out-discarded-packets number
Tree	out-discarded-packets
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

out-octets *number*

Description	The number of octets encapsulated in egress VXLAN packets.
Context	tunnel vxlan-tunnel vtep address (ipv4-address ipv6-address) statistics out-octets number
Tree	out-octets
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

out-packets *number*

Description	The number of packets encapsulated in egress VXLAN packets. A packet in this context is an inner frame.
Context	tunnel vxlan-tunnel vtep address (ipv4-address ipv6-address) statistics out-packets number
Tree	out-packets
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L
