**Options**

- up  
Component or process is operational
- down  
Component or process is not operational
- empty  
Component slot is empty
- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**oper-state** *keyword*

<b>Description</b>	Operational state of the Threshold Crossing Alerts (TCAs)
--------------------	-----------------------------------------------------------

The conditions are evaluated in the order shown.

The value 'pending' is returned if the threshold configuration for the specified indices changed during the current measurement interval. The threshold configuration is evaluated in the next full measurement interval after the new configuration.

The value 'active' is returned if the specified indices have a no clear threshold configured (stateless), and the current measurement interval has generated a Raise TCA. The value is also returned if the specified indices have a clear threshold configured (stateful), and the most recent TCA generated was a Raise.

The value 'not-active' is returned for all other conditions (e.g., thresholding is not configured for the specified indices).

### mi-duration *keyword*

<b>Description</b>	Configure the measurement interval duration  The measurement interval duration defines the length of the sample window over which the statistics are collected, computed, and stored. The system automatically instantiates a 'raw' measurement interval for each defined test session. The 'raw' measurement interval is unbounded and continually accumulates measurements while the test session admin-state has value 'enable'. The 'raw' measurement interval can have result cleared to flush restart the accumulation of statistics.

**oper-state** *keyword*

<b>Description</b>	Operational state of the Threshold Crossing Alerts (TCAs) The conditions are evaluated in the order shown. The value 'pending' is returned if the threshold configuration for the specified indices changed during the current measurement interval. The threshold configuration is evaluated in the next full measurement interval after the new configuration. The value 'active' is returned if the specified indices have a no clear threshold configured (stateless), and the current measurement interval has generated a Raise TCA. The value is also returned if the specified indices have a clear threshold configured (stateful), and the most recent TCA generated was a Raise. The value 'not-active' is returned for all other conditions (e.g., thresholding is not configured for the specified indices).

This flag is used to warn operators if the result count in the measurement interval is suboptimal for considering the results valid. Results are still collected, computed, and stored regardless of this flag. This is meant as a post processing notification to an external system.</p> <p>Conditions for a discontinuity include, but are not limited to the following:</p> <ol style="list-style-type: none"> <li>1 - The local time-of-day clock is adjusted by at least 10 seconds</li> <li>2 - The test is halted before the current Measurement Interval is completed</li> <li>3 - A local test failure, or reconfiguration that disrupts testing</li> </ol>

<b>Description</b>	Reason for the specified test session's current inability (if any) to launch request frames  For example, 'eth-parent-admin-down(4)' could be returned for a test if the MEP to be tested is associated with a subinterface which is administratively down.  Not all request frame transmit failures are detected by this mechanism. It is possible that the value 'none' will be returned when the test is unable to transmit frames during undetectable transmission errors.

**undetermined-available number**

<b>Description</b>	Number of availability indicators evaluated as Available for the specified direction and measurement interval, based on extrapolation  Undetermined counters are incremented when there is no explicit understanding why a response packet was not received. This will occur during a complete failure where no responses are received on the source and the source must time out those missing responses. This counter will increment when the availability window has been reached plus an additional five second timeout. Previous state must be maintained but the appropriate undetermined counter will increment by the equal value. This value should be used to adjust the availability counter if the reason was packet loss and not an administrative function that caused the condition.

### suspect-status *boolean*

**Description** Whether the Measurement Interval has been marked as suspect

The object is to be set to 'false' at the start of a measurement interval. It is set to 'true' when there is a discontinuity in the performance measurements during the Measurement Interval. This flag is used to warn operators if the result count in the measurement interval is suboptimal for considering the results valid. Results are still collected, computed, and stored regardless of this flag. This is meant as a post processing notification to an external system.

Conditions for a discontinuity include, but are not limited to the following:

- 1 - The local time-of-day clock is adjusted by at least 10 seconds
- 2 - The test is halted before the current Measurement Interval is completed
- 3 - A local test failure, or reconfiguration that disrupts testing

[state](#)

#### Options

- active

TWAMP-Control connection between the Server and the Control-Client is active

Packets are arriving on the TWAMP-Control channel or there are active TWAMP-Test sessions on the TWAMP-Control channel.

- servwait

TWAMP-Control connection between the Server and the Control-Client is in SERVWAIT

This state is entered when no there are no TWAMP-Control messages between the Control-Client and Server and all test sessions on the TWAMP-Control channel have been stopped, and the REFWAIT (timeout following test session stop) has expired.

### **enforce-test-session-start-time** *boolean*

<b>Description</b>	Discard or process TWAMP-Test packets arriving before the negotiated session start time  A Request-TW-Session includes a start-time value for the test session. A value 'true' enforces the server check that will drop the TWAMP-Test packets if the test session start-time is before the Server time of day. In environments where the TWAMP Client and TWAMP Servers are not synchronized the value 'false' can be used to skip this validation check and process TWAMP test packets that arrive before their indicated start time.

<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D5, 7220 IXR-H4

**orientation** *keyword*

<b>Description</b>	The orientation of the chassis
<b>Context</b>	<a href="#">platform chassis environment orientation</a> <i>keyword</i>
<b>Tree</b>	<a href="#">orientation</a>
<b>Default</b>	horizontal
<b>Options</b>	<ul style="list-style-type: none"> <li>vertical-ports-up The chassis is oriented vertically, with ports facing up</li> <li>vertical-ports-down The chassis is oriented vertically, with ports facing down</li> <li>horizontal The chassis is oriented horizontally</li> </ul>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D5, 7220 IXR-H4

**failure-reason** *string*

<b>Description</b>	The reason the component transitioned to a failed state Field is empty if the component is not currently in a failure state
<b>Context</b>	<a href="#">platform chassis failure-reason</a> <i>string</i>
<b>Tree</b>	<a href="#">failure-reason</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**healthz**

<b>Description</b>	The health of the component  The paramaters within this container indicate the status of the component beyond whether it is operationally up or down. When a signal is received that a component is in an unhealthy state the gNOI.Healthz service can be used to retrieve further diagnostic information relating to the component. The contents of this directory relate only to the specific component that it is associated with.
<b>Context</b>	<a href="#">platform chassis healthz</a>
<b>Tree</b>	<a href="#">healthz</a>
<b>Configurable</b>	False

<b>Platforms</b>	7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

## last-unhealthy *string*

<b>Description</b>	Last unhealthy time The time at which the component was last observed to transition from the healthy state to any other state, represented as nanoseconds since the Unix epoch.
<b>Context</b>	<a href="#">platform chassis healthz last-unhealthy string</a>
<b>Tree</b>	<a href="#">last-unhealthy</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

## status *keyword*

<b>Description</b>	Health status The status of the component, indicating its current health.
<b>Context</b>	<a href="#">platform chassis healthz status keyword</a>
<b>Tree</b>	<a href="#">status</a>
<b>Options</b>	<ul style="list-style-type: none"> <li>unspecified Unspecified status The component's health status has not yet been checked by the system.</li> <li>healthy Healthy status The component is in a healthy state, and is operating within the expected parameters.</li> <li>unhealthy Unhealthy status The component is in a unhealthy state, it is not performing the function expected of it.</li> </ul>

<b>Configurable</b>	False
<b>Platforms</b>	7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

### **unhealthy-count** *number*

<b>Description</b>	Unhealthy count The number of times the component has transitioned from the healthy state to any other state.
<b>Context</b>	<a href="#">platform chassis healthz unhealthy-count</a> <i>number</i>
<b>Tree</b>	<a href="#">unhealthy-count</a>
<b>Default</b>	0
<b>Configurable</b>	False
<b>Platforms</b>	7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

### **hw-mac-address** *string*

<b>Description</b>	The chassis MAC address Read from hardware, or derived from the systems UUID
<b>Context</b>	<a href="#">platform chassis hw-mac-address</a> <i>string</i>
<b>Tree</b>	<a href="#">hw-mac-address</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **id** *number*

<b>Description</b>	A user configured chassis ID This value is not used by the system, but is provided for user convenience.
<b>Context</b>	<a href="#">platform chassis id</a> <i>number</i>
<b>Tree</b>	<a href="#">id</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

### **last-boot-type** *string*

**Description** The type of boot the chassis initialized from  
This field indicates what type of reboot occurred, whether it be warm, normal, or otherwise.

**Context** [platform chassis last-boot-type](#) *string*

**Tree** [last-boot-type](#)

**Configurable** False

**Platforms** Supported on all platforms

### **last-booted** *string*

**Description** The date and time this component last booted  
For components that do not boot, this is the time the component was last discovered by the active control module

**Context** [platform chassis last-booted](#) *string*

**Tree** [last-booted](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** Supported on all platforms

### **last-booted-reason** *identityref*

**Description** The reason this component last booted or rebooted  
For components without the ability to 'boot' this field is never populated

**Context** [platform chassis last-booted-reason](#) *identityref*

**Tree** [last-booted-reason](#)

**Options**

- user-initiated-reboot  
A user initiated the reboot directly via a management interface
- power-failure  
The system rebooted the component due to insufficient power
- critical-error  
The system rebooted the component due to an internal critical error

**Configurable** False

**Platforms** Supported on all platforms

### **last-change** *string*

**Description** The date and time this component last changed state  
**Context** [platform chassis last-change string](#)  
**Tree** [last-change](#)  
**String Length** 20 to 32  
**Configurable** False

### **oper-state** *keyword*

**Description** The operational state of this component  
**Context** [platform chassis oper-state keyword](#)  
**Tree** [oper-state](#)  
**Options**

- up  
Component or process is operational
- down  
Component or process is not operational
- empty  
Component slot is empty
- downloading  
Component is downloading image into memory
- booting  
Component is booting downloaded image
- starting

- Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

## healthz

<b>Description</b>	The health of the component  The parameters within this container indicate the status of the component beyond whether it is operationally up or down. When a signal is received that a component is in an unhealthy state the gNOI.Healthz service can be used to retrieve further diagnostic information relating to the component. The contents of this directory relate only to the specific component that it is associated with.

<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid</a> <i>number</i> <a href="#">name</a> <i>string</i>
<b>Tree</b>	<a href="#">name</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**start-time** *string*

<b>Description</b>	The time at which this process started
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">process pid</a> <i>number</i> <a href="#">start-time</a> <i>string</i>
<b>Tree</b>	<a href="#">start-time</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**rebooting-at** *string*

<b>Description</b>	Indicates the date and time this component will reboot If empty, no delayed reboots are queued for this component. A non empty value implies that a delayed reboot operation has been triggered for this component, which can be aborted using 'tools platform <component> reboot cancel'.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">rebooting-at</a> <i>string</i>
<b>Tree</b>	<a href="#">rebooting-at</a>

<b>Tree</b>	<a href="#">temperature</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **alarm-status** *boolean*

<b>Description</b>	Indicates if a temperature sensor of this component is currently in an alarm state  An alarm state is triggered if the margin is <=2 degrees, indicating that a thermal protection shut down is imminent unless adequate system cooling is provided to bring the temperature sensor back into safe operating ranges.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">temperature alarm-status</a> <i>boolean</i>
<b>Tree</b>	<a href="#">alarm-status</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**instant** *number*

<b>Description</b>	Represents the highest current temperature of any sensor on this component Note that as multiple sensors may feed in, that this field and the margin field may be referencing different sensors.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">temperature instant</a> <i>number</i>
<b>Tree</b>	<a href="#">instant</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**margin** *number*

<b>Description</b>	Indicates the lowest alarm margin of any sensor on this component The margin is the delta between the current sensor temperature and the thermal protection threshold for that sensor. Note that as multiple sensors may feed in, that this field and the instant field may be referencing different sensors.
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">temperature margin</a> <i>number</i>

**fabric slot** *number*

<b>Description</b>	Top-level container for fabric configuration and state
<b>Context</b>	<a href="#">platform fabric slot</a> <i>number</i>
<b>Tree</b>	<a href="#">fabric</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**slot** *number*

<b>Description</b>	Numeric identifier for the fabric module
<b>Context</b>	<a href="#">platform fabric slot</a> <i>number</i>
<b>Range</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**admin-state** *keyword*

<b>Description</b>	The administrative state of this component
<b>Context</b>	<a href="#">platform fabric slot</a> <i>number</i> <a href="#">admin-state</a> <i>keyword</i>
<b>Tree</b>	<a href="#">admin-state</a>

### **oper-reason** *keyword*

**Description** Indicates the reason for the current state of this fan tray

**Context** [platform fan-tray id number oper-reason keyword](#)

**Tree** [oper-reason](#)

**Options**

- fault  
Hardware fault detected
- eeprom-invalid  
EEPROM of this fan tray is either invalid or corrupt
- airflow-mismatch  
The detected airflow of this fan tray does not match the system-calculated airflow direction

The logic for determining the system-calculated direction is: - Majority wins between present fan trays - In the case where there are equal F2B or B2F fan-trays, PSUs are used as a tie break (PSUs only are counted in the event a tie breaker is needed) - F2B wins if no tie break can be used

<b>Configurable</b>	False

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every subinterface using the IPv4 filter.

- input-ipv4-qos-multifield-instances

This resource is used every time an IPv4 multifield classifier policy is applied to ingress traffic on a subinterface.

- input-ipv4-filter-instances-routed

This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on routed subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every routed subinterface using the IPv4 filter.

- input-ipv4-filter-instances-bridged

This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on bridged subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every bridged subinterface using the IPv4 filter.

- input-ipv6-filter-instances

This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on the forwarding complex. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every subinterface using the IPv6 filter.

- input-ipv6-qos-multifield-instances

This resource is used every time an IPv6 multifield classifier policy is applied to ingress traffic on a subinterface.

- exact-match-entries

IP exact match lookup table resources

Reports the number of half-wide entries used in the LEM table. Each MPLS ILM record uses one half-wide entry. Each IPv4 address used as a host route, ARP entry or subnet broadcast address requires a half-wide entry. An IPv6 address used as a host route, or ND entry requires a single-wide entry (2 half-wide entries). Free entries is the remaining number of half-wide entries.

- ip-tunnel-source-ipv4-addresses

IP tunnel source IPv4 address resources

Each IPinIP and GRE tunnel with a different source IPv4 address uses one of these resources.

- ip-tunnel-source-ipv6-addresses

IP tunnel source IPv6 address resources

Each IPinIP and GRE tunnel with a different source IPv6 address uses one of these resources.

- underlay-ecmp-groups

Underlay ECMP group resources

ECMP groups are partitioned into overlay and underlay groups. The underlay partition is further subdivided into groups used for underlay

ECMP and groups used for VP LAGs (EVPN M-H). This counts the utilization of the sub-resource used for ECMP.

- vp-lag-groups

VP LAG group resources

ECMP groups are partitioned into overlay and underlay groups. The underlay partition is further subdivided into groups used for underlay ECMP and groups used for VP LAGs (EVPN M-H). This counts the utilization of the sub-resource used for VP LAGs.

- overlay-ecmp-groups

Overlay ECMP group resources

ECMP groups are partitioned into overlay and underlay groups. This counts the utilization of the overlay ECMP partition.

- underlay-ecmp-members

Underlay ECMP member resources

ECMP members are partitioned into overlay and underlay. This counts the utilization of the partition used for underlay.

- overlay-ecmp-members

Overlay ECMP member resources

ECMP members are partitioned into overlay and underlay. This counts the utilization of the partition used for overlay.

- underlay-egress-next-hops

Underlay egress next-hop resources

Egress next-hops are partitioned into overlay and underlay. This counts the utilization of the partition used for underlay.

- overlay-egress-next-hops

Overlay egress next-hop resources

Egress next-hops are partitioned into overlay and underlay. This counts the utilization of the partition used for overlay.

- dgpp-module-ids

DGPP module ID resources

DGPPs are an aggregate id consisting of a module\_id and a port\_id. There are 64 modules and 120 ports per module. Each 'network' ARP entry (IP next-hop) needs a DGPP - the module\_id is allocated against the network interface (port) and a port\_id is allocated from within the module. A module\_id will only be allocated when the first ArpEntry is added (freed when last is removed) but is owned exclusively by that network interface. A network interface may require more than one module\_id - i.e. if there are 245 ArpEntries on ethernet-1/1 (possibly spread across multiple network-instance interfaces) then 3 module\_ids are required.

- egress-vlan-translate-egress-vnis

EGR\_VLAN\_XLATE\_1 resources

Corresponds to the 'EGR\_VLAN\_XLATE\_1' HW table (8K entries). These entries are used for finding the egress VNI to be used for VXLAN packets.

- egress-vlan-translate-local-bias-pairs

EGR\_VLAN\_XLATE\_2 resources

Corresponds to the 'EGR\_VLAN\_XLATE\_2' HW table (24K entries). These entries are used for local bias (ES pruning).

Level 2 (middle level) non-ECMP FEC resources.

- level-3-non-ecmp-fecs

Level 3 (bottom level) non-ECMP FEC resources.

- decap-next-hop-statistics

Statistics resources for counting packets matching a tunnel termination entry and then forwarded to a next-hop

One resource is one packet/octet counter pair that is allocated to counting each case where packets: (a) match a gRIBI-programmed tunnel termination entry and get forwarded to a next-hop that does redirect to another network-instance (1 counter pair for all redirect targets) (b) match a gRIBI-programmed tunnel termination entry and get forwarded to a next-hop that does IP-in-IP encapsulation towards a new endpoint address (1 counter pair per new endpoint address)

- mac-addresses

MAC lookup table resources

Reports the number of entries used in the MAC lookup table. On 7220 D1/D2/D3/D4/D5, free entries reflects the total number of entries remaining in shared + dedicated UFT banks

- mac-next-hops

Direct MAC next-hop resources

A resource consumed by every next-hop of a gRIBI route that is specified as an interface name plus MAC address

- direct-ip-next-hops

Direct IP next-hop resources

Reports the number of entries, where 1 entry is used for every next-hop of an IP route or MPLS route/tunnel that is resolved directly to a local interface.

- indirect-ip-next-hops

Indirect IP next-hop resources

Reports the number of entries, where 1 entry is used for every next-hop of an IP route that requires resolution by a non-local route. This does not consider underlying ASIC resources.

- tunnel-next-hops

Tunnel next-hop resources

Reports the number of tunnel next-hop entries. 1 tunnel next-hop is required every time an indirect next-hop (e.g. a BGP next-hop) is resolved by a tunnel (BGP-LU, LDP, SR-ISIS or VXLAN)

- ecmp-groups

ECMP group resources

7250 IXR/IXRe: Reports the used number of ECMP FECs, adding L1 ECMP FECs, L2 ECMP FECs and L3 ECMP FECs.

7220 D1/D2/D3/D4/D5: Reports the used number of ECMP groups, adding overlay and underlay ECMP groups (if applicable).

7220 H2/H3/H4: Reports used number of ECMP groups.

- **ecmp-members**  
ECMP member resources  
7250 IXR/IXRe: Reports the used number of ECMP member FECs, adding L1 ECMP member FECs, L2 ECMP member FECs and L3 ECMP member FECs.  
7220 D1/D2/D3/D4/D5: Reports the used number of ECMP members, adding overlay and underlay ECMP members (if applicable).  
7220 H2/H3/H4: Reports used number of ECMP members.
- **egress-next-hops**  
Egress next-hop resources  
7220 D2/D3/D4/D5: Reports the number of entries used in the egress next-hop table, counting entries in the overlay partition and entries in the underlay partition. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.  
7220 H2/H3/H4: Reports the number of entries used in the egress next-hop table. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.
- **lag-groups**  
LAG group resources  
Reports the number of LAG resources used, including DGPP LAGs.
- **lag-members**  
LAG member resources  
Reports the number of LAG member resources used, including DGPP LAG members.
- **subinterfaces**  
Subinterface resources  
There are a maximum of 127 subinterfaces per TH3 pipeline (limited by VFP/EFP TCAM resources). This counts the utilization of those resources.
- **mpls-next-hops**  
MPLS next-hop (NHLFE) resources  
One resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an ILM entry that performs a 'swap'. One additional resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an MPLS tunnel.
- **mpls-incoming-labels**  
MPLS label lookup (ILM) resources  
One resource is used for every MPLS ILM entry that performs either a 'swap' or a 'pop' operation.
- **originating-tunnels**  
Originating tunnel resources

One resource is used for every VXLAN, LDP, SR-ISIS or IPinIP tunnel originating on this node as head-end. On TD3 and TD4 systems this equates to a DVP resource.

- terminating-tunnels

Terminating tunnel resources

One resource is used for every IPinIP tunnel terminating entry on this node.

### **adverse-aggregate *number***

<b>Description</b>	<p>Aggregation of all counters incremented when packets are dropped unexpectedly</p> <p>This leaf counts packet discarded as result of corrupted programming state or data structures in the forwarding-complex integrated circuit.</p> <p>Note: corrupted packets received on ingress interfaces are not counted in this leaf. This is because incoming corrupted packets are not a signal of adverse state within the integrated circuit, but rather of an adjacent entity, such as a cable or transceiver.</p>

## healthz

**Description** The health of the component

The parameters within this container indicate the status of the component beyond whether it is operationally up or down. When a signal is received that a component is in an unhealthy state the gNOI.Healthz service can be used to retrieve further diagnostic information relating to the component. The contents of this directory relate only to the specific component that it is associated with.

**Options**

- arp-nd-entries  
IPv4 ARP and IPv6 neighbor discovery resources  
Each IPv4 ARP and each IPv6 neighbor entry counts as 1 used resource against a total that is platform dependent.
- ip-hosts  
IP host route resources  
7220 D1/D2/D3: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. Every IPv4 multicast snoop entry requires 2 entries. In non-ALPM operation every remote /32 route also requires 1 entry.

Every local host /128 route, and ND entry requires 2 entries. Every IPv6 multicast snoop entry requires 4 entries. In non-ALPM operation every remote /128 route also requires 2 entries. Free entries reflects the total number of entries remaining in shared + dedicated UFT banks.

7220 D4/D5: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. Every local host /128 route, and ND entry requires 2 entries. Every (\*, G) IPv4 multicast snoop entry requires 1 entry. Every (S, G) IPv4 multicast snoop entry requires 2 entries. Every (\*, G) IPv6 multicast snoop entry requires 2 entries. Every (S, G) IPv6 multicast snoop entry requires 4 entries.

7220 H2/H3/H4: Reports the number of entries used in the IP host table. Every local host /32 route, ARP entry and IPv4 subnet broadcast address requires 1 entry. Every local host /128 route, and ND entry requires 2 entries.

- ip-lpm-routes

IP longest prefix match route resources

7250 IXR/IXRe: Every installed IPv4 and IPv6 route counts as one used route.

7220 D1/D2/D3: In ALPM-disabled mode: Reports the number of half-wide entries. An IPv4 route requires a half-wide entry. An IPv6 route that is /64 or less requires a single-wide entry (2 half-wide entries). An IPv6 route that is more than /64 requires a double-wide entry (4 half-wide entries). In ALPM mode: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 2 used routes.

7220 D4/D5: Every IPv4 route counts as 1 used route and every IPv6 route (regardless of prefix length) counts as 4 used routes.

- mac-addresses

MAC lookup table resources

Reports the number of entries used in the MAC lookup table. On 7220 D1/D2/D3/D4/D5, free entries reflects the total number of entries remaining in shared + dedicated UFT banks

- mac-next-hops

Direct MAC next-hop resources

A resource consumed by every next-hop of a gRIBI route that is specified as an interface name plus MAC address

- direct-ip-next-hops

Direct IP next-hop resources

Reports the number of entries, where 1 entry is used for every next-hop of an IP route or MPLS route/tunnel that is resolved directly to a local interface.

- indirect-ip-next-hops

Indirect IP next-hop resources

Reports the number of entries, where 1 entry is used for every next-hop of an IP route that requires resolution by a non-local route. This does not consider underlying ASIC resources.

- tunnel-next-hops

Tunnel next-hop resources

Reports the number of tunnel next-hop entries. 1 tunnel next-hop is required every time an indirect next-hop (e.g. a BGP next-hop) is resolved by a tunnel (BGP-LU, LDP, SR-ISIS or VXLAN)

- ecmp-groups

ECMP group resources

7250 IXR/IXRe: Reports the used number of ECMP FECs, adding L1 ECMP FECs, L2 ECMP FECs and L3 ECMP FECs.

7220 D1/D2/D3/D4/D5: Reports the used number of ECMP groups, adding overlay and underlay ECMP groups (if applicable).

7220 H2/H3/H4: Reports used number of ECMP groups.

- ecmp-members

ECMP member resources

7250 IXR/IXRe: Reports the used number of ECMP member FECs, adding L1 ECMP member FECs, L2 ECMP member FECs and L3 ECMP member FECs.

7220 D1/D2/D3/D4/D5: Reports the used number of ECMP members, adding overlay and underlay ECMP members (if applicable).

7220 H2/H3/H4: Reports used number of ECMP members.

- egress-next-hops

Egress next-hop resources

7220 D2/D3/D4/D5: Reports the number of entries used in the egress next-hop table, counting entries in the overlay partition and entries in the underlay partition. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.

7220 H2/H3/H4: Reports the number of entries used in the egress next-hop table. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.

- lag-groups

LAG group resources

Reports the number of LAG resources used, including DGPP LAGs.

- lag-members

LAG member resources

Reports the number of LAG member resources used, including DGPP LAG members.

- subinterfaces

Subinterface resources

There are a maximum of 127 subinterfaces per TH3 pipeline (limited by VFP/EFP TCAM resources). This counts the utilization of those resources.

- **mpls-next-hops**

MPLS next-hop (NHLFE) resources

One resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an ILM entry that performs a 'swap'. One additional resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an MPLS tunnel.

- **mpls-incoming-labels**

MPLS label lookup (ILM) resources

One resource is used for every MPLS ILM entry that performs either a 'swap' or a 'pop' operation.

- **originating-tunnels**

Originating tunnel resources

One resource is used for every VXLAN, LDP, SR-ISIS or IPinIP tunnel originating on this node as head-end. On TD3 and TD4 systems this equates to a DVP resource.

- **terminating-tunnels**

Terminating tunnel resources

One resource is used for every IPinIP tunnel terminating entry on this node.

IPv6 packet with topmost next-header value of zero.
- [icmp](#)  
ICMPv4 packets with this router as destination.
- [icmp6](#)  
ICMPv6 packets including neighbor-solicitation and neighbor-advertisement messages.
- [icmp-redirect](#)  
Received IPv4 and IPv6 packets that should cause an ICMP redirect to be generated.
- [bfd](#)  
BFD and micro-BFD packets with this router as destination.
- [bgp](#)  
BGP packets; TCP port 179.
- [grpc](#)  
GRPC packets; TCP port 57400

- ospf  
OSPF packets; IP protocol 89

- ipv6-multicast  
IPv6 DA = FF01:0:0:0:0:0:1 or IPv6 DA = FF01:0:0:0:0:0:2
- ipv6-link-local  
IPv6 DA = FE80::/10 address
- ipv4-broadcast  
IPv4 packets were received with a subnet broadcast address or a limited broadcast and not recognized as another type
- ip-no-route  
IPv4 and IPv6 packets for which there was no route to the destination
- ip-header-errors  
IP version error, IP header checksum error, IP header length error, IP header total length error, IPv6 next-header is null, IPv6 SA is link-local while IPv6 DA is global
- ip-ttl-expired  
The IP packet is not destined for this router and it was received with TTL 0 or TTL 1
- mpls-ttl-expired  
The MPLS packet was received with MPLS label stack TTL 0 or TTL 1
- ip-arp-miss  
The IP DA itself or the next-hop of the route used to forward the packet has no ARP/IPv6 neighbor entry
- ip-arp  
The received frame is an ARP packet recognized by ethertype 0x0806
- lldp  
The received frame is an LLDP packet recognized by ethertype 0x88cc
- isis

- The received frame is an ISIS packet
- lacp
  - The received frame is an LACP packet
- google-discovery
  - The received frame is a GDP packet recognized by ethertype 0x6007
- capture-filter-copy
  - Packets matching a capture-filter copy rule
- cpm-filter-log
  - Packets matching a CPM-filter rule with log action
- ingress-acl-log
  - Packets matching an interface IP filter rule with log action
- egress-acl-log
  - Packet matched an egress ACL rule with log action.
- ip-mpls-mtu-exceeded
  - The egress subinterface IP MTU or MPLS MTU (as applicable) is less than the size of the IP or MPLS packet that needs to be transmitted.

Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

### requested-extra-ip-host-entries *number*

**Description** The extra number of host entries that are desired.  
The number of UFT shared banks that are reserved for IPv4 and IPv6 host entries is given by:  $\min(N/X, P-A)$   
where: N = configured value of requested-extra-ip-host-entries X = the size of each shared bank, which is platform specific P-A = platform-specific number of shared banks, subtracting the ALPM banks  
requested-extra-ip-host-entries is interpreted in terms of IPv4 hosts (single-wide entries). IPv6 host entries are double-wide so 1 IPv4 host entry + 1 IPv6 host-entry counts as 3 entries.  
All UFT shared banks that are not reserved by ALPM and not reserved for extra IP host entries are used for extra MAC entries.  
On D1 the default value is 48K entries, which provides 3 shared banks, max is 96K. On D2/D3 the default value is 128K entries, which provides 4 shared banks, max is 256K.

- **input-ipv4-filter-instances**

This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on the forwarding complex. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every subinterface using the IPv4 filter.
- **input-ipv4-qos-multifield-instances**

This resource is used every time an IPv4 multifield classifier policy is applied to ingress traffic on a subinterface.
- **input-ipv4-filter-instances-routed**

This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on routed subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every routed subinterface using the IPv4 filter.
- **input-ipv4-filter-instances-bridged**

This resource is used every time an IPv4 filter instance is created and applied to ingress traffic on bridged subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every bridged subinterface using the IPv4 filter.
- **input-ipv6-filter-instances**

This resource is used every time an IPv6 filter instance is created and applied to ingress traffic on the forwarding complex. Only one instance is used if the subinterface-specific property of the filter is set to output-only; otherwise one instance is used for every subinterface using the IPv6 filter.

- **input-acl-qos-template-policers**  
This resource is used every time an IPv4 or IPv6 input subinterface filter entry uses a rate-limit policer, or, on TD4 only, a subinterface policer-template is used.
- **input-qos-template-policers**  
This resource is used every time a QoS subinterface policer-template is used.
- **input-acl-ipv4-policers**  
This resource is used every time an IPv4 input subinterface filter entry uses a rate-limit policer.
- **input-acl-ipv6-policers**  
This resource is used every time an IPv6 input subinterface filter entry uses a rate-limit policer.
- **acl-policers**  
This resource is used every time at least one ACL filter entry uses a rate-limit policer.
- **output-acl-cpm-filter-policers**  
This resource is used every time an IPv4 or IPv6 output subinterface filter or CPM filter entry uses a rate-limit policer.

- exact-match-entries

IP exact match lookup table resources

Reports the number of half-wide entries used in the LEM table. Each MPLS ILM record uses one half-wide entry. Each IPv4 address used as a host route, ARP entry or subnet broadcast address requires a half-wide entry. An IPv6 address used as a host route, or ND entry requires a single-wide entry (2 half-wide entries). Free entries is the remaining number of half-wide entries.

- ip-tunnel-source-ipv4-addresses

IP tunnel source IPv4 address resources

Each IPinIP and GRE tunnel with a different source IPv4 address uses one of these resources.

- ip-tunnel-source-ipv6-addresses

IP tunnel source IPv6 address resources

Each IPinIP and GRE tunnel with a different source IPv6 address uses one of these resources.

- underlay-ecmp-groups

Underlay ECMP group resources

ECMP groups are partitioned into overlay and underlay groups. The underlay partition is further subdivided into groups used for underlay ECMP and groups used for VP LAGs (EVPN M-H). This counts the utilization of the sub-resource used for ECMP.

- vp-lag-groups

VP LAG group resources

ECMP groups are partitioned into overlay and underlay groups. The underlay partition is further subdivided into groups used for underlay ECMP and groups used for VP LAGs (EVPN M-H). This counts the utilization of the sub-resource used for VP LAGs.

- overlay-ecmp-groups  
Overlay ECMP group resources  
ECMP groups are partitioned into overlay and underlay groups. This counts the utilization of the overlay ECMP partition.
- underlay-ecmp-members  
Underlay ECMP member resources  
ECMP members are partitioned into overlay and underlay. This counts the utilization of the partition used for underlay.
- overlay-ecmp-members  
Overlay ECMP member resources  
ECMP members are partitioned into overlay and underlay. This counts the utilization of the partition used for overlay.
- underlay-egress-next-hops  
Underlay egress next-hop resources  
Egress next-hops are partitioned into overlay and underlay. This counts the utilization of the partition used for underlay.
- overlay-egress-next-hops  
Overlay egress next-hop resources  
Egress next-hops are partitioned into overlay and underlay. This counts the utilization of the partition used for overlay.
- dgpp-module-ids  
DGPP module ID resources  
DGPPs are an aggregate id consisting of a module\_id and a port\_id. There are 64 modules and 120 ports per module. Each 'network' ARP entry (IP next-hop) needs a DGPP - the module\_id is allocated against the network interface (port) and a port\_id is allocated from within the module. A module\_id will only be allocated when the first ArpEntry is added (freed when last is removed) but is owned exclusively by that network interface. A network interface may require more than one module\_id - i.e. if there are 245 ArpEntries on ethernet-1/1 (possibly spread across multiple network-instance interfaces) then 3 module\_ids are required.
- egress-vlan-translate-egress-vnis  
EGR\_VLAN\_XLATE\_1 resources  
Corresponds to the 'EGR\_VLAN\_XLATE\_1' HW table (8K entries). These entries are used for finding the egress VNI to be used for VXLAN packets.
- egress-vlan-translate-local-bias-pairs  
EGR\_VLAN\_XLATE\_2 resources  
Corresponds to the 'EGR\_VLAN\_XLATE\_2' HW table (24K entries). These entries are used for local bias (ES pruning).

Level 3 (bottom level) non-ECMP FEC resources.
- decap-next-hop-statistics  
Statistics resources for counting packets matching a tunnel termination entry and then forwarded to a next-hop  
  
One resource is one packet/octet counter pair that is allocated to counting each case where packets: (a) match a gRIBI-programmed tunnel termination entry and get forwarded to a next-hop that does redirect to another network-instance (1 counter pair for all redirect targets) (b) match a gRIBI-programmed tunnel termination entry and get forwarded to a next-hop that does IP-in-IP encapsulation towards a new endpoint address (1 counter pair per new endpoint address)
- subinterface-basic-stats-counters  
Stats resources used by bridged and routed (non-IRB) subinterfaces that do not provide a breakdown by protocol family
- subinterface-detailed-stats-counters  
Stats resources used by routed (non-IRB) subinterfaces that provide a breakdown by protocol family
- subinterface-irb-stats-counters  
Stats resources used by routed IRB subinterfaces

- mac-addresses

MAC lookup table resources

Reports the number of entries used in the MAC lookup table. On 7220 D1/D2/D3/D4/D5, free entries reflects the total number of entries remaining in shared + dedicated UFT banks

- mac-next-hops

Direct MAC next-hop resources

A resource consumed by every next-hop of a gRIBI route that is specified as an interface name plus MAC address

- direct-ip-next-hops

Direct IP next-hop resources

Reports the number of entries, where 1 entry is used for every next-hop of an IP route or MPLS route/tunnel that is resolved directly to a local interface.

- indirect-ip-next-hops

Indirect IP next-hop resources

Reports the number of entries, where 1 entry is used for every next-hop of an IP route that requires resolution by a non-local route. This does not consider underlying ASIC resources.

- tunnel-next-hops

Tunnel next-hop resources

Reports the number of tunnel next-hop entries. 1 tunnel next-hop is required every time an indirect next-hop (e.g. a BGP next-hop) is resolved by a tunnel (BGP-LU, LDP, SR-ISIS or VXLAN)

- ecmp-groups

ECMP group resources

7250 IXR/IXRe: Reports the used number of ECMP FECs, adding L1 ECMP FECs, L2 ECMP FECs and L3 ECMP FECs.

7220 D1/D2/D3/D4/D5: Reports the used number of ECMP groups, adding overlay and underlay ECMP groups (if applicable).

7220 H2/H3/H4: Reports used number of ECMP groups.

- ecmp-members

ECMP member resources

7250 IXR/IXRe: Reports the used number of ECMP member FECs, adding L1 ECMP member FECs, L2 ECMP member FECs and L3 ECMP member FECs.

7220 D1/D2/D3/D4/D5: Reports the used number of ECMP members, adding overlay and underlay ECMP members (if applicable).

7220 H2/H3/H4: Reports used number of ECMP members.

- egress-next-hops

Egress next-hop resources

7220 D2/D3/D4/D5: Reports the number of entries used in the egress next-hop table, counting entries in the overlay partition and entries in the underlay partition. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.

7220 H2/H3/H4: Reports the number of entries used in the egress next-hop table. 1 entry = 1 IPv4 next-hop address or 1 IPv6 next-hop address.

- lag-groups

LAG group resources

Reports the number of LAG resources used, including DGPP LAGs.

- lag-members

LAG member resources

Reports the number of LAG member resources used, including DGPP LAG members.

- subinterfaces

Subinterface resources

There are a maximum of 127 subinterfaces per TH3 pipeline (limited by VFP/EFPP TCAM resources). This counts the utilization of those resources.

- mpls-next-hops

MPLS next-hop (NHLFE) resources

One resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an ILM entry that performs a 'swap'. One additional resource is used for every next-hop that pushes an MPLS label in every next-hop-group that is tied to an MPLS tunnel.

- mpls-incoming-labels

MPLS label lookup (ILM) resources

One resource is used for every MPLS ILM entry that performs either a 'swap' or a 'pop' operation.

- originating-tunnels

Originating tunnel resources

One resource is used for every VXLAN, LDP, SR-ISIS or IPinIP tunnel originating on this node as head-end. On TD3 and TD4 systems this equates to a DVP resource.

- terminating-tunnels  
Terminating tunnel resources  
One resource is used for every IPinIP tunnel terminating entry on this node.

- if-output-cpm-mac  
Resource pool of TCAM entries used by MAC egress ACLs and MAC cpm-filter ACLs
- policy-forwarding-vrf-selection-ipv4  
Resource pool of TCAM entries used by IPv4 policy-forwarding entries that redirect flows to a different network-instance
- policy-forwarding-vrf-selection-ipv6  
Resource pool of TCAM entries used by IPv6 policy-forwarding entries that redirect flows to a different network-instance
- policy-forwarding-nhg-ipv4  
Resource pool of TCAM entries used by IPv4 policy-forwarding entries that redirect flows to a NHG of IP next-hops or tunnels  
On TD4 systems IPv6 policy-forwarding entries share this resource with IPv4 entries.
- policy-forwarding-nhg-ipv6  
Resource pool of TCAM entries used by IPv6 policy-forwarding entries that redirect flows to a NHG of IP next-hops or tunnels
- if-input-policer  
Resource pool of TCAM entries used by ingress subinterface policer templates
- if-input-ipv4-qos

- if-input-ipv6-qos  
Resource pool of TCAM entries associated with IPv6 multi-field QoS classification entries, when applied to subinterface input
- mrouter-mfib-redirect  
Resource pool of TCAM entries used by multicast snooping protocols in MAC-VRF network-instances  
One TCAM entry is used per multicast snooping protocol enabled in a MAC-VRF. For instance, if igmp-snooping and mld-snooping are enabled on a MAC-VRF, two entries are used. If only igmp-snooping is enabled, only one entry is used.
- tunnel-decap-ipv4-ipv6  
Resource pool of TCAM entries used for IPv4 and IPv6 tunnel-decapsulation groups
- if-output-evpn-mh-multicast-non-df  
Resource pool of TCAM entries used by egress filtering of IP multicast traffic to non-Designated Forwarder subinterfaces

One TCAM entry is used when multicast snooping protocols are enabled on at least one MAC-VRF that has one or more subinterfaces associated with Ethernet Segments.

## 9.1 qos Descriptions

### qos

<b>Description</b>	Top-level container for QoS data
<b>Context</b>	<a href="#">qos</a>
<b>Tree</b>	<a href="#">qos</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

### buffer-management

<b>Description</b>	Container for the list of configured queue management profiles
<b>Context</b>	<a href="#">qos buffer-management</a>
<b>Tree</b>	<a href="#">buffer-management</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

### buffer-allocation-profile *name string*

<b>Description</b>	The name of a buffer-allocation-profile
<b>Context</b>	<a href="#">qos buffer-management buffer-allocation-profile name string</a>
<b>Tree</b>	<a href="#">buffer-allocation-profile</a>

On 7220-D2/D3/H2/H3 this parameter applies to a unicast queue only; the configuration of this leaf is ignored when the queue-template is attached to a queue with queue-type other than unicast.</p> <p>On 7220-D2/D3 the threshold is rounded up the nearest multiple of 2048 bytes. On IXR-6/10 the threshold is rounded up to the nearest multiple of</p>

<b>Platforms</b>	7730 SXR-1d-32D, 7730 SXR-1x-44S

### maximum-burst-size *number*

<b>Description</b>	<p>Maximum amount of shared buffer memory available to the queue.</p> <p>On IXR-6/10 this parameter applies to a set of VOQs. If the configured value is 0 or no value is configured the limit is 256 MB (268435456 bytes), however the use of 'alpha' may limit the effective value to less than 256 MB. A configured non-zero value sets a static limit without 'alpha'.</p> <p>On 7220-D2/D3/D5/H2/H3 this parameter applies to an egress queue and the default value of zero instructs the forwarding chip to apply its own limit based on 'alpha'. A non-zero value disables 'alpha'. The alpha value is 5 (0.25 multiplier of shared buffer space) for unicast queues and 4 (0.125 multiplier of shared buffer space) for multicast queues.</p> <p>On 7730 this parameter applies to egress-queue and setting value to 0 means default value (still need to determine that)</p> <p>Must be non-zero/non-default in order to add the active-queue-management presence container</p>

**enable-ecn** *boolean***Description**

When this leaf is true and the number of packets in the queue is between the minimum threshold and the maximum threshold, if the ECN field on the packet indicates that the endpoints are ECN capable and the WRED algorithm determines that the packet should have been dropped based on the drop probability, the CE bits for the packet are changed to 1, and the packet is transmitted. When set to false, the such packets will be discarded based on wred-slope

**source-port****Description**

A packet matches this condition if its source TCP or UDP port number matches the value or range that is specified

The rule should also have a condition that the IP protocol equals 6 (TCP) or 17 (UDP) in order for this to be interpreted correctly.

### single-instance *number*

**Description** The number of TCAM entries required to implement this entry if it is applied to only one subinterface and one traffic direction specific to this slot.  
This is non-zero even if the filter is not applied to any subinterfaces of this complex. It captures the effect of TCAM entry expansion to deal with L4 port or VLAN ranges, for example.

**Context** [qos interfaces interface interface-id](#) *string* [output queues queue queue-name](#) [reference queue-type keyword](#)

**Tree** [queue-type](#)

**Options**

- local
- interface-queue

**Configurable** False

**Platforms** 7730 SXR-1d-32D, 7730 SXR-1x-44S

### scheduling

**Description** Container for queue scheduling parameters

**Context** [qos interfaces interface interface-id](#) *string* [output queues queue queue-name](#) [reference scheduling](#)

**Tree** [scheduling](#)

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

### peak-rate-bps *number*

**Description** The actual/operational peak rate in bits per second

**Context** [qos interfaces interface interface-id](#) *string* [output queues queue queue-name](#) [reference scheduling peak-rate-bps number](#)

**Tree** [peak-rate-bps](#)

**Configurable** False

**Platforms** 7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b

**peak-rate-percent** *number*

<b>Description</b>	The maximum percentage of port bandwidth that is available to the traffic in this queue during the PIR scheduling loop. The default is 100
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">scheduling peak-rate-percent</a> <i>number</i>
<b>Tree</b>	<a href="#">peak-rate-percent</a>
<b>Range</b>	1 to 100
<b>Configurable</b>	False
<b>Platforms</b>	7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b

**scheduling-class** *number*

<b>Description</b>	The scheduling-class for output-queue
<b>Context</b>	<a href="#">qos interfaces interface interface-id</a> <i>string</i> <a href="#">output queues queue queue-name</a> <i>reference</i> <a href="#">scheduling scheduling-class</a> <i>number</i>

Component or process is currently warm rebooting

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Context** [qos policer-policies policer-policy name](#) *string* [parent-policer rate adaptation-rule](#) *keyword*

**Tree** [adaptation-rule](#)

**Default** closest

**Options**

- closest  
Closest possible HW value is used.
- lower  
The configured values is aligned with closest lower HW value.
- higher  
The configured value is aligned with the closest higher HW value.

**Configurable** True

**Platforms** 7730 SXR-1d-32D, 7730 SXR-1x-44S

**burst-allowance** *number*

<b>Description</b>	Defines burst-allowance for the parent-policer
<b>Context</b>	<a href="#">qos policer-policies policer-policy name</a> <i>string</i> <a href="#">parent-policer rate burst-allowance</a> <i>number</i>

<b>Range</b>	0 to 64
<b>Units</b>	bytes
<b>Configurable</b>	True
<b>Platforms</b>	7730 SXR-1d-32D, 7730 SXR-1x-44S

### **peak-rate-kbps** *number*

<b>Description</b>	The peak information rate (PIR) of the policer, defined in kilobits (1024 bits) per second. This parameter is ignored if 'algorithm-type' is set to 'trtcm2'
<b>Context</b>	<a href="#">qos policer-policies policer-policy name</a> <i>string</i> <a href="#">policer policer-id</a> <i>number</i> <a href="#">peak-rate-kbps</a> <i>number</i>
<b>Tree</b>	<a href="#">peak-rate-kbps</a>
<b>Range</b>	64 to 800000000
<b>Default</b>	64
<b>Units</b>	kbps
<b>Configurable</b>	True
<b>Platforms</b>	7730 SXR-1d-32D, 7730 SXR-1x-44S

### **pir-threshold-separation**

<b>Description</b>	Container defining selection of one from pre-defined policer-threshold-separation policies
<b>Context</b>	<a href="#">qos policer-policies policer-policy name</a> <i>string</i> <a href="#">policer policer-id</a> <i>number</i> <a href="#">pir-threshold-separation</a>

<b>Default</b>	false
<b>Configurable</b>	True

**Platforms** 7730 SXR-1d-32D, 7730 SXR-1x-44S

### statistics-mode *keyword*

**Description** Defines the number and type of the counters collected for the policer. The modes are mutually exclusive

**Context** [qos policer-policies policer-policy name](#) *string* [policer policer-id](#) *number* [statistics-mode](#) *keyword*

**Tree** [statistics-mode](#)

**Default** extended

**Options**

- extended
 

This statistics-mode counts forwarded packets/octets on per profile basis. The discards are counted as an aggregate

**Configurable** True

**Platforms** 7730 SXR-1d-32D, 7730 SXR-1x-44S

### violate-action *keyword*

**Description** Defines action when policer will evaluate the packet as violating

**Context** [qos policer-policies policer-policy name](#) *string* [policer policer-id](#) *number* [violate-action](#) *keyword*

**Tree** [violate-action](#)

**Default** drop

**Options**

- drop
 

The violating packet will be dropped
- mark-exceed
 

The violating packet will be marked as exceed

**Configurable** True

**Platforms** 7730 SXR-1d-32D, 7730 SXR-1x-44S

### threshold-separation-policies

**Description** This container lists pre-defined threshold-separation-policies

**Context** [qos policer-policies threshold-separation-policies](#)

**Tree** [threshold-separation-policies](#)

**Configurable** False

**Platforms** 7730 SXR-1d-32D, 7730 SXR-1x-44S

### **threshold-separation-policy** *name string*

**Description** Lists configuration of pre-defined threshold-separation policy

**Context** [qos policer-policies](#) [threshold-separation-policies](#) [threshold-separation-policy name string](#)

**Tree** [threshold-separation-policy](#)

**Configurable** False

**Platforms** 7730 SXR-1d-32D, 7730 SXR-1x-44S

### **name** *string*

**Description** System wide pre-defined threshold-separation-policy name

**Context** [qos policer-policies](#) [threshold-separation-policies](#) [threshold-separation-policy name string](#)

**String Length** 1 to 255

**Configurable** False

**Platforms** 7730 SXR-1d-32D, 7730 SXR-1x-44S

### **input-profile** [input-profile](#) *keyword*

**Description** Profile of the packet

## 10.1 routing-policy Descriptions

### routing-policy

<b>Description</b>	Top-level container for all routing policy configuration
<b>Context</b>	<a href="#">routing-policy</a>
<b>Tree</b>	<a href="#">routing-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### as-path-set *name string*

<b>Description</b>	AS Path regular expressions for use in policy entries
<b>Context</b>	<a href="#">routing-policy as-path-set name string</a>
<b>Tree</b>	<a href="#">as-path-set</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### name *string*

<b>Description</b>	A name used to identify the AS path regular expression
<b>Context</b>	<a href="#">routing-policy as-path-set name string</a>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### as-path-set-member *string*

<b>Description</b>	A list of regular expressions
<b>Context</b>	<a href="#">routing-policy as-path-set name string as-path-set-member string</a>

## 11.1 system Descriptions

### system

<b>Description</b>	Enclosing container for system management
<b>Context</b>	<a href="#">system</a>
<b>Tree</b>	<a href="#">system</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### aaa

<b>Description</b>	Top-level container for AAA services
<b>Context</b>	<a href="#">system aaa</a>
<b>Tree</b>	<a href="#">aaa</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### accounting

<b>Description</b>	Top-level container for accounting
<b>Context</b>	<a href="#">system aaa accounting</a>
<b>Tree</b>	<a href="#">accounting</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### accounting-method *reference*

<b>Description</b>	Ordered list of server-groups to use for accounting in the system If accounting fails with one method, the next defined method is tried -- failure of all methods results in the accounting request failing.
<b>Context</b>	<a href="#">system aaa accounting accounting-method <i>reference</i></a>
<b>Tree</b>	<a href="#">accounting-method</a>
<b>Reference</b>	<a href="#">system aaa server-group name <i>string</i></a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## acctz

**Description** Top-level container for acctz accounting

**Context** [system aaa accounting acctz](#)

**Tree** [acctz](#)

**Configurable** True

**Platforms** Supported on all platforms

## history-size *number*

**Description** Size of the kept accounting events history

**Context** [system aaa accounting acctz history-size \*number\*](#)

**Tree** [history-size](#)

**Range** 1 to 100000

**Default** 1000

**Configurable** True

**Platforms** Supported on all platforms

## event [event-type \*identityref\*](#)

**Description** List of events subject to accounting

**Context** [system aaa accounting event \[event-type \\*identityref\\*\]\(#\)](#)

**Tree** [event](#)

**Configurable** True

**Platforms** Supported on all platforms

## event-type *identityref*

**Description** The type of activity to record at the accounting server

**Context** [system aaa accounting event \[event-type \\*identityref\\*\]\(#\)](#)

**Options**

- `command`  
Specifies interactive command events for AAA accounting

**Configurable** True

**Platforms** Supported on all platforms

## **record *identityref***

**Description** Type of record to send to the accounting server for this activity type

**Context** [system aaa accounting event event-type identityref record identityref](#)

**Tree** [record](#)

**Options**

- start-stop  
Send start and stop records for user activities  
A start record is sent to the accounting server at the beginning of the activity, and a stop record at the end of the activity
- stop  
Send only stop records for user activities  
A stop record is sent to the accounting server when the user activity completes

**Configurable** True

**Platforms** Supported on all platforms

## **authentication**

**Description** Top-level container for global authentication data

**Context** [system aaa authentication](#)

**Tree** [authentication](#)

**Configurable** True

**Platforms** Supported on all platforms

## **admin-user**

**Description** Enclosing container for admin user

**Context** [system aaa authentication admin-user](#)

**Tree** [admin-user](#)

**Configurable** True

**Platforms** Supported on all platforms

## credentialz

<b>Description</b>	Information relating to the active user credentials as provided via Credentialz State is provided by the gNSI Credentialz service, and can be changed using the gNSI.Credentialz.RotateAccountCredentials RPC
<b>Context</b>	<a href="#">system aaa authentication admin-user credentialz</a>

### **password**

<b>Description</b>	State relating to the Password provided via Credentialz.
<b>Context</b>	<a href="#">system aaa authentication admin-user credentialz password</a>
<b>Tree</b>	<a href="#">password</a>
<b>Configurable</b>	False
<b>Platforms</b>	7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

### **created-on string**

<b>Description</b>	The created on timestamp as provided by the gNSI client at the time of uploading the artifact
--------------------	-----------------------------------------------------------------------------------------------

The maps to the `created_on` field within a Entity message in the Credentialz protobuf.

**Context** [system aaa authentication admin-user credentialz password created-on string](#)

**Tree** [created-on](#)

**String Length** 20 to 32

**Configurable** False

**Platforms** 7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

### **version string**

**Description** The version string as provided by the gNSI client at the time of uploading the artifact

The maps to the `version` field within a Entity message in the Credentialz protobuf.

**Context** [system aaa authentication admin-user credentialz password version string](#)

**Tree** [version](#)

**Configurable** False

**Platforms** 7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

### **failed-login-attempts number**

**Description** Number of failed login attempts from the user

**Context** [system aaa authentication admin-user failed-login-attempts number](#)

**Tree** [failed-login-attempts](#)

**Default** 0

**Configurable** False

**Platforms** Supported on all platforms

**last-failed-login** *string*

<b>Description</b>	The date and time of the last login failure from this user
<b>Context</b>	<a href="#">system aaa authentication admin-user last-failed-login</a> <i>string</i>
<b>Tree</b>	<a href="#">last-failed-login</a>
<b>String Length</b>	20 to 32

**lockout**

<b>Description</b>	Information relating to the lockout state of this user
<b>Context</b>	<a href="#">system aaa authentication admin-user lockout</a>
<b>Tree</b>	<a href="#">lockout</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**active** *boolean*

<b>Description</b>	Indicates if a lockout is active for the user Lockouts can occur after successive failed logins, and can be cleared by 'tools system aaa authentication user <username> unlock'
<b>Context</b>	<a href="#">system aaa authentication admin-user lockout active</a> <i>boolean</i>
<b>Tree</b>	<a href="#">active</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**end string**

<b>Description</b>	Indicates the time at which the most recent lockout for this user ended or will end
<b>Context</b>	<a href="#">system aaa authentication admin-user lockout end string</a>
<b>Tree</b>	<a href="#">end</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**start string**

<b>Description</b>	Indicates the time at which the most recent lockout for this user started
<b>Context</b>	<a href="#">system aaa authentication admin-user lockout start string</a>
<b>Tree</b>	<a href="#">start</a>
<b>String Length</b>	20 to 32
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**password string**

<b>Description</b>	The admin password, supplied either as cleartext or as a hashed value If provided as cleartext, the system will hash the value on input, storing only the hashed value. If provided as a hashed value, the value should include any '\$' characters, for example '\$ar2\$aOvsuj0ALIU=\$r750fMa3ZEA/Di8dIfU2fQ=='
<b>Context</b>	<a href="#">system aaa authentication admin-user password string</a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**password-change-required boolean**

<b>Description</b>	Indicates if the user must change their password on next login
<b>Context</b>	<a href="#">system aaa authentication admin-user password-change-required boolean</a>

<b>Tree</b>	<a href="#">password-change-required</a>
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

**role reference**

<b>Description</b>	List of roles to assign to this user  The most specific rule for a particular role takes precedence. Rules from all user roles are evaluated together, most permissive privilege taking precedence.
<b>Context</b>	<a href="#">system aaa authentication admin-user role reference</a>
<b>Tree</b>	<a href="#">role</a>
<b>Reference</b>	<a href="#">system aaa authorization role rolename string</a>
<b>Configurable</b>	True
<b>Platforms</b>	7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S
<b>Max. Elements</b>	32

**spiffe-ids string**

<b>Description</b>	The SPIFFE ID list for the user, including the spiffe:// URI  This list of IDs is evaluated by TLS-consuming servers (e.g. gNMI, JSON-RPC) that use a TLS server-profile with authenticate-client set to true.  If a match is found in any incoming offered client certificates, the provider of the certificate is associated with this local user, and given resulting permissions.

**ssh-key** *string*

<b>Description</b>	SSH public key(s) for the user  If defined, the user may login to the system over SSH with this key. This should use the SSH public authorized key format.
<b>Context</b>	<a href="#">system aaa authentication admin-user ssh-key</a> <i>string</i>
<b>Tree</b>	<a href="#">ssh-key</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

**ssh-principals** *string*

<b>Description</b>	List of principals to associate with this user  If any of the principals in the list are matched in a SSH client's certificate, and that clients username matches this user, and the certificate is verified, the client will authenticate.
<b>Context</b>	<a href="#">system aaa authentication admin-user ssh-principals</a> <i>string</i>
<b>Tree</b>	<a href="#">ssh-principals</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

**superuser** *boolean*

<b>Description</b>	Indicates if the admin user is a superuser  A superuser is granted implicit authorization to all YANG paths, has the ability to execute all CLI plugins, and by default is permitted to access the device through any interface.  Additionally, users with the superuser attribute are able to execute 'sudo' in bash. A user may also be assigned a role or list of roles, but these are only evaluated for service authorization.
<b>Context</b>	<a href="#">system aaa authentication admin-user superuser</a> <i>boolean</i>
<b>Tree</b>	<a href="#">superuser</a>
<b>Default</b>	true
<b>Configurable</b>	True
<b>Platforms</b>	7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3,

7220 IXR-H4, 7220 IXR-H4-32D, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

### **username** *string*

<b>Description</b>	Assigned username for admin user
<b>Context</b>	<a href="#">system aaa authentication admin-user username</a> <i>string</i>
<b>Tree</b>	<a href="#">username</a>
<b>Default</b>	admin
<b>Configurable</b>	False
<b>Platforms</b>	Supported on all platforms

### **authentication-method** *reference*

<b>Description</b>	Ordered list of server-groups to be used during user authentication If authentication fails with one method, the next defined method is tried -- failure of all methods results in the user being denied access.
<b>Context</b>	<a href="#">system aaa authentication authentication-method</a> <i>reference</i>
<b>Tree</b>	<a href="#">authentication-method</a>

<b>Description</b>	Dynamic SPIFFE settings
<b>Context</b>	<a href="#">system aaa authentication dynamic-spiffe</a>
<b>Tree</b>	<a href="#">dynamic-spiffe</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **allow** *boolean*

<b>Description</b>	Accept clients with SPIFFE ID values that are not configured under any local user  With this behaviour enabled, when a client using a client certificate containing SPIFFE ID connects the system will accept the client. Otherwise
--------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

the SPIFFE ID must be configured under some local user. Even if enabled, any client using local user's configured SPIFFE ID will use that user's identity in all operations

<b>Context</b>	<a href="#">system aaa authentication dynamic-spiffe allow</a> <i>boolean</i>
<b>Tree</b>	<a href="#">allow</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **role reference**

<b>Description</b>	List of roles to assign to all dynamic SPIFFE clients  Dynamic SPIFFE clients are clients authenticated using a client certificate containing SPIFFE ID value that is not configured under any local user. The most specific rule for a particular role takes precedence. Rules from all user roles are evaluated together, most permissive privilege taking precedence.

<b>Platforms</b>	Supported on all platforms
<b>Max. Elements</b>	32

### **exit-on-reject** *boolean*

<b>Description</b>	Enable/disable exit-on-reject behaviour for authentication attempts  With this behaviour enabled, when a reject is received from any server the system will not try further methods, and will reject the user authentication attempt. Default behaviour is to continue trying methods until one accepts the user, or the system runs out of methods to try.
<b>Context</b>	<a href="#">system aaa authentication exit-on-reject</a> <i>boolean</i>
<b>Tree</b>	<a href="#">exit-on-reject</a>
<b>Default</b>	false
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**idle-timeout** *number*

<b>Description</b>	Set the idle timeout of all CLI sessions After the timeout is reached, the session is disconnected from the system.
<b>Context</b>	<a href="#">system aaa authentication idle-timeout number</a>
<b>Tree</b>	<a href="#">idle-timeout</a>
<b>Default</b>	600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**linuxadmin-user**

<b>Description</b>	Enclosing container for linuxadmin user
<b>Context</b>	<a href="#">system aaa authentication linuxadmin-user</a>
<b>Tree</b>	<a href="#">linuxadmin-user</a>

This results in the application being loaded into app-mgr, but not starting until the system receives configuration for it</li> <li>• error The application has not started successfully, or has failed This state can be caused by an application hitting the restart backoff, or an application failing to start following triggering a system reboot</li> <li>• starting The application has been asked to start</li> </ul>

All applications enter this state after initial execution, after which application manager will wait five seconds before checking their status. IDB connected applications may announce their state before this five second window has passed, resulting in them transitioning from this state faster than PID-monitored applications.

- stopped

The application is not running

This state is most likely caused by an operator action

**Options**

- hot

A hot start indicates the non-stop routing application initialized with synchronized IDB state

This type results in least amount of disruption to the corresponding service and functionality.

- warm

A warm start indicates that the application will leave state in IDB during a restart, and recover it post restart

This type results in less disruption to surrounding applications and functionality.

- cold

A cold start indicates that the application will not leave state in IDB during a restart

This type is equivalent to a normal application restart, i.e. one where the application's state is purged from the system during the restart, and recreated after.

## forwarding-mode *keyword*

**Description** The forwarding mode for Ethernet frames received on all eligible ports of the system

In store-and-forward mode, the forwarding of an Ethernet frame received on a particular port must wait until the entire Ethernet frame has been received, including the trailing 4-byte CRC; if the CRC is valid the packet is forwarded to the egress port based on the L2/L3 lookup result but if the CRC is invalid the frame is discarded and the in-error-packets counter is incremented.

In cut-through mode, the forwarding ASIC does the L2/L3 forwarding lookup as soon as it has read the necessary packet headers. If the target egress queue of the egress port is not congested the bytes of the received frame are transmitted across the switch fabric as they are received. The fully intact frame is transmitted from the egress port as soon as all the bytes have been received.

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

### system-description *string*

**Description**

The system description of the remote neighbor

The system description field shall contain an alpha-numeric string that is the textual description of the network entity. The system description should include the full name and version identification of the system's hardware type, software operating system, and networking software. If implementations support IETF RFC 3418, the sysDescr object should be used for this field.

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

Component or process is currently waiting

This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

- label-stack  
LSR load balancing based on only the label stack.  
The datapath searches for BoS=1 or up until hash label search depth is reached
- label-eth-or-ip-l4-teid  
LSR load balancing based on the label stack and Eth or IP headers  
The datapath performs Eth speculation after BoS=1 or once max label stack depth is reached. Irrespective of the outcome of the Eth speculation further attempts IPv4/6 speculation based on first nibble, includes source and destination IP address, followed by UDP/TCP check for inclusion of source and destination ports and includes GTP/TEID when UDP or TCP port is 2123 or 2152. When Ethernet header speculation yields a positive outcome, source and destination MAC together with up to two VLANs are included in the hash

- **socket-create-failed**  
Unable to create listening socket. This usually means that there are missing permissions to create socket
- **socket-bind-failed**  
Unable to bind socket to an address or a file. If unix-socket transport is used this usually means that UNIX socket file already exist or is used by other service. If TLS transport is used this usually means that configured address is already used by other service
- **socket-file-create-failed**  
Unable to create UNIX socket file. This usually means that the file location does not exist or there are insufficient access rights to modify file location or the file location resides on a read-only file system
- **out-of-resources**  
System does not have enough resources to enable NETCONF server. This usually means that the limit on the number of open file descriptors has been reached or the limit on the number of open files has been reached
- **out-of-memory**  
System does not have enough memory.

- **up**  
Component or process is operational
- **down**  
Component or process is not operational
- **empty**  
Component slot is empty
- **downloading**  
Component is downloading image into memory
- **booting**

- Component is booting downloaded image
- starting  
Component image operational, application processes starting
- failed  
Component or process has failed
- synchronizing  
Component is currently being synchronized
- upgrading  
Component is currently being upgraded
- low-power  
Component is offline due to insufficient system power
- degraded  
Component or process is in a degraded state
- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

### **hold-down-timer** (*number* | *keyword*)

<b>Description</b>	Specifies a hold-down timer value when seamless-bfd is enabled The timer is started when the number of S-BFD sessions that are up drops below the threshold. The TE-policy path is not considered to be up again until the hold-down timer has expired and the number of S-BFD sessions that are up equals or exceeds the threshold. A grace period after session down such that sBFD session flaps does not impact active path. The default is 4 seconds.

**wait-for-up-timer *number***

<b>Description</b>	Specifies a wait-for-up timer value when seamless-bfd is enabled  This timer takes effect if BFD does not come up, or BFD goes from up to down. The timer is started when BFD is first enabled on a segment-list or BFD transitions from up to down. When the timer expires if BFD is not yet come up, then the path is torn down by removing it from the TTM and the PI and the retry timer is started.  The default is 4 seconds.

- warm-reboot  
Component or process is currently warm rebooting  
This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting  
Component or process is currently waiting  
This state can be set by event handler when the `reinvoke-with-delay` action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

**Configurable** True

**Platforms** 7220 IXR-D5, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

### instance-index *number*

**Description** The instance index of the current PTP instance  
This instance index is used for management purposes only. This instance index does not represent the PTP domain number and is not used in PTP messages.

**Context** [system sync ptp instance instance-index](#) *number*

**Range** 1 to 2

**Configurable** True

**Platforms** 7220 IXR-D5, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

### current-ds

**Description** Provides current data from operation of the protocol

**Context** [system sync ptp instance instance-index](#) *number* [current-ds](#)

**Tree** [current-ds](#)

**Configurable** False

**Platforms** 7220 IXR-D5, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

**mean-delay** *number*

<b>Description</b>	The mean propagation time between this PTP instance and the master clock
<b>Context</b>	<a href="#">system sync ptp instance instance-index number current-ds mean-delay number</a>

### **port-index** *number*

<b>Description</b>	Index into the port-ds list This is not the PTP port number. Discovered IP peer ports are created based on Unicast negotiation.
--------------------	------------------------------------------------------------------------------------------------------------------------------------

If an IP peer is a discovered IP peer and later that IP address is entered as a configured peer, then port DS information will move from this list to the port-ds-cfg-ip-list to cover both aspects of communication with this peer.

The data sets (i.e., information model) of IEEE Std 1588-2008 specify a member portDS.portIdentity, which uses a typed struct with members clockIdentity and portNumber.

In this YANG data model, portIdentity is not modeled in the port-ds. However, its members are provided as follows: portIdentity.portNumber is provided as this ptp-port-number leaf in port-ds, and portIdentity.clockIdentity is provided as the clock-identity leaf in default-ds of the instance (i.e., ../default-ds/clock-identity).

### port-index *number*

**Description** Index into the port-ds list

This is not the PTP port number. Configurable ports use port indices 1 through 999 but there is a limit on the overall number of these configured ports based on the platform and software release.

The data sets (i.e., information model) of IEEE Std 1588-2008 specify a member portDS.portIdentity, which uses a typed struct with members clockIdentity and portNumber.

In this YANG data model, portIdentity is not modeled in the port-ds. However, its members are provided as follows: portIdentity.portNumber is provided as this ptp-port-number leaf in port-ds, and portIdentity.clockIdentity is provided as the clock-identity leaf in default-ds of the instance (i.e., ../default-ds/clock-identity).

## 17.1 platform Descriptions

### platform

<b>Description</b>	Top-level container for platform operational commands
<b>Context</b>	<a href="#">platform</a>
<b>Tree</b>	<a href="#">platform</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### chassis

<b>Description</b>	Operational commands related to the chassis
<b>Context</b>	<a href="#">platform chassis</a>
<b>Tree</b>	<a href="#">chassis</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### reboot

<b>Description</b>	Trigger a reboot of the chassis
<b>Context</b>	<a href="#">platform chassis reboot</a>
<b>Tree</b>	<a href="#">reboot</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### cancel

<b>Description</b>	Cancels a pending reboot on this component
<b>Context</b>	<a href="#">platform chassis reboot cancel</a>
<b>Tree</b>	<a href="#">cancel</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## **delay** *number*

<b>Description</b>	The amount of time to delay the reboot During this period, the reboot can be cancelled.
<b>Context</b>	<a href="#">platform chassis reboot delay</a> <i>number</i>
<b>Tree</b>	<a href="#">delay</a>
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## **force**

<b>Description</b>	Force a reboot of this component, overriding any synchronizations or other activities in progress  This option can be dangerous, and may result in a module booting on an older image if used after an image change
<b>Context</b>	<a href="#">platform chassis reboot force</a>
<b>Tree</b>	<a href="#">force</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## **message** *string*

<b>Description</b>	A user-defined message to broadcast to other users of the system
<b>Context</b>	<a href="#">platform chassis reboot message</a> <i>string</i>
<b>Tree</b>	<a href="#">message</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## **warm**

<b>Description</b>	Perform a warm reboot of the system  This option will perform checks against the current configuration, before prompting to confirm the reboot, and then rebooting the system without impacting the datapath - if a new image has been configured, this will upgrade the system.
<b>Context</b>	<a href="#">platform chassis reboot warm</a>

<b>Tree</b>	<a href="#">warm</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

## force

<b>Description</b>	Force a warm reboot of the system, overriding any validation, synchronizations or other activities in progress  This option can be dangerous, and may result in an outage - but can be used to support a fast reboot of the system.
<b>Context</b>	<a href="#">platform chassis reboot warm force</a>
<b>Tree</b>	<a href="#">force</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

## validate

<b>Description</b>	Validate that the system's current configuration and state supports a warm reboot operation
<b>Context</b>	<a href="#">platform chassis reboot warm validate</a>
<b>Tree</b>	<a href="#">validate</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

## control *slot string*

<b>Description</b>	Operational commands related to control modules
<b>Context</b>	<a href="#">platform control slot <i>string</i></a>
<b>Tree</b>	<a href="#">control</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## slot *string*

<b>Description</b>	Slot identifier for the control module
<b>Context</b>	<a href="#">platform control slot <i>string</i></a>

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## locator

<b>Description</b>	Operational commands for the locator LED
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">locator</a>
<b>Tree</b>	<a href="#">locator</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## disable

<b>Description</b>	Deactivates the locator LED for this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">locator</a> <a href="#">disable</a>
<b>Tree</b>	<a href="#">disable</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## enable

<b>Description</b>	Activate the locator LED for this component
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">locator</a> <a href="#">enable</a>
<b>Tree</b>	<a href="#">enable</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## duration *number*

<b>Description</b>	Sets the duration to activate the locator LED, after which it will disable automatically
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">locator</a> <a href="#">enable</a> <a href="#">duration</a> <i>number</i>
<b>Tree</b>	<a href="#">duration</a>
<b>Range</b>	10 to 3600
<b>Units</b>	seconds
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## reboot

**Description** Trigger or a reboot of this component

**Context** [platform control slot](#) *string* [reboot](#)

**Tree** [reboot](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## cancel

**Description** Cancels a pending reboot on this component

**Context** [platform control slot](#) *string* [reboot](#) [cancel](#)

**Tree** [cancel](#)

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## delay *number*

**Description** The amount of time to delay the reboot  
During this period, the reboot can be cancelled.

**Context** [platform control slot](#) *string* [reboot](#) [delay](#) *number*

**Tree** [delay](#)

**Units** seconds

**Configurable** True

**Platforms** 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## force

**Description** Force a reboot of this component, overriding any synchronizations or other activities in progress  
This option can be dangerous, and may result in a module booting on an older image if used after an image change

**Context** [platform control slot](#) *string* [reboot](#) [force](#)

**Tree** [force](#)

<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **message** *string*

<b>Description</b>	A user-defined message to broadcast to other users of the system
<b>Context</b>	<a href="#">platform control slot</a> <i>string</i> <a href="#">reboot message</a> <i>string</i>
<b>Tree</b>	<a href="#">message</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **fabric slot** *number*

<b>Description</b>	Operational commands related to fabric modules
<b>Context</b>	<a href="#">platform fabric slot</a> <i>number</i>
<b>Tree</b>	<a href="#">fabric</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **slot** *number*

<b>Description</b>	Numeric identifier for the fabric module
<b>Context</b>	<a href="#">platform fabric slot</a> <i>number</i>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **locator**

<b>Description</b>	Operational commands for the locator LED
<b>Context</b>	<a href="#">platform fabric slot</a> <i>number</i> <a href="#">locator</a>
<b>Tree</b>	<a href="#">locator</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**disable**

<b>Description</b>	Deactivates the locator LED for this component
<b>Context</b>	<a href="#">platform fabric slot number locator disable</a>
<b>Tree</b>	<a href="#">disable</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**enable**

<b>Description</b>	Activate the locator LED for this component
<b>Context</b>	<a href="#">platform fabric slot number locator enable</a>
<b>Tree</b>	<a href="#">enable</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**duration *number***

<b>Description</b>	Sets the duration to activate the locator LED, after which it will disable automatically
<b>Context</b>	<a href="#">platform fabric slot number locator enable duration number</a>
<b>Tree</b>	<a href="#">duration</a>
<b>Range</b>	10 to 3600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**reboot**

<b>Description</b>	Trigger or a reboot of this component
<b>Context</b>	<a href="#">platform fabric slot number reboot</a>
<b>Tree</b>	<a href="#">reboot</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## cancel

<b>Description</b>	Cancels a pending reboot on this component
<b>Context</b>	<a href="#">platform fabric slot number reboot cancel</a>
<b>Tree</b>	<a href="#">cancel</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## delay *number*

<b>Description</b>	The amount of time to delay the reboot During this period, the reboot can be cancelled.
<b>Context</b>	<a href="#">platform fabric slot number reboot delay number</a>
<b>Tree</b>	<a href="#">delay</a>
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## message *string*

<b>Description</b>	A user-defined message to broadcast to other users of the system
<b>Context</b>	<a href="#">platform fabric slot number reboot message string</a>
<b>Tree</b>	<a href="#">message</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## fan-tray *id number*

<b>Description</b>	Operational commands related to fan modules
<b>Context</b>	<a href="#">platform fan-tray id number</a>
<b>Tree</b>	<a href="#">fan-tray</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**id number**

<b>Description</b>	Numeric identifier for the fan module
<b>Context</b>	<a href="#">platform fan-tray id number</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**locator**

<b>Description</b>	Operational commands for the locator LED
<b>Context</b>	<a href="#">platform fan-tray id number locator</a>
<b>Tree</b>	<a href="#">locator</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**disable**

<b>Description</b>	Deactivates the locator LED for this component
<b>Context</b>	<a href="#">platform fan-tray id number locator disable</a>
<b>Tree</b>	<a href="#">disable</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**enable**

<b>Description</b>	Activate the locator LED for this component
<b>Context</b>	<a href="#">platform fan-tray id number locator enable</a>
<b>Tree</b>	<a href="#">enable</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**duration number**

<b>Description</b>	Sets the duration to activate the locator LED, after which it will disable automatically
<b>Context</b>	<a href="#">platform fan-tray id number locator enable duration number</a>

<b>Tree</b>	<a href="#">duration</a>
<b>Range</b>	10 to 3600
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **linecard** [slot number](#)

<b>Description</b>	Operational commands related to line cards
<b>Context</b>	<a href="#">platform linecard slot number</a>
<b>Tree</b>	<a href="#">linecard</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **slot number**

<b>Description</b>	Numeric identifier for the line card
<b>Context</b>	<a href="#">platform linecard slot number</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **locator**

<b>Description</b>	Operational commands for the locator LED
<b>Context</b>	<a href="#">platform linecard slot number locator</a>
<b>Tree</b>	<a href="#">locator</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

### **disable**

<b>Description</b>	Deactivates the locator LED for this component
<b>Context</b>	<a href="#">platform linecard slot number locator disable</a>
<b>Tree</b>	<a href="#">disable</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## enable

<b>Description</b>	Activate the locator LED for this component
<b>Context</b>	<a href="#">platform linecard slot number locator enable</a>
<b>Tree</b>	<a href="#">enable</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## duration *number*

<b>Description</b>	Sets the duration to activate the locator LED, after which it will disable automatically
<b>Context</b>	<a href="#">platform linecard slot number locator enable duration number</a>
<b>Tree</b>	<a href="#">duration</a>

<b>Description</b>	Cancels a pending reboot on this component
<b>Context</b>	<a href="#">platform linecard slot number reboot cancel</a>
<b>Tree</b>	<a href="#">cancel</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## **delay** *number*

<b>Description</b>	The amount of time to delay the reboot During this period, the reboot can be cancelled.
<b>Context</b>	<a href="#">platform linecard slot number reboot delay number</a>
<b>Tree</b>	<a href="#">delay</a>
<b>Units</b>	seconds
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## **message** *string*

<b>Description</b>	A user-defined message to broadcast to other users of the system
<b>Context</b>	<a href="#">platform linecard slot number reboot message string</a>
<b>Tree</b>	<a href="#">message</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## **redundancy**

<b>Description</b>	Top-level container for redundancy operational commands
<b>Context</b>	<a href="#">platform redundancy</a>
<b>Tree</b>	<a href="#">redundancy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## **switchover**

<b>Description</b>	Trigger a redundancy switchover to the other control module
<b>Context</b>	<a href="#">platform redundancy switchover</a>
<b>Tree</b>	<a href="#">switchover</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## synchronize

<b>Description</b>	Top-level container for manual synchronization activities
<b>Context</b>	<a href="#">platform redundancy synchronize</a>
<b>Tree</b>	<a href="#">synchronize</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## overlay

<b>Description</b>	Force a synchronization of the overlay filesystem between the active control module and the standby  This synchronizes all non-excluded directories in the overlay filesystem
<b>Context</b>	<a href="#">platform redundancy synchronize overlay</a>
<b>Tree</b>	<a href="#">overlay</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## system

<b>Description</b>	Force a synchronization of the system-required data between the active control module and the standby  This synchronizes images, configuration, checkpoints, and other system-required data
<b>Context</b>	<a href="#">platform redundancy synchronize system</a>
<b>Tree</b>	<a href="#">system</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

## show-fabric-bandwidth

<b>Description</b>	Show fabric bandwidth
<b>Context</b>	<a href="#">platform show-fabric-bandwidth</a>
<b>Tree</b>	<a href="#">show-fabric-bandwidth</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e

**trust**

<b>Description</b>	Operational commands related to Platform Trust
<b>Context</b>	<a href="#">platform trust</a>
<b>Tree</b>	<a href="#">trust</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

**attestation**

<b>Description</b>	Tools commands input parameter for attestation to retrieve TCG BIOS Logs, IMA Logs
<b>Context</b>	<a href="#">platform trust attestation</a>
<b>Tree</b>	<a href="#">attestation</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

**control [slot string](#)**

<b>Description</b>	Operational commands related to log retrieval for control modules
<b>Context</b>	<a href="#">platform trust attestation control slot string</a>
<b>Tree</b>	<a href="#">control</a>
<b>Configurable</b>	True
<b>Platforms</b>	7250 IXR-10e, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

## app-management

**Description** Operational commands related to app-management

**Context** [system app-management](#)

**Tree** [app-management](#)

<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **application** *name string*

<b>Description</b>	List of all applications managed by the application manager
<b>Context</b>	<a href="#">system app-management application name string</a>
<b>Tree</b>	<a href="#">application</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **name** *string*

<b>Description</b>	Unique name of this application instance
<b>Context</b>	<a href="#">system app-management application name string</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **kill**

<b>Description</b>	Terminate the application instance ungracefully
<b>Context</b>	<a href="#">system app-management application name string kill</a>
<b>Tree</b>	<a href="#">kill</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

### **quit**

<b>Description</b>	Terminate the application instance, requesting it to core dump
<b>Context</b>	<a href="#">system app-management application name string quit</a>
<b>Tree</b>	<a href="#">quit</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## reload

<b>Description</b>	Reload the configuration of the application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">reload</a>
<b>Tree</b>	<a href="#">reload</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## restart

<b>Description</b>	<p>Restart the application instance</p> <p>The best restart that is supported by the application is used if neither 'warm' or 'cold' is specified. If 'warm' restart is supported that will be used, or 'cold' if 'warm' is unavailable.</p> <p>A 'warm' restart will result in the application leaving its state in IDB during the restart, and recovering it post restart. This restart type results in less disruption to surrounding applications that would depend on the restarting applications state.</p> <p>A 'cold' restart will result in a normal stop/start of the application, including the purging of its state in IDB.</p>
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">restart</a>
<b>Tree</b>	<a href="#">restart</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## cold

<b>Description</b>	Perform a cold restart of the application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">restart cold</a>
<b>Tree</b>	<a href="#">cold</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## warm

<b>Description</b>	Perform a warm restart of the application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">restart warm</a>

<b>Tree</b>	<a href="#">warm</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## start

<b>Description</b>	Start the application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">start</a>
<b>Tree</b>	<a href="#">start</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## statistics

<b>Description</b>	Top-level grouping of operational commands related to application statistics
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">statistics</a>
<b>Tree</b>	<a href="#">statistics</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## clear

<b>Description</b>	Clear statistics for this application instance
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">statistics</a> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## stop

<b>Description</b>	Terminate the application instance gracefully
<b>Context</b>	<a href="#">system app-management application name</a> <i>string</i> <a href="#">stop</a>
<b>Tree</b>	<a href="#">stop</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**boot**

<b>Description</b>	Top-level container for operational commands related to booting the system
<b>Context</b>	<a href="#">system boot</a>
<b>Tree</b>	<a href="#">boot</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

<b>Context</b>	<a href="#">system configuration</a>
<b>Tree</b>	<a href="#">configuration</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## candidate *name string*

<b>Description</b>	List of configuration candidates currently active
<b>Context</b>	<a href="#">system configuration candidate name <i>string</i></a>
<b>Tree</b>	<a href="#">candidate</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## name *string*

<b>Description</b>	The name of the candidate
--------------------	---------------------------

<b>Context</b>	<a href="#">system configuration candidate name</a> <i>string</i>
<b>String Length</b>	1 to 255
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear the candidate from the system, discarding any changes This results in any users currently in the candidate being dropped back to running mode.
<b>Context</b>	<a href="#">system configuration candidate name</a> <i>string</i> <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**checkpoint id** (*number | checkpoint-name*)

<b>Description</b>	List of current checkpoints present in the system
<b>Context</b>	<a href="#">system configuration checkpoint id</a> ( <i>number   checkpoint-name</i> )
<b>Tree</b>	<a href="#">checkpoint</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**id** (*number | checkpoint-name*)

<b>Description</b>	System generated ID, or operator defined name for the checkpoint
<b>Context</b>	<a href="#">system configuration checkpoint id</a> ( <i>number   checkpoint-name</i> )
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

**clear**

<b>Description</b>	Clear the checkpoint from the system
<b>Context</b>	<a href="#">system configuration checkpoint id</a> ( <i>number   checkpoint-name</i> ) <a href="#">clear</a>
<b>Tree</b>	<a href="#">clear</a>
<b>Configurable</b>	True

**Platforms** Supported on all platforms

## load

**Description** Load candidate from saved checkpoint configuration

**Context** [system configuration checkpoint id \(number | checkpoint-name\) load](#)

**Tree** [load](#)

**Configurable** True

**Platforms** Supported on all platforms

## revert

**Description** Revert running system configuration to the saved checkpoint configuration  
This functions as a load and commit action.

**Context** [system configuration checkpoint id \(number | checkpoint-name\) revert](#)

**Tree** [revert](#)

**Configurable** True

**Platforms** Supported on all platforms

## confirmed-accept

**Description** Accepts an in progress commit and stops the confirmation timer

**Context** [system configuration confirmed-accept](#)

**Tree** [confirmed-accept](#)

**Configurable** True

**Platforms** Supported on all platforms

## persist-id *string*

**Description** Specifies the persist-id to which the commit confirmed accept applies

**Context** [system configuration confirmed-accept persist-id \*string\*](#)

**Tree** [persist-id](#)

**Configurable** True

**Platforms** Supported on all platforms

## confirmed-reject

<b>Description</b>	Rejects an in progress commit and stops the confirmation timer
<b>Context</b>	<a href="#">system configuration confirmed-reject</a>
<b>Tree</b>	<a href="#">confirmed-reject</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## persist-id *string*

<b>Description</b>	Specifies the persist-id to which the commit confirmed reject applies
<b>Context</b>	<a href="#">system configuration confirmed-reject persist-id <i>string</i></a>
<b>Tree</b>	<a href="#">persist-id</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## generate-checkpoint

<b>Description</b>	Generate a checkpoint point based on the current running configuration
<b>Context</b>	<a href="#">system configuration generate-checkpoint</a>
<b>Tree</b>	<a href="#">generate-checkpoint</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## comment *string*

<b>Description</b>	User provided comment to associate with the checkpoint
<b>Context</b>	<a href="#">system configuration generate-checkpoint comment <i>string</i></a>
<b>Tree</b>	<a href="#">comment</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## name *string*

<b>Description</b>	User provided name of the checkpoint
<b>Context</b>	<a href="#">system configuration generate-checkpoint name <i>string</i></a>

<b>Tree</b>	<a href="#">name</a>
<b>Configurable</b>	True
<b>Platforms</b>	Supported on all platforms

## pathz-policy

<b>Description</b>	Top-level container for operational commands relating to Pathz gRPC policies
<b>Context</b>	<a href="#">system configuration pathz-policy</a>
<b>Tree</b>	<a href="#">pathz-policy</a>
<b>Configurable</b>	True
<b>Platforms</b>	7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7250 IXR-10, 7250 IXR-10e, 7250 IXR-6, 7250 IXR-6e, 7250 IXR-X1b, 7250 IXR-X3b, 7730 SXR-1d-32D, 7730 SXR-1x-44S

## clear

<b>Description</b>	Clear Pathz authorization policy counters
<b>Context</b>	<a href="#">system configuration pathz-policy clear</a>

## 21.1 tunnel-interface Descriptions

### tunnel-interface *name string*

<b>Description</b>	In the case that the interface is logical tunnel interface, the parameters for the tunnel are specified within this subtree. Tunnel interfaces have only a single logical subinterface associated with them.
<b>Context</b>	<a href="#">tunnel-interface name string</a>
<b>Tree</b>	<a href="#">tunnel-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### *name string*

<b>Description</b>	The name of the tunnel-interface. Valid options are: vxlan<N>, N=0..255
<b>Context</b>	<a href="#">tunnel-interface name string</a>
<b>String Length</b>	6 to 8
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

### vxlan-interface *index number*

<b>Description</b>	The list of vxlan-interfaces.
<b>Context</b>	<a href="#">tunnel-interface name string vxlan-interface index number</a>
<b>Tree</b>	<a href="#">vxlan-interface</a>
<b>Configurable</b>	True
<b>Platforms</b>	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5
<b>Max. Elements</b>	16384

### *index number*

<b>Description</b>	The index of the vxlan-tunnel.
--------------------	--------------------------------

<b>Context</b>	<a href="#">tunnel-interface name</a> <i>string</i> <a href="#">vxlan-interface index</a> <i>number</i>
<b>Range</b>	0 to 999999999
<b>Configurable</b>	True

**Tree** [statistics](#)

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

## admin-state *keyword*

**Description** The configured state of the VXLAN statistics on the router

The default value is disable. No statistics are collected on VXLAN when the admin-state is disable. When enabled, the router starts collecting VXLAN statistics at both, global and VTEP level, however, the total number of layer-2 subinterfaces is decreased. A change in the configuration of this command also resets the statistic counters on layer-2 subinterfaces as a side effect, before resuming the collection of statistics (on these layer-2 subinterfaces).

**Context** [tunnel vxlan-tunnel statistics admin-state keyword](#)

**Tree** [admin-state](#)

**Default** disable

**Options**

- enable
- disable

**Configurable** True

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

## in-discarded-packets *number*

**Description** The total number of discarded ingress VXLAN packets.

Ingress VXLAN packets can be discarded due to one of the following reasons:

**Context** [tunnel vxlan-tunnel statistics in-discarded-packets number](#)

**Tree** [in-discarded-packets](#)

**Default** 0

**Configurable** False

**Platforms** 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

### **in-octets** *number*

**Description** The total sum of ingress VXLAN octets.
