Tree label

Configurable False

Platforms Supported on all platforms

value *number*

Description The value of the label field

If the route is an EVPN MPLS route, the mpls-label is read out of the 20-bit high order value. If the route is an EVPN VXLAN route, the vni is read out of the 24-bit value. If the route is an EVPN SRv6 route, this field is set to zero if no transposition is used and set to a non-zero value if transposition is used. For all the cases, if this is an Auto-Discovery per ES route, this leaf is set to zero.

Options

- aggregate

  Locally configured aggregate route

- arp-nd

  IP route added by ARP ND.

- bgp

  Border Gateway Protocol version 4

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- bgp-evpn

  BGP Ethernet VPN (EVPN) Interface-less
- bgp-evpn-iff

  BGP Ethernet VPN (EVPN) Interface-ful
- bgp-evpn-ifl-host

  BGP Ethernet VPN (EVPN) Interface-less Host
- bgp-ipvpn

  BGP IP VPN
- bgp-label

  BGP labeled-unicast
- dhcp

  IP (default) route added by DHCP.
- gribi

  A gRIBI route
- host

  A host route
- isis

  IS-IS
- local

  A directly connected route
- linux

  IP route added by the linux kernel.
- ndk1

  Route added by an agent application using the NDK
- ndk2

  Route added by an agent application using the NDK
- ospfv2

  OSPFv2
- ospfv3

  OSPFv3
- sr-submgmt

  Subscriber-management route
- srv6

  Segment routing using IPv6 dataplane, SRv6, programmed by srv6 manager.
- static

origin-protocol *identityref*

Description If the route was imported from another protocol, this is the protocol name.

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-labeled-unicast local-rib route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-protocol *identityref* path-id *number*

Options

- aggregate

  Locally configured aggregate route
- arp-nd

  IP route added by ARP ND.
- bgp

  Border Gateway Protocol version 4
- bgp-evpn

  BGP Ethernet VPN (EVPN) Interface-less
- bgp-evpn-iff

  BGP Ethernet VPN (EVPN) Interface-ful
- bgp-evpn-ifl-host

  BGP Ethernet VPN (EVPN) Interface-less Host
- bgp-ipvpn

  BGP IP VPN
- bgp-label

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

BGP labeled-unicast

- dhcp

  IP (default) route added by DHCP.
- gribi

  A gRIBI route
- host

  A host route
- isis

  IS-IS
- local

  A directly connected route
- linux

  IP route added by the linux kernel.
- ndk1

  Route added by an agent application using the NDK
- ndk2

  Route added by an agent application using the NDK
- ospfv2

  OSPFv2
- ospfv3

  OSPFv3
- sr-submgmt

  Subscriber-management route
- srv6

  Segment routing using IPv6 dataplane, SRv6, programmed by srv6 manager.
- static

  Locally configured static route

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

origin-validation-state *keyword*

Description RPKI origin validation state of this BGP route

Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-labeled-unicast local-rib route prefix *(ipv4-prefix* | *ipv6-prefix)* neighbor *(ipv4-address-with-zone* | *ipv6-address-with-zone)* origin-protocol *identityref* path-id *number* origin-validation-state *keyword*

Tree origin-validation-state

Options

- valid

  Route matches a ROA entry with correct prefix-length and origin AS

- invalid

  Route matches a ROA entry but prefix-length or origin AS does not match

- not-found

  No matching ROA entry exists for this prefix

- disabled

  Origin validation is not enabled for this route

Configurable False

Use subject to Terms available at: www.nokia.com/terms.

last-modified *string*

Description	Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-update received. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-labeled-unicast rib-in-out rib-in-post route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* last-modified *string*
Tree	last-modified
String Length	20 to 32
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

neighbor-as *number*

Description	The last external AS to advertise the route into the local AS
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-labeled-unicast rib-in-out rib-in-post route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* neighbor-as *number*
Tree	neighbor-as
Range	1 to 4294967295
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

origin-validation-state *keyword*

Description	RPKI origin validation state of this BGP route Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-labeled-unicast rib-in-out rib-in-post route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* origin-validation-state *keyword*

Tree origin-validation-state

Options

- valid

  Route matches a ROA entry with correct prefix-length and origin AS

- invalid

  Route matches a ROA entry but prefix-length or origin AS does not match

- not-found

  No matching ROA entry exists for this prefix

- disabled

  Origin validation is not enabled for this route

Configurable False

origin-validation-state *keyword*

Description RPKI origin validation state of this BGP route

Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-labeled-unicast rib-in-out rib-in-pre route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* origin-validation-state *keyword*

Tree origin-validation-state

Options

- valid

  Route matches a ROA entry with correct prefix-length and origin AS
- invalid

  Route matches a ROA entry but prefix-length or origin AS does not match
- not-found

  No matching ROA entry exists for this prefix
- disabled

  Origin validation is not enabled for this route

origin-validation-state *keyword*

Description RPKI origin validation state of this BGP route

Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-labeled-unicast rib-in-out rib-out-post route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* origin-validation-state *keyword*

Tree origin-validation-state

Options

- valid

  Route matches a ROA entry with correct prefix-length and origin AS

- invalid

  Route matches a ROA entry but prefix-length or origin AS does not match

- not-found

  No matching ROA entry exists for this prefix

- disabled

  Origin validation is not enabled for this route

label-allocation-failed *boolean*

Description	Indicates true if dynamic-label-block has no more free labels
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-unicast local-rib route prefix *(ipv4-prefix* | *ipv6-prefix)* neighbor *(ipv4-address-with-zone* | *ipv6-address-with-zone)* origin-protocol *identityref* path-id *number* invalid-reason label-allocation-failed *boolean*
Tree	label-allocation-failed
Configurable	False
Platforms	Supported on all platforms

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

next-hop-unresolved *boolean*

Description	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-unicast local-rib route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-protocol *identityref* path-id *number* invalid-reason next-hop-unresolved *boolean*
Tree	next-hop-unresolved
Configurable	False
Platforms	Supported on all platforms

rejected-route *boolean*

Description	Indicates true if the route was rejected by an import policy.
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-unicast local-rib route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-protocol *identityref* path-id *number* invalid-reason rejected-route *boolean*
Tree	rejected-route
Configurable	False
Platforms	Supported on all platforms

last-modified *string*

Description	Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-update received. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-unicast local-rib route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-protocol *identityref* path-id *number* last-modified *string*
Tree	last-modified
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

Use subject to Terms available at: www.nokia.com/terms.

neighbor-as *number*

Description The last external AS to advertise the route into the local AS

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-unicast local-rib route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-protocol *identityref* path-id *number* neighbor-as *number*

Tree neighbor-as

Range 1 to 4294967295

Configurable False

Platforms Supported on all platforms

origin-validation-state *keyword*

Description RPKI origin validation state of this BGP route

Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-unicast local-rib route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-protocol *identityref* path-id *number* origin-validation-state *keyword*

Tree origin-validation-state

Options

- valid

  Route matches a ROA entry with correct prefix-length and origin AS
- invalid

  Route matches a ROA entry but prefix-length or origin AS does not match
- not-found

  No matching ROA entry exists for this prefix
- disabled

  Origin validation is not enabled for this route

Configurable False

label-allocation-failed *boolean*

Description	Indicates true if dynamic-label-block has no more free labels
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-unicast rib-in-out rib-in-post route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* invalid-reason label-allocation-failed *boolean*
Tree	label-allocation-failed
Configurable	False
Platforms	Supported on all platforms

next-hop-unresolved *boolean*

Description	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-unicast rib-in-out rib-in-post route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* invalid-reason next-hop-unresolved *boolean*
Tree	next-hop-unresolved
Configurable	False
Platforms	Supported on all platforms

rejected-route *boolean*

Description	Indicates true if the route was rejected by an import policy.
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-unicast rib-in-out rib-in-post route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* invalid-reason rejected-route *boolean*
Tree	rejected-route
Configurable	False
Platforms	Supported on all platforms

last-modified *string*

Description	Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-update received. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.

Use subject to Terms available at: www.nokia.com/terms.

Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-unicast rib-in-out rib-in-post route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* last-modified *string*
Tree	last-modified
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

neighbor-as *number*

Description	The last external AS to advertise the route into the local AS
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-unicast rib-in-out rib-in-post route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* neighbor-as *number*
Tree	neighbor-as
Range	1 to 4294967295
Configurable	False
Platforms	Supported on all platforms

origin-validation-state *keyword*

Description	RPKI origin validation state of this BGP route Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv4-unicast rib-in-out rib-in-post route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* origin-validation-state *keyword*
Tree	origin-validation-state
Options	• valid Route matches a ROA entry with correct prefix-length and origin AS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- invalid

  Route matches a ROA entry but prefix-length or origin AS does not match
- not-found

  No matching ROA entry exists for this prefix
- disabled

  Origin validation is not enabled for this route

Configurable False

route crc *number* nlri-length *number* nlri neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-protocol *identityref* path-id *number*

Description List of ipv6-flowspec-v1 routes. Keys to route include prefix, neighbor, origin and path-id. If route is imported route from other local protocols, neighbor IP address will be zero. If route is selected to be advertised to peer by local BGP speaker's decision making process, then the origin will be set to 'bgp'.

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv6-flowspec-v1 local-rib route crc *number* nlri-length *number* nlri neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-protocol *identityref* path-id *number*

Options

- aggregate

  Locally configured aggregate route
- arp-nd

  IP route added by ARP ND.
- bgp

  Border Gateway Protocol version 4
- bgp-evpn

  BGP Ethernet VPN (EVPN) Interface-less
- bgp-evpn-iff

  BGP Ethernet VPN (EVPN) Interface-ful
- bgp-evpn-ifl-host

  BGP Ethernet VPN (EVPN) Interface-less Host
- bgp-ipvpn

  BGP IP VPN
- bgp-label

  BGP labeled-unicast
- dhcp

  IP (default) route added by DHCP.
- gribi

  A gRIBI route
- host

  A host route
- isis

  IS-IS
- local

  A directly connected route

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- linux

  IP route added by the linux kernel.
- ndk1

  Route added by an agent application using the NDK
- ndk2

  Route added by an agent application using the NDK
- ospfv2

  OSPFv2
- ospfv3

  OSPFv3
- sr-submgmt

  Subscriber-management route
- srv6

  Segment routing using IPv6 dataplane, SRv6, programmed by srv6 manager.
- static

  Locally configured static route

Configurable False

IP route added by the linux kernel.

- ndk1

  Route added by an agent application using the NDK
- ndk2

  Route added by an agent application using the NDK
- ospfv2

  OSPFv2
- ospfv3

  OSPFv3
- sr-submgmt

  Subscriber-management route
- srv6

  Segment routing using IPv6 dataplane, SRv6, programmed by srv6 manager.
- static

  Locally configured static route

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

origin-validation-state *keyword*

Description	RPKI origin validation state of this BGP route Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv6-labeled-unicast local-rib route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-protocol *identityref* path-id *number* origin-validation-state *keyword*

Tree origin-validation-state

Options

- valid

  Route matches a ROA entry with correct prefix-length and origin AS
- invalid

  Route matches a ROA entry but prefix-length or origin AS does not match
- not-found

  No matching ROA entry exists for this prefix
- disabled

  Origin validation is not enabled for this route

Configurable False

origin-validation-state *keyword*

Description RPKI origin validation state of this BGP route

Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv6-labeled-unicast rib-in-out rib-in-post route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* origin-validation-state *keyword*

Tree origin-validation-state

Options

- valid

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Route matches a ROA entry with correct prefix-length and origin AS

- invalid

  Route matches a ROA entry but prefix-length or origin AS does not match

- not-found

  No matching ROA entry exists for this prefix

- disabled

  Origin validation is not enabled for this route

Configurable False

origin-validation-state *keyword*

Description RPKI origin validation state of this BGP route

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv6-labeled-unicast rib-in-out rib-in-pre route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* origin-validation-state *keyword*

Tree origin-validation-state

label-allocation-failed *boolean*

Description	Indicates true if dynamic-label-block has no more free labels
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv6-unicast local-rib route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-protocol *identityref* path-id *number* invalid-reason label-allocation-failed *boolean*
Tree	label-allocation-failed
Configurable	False
Platforms	Supported on all platforms

next-hop-unresolved *boolean*

Description	Indicates true if the BGP route has a BGP next-hop that cannot be resolved to an outgoing interface.
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv6-unicast local-rib route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-protocol *identityref* path-id *number* invalid-reason next-hop-unresolved *boolean*
Tree	next-hop-unresolved
Configurable	False
Platforms	Supported on all platforms

rejected-route *boolean*

Description	Indicates true if the route was rejected by an import policy.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv6-unicast local-rib route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-protocol *identityref* path-id *number* invalid-reason rejected-route *boolean*
Tree	rejected-route
Configurable	False
Platforms	Supported on all platforms

last-modified *string*

Description	Time of the last modification of the route stored in the BGP RIB. For a route learned from a BGP neighbor the initial value is the same as last-update received. If an import policy later changed some attribute of the route last-modified would be updated to reflect the time of this change.
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv6-unicast local-rib route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-protocol *identityref* path-id *number* last-modified *string*
Tree	last-modified
String Length	20 to 32
Configurable	False
Platforms	Supported on all platforms

neighbor-as *number*

Description	The last external AS to advertise the route into the local AS
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv6-unicast local-rib route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-protocol *identityref* path-id *number* neighbor-as *number*
Tree	neighbor-as
Range	1 to 4294967295
Configurable	False
Platforms	Supported on all platforms

origin-validation-state *keyword*

Description	RPKI origin validation state of this BGP route Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv6-unicast local-rib route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-protocol *identityref* path-id *number* origin-validation-state *keyword*

Tree origin-validation-state

Options

- valid

  Route matches a ROA entry with correct prefix-length and origin AS
- invalid

  Route matches a ROA entry but prefix-length or origin AS does not match
- not-found

  No matching ROA entry exists for this prefix
- disabled

  Origin validation is not enabled for this route

Configurable False

Range	1 to 4294967295
Configurable	False
Platforms	Supported on all platforms

origin-validation-state *keyword*

Description

RPKI origin validation state of this BGP route

Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context

network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv6-unicast rib-in-out rib-in-post route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* origin-validation-state *keyword*

Tree

origin-validation-state

Options

- valid

  Route matches a ROA entry with correct prefix-length and origin AS
- invalid

  Route matches a ROA entry but prefix-length or origin AS does not match
- not-found

  No matching ROA entry exists for this prefix
- disabled

  Origin validation is not enabled for this route

Configurable

origin-validation-state *keyword*

Description RPKI origin validation state of this BGP route

Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv6-unicast rib-in-out rib-in-pre route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* origin-validation-state *keyword*

Tree origin-validation-state

Options

- valid

Description

RPKI origin validation state of this BGP route

Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context

network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* ipv6-unicast rib-in-out rib-out-post route prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* origin-validation-state *keyword*

Tree

origin-validation-state

Options

- valid

  Route matches a ROA entry with correct prefix-length and origin AS
- invalid

  Route matches a ROA entry but prefix-length or origin AS does not match
- not-found

  No matching ROA entry exists for this prefix
- disabled

  Origin validation is not enabled for this route

Configurable

False

origin-validation-state *keyword*

Description RPKI origin validation state of this BGP route

Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* l3vpn-ipv4-unicast local-rib route route-distinguisher *(route-distinguisher-type-0 | route-distinguisher-type-1 | route-distinguisher-type-2 | route-distinguisher-type-2b)* prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* origin-validation-state *keyword*

Tree origin-validation-state

Options

- valid

  Route matches a ROA entry with correct prefix-length and origin AS
- invalid

  Route matches a ROA entry but prefix-length or origin AS does not match
- not-found

  No matching ROA entry exists for this prefix
- disabled

  Origin validation is not enabled for this route

Configurable False

origin-validation-state *keyword*

Description RPKI origin validation state of this BGP route

Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* l3vpn-ipv4-unicast rib-in-out rib-in-post route route-distinguisher *(route-distinguisher-type-0 | route-distinguisher-type-1 | route-distinguisher-type-2 | route-distinguisher-type-2b)* prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* origin-validation-state *keyword*

Tree origin-validation-state

Options

- valid

  Route matches a ROA entry with correct prefix-length and origin AS
- invalid

  Route matches a ROA entry but prefix-length or origin AS does not match
- not-found

  No matching ROA entry exists for this prefix
- disabled

  Origin validation is not enabled for this route

Configurable False

origin-validation-state *keyword*

Description RPKI origin validation state of this BGP route

Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* l3vpn-ipv4-unicast rib-in-out rib-in-pre route route-distinguisher *(route-distinguisher-type-0 | route-distinguisher-type-1 | route-distinguisher-type-2 | route-distinguisher-type-2b)* prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* origin-validation-state *keyword*

origin-validation-state *keyword*

Description	RPKI origin validation state of this BGP route Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* l3vpn-ipv6-unicast rib-in-out rib-in-post route route-distinguisher *(route-distinguisher-type-0 | route-distinguisher-type-1 | route-distinguisher-type-2 | route-distinguisher-type-2b)* prefix *(ipv4-prefix | ipv6-prefix)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* origin-validation-state *keyword*

Tree origin-validation-state

Options

- valid

  Route matches a ROA entry with correct prefix-length and origin AS

- invalid

  Route matches a ROA entry but prefix-length or origin AS does not match

- not-found

  No matching ROA entry exists for this prefix

- disabled

  Origin validation is not enabled for this route

Configurable False

origin-validation-state *keyword*

Description

RPKI origin validation state of this BGP route

Determined by lookup of the route prefix and origin AS against the local ROA database: valid - prefix matches a ROA with correct origin AS and prefix-length within the allowed range invalid - prefix matches a ROA but origin AS or prefix-length violates the ROA constraints not-found - no matching ROA entry exists for this prefix disabled - origin validation is not enabled for this neighbor AFI-SAFI

The state is computed at route receipt and updated whenever the ROA database changes in a way that affects this prefix. BGP will not publish this state for address families where origin validation is not supported.

Context

  A directly connected route
- linux

  IP route added by the linux kernel.
- ndk1

  Route added by an agent application using the NDK
- ndk2

  Route added by an agent application using the NDK
- ospfv2

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

OSPFv2

- ospfv3

  OSPFv3

- sr-submgmt

  Subscriber-management route

- srv6

  Segment routing using IPv6 dataplane, SRv6, programmed by srv6 manager.

- static

  Locally configured static route

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

path-id *number*

Description Path identifier of the BGP route

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* link-state local-rib route nlri-type *keyword* crc *number* nlri-length *number* nlri neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* origin-protocol *identityref* path-id *number*

Configurable False

distinguisher *number*

Description	Unique identifier of the policy candidate path in the context of <color, endpoint> tuple
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* srte-policy-ipv6 rib-in-out rib-out-post route distinguisher *number* color *number* endpoint *(ipv4-address | ipv6-address)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number*
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

color *number*

Description	Color of the SRTE policy, used to steer traffic into the tunnel
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* srte-policy-ipv6 rib-in-out rib-out-post route distinguisher *number* color *number* endpoint *(ipv4-address | ipv6-address)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number*
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

endpoint *(ipv4-address | ipv6-address)*

Description	The endpoint IPv4 or IPv6 address of the SR policy
Context	network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* srte-policy-ipv6 rib-in-out rib-out-post route distinguisher *number* color *number* endpoint *(ipv4-address | ipv6-address)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number*
Configurable	False
Platforms	7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)*

Description	If the route was learned from a BGP neighbor, this is the IPv4 or IPv6 address of that neighbor

attr-id *reference*

Description Leaf reference to networkinstance/protocols/bgp/rib/ attr-sets/attr-set/index

Context network-instance name *string* bgp-rib afi-safi afi-safi-name *identityref* srte-policy-ipv6 rib-in-out rib-out-post route distinguisher *number* color *number* endpoint *(ipv4-address | ipv6-address)* neighbor *(ipv4-address-with-zone | ipv6-address-with-zone)* path-id *number* attr-id *reference*

Tree attr-id

Reference network-instance name *string* bgp-rib attr-sets attr-set index *number*

Configurable False

Platforms 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

attr-sets

Description Enter the attr-sets context

Container for BGP RIB path attribute sets that can be shared by one or more BGP routes.

Context network-instance name *string* bgp-rib attr-sets

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	attr-sets
Configurable	False
Platforms	Supported on all platforms

attr-set index *number*

Description	List of attribute sets.
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number*
Tree	attr-set
Configurable	False
Platforms	Supported on all platforms

index *number*

Description	A unique internal identifier of the attribute set.
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number*
Configurable	False
Platforms	Supported on all platforms

aggregator

Description	Enter the aggregator context
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* aggregator
Tree	aggregator
Configurable	False
Platforms	Supported on all platforms

address *(ipv4-address | ipv6-address)*

Description	The router ID of the BGP router that formed the aggregate route.
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* aggregator address *(ipv4-address | ipv6-address)*
Tree	address
Configurable	False
Platforms	Supported on all platforms

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

as-number *number*

Description	The 2byte or 4byte AS number of the router that formed the aggregate route.
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* aggregator as-number *number*
Tree	as-number
Range	1 to 4294967295
Configurable	False
Platforms	Supported on all platforms

aigp *number*

Description	The value in the AIGP path attribute.
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* aigp *number*
Tree	aigp
Configurable	False
Platforms	Supported on all platforms

as-path

Description	Enter the as-path context A container for the AS path attribute of the attribute set.
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* as-path
Tree	as-path
Configurable	False
Platforms	Supported on all platforms

segment as-path-index *number*

Description	A list of segments. Each segment has a type and a list of one or more AS numbers.
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* as-path segment as-path-index *number*
Tree	segment
Configurable	False
Platforms	Supported on all platforms

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

as-path-index *number*

Description	RIB attribute AS Path index
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* as-path segment as-path-index *number*
Configurable	False
Platforms	Supported on all platforms

member *number*

Description	A list of AS numbers (each of which is a 2byte-ASN or a 4byte-ASN) that belong to the AS path segment.
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* as-path segment as-path-index *number* member *number*
Tree	member
Configurable	False
Platforms	Supported on all platforms

type *keyword*

Description	The type of the AS path segment.
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* as-path segment as-path-index *number* type *keyword*
Tree	type
Options	• as-set • as-sequence • as-confed-sequence • as-confed-set
Configurable	False
Platforms	Supported on all platforms

atomic-aggregate *boolean*

Description	Set to true to indicate the presence of the ATOMIC_AGGREGATE path attribute.
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* atomic-aggregate *boolean*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	atomic-aggregate
Configurable	False
Platforms	Supported on all platforms

cluster-list *(ipv4-address | ipv6-address)*

Description	The list of IPv4 addresses in the CLUSTER_LIST path attribute.
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* cluster-list *(ipv4-address | ipv6-address)*
Tree	cluster-list
Configurable	False
Platforms	Supported on all platforms

communities

Description	Enter the communities context Container for different types of BGP communities
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* communities
Tree	communities
Configurable	False
Platforms	Supported on all platforms

community *string*

Description	List of standard 4-byte community values in the COMMUNITY path attribute. Each should be displayed in the format <0..65355>:<0..65535>
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* communities community *string*
Tree	community
Configurable	False
Platforms	Supported on all platforms

ext-community *string*

Description	List of extended 8-byte community values in the EXT_COMMUNITY path attribute.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* communities ext-community *string*
Tree	ext-community
Configurable	False
Platforms	Supported on all platforms

ext-community-raw-format *string*

Description	List of extended 8-byte community values in the EXT_COMMUNITY path attribute, output in hex format
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* communities ext-community-raw-format *string*
Tree	ext-community-raw-format
Configurable	False
Platforms	Supported on all platforms

ipv6-ext-community *string*

Description	List of ipv6-extended 20-byte community values in the COMMUNITY path attribute.
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* communities ipv6-ext-community *string*
Tree	ipv6-ext-community
Configurable	False
Platforms	Supported on all platforms

large-community *string*

Description	List of large 12-byte community values in the LARGE_ COMMUNITY path attribute. Each should be displayed in the format: <0..4294967295>:<0..4294967295>:< 0..4294967295>
Context	network-instance name *string* bgp-rib attr-sets attr-set index *number* communities large-community *string*
Tree	large-community
String Length	1 to 72
Configurable	False
Platforms	Supported on all platforms

- failed

  Component or process has failed
- synchronizing

  Component is currently being synchronized
- upgrading

  Component is currently being upgraded
- low-power

  Component is offline due to insufficient system power
- degraded

  Component or process is in a degraded state
- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

retention-timer *number*

Description The retention timer in seconds for evpn-local-es entries

This timer begins when the EVPN MAC/IP Advertisement route that originated the re-advertisement of the evpn-local-es entry is withdrawn and defines how long the evpn-local-es entry is retained. While the timer is active, the router sends ARP Requests or Neighbor Solicitations for the entry to the local ethernet segment. The entry is converted into a dynamic entry if a response is received.

retention-timer *number*

Description The retention timer in seconds for evpn-local-es entries

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

This timer begins when the EVPN MAC/IP Advertisement route that originated the re-advertisement of the evpn-local-es entry is withdrawn and defines how long the evpn-local-es entry is retained. While the timer is active, the router sends ARP Requests or Neighbor Solicitations for the entry to the local ethernet segment. The entry is converted into a dynamic entry if a response is received.

Options

- up

  Component or process is operational
- down

  Component or process is not operational
- empty

  Component slot is empty
- downloading

  Component is downloading image into memory
- booting

  Component is booting downloaded image
- starting

  Component image operational, application processes starting
- failed

  Component or process has failed
- synchronizing

  Component is currently being synchronized
- upgrading

  Component is currently being upgraded
- low-power

  Component is offline due to insufficient system power
- degraded

  Component or process is in a degraded state
- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable False

Reference to a subinterface

Context network-instance name *string* flexible-algorithm interface-attributes interface interface-name *string* interface-ref

Tree interface-ref

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

interface *reference*

Description Reference to a base interface, for example a port or LAG

Context network-instance name *string* flexible-algorithm interface-attributes interface interface-name *string* interface-ref interface *reference*

Tree interface

Reference interface name *string*

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

subinterface *reference*

Description Reference to a subinterface

This requires the base interface to be specified using the interface leaf in this container.

Context network-instance name *string* flexible-algorithm interface-attributes interface interface-name *string* interface-ref subinterface *reference*

Tree subinterface

Reference interface name *string* subinterface index *number*

Configurable True

Platforms 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

group-based-policy

Description Container for the micro segmentation Group Based Policy

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	network-instance name *string* group-based-policy
Tree	group-based-policy
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

acl

Description	Group Based Policy (GBP) ACL definition for this network-instance
Context	network-instance name *string* group-based-policy acl
Tree	acl
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

entry sequence-id *number*

Description	List of ACL entries
Context	network-instance name *string* group-based-policy acl entry sequence-id *number*
Tree	entry
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

sequence-id *number*

Description	A number to indicate the relative evaluation order of the different entries Lower numbered entries are evaluated before higher numbered entries.
Context	network-instance name *string* group-based-policy acl entry sequence-id *number*
Range	1 to 65535
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

action

Description Enter the action context

Container for the actions to be applied to packets matching the filter entry

Context network-instance name *string* group-based-policy acl entry sequence-id *number* action

Tree action

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

accept

Description Accept matching packets and forward them towards their normal destination

Context network-instance name *string* group-based-policy acl entry sequence-id *number* action accept

Tree accept

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

collect-stats *boolean*

Description Collect statistics for each entry of the ACL. If this is set to false no hardware resources are allocated to collecting statistics for this ACL entry.

Context network-instance name *string* group-based-policy acl entry sequence-id *number* action collect-stats *boolean*

Tree collect-stats

Default false

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

drop

Description Drop matching packets

Dropped IP packets do not result in sending ICMP messages back to the source

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	network-instance name *string* group-based-policy acl entry sequence-id *number* action drop
Tree	drop
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

log *boolean*

Description	When this is true, a log is created for each packet matching the entry For IP packets matched by an IP filter entry the log entry contains the following information:
Context	network-instance name *string* group-based-policy acl entry sequence-id *number* action log *boolean*
Tree	log
Default	false
Configurable	True
Platforms	7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7220 IXR-H5-32D, 7220 IXR-H5-64D, 7220 IXR-H5-64O, 7220 IXR-H5-64O-512, 7220 IXR-H6-64, 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

description *string*

Description	Description string for the filter entry
Context	network-instance name *string* group-based-policy acl entry sequence-id *number* description *string*
Tree	description
String Length	1 to 4096
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

match

Description	Enter the match context

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Container for the conditions that determine whether a packet matches this entry

Context network-instance name *string* group-based-policy acl entry sequence-id *number* match

Tree match

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

destination-group *reference*

Description An IPv4 or IPv6 packet matches this condition if its destination groups match the name specified

Context network-instance name *string* group-based-policy acl entry sequence-id *number* match destination-group *reference*

Tree destination-group

Reference network-instance name *string* group-based-policy group name *string*

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

Max. Elements 14

destination-port

Description Enter the destination-port context

A packet matches this condition if its destination TCP or UDP port number matches the value or range that is specified

The rule should also have a condition that the IP protocol equals 6 (TCP) or 17 (UDP) in order for this to be interpreted correctly.

Context network-instance name *string* group-based-policy acl entry sequence-id *number* match destination-port

Tree destination-port

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

operator *keyword*

Description Comparison operator

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

eq = equal ge = greater than or equal to le = less than or equal to

Context network-instance name *string* group-based-policy acl entry sequence-id *number* match destination-port operator *keyword*

Tree operator

Options

- le

  Less than or equal.

- ge

  Greater than or equal.

- eq

  Equal to.

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

range

Description Enter the range context

Container used to specify a contiguous range of TCP/UDP port numbers

Context network-instance name *string* group-based-policy acl entry sequence-id *number* match destination-port range

Tree range

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

end *(number | keyword)*

Description The ending port number to include in the range

Context network-instance name *string* group-based-policy acl entry sequence-id *number* match destination-port range end *(number | keyword)*

Tree end

Range 0 to 65535

ANSI Z39.50

Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

tcp-flags *string*

Description	A logical expression using the &, | and ! logical operators and the TCP flag names: rst, syn and ack
Context	network-instance name *string* group-based-policy acl entry sequence-id *number* match tcp-flags *string*
Tree	tcp-flags
String Length	1 to 255
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

statistics

Description	Enter the statistics context Container for per-entry statistics
Context	network-instance name *string* group-based-policy acl entry sequence-id *number* statistics
Tree	statistics
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

incomplete *boolean*

Description	Returns true when at least one linecard had insufficient stats resources to ensure an accurate set of values for the number of matched packets
Context	network-instance name *string* group-based-policy acl entry sequence-id *number* statistics incomplete *boolean*
Tree	incomplete
Configurable	False
Platforms	Supported on all platforms

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

last-clear *string*

Description	Time of the last clear command performed by the user at this level or a higher level
Context	network-instance name *string* group-based-policy acl entry sequence-id *number* statistics last-clear *string*
Tree	last-clear
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

last-match *string*

Description	The elapsed time since a packet last matched the entry, considering the mgmt0 subinterface and all subinterfaces of all linecard ports that use the ACL as an input ACL
Context	network-instance name *string* group-based-policy acl entry sequence-id *number* statistics last-match *string*
Tree	last-match
String Length	20 to 32
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

matched-packets *number*

Description	The number of packets matching the entry since it was programmed or since the last clear, considering the mgmt0 subinterface and all subinterfaces of all linecard ports that use the ACL as an input ACL
Context	network-instance name *string* group-based-policy acl entry sequence-id *number* statistics matched-packets *number*
Tree	matched-packets
Default	0
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

policer

Description	Enter the policer context Policer stats for traffic matching the entry: Statistics for policer configured with scope=global and entry-specific=true, and acl configured with subinterface-specific=false.
Context	network-instance name *string* group-based-policy acl entry sequence-id *number* statistics policer
Tree	policer
Configurable	False
Platforms	acl-group-based-policy-policer and not vsrl

conforming-octets *number*

Description	The number of bytes that were considered conforming by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.
Context	network-instance name *string* group-based-policy acl entry sequence-id *number* statistics policer conforming-octets *number*
Tree	conforming-octets
Default	0
Configurable	False
Platforms	acl-group-based-policy-policer and not vsrl

conforming-packets *number*

Description	The number of packets (actually Ethernet frames) that were considered conforming by the policer
Context	network-instance name *string* group-based-policy acl entry sequence-id *number* statistics policer conforming-packets *number*
Tree	conforming-packets
Default	0
Configurable	False
Platforms	acl-group-based-policy-policer and not vsrl

exceeding-octets *number*

Description	The number of bytes that were considered exceeding by the policer. The byte count includes 18 bytes of Ethernet overhead for every IP packet.

Component or process has failed

- synchronizing

  Component is currently being synchronized

- upgrading

  Component is currently being upgraded

- low-power

  Component is offline due to insufficient system power

- degraded

  Component or process is in a degraded state

- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Platforms Supported on all platforms

oper-state *keyword*

Description The operational state of this subinterface.

Context network-instance name *string* interface name *string* oper-state *keyword*

Tree oper-state

Options

- up

  Component or process is operational
- down

  Component or process is not operational
- empty

  Component slot is empty
- downloading

  Component is downloading image into memory
- booting

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Component is booting downloaded image

- starting

  Component image operational, application processes starting

- failed

  Component or process has failed

- synchronizing

  Component is currently being synchronized

- upgrading

  Component is currently being upgraded

- low-power

  Component is offline due to insufficient system power

- degraded

  Component or process is in a degraded state

- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable False

icmp-tunneling *boolean*

Description When enabled, ICMP messages generated by the router acting in the role of a transit LSR are injected in the forward direction of the LSP, to be turned around and sent back to the sender of the IP payload by the egress LER.

If a transit LSR receives an MPLS packet that cannot be forwarded (e.g. label TTL has expired, or the egress subinterface MPLS MTU was exceeded) and the MPLS packet has an IP payload, the router will generate an appropriate ICMP error message. When icmp-tunneling is 'false' the ICMP error message is dropped if there is no IP route back to the source in the network-instance that received the MPLS packet.

Context network-instance name *string* mpls icmp-tunneling *boolean*

Tree fail-code

Options

- no-error

  Indicates no error for the LSP

- admission-control-error

  RSVP admission control failure occurred at some point along the path of an LSP

- no-route-to-destination

  No route could be found toward the requested destination

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- traffic-control-system-error

  An error in the traffic control system due to an unsupported traffic parameter

- routing-error

  There is a problem with the route defined for the LSP, for example the ERO is truncated.

- no-resources-available

  Insufficient system or protocol resources available to complete the request

- bad-node

  Indicates a bad node in path hop list at head-end or ERO at transit.

- routing-loop

  A routing loop was detected for the LSP path.

- label-allocation-error

  Unable to allocate a label for the LSP path.

- bad-l3-pid

  The router has received a PathErr with the error code 'Routing problem' and the error value 'Unsupported L3PID'.

- tunnel-locally-repaired

  A PLR has triggered a local repair at some point along the path of the LSP.

- unknown-object-class

  A downstream LSR rejected an RSVP message because it contained an Unknown object class - Error code 13 defined in RFC2205.

- unknown-c-type

  A downstream LSR rejected an RSVP message due to an Unknown object C-type - Error code 14 defined in RFC2205.

- unknown

  Indicates an error not covered by one of the other known errors for this LSP.

- retry-exceeded

  The retry limit for the LSP path has been exceeded.

- no-cspf-route-owner

  No IGP instance was found that has a route to the LSP destination.

- no-cspf-route-to-destination

  CSPF was unable to find a route to the requested destination that satisfies all of the constraints.

- hop-limit-exceeded

  The hop-limit for the LSP path has been exceeded.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- srlg-secondary-not-disjoint

  The secondary or standby path is not SRLG disjoint from the primary path.

- srlg-primary-path-down

  An SRLG disjoint path could not be found for the secondary because the primary is down.

- local-link-maintenance

  A TE link (RSVP interface) local to this LSR or on a remote LSR used by the LSP is in TE graceful shutdown.

- inv-ct-and-setup-priority

  The combination of signaled diffserv class type and setup priority does not map to a valid diffserv TE class

- inv-ct-and-hold-priority

  The combination of signaled diffserv class type and hold priority does not map to a valid diffserv TE class

- inv-ct-and-setup-and-hold-priority

  The combination of signaled diffserv class type and setup priority and hold priority does not map to a valid diffserv TE class

- local-node-maintenance

  The local LSR or a remote LSR used by the LSP is in TE graceful shutdown due to maintenance The LSR that s shutdown is also identified.

- soft-preemption

  The LSP path is under soft pre-emption.

- rsvp-not-supported

  Maps to SubErrorCode 8 for ErrorCode 24 (Routing error) from RFC 3209.

  An LSR will send ErrorCode=24, SubErrorCode=8 when it receives PATH for P2MP LSP but P2MP is not supported on that router.

- conflicting-admin-groups

  The specified admin groups contradict e.g. the same group is both included and excluded.

- node-in-igp-overload

  An LSR along the path of the LSP has advertised the IS-IS overload state.

- mpls-v4-down

  MPLS IPv4 is operationally down

- tunnel-admin-down

  LSP is admin down.

- path-admin-down

  Path or LSP path is admin down.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- path-retried

  LSP path was brought down and retried.
- non-active-secondary

  Secondary path is down because the LSP has an alternate active path.
- auto-bandwidth-adjustment

  For an auto-bandwidth LSP, operational bandwidth for a non-active LSP path does not match the bandwidth configured for that path and we were not able adjust the bandwidth via MBB.
- path-degraded

  Non-active path was brought down because it was in degraded state (FRR active, soft-preempted, etc.) and we could not use MBB to resignal the path.
- lsp-self-ping-timeout

  LSP self-ping timed out.
- rsvp-error

  RSVP signaling errors like ResvTear received, egress neighbor down etc.
- rsvp-neighbor-down

  RSVP neighbor is down for the RSVP-TE LSP.
- resv-timeout

  RESV state timed out for RSVP-TE LSP.
- resv-tear

  ResvTear message received for RSVP-TE LSP.
- frr-path-down

  Fast-reroute enabled RSVP-TE LSP was actively using backup path and backup path went down.
- tunnel-init-retry-timeout

  Initial retry timer expired for RSVP-TE LSP.
- iom-programming-failure

  IOM programming failed for RSVP-TE LSP.

- starting

  Component image operational, application processes starting
- failed

  Component or process has failed
- synchronizing

  Component is currently being synchronized
- upgrading

  Component is currently being upgraded
- low-power

  Component is offline due to insufficient system power
- degraded

  Component or process is in a degraded state
- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Tree fail-code

Options

- no-error

  Indicates no error for the LSP
- admission-control-error

  RSVP admission control failure occurred at some point along the path of an LSP
- no-route-to-destination

  No route could be found toward the requested destination
- traffic-control-system-error

  An error in the traffic control system due to an unsupported traffic parameter
- routing-error

  There is a problem with the route defined for the LSP, for example the ERO is truncated.
- no-resources-available

  Insufficient system or protocol resources available to complete the request
- bad-node

  Indicates a bad node in path hop list at head-end or ERO at transit.
- routing-loop

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

A routing loop was detected for the LSP path.

- label-allocation-error

  Unable to allocate a label for the LSP path.

- bad-l3-pid

  The router has received a PathErr with the error code 'Routing problem' and the error value 'Unsupported L3PID'.

- tunnel-locally-repaired

  A PLR has triggered a local repair at some point along the path of the LSP.

- unknown-object-class

  A downstream LSR rejected an RSVP message because it contained an Unknown object class - Error code 13 defined in RFC2205.

- unknown-c-type

  A downstream LSR rejected an RSVP message due to an Unknown object C-type - Error code 14 defined in RFC2205.

- unknown

  Indicates an error not covered by one of the other known errors for this LSP.

- retry-exceeded

  The retry limit for the LSP path has been exceeded.

- no-cspf-route-owner

  No IGP instance was found that has a route to the LSP destination.

- no-cspf-route-to-destination

  CSPF was unable to find a route to the requested destination that satisfies all of the constraints.

- hop-limit-exceeded

  The hop-limit for the LSP path has been exceeded.

- srlg-secondary-not-disjoint

  The secondary or standby path is not SRLG disjoint from the primary path.

- srlg-primary-path-down

  An SRLG disjoint path could not be found for the secondary because the primary is down.

- local-link-maintenance

  A TE link (RSVP interface) local to this LSR or on a remote LSR used by the LSP is in TE graceful shutdown.

- inv-ct-and-setup-priority

  The combination of signaled diffserv class type and setup priority does not map to a valid diffserv TE class

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- inv-ct-and-hold-priority

  The combination of signaled diffserv class type and hold priority does not map to a valid diffserv TE class

- inv-ct-and-setup-and-hold-priority

  The combination of signaled diffserv class type and setup priority and hold priority does not map to a valid diffserv TE class

- local-node-maintenance

  The local LSR or a remote LSR used by the LSP is in TE graceful shutdown due to maintenance The LSR that s shutdown is also identified.

- soft-preemption

  The LSP path is under soft pre-emption.

- rsvp-not-supported

  Maps to SubErrorCode 8 for ErrorCode 24 (Routing error) from RFC 3209.

  An LSR will send ErrorCode=24, SubErrorCode=8 when it receives PATH for P2MP LSP but P2MP is not supported on that router.

- conflicting-admin-groups

  The specified admin groups contradict e.g. the same group is both included and excluded.

- node-in-igp-overload

  An LSR along the path of the LSP has advertised the IS-IS overload state.

- mpls-v4-down

  MPLS IPv4 is operationally down

- tunnel-admin-down

  LSP is admin down.

- path-admin-down

  Path or LSP path is admin down.

- path-retried

  LSP path was brought down and retried.

- non-active-secondary

  Secondary path is down because the LSP has an alternate active path.

- auto-bandwidth-adjustment

  For an auto-bandwidth LSP, operational bandwidth for a non-active LSP path does not match the bandwidth configured for that path and we were not able adjust the bandwidth via MBB.

- path-degraded

  Non-active path was brought down because it was in degraded state (FRR active, soft-preempted, etc.) and we could not use MBB to resignal the path.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- lsp-self-ping-timeout

  LSP self-ping timed out.
- rsvp-error

  RSVP signaling errors like ResvTear received, egress neighbor down etc.
- rsvp-neighbor-down

  RSVP neighbor is down for the RSVP-TE LSP.
- resv-timeout

  RESV state timed out for RSVP-TE LSP.
- resv-tear

  ResvTear message received for RSVP-TE LSP.
- frr-path-down

  Fast-reroute enabled RSVP-TE LSP was actively using backup path and backup path went down.
- tunnel-init-retry-timeout

  Initial retry timer expired for RSVP-TE LSP.
- iom-programming-failure

  IOM programming failed for RSVP-TE LSP.

Component is downloading image into memory

- booting

  Component is booting downloaded image

- starting

  Component image operational, application processes starting

- failed

  Component or process has failed

- synchronizing

  Component is currently being synchronized

- upgrading

  Component is currently being upgraded

- low-power

  Component is offline due to insufficient system power

- degraded

  Component or process is in a degraded state

- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Options

- no-error

  Indicates no error for the LSP
- admission-control-error

  RSVP admission control failure occurred at some point along the path of an LSP
- no-route-to-destination

  No route could be found toward the requested destination
- traffic-control-system-error

  An error in the traffic control system due to an unsupported traffic parameter
- routing-error

  There is a problem with the route defined for the LSP, for example the ERO is truncated.
- no-resources-available

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Insufficient system or protocol resources available to complete the request

- bad-node

  Indicates a bad node in path hop list at head-end or ERO at transit.

- routing-loop

  A routing loop was detected for the LSP path.

- label-allocation-error

  Unable to allocate a label for the LSP path.

- bad-l3-pid

  The router has received a PathErr with the error code 'Routing problem' and the error value 'Unsupported L3PID'.

- tunnel-locally-repaired

  A PLR has triggered a local repair at some point along the path of the LSP.

- unknown-object-class

  A downstream LSR rejected an RSVP message because it contained an Unknown object class - Error code 13 defined in RFC2205.

- unknown-c-type

  A downstream LSR rejected an RSVP message due to an Unknown object C-type - Error code 14 defined in RFC2205.

- unknown

  Indicates an error not covered by one of the other known errors for this LSP.

- retry-exceeded

  The retry limit for the LSP path has been exceeded.

- no-cspf-route-owner

  No IGP instance was found that has a route to the LSP destination.

- no-cspf-route-to-destination

  CSPF was unable to find a route to the requested destination that satisfies all of the constraints.

- hop-limit-exceeded

  The hop-limit for the LSP path has been exceeded.

- srlg-secondary-not-disjoint

  The secondary or standby path is not SRLG disjoint from the primary path.

- srlg-primary-path-down

  An SRLG disjoint path could not be found for the secondary because the primary is down.

- local-link-maintenance

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

A TE link (RSVP interface) local to this LSR or on a remote LSR used by the LSP is in TE graceful shutdown.

- inv-ct-and-setup-priority

  The combination of signaled diffserv class type and setup priority does not map to a valid diffserv TE class

- inv-ct-and-hold-priority

  The combination of signaled diffserv class type and hold priority does not map to a valid diffserv TE class

- inv-ct-and-setup-and-hold-priority

  The combination of signaled diffserv class type and setup priority and hold priority does not map to a valid diffserv TE class

- local-node-maintenance

  The local LSR or a remote LSR used by the LSP is in TE graceful shutdown due to maintenance The LSR that s shutdown is also identified.

- soft-preemption

  The LSP path is under soft pre-emption.

- rsvp-not-supported

  Maps to SubErrorCode 8 for ErrorCode 24 (Routing error) from RFC 3209.

  An LSR will send ErrorCode=24, SubErrorCode=8 when it receives PATH for P2MP LSP but P2MP is not supported on that router.

- conflicting-admin-groups

  The specified admin groups contradict e.g. the same group is both included and excluded.

- node-in-igp-overload

  An LSR along the path of the LSP has advertised the IS-IS overload state.

- mpls-v4-down

  MPLS IPv4 is operationally down

- tunnel-admin-down

  LSP is admin down.

- path-admin-down

  Path or LSP path is admin down.

- path-retried

  LSP path was brought down and retried.

- non-active-secondary

  Secondary path is down because the LSP has an alternate active path.

- auto-bandwidth-adjustment

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

For an auto-bandwidth LSP, operational bandwidth for a non-active LSP path does not match the bandwidth configured for that path and we were not able adjust the bandwidth via MBB.

- path-degraded

  Non-active path was brought down because it was in degraded state (FRR active, soft-preempted, etc.) and we could not use MBB to resignal the path.

- lsp-self-ping-timeout

  LSP self-ping timed out.

- rsvp-error

  RSVP signaling errors like ResvTear received, egress neighbor down etc.

- rsvp-neighbor-down

  RSVP neighbor is down for the RSVP-TE LSP.

- resv-timeout

  RESV state timed out for RSVP-TE LSP.

- resv-tear

  ResvTear message received for RSVP-TE LSP.

- frr-path-down

  Fast-reroute enabled RSVP-TE LSP was actively using backup path and backup path went down.

- tunnel-init-retry-timeout

  Initial retry timer expired for RSVP-TE LSP.

- iom-programming-failure

  IOM programming failed for RSVP-TE LSP.

  Secondary path is down because the LSP has an alternate active path.
- auto-bandwidth-adjustment

  For an auto-bandwidth LSP, operational bandwidth for a non-active LSP path does not match the bandwidth configured for that path and we were not able adjust the bandwidth via MBB.
- path-degraded

  Non-active path was brought down because it was in degraded state (FRR active, soft-preempted, etc.) and we could not use MBB to resignal the path.
- lsp-self-ping-timeout

  LSP self-ping timed out.
- rsvp-error

  RSVP signaling errors like ResvTear received, egress neighbor down etc.
- rsvp-neighbor-down

  RSVP neighbor is down for the RSVP-TE LSP.
- resv-timeout

  RESV state timed out for RSVP-TE LSP.
- resv-tear

  ResvTear message received for RSVP-TE LSP.
- frr-path-down

  Fast-reroute enabled RSVP-TE LSP was actively using backup path and backup path went down.
- tunnel-init-retry-timeout

  Initial retry timer expired for RSVP-TE LSP.
- iom-programming-failure

  IOM programming failed for RSVP-TE LSP.

Configurable False

Tree fail-code

Options

- no-error

  Indicates no error for the LSP

- admission-control-error

  RSVP admission control failure occurred at some point along the path of an LSP

- no-route-to-destination

  No route could be found toward the requested destination

- traffic-control-system-error

  An error in the traffic control system due to an unsupported traffic parameter

- routing-error

  There is a problem with the route defined for the LSP, for example the ERO is truncated.

- no-resources-available

  Insufficient system or protocol resources available to complete the request

- bad-node

  Indicates a bad node in path hop list at head-end or ERO at transit.

- routing-loop

  A routing loop was detected for the LSP path.

- label-allocation-error

  Unable to allocate a label for the LSP path.

- bad-l3-pid

  The router has received a PathErr with the error code 'Routing problem' and the error value 'Unsupported L3PID'.

- tunnel-locally-repaired

  A PLR has triggered a local repair at some point along the path of the LSP.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- unknown-object-class

  A downstream LSR rejected an RSVP message because it contained an Unknown object class - Error code 13 defined in RFC2205.

- unknown-c-type

  A downstream LSR rejected an RSVP message due to an Unknown object C-type - Error code 14 defined in RFC2205.

- unknown

  Indicates an error not covered by one of the other known errors for this LSP.

- retry-exceeded

  The retry limit for the LSP path has been exceeded.

- no-cspf-route-owner

  No IGP instance was found that has a route to the LSP destination.

- no-cspf-route-to-destination

  CSPF was unable to find a route to the requested destination that satisfies all of the constraints.

- hop-limit-exceeded

  The hop-limit for the LSP path has been exceeded.

- srlg-secondary-not-disjoint

  The secondary or standby path is not SRLG disjoint from the primary path.

- srlg-primary-path-down

  An SRLG disjoint path could not be found for the secondary because the primary is down.

- local-link-maintenance

  A TE link (RSVP interface) local to this LSR or on a remote LSR used by the LSP is in TE graceful shutdown.

- inv-ct-and-setup-priority

  The combination of signaled diffserv class type and setup priority does not map to a valid diffserv TE class

- inv-ct-and-hold-priority

  The combination of signaled diffserv class type and hold priority does not map to a valid diffserv TE class

- inv-ct-and-setup-and-hold-priority

  The combination of signaled diffserv class type and setup priority and hold priority does not map to a valid diffserv TE class

- local-node-maintenance

  The local LSR or a remote LSR used by the LSP is in TE graceful shutdown due to maintenance The LSR that s shutdown is also identified.

- soft-preemption

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The LSP path is under soft pre-emption.

- rsvp-not-supported

  Maps to SubErrorCode 8 for ErrorCode 24 (Routing error) from RFC 3209.

  An LSR will send ErrorCode=24, SubErrorCode=8 when it receives PATH for P2MP LSP but P2MP is not supported on that router.

- conflicting-admin-groups

  The specified admin groups contradict e.g. the same group is both included and excluded.

- node-in-igp-overload

  An LSR along the path of the LSP has advertised the IS-IS overload state.

- mpls-v4-down

  MPLS IPv4 is operationally down

- tunnel-admin-down

  LSP is admin down.

- path-admin-down

  Path or LSP path is admin down.

- path-retried

  LSP path was brought down and retried.

- non-active-secondary

  Secondary path is down because the LSP has an alternate active path.

- auto-bandwidth-adjustment

  For an auto-bandwidth LSP, operational bandwidth for a non-active LSP path does not match the bandwidth configured for that path and we were not able adjust the bandwidth via MBB.

- path-degraded

  Non-active path was brought down because it was in degraded state (FRR active, soft-preempted, etc.) and we could not use MBB to resignal the path.

- lsp-self-ping-timeout

  LSP self-ping timed out.

- rsvp-error

  RSVP signaling errors like ResvTear received, egress neighbor down etc.

- rsvp-neighbor-down

  RSVP neighbor is down for the RSVP-TE LSP.

- resv-timeout

  RESV state timed out for RSVP-TE LSP.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- resv-tear

  ResvTear message received for RSVP-TE LSP.
- frr-path-down

  Fast-reroute enabled RSVP-TE LSP was actively using backup path and backup path went down.
- tunnel-init-retry-timeout

  Initial retry timer expired for RSVP-TE LSP.
- iom-programming-failure

  IOM programming failed for RSVP-TE LSP.

This is controlled via the kernel ip_no_pmtu_disc option. Path MTU discovery (PMTUD) is a standardized technique in networking for determining the MTU size on the network path between two hosts, usually with the goal of avoiding IP fragmentation.

For IPv4 packets, Path MTU discovery works by setting the Don't Fragment (DF) flag bit in the IP headers of outgoing packets. Then, any device along the path whose MTU is smaller than the packet will drop it, and send back an Internet Control Message Protocol (ICMP) Fragmentation Needed (Type 3, Code 4) message containing its MTU, allowing the source host to reduce its Path MTU appropriately. The process is repeated until the MTU is small enough to traverse the entire path without fragmentation.

oper-down-reason *keyword*

Description	The reason the network-instance is down
Context	network-instance name *string* oper-down-reason *keyword*
Tree	oper-down-reason
Options	• admin-down • no-mcid
Configurable	False
Platforms	Supported on all platforms

oper-mac-vrf-mtu *number*

Description	Operational l2-mtu of the mac-vrf network-instance Calculated as the lowest l2-mtu of the bridged subinterfaces associated to the mac-vrf, minus the associated vlan tags of the subinterface. The subinterface l2-mtu is the value configured under the subinterface, or the system/mtu/default-l2-mtu value otherwise. For mac-vrf network-instances without subinterfaces, the oper-mac-vrf-mtu matches the system/mtu/default-l2-mtu value. When the mac-vrf has an associated irb subinterface, if the configured irb ip-mtu exceeds the oper-mac-vrf-mtu minus 14 bytes (Ethernet header), then the irb subinterface will remain operationally down. The oper-mac-vrf-mtu is only available in mac-vrf network-instances.
Context	network-instance name *string* oper-mac-vrf-mtu *number*
Tree	oper-mac-vrf-mtu
Range	1492 to 9500
Units	bytes
Configurable	False
Platforms	Supported on all platforms

oper-state *keyword*

- down

  Component or process is not operational
- empty

  Component slot is empty
- downloading

  Component is downloading image into memory
- booting

  Component is booting downloaded image
- starting

  Component image operational, application processes starting
- failed

  Component or process has failed
- synchronizing

  Component is currently being synchronized
- upgrading

  Component is currently being upgraded
- low-power

  Component is offline due to insufficient system power
- degraded

  Component or process is in a degraded state
- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable False

Platforms Supported on all platforms

oper-vpws-mtu *number*

Description Operational l2-mtu of the vpws network-instance

Derived from the lowest l2-mtu value of the bridged subinterfaces associated to the vpws, minus the vlan tags associated to that subinterface. If the vpws

© 2026 Nokia.

decap-network-instance *reference*

Description	Matching packets should be looked up in the referenced network-instance that is expected to contain 'routes' that perform IP tunnel decapsulation If there is a match, the packet should be decapsulated and route lookup on the new header should happen in the post-decap-network-instance. If there is no match, the packet should be looked up in the decap-fallback-network-instance. Configuration of this leaf is not valid without configuration for decap-fallback-network-instance and post-decap-network-instance. Configuration of this leaf is mutually exclusive with the network-instance action. Note: The only entries in the decap-network-instance that are relevant to this PBF action are special decap entries programmed by gRIBI.

  Robust Header Compression

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H5-32D, 7220 IXR-H5-64D, 7220 IXR-H5-64O, 7220 IXR-H5-64O-512, 7220 IXR-H6-64, 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

source-ip

Description Enter the source-ip context

Packet matching criteria based on source IPv4 address

Context network-instance name *string* policy-forwarding policy policy-id *string* rule sequence-id *number* match ipv4 source-ip

Tree source-ip

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

prefix *string*

Description Match a packet if its source IPv4 address is within the specified IPv4 prefix

Context network-instance name *string* policy-forwarding policy policy-id *string* rule sequence-id *number* match ipv4 source-ip prefix *string*

Tree prefix

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

ttl *number*

Description match an IPv4 packet if its IP TTL (Time to Live) is equal to the specified value

© 2026 Nokia.

prefix *string*

Description Match a packet if its destination IPv6 address is within the specified IPv6 prefix

Context network-instance name *string* policy-forwarding policy policy-id *string* rule sequence-id *number* match ipv6 destination-ip prefix *string*

Tree prefix

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H5-32D, 7220 IXR-H5-64D, 7220 IXR-H5-64O, 7220 IXR-H5-64O-512, 7220 IXR-H6-64, 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

dscp-set *(number | keyword)*

Description A list of DSCP values to be matched for incoming packets. An OR match should be performed, such that a packet must match one of the values defined in this list. If the field is left empty then any DSCP value matches.

Context network-instance name *string* policy-forwarding policy policy-id *string* rule sequence-id *number* match ipv6 dscp-set *(number | keyword)*

Tree dscp-set

Range 0 to 63
