origin-validation-state *keyword*

Description

Match BGP routes based on their RPKI origin validation state.

A route meets this condition if its origin-validation-state matches the configured value. Applies to BGP routes in any address family for which origin validation is enabled, including ipv4-unicast, ipv6-unicast, ipv4-labeled-unicast, and ipv6-labeled-unicast.

Non-BGP routes do not carry an origin-validation-state and will not match this condition regardless of the configured value.

'disabled' is not a valid match value here and is therefore not part of this leaf's type. A route with origin validation disabled simply does not carry a determined origin-validation-state and will not match any configured value of this leaf.

Only a single value may be matched per policy term. To match multiple states (e.g., valid and not-found for permissive RPKI mode), use separate policy terms.

Requires the bgp-rpki-origin-validation feature flag and origin validation to be enabled on the relevant BGP neighbor or peer-group AFI-SAFI.

Context

routing-policy policy name *string* statement name *string* match bgp origin-validation-state *keyword*

Tree

origin-validation-state

Options

- valid

  Route matches a ROA entry with correct prefix-length and origin AS

- invalid

  Route matches a ROA entry but prefix-length or origin AS does not match

- not-found

  No matching ROA entry exists for this prefix

member *(identityref | bgp-std-community-regexp-type2)*

Description A standard BGP community value or regular expression

Context routing-policy standard-community-set name *string* member *(identityref | bgp-std-community-regexp-type2)*

Tree member

Options

- no-export

  Do not export NLRI received carrying this community outside the bounds of this autonomous system, or this confederation if the local autonomous system is a confederation member AS. This community has a value of 0xFFFFFF01.

- no-advertise

  All NLRI received carrying this community must not be advertised to other BGP peers. This community has a value of 0xFFFFFF02.

- no-export-subconfed

  All NLRI received carrying this community must not be advertised to external BGP peers - including over confederation sub-AS boundaries. This community has a value of 0xFFFFFF03.

11.1 system Descriptions

system

Description Enter the system context

Enclosing container for system management

Context system

Tree system

Configurable True

Platforms Supported on all platforms

aaa

Description Enter the aaa context

Top-level container for AAA services

Context system aaa

Tree aaa

Configurable True

Platforms Supported on all platforms

accounting

Description Enter the accounting context

Top-level container for accounting

Context system aaa accounting

Tree accounting

Configurable True

Platforms Supported on all platforms

accounting-method *reference*

Description Ordered list of server-groups to use for accounting in the system

If accounting fails with one method, the next defined method is tried -- failure of all methods results in the accounting request failing.

Context system aaa accounting accounting-method *reference*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	accounting-method
Reference	system aaa server-group name *string*
Configurable	True
Platforms	Supported on all platforms

acctz

Description	Enter the acctz context Top-level container for acctz accounting
Context	system aaa accounting acctz
Tree	acctz
Configurable	True
Platforms	Supported on all platforms except ACCOUNTING AND NOT PLATFORM

history-size *number*

Description	Size of the kept accounting events history. Setting a value of 0 disables acctz history
Context	system aaa accounting acctz history-size *number*
Tree	history-size
Range	0 to 100000
Default	1000
Configurable	True
Platforms	Supported on all platforms except ACCOUNTING AND NOT PLATFORM

event event-type *identityref*

Description	List of events subject to accounting
Context	system aaa accounting event event-type *identityref*
Tree	event
Configurable	True
Platforms	Supported on all platforms

event-type *identityref*

Description	The type of activity to record at the accounting server

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context system aaa accounting event event-type *identityref*

Options
- command

  Specifies interactive command events for AAA accounting

Configurable True

Platforms Supported on all platforms

record *identityref*

Description Type of record to send to the accounting server for this activity type

Context system aaa accounting event event-type *identityref* record *identityref*

Tree record

Options
- start-stop

  Send start and stop records for user activities

  A start record is sent to the accounting server at the beginning of the activity, and a stop record at the end of the activity
- stop

  Send only stop records for user activities

  A stop record is sent to the accounting server when the user activity completes

Configurable True

Platforms Supported on all platforms

authentication

Description Enter the authentication context

Top-level container for global authentication data

Context system aaa authentication

Tree authentication

Configurable True

Platforms Supported on all platforms

admin-user

Description Enter the admin-user context

Enclosing container for admin user

Context system aaa authentication admin-user

Max. Elements 32

spiffe-ids *string*

Description The SPIFFE ID list for the user, including the spiffe:// URI

This list of IDs is evaluated by TLS-consuming servers (e.g. gNMI, JSON-RPC) that use a TLS profile with authenticate-client set to true.

If a match is found in any incoming offered client certificates, the provider of the certificate is associated with this local user, and given resulting permissions.

Context system aaa authentication admin-user spiffe-ids *string*

Tree spiffe-ids

Configurable True

Platforms 7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7220 IXR-H5-32D, 7220 IXR-H5-64D, 7220 IXR-H5-64O, 7220 IXR-H5-64O-512, 7220 IXR-H6-64, 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

ssh-key *string*

Description SSH public key(s) for the user

If defined, the user may login to the system over SSH with this key. This should use the SSH public authorized key format.

Context system aaa authentication admin-user ssh-key *string*

Tree ssh-key

Configurable True

Platforms Supported on all platforms

Max. Elements 32

ssh-principals *string*

Description List of principals to associate with this user

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

If any of the principals in the list are matched in a SSH client's certificate, and that clients username matches this user, and the certificate is verified, the client will authenticate.

Context system aaa authentication admin-user ssh-principals *string*

Tree ssh-principals

Configurable True

Platforms Supported on all platforms

Max. Elements 32

superuser *boolean*

Description Indicates if the admin user is a superuser

A superuser is granted implicit authorization to all YANG paths, has the ability to execute all CLI plugins, and by default is permitted to access the device through any interface.

Additionally, users with the superuser attribute are able to execute 'sudo' in bash. A user may also be assigned a role or list of roles, but these are only evaluated for service authorization.

Context system aaa authentication admin-user superuser *boolean*

Tree superuser

hash-method *keyword*

Description	The hash algorithm for the passwords entered as plain text

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

If no value is configured, then Yescrypt will be used as the hash algorithm unless overriden for specific leafs using the srl_nokia-extensions:hash-algorithm yang extension. The Argon2 (ar2) hash algorithm is not supported for the linuxadmin user and if selected then the linuxadmin password will be hashed using Yescrypt.

Context system aaa authentication password hash-method *keyword*

Tree hash-method

Options

- ar2

  The Argon2 password hashing algorithm
- sha2

  The SHA512 password hashing algorithm
- yescrypt

  The Yescrypt password hashing algorithm

Configurable True

Platforms Supported on all platforms

history *number*

Description Defines how many previous passwords a new password is matched against, such that a new password can't be one of the previous n passwords

Context system aaa authentication password history *number*

Tree history

Range 0 to 20

Default 0

Configurable True

Platforms Supported on all platforms

lockout-policy

Description Enter the lockout-policy context

Context system app-management application name *string* search-command *string*

Tree search-command

Configurable False

Platforms Supported on all platforms

state *keyword*

Description Current state of this application instance

Context system app-management application name *string* state *keyword*

Tree state

Options

- running

  Application instance is running

  This is the normal, active state of an application

- waiting-for-config

  Application instance is loaded, but has no configuration

  This state requires wait-for-config true within the applications YAML configuration. This results in the application being loaded into app-mgr, but not starting until the system receives configuration for it

- error

  The application has not started successfully, or has failed

  This state can be caused by an application hitting the restart backoff, or an application failing to start following triggering a system reboot

- starting

  The application has been asked to start

  All applications enter this state after initial execution, after which application manager will wait five seconds before checking their status. IDB connected applications may announce their state before this five second window has passed, resulting in them transitioning from this state faster than PID-monitored applications.

- stopped

  The application is not running

  This state is most likely caused by an operator action

Configurable False

Platforms Supported on all platforms

Default 0

Configurable False

Platforms Supported on all platforms

supported-restart-types *keyword*

Description Indicates the supported restart types for this application

Context system app-management application name *string* supported-restart-types *keyword*

Tree supported-restart-types

Options

- hot

  A hot start indicates that the application has synchronized with a redundant peer, and took over from the peer during a switchover

  This type results in least amount of disruption to the corresponding service and functionality.

- warm

  A warm start indicates that the application will leave state in IDB during a restart, and recover it post restart

  This type results in less disruption to surrounding applications and functionality.

- cold

  A cold start indicates that the application will not leave state in IDB during a restart

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

This type is equivalent to a normal application restart, i.e. one where the application's state is purged from the system during the restart, and recreated after.

Configurable False

Platforms Supported on all platforms

synchronization-state *keyword*

Description Indicates if this application is available for a warm or hot restart

An application supports either hot or warm restarts, not both.

Context system app-management application name *string* synchronization-state *keyword*

Tree synchronization-state

Options

- synchronized

  This application has synchronized

  For applications that support hot redundancy, this state indicates that the application has synchronized with its redundant peer, and is ready to take over in the event of a switchover. For applications that support warm redundancy, this state indicates that the application has synchronized with its IDB, and is ready to recover its state post restart.

- not-synchronized

  This application supports either warm or hot redundancy, but has not synchronized yet, and is not in a state where a switchover can occur

- not-applicable

  This application does not support either warm or hot restart

Configurable False

end-time *(keyword | date-and-time-delta)*

Description	The time at which the key becomes invalid for use in the receive direction

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

The default is forever.

Context system authentication keychain name *string* key index *number* receive-lifetime end-time *(keyword | date-and-time-delta)*

Tree end-time

String Length 20 to 32

Options

- forever

  Receive key does not expire (equivalent to infinite tolerance)

Configurable True

Platforms 7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7220 IXR-H5-32D, 7220 IXR-H5-64D, 7220 IXR-H5-64O, 7220 IXR-H5-64O-512, 7220 IXR-H6-64, 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

start-time *string*

Description The time at which the key becomes valid for use in the receive direction

If send-and-receive is true, this value is ignored. If send-and-receive is false the default is the Unix Epoch (Jan 1, 1970 00:00:00 UTC).

If there are multiple keys in the keychain the one used for checking received authentication information is the key with the most recent receive-lifetime start-time that is earlier than the current date and time and that has not exceeded its receive-lifetime end-time by more than 'tolerance' seconds

Component or process is operational

- down

  Component or process is not operational

- empty

  Component slot is empty

- downloading

  Component is downloading image into memory

- booting

  Component is booting downloaded image

- starting

  Component image operational, application processes starting

- failed

  Component or process has failed

- synchronizing

  Component is currently being synchronized

- upgrading

  Component is currently being upgraded

- low-power

  Component is offline due to insufficient system power

- degraded

  Component or process is in a degraded state

- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

alias name *string*

Description Create or overwrite an alias

Aliases can be entered at the start of the input line, and must represent a complete command.

The alias name can contain the following:

For example, if you create this alias: environment alias 'display interface {name}' 'info / interface {name} | as table'

Then entering 'display interface ethernet-1/1' will execute 'info / interface ethernet-1/1 | as table'.

The alias value can contain the following keywords:

For example, if you create this alias: environment alias 'display interface' 'info / interface {} subinterface {subinterface} | as table'

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Then entering the following are all equivalent: display interface display interface * display interface * subinterface * But you can of course also use other values display interface my_interface subinterface 1

basic-prompt *string*

Description

Change the prompt for 'basic' cli-engine type displayed before every input line

The following list of keywords will be replaced automatically: aaa_session_id The session id of the current AAA session. aaa_user The user name from the current AAA session. banner Shows server status banner if there is any (for example [WARM BOOT]) candidate_name The current candidate name or empty string if not in candidate mode. commit_confirmed Shows [commit confirmed] if there is commit confirmed in progress. commit_confirmed_with_remaining_time Shows [commit confirmed] and the remaining time if there is commit confirmed in progress. configuration_session_type The current configuration session type (e.g. shared, shared-exclusive or private or private-exclusive). Will output empty string when no configuration session has been established. domain The domain name (as returned by domainname program, same as sysctl kernel.domainname). fqdn Returns FQDN (if the domain name is not defined or unknown, then returns the host name). host The host name. hw_slot Slot letter of the CPM slot ('A' or 'B'). jspath_pwc The present working context, formatted as a jspath. Example: .interface{.name=="mgmt0"}.subinterface{.index==0} last_executed_command_duration Duration of the last executed command in seconds. last_executed_command_status Status of the last executed command ('0' if successful, '1' if the last command failed to parse or execute). mode The current CLI mode (e.g. candidate, running, show, state or tools). mode_and_session The current CLI mode and configuration session type and candidate name (e.g. candidate shared default, candidate private-exclusive mycandidate, running, show, state or tools). mode_and_session_type The current CLI mode and configuration session type (e.g. candidate shared, candidate shared-exclusive, running, show, state or tools). modified Same as {banner}{startup_config_state}{modified_flags} modified_flags Shows + if the running configuration is different from the saved configuration (unsaved changes). Shows ! if the baseline is out of sync with the running configuration. Shows * if there are any changes in the candidate configuration to commit or discard. modified_with_change_count Same as {modified} but shows count of changed objects in addition to '*' if there are any changes in the candidate configuration. pwc The present working context, formatted as a CLI command. Example: interface mgmt0 subinterface 0 pwd The present working directory Example: /home/admin redundancy Active/standby CPM redundancy status ('standby ' or ' '). short_pwc The nodes in the present working context, separated by '>'. Note this does not include any key values. Example: interface>subinterface short_redundancy Short active/standby CPM redundancy status ('s' or ''). short_yang_models The currently used yang models ('' or 'oc ') startup_config_state Shows [RESCUE], [FACTORY] or [FAILED] if the initial configuration has issues or does not exist. Is empty when the initial configuration exists and was loaded/saved without problems. [RESCUE] means that the initial

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

(startup) configuration failed to load or commit, but rescue configuration was successfully loaded and committed. [FACTORY] means that neither initial (startup) configuration or rescue configuration exists and hard-coded factory configuration was successfully loaded and committed. [FAILED] means that no configuration was successfully loaded and committed. The default candidate may contain initial (startup) or rescue configuration content (it can be empty if it is not possible to load them because they are invalid). time_12 Current day of the week and local time (e.g. Fri 1:23PM). time_24 Same as {time_12} but using 24h format (e.g. Fri 13:23). user The user name. vi_editing_mode The current vi editing mode (if vi-editing-mode is enabled). Shows one of INSERT, REPLACE, REPLACE_SINGLE, NAVIGATION xpath_pwc The present working context, formatted as a xpath path. Example: /interface[name=mgmt0]/subinterface[index=0] To enter a keyword, enclose it with '{' and '}', e.g. '{pwc}'. To create a multiline prompt, use ' ' for newlines. To print a '{' or '}', use '{{' or '}}', respectively. e.g. '{{pwc}}'. In addition | can be used to separate left and right aligned part. Use || for literal '|'.

bottom-toolbar *string*

Description Change the text displayed in the bottom toolbar

The following list of keywords will be replaced automatically: aaa_session_id The session id of the current AAA session. aaa_user The user name from the current AAA session. banner Shows server status banner if there is any (for example [WARM BOOT]) candidate_name The current candidate name or empty string if not in candidate mode. commit_confirmed Shows [commit confirmed] if there is commit confirmed in progress. commit_confirmed_with_remaining_time Shows [commit confirmed] and the remaining time if there is commit confirmed in progress. configuration_session_type The current configuration session type (e.g. shared, shared-exclusive or private or private-exclusive). Will output empty string when no configuration session has been established. domain The domain name (as returned by domainname program, same as sysctl kernel.domainname).

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

fqdn Returns FQDN (if the domain name is not defined or unknown, then returns the host name). host The host name. hw_slot Slot letter of the CPM slot ('A' or 'B'). jspath_pwc The present working context, formatted as a jspath. Example: .interface{.name=="mgmt0"}.subinterface{.index==0} last_executed_command_duration Duration of the last executed command in seconds. last_executed_command_status Status of the last executed command ('0' if successful, '1' if the last command failed to parse or execute). mode The current CLI mode (e.g. candidate, running, show, state or tools). mode_and_session The current CLI mode and configuration session type and candidate name (e.g. candidate shared default, candidate private-exclusive mycandidate, running, show, state or tools). mode_and_session_type The current CLI mode and configuration session type (e.g. candidate shared, candidate shared-exclusive, running, show, state or tools). modified Same as {banner}{startup_config_state}{modified_flags} modified_flags Shows + if the running configuration is different from the saved configuration (unsaved changes). Shows ! if the baseline is out of sync with the running configuration. Shows * if there are any changes in the candidate configuration to commit or discard. modified_with_change_count Same as {modified} but shows count of changed objects in addition to '*' if there are any changes in the candidate configuration. pwc The present working context, formatted as a CLI command. Example: interface mgmt0 subinterface 0 pwd The present working directory Example: /home/admin redundancy Active/standby CPM redundancy status ('standby ' or ' '). short_pwc The nodes in the present working context, separated by '>'. Note this does not include any key values. Example: interface>subinterface short_redundancy Short active/standby CPM redundancy status ('s' or ''). short_yang_models The currently used yang models ('' or 'oc ') startup_config_state Shows [RESCUE], [FACTORY] or [FAILED] if the initial configuration has issues or does not exist. Is empty when the initial configuration exists and was loaded/saved without problems. [RESCUE] means that the initial (startup) configuration failed to load or commit, but rescue configuration was successfully loaded and committed. [FACTORY] means that neither initial (startup) configuration or rescue configuration exists and hard-coded factory configuration was successfully loaded and committed. [FAILED] means that no configuration was successfully loaded and committed.
The default candidate may contain initial (startup) or rescue configuration content (it can be empty if it is not possible to load them because they are invalid). time_12 Current day of the week and local time (e.g. Fri 1:23PM). time_24 Same as {time_12} but using 24h format (e.g. Fri 13:23). user The user name. vi_editing_mode The current vi editing mode (if vi-editing-mode is enabled). Shows one of INSERT, REPLACE, REPLACE_SINGLE, NAVIGATION xpath_pwc The present working context, formatted as a xpath path. Example: /interface[name=mgmt0]/subinterface[index=0] To enter a keyword, enclose it with '{' and '}', e.g. '{pwc}'. To create a multiline prompt, use ' ' for newlines. To print a '{' or '}', use '{{' or '}}', respectively. e.g. '{{pwc}}'. In addition | can be used to separate left and right aligned part. Use || for literal '|'.

prompt *string*

Description

Change the prompt for 'advanced' cli-engine type displayed before every input line

The following list of keywords will be replaced automatically: aaa_session_id The session id of the current AAA session. aaa_user The user name from the current AAA session. banner Shows server status banner if there is any (for example [WARM BOOT]) candidate_name The current candidate name or empty string if not in candidate mode. commit_confirmed Shows [commit confirmed] if there is commit confirmed in progress. commit_confirmed_with_remaining_time Shows [commit confirmed] and the remaining time if there is commit confirmed in progress. configuration_session_type The current configuration session type (e.g. shared, shared-exclusive or private or private-exclusive). Will output empty string when no configuration session has been established. domain The domain name (as returned by domainname program, same as sysctl kernel.domainname). fqdn Returns FQDN (if the domain name is not defined or unknown, then

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

returns the host name). host The host name. hw_slot Slot letter of the CPM slot ('A' or 'B'). jspath_pwc The present working context, formatted as a jspath. Example: .interface{.name=="mgmt0"}.subinterface{.index==0} last_executed_command_duration Duration of the last executed command in seconds. last_executed_command_status Status of the last executed command ('0' if successful, '1' if the last command failed to parse or execute). mode The current CLI mode (e.g. candidate, running, show, state or tools). mode_and_session The current CLI mode and configuration session type and candidate name (e.g. candidate shared default, candidate private-exclusive mycandidate, running, show, state or tools). mode_and_session_type The current CLI mode and configuration session type (e.g. candidate shared, candidate shared-exclusive, running, show, state or tools). modified Same as {banner}{startup_config_state}{modified_flags} modified_flags Shows + if the running configuration is different from the saved configuration (unsaved changes). Shows ! if the baseline is out of sync with the running configuration. Shows * if there are any changes in the candidate configuration to commit or discard. modified_with_change_count Same as {modified} but shows count of changed objects in addition to '*' if there are any changes in the candidate configuration. pwc The present working context, formatted as a CLI command. Example: interface mgmt0 subinterface 0 pwd The present working directory Example: /home/admin redundancy Active/standby CPM redundancy status ('standby ' or ' '). short_pwc The nodes in the present working context, separated by '>'. Note this does not include any key values. Example: interface>subinterface short_redundancy Short active/standby CPM redundancy status ('s' or ''). short_yang_models The currently used yang models ('' or 'oc ') startup_config_state Shows [RESCUE], [FACTORY] or [FAILED] if the initial configuration has issues or does not exist. Is empty when the initial configuration exists and was loaded/saved without problems. [RESCUE] means that the initial (startup) configuration failed to load or commit, but rescue configuration was successfully loaded and committed. [FACTORY] means that neither initial (startup) configuration or rescue configuration exists and hard-coded factory configuration was successfully loaded and committed. [FAILED] means that no configuration was successfully loaded and committed. The default candidate may contain initial (startup) or rescue configuration content (it can be empty if it is not possible to load them because they are invalid). time_12 Current day of the week and local time (e.g. Fri 1:23PM). time_24 Same as {time_12} but using 24h format (e.g. Fri 13:23). user The user name. vi_editing_mode The current vi editing mode (if vi-editing-mode is enabled). Shows one of INSERT, REPLACE, REPLACE_SINGLE, NAVIGATION xpath_pwc The present working context, formatted as a xpath path. Example: /interface[name=mgmt0]/subinterface[index=0] To enter a keyword, enclose it with '{' and '}', e.g. '{pwc}'. To create a multiline prompt, use ' ' for newlines. To print a '{' or '}', use '{{' or '}}', respectively. e.g. '{{pwc}}'. In addition | can be used to separate left and right aligned part. Use || for literal '|'.

forwarding-mode *keyword*

Description The forwarding mode for Ethernet frames received on all eligible ports of the system

In store-and-forward mode, the forwarding of an Ethernet frame received on a particular port must wait until the entire Ethernet frame has been received, including the trailing 4-byte CRC; if the CRC is valid the packet is forwarded to the egress port based on the L2/L3 lookup result but if the CRC is invalid the frame is discarded and the in-error-packets counter is incremented.

In cut-through mode, the forwarding ASIC does the L2/L3 forwarding lookup as soon as it has read the necessary packet headers. If the target egress queue of the egress port is not congested the bytes of the received frame are transmitted across the switch fabric as they are received. The fully intact frame is transmitted from the egress port as soon as all the bytes have been received.

Configurable True

Platforms queue-stats-poll-interval

polling-interval *number*

Description The interval at which queue statistics are collected from the forwarding hardware

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

This interval applies to interface queue statistics, including per-LAG-member statistics, and to subinterface queue statistics. It is applied to every forwarding complex in the system.

When this leaf is not configured each forwarding complex collects at its existing default interval, which depends on the chipset generation and on whether the statistics are for interface queues or subinterface queues.

Configuring an interval shorter than a forwarding complex default increases the rate at which statistics are read from hardware and published, and therefore increases control plane load.

Component or process is currently warm rebooting

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Component is booting downloaded image

- starting

  Component image operational, application processes starting

- failed

  Component or process has failed

- synchronizing

  Component is currently being synchronized

- upgrading

  Component is currently being upgraded

- low-power

  Component is offline due to insufficient system power

- degraded

  Component or process is in a degraded state

- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Context system dns-instance name *string* oper-state *keyword*

Tree oper-state

Options

- up

  Component or process is operational
- down

  Component or process is not operational
- empty

  Component slot is empty
- downloading

  Component is downloading image into memory
- booting

  Component is booting downloaded image
- starting

  Component image operational, application processes starting
- failed

  Component or process has failed
- synchronizing

  Component is currently being synchronized
- upgrading

  Component is currently being upgraded
- low-power

  Component is offline due to insufficient system power
- degraded

  Component or process is in a degraded state
- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

cron *string*

Description Cron expression describing the interval at which to run the script

This expression is in the Linux cron format of five fields separated by whitespace - '<minutes> <hours> <days-of-month> <months> <days-of-week>'.

Certain special characters can be used to assist in describing an interval: '?' can be used to specify one field and leave another unspecified, e.g. '11 11 11 11 ?' meaning to run on every November 11th at 11:11 AM. '*' can be used as a wildcard, e.g. '* * * * ?' meaning to run every minute of every hour of every day of the month of every month. '-' can be used to specify a range, e.g. '1-50' in the <minutes> field indicating to run every minute between and including 1-50. ',' can be used to provide a list of values within a field, e.g. '1,3,5'. '/' can be used to specify increments, e.g. '*/5 * * * ?' meaning every 5 minutes. 'L' can be used to specify the last day of the month. e.g. '15 10 L * ?' meaning to run at 10:15 AM on the last day of every month.

Keywords can also be used: '@yearly' resulting in '0 0 1 1 *', or run at midnight on the 1st of January. '@monthly' resulting in '0 0 1 * *' or run at midnight on the 1st of every month. '@weekly' resulting in '0 0 * * 0', or run at midnight on Sunday every week. '@daily' resulting in '0 0 * * *', or run at midnight every day. '@hourly' resulting in '0 * * * *', or run at the top of every hour. '@reboot' resulting in execution at startup.

Valid values for fields outside of the above special characters are: <minutes>: 0-59 <hours>: 0-23 <days-of-month>: 1-31, ?, L <months>: 1-12, JAN-DEC <days-of-week>: 0-6 (0 is Sunday), ?, SUN-SAT

oper-state *keyword*

Description Details if this event handler instance is operationally available

Context system event-handler instance name *string* oper-state *keyword*

Tree oper-state

Options

- up

  Component or process is operational
- down

  Component or process is not operational
- empty

  Component slot is empty
- downloading

  Component is downloading image into memory
- booting

  Component is booting downloaded image
- starting

  Component image operational, application processes starting
- failed

  Component or process has failed
- synchronizing

  Component is currently being synchronized
- upgrading

  Component is currently being upgraded
- low-power

  Component is offline due to insufficient system power
- degraded

  Component or process is in a degraded state
- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Component or process is not operational

- empty

  Component slot is empty

- downloading

  Component is downloading image into memory

- booting

  Component is booting downloaded image

- starting

  Component image operational, application processes starting

- failed

  Component or process has failed

- synchronizing

  Component is currently being synchronized

- upgrading

  Component is currently being upgraded

- low-power

  Component is offline due to insufficient system power

- degraded

  Component or process is in a degraded state

- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

persistence-mode *keyword*

Description The defined persistence mode as signaled by the client

Context system grpc-server name *string* client id *number* gribi persistence-mode *keyword*

Tree persistence-mode

Options

- preserve

  Entries populated by the client will be persisted during a client disconnect, or control module switchover

- delete

  Entries populated by the client will be purged on the client disconnecting, or a control module switchover

  If no persistence mode is signaled, the default is to delete entries.

Component or process is in a degraded state

- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Options

- up

  Component or process is operational

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- down

  Component or process is not operational
- empty

  Component slot is empty
- downloading

  Component is downloading image into memory
- booting

  Component is booting downloaded image
- starting

  Component image operational, application processes starting
- failed

  Component or process has failed
- synchronizing

  Component is currently being synchronized
- upgrading

  Component is currently being upgraded
- low-power

  Component is offline due to insufficient system power
- degraded

  Component or process is in a degraded state
- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

oper-state *keyword*

Description

Status of the Transport Session

Note that this parameter corresponds to ipfixTransportSessionStatus in the IPFIX MIB module.

Context

system ipfix exporting-process name *string* destination name *string* udp-exporter transport-session oper-state *keyword*

Tree

oper-state

Options

- up

  Component or process is operational
- down

  Component or process is not operational
- empty

  Component slot is empty
- downloading

  Component is downloading image into memory
- booting

  Component is booting downloaded image
- starting

  Component image operational, application processes starting
- failed

  Component or process has failed
- synchronizing

  Component is currently being synchronized
- upgrading

  Component is currently being upgraded
- low-power

  Component is offline due to insufficient system power
- degraded

  Component or process is in a degraded state
- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting

  Component or process is currently waiting

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable False

Platforms 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6e-gen3, 7250 IXR-X4, 7250 IXR-X4-OSFP

options-templates *number*

Description The number of Option Templates transmitted by the Exporting Process or received by the Collecting Process. Discontinuities in the value of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of transportSessionDiscontinuityTime.

Platforms Supported on all platforms

session-limit *number*

Description The number of concurrent requests the server will allow If a request comes in while this limit is reached, the request will block until another request is finished.

Context system json-rpc-server unix-socket session-limit *number*

Tree session-limit

Range 1 to 20

Configurable True

Platforms Supported on all platforms

socket-path *string*

Description Path to the unix socket used by JSON RPC

Context system json-rpc-server unix-socket socket-path *string*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	socket-path
Configurable	False
Platforms	Supported on all platforms

tls-profile *reference*

Description	Reference to the TLS profile to use on the JSON RPC unix socket server If none is specified, then TLS is not used.
Context	system json-rpc-server unix-socket tls-profile *reference*
Tree	tls-profile
Reference	system tls profile name *string*
Configurable	True
Platforms	Supported on all platforms

use-authentication *boolean*

Description	Enable or disable the use of username/password authentication for every JSON RPC request
Context	system json-rpc-server unix-socket use-authentication *boolean*
Tree	use-authentication
Default	true
Configurable	True
Platforms	Supported on all platforms

l2cp-transparency

Description	Enter the l2cp-transparency context Enclosing container for system level Layer-2 Control Protocol transparency.
Context	system l2cp-transparency
Tree	l2cp-transparency
Configurable	False
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H4, 7220 IXR-H4-32D, 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-X1B, 7250 IXR-X3B

chassis-id *string*

Description The Chassis ID is a mandatory TLV which identifies the chassis component of the endpoint identifier associated with the transmitting LLDP agent

Context system lldp chassis-id *string*

Tree chassis-id

Configurable False

Platforms Supported on all platforms

chassis-id-type *keyword*

Description The source for the chassis identifier string

It is an enumerator defined by the LldpChassisIdSubtype object from IEEE 802.1AB MIB.

Context system lldp chassis-id-type *keyword*

Tree chassis-id-type

Default MAC_ADDRESS

Options

- CHASSIS_COMPONENT

  Chassis identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737

- INTERFACE_ALIAS

  Chassis identifier based on the value of ifAlias object defined in IETF RFC 2863

- PORT_COMPONENT

  Chassis identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737 for a port or backplane component

- MAC_ADDRESS

  Chassis identifier based on the value of a unicast source address (encoded in network byte order and IEEE 802.3 canonical bit order), of a port on the containing chassis as defined in IEEE Std 802-2001

- NETWORK_ADDRESS

  Chassis identifier based on a network address, associated with a particular chassis. The encoded address is composed of two fields. The first field is a single octet, representing the IANA AddressFamilyNumbers value for the specific address type, and the second field is the network address value

- INTERFACE_NAME

  Chassis identifier based on the name of the interface, e.g., the value of if Name object defined in IETF RFC 2863

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- LOCAL

  Chassis identifier based on a locally defined value

Configurable	False
Platforms	Supported on all platforms

hello-timer *number*

Description	System level hello timer for the LLDP protocol
Context	system lldp hello-timer *number*
Tree	hello-timer
Default	30
Units	seconds
Configurable	True
Platforms	Supported on all platforms

hold-multiplier *number*

Description	System level hold multiplier, used to define neighbor aging This field defines how many hellos need to be missed before a neighbor is aged out. This field also is used along with the 'hello-timer' field to define the TTL TLV in outgoing LLDPDUs.
Context	system lldp hold-multiplier *number*
Tree	hold-multiplier
Default	4
Configurable	True
Platforms	Supported on all platforms

interface name *reference*

Description	List of interfaces on which LLDP can be enabled
Context	system lldp interface name *reference*

Platforms Supported on all platforms

port-id-type *keyword*

Description The type of identifier used in the port-id field

This field identifies the format and source of the port identifier string. It is an enumerator defined by the PtopoPortIdType object from RFC2922.

Context system lldp interface name *reference* neighbor id *string* port-id-type *keyword*

Tree port-id-type

Options

- INTERFACE_ALIAS

  Chassis identifier based on the value of ifAlias object defined in IETF RFC 2863

- PORT_COMPONENT

  Port identifier based on the value of entPhysicalAlias object defined in IETF RFC 2737 for a port component

- MAC_ADDRESS

  Port identifier based on the value of a unicast source address (encoded in network byte order and IEEE 802.3 canonical bit order) associated with a port

- NETWORK_ADDRESS

  Port identifier based on a network address, associated with a particular port

- INTERFACE_NAME

  Port identifier based on the name of the interface, e.g., the value of if Name object defined in IETF RFC 2863

- AGENT_CIRCUIT_ID

  Port identifer based on the circuit id in the DHCP relay agent information option as defined in IETF RFC 3046

- LOCAL

  Port identifier based on a locally defined alphanumeric string

Configurable False

Platforms Supported on all platforms

system-description *string*

Description The system description of the remote neighbor

The system description field shall contain an alpha-numeric string that is the textual description of the network entity. The system description should include the full name and version identification of the system's

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

hardware type, software operating system, and networking software. If implementations support IETF RFC 3418, the sysDescr object should be used for this field.

Component is booting downloaded image

- starting

  Component image operational, application processes starting

- failed

  Component or process has failed

- synchronizing

  Component is currently being synchronized

- upgrading

  Component is currently being upgraded

- low-power

  Component is offline due to insufficient system power

- degraded

  Component or process is in a degraded state

- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

per-complex-randomization *boolean*

Description	When set true, hashing uses a different random parser seed on each forwarding complex When set false, every forwarding complex uses the same parser seed In general, the true setting provides better hashing performance. Consider false only if traffic belonging to a specific flow show always hash to the same egress next-hop, even when a reroute or some other network event causes the flow to land on a different ingress complex
Context	system load-balancing hash-options per-complex-randomization *boolean*
Tree	per-complex-randomization
Default	true
Configurable	True
Platforms	7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

protocol *boolean*

Description	Include the IP protocol number in the hash calculation. For an IPv6 packet this is protocol value in the next-header field of the last extension header.
Context	system load-balancing hash-options protocol *boolean*
Tree	protocol
Default	true
Configurable	True
Platforms	Supported on all platforms

source-address *boolean*

Description	Include the source IP address in the hash calculation
Context	system load-balancing hash-options source-address *boolean*
Tree	source-address
Default	true
Configurable	True

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Platforms	Supported on all platforms

source-port *boolean*

Description	Include the source TCP/UDP port number in the hash calculation if the packet is an unfragmented IP packet carrying a TCP/UDP payload
Context	system load-balancing hash-options source-port *boolean*
Tree	source-port
Default	true
Configurable	True
Platforms	Supported on all platforms

terminated-eth-fields *boolean*

Description	When set true, hashing uses Ethernet header fields that are terminated when an IP/MPLS packet is forwarded When set false, L3 forwarding does not consider any Ethernet header fields in the hash calculation. In general, the true setting provides better hashing performance.
Context	system load-balancing hash-options terminated-eth-fields *boolean*
Tree	terminated-eth-fields
Default	false
Configurable	True
Platforms	7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

vlan *boolean*

Description	Include the received VLAN ID in the hash calculation
Context	system load-balancing hash-options vlan *boolean*
Tree	vlan
Default	true
Configurable	True
Platforms	7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D

tls-profile *reference*

Description Reference to a TLS profile to use for the transport of syslog messages

If none is specified, then TLS is not used.

The cipher-list, tls-version and tls13 cryptographic settings of the TLS profile are applied to the session established with the remote server. Any of those left at its default value is negotiated using the defaults of the TLS library. Using the __default__ TLS profile is not supported as there is no trust-anchor configured.

- up

  Component or process is operational
- down

  Component or process is not operational
- empty

  Component slot is empty
- downloading

  Component is downloading image into memory
- booting

  Component is booting downloaded image
- starting

  Component image operational, application processes starting
- failed

  Component or process has failed

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- synchronizing

  Component is currently being synchronized
- upgrading

  Component is currently being upgraded
- low-power

  Component is offline due to insufficient system power
- degraded

  Component or process is in a degraded state
- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable False

dynamic name *string*

Description List of dynamic label blocks

When a client application binds its operation to a dynamic label block that client application is expected to just ask for the next available label within the dynamic label block.

At this time a dynamic label block cannot be shared by multiple different clients/protocols. Each protocol needing dynamic labels must have its own label block.

min-path-mtu *number*

Description Sets the minimum path MTU to use when receiving an ICMP fragmentation needed message

This is controlled via the kernel min_pmtu option. In the event an ICMP fragmentation needed message is received by the kernel, the system will drop the session to this MTU to allow packets to traverse the entire path.

oper-down-reason *identityref*

Description	Details why the NETCONF server instance is operationally unavailable
Context	system netconf-server name *string* oper-down-reason *identityref*
Tree	oper-down-reason
Options	• admin-disabled NETCONF server administratively disabled • ssh-server-down Bound SSH server instance is operationaly down • socket-create-failed Unable to create listening socket. This usually means that there are missing permisions to create socket • socket-bind-failed Unable to bind socket to an address or a file. If unix-socket transport is used this usually means that UNIX socket file already exist or is used by other service. If TLS transport is used this usually means that configured address is already used by other service • socket-file-create-failed Unable to create UNIX socket file. This usually means that the file location does not exist or there are insufficient access rights to modify file location or the file location resides on a read-only file system • out-of-resources System does not have enough resources to enable NETCONF server. This usually means that the limit on the number of open file descriptors has been reached or the limit on the number of open files has been reached • out-of-memory System does not have enough memory.
Configurable	False

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

advertise-ifl-host-ad-routes

Description Enables the advertisement of IP AD per EVI/ES routes for IP Aliasing

When configured, AD per-EVI/ES routes are advertised for the IP-VRF and bgp-evpn instances with MAC-VRFs attached to the Ethernet Segment. The AD per-EVI routes for the IP-VRFs contain the route distinguisher, route targets and label/VNI of the IP-VRF bgp-evpn instance (with the instance indicated in the bgp-evpn-instance command). The AD per-ES routes for the IP-VRFs contain the route distinguisher and route targets of the IP-VRF bgp-evpn-instance. On the remote PEs, the reception of BGP-EVPN-IFL-HOST routes with an ESI matching the ESI of the IP-VRF AD per-EVI/ES routes, will enable the IP Aliasing procedures for BGP-EVPN-IFL-HOST routes.

bgp-evpn-instance *reference*

Description The bgp-evpn instance of the IP-VRF network-instance using the Ethernet Segment

It indicates from which EVPN interface-less bgp-instance the label/VNI, route distinguisher and route targets are taken when advertising the AD per-EVI routes and the AD per-ES routes (except for the VNI/label in AD per-ES routes).

value *number*

Description	The value of the label field If the route is an EVPN MPLS route, the mpls-label is read out of the 20-bit high order value. If the route is an EVPN VXLAN route, the vni is read out of the 24-bit value. If the route is an EVPN SRv6 route, this field is set to zero if no transposition is used and set to a non-zero value if transposition is used. For all the cases, if this is an Auto-Discovery per ES route, this leaf is set to zero.

layer-3-neighbor-synchronization *boolean*

Description	Enables the layer-3 ARP and ND synchronization across PEs

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

When set to true, the Ethernet Segment is used to synchronize ARP and/or Neighbor Discovery entries on non-IRB subinterfaces across all the PEs attached to the same CE that uses a single LAG.

Context system network-instance protocols evpn ethernet-segments bgp-instance id *reference* ethernet-segment name *string* layer-3-neighbor-synchronization *boolean*

Tree layer-3-neighbor-synchronization

multi-homing-mode *keyword*

Description Multi-homing mode of the ethernet segment.

The state of this leaf can be different than the configured value in cases where the configured value is 'all-active' and the multi-homing mode advertised by the ES peers in the AD per-ES routes is 'single-active'. In this case, the state of this leaf will show 'single-active'.

When an Ethernet Segment (ES) is configured as either all-active-no-esi-label or single-active-no-esi-label, no ESI (Ethernet Segment Identifier) label is allocated. This configuration is suitable for Ethernet segments connected exclusively to VXLAN or VPWS network instances.

  Component or process is not operational
- empty

  Component slot is empty
- downloading

  Component is downloading image into memory
- booting

  Component is booting downloaded image
- starting

  Component image operational, application processes starting
- failed

  Component or process has failed
- synchronizing

  Component is currently being synchronized
- upgrading

  Component is currently being upgraded
- low-power

  Component is offline due to insufficient system power
- degraded

  Component or process is in a degraded state
- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

leave-sync-propagation *number*

Description This value is the delta time applied by a node sending the leave synch route before removing the multicast state

When EVPN multi-homing is used along with igmp/mld snooping, a node receiving a leave message from a receiver will advertise an EVPN Multicast Leave Sync route to synchronize the leave state across all nodes attached to the Ethernet Segment. This route encodes the maximum response time that the receiving node needs to apply for a given (S,G) or (*,G) state

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

before removing it. The leave-sync-propagation time accounts for the BGP propagation time so that the local node minimizes the potential churn of removing the multicast state before the route made it to the node receiving a join for the multicast group to be removed. The value must be adjusted to the estimated BGP propagation time between the Ethernet Segment peers.

Context	system network-instance protocols mgmt-stp name *string* interface interface-name *string* mst-instance mst-id *reference*
Tree	mst-instance
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

mst-id *reference*

Description	In an MSTP Bridge, an MST-ID, is used to identify a multiple-spanning-tree-instance
Context	system network-instance protocols mgmt-stp name *string* interface interface-name *string* mst-instance mst-id *reference*
Reference	system network-instance protocols mgmt-stp name *string* mst-instance mst-id *number*
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

designated-bridge *string*

Description	The bridge identifier of the designated bridge The bridge identifer of the bridge recorded as the root in the configuration BPDUs transmitted by the designated bridge for the segment to which the port is attached. format: bridge-priority.extended-system-id.mac-address
Context	system network-instance protocols mgmt-stp name *string* interface interface-name *string* mst-instance mst-id *reference* designated-bridge *string*
Tree	designated-bridge
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

designated-port *number*

Description	The identifier of the port on the designated bridge
Context	system network-instance protocols mgmt-stp name *string* interface interface-name *string* mst-instance mst-id *reference* designated-port *number*
Tree	designated-port
Configurable	False

oper-state *keyword*

Description Stp Operational status

Context system network-instance protocols mgmt-stp name *string* interface interface-name *string* mst-instance mst-id *reference* oper-state *keyword*

Tree oper-state

Options

- up

  Component or process is operational
- down

  Component or process is not operational
- empty

  Component slot is empty
- downloading

  Component is downloading image into memory
- booting

  Component is booting downloaded image
- starting

  Component image operational, application processes starting
- failed

  Component or process has failed
- synchronizing

  Component is currently being synchronized
- upgrading

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Component is currently being upgraded

- low-power

  Component is offline due to insufficient system power

- degraded

  Component or process is in a degraded state

- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

port-num *number*

Context system network-instance protocols mgmt-stp name *string* interface interface-name *string* mst-instance mst-id *reference* port-num *number*

Tree port-num

Range 0 to 4094

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

port-role *identityref*

Description Interface Stp Port role

Context system network-instance protocols mgmt-stp name *string* interface interface-name *string* mst-instance mst-id *reference* port-role *identityref*

Tree port-role

Options

- ROOT

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Root port role is assigned to the port that receives the best BPDU on a bridge.

- DESIGNATED

  Designated port role is assigned to the port that can send the best BPDU on the segment to which it is connected.

- ALTERNATE

  Alternate port role is assigned to the port that receives more useful BPDUs from another bridge and is blocked

- BACKUP

  Backup port role is assigned to the port that receives more useful BPDUs from the same bridge it is on and is blocked

- MASTER

  Master port role is assigned to the port that connects an MST Region to the Root Bridge of the entire network

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

port-state *identityref*

Description Interface Stp Port state

Context system network-instance protocols mgmt-stp name *string* interface interface-name *string* mst-instance mst-id *reference* port-state *identityref*

Tree port-state

Options

- LISTENING

  Listening port indicates port that is processing BPDUs and building active toplogy

- LEARNING

  Learning port indicates port that is building bridging tables; no forwarding of data

- BLOCKING

  Blocking port indicates port that would cause a loop if it were sending data. It only receivs BPDUs, until a topology change removes the possibliity of a loop

- FORWARDING

  Forwarding port indicates port that is operating normally, sending and receiving data

- DISCARDING

  Discarding port indicates port that is receiving and discarding data

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- DISABLED

  Disabled Port is the port that is isolated from network, either administratively down or failed

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

mst-instance mst-id *number*

Description	List of the mstp instances
Context	system network-instance protocols mgmt-stp name *string* mst-instance mst-id *number*
Tree	mst-instance
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mst-id *number*

Description	In an MSTP Bridge, an MSTID, is used to identify a multiple-spanning-tree-instance.
Context	system network-instance protocols mgmt-stp name *string* mst-instance mst-id *number*
Range	1 to 15
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

internal-root-cost *number*

Description	The cost of the path to the regional root bridge as seen from this bridge
Context	system network-instance protocols mgmt-stp name *string* mst-instance mst-id *number* internal-root-cost *number*
Tree	internal-root-cost
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

mst-priority *number*

Description	Priority component of the Bridge Identifier
Context	system network-instance protocols mgmt-stp name *string* mst-instance mst-id *number* mst-priority *number*
Tree	mst-priority
Range	0 to 61440
Default	32768
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

regional-root *string*

Description	The bridge identifier of the regional root determined by the Mst Instance STP
Context	system network-instance protocols mgmt-stp name *string* mst-instance mst-id *number* regional-root *string*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	regional-root
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

remaining-hop-count *number*

Description	The value specifies the remaining number of hops.
Context	system network-instance protocols mgmt-stp name *string* mst-instance mst-id *number* remaining-hop-count *number*
Tree	remaining-hop-count
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

root-port *number*

Description	The port number of port which offers the lowest cost path from this bridge to the regional root bridge.
Context	system network-instance protocols mgmt-stp name *string* mst-instance mst-id *number* root-port *number*
Tree	root-port
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

vlan-range *string*

Description	An inclusive range mapped to the MST instance specified as x..y where x and y are valid VLAN IDs (1 <= vlan-id <= 4094)
Context	system network-instance protocols mgmt-stp name *string* mst-instance mst-id *number* vlan-range *string*
Tree	vlan-range
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

mst-max-hops *number*

Description	The max hop determines the number of bridges in an MST region that a BPDU can traverse before it is discarded
Context	system network-instance protocols mgmt-stp name *string* mst-max-hops *number*
Tree	mst-max-hops
Range	1 to 255
Default	20
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

mst-name *string*

Description	The Configuration Name in the MST Configuration Identifier
Context	system network-instance protocols mgmt-stp name *string* mst-name *string*
Tree	mst-name
String Length	1 to 32
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

mst-revision *number*

Description	The Revision Level in the MST Configuration Identifier
Context	system network-instance protocols mgmt-stp name *string* mst-revision *number*
Tree	mst-revision
Range	0 to 65535
Default	0
Configurable	True
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

oper-forward-delay *number*

Description	The amount of time it takes to change its state when moving towards the forwarding state
Context	system network-instance protocols mgmt-stp name *string* oper-forward-delay *number*
Tree	oper-forward-delay
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

oper-hello-time *number*

Description	The amount of time between the transmission of Configuration BPDUs
Context	system network-instance protocols mgmt-stp name *string* oper-hello-time *number*
Tree	oper-hello-time
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

oper-max-age *number*

Description	The maximum age of the stp information learned
Context	system network-instance protocols mgmt-stp name *string* oper-max-age *number*
Tree	oper-max-age
Configurable	False
Platforms	7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

oper-state *keyword*

Description	Stp Operational status
Context	system network-instance protocols mgmt-stp name *string* oper-state *keyword*
Tree	oper-state
Options	• up Component or process is operational

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

- down

  Component or process is not operational
- empty

  Component slot is empty
- downloading

  Component is downloading image into memory
- booting

  Component is booting downloaded image
- starting

  Component image operational, application processes starting
- failed

  Component or process has failed
- synchronizing

  Component is currently being synchronized
- upgrading

  Component is currently being upgraded
- low-power

  Component is offline due to insufficient system power
- degraded

  Component or process is in a degraded state
- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable False

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5

root-cost *number*

Description The cost of the path to the root as seen from this bridge

Context system ntp oper-state *keyword*

Tree oper-state

Options

- up

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Component or process is operational

- down

  Component or process is not operational

- empty

  Component slot is empty

- downloading

  Component is downloading image into memory

- booting

  Component is booting downloaded image

- starting

  Component image operational, application processes starting

- failed

  Component or process has failed

- synchronizing

  Component is currently being synchronized

- upgrading

  Component is currently being upgraded

- low-power

  Component is offline due to insufficient system power

- degraded

  Component or process is in a degraded state

- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable False

Platforms Supported on all platforms except IMGMT

server address *(ipv4 | ipv6 | domain-name)*

Description List of NTP servers to use for system clock synchronization

© 2026 Nokia.

offset *number*

Description	Estimate of the current time offset from the peer This is the time difference between the local and reference clock.
Context	system ntp server address *(ipv4 | ipv6 | domain-name)* offset *number*
Tree	offset
Units	microseconds
Configurable	False
Platforms	Supported on all platforms except IMGMT

poll-interval *number*

Description	Polling interval of the peer
Context	system ntp server address *(ipv4 | ipv6 | domain-name)* poll-interval *number*
Tree	poll-interval
Units	seconds
Configurable	False
Platforms	Supported on all platforms except IMGMT

prefer *boolean*

Description	Indicates whether this server should be preferred or not All other things being equal, this host will be chosen for synchronization among a set of correctly operating NTP servers
Context	system ntp server address *(ipv4 | ipv6 | domain-name)* prefer *boolean*
Tree	prefer
Default	false
Configurable	True
Platforms	Supported on all platforms except IMGMT

root-delay *number*

Description	The round-trip delay to the server

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	system ntp server address *(ipv4 | ipv6 | domain-name)* root-delay *number*
Tree	root-delay
Units	milliseconds
Configurable	False
Platforms	Supported on all platforms except IMGMT

root-dispersion *number*

Description	Dispersion (epsilon) represents the maximum error inherent in the measurement
Context	system ntp server address *(ipv4 | ipv6 | domain-name)* root-dispersion *number*
Tree	root-dispersion
Units	milliseconds
Configurable	False
Platforms	Supported on all platforms except IMGMT

source-address *(ipv4-address \| ipv6-address)*

Description	Source address for NTP to use for messages sent to a remote server
Context	system ntp server address *(ipv4 | ipv6 | domain-name)* source-address *(ipv4-address | ipv6-address)*
Tree	source-address
Configurable	True
Platforms	Supported on all platforms except IMGMT

stratum *number*

Description	Indicates the level of the server in the NTP hierarchy as number increases, the accuracy is degraded. Primary servers are stratum 1 while a maximum value of 16 indicates unsynchronized. The values have the following meanings: 0 unspecified or invalid 1 primary server (e.g., equipped with a GPS receiver) 2-15 secondary server (via NTP) 16 unsynchronized 17-255 reserved
Context	system ntp server address *(ipv4 | ipv6 | domain-name)* stratum *number*
Tree	stratum
Configurable	False
Platforms	Supported on all platforms except IMGMT

- upgrading

  Component is currently being upgraded
- low-power

  Component is offline due to insufficient system power
- degraded

  Component or process is in a degraded state
- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable False

Platforms Supported on all platforms except SERVER AND NOT PLATFORM

port *number*

Description Port the NTP server instance will listen on for incoming connections

Context system ntp-server name *string* port *number*

Tree port

Range 0 to 65535

Default 123

Configurable True

desired-minimum-transmit-interval *number*

Description	The minimum interval between transmission of BFD control packets This value is advertised to the peer, however the actual interval used is specified by taking the maximum of desired-minimum-transmit-interval and the value of the remote required-minimum-receive interval value. This value is specified as an integer number of microseconds.
Context	system protection-policies policy protection-policy-name *string* seamless-bfd desired-minimum-transmit-interval *number*
Tree	desired-minimum-transmit-interval
Range	10000 to 100000000

hold-down-timer *(number | keyword)*

Description Specifies a hold-down timer value when seamless-bfd is enabled

The timer is started when the number of S-BFD sessions that are up drops below the threshold. The TE-policy path is not considered to be up again until the hold-down timer has expired and the number of S-BFD sessions that are up equals or exceeds the threshold. A grace preiod after session down such that sBFD session flaps does not impact active path.

The default is 4 seconds.

Context system protection-policies policy protection-policy-name *string* seamless-bfd hold-down-timer *(number | keyword)*

Tree hold-down-timer

Range 1 to 500

Default 4

Units seconds

Options
- disable

mode *keyword*

Description Specifies requested protection method

ecmp-protected is valid for colored te-policies and programs all the valid segment lists and manages their availability using seamless-BFD for each segment list. Switchover between candidate paths is triggered by the node if number of segment-lists up is less than the threshold on the active policy.ecmp-protected is not valid for uncolored sr-policies.

linear is valid for uncolored te-policies and triggers fail-over among active segment-lists, primary to standby / secondary.

oper-state *keyword*

Description Details the operational state of the SNMP server

Context system snmp network-instance name *reference* oper-state *keyword*

Tree oper-state

Options

- up

  Component or process is operational
- down

  Component or process is not operational
- empty

  Component slot is empty
- downloading

  Component is downloading image into memory
- booting

  Component is booting downloaded image
- starting

  Component image operational, application processes starting
- failed

  Component or process has failed
- synchronizing

  Component is currently being synchronized
- upgrading

  Component is currently being upgraded
- low-power

  Component is offline due to insufficient system power
- degraded

  Component or process is in a degraded state
- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

preserve *boolean*

Description Indicates whether the autogenerated SSH server host keys should be preserved on reboots

Setting this to true will result in host keys in /etc/sshd not being cleared on a reboot. Alternatively setting this to false will result in host keys being removed and regenerated on each reboot of the system.

This is useful only when the host keys are not statically configured and not dynamically configured using gNSI Credentialz service (and therefore are suitable to be potentially regenerated on every reboot).

Takes effect only if the value is set to false for every configured ssh server instance.

Context system ssh-server name *string* host-key preserve *boolean*

Tree preserve

Default true

Configurable True

Platforms	Supported on all platforms

certificate *string*

Description	Each item value should be the host key certificate as read from the *-cert.pub file generated by the CA including the certificate type, e.g. 'ssh-rsa-cert-v01@openssh.com AAAA<...> comment'. This certificate is returned to clients during SSH init for the client to verify the host it is communicating with. This sets the HostCertificate option within each SSH servers configuration file. The certificate should be generated by first extracting the systems current public key and having this signed by a CA.

Component is currently being synchronized

- upgrading

  Component is currently being upgraded

- low-power

  Component is offline due to insufficient system power

- degraded

  Component or process is in a degraded state

- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.

- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable False

Platforms Supported on all platforms

port *number*

Description Port the SSH server instance will listen on for incoming connections

Platforms	7220 IXR-D5, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

discards

Description	Enter the discards context Aggregate discard statistics for the PTP clock
Context	system sync ptp instance instance-index *number* default-ds statistics discards
Tree	discards
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

alternate-master *number*

Description	Specifies the number of alternate master messages that were discarded
Context	system sync ptp instance instance-index *number* default-ds statistics discards alternate-master *number*
Tree	alternate-master
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

bad-domain *number*

Description	Specifies the number of bad domain messages that were discarded
Context	system sync ptp instance instance-index *number* default-ds statistics discards bad-domain *number*
Tree	bad-domain
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

max-steps-removed-exceeded *number*

Description	Specifies the number of maximum steps-removed exceeded messages that were discarded
Context	system sync ptp instance instance-index *number* default-ds statistics discards max-steps-removed-exceeded *number*
Tree	max-steps-removed-exceeded
Configurable	False
Platforms	7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7220 IXR-H5-32D, 7220 IXR-H5-64D, 7220 IXR-H5-64O, 7220 IXR-H5-64O-512, 7220 IXR-H6-64, 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

other *number*

Description	Specifies the number of other messages that were discarded
Context	system sync ptp instance instance-index *number* default-ds statistics discards other *number*
Tree	other
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

out-of-sequence *number*

Description	Specifies the number of out of sequence messages that were discarded
Context	system sync ptp instance instance-index *number* default-ds statistics discards out-of-sequence *number*
Tree	out-of-sequence
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

peer-disabled *number*

Description	Specifies the number of PTP messages that were discarded from disabled PTP peer Occurs when a PTP peer has been administratively disabled. This information is only available for configured and discovered peers.
Context	system sync ptp instance instance-index *number* default-ds statistics discards peer-disabled *number*
Tree	peer-disabled
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

follow-up-msg-rx *number*

Description	Specifies the number of follow-up messages received
Context	system sync ptp instance instance-index *number* default-ds statistics follow-up-msg-rx *number*
Tree	follow-up-msg-rx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

follow-up-msg-tx *number*

Description	Specifies the number of follow-up messages transmitted
Context	system sync ptp instance instance-index *number* default-ds statistics follow-up-msg-tx *number*
Tree	follow-up-msg-tx
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

multicast-msg-rate

Description	Enter the multicast-msg-rate context Aggregate multicast message rates for the PTP clock

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	system sync ptp instance instance-index *number* default-ds statistics multicast-msg-rate
Tree	multicast-msg-rate
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

anno-msg-rate-rx *decimal-number*

Description	Specifies the rate of messages of announce messages received
Context	system sync ptp instance instance-index *number* default-ds statistics multicast-msg-rate anno-msg-rate-rx *decimal-number*
Tree	anno-msg-rate-rx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

anno-msg-rate-tx *decimal-number*

Description	Specifies the rate of messages of announce messages transmitted
Context	system sync ptp instance instance-index *number* default-ds statistics multicast-msg-rate anno-msg-rate-tx *decimal-number*
Tree	anno-msg-rate-tx
Units	messages-per-second
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

del-req-msg-rate-rx *decimal-number*

Description	Specifies the rate of messages of delay-req messages received
Context	system sync ptp instance instance-index *number* default-ds statistics multicast-msg-rate del-req-msg-rate-rx *decimal-number*
Tree	del-req-msg-rate-rx
Units	messages-per-second

Use subject to Terms available at: www.nokia.com/terms.

port-index *number*

Description Index into the port-ds list

This is not the PTP port number. Configurable ports use port indices 1 through 999 but there is a limit on the overall number of these configured ports based on the platform and software release.

The data sets (i.e., information model) of IEEE Std 1588-2008 specify a member portDS.portIdentity, which uses a typed struct with members clock Identity and portNumber.

In this YANG data model, portIdentity is not modeled in the port-ds. However, its members are provided as follows: portIdentity.portNumber is provided as this ptp-port-number leaf in port-ds, and portIdentity.clockIdentity is provided as the clock-identity leaf in default-ds of the instance (i.e., ../../default-ds/clock-identity).

announce-receipt-timeout *number*

Description Sets the time limit for missed Announce packets before the master clock is deemed down

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

This command configures the announceReceiptTimeout value for all peer associations. This defines the number of Announce message intervals that must expire with no received Announce messages before declaring an ANNOUNCE_RECEIPT_TIMEOUT event. To change this setting, refer to announce-receipt-timeout in the Default data set.

Context system sync ptp instance instance-index *number* port-ds-cfg-ip-list port-index *number* announce-receipt-timeout *number*

Description	List of port data sets for discovered IP peers
Context	system sync ptp instance instance-index *number* port-ds-dsc-ip-list port-index *number*
Tree	port-ds-dsc-ip-list
Configurable	False
Platforms	7220 IXR-D5, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

port-index *number*

Description	Index into the port-ds list This is not the PTP port number. Discovered IP peer ports are created based on Unicast negotiation. If an IP peer is a discovered IP peer and later that IP address is entered as a configured peer, then port DS information will move from this list to teh port-ds-cfg-ip-list to cover both aspects of communication with this peer. The data sets (i.e., information model) of IEEE Std 1588-2008 specify a member portDS.portIdentity, which uses a typed struct with members clock Identity and portNumber. In this YANG data model, portIdentity is not modeled in the port-ds. However, its members are provided as follows: portIdentity.portNumber is provided as this ptp-port-number leaf in port-ds, and portIdentity.clockIdentity is provided as the clock-identity leaf in default-ds of the instance (i.e., ../../default-ds/clock-identity).
Context	system sync ptp instance instance-index *number* port-ds-dsc-ip-list port-index *number*

port-index *number*

Description	Index into the port-ds list This is not the PTP port number. Configurable ports use port indices 1 through 999 but there is a limit on the overall number of these configured ports based on the platform and software release. The data sets (i.e., information model) of IEEE Std 1588-2008 specify a member portDS.portIdentity, which uses a typed struct with members clock Identity and portNumber. In this YANG data model, portIdentity is not modeled in the port-ds. However, its members are provided as follows: portIdentity.portNumber is provided as this ptp-port-number leaf in port-ds, and portIdentity.clockIdentity is provided as the clock-identity leaf in default-ds of the instance (i.e., ../../default-ds/clock-identity).

parent-clock *boolean*

Description Indicates if this interface is the current parent clock of this PTP clock

May differ from best-master due to use of local GNSS as time source.

Context system sync ptp instance instance-index *number* port-ds-interface-list port-index *number* parent-clock *boolean*

Tree parent-clock

Configurable False

Platforms 7220 IXR-D5, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

port-state *keyword*

Description Current state associated with the port

Context system sync ptp instance instance-index *number* port-ds-interface-list port-index *number* port-state *keyword*

Tree port-state

Options

- initializing

  The port is initializing its data sets, hardware, and communication facilities
- faulty

  The port is in the fault state
- disabled

  The port is disabled and is not communicating PTP messages
- listening

  The port is listening for an Announce message
- pre-master

  The port is in the pre-master state
- master

  The port is behaving as a master port
- passive

  The port is in the passive state
- uncalibrated

  A master port has been selected, but the port is still in the uncalibrated state
- slave

Tree oper-state

Options

- up

  Component or process is operational
- down

  Component or process is not operational
- empty

  Component slot is empty
- downloading

  Component is downloading image into memory
- booting

  Component is booting downloaded image
- starting

  Component image operational, application processes starting
- failed

  Component or process has failed
- synchronizing

  Component is currently being synchronized
- upgrading

  Component is currently being upgraded
- low-power

  Component is offline due to insufficient system power
- degraded

  Component or process is in a degraded state
- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting

  Component or process is currently waiting

  This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

name *identityref*

Description The name of the resource

Context system utilization acl resource name *identityref*

Options

- output-ipv4-filter-instances

  This resource is used every time an IPv4 filter instance is created and applied to egress traffic on the forwarding complex. Only one instance is used if the subinterface-specific property of the filter is set to input-only; otherwise one instance is used for every subinterface using the IPv4 filter as an egress filter.

- output-ipv4-filter-instances-routed

  This resource is used every time an IPv4 filter instance is created and applied to egress traffic on routed subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to input-only; otherwise one instance is used for every routed subinterface using the IPv4 filter.

- output-ipv4-filter-instances-bridged

  This resource is used every time an IPv4 filter instance is created and applied to egress traffic on bridged subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to input-only; otherwise one instance is used for every bridged subinterface using the IPv4 filter.

- output-ipv6-filter-instances

  This resource is used every time an IPv6 filter instance is created and applied to egress traffic on the forwarding complex. Only one instance is used if the subinterface-specific property of the filter is set to input-only; otherwise one instance is used for every subinterface using the IPv6 filter as an egress filter.

- output-ipv6-filter-instances-routed

  This resource is used every time an IPv6 filter instance is created and applied to egress traffic on routed subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to input-only; otherwise one instance is used for every routed subinterface using the IPv6 filter.

- output-ipv6-filter-instances-bridged

  This resource is used every time an IPv6 filter instance is created and applied to egress traffic on bridged subinterfaces. Only one instance is used if the subinterface-specific property of the filter is set to input-only; otherwise one instance is used for every bridged subinterface using the IPv6 filter.

- output-mac-filter-instances

  This resource is used every time an MAC filter instance is created and applied to egress traffic on the forwarding complex. Only one instance is used if the subinterface-specific property of the filter is set to input-only;

Options

- mpls-next-hops

  MPLS next hop label forwarding entry resources

  Each MPLS next-hop that pushes an outgoing label stack uses one of these resources
- tunnels

  Tunnel resources

  Each IP-in-IP, GRE or MPLS tunnel uses one of these resources
- ip-in-ip-tunnels

  IP-in-IP tunnel resources

  Each originating IP-in-IP tunnel uses one of these resources
- ip-gre-tunnels

  IP-over-GRE tunnel resources

  Each originating IP-over-GRE tunnel uses one of these resources
- ip-udp-tunnels

  UDP tunnel resources

  Each originating UDP tunnel uses one of these resources
- ip-gre-udp-tunnels

  GRE and UDP tunnel resources

  Each originating GRE or UDP tunnel uses one of these resources
- vp-lag-groups

  VP LAG group resources

  VP LAGs are needed by a NHG when it supports EVPN multi-homing
- protect-groups

  Protect group IDs

  Each primary next-hop that needs fast failover to a backup next-hop needs a protect-group ID
- mcast-rpf-indices

  P2MP RPF Index
- vxlan-tunnels

  VXLAN tunnel resources

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Each originating VXLAN tunnel uses one of these resources

- ingress-labeled-tunnel-statistics

  Ingress labeled tunnel statistics resources

  Each ingress tunnel (e.g. segment-list) so as iLM forwarding entries uses one of these resources

- egress-labeled-tunnel-statistics

  Egress labeled tunnel statistics resources

  Each engress tunnel (e.g. segment-list) so as NHLFE forwarding entries uses one of these resources

- multicast-ppmc-indices

  PPMC indices for multicast users

Configurable True

clear

Description Clear the retention-timer for the VLAN scope selected (a specific VLAN, untagged traffic, or all VLANs)

Normally, a VLAN remains in the active-vlans list until its retention timer expires after traffic ceases. This tools command clears that timer, causing any VLAN currently marked as active, due to frames observed on the

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

interface, to be removed from active-vlans immediately. This command does not remove a VLAN from the active-vlans list if it was created as a result of the existence of an Ethernet Segment destination.

Configurable True

Platforms Supported on all platforms

origin-validation

Description Enter the origin-validation context

On-demand RPKI origin-validation lookup, handled by the BGP manager process. Evaluates the origin-validation state (valid, invalid or not-found) of an arbitrary (prefix, origin-AS) pair against the local ROA database. Both match and origin-as must be supplied. This is a read-only operation: it does not modify the ROA database, any route, or any statistics.

match *(ipv4-prefix | ipv6-prefix)*

Description The route prefix (IPv4 or IPv6, in address/length form) to evaluate against the local ROA database

This is the prefix whose origin-validation state should be computed. It does not need to correspond to a route that is currently present in any Adj-RIB-In; the lookup is performed directly against the ROA database. Must be specified together with origin-as.

Context network-instance name *string* protocols bgp origin-validation match *(ipv4-prefix | ipv6-prefix)*

origin-as *number*

Description The candidate origin autonomous system number to validate the prefix against

The lookup compares this origin AS and the prefix length of match against the matching ROA entries: the result is valid when a covering ROA authorizes this origin AS at an acceptable max-length, invalid when a covering ROA exists but the origin AS or prefix length is not authorized, and not-found when no covering ROA exists. Must be specified together with match.

rpki

Description Enter the rpki context

RPKI-RTR operational commands, handled by the RPKI manager process. Nested under the bgp tools container so the tools path mirrors the state path (/network-instance/protocols/ bgp/rpki/session), which is what the mgmt-server CLI relies on to auto-complete configured session names. Dispatch of each command to rpkimgr (rather than bgpmgr) is driven by the tools codegen: the container's owning application is rpki_mgr per rpki_mgr_ config.yml.

clear

Description Reset the RPKI-RTR session and immediately purge all ROA entries

Forces an immediate TCP connection reset and purges all ROA entries from the session's roa-entries container. roa-entries-active drops to zero on clear. The session then transitions to connecting to re-establish and repopulate the ROA database from the cache server.

This differs from admin-state disable in two ways: it does not enter the cleanup state, and ROA entries are purged immediately rather than via a

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

sequential cleanup process. An automatic reconnect attempt is triggered immediately after the clear.

This behavior is consistent with SR OS session clear semantics.

16.1 oam Descriptions

oam

Description	Enclosing container for OAM management.
Context	oam
Tree	oam
Configurable	True
Platforms	Supported on all platforms

ethcfm

Description	Enter ETH-CFM on-demand tools
Context	oam ethcfm
Tree	ethcfm
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

clear-cfm-statistics

Description	Clears ETH-CFM statistics This clears the statistics at the relative hierarchy to the command instance. For example, if the command is issued directly under ethcfm all ETH-CFM system statistics are cleared. If the command is issued at the ethcfm domain association local-mep those individual mep OpCode statistics will be cleared.
Context	oam ethcfm clear-cfm-statistics
Tree	clear-cfm-statistics
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

delete-auto-discovered-meps

Description	Delete discovered meps from the remote mep database

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

This deletes the entries at the relative hierarchy to the command instance. For example, if the command is issued directly under ethcfm all entries are deleted. If the command is issued at the ethcfm domain association local-mep remote-mep that specific entry will be deleted.

Context oam ethcfm delete-auto-discovered-meps

source-ip *(ipv4-address | ipv6-address)*

Description	The source IP address of the UDP/IP MPLS trace message This should be a routable address of the router. This will be destination of the MPLS echo reply message sent back to the sender. By default this is the system address of the default network-instance; if the default network-instance does not have system interface then it will be primary address of the lowest numbered loopback subinterface of the default network-instace.

Tree warm

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

force

Description Force a warm reboot of the system, overriding any validation, synchronizations or other activities in progress

This option can be dangerous, and may result in an outage - but can be used to support a fast reboot of the system.

Context platform chassis reboot warm force

Tree force

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

validate

Description Validate that the system's current configuration and state supports a warm reboot operation

Context platform chassis reboot warm validate

Tree validate

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

nonce *binary*

Description A random number intended to guarantee freshness and for use as part of a replay-detection mechanism Note that a nonce sent into a TPM will typically be 160 or 256 binary digits long (20 or 32 bytes). If fewer binary digits are sent, this nonce object will be padded with leading zeros within Quotes returned from the TPM Additionally if more bytes are sent, the nonce will be trimmed to the most significant binary digits.

Configurable	True
Platforms	Supported on all platforms

restart

Description	Restart the application instance The best restart that is supported by the application is used if neither 'warm' or 'cold' is specified. If 'warm' restart is supported that will be used, or 'cold' if 'warm' is unavailable. A 'warm' restart will result in the application leaving its state in IDB during the restart, and recovering it post restart. This restart type results in less disruption to surrounding applications that would depend on the restarting applications state. A 'cold' restart will result in a normal stop/start of the application, including the purging of its state in IDB.
Context	system app-management application name *string* restart
Tree	restart
Configurable	True
Platforms	Supported on all platforms

cold

Platforms	Supported on all platforms

fips-140

Description	Enter the fips-140 context Operational state and commands related to FIPS 140 cryptographic module validation.
Context	system boot fips-140
Tree	fips-140
Configurable	True
Platforms	7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7220 IXR-H5-32D, 7220 IXR-H5-64D, 7220 IXR-H5-64O, 7220 IXR-H5-64O-512, 7220 IXR-H6-64, 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

conditional-test

Description	Execute an on-demand Conditional Self-Test (CST) to verify the current operational health and compliance of the FIPS module. Invoking this command triggers a cryptographic operation (e.g., ECDSA key generation) that forces the module to run the Pairwise Consistency Test (PCT) and the Continuous Random Number Generator Test (CRNGT). The command returns success only if the FIPS provider is loaded, functional, and passes these critical runtime checks.
Context	system boot fips-140 conditional-test
Tree	conditional-test
Configurable	True

Platforms	Supported on all platforms

clear

Description	Clear the checkpoint from the system
Context	system configuration checkpoint id *(number | checkpoint-name)* clear
Tree	clear
Configurable	True
Platforms	Supported on all platforms

load

Description	Load candidate from saved checkpoint configuration
Context	system configuration checkpoint id *(number | checkpoint-name)* load
Tree	load
Configurable	True
Platforms	Supported on all platforms

revert

Description	Revert running system configuration to the saved checkpoint configuration This functions as a load and commit action.
Context	system configuration checkpoint id *(number | checkpoint-name)* revert
Tree	revert
Configurable	True
Platforms	Supported on all platforms

confirmed-accept

Description	Accepts an in progress commit and stops the confirmation timer
Context	system configuration confirmed-accept
Tree	confirmed-accept
Configurable	True
Platforms	Supported on all platforms

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

persist-id *string*

Description	Specifies the persist-id to which the commit confirmed accept applies
Context	system configuration confirmed-accept persist-id *string*
Tree	persist-id
Configurable	True
Platforms	Supported on all platforms

confirmed-reject

Description	Rejects an in progress commit and stops the confirmation timer
Context	system configuration confirmed-reject
Tree	confirmed-reject
Configurable	True
Platforms	Supported on all platforms

persist-id *string*

Description	Specifies the persist-id to which the commit confirmed reject applies
Context	system configuration confirmed-reject persist-id *string*
Tree	persist-id
Configurable	True
Platforms	Supported on all platforms

generate-checkpoint

Description	Generate a checkpoint point based on the current running configuration
Context	system configuration generate-checkpoint
Tree	generate-checkpoint
Configurable	True
Platforms	Supported on all platforms

comment *string*

Description	User provided comment to associate with the checkpoint
Context	system configuration generate-checkpoint comment *string*

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Tree	comment
Configurable	True
Platforms	Supported on all platforms

name *string*

Description	User provided name of the checkpoint
Context	system configuration generate-checkpoint name *string*
Tree	name
Configurable	True
Platforms	Supported on all platforms

pathz-policy

Description	Top-level container for operational commands relating to Pathz gRPC policies
Context	system configuration pathz-policy
Tree	pathz-policy
Configurable	True
Platforms	7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7220 IXR-H5-32D, 7220 IXR-H5-64D, 7220 IXR-H5-64O, 7220 IXR-H5-64O-512, 7220 IXR-H6-64, 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

clear

Description	Clear Pathz authorization policy counters
Context	system configuration pathz-policy clear
Tree	clear
Configurable	True
Platforms	7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7220 IXR-H5-32D, 7220 IXR-H5-64D, 7220 IXR-H5-64O, 7220 IXR-H5-64O-512, 7220 IXR-H6-64, 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250

restore-sd

Description	Top-level container for operational commands related to restoring a SD card
Context	system restore-sd
Tree	restore-sd
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3

current

Description	Restore the current active SD card image to the external SD card slot
Context	system restore-sd current
Tree	current
Configurable	True
Platforms	7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3

snmp

Description	Enable the snmp context
Context	system snmp
Tree	snmp
Configurable	True
Platforms	Supported on all platforms except TOOLS

trap trap-name *string*

Description	Send simulated SNMP trap
Context	system snmp trap trap-name *string*
Tree	trap
Configurable	True
Platforms	Supported on all platforms except TOOLS

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

trap-name *string*

Description Name of the SNMP trap

Context system snmp trap trap-name *string*

Configurable True

Platforms Supported on all platforms except TOOLS

force

Description Force trap to be send even if value doesn't trigger the python-script to generate a trap

Context system snmp trap trap-name *string* force

Tree force

Configurable True

Platforms Supported on all platforms except TOOLS

network-instance *string*

Description The name of the network instance that will be used to send an SNMP trap.

If none is provided, all possible network-instances will receive the trap

Context system snmp trap trap-name *string* network-instance *string*

Tree network-instance

String Length 1 to 255

Configurable True

Platforms 7215 IXS-A1, 7220 IXR-D1, 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L, 7220 IXR-D4, 7220 IXR-D5, 7220 IXR-H2, 7220 IXR-H3, 7220 IXR-H4, 7220 IXR-H4-32D, 7220 IXR-H5-32D, 7220 IXR-H5-64D, 7220 IXR-H5-64O, 7220 IXR-H5-64O-512, 7220 IXR-H6-64, 7250 IXR-10, 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

trigger *string*

Description Trigger that will generate the trap with a simulated on-change notification.

Uses xpath format

Context system snmp trap trap-name *string* trigger *string*

Tree trigger

21.1 transport-security Descriptions

transport-security

Description	Enter the transport-security context Enclosing container for transport security
Context	transport-security
Tree	transport-security
Configurable	True
Platforms	7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

macsec

Description	Enter the macsec context
Context	transport-security macsec
Tree	macsec
Configurable	True
Platforms	7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

exclude-protocol name *keyword*

Description	List of protocols to be excluded from MACsec
Context	transport-security macsec exclude-protocol name *keyword*
Tree	exclude-protocol
Configurable	True
Platforms	7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

name *keyword*

Description	Name of the protocol to be excluded from MACsec
Context	transport-security macsec exclude-protocol name *keyword*

Use subject to Terms available at: www.nokia.com/terms.

Options

- lacp
  LACP protocol
- lldp
  LLDP protocol
- cdp
  Cisco discovery protocol
- eapol-start
  EAP over LAN start packets
- efm-oam
  Ethernet in first mile protocol
- eth-cfm
  Connectivity fault management protocol
- ptp
  Precision Time Protocol
- ubfd
  Micro BFD protocol

Configurable True

Platforms 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

interface *reference*

Description Interfaces on which this protocol is excluded from MACsec

Context transport-security macsec exclude-protocol name *keyword* interface *reference*

Tree interface

Reference interface name *string*

Configurable True

Platforms 7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

interface name *string*

Description List of interfaces on which MACsec is enabled / available When interface is configured the entire interface is protected via macsec.

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Context	transport-security macsec interface name *string*
Tree	interface
Configurable	True
Platforms	7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

name *string*

Description	Name of the interface being created for the MACSec
Context	transport-security macsec interface name *string*
String Length	1 to 255
Configurable	True
Platforms	7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

admin-state *keyword*

Description	Enable MACsec on an interface
Context	transport-security macsec interface name *string* admin-state *keyword*
Tree	admin-state
Default	disable
Options	• enable • disable
Configurable	True
Platforms	7250 IXR-10e-gen2cp, 7250 IXR-10e-gen2cp-3, 7250 IXR-10e-gen3, 7250 IXR-18e-gen3, 7250 IXR-6e-gen2cp, 7250 IXR-6e-gen2cp-3, 7250 IXR-6e-gen3, 7250 IXR-X1B, 7250 IXR-X3B, 7250 IXR-X4, 7250 IXR-X4-OSFP

exclude-mac destination-mac *string*

Description	list of destination macs to be excluded from the macsec encryption
Context	transport-security macsec interface name *string* exclude-mac destination-mac *string*
Tree	exclude-mac
Configurable	True

oper-state *keyword*

Description Indicates the operational state of macsec on this subinterface

Context transport-security macsec interface name *string* oper-state *keyword*

Tree oper-state

Options

- up

  Component or process is operational
- down

  Component or process is not operational
- empty

  Component slot is empty
- downloading

  Component is downloading image into memory
- booting

  Component is booting downloaded image
- starting

  Component image operational, application processes starting
- failed

  Component or process has failed
- synchronizing

  Component is currently being synchronized
- upgrading

  Component is currently being upgraded
- low-power

  Component is offline due to insufficient system power
- degraded

  Component or process is in a degraded state
- warm-reboot

  Component or process is currently warm rebooting

  This state is set during a warm reboot immediately following initiation of the reboot, continuing after startup until the system has completed audit. In this state the system will not accept configuration changes.
- waiting

© 2026 Nokia.
Use subject to Terms available at: www.nokia.com/terms.

Component or process is currently waiting

This state can be set by event handler when the reinvoke-with-delay action is used, and indicates that the event handler is waiting for the provided delay before reinvoking the instance.

Configurable False

irb-termination *boolean*

Description Controls allocation of a station-tcam-2 entry on supported Hx platforms for terminating VXLAN traffic into the associated IRB subinterface

Station-tcam-2 is the overlay my-station TCAM. It is used to terminate the inner destination IRB MAC of VXLAN packets, and also holds the system IFL MAC entry. When configured to true, the router attempts to allocate a station-tcam-2 entry for this vxlan-interface. When read from state, this leaf is true only if the station-tcam-2 entry was successfully allocated and VXLAN traffic can therefore be terminated into the IRB subinterface. When the configured value is false, or the state value is false, the IRB subinterface and the vxlan-interface may remain oper-up, but while traffic between local subinterfaces and the IRB is forwarded normally, VXLAN traffic with an inner destination MAC matching the IRB MAC is not routed.

Description The configured state of the VXLAN statistics on the router

The default value is disable. No statistics are collected on VXLAN when the admin-state is disable. When enabled, the router starts collecting VXLAN statistics at both, global and VTEP level, however, the total number of layer-2 subinterfaces is decreased. A change in the configuration of this command also resets the statistic counters on layer-2 subinterfaces as a side effect, before resuming the collection of statistics (on these layer-2 subinterfaces).

Context tunnel vxlan-tunnel statistics admin-state *keyword*

Tree admin-state

Default disable

Options

- enable
- disable

Configurable True

Platforms 7220 IXR-D2, 7220 IXR-D2L, 7220 IXR-D3, 7220 IXR-D3L

in-discarded-packets *number*

Description The total number of discarded ingress VXLAN packets.

Ingress VXLAN packets can be discarded due to one of the following reasons:

Context tunnel vxlan-tunnel statistics in-discarded-packets *number*
